ing of the taxpayers' money by the W. P. A. and of the abominable activities carried on under the guise of humanitarianism. As I stated in the beginning, no American wants to see any of his fellow countrymen starve or even suffer. No one is against relief to those who are destitute and worthy of assistance, but certainly the time has come when we should eliminate much of the foolishment and the company of the control of th the time has come when we should eliminate much of the foolishness, fraud, graft, and corruption that has crept into this program. Up until recently there has been no sincere or determined effort to get rid of the abuses. Naturally the New Dealers will not indict themselves and Mr. Hopkins always investigated himself. As one of my constitutents wrote me, "the one greatest weakness of all Federal relief of both direct and work relief has been that the sole power to investigate and prosecute has been invested in those who have been themselves responsible for the irregularities. I have it in a signed letter from the Attorney General's office that have it in a signed letter from the Attorney General's office that they had no jurisdiction over W. P. A. irregularities. Such a thing as that breeds crimes against the Federal Government, as the

same crooked politicians that caused the wrongdoings had the sole power to investigate and prosecute."

While the Senate investigating committee last year uncovered the coercive and intimidating tactics employed by W. P. A., if not open unblushing bribery, that committee was careful to affix no blame on those in high command. In the Congressional Record of January 12, this year, I made a 25-minute speech in which I included many personal affidavits from citizens of my district testifying as to politics in relief. Nothing yet has been done about the evils of this agency, and some of its rotten activities that are so foul they stink to high heaven. However, the conscience of the American people, though calloused and warped by many of these New Deal activities, has become so aroused that the masses are rising up in righteous indignation and holy wrath to clean house from top to bottom. At present, the House subcommittee on ap-propriations carrying on the investigation is striving to do a good job and should receive the whole-hearted approval and unfailing support of the American people in their attempt to right many

wrongs.

Transportation and Progress

EXTENSION OF REMARKS

HON. EARL R. LEWIS

IN THE HOUSE OF REPRESENTATIVES Monday, May 15, 1939

RADIO ADDRESS BY L. J. TABER, MASTER, THE NATIONAL GRANGE, COLUMBUS, OHIO, APRIL 20, 1939

Mr. LEWIS of Ohio. Mr. Speaker, the pace of progress in civilization has through the centuries been largely geared to mankind's means of transportation, and, as those means have made possible evermore direct and speedy travel, the pace of advancement in the arts, the sciences, industry, and agriculture has been quickened.

Hon. L. J. Taber, an eminent constituent of mine, and for many years and now the master of the National Grange, recently delivered a most timely, thought-provoking, and constructive address by radio on the subject of transportation and progress, to which address I now call your attention, as follows:

Transportation is the evolution of loads first borne on the backs of men, then on the camel, the elephant, the donkey, the water buffalo, and other beasts of burden. Then came the development of crude rafts and boats; the slow evolution of the ship, first driven by oars, then by sail, and finally by steam and the combustion In earliest times came the oxcart and the chariot; then came the covered wagon and the horse and buggy, followed by the automobile. Finally came the miracle of miracles—man left the earth, and airways became the latest link in the highway of

It has been well said that the discovery of the wheel ranks as one of the greatest inventions of the human race. The modern machine age, with all of its blessings, is but the completion of this first discovery back in the dim, unchartered past. The savage built no roads and had no regular system of communication. The long forward march of the human family from the river valleys in the Orient, ever westward, has resulted from the use and development of travel. The Caesars of old realized that without roads there could be no imperial Rome. The Appian Way stands symbolic of that great spider web of highways leading out into the conquered territory. Transportation on land in those days placed limits on progress. Columbus and other bold navigators of centuries ago put a new emphasis on water-borne commerce.

Tonight I want to direct the thinking of all listeners to the fact that our further development, recovery, and civilization itself rests that our further development, recovery, and civilization itself rests more definitely on the broad problems of communication and transportation than ever before in history. There are four great sides to the transportation quadrangle of progress—airways, waterways, highways, and railways. Each of these has a definite place in the life of today and the hopes of tomorrow. Without transportation the wheat of Kansas or of the Dakotas will never be turned into bread to feed the teeming millions in eastern cities. The products of our fields, flocks, and herds coming from a thousand hills and farms would never satisfy those who ask for food and raiment without excellent shipping facilities.

Too many people take transportation as a matter of course and

Too many people take transportation as a matter of course and Too many people take transportation as a matter of course and think it means little to their lives and happiness. Let me make this suggestion—analyze what was on your dinner table today. The meat probably came from the Corn Belt; the butter from Wisconsin or Minnesota; the sugar from the South, or from the islands of the sea; the coffee, spices, and the pepper from the Tropics. Your head lettuce came from the West. The grapefruit or the strawberries from southern California, Texas, Florida, or the Gulf coast. Your cream may have come from nearby farms; or the contented cows which produced it may have been a thousand the contented cows which produced it may have been a thousand miles from your home. The maple sirup you enjoyed came from New England. At every dinner table tonight, almost without exception, all forms of transportation were used, either in the actual deliveries or in the mailing of orders or payments for the material consumed.

Transportation is so essential to our development that I have no patience with those who spend their time quarreling as to which form is the most essential and which is entitled to greater protection. It must be admitted that all have their own places that each should have freedom for development in its own way, and each should be used to serve not only the progress of the Nation, but for the safety and defense of the Republic itself.

Nation, but for the safety and defense of the Republic itself.

Railways have been a tremendous factor in the development of our Nation. They are the agencies that brought the East, the West, and the North, and the South closer together. They linked the Republic with bands of steel and made national unity a reality. In the beginning, railways held a monopoly in land transportation, and regulation became essential.

Today we hear much of an acute railway problem, and every friend of progress wants the railroads to enjoy their full share of national prosperity and fulfill their part in the development of the Nation. Railways, like any other form of transportation, are entitled to justice and fair treatment. They should be given larger freedom to meet competition and to develop along sound and workable lines. workable lines.

Speaking for the National Grange and its million members, I want to emphasize our insistence on justice to the railroads, but at the same time we demand that other forms of transportation shall not be handicapped, restricted, or retarded in an effort to cure railroad ills. The difficulties of the rail carriers will be corrected

railroad ills. The difficulties of the rail carriers will be corrected by essential adjustments, economy, and progress, and not by imposing unnecessary regulations on other forms of transportation.

Ocean-borne commerce and the freedom of the seas are essential to modern civilization. This is a problem that affects the whole human family and need not be discussed tonight, other than to insist that our coastwise shipping be allowed to continue its development for the good of all. On our rivers and lakes, however, transportation problems mean much more than the movement of commodities. The public has a three-way interest in lakes, rivers, and canals. First are matters of conservation. The protection from floods on the one hand and water shortage, on the other, is from floods, on the one hand, and water shortage, on the other, is a public necessity. Of almost equal importance is the question of power and the utilization of our rivers and harbors as a matter of national defense and welfare. No nation dares to neglect the

proper protection of its lakes, rivers, and harbors if it hopes to survive in this modern age. Our third interest comes from the problems of commerce, and here, again, water transportation should not be subsidized, on the one hand, nor interfered with by unfair taxation or regulation, on the other.

taxation or regulation, on the other.

The great new method of air transportation is in its infancy. No man can tell what the future will bring forth in this regard, but we can be certain that airways will affect the transportation of mall, of passengers, and of freight to a growing degree in the years ahead. Our airway program must be developed and airports must be built, not to subsidize air commerce, but to take adequate steps for the progress, the defense, and the safety of all our people. nation will be secure in the future unless it develops adequate

This brings us to the consideration of the most basic and fundamental of all the forces of transportation, namely, the highways of the Nation. They are the foundation upon which the whole structure of communication recognitions. ture of communication, progress, safety, and the movement of persons and goods from place to place must rest. In the beginning, primary consideration was given to post roads and military high-

Our modern highway system is much more than that. It is the foundation upon which our complicated social order rests. Destroy the streets and highways of America and overnight the Republic would lapse back into the jungle. Highway transportation does take on a new relation with the ever-increasing development of the automobile and the truck. While roads are essential for health, the automobile and the truck. While roads are essential for health, safety, social, and educational life, they are also essential in the movement of passengers and of freight. Let it not be forgotten that every ton of freight, that every passenger, that every piece of mail that moves over railways, airways, or waterways must some place be moved by an automobile or a truck. Not a pound of produce leaves the farm and comes to the city without first moving over the highways. Not a piece of mail gets from the post office to the citizen without the highways or the streets of the Nation getting into the picture.

to the citizen without the highways or the streets of the Nation getting into the picture.

Highway users ask no special privileges or unfair advantages. They are willing to pay the cost of construction, maintenance, and repair of our highways. They are willing to pay their just proportion in the elimination of grade crossings and the taking of necessary steps to promote highway safety. I insist that the highway users have made this contribution in the past, are doing so now, and will continue to do it in the future. The automobile and the truck user through license fees, through State and Federal gas and oll taxes and other taxation methods pay their full share of highway costs.

oil taxes and other taxation methods pay their full share of highway costs.

In 1936 the total cost of highway construction, maintenance, administration, and interest on outstanding bonds was \$1,371,000,000. The following year, however, the motorists of this country paid over \$1,500,000,000 in fees and special taxes. This equals many times the total taxes paid by all the railways, airways, and water carriers of the Nation combined.

During the 21-year period from 1917 to 1937, both inclusive, Federal appropriations for highways totaled \$2,625,100,000. This included appropriations for forest roads, trails, and bridges in national parks and reservations, together with roads and bridges on nontaxable Indian lands and reservations. In the above is \$1,200,-000,000 of special authorizations made by Congress primarily for relief purposes. It was expressly stipulated that some contracts were to require hand labor wherever it would furnish the greatest amount of employment. More important, an emergency appropriation of \$400,000,000 in 1935 and \$200,000,000 earmarked for gradecrossing elimination. It is apparent that several hundred million crossing elimination. It is apparent that several hundred million dollars in the above total was not used exclusively for highway

During the 21-year period in question the Federal Government collected \$2,573,000,000 in special taxes on motor transportation. This proves conclusively that the motorists were not subsidized

collected \$2,573,000,000 in special taxes on motor transportation. This proves conclusively that the motorists were not subsidized by the Federal Government, and are actually contributing more to the whole program than is spent on highways. This is true in practically every State in the Union. Motor transportation, and especially the family flivver, is paying its full share of the cost of government. Remember, these taxes are paid by those who have already contributed their full share in real estate, income, and other forms of taxation. The National Grange is opposed to all legislation now pending in Congress that would add to the tax burdens of those using the highways of the Nation.

We want no fights between the four great essential transportation agencies. Each has its own work, each has its own task to fulfill; but I again submit that, out of the four, the highways are the most important. Cripple highway transportation and the three other forms are injured. The Grange demands that there shall be continued and increased appropriations for farm-to-market roads; that safety provisions shall be maintained; that our transportation system shall develop in the American way along competitive lines and not monopolistic lines. We are willing that motorists and highways users pay their share of Government costs and, in addition, maintain highways from the taxes they pay. We demand, however, that there should be no taxation to equalize transportation costs, and, equally important, that there shall be no diversion of highway funds to other purposes.

Let us not forget that transportation is the lifeblood of commerce. It is also the lifeblood of progress. Let us give to the public the most efficient and safest transportation possible, and

merce. It is also the lifeblood of progress. Let us give to the public the most efficient and safest transportation possible and let the consuming public, which must foot the bill, determine which agencies shall render the service they desire.

This great problem has a close relationship to the family pocket-books of the Nation. The heaviest single item that must be paid by both the farmer and the consumer is that of transportation and distribution costs. During 1938 the farmer received only 40 cents out of every dollar spent by the consuming public for food. It would be contrary to sound public policy to take any step that would arbitrarily increase the costs of transportation. Every home owner, as well as every farmer, is vitally interested in the problem of maintaining for America efficient and low-cost transportation, all are interested in seeing that every form of transportation shall stand on its own feet.

portation shall stand on its own feet.

Who wants to go back to the covered wagon? Who wants to go back to the model T Ford in this day of better roads and streets? Who wants to go back to the old-fashioned railroad coach and the old unventilated sleepers? In no line of endeavor has there been greater progress and efficiency and lower costs than in the development of the automobile, the tractor, and the truck. Here it is the survival of the fittest. It is the choice of the consumer that has given America the greatest automobile manufacturing plants in all the world.

We have been celebrating the various steps marking the one hundred and fittieth anniversary of our Constitution and the founding of the Nation. On the 30th of this month we pause to celebrate the one hundred and fittieth anniversary of the inauguration of George Washington and the complete functioning of our Nation with the legislative, its executive and indical branches of governments. the one hundred and liftieth anniversary of the inauguration of George Washington and the complete functioning of our Nation with its legislative, its executive, and judicial branches of government, with its checks and balances, its unity of purpose, and its freedom for the individual. Orators have stressed in recent days the advantages of our Constitution with its Bill of Rights and the guaranty of religious, political, and personal freedom. These are outstanding milestones of progress. Tonight we all pay tribute to this document and are all ready to give our lives for its preservation and the Republic which it made possible.

I challenge you to remember, however, that it was that provision in the Constitution which made possible the freedom of commerce between the States that gave us our national unity. It was the creation of post roads and military roads that gave the Nation its foundation for growth and progress as well as for the greatest highway system in the world. Yes, better transportation is not only the key to progress, it is progress itself. The future happiness of every citizen in America is dependent upon maintaining this great quadrangle of transportation, highways, waterways, rall-ways, and airways, functioning so they can serve the greater America that we all await.

A Message From the First Republican President

EXTENSION OF REMARKS

HON. JOHN M. ROBSION

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1939

ADDRESS BY DR. STEWART W. McCLELLAND, D. D., L. H. D., PRESIDENT, LINCOLN MEMORIAL UNIVERSITY

Mr. ROBSION of Kentucky. Mr. Speaker, with the unanimous consent of the House I am extending my remarks and including therein a learned and eloquent address delivered by Stewart W. McClelland, D. D., L. H. D., president of Lincoln Memorial University, Harrogate, Tenn., at the Lincoln banquet in Louisville, Ky., February 11, 1939.

Lincoln Memorial University is the fulfillment of a desire of the Great Emancipator himself to do something for the people of the great Appalachian Mountain region. A great majority of the people of the Appalachian mountain section favored the Union cause. They were strongly attached to the Union and were opposed to slavery. The people of the highland region throughout the ages have championed the cause of freedom. Because of their devotion to the Union and their opposition to slavery, Lincoln became greatly attached to them. During the progress of the great war President Lincoln put his finger on the map at Cumberland Gap. where Tennessee, Virginia, and Kentucky join, and said, in speaking of the people of that section, "General, if we come out of this great war alive we must do something for those wonderful people." President Lincoln did not live to carry out his purpose, but General Howard and many other devoted friends of Lincoln's set about to establish the university of which Dr. McClelland is now president, and they named it Lincoln Memorial University.

There is no finer or more beautiful place in all America. Its holdings cover many thousands of acres of land, some of it beautiful blue grass, also towering mountains with great forests. It has beautiful and modern buildings, up-to-date equipment, and trained teachers necessary for a great university. I should say there is not a more attractive spot or more desirable surroundings for a young man or young woman to secure an education than this university, located at the foot of the mountains near Harrogate, Tenn.

Philanthropists, captains of industry, Presidents, and statesmen have considered it an honor to be sponsors and promoters of this university. It is especially designed to serve the boys and girls, the young men and young women, of the great Appalachian region, where is found the purest strain of Anglo-Saxon blood in the United States. This institution is ably directed by Dr. McClelland. The speech of

Dr. McClelland at this time is most timely.

Mr. Toastmaster, ladies, and gentlemen, it is the custom of each generation to look to the past for guidance either for good or bad. Whether we will or not, we are to a great extent the products of the past. We are accustomed to find authority for our acts in the customs, ideas, and ideals, of preceding generations and the present is largely determined by the heed we pay to the voices of our forefathers. More and more men of all creeds and all political faiths look to Abraham Lincoln for their authority, regardless of the doubt which rests in the minds of some of us whether or not Lincoln would like to be the authority in some case in which he is quoted. One is sometimes reminded of Shakespeare's famous saying, "What damned error, but some sober brow to bless it and approve it with a text."

Sometime ago, in a discussion of the Gettysburg Address, Alex-

Sometime ago, in a discussion of the Gettysburg Address, Alexander Woollcott made the observation that Lincoln was not merely talking to the audience within the sound of his voice, not merely to the North nor to the South, "He was also talking to Americans as yet unborn and unbegot." And with trumpetlike clearness his ideas echo down the ages not only for Americans but

for all nations.

Let us in just a few minutes see what was the heart of the message of the first Republican and the greatest of all Presidents.

Lincoln recognized the supremacy of the individual without reference to race or creed. And under the Declaration of Indereference to race or creed. And under the Declaration of Independence all men are entitled to the right of life, liberty, and pursuit of happiness. Under such a leader there could be no such cowering individual as the "forgotten man." Abraham Lincoln, the rail splitter, recognized the dignity of the man who worked with his hands, and in his message to Congress on December 3, 1861, he said: "Labor is prior to and independent of capital. Capital is only the fruit of labor, and could never have existed if labor had not first existed. Labor is the superior of capital and deserves much the higher consideration. Capital has its rights, which are as worthy of protection as any rights, nor is it denied that there is, and probably always will be, a relation between labor and capital, producing mutual benefits. The prudent, penniless beginner in the world labors for wages a while, saves a surplus with which to buy tools or land for himself, then labors surplus with which to buy tools or land for himself, then labors on his own account another while, and at length hires another new beginner to help him. This is the just and generous and pros-perous system which opens the way to all, gives hope to all, and consequent energy and progress and improvement of condition

And again on the same subject at a later date he enlarges on this theme, "Property is the fruit of labor; property is desirable; is a positive good in the world. That some should be rich shows that others may become rich, and hence is just encouragement to industry and enterprise. Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built." The implications of such a doctrine are too evident for us to dwell upon and we must hurry to Lincoln's next message to us all.

This we would find in his emphasis on law observance and reverence for the Constitution. He would say to us today as he said 75 years ago, "Our enemies to be feared are not those without our years ago, "Our enemies to be feared are not those without our borders but our worst enemies are they of our own household." "I hope I am not overwary; but if I am not, there is even now something of evil omen amongst us. I mean the growing disposition to substitute the wild and furious passions in lieu of the sober judgment of courts; and the worse than savage mobs for the executive ministers of justice. The answer is simple. Let every American, every lover of liberty, every well-wisher of his posterity, swear by the blood of the Revolution never to violate in the least particular the laws of the country, and never to tolerate their violation by others. Let reverence for the laws be breathed by every American mother to the lisping babe that prattles on her lap; let it be taught in the schools, in seminaries, and in colleges; let it be written in primers, in spelling books, and in almanacs; let it be written in primers, in spelling books, and in almanacs; let it be preached from the pulpits, proclaimed in legislative halls, and enforced in courts of justice. And, in short, let it become the political religion of the Nation; and let the old and young, the rich and the poor, the grave and the gay of all sexes and tongues and colors and conditions, sacrifice unceasingly upon its altars."

With such an attitude toward the laws of the land we would expect from Lincoln's lips some strong statement on behalf of the Constitution, in which all just laws are based. "As a general rule, I think we would much better let it alone. No slight occasion should tempt us to touch it. Better not take the first step which may lead to a habit of altering it. Better, rather, to habituate ourselves to think of it as unalterable. It can scarcely be made better than it is. New provisions would introduce new difficulties, and thus create and increase appetite for further change. No; let it stand as it is. New hands have never touched it. The men who made it have done their work and passed away. Who shall improve on what they did?"

But the watchword of Abraham Lincoln was "Union." It is related that when he met the southern commissioners on board the River Queen, where they had come to talk conditions upon which the war might cease, that he told them that he did not care what might be the terms, just so that the word "Union" should be written first. Born in the South, matured in the West, elected to the Presidency by the North, Lincoln taught men to look at the country not from a sectional but from a national point of view. Older and dearer than the Constitution was the Union, the confederation of States, the representatives of which gave us the Constitution and our sacred Bill of Rights. And the first Republican President in words which will always be an inspiration to every American youth proclaimed his sacred obligation to "preserve, protect, and defend" that Union.

Other Presidents had taken that oath, other men had said those words, but Abraham Lincoln lived and died his belief in the spirit back of them. Today, as then, Union does not merely refer to a mechanical amalgamation of State lines nor the joining together in a confederation, peoples in different sections of this vast country. The Union for which Lincoln gave his life was the spiritual ideal of a united people. Each individual, in whatever State he may live is secure in the rights of his personal liberty, giving himself to the service of his country for the betterment of his countrymen; this was Lincoln's idea of Union.

Utopian? Aye, Utopian! But listen to Lincoln, "The mystic chords of memory, stretching from every battlefield and patriot grave to every living heart and hearthstone all over this broad land, will yet swell the chorus of the Union when again touched, as surely as they will be, by the better angels of our nature."

Flood Control

EXTENSION OF REMARKS

- -

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1939

Mr. GEYER of California. Mr. Speaker, I rise in support of this measure. No one has ever accused me of being reckless in the spending of money. My entire life training has been in the opposite direction. I have never had money to spend and consequently have never formed the habit of extravagance. I believe, however, that if we can save several dollars by spending one that that is good business. Last year in several places in these United States there were more dollars lost because of floods that could have been prevented than the entire amount of money requested in this bill.

RELIEF WORK SHOULD BE ON WORTH-WHILE PROJECTS

Much of this money will be expended directly for relief on flood-control projects. This is as it should be. Our people who find themselves unemployed should be given work on projects that will return to the Nation value received for the money spent.

I MAKE THE SAME PLEA TO THE ENTIRE HOUSE THAT I HAVE MADE TO THE COMMITTEE

I wish to discuss with this entire House a problem that I placed before the Appropriations Committee. It may sound like an old story to these few on the committee, but it is so vital to my people that I know the committee will bear with me. Besides, as that committee is the one that first must recommend before an appropriation can be obtained, I am anxious that you know the story well. I know at first hand

the things of which I speak for my home is on the very banks of this "problem child."

GARDENA VALLEY-THE GARDEN

Gardena Valley is just what the name implies—a beautiful little valley of gardens. This community lies in the very heart of the industrial area of southern California. Millions of people are employed within a radius of a drive of 15 minutes. It is not strange, then, that into this fertile valley, bordered on one side by metropolitan Los Angeles and the other by the great harbor of San Pedro, the port of Los Angeles, people have flocked to make their homes. Here, indeed, is the place, so thought thousands of home-loving people, to get a little garden patch and after the toil of the day is over in the factory or in the office indulge in their favorite pastime of working in the garden or the raising of chickens or rabbits that might be sold, if they so desired, from the numerous highways and crowded streets that traverse this territory.

OUR PEOPLE THE VICTIMS OF CIRCUMSTANCES

But in the last few years all has not been well. The higher country above the valley has also been settled to a large extent. There has been built recently a large racing course with many acres hard surfaced, making the land impervious to the water that falls during the rainy season. We also have on the high ground several large airports also hard-surfaced. In fact the water that at one time fell on the higher ground about us now falls and at once runs off at such a rapid rate that the ditch or slough that once was ample to carry it away now becomes clogged with the excess and the muddy water finds its way into the very homes and gardens of the good people. When this water recedes it leaves something that does not make any housewife happy. This is what is happening to the fine people who a few years ago believed their homes to be high and dry. If it were possible to take you to the little community of Keystone, for example, just after one of our storms, you would realize the terrible conditions that I am unable to describe to you.

BUSINESS IS DEMORALIZED

Besides this matter of the inundation of the homes and farm lands there are other very bad features connected with this drainage problem. The main trade routes to and from the city of Los Angeles and the harbor pass through this valley and must cross the Laguna Domingues, usually called Nigger Slough. Traffic is held up sometimes for days, causing great loss to the business interests of the country. This blocking of traffic might also have serious results if ever the country were plunged into war.

EDUCATION IS RETARDED

It so happens that for the past 12 years I have been a teacher in one of the high schools in this community and I can testify from first-hand information that there are times when it is impossible for either teachers or pupils to reach the school buildings. There are many other angles that I might discuss here, but I believe that I have outlined the problem to some extent. As you will see from examining my statements to the committee—page 373—I am very much concerned about this matter.

I SHALL NOT ALLOW THIS BODY TO FORGET THIS PROBLEM UNTIL IT IS SOLVED

While I was unable to get the project included in this bill, my purpose today is to acquaint you somewhat with the problem, for I intend not to allow this body to forget our problem until we have solved it. This can only be done by the Federal Government for the community has already burdened itself to the point of exhaustion in coping with this. I am not here advocating any particular procedure as to how the plan will be worked out. That is not within my province but I am telling this body that the Nigger Slough is a worthy project and I intend to remind you of it at every opportunity. You will hear from me again.

Flood Control, Rivers, Harbors, and Economy

EXTENSION OF REMARKS

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, May 15, 1939

Mr. BENDER. Mr. Speaker, journalists throughout the Nation have been telling their readers that "economy suffered a major defeat" in the House of Representatives when the Members of our lower House added \$50,000,000 to the floodcontrol, rivers and harbors appropriation. To those who have neither analyzed the legislation nor studied the issues involved, this charge seems irrefutable. But any such conclusion is completely contradicted by the facts. It would be just as proper for our columnists to condemn Congress for appropriating funds to protect the health of the Nation's children in the name of economy. We have long known that there is such a thing as utterly false economy. Saving funds today which jeopardize important national investments tomorrow cannot be described as economy. Such action is nothing but parsimonious stupidity.

What would our people think of a businessman who decided to "save" his money by neglecting to renew his insurance against fire? What would we say to the home owner who refused to build a bulkhead to protect his ocean cottage from the winter's storms? What would we think of a city which stolidly refrained from erecting a sea wall after it had been repeatedly inundated by floods? Surely no thinking citizen would assert that a valuable "economy" had been effected by such unreasonable "savings" of expenditures.

What, then, would our Nation say of a Congress which is ready and willing to spend over \$1,000,000,000 on military and naval appropriations and yet refuses to designate \$50,000,000

to protect billions of dollars' worth of property?

In the year 1937, one flood sweeping over the Ohio Valley caused damage amounting to more than \$400,000,000. The devastating waters which covered the New England area inflicted losses totaling untold millions. In the words of the gentleman from Massachusetts, Mr. ALLEN T. TREADWAY, "The business interests that were destroyed, the homes that were ruined, the industries that were leveled, and the destitution in the flooded area cannot be overestimated." The United States Army Engineer Corps which studied the related problems of flood control and rivers and harbors development informed Congress that \$195,000,000 could be well and economically spent for flood control alone; that \$102,000,000 could be intelligently used for rivers and harbors. As passed by the House of Representatives, the measure provides for the expenditure of \$172,000,000 for flood control, \$39,000,000 of which will be used for Mississippi River flood-control developments, and \$96,000,000 for rivers and harbors improvements. The figures are still \$29,000,000 below the amounts proposed by the Army Engineering Department.

And the Nation has the assurance which comes from long experience that these funds will be wisely and efficiently spent. The gentleman from Missouri, Mr. Dewey Short, addressing the House in the debate which preceded the passage of the flood-control appropriation, stated the case with

pointed significance. He declared:

The American people are more concerned not as to the amount of money that is spent but the manner in which it is spent and of money that is spent but the manner in which it is spent and the purposes for which it is spent. This money is not going to be wasted on boondoggling projects—the raking of leaves, building of outhouses on the sides of hills in North Carolina, the construction of a dog pound in Memphis, or monkey houses in Little Rock. This money is going to be spent to save human life and to save hundreds of millions of dollars worth of property. Every dollar that has been spent in our past history by the Army engineers has been wisely spent, and never has anyone raised his voice in protest or questioned the integrity and honesty of the men who construct these projects. It seems to me when we come in here and vote hundreds of millions of dollars for so many different things, then vote against an increased appropriation of \$50,000,000 for these useful projects which will serve the public all alike, indiscriminately, without partisanship, without favor of discrimination, is simply straining at the gnat and swallowing the camel.

As for the arguments that the expenditure of funds for flood control and harbor improvements will reduce the funds available for relief, consider the observations of the gentleman from Massachusetts [Mr. TREADWAY]:

If there is any one thing that means relief to the people of the New England area it is better flood control. Those of you who have visited the New England sections that suffered in the flood of last September can well realize how much our section of the country needs this most necessary relief.

There is the further evidence of the Army engineers that it is their practice to take people from relief rolls to give them

employment on flood-control projects.

Taken in its entirety the program passed by Congress cannot be assailed as "pork barrel" legislation. The construction of a flood wall at Ironton, the improvement and reinforcing of the Portsmouth flood wall which saved that city from the menace of the Ohio River's rising currents in 1937, the dredging of the Cleveland Harbor are typical projects in the list approved by the Government engineering department. If these developments are unnecessary, then virtually none of the legislation which Congress enacts is necessary.

Economy is a magic word. It can be used to praise or to condemn with equal facility. But when it is used as a synonym for lack of foresight, it has no place in the vocabu-

lary of a provident nation.

Return of the Original Wright Airplane to the **United States**

EXTENSION OF REMARKS

HON. FOREST A. HARNESS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Monday, May 15, 1939

RESOLUTION ADOPTED BY THE AMERICAN LEGION, DEPARTMENT OF INDIANA

Mr. HARNESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas the science of aeronautics is rapidly becoming more important to the national defense and the economic life of our country; and

Whereas the pioneers in the field of aeronautical research in the United States have made contributions of inestimable value to the orld in the science of aeronautics; and

Whereas the first flight made by man in a heavier-than-air craft was accomplished by the Wright brothers at Kitty Hawk, N. C., on December 17, 1903; and

Whereas this first flight of man in a heavier-than-air craft was made in the first man-carrying airplane capable of sustained free flight under its own power; and

Whereas official records in Washington do not acknowledge the original Wright airplane as being the first man-carrying airplane capable of sustained free flight under its own power; and

Whereas the Aeronautics Committee of the Department of Indiana of the American Legion has ample documentary evidence to prove the above statements; and

Whereas the original Wright airplane is now being exhibited in a museum of a European country as a voluntary acknowledgment of its being the first man-carrying airplane capable of sustained free flight under its own power; and

Whereas this original Wright airplane can and should be returned to the United States, the home of the birth of heavier-than-

air flight; and

Whereas the American Legion can be of great and unselfish service to our contemporaries and to posterity by assisting in bringing about the return to the United States of the first man-carrying airplane capable of sustained free flight under its own power: Now,

therefore, be it

Resolved. That the American Legion. Department of Indiana, request immediate and favorable action by national and department officers and committee members to bring about proper and clearly understood corrections of records in Washington in order to justify a request that the first man-carrying airplane capable of sustained free flight under its own power be returned to the United States of America—the birthplace of heavier-than-air flight.

P. W. A. Endorsed by Public Opinion

EXTENSION OF REMARKS

HON. CLYDE WILLIAMS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1939

EDITORIAL FROM THE PERRY COUNTY (MO.) SUN OF APRIL 27, 1939

Mr. WILLIAMS of Missouri. Mr. Speaker, under leave to extend my remarks, I include an editorial which appeared in the Perry County Sun, Perryville, Mo., on April 27, 1939, entitled "P. W. A. Endorsed by Public Opinion." Inasmuch as the article represents a compendium of opinion throughout the West and Middle West, I believe it will be of interest to the Congress.

The editorial is as follows:

[From the Perry County (Mo.) Sun of April 27, 1939] P. W. A. ENDORSED BY PUBLIC OPINION

Numerous editorials and comments commending the good work done by the P. W. A. and advocating its continuance as a permanent agency to combat future business depressions have appeared from time to time in many leading newspapers throughout the country.

The general impression seems to prevail that the Public Works Administration has functioned in an efficient and businesslike manner and has been a major factor in turning the tide of the recent business depression by stimulating industry through the construction of permanent and worth-while improvements.

Comment from various newspapers published in the eight States comprising region No. 4 are shown below:

Des Moines (Iowa) Tribune: "It stands as a remarkable tribute to the administration of the eight-State region of the P. W. A., and to the resourcefulness of the construction forces in this State,

and to the resourcefulness of the construction forces in this State, that actual construction was under way on every project which lawfully could be started before the January 1 dead line established by Congress. Iowa's share in this program represents a widely diversified and a geographically well-distributed range of projects so genuinely wanted by the Iowa communities that they were willing to assess themselves for 55 percent of the total cost."

Bolivar (Mo.) Herald: "'Yes, we are glad for P. W. A. and resulting improvements." Editorial headline: P. W. A. has already done a great deal for Polk County. What would the State have done for highway bridges had it not been for P. W. A.? Missouri has some of the finest highway bridges in America, all built by P. W. A. If the above appropriation is the last made for P. W. A., it will have hundreds of lasting memorials to its credit, due to the wise planning of President Roosevelt and the Democratic Party."

If the above appropriation is the last made for P. W. A., it will have hundreds of lasting memorials to its credit, due to the wise planning of President Roosevelt and the Democratic Party."

Aberdeen (S. Dak.) News: "Although but one project is in progress now in Aberdeen, the boys' dormitory at Northern State Teachers' College, this community is proud of the improvements that P. W. A. helped to make possible. The city water softener supply and the civic school auditorium, which this month is expected to accommodate 5,000 basket ball fans at the Big Eight tournament, are notable examples. The P. W. A. has proved a good stimulus to building and one especially beneficial in States whose citizens pay a small percentage of the Federal income tax." International Falls (Minn.) Journal: "Our experience with P. W. A. has been both pleasant and profitable."

Hysham (Mont.) Midland Empire Farmer: "P. W. A. recommended for cooperation.' Public Works Administration is among the very foremost mentioned in this county when recognition is given to those who have made it possible for the Treasure County to enjoy a new and modern gymnasium building. It is pointed out that the gymnasium building is a permanent and needed improvement which could not have been added to the school system without P. W. A. assistance. Contacts with the P. W. A. organization have earned and deserved its splendid reputation for well-organized efficiency."

Lamar (Mo.) Democrat: "The new jail is so much better than Bartno County ever hoped for before the P. W. A. grant was obtained that it will be a real monument to this form of Federal aid

tained that it will be a real monument to this form of Federal aid which has done so much to improve this community."

Casper (Wyo.) Tribune-Herald: "Pyramids remind us of the ancient Pharachs and the glory that was Egypt's. But there are more practical reminders of the Public Works Administration in Wyoming and elsewhere. Gleaming structures of stone, like the new State Supreme Court Building in Cheyenne. The P. W. A. (not to be confused with the W. P. A. or work relief) has poured out a golden flood of \$4,400,000 in Government, city, and county funds in Wyoming during the last 5 years."

Virginia (Minn.) Enterprise: "On July 25 the city council's application was submitted to the P. W. A. regional office in Omaha and received almost immediate approval. On July 27 the application was forwarded to Washington, D. C., and on August 6 the final approval was gained. If this is a sample of the manner in which P. W. A. now functions, it must be agreed that there is very little 'red tape' involved."

P. W. A. now functions, it must be agreed that there is very little 'red tape' involved."

Central Constructor, Des Moines, Iowa: "There has been no Government agency more heartily supported by those responsible for its success than has P. W. A. by the contractors. They have gone to bat for it consistently before Congress and congressional committees, They have urged—and in no small degree have been responsible for—a continuation of the agency as an active construction organization."

Salaries of Corporation Executives

EXTENSION OF REMARKS

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 15, 1939

ARTICLE FROM THE CHRISTIAN SCIENCE MONITOR

Mr. GEYER of California. Mr. Speaker, inasmuch as we are now considering the Fair Labor Standards Act. it might be well to have in the RECORD the report of the Securities and Exchange Commission on the salaries of corporation executives who receive more than \$100,000 per year.

It might be interesting to note that some of these very people whose names are listed below are the very ones that are either directly or indirectly opposing this measure.

The article appearing below is taken from the Christian Science Monitor:

[From the Christian Science Monitor]

SALARIES IN 1938 OF OVER \$100,000 LISTED BY THE S. E. C.

Washington.—Walter Gifford received \$209,350 as President of the American Telephone & Telegraph Co. in 1938, thereby heading the list of corporation executives whose compensation was re-ported to the Securities Commission.

The only other executive listed who received more than \$200,000 was Robert C. Stanley, board chairman of International Nickel of Canada, Ltd. His 1938 remuneration was \$204,700.

Nineteen corporation officials received between \$100,000 and \$200,000, while 65 received between \$50,000 and \$100,000. William S. Knudsen, president of General Motors, got \$193,713, of which \$69,248 was a common-stock bonus. Alfred P. Sloan, Jr., chairman, received \$164,450. Charles F. Kettering, vice president, was paid a salary of \$83,173 and a stock bonus of \$50,154 in common stock common stock.

For 1937, Mr. Knudsen received a salary of \$140,380 and a common-stock bonus valued by the company at \$166,820, while Mr. Kettering received a salary of \$95,120 and a stock bonus of

\$117,674.

Others earning \$100,000 or more were:

William S. Paley, president of Columbia Broadcasting System, Inc.,

William S. Paley, president of Columbia Broadcasting System, Inc., \$171,849; David Sarnoff, president of Radio Corporation of America, \$100,900; H. F. Atherton, president of Allied Chemical and Dye, \$125,000; Thomas N. McCarter, president of Public Service Corporation of New Jersey, \$120,000.

C. P. Cooper, vice president of American Telephone & Telegraph Co., \$102,699; H. W. Bracy, branch manager of Kroger Grocery Co., Cincinnati, \$124,512; Martin W. Clement, president of the Pennsylvania Railroad, \$100,000; W. E. Weiss, chairman of Sterling Products, Inc., \$116,068; A. H. Diebold, president of Sterling Products, Inc., \$115,000.

Seton Porter, president of National Distillers Products Corpora-

Seton Porter, president of National Distillers Products Corpora-tion, \$178,360; Charles L. Jones, vice president of National Dis-

tillers Products Corporation, \$137,960; F. L. Carlisle, chairman of Consolidated Edison Co. of New York, \$108,160; W. S. S. Rogers, president of Texas Corporation, \$100,000; T. Rieber, chairman of Texas Corporation, \$100,000; J. W. Van Dyke, chairman of the Atlantic Refining Co., \$100,000; and Frank W. Lovejoy, president of Eastman Kodak Co., \$115,419.

"Green Pastures"-Senator Wagner's Bill to Politicalize and Socialize the Sacred Art of Healing

EXTENSION OF REMARKS

HON, FREDERICK C. SMITH

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1939

RADIO ADDRESS BY HON. FREDERICK C. SMITH, OF OHIO, MAY 7, 1939

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the Record, I include a speech I made in debate with Hon. Robert F. Wagner, Senator from New York, on the American Forum of the Air, May 7, 1939, as follows:

Mr. Chairman, Senator Wagner, ladies, and gentlemen, I appear before you this evening in a dual capacity, first as a physician and second as a Member of Congress. My opposition to Senator Wag-Ner's bill to politicalize or socialize medicine is based upon the

NEE'S bill to politicalize or socialize medicine is based upon the historical facts of the manner in which the healing art has developed and my own experience of 30 years as a practicing physician. Medical science has been in the process of development for thousands of years, and upon the shoulders of the medical profession rests the responsibility of preserving that achievement as well as its future advancement. It is of the most vital importance to future generations, even to civilization itself, that no obstacle be placed in the way of that continued progress. It behooves us, therefore, to proceed cautiously.

We should be mindful of the fact that the greatest advancement in the science of medicine, that of the past century, has taken place in the period characterized by the greatest human liberty and freedom from political restraint. In no other field has the necessity for free individual initiative been more clearly demonstrated than in the science of medicine. It is of the utmost importance that everything be done to preserve those natural incenstrated than in the science of medicine. It is of the utmost importance that everything be done to preserve those natural incentives to individual accomplishment. Compulsion and the lack of natural rewards for individual improvement, such as must prevail in any political system, cannot fail to have a deleterious effect upon all individual effort. Socialized medicine would of necessity and because of the manner in which it must be operated, tend to freeze the present state of medical knowledge and check advancement.

No one more than those engaged in the practice of medicine No one more than those engaged in the practice of medicine realizes the imperfections and need of advancement in this field. Medical science has gone far and its accomplishments have been phenomenal but we understand clearly that much remains to be done. We must bear in mind that medical research is not confined to laboratories alone but is conducted every day by thousands of physicians at the bedside of the sick.

physicians at the bedside of the sick.

The physician-patient relationship is a very personal and individual relation. It is an intangible thing that rests upon mutual confidence and past experiences of the doctor and his patient. The good physician does not prescribe to the physical only. Nowhere is that Biblical saying "Man cannot live by bread alone" more applicable than in the treatment of the sick. Under a political set-up, widow Brown whose six children I may have brought into the world, and whose husband before his untimely death had tried hard to meet his obligations, would no longer be my sorrowful. hard to meet his obligations, would no longer be my sorrowful friend who needs consolation, advice, and encouragement more than drugs, but by force of circumstances would become case No. 1405. Socialized medicine would destroy those personal relationships and the individual touch that means so much to the sick and are so meet its prized by the true physicial. greatly prized by the true physician. Under the sick and are so greatly prized by the true physician. Under the system of political compulsion and regimentation, these fine humanities could not survive. More and more medical practice would become systematized and mechanized. The whole process would become involved in political red tape.

in political red tape.

During several months of study in Europe I had an opportunity to observe the operation of socialized medicine. There I saw the cold and clammy hand of political regimentation and bureaucracy in the field of medicine. The poor did not receive the kind consideration our physicians give them here. Medicine there was routine and Government reports. The patient's disease was not a private matter between himself and his physician. Every case was

the subject of a Government report. To reply that this need not be so here answers nothing. Human nature being what it is, that is the way socialized medicine works out in actual practice. We can only accept human nature as it is, not as we would have it.

be so here answers nothing. Human nature being what it is, that is the way socialized medicine works out in actual practice. We can only accept human nature as it is, not as we would have it. A comparison of the results of our free practice of medicine with that of countries where it has been for many years socialized, does not warrant the importation of that alien system into our country. Health conditions in America are definitely superior to those in Germany and England. A splendid point in evidence is the exceedingly low diphtheria mortality rate in the United States. In 1933 this was 2.9 per thousand, as compared with 8 in Germany and 8.2 in England. Diphtheria is a disease where laboratory and treatment technique are established, and if socialized medicine could bring any improvement it should certainly be apparent in those diseases where definite procedure is known.

From whence comes the demand for socialized medicine? Has the public asked for it? There is no evidence that they have done so. I am sure they would not if they understood it. Convincing evidence shows that it is sponsored by those same political and bureaucratic forces that have in the past few years so successfully maneuvered and forced upon the American people the many socialistic measures that are today bankrupting our Government, strangling out the liberties of our people, destroying our American institutions, and our opportunity for employment.

Senator Wagner's bill would set up another gigantic Federal bureaucracy. It would require an immediate appropriation of \$80,000,000 for its first year's operation. Should this bill pass, of course, the further recommendations of the "technical committee" will in due time be carried out, in which case the annual appropriation estimated to be required is \$2,600,000,000. Where, Senator Wagner, do you propose to get the money to finance such an undertaking? The Federal debt is now well above \$40,000,000,000 and daily increasing. Shall we also charge our medical services to our children? How long ca

established, it would move forward under its own political momentum, in its own politically preconceived directions, toward its own politically desired goal.

The so-called "technical committee's report," upon which Senator Wagner's bill is based, is anything but a carefully considered or scientific work. In my opinion, it is the cheapest political propaganda—petty dramatization of human disease, especially for appreciation to the programment of the programment. appeal to the poor.

All through this report the association together of poverty and disease is stressed, and correctly so. Of course, they are related to each other. But unemployment and poverty happen to be twin brothers, too. So that makes triplets—unemployment, poverty, sickness. In an endless cycle unemployment begets poverty; pov-

sickness. In an endless cycle unemployment begets poverty; poverty, sickness; sickness, unemployment.

Moreover, this matter is now becoming very serious. Colonel Harrington, head of W. P. A., highest authority, a short time ago before the House Appropriations Committee admitted, "We now have the greatest destitution in the history of the United States."

I agree with Senator WAGNER that the national health now is the concern of Congress. But I disagree with him altogether on the cure. As it appears to me, he sees only the symptoms. I would go

to the root of the matter.

What, then, is the statesman's problem here? It should be sun clear. Find the cause of unemployment and remove that. Therefore this is for you and me, Senator Wagner, insofar as we have any statesmanship in us, primarily an economic and not a medical question. Our foremost duty is to restore the health of our economic

body.

This being one of the most serious problems that can confront a nation, forthrightness is absolutely essential. We must face the

What is causing the continual great unemployment?

What is causing the continual great unemployment? The many socialistic laws, exactly like this scheme of Senator Wagner's, to politicalize medicine which have been enacted by Congress in the last few years, which have resulted in the creation of 50 to 75 new powerful bureaus and the addition to the Federal pay roll of more than 300,000 political jobs. These things, together with the excess-profits tax and other oppressive legislation, and especially the political tinkering with our money, are sapping the lifeblood out of our people, and especially the poor. They are destroying our industry and the opportunity for employment. The bare truth is, Senator, your bill, if enacted, instead of relieving the physical ills of the poor, would add to them. Besides destroying the healing art. of the poor, would add to them. Besides destroying the healing art, it would add to the already overburdening tax load of the poor, rob them still further of their opportunity to get jobs, thus making them more vulnerable to disease.

The poor don't want charity. They want us politicians and bureaucrats to get off their backs, leave them alone so they can earn their own living, choose their own doctors, and pay for their own medical service.

Thank you.

Address of the Postmaster General

EXTENSION OF REMARKS

HON. ROBERT CROSSER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, May 15, 1939

ADDRESS BY HON, JAMES A. FARLEY, MAY 11, 1939

Mr. CROSSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley, chairman of the Democratic National Committee, at the second quadrennial convention of the Brotherhood of Railroad Trainmen, held in Cleveland, Ohio, Thursday, May 11, 1939:

It gives me great pleasure to join with the delegates to the second quadrennial convention of the Brotherhood of Railroad Trainmen and to have the opportunity of speaking before an organization that has done so much for and been so vitally alive to the necessities of the workers and the welfare of our Nation.

Nothing gives me greater satisfaction than to meet with the leaders of organized labor, whose membership is drawn from the masses of the common people. Unions are idealistic in character and are founded upon the innermost feelings of the heart and mind. Labor has ever fought to promote the moral, spiritual, and

mind. Labor has ever fought to promote the moral, spiritual, and cultural welfare of the people. It has ever endeavored to raise the standard of living and the standard of citizenship.

The record shows that working people, through their trade unions, have succeeded in realizing in a very large measure their primary objectives. Wages of working men and women have been increased. Conditions of labor in workshops, mills, mines, factories, and on the railroads have been improved. Long hours of hard labor have been greatly reduced. All of which has resulted in better living conditions, better homes, and better home life.

In advocating social and industrial reforms organized labor often took positions that were in advance of the thought of the day. They were pioneers and blazers of new trails. Organized labor was one of the first groups in America to advocate free textbooks for school children. It was the first large organized group to fightfor compulsory education, old-age pensions, and unemployment insurance. It was the first to advocate workmen's compensation laws, the abolition of child labor, and the restriction of immigration.

There is no greater problem than that of human relations and careful planning to create greater cooperation, better understanding, and mutual good will among men.

When America was young the security of life, liberty, and happiness was rather abundant. But the shift from individual to corporate ownership, the transition from hand labor to mass production, and the switch of the simple agricultural economy to our complex industrial economy have brought about changes without much consideration to the changed relationship of the individual much consideration to the changed relationship of the individual to society. It was assumed that the individual would somehow adapt himself to a complex industrial system which he knew little about but which affected his security on every side. That industrial system is more complicated now than ever before. The security or insecurity of the American worker today depends upon such varied factors as pecuniary competition, production on a large scale, the scheme of prices, distant and future markets, the ever-increasing use of machines, the alteration of business enterprises, and the cycles of stagnation. This onward sweep of industry into an unknown future has made the security of men even more uncertain. more uncertain.

The immediate task facing the citizens of this Republic (and there aren't many republics left) is to plan for the establishment of fair-dealing and closer cooperation between government, industry, and labor. It is a goal for which every one of us should be

The most essential requirement to promote fair dealing and operation is the development of tolerance, reason, and understanding by the leaders in these three groups. Unless our economic problems are dealt with intelligently, fairly, and with justice to all concerned, very serious consequences may face us.

Sanity and light begin with facts. Fact No. 1 is that modern civilization rests upon industry. Human life is so dependent upon the services of industry that we become appalled when we stop to contemplate the results which would follow should the industrial life of the Nation become impaired or paralyzed. Without the forces of industry our civilization would perish.

The second fact is that in our very complex civilization government could not exist without successfully operated industry, and it is equally true that industry could not continue properly to

function without the sympathetic and active aid of government. No business could exist very long without the protection of a strong national authority. It is business that makes a cohesive and powerful national authority.

While business on the one hand depends upon Federal unity, it is even more dependent upon certain natural laws called the laws of economics. And these laws are no more changeable than the natural laws of other sciences. They operate steadily, irresistibly, whether the unity of government is strong or weak, whether civilization is represented by a crude social order or the complex social structure of today. Business may quarrel with the laws of government with some degree of success, but government can quarrel with the laws of economics with no change of any success.

the laws of economics with no chance of any success.

Business should be a realist. It should not suffer from any delusion as to its ability to buck the natural laws on which it is based. Government, on the other hand, by its very nature must be idealistic and must try at all times to meet the needs of its

Let us look at the facts. In America we have created the highest standard of living in the world. A recent report from a reliable

business bureau stated:

"A factory worker in the United States can buy four times as much food and clothing with an hour's wage as a German worker, nine times as much as an Italian worker, and nearly twelve times as much as a Russian worker."

as much as a Russian worker."

We lead the world in the production of iron ore, tin, iron, steel, copper, coal, crude oil, and telephone, and electric energy.

More than 30,000,000 Americans own and drive automobiles.

More than 27,000,000 young men and women go regularly to school. There are approximately 61,000,000 individual bank deposits, amounting to approximately \$57,000,000,000.

We still have the right of free assembly free speech free press

We still have the right of free assembly, free speech, free press and radio, and free religious worship.

We have everything necessary for a prosperous life. A wealth of raw material, the inventive genius of our scientists, and the great productiveness of our workers—the greatest in the world. Yet, in spite of all this, we have failed to create adequate policies and practices which would enable us to balance production with consumption and to deal fairly and effectively with many

with consumption and to deal fairly and effectively with many human problems.

I firmly believe that our political, industrial, and labor leaders can find a solution for these grave problems if they will honestly cooperate with each other. But this cannot happen until suspicion and coercion are supplanted by reason and good will.

Nothing in this world is stationary. Everything changes. Values decline and new values are created. One of our greatest industries—the railroad industry—your industry, has been seriously affected with the passage of time and by changed conditions.

The railroad transportation problem is one that must be given the most careful and sympathetic consideration. The history of the railroads and the important part they have played in the develop-

railroads and the important part they have played in the development of our Nation is admitted by all.

I am firmly convinced that we must develop in this country a broad national transportation policy, because the railroads must continue to operate. They furnish access to the markets as no other means of transportation can. In national defense they always have been and will continue to be indispensable. In carrying the mails nothing can take their place. They have employed, directly and indirectly, more men and women than any other single industry in America. If it were not for the equipment and supplies that the railroads secure from other industries, our unemployment problem would be more equipment. problem would be more acute.

No group of labor leaders in this country has had to meet more

pressing and acute problems than that in the railroad industry, and no group of labor leaders in the world has conducted itself with greater patience and more intelligence than that of the railroad

brotherhoods.

The very essence of government stability depends upon change. The late Justice Cardozo said: "We live in a world of change. If a body of law were in existence adequate for the welfare of today it could not meet the demands of tomorrow—there is change whether we will it or not."

The birth of new ideas because of

The birth of new ideas because of new needs and greater security for the masses is necessary. Governments, empires, kingdoms, and republics arose and declined because they falled adequately to meet the needs of their citizenship and to readjust, from time to time, their internal affairs.

At the present hour more than 375,000,000 persons are living under dictatorships, where freedom of assembly, freedom of speech, freedom of the press and of the radio, freedom of religious worship, and intellectual freedom have been completely abolished or drastically restrained; where free labor unions are not allowed to exist; where industry and capital have, to a great extent, been put into dictatorial strait jackets.

Under these forms of government, man is given to understand that he exists solely for the welfare of the State. The individual is completely submerged. He is assigned to a definite part of the national plan and is held responsible for his part of the plan's

fulfillment.

There is a complete loss of all the liberties so dear to the heart of all Americans. Liberties that we revere and that countless brave citizens fought to obtain and to preserve are destroyed.

The time has come for men of good will in all ranks of society to work together for the common welfare and for the preservation of our democracy.

I know from personal experience and contact that there is no

I know from personal experience and contact that there is no group within our borders more loyal to our institutions than the leaders and members of organized labor.

To put our own house in order is the best plan to meet any threat from without our borders, and all of us should dedicate ourselves to this great purpose. Labor, industry, and the Government, working together, can make democracy effective if they will unite in an effort to find a solution for the serious every-day problems facing all of us.

facing all of us.

I want to repeat that nothing is static. Changes are occurring constantly and we must make the necessary changes for the assurance and protection of a decent standard of living, adequate food, clothing, shelter, education, health, recreation, and work for all a guaranty of personal and social security and an opportunity for self-expression and growth. Until we do this we will not have discharged our moral, social, and political obligations.

We will as management. To

We are all industrialists—labor as well as management. To proclaim that the interests of labor and industry are fundamentally opposite is a mistake. Between capital and labor there is an interdependence so fixed and certain as to make complete success attainable only from understanding and cooperation. Economic read-

justments require careful study.

The Nation needs the cooperation of such men as are gathered at this convention. We need more teamwork, better understand-

ing, patience, and tolerance with each other.

This is a time for self-restraint in these very difficult times of readjustment. The country needs more smiles and less snarls. It

readjustment. The country needs more smiles and less snarls. It is a time for faith, courage, and cooperation.

Let me assure you, my friends, that so far as I am concerned, we are going to continue to place the security of the men, women, and children of this Nation first. We will not swerve from the determination to provide decent homes in which to live; to develop natural resources, and to safeguard the humblest citizen against the major misfortunes of life. We are going to continue to build for the future in a spirit of democracy against any possible threat of a dictatorship of tomorrow.

Let the delegates to this convention declare to the cynics of the world that America can't be liked.

world that America can't be licked.

EXTENSION OF REMARKS

HON. LEX GREEN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Monday, May 15, 1939

JOINT RESOLUTION OF THE FLORIDA LEGISLATURE

Mr. GREEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint resolution recently adopted by the Legislature of the State of Florida:

SENATE MEMORIAL 3

Joint resolution as a memorial to Congress to pass an act terminating the selling of munitions and war materials by citizens of the United States to the country of Japan

Whereas in the interests of humanity and world peace it becomes necessary that the President of the United States and the Congress of the United States take such action as will deny aid or assistance of the United States take such action as will deny aid or assistance of any kind to the country of Japan in the furtherance of the war against the country of China; and

Whereas denial of the right to purchase munitions and materials of war would effectively accomplish such purpose: Now, therefore,

be it

Resolved by the Legislature of the State of Florida:

SECTION 1. That this body memorialize the President of the
United States and the Congress of the United States to take immediate action to terminate the selling of munitions and war materials by citizens of the United States to the country of Japan.

SEC. 2. That the Senators and Representatives of the State of
Florida in the Congress of the United States give their support to
any measure that will accomplish the purpose of this resolution,
and that copies of this memorial be forwarded to the President of
the United States the President of the Separe and the Speaker of the United States, the President of the Senate, and the Speaker of the House of Representatives of the Congress of the United States, and to the Senators and Representatives of the State of Florida in

Amendment of the National Labor Relations Act

EXTENSION OF REMARKS

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1939

LETTERS FROM FRANK T. BOW, GENERAL COUNSEL, NATIONAL COUNCIL OF INDEPENDENT UNIONS

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters written by Frank T. Bow, general counsel of the National Council of Independent Unions:

APRIL 25, 1939.

Hon, Harold L. Ickes,
Secretary of the Interior,
Washington, D. C.

Washington, D. C.

Dear Mr. Secretary: In the name of the independent workingmen of the United States I protest against the purposeful discrimination shown against them by the Department of the Interior's so-called "American Forum of the Air." By "independent workingmen" I mean the vast majority—the 40,000,000 workers—who are not organized in unions or are organized in unions not dominated by national or international organizations.

I am speaking as general counsel for the National Council of Independent Unions, and in this capacity I shall relate to you the best of my protest.

Independent Unions, and in this capacity I shall relate to you the basis of my protest.

On Thursday, April 20, I learned that the forum was to offer a discussion of the National Labor Relations Act and the proposed amendments, on Sunday night, April 23, that Senator Burke had been selected to support the proposed amendments and that Senator Minton, whose distinction in labor-relations matters seems limited to his recognized ability as a rabble rouser, had been pressed into service to support the present act as a perfect instrument of law. I learned also that Mr. Joseph Padway, general counsel of the A. F. of L., and Mr. Lee Pressman, general counsel of the C. I. O., had been selected members of the discussion panel who argue the matter after the principal speeches.

It has been my understanding that the American Forum of the Air was represented to be an impartial, nonpartisan, unbiased feature of our Government for education and information. It is true

Air was represented to be an impartial, hospartisan, unbiased feature of our Government for education and information. It is true that I have heard different reports, reports to the effect that the forum was a subtle, and not too subtle at that, medium of propaganda for administration attitudes and projects, and that its so-called education purpose was a blind. I do not know anything about those reports beyond my experience, and my experience

supports the reports.

In these forums I have been informed that the nonpartisan character of the presentation is supposed to be preserved by having each of the principal speakers select an exponent of his views for the discussion panel which follows, and having the two other members of the panel selected as impartial representatives of the public—

of the panel selected as impartial representatives of the public—experts on the subject, possibly, but impartial.

I happened to know that Senator Burke had not, in fact, been given any opportunity to select the members of the panel to represent his views. That Representative HOFFMAN did a splendid job, despite the excess of time allowed to C. I. O. attorney Lee Pressman, is beside the point. When I learned that Messrs. Padway and Pressman were also on the panel, I naturally wondered which one was the unbiased, impartial representative of the public. It seemed to me that the panel was packed.

In behalf of the independent workingmen, whose interest in the

In behalf of the independent workingmen, whose interest in the Wagner Labor Act and its proposed amendments is in the ratio of 40,000,000 to the 8,000,000 claimed members of the international A. F. of L. and C. I. O. unions, I telegraphed the director of the forum program in Washington on Thursday, April 20, insisting that the interest of the majority be considered as well as the interest of the minority; that since the general counsel for the A. F. of L. and the general counsel for the C. I. O. were on the program, that the general counsel for the National Council of Independent Unions be

general counsel for the National Council of Independent Unions be also included, in the name of honesty and fair play. I received no reply. On Friday, April 21, I again telegraphed. Still I received no reply from the program director.

Saturday, April 22, I telephoned from Canton, Ohio. I could not find the program director, but I was told he would be at his home at 6 o'clock. I called at 6. I was told he was at the barber shop and would return home at 7. I called at 7, and, after determining who was calling, I was told he was out of town and would not return until 7 o'clock the next night; that is, Sunday night, the night

of the broadcast. It seemed obvious that he was giving me a runof the broadcast. It seemed obvious that he was giving me a runa-around, and, in accordance with the policy of the administration, was flouting the independent workingmen and playing into the hands of the C. I. O. To make sure, I determined that the program director was, in fact, in Washington and at home, and that he was, in fact, dodging me and evading the claims of the independent workingmen.

Now, Mr. Secretary, I am telling you all this because you have so often complained of the alleged "bias" of the newspapers. The facts I have related happened in your own department and they

may very well be standard practice.

The C. I. O. dominated La Follette committee, sometimes called the Civil Liberties Committee, and the C. I. O. dominated National Labor Relations Board have done everything they could to destroy the rights of independent workingmen and to beat them into inter-

national unions against their wills. Is the Department of the Interior joining this drive against independent workers?

The independent workingmen of the United States will await your reply and action with interest to learn what you may do to give them a hearing and to make the American Forum of the Air converties in fact.

nonpartisan in fact Very truly yours,

FRANK T. BOW, General Counsel, National Council of Independent Unions.

WASHINGTON, D. C., May 10, 1939.

The Honorable Elbert D. Thomas,

Chairman, Committee on Education and Labor,

Dear Senator Thomas: The National Council of Independent Unions desires to commend you on your suggestion that a conference be held between the National Labor Relations Board and proence be held between the National Labor Relations Board and proponents of certain proposed amendments to the National Labor Relations Act. However, we respectfully urge that the conference you have suggested represents a small minority of those who labor. What shall be done to protect the 40,000,000 independent working what shall be done to protect the 40,000,000 independent working men and women, many of whom are organized in independent unions, those who protest paying tribute for the right to work to the leaders of the international unions. Should not this large majority have some voice in such a conference?

We respectfully insist upon the right to join the conference between the Labor Board and the American Federation of Labor. Let it be known that we agree with many of the American Federation of Labor amendments as being constructive and a close to the state.

of Labor amendments as being constructive and a step in the right

The C. I. O., with a claimed membership of about 5,000,000, many of whom had to join and pay tribute to its international leaders by virtue of coercive methods, object to this conference. Why? The answer is easy. They have been able to exist only because of the benefit their leaders have been able to gain by virtue of the administration of the National Labor Relations Act by a pro-C. I. O. Labor Read Labor Board. Any labor group whose leadership will cripple an entire industry and threaten curtailment of labor's daily pay check in all industry of the Nation for purposes not beneficial to the men who labor but to further their own personal gains, as in the present coal strike, deserve no consideration in matters where the rights of workingmen to their daily bread is concerned.

We shall be pleased to cooperate with you and all others interested in the enactment of fair laws for the majority and safeguards

to the minority Very truly yours,

NATIONAL COUNCIL OF INDEPENDENT UNIONS, FRANK T. Bow, General Counsel.

Petitioners Urge H. R. 1

EXTENSION OF REMARKS

HON, FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1939

Mr. CASE of South Dakota. Mr. Speaker, one of the largest petitions received by me since I have been a Member of this body has recently been received in support of H. R. 1. commonly referred to as the chain-store bill. The petition carries the following heading:

To Francis Case and Other Members of Congress:

GenTLEMEN: We, whose signatures are attached to and make a part of this record, freely and most ardently believe in the following:
First. That to have a prosperous Nation we must have prosperous

That to have prosperous States we must have prosperous cities and communities.

Second. That to have prosperous communities, the people (in-dividuals) in that community must be prosperous.

Third. That to be prosperous the individual must be encouraged

and protected to own and operate his own business in that community. This induces home ownership also.

Fourth. That his (the individual's) choice of operations should be protected to any location, in any community, in any State of the United States; and that he be allowed to expand that choice in that community to his own limitations.

Fifth That no individual group or corporation should be also

In that community to his own limitations.

Fifth. That no individual, group, or corporation should be allowed, because of their financial ability to do so, to go into each and every community of every county, of every State in the United States, in the form of chain stores, or whatever form, taking the best locations in those communities and forcing previously prosperous individuals out of business in every community, city, county, and State in these United States.

Sixth We firmly believe that the bill before the Manual County.

Sixth. We firmly believe that the bill before the House of Representatives and known as H. R. 1 will do more to reestablish prosperity among the individuals throughout the United States than any

measure thus far proposed.

Seventh. This represents the only real method of the distribution of wealth, namely, at the source. Chains, in whatever form, take the wealth of the Nation to Wall Street, where it is a hard matter to distribute.

To this memorial to the Congress, there were over 700 signers, principally from the Black Hills region, as follows:

From Deadwood, 112; Rapid City, 82; Belle Fourche, 76; Lead, 74; Sturgis, 71; Custer, 54; Newell, 49; Spearfish, 47; Hot Springs, 26; Nisland, 25; Fruitdale, 14; Hill City, 12; Whitewood, 10; Vale, 7; Camp Crook, 5; Pringle, 5; Cedar Canyon, 4; and others from Blue Bell, Pactola, St. Onge, Sulphur, Hoover, Imogene, Sanator, Union Center, Zeona, Aberdeen, Buffalo, Buffalo Gap, Castle Rock, Central City, Fairburn, Hermosa, Silver City, Sioux Falls, Stoneville, Roubaix, and Twilight.

I have referred the petition to the Ways and Means Committee and urge their early consideration of the bill (H. R. 1)

on the grounds set forth by these petitioners.

America's Market for the American Producer

EXTENSION OF REMARKS

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Monday, May 15, 1939

Mr. PITTENGER. Mr. Speaker, Argentine beef has become the most widely known product outside of and inside of the United States ever since announcement on May 12 by the administration that the Navy would feed the Navy boys Argentine beef, and that a contract for the Argentine product would be approved. This made a hit in reverse motion with the cattlemen of the western section of the country, as well as all growers of cattle and also makers of meat products. There has been a storm of protest and the newspapers for the last 4 days have been filled with a defense of the American steer, that first-class four-legged American animal, who with the cow-the feminine representative of the herd-has been supposed to furnish meat for the great American consuming public. It has been traditional that one of the great delicacies in every well-ordered feast in England is roast beef, and the American product has had the lead.

Under the New Deal this tradition may be shattered, because the thing that has started the "dust storm" is canned beef, which is peculiarly a product of the Argentine. This must not be confused with corned beef which many of us ordinary individuals consider with favor when a hasty meal

is to be prepared.

"Cheaper and better" appears to be the argument which led the Navy Department to decide to fill the stomachs of the American sailors with Argentine canned beef, instead of supplying these men with beef from Wyoming or Texas or California, or a dozen other States. Even the reindeer in Alaska, one of our valued Territories, has been ignored in the New Deal with Argentina. This may give the American steer an inferiority complex, and if the philosophy announced on the 12th, namely feed foreign products to our Navy, is to be continued, then we still have the steer left to make dog food for the dog, one of man's best friends.

Seriously, Mr. Speaker, this episode brings us face to face with the protective-tariff question and also the administration policy of reciprocal-trade agreements. We are either going to save the American market for the American producer, or we are going to give it away at the expense of our own people.

I note with sympathetic interest the comment in one of yesterday's newspapers of a cattleman who insisted that individuals in home industry should be given a chance of furnishing their products to the Government they support.

Mr. Joe Sneed, of the Southwestern Cattlemen's Association, is reported by the Associated Press to have suggested that the Navy could buy uniforms, medicines, and other supplies from Japan, Germany, and England for 50 percent less than the Navy is now paying.

In this connection, Minnesota is also interested in saving the American market for the American producer because of many products besides cattle. The dairy interests want protection for their butter and other dairy products against importations from other countries. The timber producers want protection against importation of timber products from other countries. The same remarks apply to the fish industry in the Great Lakes area. This Argentine beef incident, which has raised such a storm of protest, points clearly to the soundness of a protective-tariff policy that will keep the American market for the American consumer.

The administration in control of our Government has the power to pass necessary legislation to correct conditions so that we can feed our men in the Navy beef, canned or otherwise, supplied by our agricultural interests. Such legislation ought to be passed at this session of Congress.

While this purchase of Argentine beef involves a relatively small amount of money, it is starkly symptomatic of the freetrade disease which is undermining our economic system.

As a matter of fact, I feel perfectly justified in asserting that it reveals fully one of the causes of current ruinous agricultural prices. The effect of these policies is to tell the farmers that they are not entitled to have the domestic markets exclusively for their own but must compete with the foreign low-wage producers.

The whole country is gradually becoming aware of the seriousness of the situation. A few days ago my good colleague from West Virginia, Congressman Schiffler, discussed this matter in a most forceful and convincing way. And in this morning's mail I have received letters which indicate that people are beginning to realize the foreign competition brought about by reciprocal-trade agreements of the new dealers has contributed substantially to the present depression in the United States.

The Story Behind the Headlines—Extend the Nine-Foot River Highway Through the Falls of St. Anthony

EXTENSION OF REMARKS

HON. JOHN G. ALEXANDER OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1939

Mr. ALEXANDER. Mr. Speaker, there is a story behind the recent headlines carrying the account of the action taken by the House of Representatives—May 10—when my amendment to the Army appropriation bill (H. R. 6260) was adopted

This amendment struck out the provision in the bill for river and harbor work which would, if left in, have prevented the use of any of the appropriation for the building of locks in the Mississippi River at the Falls of St. Anthony. This is a final chapter in a long drawn out fight for transportation justice for the Northwest and should in time assist materially in rehabilitating Northwest farming, industry, trade, and commerce, and through that of even the railroads themselves.

I do not intend to make a public statement or record of the story behind the headlines carrying an account of this long-sought victory except to say that it was the result of concentrated effort during my service here in the House and also as a result of the aid and interest on the part of several new friends whose acquaintance I have already been favored with among the many fine Members of the House.

The fact that the committee finally adopted my amendment before I could open my mouth in defense of it as I stood before the microphone on the floor of the House ready to speak is good proof that we had laid our foundation well.

A CRITICAL SITUATION

However, I do feel that my colleagues are entitled to know the facts and the situation surrounding this great need of Minneapolis and the Northwest, and I want therefore to make a short explanatory statement regarding same.

Screaming articles in our daily papers carry the statement that we are at the end of our borrowing for the ever-increasing relief load we are carrying. One front-page headline dated May 2 is as follows: "More Relief Bonds Declared Out of Question for City."

With our finances depleted and drained dry, with the recent lay-offs in W. P. A., and the resultant growing direct relief load, with our business and industry stagnating or moving away, with our railroads in distress because of the consequent continual falling off in transportation business, and with a growing dissatisfaction and discontent among our relief clients because of these things and because of the constant tightening of their belts to fit the thinner and thinner spreading of relief, we are indeed in a critical situation.

Minneapolis needs cooperation and help in this dire situation, and this action of the House is a good step in the right direction. We need the employment the building of the locks at St. Anthony Falls will create. We need your help in rehabilitating agriculture, business, industry, and transportation, which the great, new, expanded, upper harbor will make possible, and it will all help to lessen our burden on the Federal Treasury, a direct interest of every Member of Congress.

According to figures compiled by Carl H. Chatters, executive director of the Municipal Finance Officers Association of the United States and Canada, Minneapolis has been paying up to now much more of its relief burden than some other cities.

SIX TIMES AS MUCH AS CHICAGO

In fact, Minneapolis is paying six times as large a proportion of its over-all relief bill as Chicago pays.

While Chicago pays only 6 percent of its total public relief cost, Minneapolis meets 35 percent of its over-all relief load.

Here is a chart showing the comparative contributions of various governmental units toward relief in the two cities:

	Minne- apolis, percent	Chicago, percent
Federal State County City	51 10 4 35	62 25. 6 6. 3 6. 1

The assistance of the Members of the House in putting through my amendment will help us to keep up our good record in this respect and to make curselves more and more self-supporting as the upper harbor benefits develop and bear fruit in lower transportation costs and revival of business.

In addition to the above information, I also wish to insert at this point some of the facts and figures used by me in addressing the House, March 21, on the same subject as follows:

NEED TO EXTEND BARGE LINE INTO MINNEAPOLIS

Admittedly a lot of public money has been expended to make this Mississippi water highway an economical artery of commerce

for the benefit of the producers and the consumers of the Nation. Upward of \$600,000,000 will be the public cost reasonably chargeable against improvement work on this highway for the purpose of providing a dependable low-cost transport service. Most of this improvement work has been completed, and most of the expenditure of public money has been made. Only a comparatively small amount is now needed to bring the improvement work to completion, and the dream of its sponsors to fruition, and work to competion, and the dream of its sponsors to fruition, and this necessary amount should be provided for in this appropriation bill. We need less than \$20,000,000 to fully complete the upper Mississippi authorized projects, and the improvement work to be finished with this money is vital and necessary before Northwest agriculture and industry can obtain benefit from the huge investment that has been made to date. The improvement work thus far does not bring the highway within reach of the extensive facilities engaged in the handling of farm products of the Northwest or of industry in Minneapolis, and because of this it is imperatively necessary that the job be completed without delay of Lebow below. out delay, as I show below.

The important difference between water transport and rail transport is the item of cost which normally is 10 times greater by rail than by water. This tremendous benefit must be preserved in the interest of both consumer and producer, both of whom, in the final analysis, must pay the tax burden of transport

whatever the cost may be.

The philosophy of James J. Hill was that railroad management should so operate as to discharge its heavy tonnage at the nearest water port. The Great Northern Railroad was built to perform in that manner. Its western termini is at the Pacific Ocean. Its eastern termini connects with three important water highways eastern termini connects with three important water highways—the Great Lakes at Duluth-Superior, the Mississippi at Minneapolis-St. Paul, and with the Missouri at Sioux City, Iowa. If I were to offer a suggestion looking to an improvement in the affairs of rail transport, it would be that they encourage in every way possible the development of tonnage over the water highways of the Nation, that the cost of transport over such water highways be kept down as low as possible, and that they be prepared to handle an increased tonnage from each water port in proportion to the volume of tonnage that is being transported by water. Low water rates at Pittsburgh made that industrial center possible, and it has paid greater dividends to the railroads than to any other it has paid greater dividends to the railroads than to any other form of transport. Even the land highways have developed more tonnage for the railroads than they have taken from them.

SOME COMPARATIVE FREIGHT RATES

It would be interesting to a lot of folks to learn just why there is a rail problem in the face of the wonderful showing the rail managements have made. Their record for 1937 shows an earning equivalent to 3½ percent on all outstanding securities figured at par value of the stocks and bonds. This is nearly 6 percent on listed value of these same securities. The same record shows that the railroad employees for that year transported 1,000 ton-miles of revenue freight at a cost of \$6.41, as compared with a cost of \$10.78 back in 1921. The record shows that the income from this freight was \$9.33, or a margain of \$2.92, and this same record shows that every ton of all the railroads were handled on these average figures. It sure looks like the railroad employees did their job and did it well. This railroad showing was accomplished with less than 1,000,000 employees, and the way it figures out is something like this: 17 trainmen can transport, approximately, 10,000 tons of freight a distance of 150 miles in 8 hours. This looks like exceptional performance, compared with water transport, where it requires 24 employees and 24 hours of time to move the same amount of tonnage the same distance. But now look how it It would be interesting to a lot of folks to learn just why there is where it requires 24 employees and 24 hours of time to move the same amount of tonnage the same distance. But now look how it compares with transport by land highway. A 10-ton truck will do well to make 300 miles in 8 hours, and two drivers are necessary. That means that 300 trucks and 600 drivers can start off with a total of 3,000 tons and make a distance of 300 miles in 8 hours, or the equivalent of only 3,000 tons for a distance of 150 miles with 300 drivers. The freight cost by truck is no higher than the freight cost by rail, while the freight cost by water is only one-tenth the cost of rail transport. Anyone who starts to figure this out should remember that the cost of \$6.41 per 1,000 tonmiles includes the salary of every rail employee, whether he be miles includes the salary of every rail employee, whether he be section hand or bookkeeper.

Mr. Speaker, I would like to see all the Members of the Congress

use their pencils on the transportation problem and keep them-selves out of the whirlpool of confusion that seems to permeate the air. On the basis of comparative performance, the railroad employees seem to be far in the lead over other types of transport. The railroad problem is not due to the loss of tonnage to other types of transport, and the issue must be faced on the basis that the public will insist that each type of transport renders an invaluable service that must not be throttled in any manner whatsoever. I hope the Committee on Appropriations sets up for the United States Army engineers the full amount of money the engineers can States army engineers the run amount of money the engineers can efficiently use during their next fiscal year, which they say is \$102.975,800. Of this amount, we in the Northwest would like enough to complete the upper Mississippi River highway so that it will become of benefit to our Northwest agriculture and industry. There is no economy in huge governmental investments that are largely tied up and nonproductive because of being incomplete. We must complete these authorized and appropried projects and I set must complete these authorized and approved projects, and I ask and urge that we all join hands to complete the job. Complete a job that is far advanced toward completion and thus promptly discharge our responsibility to the regions of the country where these projects are expected to bring about substantial relief.

Continuing loss and hardship will come from further delay, and delay will not meet nor discharge our responsibility. It is upon this basis that I plead for your cooperation and support for an appropriation that will meet the need of the Army engineers for river and harbor work.

THE MINNEAPOLIS PICTURE

Now, in order to get down to cases and to view this problem intelligently, I wish to give the Congress a brief picture of our situation in Minneapolis. The present 9-foot channel comes up the river through a deep, perpendicular wall, which has been dug out by the water currents in the centuries gone by to a depth in most places of well over 100 feet. About a mile below the center of the business district on the west bank of the river under an old bridge there is room for two small docks. These docks in 1938 handled approximately only 40,000 tons of miscellaneous and package freight, 60,000 tons of oil, and 96,000 tons of coal. This is the maximum handling capacity for coal, although we use upward of 2,000,000 tons in the city annually, and would increase this consumption considerably if capacity for coat, atthough we use upward of 2,000,000 tons in the city annually, and would increase this consumption considerably if we could get it at a price which would encourage, instead of throttle, industry. I say that as a general hint and indication of what might happen to industry in this country in a general way if we were not handicapped in many cases by high, artificial prices on both labor and material—in fact, on about everything except agricultural products. Our basic all-rail freight rate on prepared sizes of coal is nearly \$6 per ton from the Pennsylvania and West Virginia coal fields, which means an exorbitant retail price to our consumers. Think of the increased price which it would be possible to pay at the mine to both the operator and the miner if we could connect our waterway with our Minneapolis industry, our Northwest agriculture, and our milling terminals in a real measure of service, such as would be the case by the expenditure by the Federal Government of only about \$4,000,000 this year and a total of about \$8,000,000 altogether. This expenditure is recommended by the United States Army Engineers, I will say for the benefit of new Members, and also by an act of Congress in 1937, when the extension of the water highway through the Falls of St. Anthony was formally approved, subject to your making the necessary appropriation therefor. priation therefor.

minneapolis and the Northwest needs this extension very badly. Awaiting it we have millions of tons of freight annually. Our industry, our mills, and our harbor facilities all lie at or above this famous and historical falls. Just above the falls we have an ideal, level shore line for miles on both sides of the deep water forming the upper harbor. Give us this appropriation to build the necessary locks through the falls and we will be well on the road to sary locks through the falls and we will be well on the road to recovery, and the upper river channel expenditures of so many millions will have value and meaning. Deny us this small request and we will soon be worse than problem child No. 1, for our relief demands will be still greater, bad as they are now, with some 90,000 on the rolls; our mills and industry will completely stagnate, and with them our railroads, and our farmers will be forever bankrupt. I hope this body, knowing our desperate situation, will look favorably upon our plea. [Applause.]

Detention of Certain Aliens Pending Grant of Passports or Other Departure Arrangements

EXTENSION OF REMARKS

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Friday, May 5, 1939

Mr. HOBBS. Mr. Speaker, the pending measure is the outgrowth of the work of the Committee on the Judiciary in pursuance of the inquiry under the resolution of our colleague, the Honorable J. PARNELL THOMAS, which sought the impeachment of the Secretary of Labor, the Solicitor of Labor.

and the Commissioner of Immigration. In that work we discovered that during the year 1938, 460 aliens who had been ordered deported by the duly constituted authorities of our Nation could not be deported because of the failure or refusal of foreign governments to permit their return.

Some of us were shocked by that discovery. We had not realized that in so many cases the sovereign deportation power of the United States was being thwarted.

We felt that the number of such cases might indicate collusion between many of these aliens and officials of their home governments, or worse.

The vast majority of these aliens are as free as any citizen, and yet they had each been adjudged unfit to remain here, and, after due, fair, and proper procedure, solemn warrants of deportation had issued.

The problem was given careful, intensive, and extensive study. It was found that while, of course, all of these had forfeited their privilege of living in this country by violating our law, yet in only a few cases were the offenses serious enough, or so socially significant as to warrant the provision of the manifest remedy. But in those few cases the offenses were both serious and socially significant. So the conclusion was reached that as to those few of such aliens whose conduct had placed them in any one of the four worst classes-white slavers, narcotic venders, anarchists and others advocating the overthrow of our Government by force, and felons whose crimes involved moral turpitude, not as to their own entry or naturalization—the right of detention necessarily incident to the right of deportation should be broadened, by authorizing, clearly, detention until deportation should have become feasible or other departure arranged, or until the Secretary of Labor, upon sufficient evidence of good cause, should order the release of any one of them temporarily or permanently, with or without rescission of the warrant of deportation.

The bill now under consideration has resulted from that conclusion. It was introduced, referred to the Committee on the Judiciary, and after hearings before a subcommittee which reported it favorably to the full committee, the full committee reported it favorably. The Rules Committee held two hearings on it, and on last Tuesday the House voted to adopt the rule granted by the Rules Committee making its consideration in order.

Mr. Speaker, Bishop Warren A. Candler, then the distinguished senior bishop of the Methodist Episcopal Church South, was holding a conference upon one occasion and he preached upon a text from that portion of the Scriptures containing the story of Ananias and Sapphira. "God did not strike Ananias and Sapphira dead for lying," that great preacher said. "God does not strike people dead for lying. If He did, where would I be?" A titter which grew into laughter swept that vast audience; that this distinguished prelate should thus involve himself. But immediately he continued. "I will tell you where I would be. I would be standing here preaching to a bunch of corpses." [Laughter.]

I am glad that God does not strike people dead for lying, but if He did, some of the statements in the latest edition of this Communist organ which I hold in my hand, and in the flood of telegrams and letters with which Members have been deluged the last few days, would have made the business of the undertakers boom and would have relieved us of some of the responsibility we are trying to discharge by the passage of this bill.

This telegram is one of hundreds sent out from Washington, D. C., although it is signed with Louisville, Ky., written after the name of the alleged sender, meaning, of course, to indicate that it was sent from Louisville, Ky. Each of these telegrams originating here in Washington in the master mind who sent them sought to make it appear that they had been sent from as many different cities as there were telegrams. In other words, though every one of them originated in and was sent from Washington, the false impression was striven for that the opposition to this bill was widespread over the Nation. Members of Congress do not claim to be the most brilliant citizens of our Republic, but they are not as stupid as the sender of these telegrams thought. At least we can read "Washington, D. C.," at the top of telegrams.

There is not one word in this bill directly or indirectly authorizing the establishment of a concentration camp, nor of a detention camp, nor of a stockade, nor of any additional places of confinement. The present immigration stations and the Federal penitentiaries are not only amply sufficient for the additional detention authorized by this bill, but it is specifically provided in section 3 that-

The Secretary of Labor is hereby authorized and directed to arrange for apppropriate places of detention in established institutions for those aliens required by this act to be taken into custody and confined.

Any Federal institution designated by the Secretary of Labor in a detention order hereunder shall receive the alien subject to such order, any provision of law to the contrary notwithstanding, and

shall deem any appropriate order of the Secretary of Labor sufficient warrant for discharging any such alien.

The appropriation of such sums of money as may be necessary from time to time for the maintenance and care of detained aliens in such places of detention, including the cost of the removal of such aliens thereto, is hereby authorized.

These are the "vicious," "awful," "barbarous," "inhuman," "undemocratic," and "un-American" provisions which opponents claim to authorize the establishment of Hitleresque concentration camps and stockades. There is nothing in the pending bill to justify any such interpretation. This propaganda merely creates a bogeyman in an attempt to frighten us. The language is as plain as words can make it. No such interpretation could possibly be placed upon it. Without proper arrangements being made in advance for appropriate places of detention in established institutions, and without specific authorization for them to be admitted thereto upon the order of the Secretary of Labor, the aliens to be confined under the provisions of this bill might be denied admission to Federal penitentiaries. Therefore, the bill authorizes and directs such arrangements to be made and further provides that any Federal institution designated by the Secretary in a detention order hereunder shall receive the alien subject to such order. The immigration stations being already under the jurisdiction of the Secretary of Labor, and ample provision therein being already available, no specific reference to them was necessary. Absolutely no new or other places of detention could possibly be established or utilized.

Yet these preposterous misrepresentations flood us and the

Let me read an amusing postcard which came to my desk with thousands of others. It is directed to Congressman Heil Hitler Hobbs:

As to your Fascist bill, H. R. 5643, America is going to remember you very well, Mr. Snobbs, Wobs, or Chobs. The name "Hobbs" has the stench of an English pigpen about it, and so certainly is appropriate, Mr. Knobs. Go back to Hitler, you dirty skunk.

If this were a cussing match I admit that I would be outclassed. I have been called many pet names since this fight began. Among a host of other complimentary references, I have been called a monkey, a wolf, a hog, and a dirty skunk. But I hold no grudge against this nor any other communistic sheet, nor against the equally subversive force behind these telegrams.

The gentleman from New York [Mr. Celler], the distinguished ranking Democratic member of our committee, complains that the Committee on the Judiciary did not take into consideration a letter written by the Secretary of Labor. If he will take the trouble to look at that letter he will see that it was written after the bill had been reported to the House. But had that letter been there, that committee, composed of 25 lawyers, would not have been very apt to have followed the legal advice of the Secretary of Labor, who is not a lawyer, upon the question of the constitutionality of this bill unless they agreed with her, which they did not.

It is said that the present law is sufficient. Sufficient for what? Sufficient to permit continuation of the pollution and poisoning of the blood stream of the body politic of this Nation. There its sufficiency ends.

The honorable gentleman from New York [Mr. Dickstein]. chairman of the Committee on Immigration and Naturalization, complains that he now has in the Rules Committee a bill, which is being held up there, that would if given a rule and passed by the House permit him and his committee to study this whole problem. In God's name, what have you been doing all these years? Why can you not study it now? You evidence a profound knowledge of the facts and an intimate mastery of the whole problem every time you make one of your many speeches on this subject in this House. You do not need a rule. What you need is inclination. [Applause.]

While you are cussing the Rules Committee for not giving you authority to make a study, we are doing business for God and for this country in the pending bill. [Applause.]

May I now quote from the minority report made by the gentleman from New York [EMANUEL CELLER], in which it is said that only 850 would be taken care of by this bill. Well, 12 men whom we read of in Holy Writ were said to have turned the world upside down in their generation. They did so by preaching a gospel to which we have sadly become hardened. In that same Book of Books we read, "Be not deceived: Evil communications corrupt good manners"; and again, "Righteousness exalteth a nation; but sin is a reproach to any people." This bill is in accordance with those Biblical injunctions. It seeks to make this land a better place in which to live. Even if this bill never takes "out of circulation" more than 850 of these uninvited guests who have outraged our hospitality, it would have done that much to purify our social atmosphere. Each one of those at whom this bill is aimed is a breeder of discord, a purveyor of dissatisfaction, a potential, if not an actual, debaucher of youth.

Mr. Speaker, I am glad this bill comes up for final passage in Child Health Week. Children all over this country are being preyed upon by peddlers of marijuana cigarettes and other narcotics. Some of the flower of our youth are being transformed into dope flends. A distinguished gentleman from a neighboring State told me just yesterday that he knew of one alien woman—a flend incarnate—who had sent into the degraded pollution of bawdy-house life over a hundred American girls in his State. Yet we allow such people to live here as free as any one of us, even though they be aliens who have no right to live here and who ply their iniquitous trade in open defiance of our law. The perpetuation of such outrageous travesties upon justice is what you opponents of this bill are pleading for, whether you know it or not.

May I call your attention to a letter signed by the general counsel of the C. I. O., Mr. Lee Pressman? I will not take time to read it because all of you received it, and I have no doubt you read it, as I did. He states:

This bill would authorize the detention of any alien who has been ordered deported, but who, through no fault of his own, is unable to secure a passport from the government of his native country.

That is not what men of long experience in the Immigration Service tell me. They say that 9 out of 10 of the aliens covered by my bill remain here as a result of slipping a bribe to one of their local consular agents, or by collusion with their home governments. They remain here, mark you, in spite of a solemn warrant of deportation, duly made in conformity with our law, by our duly constituted immigration authorities. after full and fair hearings, in which they had the right to be represented by counsel of their own choosing, and to disprove by any evidence they could adduce the charges against them. The important ones, who have qualified as efficient propagandists for the overthrow by force and violence of our Government and for the establishment of some communistic or anarchistic heaven on earth, have made themselves so valuable to "red" Russia, for instance, that Russia will not receive them back but wishes to keep them here on the job. The unimportant ones-the small fryhave to go down and slip a hundred-dollar bill to some local consular agent of their foreign government and say:

"Now, remember, this is not a bribe. I have been trying ever since Christmas to think of something nice to buy for you, but I have not been able to decide. Here is something I want you to take and use just as you see fit. There is just one thing I want you to remember, and that is I do not want to go back to Italy"-or to whatever may be his homeland. That is why most of them are here, so the experts tell me. Occasionally there may be one who through no fault of his own is unable to secure a passport from the government of his native country. I grant that. But may I inquire how Uncle Sam is to blame for that? Are the people of the United States to continue being compelled to suffer from their presence, merely because they cannot secure passports? And note this well: There is nothing in this bill which requires the detention of any alien until passport for him can be secured. The bill reads:

That any alien in any of the classes indicated in section 2 of this act, who has been or may hereafter be ordered deported by the Secretary of Labor, but whose deportation or departure from the United States otherwise is not effectuated within 90 days after the

date the warrant of deportation shall have become final, shall be taken into custody and transported to such place of detention as may be designated by the Secretary of Labor and there, or in such other place or places as may be thereafter designated by the Secretary of Labor, confined, though not at hard labor, until such time as deportation shall have become feasible, or departure from the United States otherwise shall have become arranged, or until the Secretary of Labor, upon sufficient evidence of good cause, shall order the release of such alien, temporarily or permanently, on such bond as may be required, with or without rescinding the warrant of deportation.

There are three other ways by which any alien covered by this bill may be released from the detention required: First, by shipping as a seaman on some vessel bound for a foreign shore, without passport or other authority; second, by obtaining from some foreign government a visitor's visa; third, by obtaining from some foreign government any other form of travel document when passport is not forthcoming. It is inconceivable that many aliens will find it impossible to arrange for their departure from the United States in one of these four ways. By making departure arrangements of any kind, any alien detained under this bill can escape further detention.

Mr. Pressman continues:

The result would be that such individuals would be placed in concentration camps for the rest of their lives.

This statement is so preposterously false as to require no answer. It is only necessary to point out that there is no provision anywhere in the bill for confinement of anyone in a concentration camp. In fact, it is utterly impossible that anyone could be so confined under the provisions of this bill. While it is conceivable that there might be an alien confined for a considerable length of time, and possibly for life, in an immigration station or a Federal penitentiary, by virtue of the passage of this bill, yet it is such a remote possibility as to be negligible. No alien can be detained longer than necessary for him to make some kind of departure arrangements.

Quoting further from Mr. Pressman's letter:

This procedure is a violation of the fundamental principles of justice and in contravention of our constitutional guaranties.

What fundamental principles of justice does it violate? Every one of the aliens who will be dealt with came here uninvited and forfeited his right to remain here, as in each case will have been adjudged by our own immigration authorities, in accordance with our law, before this act can touch him. It is a universally recognized principle of law that no alien has any right to live in this country except by complying with our laws. "In contravention of our constitutional guaranties." Whose constitutional guaranties? The Constitution of the United States and the rights therein assured are for the benefit of citizens, not aliens. It is true that in criminal cases due process of law is required even for aliens. But deportation is not a criminal proceeding. This is pointed out by the gentleman from New York [Mr. Celler] in his minority report on this bill. The Supreme Court of the United States has repeatedly so held. So no alien, much less one of the four worst classes of them, can complain that we do not accord him in this civil proceeding the rights reserved for citizens. No alien has the "right" to be or remain here, much less these.

These fulminations of Mr. Pressman are on a par with the statements of these other gentlemen who have been prating about the guaranties of the fifth, sixth, and fourteenth amendments of the Constitution of the United States, which are stressed in the minority report. Their plea for due process of law for aliens in a civil case is, with all due deference, pointless. The Supreme Court of the United States has made this clear in any number of its decisions. But via habeas corpus they achieve practically the same result—judicial review—as citizens get by the same means.

There is one part of Mr. Pressman's letter which is as true as gospel. He intimates that this bill is one of those designed to intimidate and threaten "workers." Yes; this bill is designed to intimidate and threaten workers. Workers, as busy as bees, engaged in smuggling dope and selling it; selling innocent girls into white slavery and exacting a "cut" out of the wage of shame; committing felonies involving moral

turpitude; and advocating the overthrow of our Government by force and violence. They are workers, all right. And I glory in the fact that this bill is intimidating them and all their "buddies." Pass this bill and the United States will no longer be as free and profitable a place for the white-slave procurer, the pimp, the peddlers of dope, the anarchists, and the felons whose crimes involve moral turpitude. [Applause.] They and their ilk and their sponsors are the very ones I am shooting at and talking about.

The gentleman from New York [Mr. Celler] made a statement today, hedging a little bit on the statement he made in his former speech opposing the rule which the House voted for this bill. Today he said the State Department would, beyond the peradventure of a doubt, agree with the Secretary

of Labor. But the other day he said:

I have been in touch with the State Department. They have indicated they would much prefer to deal with the question in the way indicated by the gentleman from California—namely, by treaty arrangement—and for some time past they have been endeavoring to work out a situation satisfactory to all parties. They feel that this method of attacking the problem is an erroneous method.

I did not know anyone to whom I might appeal in the State Department who had more authority to speak for it than its head, the Secretary of State, the Honorable Cordell Hull. He read to me the only letter the State Department had written on the subject. It had never been signed and had never been dispatched; yet the gentleman from New York said they have written a strong letter opposing my bill. Mr. Hull read the letter to me. The letter did not corroborate the statement of the gentleman from New York, and it had not gone out when the gentleman from New York made that statement. Now, I do not know to whom the gentleman has been talking in the

State Department, but I give you my authority.

The gentleman from New York [Mr. Celler] and several others would have you believe that the violation of the prohibition law when the old Volstead Act was in effect could bring an alien within the purview of this bill. They cry out against the inequity of detaining an alien who has been ordered deported pending departure arrangements when his only crime has been to have in his possession a bottle of beer. My answer is: First, this act stipulates specifically that the only criminal offenses covered are those denominated in our deportation statutes as "crimes." The possession of a bottle of beer—or any other intoxicating liquor-has never been a crime. It has always been a misdemeanor under all State and Federal prohibition laws. Second, but it is not even "crime" which warrants deportation. It is only those crimes which involve moral turpitude. And in my bill I specifically exclude even those crimes involving moral turpitude which are connected with the entry or naturalization of the alien. Moral turpitude is defined in Webster's New International Dictionary as follows:

The quality of a crime involving grave infringement of the moral sentiment of the community as distinguished from statutory mala prohibita.

Moral turpitude is defined in Forty-sixth Federal Reports, second edition, page 755, as "an act of baseness, vileness, or depravity"; and in Thirty-fourth Federal Reports, second edition, page 920, as "shamefully immoral." These definitions give us the true meaning of moral turpitude. Mere violation of the prohibition law is not such an offense. It has been repeatedly held by the courts not to be a crime at all, much less one involving moral turpitude. There are court decisions which hold that certain violations of the prohibition law involve moral turpitude, but mere illegal possession of liquor is not one of those. Third, there never has been in the history of this Government a single alien deported on the ground that he has violated the prohibition law. There is one case—and only one—which comes anywhere near supporting this contention of the opponents of the pending bill. That is the case of Rousseau against Weedin, reported in Two Hundred and Eighty-fourth Federal Reports at page 565. In that case a man who ran a house of ill fame in which he sold liquor illegally, as a business, was convicted under a Washington State statute as being a "jointist"; that is, a man who ran a "joint." The court said that because the "joint" he ran was of ill repute and was being run for the open sale of liquor in violation of the law of that State he could be deported. [Applause.] That is the only case in our Nation's history giving any semblance of support to the fear averred by the opposition, and it was not a mere case of possessing liquor unlawfully, such as they hypothesize.

Therefore, as there is no case in the past wherein any alien has been ordered deported for violating the prohibition law to be resurrected, as there is no such case pending, and as there is no reasonable possibility of one in the future, their alleged fears on this score are absolutely groundless.

The gentleman from New York [Mr. MARCANTONIO] is alarmed by the fear that the right of review provided in this bill is insufficient. May I remind the gentleman that before any alien may be ordered deported an affidavit must be made charging him with a deportable offense? This is reviewed by the immigration authorities and if deemed sufficient a warrant of arrest is issued and the deportation proceedings then begin. Deportation proceedings include a hearing before an immigration commissioner who hears the evidence both for and against the defendant. At this hearing the defendant has the right to be represented by counsel. After the commissioner makes his findings and reports that the evidence warrants the deportation of the alien, his report together with the evidence upon which it is based is transmitted to a board of review here in Washington, composed of seasoned veterans of the Immigration Service. They review the findings and the evidence and either affirm or send the case back for further hearing. Finally, after the proceedings have been approved by the board of review, the Secretary of Labor takes the record, goes over it carefully, and if satisfied that the decision of the commissioner, as affirmed by the board of review, is in accordance with the law and the evidence, a warrant of deportation is issued.

From beginning to end of these proceedings any alien has the right to appeal to the courts for a writ of habeas corpus to test the validity of the proceedings, or of his detention by virtue thereof. He may then, if the decision of the lower court be adverse, appeal to the circuit court of appeals, and if not satisfied with the decision of that court, may apply for the writ of certiorari which, if granted, will entitle him to a review by the Supreme Court of the United States. Take the case of Joe Strecker, for illustration. After due hearing before the immigration commissioner, the commissioner's report and the evidence upon which it was based were sent up to the board of review. The board of review did not think there was sufficient evidence of the character and purposes of the Communist Party to warrant the affirmance of the commissioner's report recommending the deportation. So the board of review ordered the case sent back to the commissioner for further hearing. Another hearing was had, further evidence adduced, both pro and con, and the commissioner again recommended his deportation. A second time the case came to the board of review. This time the board affirmed the decision or recommendation of the commissioner. The Secretary or, in that case, one of her assistants, duly authorized by law, reviewed the record and in due course issued the warrant of deportation. Two years ensued, during which the immigration authorities and the State Department sought a passport from the Government of Poland which would permit the deportation of Joe Strecker to be effectuated. Finally the passport was forthcoming. Then Joe Strecker appealed to the United States district court in Arkansas-the State in which he lived-for a writ of habeas corpus.

After due hearing the United States district judge denied Strecker's petition for freedom and remanded him to the custody of the immigration authorities for deportation. Strecker then went to New Orleans, La., surrendered himself to the immigration authorities, but immediately sued out a second petition for a writ of habeas corpus before the United States district court there. Again there was a hearing and Judge Borah rendered the same judgment which the Arkansas district judge had handed down. Strecker took an appeal from this decision to the United States circuit court of appeals. That court reversed the case and remanded the same to Judge Borah's court for further preceedings, a trial de novo. The

United States certioraried the case to the United States Supreme Court. The United States Supreme Court passed upon the case a few weeks ago and Strecker is a free man. The same rights which were exercised by Joe Strecker are open, free, and available to every alien who may become involved in deportation proceedings. The pending bill does not take away any right whatsoever of the kind to which Joe Strecker resorted. Every alien has them and will continue to have them. The pending bill deals only with those aliens as to whom the warrant of deportation may have become final.

As to such aliens this bill has no effect whatsoever, unless deportation cannot be effected within 90 days after the order of deportation becomes final. Then, after our duly constituted authorities, administering the law we wrote, have solemnly adjudged that they are unfit to live here and should be deported, and that order has stood the test of the courts if the alien sees fit to invoke their ruling, and only if the government of the alien's homeland shall have failed or refused to grant him permission to come back home-or for any other reason the order of deportation cannot be effectuated-then and not until then does this bill come into action. It simply provides that under these circumstances our law and our sovereign right to deport the four worst classes of such aliens may not be longer set at naught by foreign governments. It requires that such aliens of the four worst classes shall be taken into custody and confined, though not at hard labor, pending departure arrangements or passport. If and when the order of the Secretary of Labor has been issued for this further detention in aid of deportation, this bill gives every alien subject to such an order the right of petition to the circuit court of appeals with or without resort to the petition for the writ of habeas corpus. The jurisdiction of the circuit courts of appeals is enlarged so that they may hear and determine the question of the validity of the detention of any such alien.

In view of the fact, therefore, that at all times prior to the final order of deportation every alien has the right of habeas corpus, unsuspended, the right of appeal from an adverse ruling, and the same right, substantially, after the order of detention under this bill, and in view of the fact that in the case of Lai To Hong v. Ebey (25 Fed. (2d) 714) the Circuit Court of Appeals of the Seventh Circuit declared the law

This [deportation] statute is valid though it provides an administrative instead of a judicial hearing, an alien remaining unlawfully in this country having no right to a hearing unless that the state of the state be accorded him by Congress; it seems to me that instead of being criticized for an alleged failure of this bill to respect wholly the rights of aliens, we might be subject to criticism for extreme liberality in that regard.

The gentleman from New York [Mr. GAVAGAN] seems to be worried by the fear that this law would be an ex post facto law within the condemnation of our Constitution. stitutional inhibition against the passage of ex post facto laws cannot possibly have any application whatsoever insofar as this bill is concerned. What does the guaranty against ex post facto laws mean? Simply this, and nothing more: If I commit an act against which there is no law at the time of commission, no law thereafter passed can make that act punishable.

In other words, if the act I did was not a violation of law at the time I did it, no subsequent legislation can make me suffer the pains of law for that act. The Supreme Court has so held many times. This bill cannot by any stretch of the imagination be said to be ex post facto. In fact, it imposes no punishment whatsoever. It merely seeks to aid our own authorities in their efforts to accomplish deportation and to make it to the interest of these worst aliens to aid in that laudable undertaking. Now that we have, I hope, disposed of some of the arguments and fears which may have been confusing, and having cleared ship for action, let us look at the

Who are these that opponents of this bill would keep here in freedom, though Congress and its administrative agents have said must go hence? This bill only applies to the four

worst classes of aliens condemned to banishment by the law of this land:

First. Those aliens who are anarchists; or who advise, advocate, or teach, or who are members of or affiliated with any organization that believes in, advises, advocates, or teaches the overthrow by force or violence of the Government of the United States, or of all forms of law; or the duty, necessity, or propriety of the unlawful assaulting or killing of any officer or officers of the Government of the United States or any other organized government because of their official character; or the unlawful damage, injury, or destruction of property, or sabotage.

Second. Convicted criminals who have committed felonies involving moral turpitude not as to their own entry or naturalization.

Third. White-slave procurers, proprietors, protectors, and pimps.

Fourth. Narcotic smugglers and peddlers.

There may be many other aliens who should be included within the operation of this bill. But surely we should not longer tolerate the presence here, in the freedom which you and I enjoy, of any alien who comes by reason of his own conduct into any one of the four classifications just enumerated. Illustrations might be multiplied to prove the necessity for separating these worst aliens from the life of our Nation. But one illustration of the need for this bill is so recent and so pointed as to suffice. For the past few weeks the daily papers have carried in almost every issue stories as to the operations of the poison murder ring of Philadelphia. One member of that ring, I believe, has admitted that he, personally, has had part in the lethal poisoning of 21 persons. The same man was quoted as saying that he knew of more than a hundred other cases in which other members of the ring had murdered their victims by poison. At least one member of this ring and probably others is now in the toils of deportation proceedings. Cesare Valenti is his name. I have a letter from Hon. James L. Houghteling, Commissioner of Immigration, giving me the facts about Valenti. He says:

> UNITED STATES DEPARTMENT OF LABOR, IMMIGRATION AND NATURALIZATION SERVICE, Washington, May 4, 1939.

Hon. Sam Hobbs, M. C.,

House of Representatives, Washington, D. C.
MY DEAR CONGRESSMAN HOBBS: In compliance with your telephonic request, the following facts are submitted in reference to the case of Cesare Valenti:

The above-named alien, who is a native and citizen of Italy, was admitted to the United States for permanent residence on April 14, 1909, and has resided in this country continuously since that time. The case was first brought to the attention of this Service in August 1933 by his divorced wife, at which time she submitted a certified copy of his criminal record in Italy prior to his embarkation for the

copy of his criminal record in Italy prior to his embarkation for the United States.

It appears that he was in constant conflict with the police authorities in Italy from 1896 to 1908. In 1903 he was sentenced to imprisonment for a term of 7 months after conviction on a charge of assault and battery. In the same year he was sentenced to imprisonment for a period of 3 months 26 days after conviction on a charge of "threatening with arms." In 1904 he was sentenced to imprisonment for a term of 3 years 5 months 20 days for "theft and wounds," and in 1908 he was sentenced to a term of 3 months 5 days after conviction on the charge of "threats" of threats of the charge of "threats" of threats. term of 3 months 5 days after conviction on the charge of "threats with arms."

It further appears from our records that in December 1918, in the court of quarter sessions for the county of Delaware, State of Pennsylvania, Valenti was indicted on a charge of murder, volun-tary and involuntary manslaughter. On December 5, 1918, he was reported to be a fugitive from justice, but on March 26, 1919, upon his plea of guilty to second-degree murder, he was sentenced to a term of imprisonment for a period of 15 years. He was not deportable for this conviction because the crime was not committed within 5 years from the date of his entry, which, as above stated, occurred on April 14, 1909.

On July 31, 1933, a warrant issued for his arrest in deportation On July 31, 1933, a warrant issued for his arrest in deportation proceedings on the ground that he is in the United States in violation of the act of February 5, 1917, in that he has been convicted of or admits having committed a felony or other crime or misdemeanor involving moral turpitude prior to entry into the United States; to wit, theft, assault and battery, threatening with arms, theft and wounds, threats with arms, and wanton destruction. After the issuance of the warrant of arrest he could not be located until January 24, 1939, when he was arrested by the New York City police on a charge of felonious assault. He was convicted on this

charge, and upon the expiration of his sentence was taken into custody by immigration officers attached to the Philadelphia office on April 30, 1939, and conveyed to Philadelphia for a hearing in de-portation proceedings. He is now in custody of the police officials in Philadelphia, and it has just been reported that he has confessed in Philadelphia, and it has just been reported that he has comessed to being implicated in the wholesale arsenic poison murders, for which 14 others have been arrested by the Philadelphia police. We understand that Valenti has not yet been indicted, but it is expected that this will occur most any day. The deportation proceedings are being held in abeyance pending the outcome of the criminal prosecution. The immigration officers in the Philadelphia station are in content of the content of the police officials of Philadelphia. cution. The immigration efficies in the Philadelphia station are in constant contact with the police officials of Philadelphia for the purpose of determining whether or not any of the other persons who have been arrested in connection with the wholesale arsenic poison murders might be subject to deportation. Thus far Valenti is the only one of the number who has been found subject to deportation. In this connection, however, it may be stated that there is one other case where deportation proceedings have been instituted and wherein the alien concerned is suspected of being involved in the arsenic murders. Nothing has yet been definitely volved in the arsenic murders. Nothing has yet been definitely determined as to this case, however.

Cordially yours,

JAMES L. HOUGHTELING, Commissioner.

P. S .- I think you will be interested in the enclosed copy of a letter received from the district attorney of Philadelphia commending the work of the Immigration and Naturalization Service in connection with the Valenti case.

[Enclosure]

DISTRICT ATTORNEY'S OFFICE, Philadelphia, May 1, 1939.

In re Cesare Valenti and the arsenic ring in Philadelphia.

Hon. Frances Perkins,
Secretary of Labor, Washington, D. C.
DEAR MADAM PERKINS: I want to extend to you my appreciation
of the valued assistance which your Department rendered my office in the investigation of the arsenic murder ring in Philadelphia

I particularly want to thank you for the assistance which Mr. James L. Hughes, district director of the Gloucester immigration division, rendered me in the transfer of Cesare Valenti from New York to Philadelphia, and I also want to recommend Inspector Schiavo in the assistance which he and the Gloucester officials rendered the office in the case of Herman Petrillo, who has been convicted of murder in the first degree with the recommendation of death.

With the feeling that your Department will continue its fine cooperation with our office, and thanking you for your Department's valued assistance, I am,

Very truly yours,

CHARLES F. KELLEY. District Attorney.

Some of you may not agree with me, or with the law of this land, or with the determination of our duly constituted authorities that such deportable aliens should not be permitted to live here in freedom, merely because of the pretense that they cannot make departure arrangements of some kind. But I say to you that men like Cesare Valenti have never made a valuable contribution to the life of America. They have frequently taken lives which would. And if the deportation proceedings now pending against him result in a final order of deportation, and if arrangements cannot be made for him to return somehow to his native Italy, then I reiterate and insist that some such measure as the pending one should require that he be separated from the free life of America, even though it means detention for life. Keep them here, if you wish, but I do not. [Applause.]

The next question which naturally arises is: Why are they here? The obvious answer is that our laws have been set at naught. Our sovereign powers have failed. In some instances that failure has been due to the whim or caprice of foreign governments; but in the main, they act with solemn assurance in vetoing our right of deportation. They seem to know what they want, and how to get it. Collusion and bribery undoubtedly play their part in forcing us to retain these undesirables. But if none of these things be true, then the only alternative answer is that they are so bad nobody wants them, but the opponents of this bill.

The next question is, What would this bill do? It would simply detain until the aliens themselves or their families or friends see fit to arrange for them to go home.

The effect of this bill is, merely, to extend section 20 of the act of February 5, 1917, to cover cases, not then anticipated, in which the deportees are so bad that no country will suffer their reentrance.

In such cases the beneficent provision of the pending bill is, that they are to be made "parlor boarders" of Uncle Sam

until they can persuade their homefolk to let them come back home. Thereupon they get a free trip back home, at our expense, and are as free as they ever were.

This may be subject to the criticism that it would place an unwarranted burden on Uncle Sam, and be too kindly treatment of the worst alien enemies who have outraged our hospitality and bitten the generous hand that fed them; but it cannot be justly said to be harsh, much less cruel.

This detention is in no sense penal. No punishment whatever is inflicted or provided. Hard labor is expressly inhibited. Many a good citizen would welcome an exchange of lots with one of these alien enemy hand biters who will get three good square meals a day and a kindly, comfortable home as long as he wishes.

The "sob sisters," who have joined the "reds" in fighting this bill, simply fail to appreciate the meaning of our sovereign right of deportation. Deportation means more than the making of an ineffectual order. It means banishmentthe removal of the deportee from the free life of America. Until we banish and remove these poisonous alien elements from circulation in the bloodstream of our body politic we are but a laughing stock-our national sovereignty, in this regard, but a joke.

As long as we acquiesce in the shameful thwarting of our right of deportation, while every Nation that may wish thumbs her nose at us, and, by refusing to take back her poisonous dregs, converts them into free residents of our homeland, our laws are set at naught-our solemn adjudications are as vain as the hand-washing of Pontius Pilate.

What does the word "deportation" mean? Of course, it comes from the Latin "deportare." De-from; portare-to carry or transport. The new Century Dictionary defines it in these terms:

To carry away, transport, banish, to carry off, remove, especially: transportation from a country by way of banishment or expulsion.

It means nothing less than banishment, and we must see to it that our Nation's deportation orders resume that outmoded connotation. Every free and independent nation has the right of deportation, indisputably. Yet in 460 cases last year other nations prevented us from exercising that sovereign right. What are we going to do about it? This bill is an honest attempt to answer that question. Let us pass it. [Applause.]

CONSTITUTIONALITY

The Supreme Court of the United States has repeatedly held that the right to exclude or to expel aliens is an inherent and inalienable right of every sovereign and independent nation. As a sovereign and independent nation, the United States of America has that right, indisputably.

Mr. Chief Justice Fuller, writing for the majority of the Supreme Court in the case of Turner v. Williams (194 U. S. 279, 289) says:

Repeated decisions of this Court have determined that Congress has the power to exclude aliens from the United States; to prescribe the terms and conditions on which they may come in, to establish regulations for sending out of the country such aliens as have entered in violation of law, and to commit the enforcement of such conditions and regulations to executive officers; that the deportation of an alien who is found to be here in violation of law is not a deprivation of liberty without due process of law, and that the provisions of the Constitution securing the right of trial by tury have no application. by jury have no application.

Citing a number of supporting cases: Chae Chan Ping v. United States, 130 U.S. 581; Nishimura Ekiu v. United States, 142 U. S. 651; Fong Yue Ting v. United States, 149 U. S. 698; Lem Moon Sing v. United States, 158 U.S. 538; Wong Wing v. United States, 163 U. S. 228; Fok Yung Yo v. United States, 185 U.S. 296; Japanese Immigrant case, 189 U.S. 86; Chin Bak Kan v. United States, 186 U. S. 193; United States v. Sing Tuck, 194 U.S. 161.

Further quoting from the same opinion:

Detention or temporary confinement as part of the means neces-sary to give effect to the exclusion or expulsion was held valid, but so much of the act of 1892 as provided for imprisonment at hard labor without a judicial trial was held to be unconstitutional (idem, p. 291).

The following quotation from the opinion of the Court in the case of Fong You Ting v. U. S. (149 U. S. 698, 705) further establishes the general proposition:

In the recent case of Nishimura Ekiu v. U. S. (142 U. S. 651, 659), the Court, in sustaining the action of the executive department, putting in force an act of Congress for the exclusion of aliens, said: "It is an accepted maxim of international law that every sovereign nation has the power, as inherent in sovereignty, and essential to self-preservation, to forbid the entrance of foreigners within its dominions, or to admit them only in such cases and upon such conditions as it may see fit to prescribe." In the United States this power is vested in the National Government, to which the Constitution has committed the entire control of international relations, in peace as well as in war. in peace as well as in war.

Quoting from the Chae Chan Ping case, the opinion in the Fong Yue Ting case proceeds:

Those laborers are not citizens of the United States; they are iens. That the Government of the United States, through the action of the legislative department, can exclude aliens from its territory is a proposition which we do not think open to controversy. Jurisdiction over its own territory to that extent is an incident of every independent nation. It is a part of its independence. If it could not exclude aliens, it would be to that extent subject to the control of another power. The United States, in their relation to foreign countries and their subjects or citizens, are one nation, invested with powers which belong to independent nations, the exercise of which can be invoked for the maintenance of its absolute independence and security throughout its entire

It is interesting to note that Mr. Justice Brewer, in his dissenting opinion in the Fong Yue Ting case, sets out substantially and clearly the very arguments which the opponents of my bill are now making. I quote from his dissenting opinion, page 733:

I rest my dissent on three propositions: First, that the persons against whom the penalties of section 6 of the act of 1892 are directed are persons lawfully residing within the United States; secondly, that as such they are within the protection of the Constitution and secured by its guaranties against oppression and wrong; and, third, that section 6 deprives them of liberty and imposes punishment without due process of law and in disregard of constitutional guaranties, especially those found in the fourth, fifth, sixth, and eighth articles of the amendments.

But the majority of the Court did not agree with Mr. Justice Brewer. They held the act constitutional.

In the case of Colyer v. Skeffington (265 Fed. 17, 23) the following significant language is used:

There is no constitutional limit to the power of Congress to exclude or expel aliens. He has no vested right to remain.

Mark this well, from the same opinion:

While deportation proceedings are not criminal proceedings, aliens who are thereby deprived of their liberty may have their legal rights to liberty tested on habeas corpus proceedings.

Reverting to the Fong Yue Ting decision, this part, quoted with approval in the Colyer case, is illuminating:

An order of deportation is not a punishment for crime. * • • It is but a method of enforcing the return to his own country of an alien who has not complled with the conditions upon the performance of which the Government of the Nation, acting within its constitutional authority and through the proper department, has determined that his continuing to reside here shall depend.

There are three cases which have been argued strenuously by the opposition, which, when casually read, may be considered as authorities militating against the constitutionality of the pending bill. They are Wong Wing v. U. S., 163 U. S. 228; U. S. v. Wallis, 279 Fed. 401; and Petition of Brooks, 5 F. (2d) 338.

From the Wong Wing I quote as follows:

We regard it as settled by our previous decisions that the United States can, as a matter of public policy, by congressional enact-ment, forbid allens or classes of aliens from coming within their borders, and expel aliens or classes of aliens from their territory, and can, in order to make effectual such decree of exclusion or expulsion, devolve the power and duty of identifying and arresting the persons included in such decree, and causing their deportant of the persons included in such decree, and causing their deportant of the persons included in such decree, and causing their deportant of the persons included in such decree, and causing their deportant of the persons included in such decree, and causing their deportant of the persons included in such decree, and causing their deportant of the persons included in such decree, and causing their deportant of the persons included in such decree, and causing their deportant of the persons included in such decree, and causing their deportant of the persons included in such decree, and causing their deportant of the persons included in such decree of exclusion or expulsion. tation, upon executive or subordinate officials.

But when Congress sees fit to further promote such a policy by

subjecting persons of such aliens to infamous punishment at hard labor or by confiscating their property, we think such legislation, to be valid, must provide for a judicial trial to establish the guilt of

the accused.

No limits can be put by the courts upon the power of Congress to protect, by summary methods, the country from the advent of aliens whose race or habits render them undesirable as citizens or

to expel such if they have already found their way into our land and unlawfully remain therein. But to declare unlawful residence within the country to be an infamous crime punishable by deprivawithin the country to be an infamous crime punishable by depirture tion of liberty and property would be to pass out of the sphere of constitutional legislation, unless provision were made that the fact of guilt should first be established by a judicial trial. It is not consistent with the theory of our Government that the legislature should, after having defined an offense as an infamous crime, find the fact of guilt and adjudge the punishment by one of its own agents.

In Ex Parte Wilson (114 U. S. 428) this Court declared that for more than a century imprisonment at hard labor in the State prison more than a century imprisonment at hard labor in the State prison or penitentiary or other similar institution has been considered an infamous punishment in England and America, and that imprisonment at hard labor, compulsory and unpaid, is, in the strongest sense of the words, "involuntary servitude for crime," spoken of in the provision of the Ordinance of 1787, and of the thirteenth amendment of the Constitution, by which all other slavery was abolished, and which declares that such slavery or involuntary servitude shall not exist within the United States or any place subject to their jurisdiction event as a number of trime whereof the to their jurisdiction except as a punishment for crime whereof the party shall have been duly convicted.

Applying this reasoning to the fifth and sixth amendments, it must be concluded that all persons within the territory of the United States are entitled to the protection guaranteed by those amendments, and that even aliens shall not be held to answer for a capital or other infamous crime unless on a presentment or indict-ment of a grand jury, nor be deprived of life, liberty, or property without due process of law.

Our conclusion is that the commissioner, in sentencing the appellants to imprisonment at hard labor at and in the Detroit house of correction, acted without jurisdiction, and that the circuit court erred in not discharging the prisoners from such imprisonment without prejudice to their detention according to law for depor-

From the Wallis case I quote as follows:

The right to deport does not include any right of indefinite imprisonment under the guise of awaiting an opportunity for deportation.

In the Wallis case the immigration authorities used as an excuse for their procrastination and failure to deport that alien that they could not get transportation back to England. The court said in effect, and very properly, "The war is over; your excuse will not hold water; your alleged inability to secure transportation is a sham; and 4 months is unreasonably long to detain this alien under the pretense that you cannot get transportation for him." But no such case could be presented under this bill. Transportation is no longer a problem. It is landing permits that we lack. Foreign governments are denying landing permits for their own nationals, and by thus refusing are thwarting our Nation's sovereign right to deport those who have been adjudged by our constituted authorities unfit to live here. We cannot run other countries, but we should be able to run our own. So, if we cannot send these, the worst aliens, who have been ordered deported, back home, we can at least keep them out of circulation until they arrange to leave.

From the third case, I quote as follows:

The right to arrest and hold or imprison an alien is nothing but a necessary incident of the right to exclude or deport. There is no power in this court or in any other tribunal in this country to hold indefinitely any sane citizen or alien in imprisonment, except as a punishment for crime. Slavery was abolished by the thirteenth amendment. It is elementary that deportation or exclusion proceedings are not punishment for crime.

It will, of course, be noted at a glance that this decision in petition of Brooks is predicated and built upon the words "in imprisonment." Therefore, we have no quarrel with this decision, since the Supreme Court of the United States has held in the Wong Wing case, that detention of an alien pending deportation is not imprisonment. This is necessarily true, for everyone knows that imprisonment is one of the well-recognized punishments for crime and usually includes hard labor. The Brooks case itself says:

It is elementary that deportation or exclusion proceedings are not punishment for crime.

And again:

The right to arrest and hold or imprison an alien is nothing but the necessary incident of the right to exclude or deport.

But even if all three of these supposedly adverse cases said and meant that the detention prescribed by this bill would be prima facie unconstitutional, because not specifically limited, this bill could not be declared unconstitutional. For,

feeling sure that the cry which has been raised would be raised, I wrote into the bill two insuring provisions against indefinite or unreasonable detention.

They conclude the first paragraph of the bill. I quote:

Confined, though not at hard labor, until such time as deportation shall have become feasible, or departure from the United States otherwise shall have been arranged, or until the Secretary of Labor, upon sufficient evidence of good cause, shall order the release of such alien, temporarily or permanently, on such bond as may be required, with or without rescinding the warrant of deportation.

These provisions not only eliminate all possibility of the requirement of hard labor of any detained alien but they also strictly limit the period of detention so that it could not possibly extend 1 minute beyond the conclusion of departure arrangements. No one could be held in detention under the provisions of this bill longer than absolutely necessary to effectuate the deportation order against him. And, in the second place, in order to make sure that there would never be any unreasonable detention, it is provided that the Secretary of Labor may at any moment, with or without rescinding the warrant of deportation, release any alien in detention. If there should develop sufficient evidence that the detention of any alien was being prolonged unreasonably, so as to satisfy the Secretary of Labor that this unreasonable duration of detention had become good cause for release, the Secretary could so order.

But I submit that none of these three cases is subject to the interpretation put upon it by the opposition. I am convinced that the Congress did not pass this Nation's deportation statute in order to place a plaything in the hands of the immigration authorities. Deportation is not a game of tag, just for fun. It is not a trivial matter. It is a solemn duty. When, after full hearings, fairly conducted, in pursuance of the law we have laid down, our duly constituted authorities decree the banishment of an alien, that decree ought to mean something. And that something should be no less than the complete separation from the free life of our Nation.

It is well said by the Supreme Court in the Wong Wing

Proceedings to exclude or expel would be vain if those accused could not be held in custody pending the inquiry into their true character, and while arrangements were being made for their deportation.

There is no authority contra.

It is also well said in the case of Becharias v. U. S. (208 Fed. 143):

Until the man was actually deported, * * the proceeding was "pending" within the meaning of the law.

It is thus supported both by authority and reason that Congress has the constitutional right to require detention of an alien ordered to be deported, "while arrangements are being made for his deportation," during the whole pendency of negotiation for some kind of departure authority and until deportation shall have become an accomplished fact.

DETENTION IS NOT IMPRISONMENT

We think it clear that detention, or temporary confinement, as part of the means necessary to give effect to the provision for the exclusion or expulsion of aliens would be valid. Proceedings to exclude or expel would be vain if those accused could not be held in custody pending the inquiry into their true character, and while arrangements were being made for their deportation. Detention is a usual feature of every case of arrest on a criminal charge, even when an innocent person is wrongfully accused; but it is not imprisonment in a legal sense (Wong Wing v. U. S., 163 U. S. 228, 238).

DETENTION IS NOT PUNISHMENT

The right to arrest and hold or imprison an alien is nothing but a necessary incident of the right to exclude or deport. * * * It is elementary the deportation or exclusion proceedings are not punishment for crime (Petition of Brooks, 5 F. (2d) 238, 239).

DETENTION IS NEITHER DOUBLE JEOPARDY NOR DOUBLE PUNISHMENT

Since we have seen clearly that detention is but a part of the necessary proceeding to effectuate deportation, and that it is in no legal sense imprisonment, and, not by any stretch of the imagination, can it be said to be punishment, it is manifestly absurd to prate of double jeopardy or double punishment by reason of the detention prescribed in this bill in aid of deportation. CONSTITUTION PRIMARILY FOR CITIZENS, NOT ALIENS

Please let me conclude this discussion of the constitutionality of the pending bill by inviting your attention to that which probably should have been the first point emphasized. Our Constitution and all its amendments were written primarily for citizens of the United States. It is true that in criminal cases, aliens being "persons," they are protected by the same guaranties as are citizens. Of course, the courts have held many times that aliens are not entitled to trial by jury nor the ordinary rules of evidence nor procedure in deportation proceedings. They are entitled to due process of law, both in criminal cases and in this strictly civil proceeding for deportation, but they have due process of law shown them in every case, and if the immigration authorities have not given the alien a fair hearing, or if for any other reason he feels himself aggrieved, he may sue out the writ of habeas corpus at any time. But in a number of cases it has been held that no alien has a primary or inherent right to bail, and whatever right in this regard may accrue to him must be granted to him by Congress (U. S. v. Commissioner, 297 F. 946; U. S. v. Sing Tuck, 194 U. S. 161; Wong Wing v. U. S., 163 U.S. 228).

And in Li To Hong v. Ebey (25 F. (2d) 714) we read:

An alien remaining unlawfully in this country, having no right to a hearing unless such a hearing is accorded him by Congress.

So, from a consideration of the decisions from the highest court of our land and many other courts of the most respectable authority, it is as clear as the noonday sun that even the best of our alien population are not entitled to the same rights under our Constitution as is a citizen. Aliens who are not the best, but the worst, are entitled under our law to a great many more rights than they are willing to accord us. Every one of these rights is safeguarded and assured to every alien within the purview of this bill. Fairly construed, it cannot be held unconstitutional.

Our forefathers came to this new land of promise seeking God—not gold.

They came with a Bible in one hand and a rifle in the other, determined to make this wilderness a sanctuary wherein they and their posterity could freely worship God according to the dictates of their individual consciences. But freedom of religion did not mean to them freedom from religion. The one and only living and true God was to rule here, though worshiped in a million different ways if individuals so pleased. He was to guard, guide, and rule.

In that determination our infant Nation came to birth. And when Jefferson, Adams, and Franklin designed our national currency they claimed for us God's promise to his first chosen people, after they had crossed the Red Sea and were come to Sinai, by putting an eagle, with wings outspread, on our coins and the pillars of cloud and of fire on our other currency. That promise was:

Ye have seen what I did to the Egyptians, and how I bore you on eagles' wings, and brought you unto Myself. Now, therefore, if ye will obey My voice indeed, and keep My covenant, then ye shall be a peculiar treasure unto Me above all people; for all the earth is Mine.

God had borne our parents across the flood of a greater than the Red Sea and brought them unto Himself here. So an American covenant was made with the Almighty, and constant reminders of it placed on our currency, lest we forget the condition precedent to national blessedness. And he is blind who cannot see the leading of the pillar of cloud by day and of fire by night in America's history.

We love money now even more than then; but are we forgetting our eagle? Do we still wish a God-ruled nation, where righteousness is enjoined?

If so, we certainly should strain out and remove from the stream of our national life the polluting and poisonous elements.

Aliens because they are alien? No—a thousand times no. Good immigrants have built our Nation. But not the four classes—white slavers, dope peddlers, criminals, and anarchists—which this bill, in kindly way, would urge to go back whence they came. These who have outraged our hospitality, broken our laws, debauched our youth, or plotted

to overthrow our Government are not builders. They are wreckers. Their lives stain our flag. Like termites, they undermine and destroy.

Good aliens, who come here as our laws provide they may, and who try to build-not destroy, pollute, or poison-are welcome and appreciated. Millions of such are here. Who of us in this House is not an immigrant per stirpes?

We all pay tribute of grateful homage to those millions of good aliens who have helped make America great. Few may

be named, but all are in mind.

From La Fayette, Rochambeau, Alexander Hamilton, John Paul Jones, Commodore John Barry, Count d'Estaing, Count de Grasse, Maj. Pierre L'Enfant, General von Kalb, Baron Von Steuben, Gen. Richard Montgomery, Haym Salomon, Gen. Thaddeus Kosciusko, Gen. Casimir Pulaski, Gen. William Alexander, Dr. James Craik, Robert Erskine, Gen. Alexander McDougal, Gen. Lachlan McIntosh, Gen. Hugh Mercer, Gen. Arthur St. Clair, James Wilson, John Witherspoon, Robert Morris, and Albert Gallatin, down through the years to Dr. Sizoo, Dr. Peter Marshall, Mr. Justice Felix Frankfurter, Albert Einstein, and Eduard Benes, aliens have here

wrought mightily for good.

Alexander Agassiz, Hjalmar Hjorth Boyesen, Leopold Damrosch, Walter Damrosch, Pierre Dupont de Nemours, Mayor William R. Grace, Franklin K. Lane, Mr. Justice Sutherland, Peter Henderson, Ales Hrdlicka, Ludwig Lewisohn, Jacques Loeb, James McCosh, John Edward Mc-Cullough, Henry Morgenthau, Hugo Munsterberg, Thomas Nast, John Boyle O'Reilly, Abraham Mitrie Rihbany, Anton Seidl, Pierre Soulé, Karl Spreckels, Matthew Vassar, Henry Villard, Alexander Wilson, William B. Wilson, James Wilson, Karl Bitter, Gustav Lindenthal, James J. Hill, Jacob A. Riis, Edward D. Baker, Samuel Gompers, Anna Howard Shaw, Eleuthere Irenee Dupont, Stephen Girard, Felix Adler, John Jacob Astor, Emile Berliner, Oscar Hammerstein, Otto Kahn, Franz Lieber, Ottmar Mergenthaler, Albert Abraham Michelson, Johann August Roebling, Jacob Henry Schiff, Carl Schurz, Charles Proteus Steinmetz, Nathan Straus, Theodore Thomas, Michael Anagnos, Joseph Pulitzer, John Philip Holland, Augustus Saint-Gaudens, Alexander Turney Stewart, Edward W. Bok, Knute Kenneth Rockne, Michael Heilprin, Judah Peter Benjamin, James Burnie Beck, Alexander Graham Bell, James Gordon Bennett, Andrew Carnegie, John S. Kennedy, James Pugh Kirkwood, James Laurie, Walter Lowrie, John Muir, Archibald Russell, Michael Pupin, John Ericsson, Louis Agassiz, Dr. Henry Detweiller, Meyer Guggenheim, Henry Rosenberg.

We honor ourselves by honoring such men-American

patriots.

Do opponents cry against this bill, "Undemocratic!"

If it be undemocratic for us, the duly elected Representatives of a sovereign people, to stop a loophole in our deportation law through which 460 aliens last year escaped their decreed banishment, then we should be just that undemocratic.

Do some say "Un-American!"

If it be un-American to restore the lost sovereignty of our Nation over deportation, we ought to glory in being just that

Make no mistake, that flag there—Old Glory—was not the product of silkworms and a dye vat.

Our flag-the most significant in all the world-is a living symbol of America's soul. We 130,000,000 people are in truth the flag.

The purity of common purpose for peace and freedom, plus the morals of the many, put that white-honor stripe in our living flag. Our lives besmirch it or keep it white.

That red is not a stripe of shame, nor wrath, but of virility; of flaming youth; of new, aspiring, conquering blood which flows in us and to us from the ends of the earth.

That field against which the stars shine is put into our living flag by the loyalty and devotion of those of us who are "true blue."

Those stars are kept bright by the fervor of the love of those who "star" in our national life!

More than a hundred million souls, by the quiet might of righteous living, keep this symbolic silken flag waving proudly over the real living flag their lives compose! Are we impotent to root out contaminating influences which stain our flag? Do we lack the courage?

> O beautiful for pilgrim feet, Whose stern, impassioned stress A thoroughfare for freedom beat Across the wilderness! America! America! God mend thine every flaw, Confirm thy soul in self-control, Thy liberty in law!

O beautiful for patriot dream
That sees beyond the years
Thine alabaster cities gleam
Undimmed by human tears!
America!
God shed His grace on thee
And crown thy good with brotherhood From sea to shining sea!

Mother's Day Address

EXTENSION OF REMARKS OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES Tuesday, May 16 (legislative day of Monday, May 8), 1939

ADDRESS BY HON. DAVID I. WALSH, OF MASSACHUSETTS, MAY 14, 1939

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Congressional Record the Mother's Day address of the distinguished senior Senator from Massachusetts [Mr. Walsh], delivered at the Amphitheater, Arlington National Cemetery, Sunday, May 14, under the auspices of the American War Mothers.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This annual ceremony held under the auspices of the American War Mothers, leads me to express the hope that sometime there will arise in this land a man and a poet with the genius, inspiration, and sympathy fittingly to sing the services given and the sacrifices made by the American mothers on the altars of patriotism.

Certainly no more fitting place and no more appropriate occasion than on Mothers' Day—a day set aside for reverential recognition of the debt we owe our mothers—could have been chosen in which of the debt we owe our mothers—could have been chosen in which to hold these ceremonies. From where we stand in this amphitheater at Arlington, within the very shadow of the Tomb of the Unknown Soldier, whose resting place commemorates all those Americans who fought and died in the World War, the graves of countless thousands of departed military and naval heroes are within our view. On such an occasion and in such a setting our hearts are enthused with patriotism and our minds with high recolves.

It is appropriate and long has been customary on Memorial Day to eulogize our war dead and our living war heroes. Today we meet to pay tribute to our war mothers, living and dead, to honor and respect them for the services and sacrifices so unselfishly made and to recall the debt we cannot too often and too earnestly acknowledge.

When flags are flying and drums are beating, when the populace is cheering the marching soldiers, when the fever of war is burn-ing in every heart, and when the glamor and glory of battle are ing in every heart, and when the glamor and glory of battle are supplementing the appeal and passion of patriotism, it is not difficult to play the patriot's part, not hard to don the uniform of the Republic and go forth to serve the country and the flag. The psychology of such a pulsating moment catches the heart and brain of man; emotion is paramount and the voice of cold reason is silenced. This is among the easiest tasks of patriotism.

That there are other duties than those of camp and battle are forgotten. When the applause and acclaim of the people for the departing soldier has died away, when the music of the trumpet and drum is only a memory of a day of wildly demonstrated patriotism, the empty chair remains. The harassing thoughts of danger, the hellishness of war, and the long and lonely hours of watching, waiting, and praying begin. There and then commences the dark

waiting, and praying begin. There and then commences the dark and dreary days that try the souls of mothers and test their sub-lime courage and unfaltering fidelity; there and then within the walls of some city tenement or some remote dwelling far removed

from the crowded marts of man, in homes however humble or from the crowded marts of man, in homes however humble or stately, begin the days and nights of pain and anguish—the battle which mothers wage with the horrifying thoughts of the seamy side of war. Then the fibers of the soul of women are tested with trials and perils that the war and rush of conflict know nothing of. I speak of one—loneliness. Is there any sorrow quite so poignant? Is there any grief more heart-breaking? Longfellow strikingly portrays and touchingly depicts the character and torture of loneliness in the famous consoling words that the spiritual friend expressed to Evangeline: "Sorrow and silence are strong, but natient endurto Evangeline: "Sorrow and silence are strong, but patient endurance is Godlike."

The very realization of a mother that she cannot be at the side of her son to comfort him grieves her as she envisages the battle-field, the death and disease of the camp, the smoke and stench of the battle, the foulness and fever of the hospital.

To mothers come none of the emotions and glory of conflict, none of the acclaim of country, nor applause of the multitudes. Her sorrow is hidden behind the smilling face and brave spirit which she must display to a thoughtless and often unsympathetic world. All this is the lot of women in time of war, a work than which there is no nobler type of patriotism, no higher form of service.

no nobler type of patriotism, no higher form of service.

The world, indeed, loves the dramatic and spectacular and ignores the modest and unobtrusive. A watching country views with exaltation the bravery, courage, and triumphs of the soldier; it hails with mad applause a man who leads his fellows to death and glory amid the roar of artillery, but it seldom thinks of the silent women who wait mid the confusion and consternation for news from the front, wondering what message of sorrow it would bring to them. The pathetic story of the French mother who gave her five sons to the service of France in the World War illustrates my thought. Meeting the telegraph messenger from the front at the door of her peasant cottage, she cried out, "Which one?"

To him who falls on the battlefield we give bronze and tablets; to

To him who falls on the battlefield we give bronze and tablets; to the generals and admirals, marble and monuments; to the women who held the home and gave their sons to war and death, nothing. To the women who gave their all, their youth, their energy, their pity, and their patience, forgetfulness, except in recent years, and now this tardy recognition, this ceremony here at Arlington to recall her vanished youth, her gray hairs, her faded services, and often her untimely death. At least on Mothers' Day we can remind a careless world that pity and mercy, sacrifice and devotion are as acceptable in Heaven's sight as the valor of the soldier and the glory of the

In a little burial ground near Versailles a crumbling stone marks the resting place of a mother who in life rejoiced in a large family of sons and daughters. Across the face of the stone is carved her name, date of her birth, and of her death. The last line is reserved for her eulogy, brief but comprehensive: "She stayed at home."

She never made a speech, wrote a book, or held an office. She was too busy making a home—that indispensable unit upon which society has and must always depend. In taking care of their bodies, in teaching baby minds to turn to God, and in providing for her husband, she was so fully occupied that she had no time for responsibilities that did not have to do with home and family life. She was loyal to God and to her home.

"She was loyal to God and to the Holia."

"She stayed at home"—surely no more touching or effective tribute could be paid a mother than this. It embraces all that anyone might say, however eloquently gifted, of her duty, sacrifice, suffering, and loneliness. Why is not she who stays at home as worthy of honor and remembrance as the great captain or admiral whose genius has annihilated armies and navies and saved nations?

whose genius has annihilated armies and navies and saved nations? Dark and ominous clouds hang over mothers all over the world today. It was Horace, centuries ago, who referred to war as "hateful to mothers." Mothers, more than ever, hate war. With uplifted eyes they are pleading to those in whom repose the destinies of our Nation to avoid war and preserve peace. American mothers want no participation in the wars of other nations. If war comes, mothers want their sons to fight in defense of America on American soil. Willingly would American mothers give their sons to defend the lives, the resources, and the institutions of America against any who dares to invade our country. They would, if that day comes, be the very first to place muskets in the hands of their sons and bid them go forth, while clenching to their own breasts the cross. the cross.

And here on this hallowed spot, touched as we are to the very depths of our being with the memory of our mothers and par-ticularly our war mothers, let us highly resolve that, God willing, ticularly our war mothers, let us highly resolve that, God willing, our children and our children's children may be spared the horrors and tortures of war which it was the lot of those who are buried here, and the lot of thousands of our mothers and their sons now living to endure. There is no higher or nobler way to honor our present and future mothers than to spare them the suffering and sorrows of war now being experienced or threatened in many lands.

in many lands.

We Americans have no quarrel with any other nation and they should have none with us. While we rejoice that we have escaped thus far the wars and tyrannies that have come in recent years to other nations, we must continue to avoid war abroad, the overthrow of liberty, peace, and concord at home, and steel ourselves against the insidious propaganda that seeks to lead us into the maelstrom of European intrigue and animosities. The mothers of America and their sons, on this day affectionately dedicated to honor and revere our mothers, beseech the God of nations to protect us against war and to give our leaders the wisdom to guide us into the cherished ways of enduring peace.

Federal Aid for Education

EXTENSION OF REMARKS

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES Tuesday, May 16 (legislative day of Monday, May 8), 1939

RADIO ADDRESS BY HON. ELBERT D. THOMAS, OF UTAH, MAY 14, 1939

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered over the Mutual Broadcasting System by the junior Senator from Utah [Mr. THOMAS] on Sunday evening, May 14, 1939, on the subject of Federal Aid for Education.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Let him who would deny Federal aid to education come forward, do so openly, and take the consequences from the electorate. Let him reject the scientifically assembled information and declare that he is what he is, an enemy to common learning for the people

of his country.

I throw down the gauntlet advisedly. For 15 years careful and conservative educators have planned the way to fulfill a need predicated on the astounding fact that in the United States, educationally speaking, the rich are getting richer and the poor are getting poorer, a fact amply proved in the hearings on the Harrison-Thomas bill, much of which proof was based on the findings of the President's Advisory Committee on Education, and offered as evidence by its staff in testimony before us. It is common knowledge that the wealthier communities are making forward strides in education. It is also common knowledge that the poorer communities are not going forward at all, but are even failing to maintain a parity with their own miserable past. In fact, they are actually losing ground and the gap between opportunities for education is becoming alarmingly widened. In America, where presumably all men are born equal, they do not retain equal educational opportunities beyond even the first grade. It is not a matter of indifference among the backward counties and States. Our studies reflect that, far from their making a relatively poor effort, they are making, for among the backward counties and States. Our studies reflect that, far from their making a relatively poor effort, they are making, for their means, the most valiant, and against odds which may not be surmounted by even their most heroic efforts. All this is in the evidence of our hearings. There is only one answer. The problem becomes national because its answer is not possible locally. The solution, and the only solution, lies in a united front against ignorance and against inequality of opportunity for the common elements of education. When we speak of a united front in America we mean unity through Federal action. That, in turn, means Federal aid for those in need.

But in order to make education still a matter of purely local control, we have determinedly sought and successfully found a solu-

But in order to make education still a matter of purely local control, we have determinedly sought and successfully found a solution which gives aid and not control from the National Government. The cost is to be borne by the Federal Government, while the whole program of education is left securely in the State governments themselves. Not one iota of States' rights is surrendered as a condition precedent to receiving help. The distribution is made solely on the basis of need, properly attested by the States' own educational systems, in keeping with their own capacity for maintaining their educational systems according to American standards.

The Harrison-Thomas bill in the Senate, and in the House the very similar Larrabee bill, have the support of practically all the

very similar Larrabee bill, have the support of practically all the educational associations in our country. American education, based upon the great public-school system, recognizes the place for the home, the church, and the private organizations in our educational system. The status quo is maintained under the Federal aid-to-education bill. American education basically remains the same after application of the proposed act as before. There is no attempt to superimpose anything on this happy condition, but to render it more happy by the addition of opportunities to States, counties, and school districts which the States, counties, and school districts have cried out for themselves, heretofore in

and school districts have cried out for themselves, heretofore in vain, and which they themselves cannot furnish.

The keystone of democracy rests upon the education of the people of a democracy. There is no way to separate education from democracy. As the opportunities for common-school education are limited, so is democracy itself restricted. Other ideologies flourish on darkness and propaganda. Democracy thrives on education and light, without which democracy is impossible. As common education becomes too expensive for a community to bear, so the essence of democracy becomes impaired and disappears in

whole sections of our country.

We approach Federal aid not as pioneers, for the pioneering was done many decades ago in the United States when President Lincoln signed a bill which created our land-grant institutions, and in

contrast to the strictural ideas of the weak Buchanan respecting the constitutionality of such a project found it fully constitutional in his own mind, a judgment which has been affirmed through the

There is no question of educational luxury in the bill. only the bare necessities of learning, and these not in abundance, but frugally. It says to a community which is starving for opportunities to give a simple school term to its young, reasonable library service to hundreds of thousands of persons now without any library service whatever, opportunities for self-help to adults who are desperate in their efforts to catch up with a neglected past a chance in life for the crippled and the shut-in, and decent but not chance in life for the crippled and the shut-in, and decent but not imposing buildings to replace shanty classrooms. Here, at the instance of your own local school boards and State governments, is a small investment for you to handle wisely and in your own way, to utilize economically. Here, if you please, is a modest beginning. Prove yourselves worthy so that Congress may examine the industry with which you have improved your desperate condition, and as the national income grows do better by you so that equality of opportunity may be looked toward as an ultimate goal. What better slum clearance may we offer than riddance of the slum conditions in the minds of our least fortunate children? What better sign may Congress give to business and industry than What better sign may Congress give to business and industry than by providing book learning to stagnant and impoverished minds for industrial and business leadership and invention of tomorrow?

by providing book learning to stagnant and impoverished minds for industrial and business leadership and invention of tomorrow?

Right here let me say that we are treading no new ground that has not been trodden before by courageous feet in the Halls and corridors of Congress and in the Federal departments. Looking back within our greenest memories we recall the F. A. P. signs which dotted our best roads when the automobile became an accepted means of transportation and travel. "F. A. P." meant "Federal-aid project." Where the sign was posted it meant that the Federal Government had bargained to pay three-fourths the cost of that highway. It was a national solution of local problems too great for the locality. Why? What business was it of the Federal Government, with its few, scattered, and strictly delegated powers? I will not argue tonight the wisdom of the liberal thinking of the hour which produced our Federal-aid highway system. Both the necessity and the wisdom of meeting the problem are recognized universally. Yet there were no initial Federal-aid highway projects without a sharp struggle between those with vision and those who challenged the province of the Federal Government to assume any kind of jurisdiction. Today State roads departments are so great an adjunct of State governments not in spite of but because of Federal assistance without Federal interference or control.

What a struggle to weld our troops into the Army of the United States under the Defense Act. Have National Guards surrendered anything? They are more important, more impressive, and more efficient as State troops as creatures of the State than they over

anything? They are more important, more impressive, and more efficient as State troops, as creatures of the State, than they ever were. In the light of these experiences we who have cherished feelings toward States' rights need have no suspicion when the only

motive is cooperation.

Within this fortnight our mayors, representing political subdivisions of, not the Federal Government but of State governments, have appealed in a desperate but organized sort of way, through have appealed in a desperate but organized sort of way, through their organized representatives, for Federal relief projects. Do they storm their State capitals? Did Mayor LaGuardia address himself to Albany or to Washington? Are these agencies of the State worried over Federal control? Yet the W. P. A. set-up was conceived and applied without a fraction of the precaution against Federal control which we applied in writing the purely State-control Federal aid to education bill.

I do not know of a single nationalist in Congress. To my knowl-I do not know of a single nationalist in Congress. To my knowledge, not one of its Members is subtly striving to bring about a unitary republic. The Constitution and the temper of their representatives, stand squarely against the surrender of one iota of State sovereignty.

But the Constitution lets the hungry eat, and the sweatshop vanish, the willing work, and the weary rest in its vast parks. It does not deny the common humanities, and in this spirit it is broad enough to satisfy a universal demand for equal opportunities for common education, such as are offered in the Federal aid to educa-

While on the subject of the Constitution, it is worth while to reflect that by its terms all persons born in the United States or under its jurisdiction are citizens of the United States and of the State wherein they reside. The Government of the United States exacts a citizen's obligation from all persons, no matter where they were born. Surely the Government owes to these citizens equal

consideration in opportunity.

American democracy, resting upon the theory of a trained citizenry—a citizenry growing into more complex activities as time goes on, conscious of the worth of that American democracy, both to himself and to the world, marches on with the growth and development of our Constitution. Thus, Federal aid, viewed as a cooperopment of our Constitution. Thus, Federal aid, viewed as a cooperative activity—cooperative on the part of the State and the Nation; cooperative on the part of the State, the Nation, and the citizen; cooperative in the development of our constitutional scheme in harmony with Marshall's great notion that the Constitution was set up to endure through the ages, and in harmony, too, with our present-day enlightened concept of that Constitution as the companion of the people in the accomplishment of their objectives—I repeat, Federal aid for education viewed in this sense finds its place and keeps its place in the development of American democracy. We may go even further: It is a base upon which that democracy rests. Both reason and purpose underlie American democracy; both reason and purpose will preserve it; but it is only through the

medium of trained minds and trained persons that reason and purpose and, therefore, democracy can be maintained. That we may better fulfill our mission through Federal aid will be our task.

Proposed Reciprocal Taxation of Government Securities

EXTENSION OF REMARKS

HON. ROBERT M. LA FOLLETTE, JR. OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Tuesday, May 16 (legislative day of Monday, May 8), 1939

RADIO ADDRESS BY HON, PRENTISS M, BROWN, OF MICHIGAN. MAY 15, 1939

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting address delivered last evening by the junior Senator from Michigan [Mr. Brown] concerning the taxation of Government securities.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The primary task of covering by taxation the expenditures of the Government of the United States falls upon the Finance Committee of the Senate and the Ways and Means Committee of the House of Representatives. Those Members of the Senate and House who are charged with the responsibility for governmental aid for agriculture, for those on relief, for military and naval preparation, and for the various other expenditures of the Government have a more pleasant task than those of us in the Congress who are charged with the responsibility for raising the money. Theirs is to grant

more pleasant task than those of us in the Congress who are charged with the responsibility for raising the money. Theirs is to grant and to give; ours to find means to pay the bills, and the only way to do it is to tax the public. It is much easier to give Government money than to take it from the general public.

In the last official statement of the public debt of the United States it appears that on January 31, 1939, the total debt of the United States was almost forty billion and the net debt was \$37,-000,000,000. This is exclusive of guaranteed obligations such as the Federal farm mortgage bonds, the Federal Housing Administration liability, Home Owners' Loan Corporation bonds, and others of a similar character, amounting to \$4,300,000,000, as shown by the statement referred to. It is amazing how many people seem to think that we have assets in gold stored in Kentucky amounting to almost \$16,000,000,000 to balance against this total. This view is entirely erroneous. The Government of the United States owns to aimost \$16,000,000,000 to balance against this total. This view is entirely erroneous. The Government of the United States owns very little of this gold. Over ten billion of the total held is owned ultimately by the depositors in banks in the Federal Reserve System. In other words, his \$10,000,000,000 represents the deposits of the general public of the United States in Federal Reserve banks. Almost three billion more is owned in the form of gold certificates by various corporations and individuals, mainly foreigners who have the right to own such certificates. The Government owns approximately two and one-half billion, of which the major part is in the stabilization fund. This balance in the Government's favor is taken into consideration in reaching the total net debt I above stated of approximately \$37,000,000,000, which is the actual present outstanding direct obligation of the Federal Government.

present outstanding direct obligation of the Federal Government. This is, of course, the largest amount of money that was ever owed by the Federal Government. In a country the size of ours, considering this as the debt of the individuals who make up the United States, it, while large, is not, comparatively speaking, on a par with the debts of other major nations. Nor is it one which the Government cannot eventually pay. It is, in round figures, about three-fifths of the present annual income of the United States; it is about one-half of the \$80,000,000,000 yearly income that we confidently believe our people will obtain when conditions States; it is about one-nair of the \$80,000,000,000 yearly income that we confidently believe our people will obtain when conditions are normal. It is mainly due to the tremendous financial outpourings of the World War period and those necessary to bridge the people over the great depression of the late twenties and the

REQUIREMENT OF TAXATION

This situation requires on the part of those charged with the tax-levying authority, a system of taxation that is (1) fair and equitable as between citizens and (2) sufficient to eventually meet these obligations while carrying the Government's current operating expenses. It is, therefore, our duty to see that citizens from whom so much is expected by way of tax levies should be treated justly as between themselves. To this end the President, in April of 1938, proposed that the reciprocal exemption from income taxation which had been granted to public officials of National, State, and local governments should be ended; and that the exemption which had been granted to holders of public securities should likewise be ended. Happily, the result desired in respect to public salaries has been achieved. Now, the Public Salary Tax Act, which was passed by the Congress and signed by

the President on April 12 and which I had the honor to sponsor in the Senate, requires every public official, be he President of the United States or the mayor of a city, a Member of the United States Senate or a member of the State legislature, a judge of the Federal court or a judge of a State or municipal court, to make the same income-tax contribution as do citizens in private employment.

It should be remembered in this connection that all Federal officials except judges appointed before 1932 have paid a Federal income tax, and State officials have paid a State income tax. The proposal we have is to apply the Federal tax to State income tax. The proposal we have is to apply the Federal tax to State officials and the State tax to Federal officials so that all citizens should be on the same basis. I could never see either the economic or legal justification for exemption.

Shortly after the President's message was received, the Senate

Shortly after the President's message was received, the Senate created a special committee to study the public salary tax question and the bond tax question. That committee consisted of the Senator from Virginia, Mr. Byrd; the Senator from Kentucky, Mr. Logan; the Senator from Arkansas, Mr. MILLER; the Senator from Delaware, Mr. Townsend; and the Senator from Vermont, Mr. Austin; with myself as chairman. We labored diligently with the question. We heard witnesses both pro and con whose testimony occupies over 700 printed pages. On February 21 of this year the committee reported favorably on the salary tax question and concluded that both from an economic and legal standpoint year the committee reported favorably on the salary tax question and concluded that both from an economic and legal standpoint the bill was in the public interest and constitutional. We were very happy that some weeks thereafter the Supreme Court came to the same conclusion in the O'Keefe case. The public salary tax became law. The return, while not large, will probably produce between fifteen and twenty millions of additional income to the Federal Government. To me the principal gain is that tax justice is done as between public and private taynavers. justice is done as between public and private taxpayers.

SIXTY-FIVE BILLION OUTSTANDING

We have not as yet formally reported on the bond-tax question. A report will be made within the next few weeks. I do not tonight speak for the committee respecting the bond tax. I give my own views. There are approximately \$65,000,000,000 in tax-exempt securities outstanding, of which amount approximately twenty billion are those of the States, cities, school districts, and other municipal units. The remainder are the securities of the Federal Government and its agencies. Not all of these bonds are wholly tax evempt but are either wholly or partially tax exempt. I esti-Government and its agencies. Not all of these bonds are wholly tax exempt but are either wholly or partially tax exempt. I estimate that if these securities were taxable at current rates by Federal and State governments they would bring in almost one-half billion dollars per year in taxes. That there would be some rise in the cost of Government financing if the income tax was applied to all Government securities there is no doubt, but that amount would be small in comparison with the return. The proposal which our committee is considering would authorize taxation of Federal Poorde by the Federal Government and the State governments and bonds by the Federal Government and the State governments and of State and municipal bonds by the Federal Government. We do not believe we should tax outstanding governmental bonds.

do not believe we should tax outstanding governmental bonds. We do not propose to make the tax retroactive, but we apply it to all newly issued securities, Federal, State, and municipal.

I pass for the present the legal question involved and discuss the matter from an economic standpoint. The exemption of this tremendous sum of \$65,000,000,000 from income taxation is objectionable (1) because it provides a means by which wealthy taxpayers may largely escape taxation and (2) because the Government loses a large part of its revenue—close to 8 percent of its present income.

TAKES UP TAX JUSTICE

I take up the matter of tax justice.

The exemption of interest on governmental securities from Federal and State income taxes results in great inequities. It affords eral and State income taxes results in great inequities. It affords proportionately greater tax-saving opportunities to the wealthy than to the less well-to-do. This follows from the fact that the Federal and practically all State income taxes have progressive rates, applying the accepted tax theory of ability to pay, which increase as the amount of taxable income increases. Consider a dollar of wholly tax-exempt interest in the hands of people differently situated. To an individual with only \$2,000 or \$3,000 of taxable income, a dollar of wholly tax-exempt interest affords a Federal income tax saving of only 4 cents. If the interest were taxable it would add 4 cents to the Federal tax liability. In the hands of an individual with \$30,000 the same dollar of interest affords a saving of 23 cents. This saving increases with further increases in income, amounting to 31 cents per dollar for an individual with \$50,000, 59 cents for an individual with \$100,000, and 77 cents for an individual with \$1,000,000. The exemption of this interest from State income taxes adds to the disparity.

In view of the progressive character of the income tax, a tax-

In view of the progressive character of the income exempt security is worth much more to a rich man than to an individual with relatively small means. Rich and poor, however, can buy these securities at identical prices. The available supply of Government securities is so large, in relation to the demand on the part of those who desire them most—the wealthy, that the tax exemption privilege these securities possess can be had by paying little or nothing for it. Because they can purchase tax-exempt securities at very favorable terms, the wealthy are encouraged to stay away from taxable securities—the type of securities which represent investments in private enterprise.

HIGHER NET YIELD

Individuals with large wealth can obtain a higher net yield from low-interest, tax-exempt Government securities than from taxable high-yield corporation securities. For example, an individual with

an annual income of \$100,000 would have to hold an equal amount of bonds bearing 7.3-percent interest in order to match a yield of of bonds bearing 7.3-percent interest in order to match a yield of 3 percent on a tax-exempt security. It is impossible to get 7 percent on good bonds. A man with an income of \$1,000,000 a year would have to receive 12½ percent on his corporation bonds to match a yield of 3 percent on a similar amount of tax-exempt securities. Expressed in another way, if a man with a \$1,000,000 income was fortunate enough to acquire 4-percent tax-exempt municipal securities (and such is entirely possible), his return would be equivalent to an interest rate of 16¾ percent on corporate securities as far as his retained income after tax is concerned, after deduction of taxes. deduction of taxes.

In view of these circumstances, it is to be expected that wealthy individuals will make large investments in Government securities. despite the fact that they are precisely the people who, because of their ability to assume risks, should use their funds for industrial their ability to assume risks, should use their funds for industrial undertakings. The extent of tax-exempt security ownership by wealthy individuals is indicated by Federal income-tax data. In 1937, 25 persons, each with net incomes in excess of \$1,000,000, received almost \$7,000,000 of wholly tax-exempt interest. They probably held well over \$200,000,000 in wholly tax-exempt securities. Their savings in Federal income taxes alone amounted to \$6,000,000. Stated another way, these individuals had almost one-third more income left after taxes than they would have had left if the interest from Government, securities were taxable even after if the interest from Government securities were taxable, even after an allowance is made for a one-fourth percent increase in yield. In one instance an individual with very large tax-exempt security holdings paid \$1,000,000 in income taxes, while if the interest he derived from wholly exempt Government securities were taxable, he would have paid almost \$2,500,000 in Federal income taxes.

LOSS MADE UP ELSEWHERE

These tax savings which accrue to the rich by virtue of their ownership of tax-exempt securities represent corresponding reductions in income-tax collections. The loss of revenue, of course, has to be made up elsewhere, frequently from less desirable sources. This is unfortunate, for the individual income tax, on which we primarily rely for progressiveness in our tax system, is much too unimportant already. It produces today less than 10 percent of combined Federal, State, and local tax collections. Estimates of the loss in Federal income-tax collections alone, due to the existence of tax-exempt securities, range between \$200,000,000 and \$300,000,000. In other words, the loss of income-tax revenue due to tax-exempt securities may be in excess of the total current yield of the Federal gasoline tax (\$203,600,000 in 1938). It may also be in excess of the total yield of all Federal manufacturary excess these taxes of the total yield of all Federal manufacturary excess taxes of the total yield of all Federal manufacturary excess taxes of the total yield of all Federal manufacturary excess taxes of the total yield of all Federal manufacturary excess taxes of the total yield of all Federal manufacturary excess taxes of the total yield of all Federal manufacturary excess taxes of the total yield of all Federal manufacturary excess taxes of the total yield of all Federal manufacturary excess taxes of the total yield of all Federal manufacturary excess taxes of the total yield of all Federal manufacturary excess taxes of the total yield of all Federal manufacturary excess taxes of the total yield of all Federal manufacturary excess taxes of the total yield of all Federal manufacturary excess taxes of the total yield of all Federal manufacturary excess taxes of the total yield of all Federal manufacturary excess taxes of the total yield of all Federal manufacturary excess taxes of the total yield of all Federal manufacturary excess taxes of the total yield of all Federal manufacturary excess taxes taxes and yield of the federal manufacturary excess taxes taxes and yield of the federal manufacturary excess taxes taxes and yield of the federal manufacturary excess taxes taxes and yield of the federal manufacturary excess taxes taxes and yield yield of the federal manufacturary excess taxes taxes and yield ers' excise taxes, other than gasoline (\$213,200,000 in 1938), which includes the yield of the excises on automobiles, trucks, tires, tubes, automobile parts and accessories, electric energy, lubrioils, radios, refrigerators, cameras, not to mention a variety of others.

of others.

In recent years we have witnessed a great expansion in governmental expenditures and the pressure for further increases continues. As a member of the Senate Finance Committee I am conscious of our responsibility to increase Federal tax revenue in order to bring about a better balance between revenues and expenditures. I am conscious of our responsibility to explore every practical channel for increasing tax collections. In that quest, the potentialities of discontinuing the issue of tax-exempt securities should not be overlooked. Such a step would not only add to the equity of the tax system but would result in a substantial revenue increase. The Under Secretary of the Treasury estimated that the elimination of tax-exempt securities would eventually revenue increase. The Under Secretary of the Treasury estimated that the elimination of tax-exempt securities would eventually mean an additional annual Federal revenue of from \$179,000,000 to \$337,000,000. This increase, of course, would not occur in full for many years, because, if the issuance of tax-exempt securities were discontinued at once, it would require almost 50 years for the entire supply of securities now outstanding to reach maturity. The resultant increase in revenue would be small in the early years, but would assume substantial proportions in later years.

ARGUMENT AGAINST PROPOSAL

The major argument advanced in opposition to the proposal that the issue of tax-exempt securities be discontinued is that such a step would greatly increase the cost of borrowing for all governments. These increased costs, however, would be small in comparison to the increase in revenue which would result. The increase in the cost of borrowing for the Federal Government and the Federal instrumentalities is estimated between \$19,000,000 and \$50,000,000; that for the State and local governments between \$40,000,000 and \$105,000,000. These increases, however, would occur only slowly as the supply of existing securities was replaced cur only slowly as the supply of existing securities was replaced by taxable securities. For State and local governments, for inby taxable securities. For state and local governments, for instance, assuming a one-fourth-percent increase in interest rates, the cost of borrowing will have increased by 1945 by only 2 percent, which is equal to 12 cents per capita, and by 1964 by 5 percent, which is equal to 30 cents per capita. The full increase in the cost of borrowing would occur only at the end of approximately 50 years and would never quite amount to 6 percent of the present cost of borrowing.

the present cost of borrowing.

The constitutional aspects of this question are most important.

The reason State and municipal bonds are not taxed at the present time is, in my judgment, due to the fear heretofore held that such a tax would be declared unconstitutional by the Supreme Court of the United States. The reason Federal bonds have not been fully taxable is because the market for them would be unfavorable in comparison with State and municipal bonds unless the tax-exempt feature was included. Therefore, it may be said that the barrier imposed by the strong indications in our court decisions is the real reason why both State and Federal bonds have not been taxed. There is no question but that the Federal Government could declare the future issues of its bonds to be subject to the income tax. The question of whether or not the Federal Government might impose its income tax on State bonds is more difficult from a legal standpoint. It is my judgment that the recent trend of decisions in the Supreme Court indicates that the early minority views of men like the late Justice Holmes and of Justice Brandeis, not to mention members of the present Court, will prevail as they have prevailed on the public salary tax question.

NOT EXACT PRECEDENT

The O'Keefe case holding the public salary tax constitutional is not, legally speaking, an exact precedent for holding a tax on bonds to be constitutional; but the O'Keefe case is a strong indication that the Court will consider that subject favorably. Strange to say since the adoption of the sixteenth amendment in 1913 there has been no ruling from the Supreme Court precisely upon the question involved here. The Court has indicated at various times that it adhered to the rule in the famous Pollock case, decided in 1896, notwithstanding the adoption of the sixteenth amendment in 1913. The Congress had several times before that case was decided taxed the income on governmental bonds; five times during the Civil War they imposed such a tax. In 1894 it imposed such a tax. The 1894 act was declared unconstitutional in the case referred to. The reasoning was, that one sovereignty should not be permitted to tax the instrumentalities of another sovereignty.

I do not propose to make a legal argument here, but merely to The O'Keefe case holding the public salary tax constitutional

I do not propose to make a legal argument here, but merely to refer to the position taken by the Court. Basing its reasoning upon the proposition advanced by Chief Justice Marshall in 1819 upon the proposition advanced by Chief Justice Marshall in 1819 in the McCulloch against Maryland case in which he used the famous phrase, "The power to tax involves the power to destroy," the Court in the Pollock case held that a tax by the Federal Government on the income of a private citizen or corporation, derived from a municipal bond was a tax on the source and laid such a burden upon the municipality that it was an unconstitutional interference by one sovereignty with another. Each of the Civil War acts and the 1894 act taxed income from municipal bonds in common with all other incomes under phraseology describing the income as coming "from any other source whatever." In the Pollock case the Supreme Court found that income from municipal bonds were intended by Congress to be taxable from municipal bonds were intended by Congress to be taxable under that phrase and, of course, held that such taxation was

NOT ONLY QUESTION

unconstitutional.

Immediately thereafter arose the agitation for the sixteenth amendment, based largely upon the holding of the Policok case that no income could be taxed unless it was apportioned among the several States according to population. But that was not the only question in the Policok case. The municipal bond question was also in it and was decided in it. The income-tax amendment was fully discussed for many years and finally adopted in 1913. It reads:

"The Congress shall have power to lay and collect taxes on incomes from whatever source derived without apportionment among the

rom whatever source derived without apportionment among the several States and without regard to any census or enumeration."

You will note the similarity between the phrases in the Civil War Acts and in the 1894 Acts, "from any source whatever," and the phrase, "from whatever source derived" contained in the sixteenth amendment.

It would be supposed that this plain language would admit of no misconstruction. It was in sense identical and in form practically identical with the prior statutory language which the Court held taxed municipal bond interest. This view is heightened by the fact that Chief Justice Hughes, who was then Governor of New York, stated in a message to the New York State Legislature in 1910, submitting the sixteenth amendment for ratification or rejection, the

"The comprehensive words, 'from whatever source derived,' if taken in their natural sense, would include not only incomes from ordinary real or personal property but also incomes derived from State and municipal securities.

"It is certainly significant that the words, 'from whatever source derived,' have been introduced into the proposed amendment as if it were the intention to make it impossible for the claim to be urged that the income from any property, even though it consists of the bonds of the State or of a municipality organized by it, will be removed from the reach of the taxing power of the Federal Government.

"The immunity from Federal taxation that the State and its instrumentalities of government now enjoy is derived not from any express provision of the Federal Constitution but from what has been deemed to be necessary implication. Who can say that any such implication with respect to the proposed tax will survive the adoption of this explicit and comprehensive amendment?"

VIEWS HAVE PREVAILED

It is significant also that the attorneys who argued and won the Pollock case appeared before the New York State Legislature and in opposing ratification asserted that without question the adoption of the sixteenth amendment would permit the taxation of Federal and State securities through the Federal income tax. But others, including Senator Borah and Senator Root, insisted that the sixteenth haven the sixteenth have a sixteenth and senator Root. teenth amendment did not overcome the immunity rule, and their

views have prevailed both in dicta expressed in various cases and in the practical application through congressional enactment, or lack thereof.

The court might very well decide this question on the basis of the sixteenth amendment, or it is entirely possible that it might review the findings and conclusions reached in the Pollock case and overrule that case insofar as it held municipal bonds to be exempt

overrue that case insorar as it held municipal bonds to be exempt from Federal income taxation, because the tax laid a burden on the source, the municipality, and therefore violated the immunity rule. The only way in which this legal question can be decided is by the application of the income-tax law to a State security. I hope that such will be done during the present session of Congress. I have become convinced after a most careful study of the question that not only should it be done but that it can be done under the Constitution of the present session.

Constitution as it now stands without amendment.

The proposed legislation will not only result in tax justice, but it itself would be a material factor in the reduction of the public debt. If this tax had been in existence during the twenty-odd years that the income tax has been effective, the returns would probably have been close to two hundred million a year, on the average, and would probably have resulted in a return to the Federal Government of approximately \$4,000,000,000 during the period, not to mention the returns to State governments.

I cannot believe that our Congress will fail to follow the recommendations of the Treasury Department. It is significant that, in addition to Secretary Morgenthau, former Secretaries of the Treasury Glass, Houston, Mellon, and Mills have all recommended elimination of tax-exempt bonds. To these high authorities I can add the last four Presidents of the United States—Presidents Harding, Coolidge, Hoover, and Roosevelt. These are high authorities. All favor the proposal. I believe we should follow their recommendations, based upon their vast experience in public figures and strike favor the proposal. I believe we should follow their recommenda-tions, based upon their vast experience in public finance, and strike down this unfair privilege.

Constitution Sunday

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Tuesday, May 16 (legislative day of Monday, May 8), 1939

ARTICLE FROM THE JOURNAL AND NEW YORK AMERICAN OF MAY 14, 1939

Mr. WILEY. Mr. President, on Sunday, May 14, there appeared in the Journal and New York American an interesting article by the senior Senator from Pennsylvania [Mr. Davis] regarding his proposal for setting aside a Sunday in September each year as Constitution Sunday. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Journal and New York American of May 14, 1939] CONSTITUTION SUNDAY AS "UNITED STATES RED LETTER DAY" URGED IN THE SENATE

(By Hon. James J. Davis, United States Senator from Pennsylvania) Washington.—The widespread observance recently of the one hundred and fiftieth anniversary of the origin and establishment of the Constitution of the United States has served to direct the thought of Americans to the religious basis of this great document.

The men who formulated its principles represented a Biblical tradition. They believed in the rule of God in the lives of men as transcendent over any earthly power. They had witnessed the tyranny of princes and kings in the Old World and wanted none

They believed in a government that would endure only through the consent of the governed. They believed in the will of the sovereign citizen who looked not to the arbitrary decrees of any earthly ruler for guidance but to the heavenly King.

The conditions that give rise to the religious faith of the founding fathers are not unlike those that prevail in Europe today. The eighteenth century was the so-called age of reason. It was also an age of many wars. The philosophers, materially minded, were seeking politely to bow God out of the universe.

CONSTITUTION BORN OF HIGH IDEALS

In this same Old World today we see this excessive emphasis on ideologies, the exaltation of force, and the war against God. The reaction against these lower levels of life caused pioneer Americans to turn away from the Old World and in this new land seek religious liberty.

The Constitution of the United States embodied these New World

aspirations. They were inherent in religious belief.

Last year, together with others, I was active in asking for the observance of Constitution Sunday, September 18. This year I received numerous petitions from eminent clergymen, representatives of the American Legion, distinguished scholars, and many others asking that I introduce legislation to designate the Sunday immediately preceding September 17 of each year as Constitution Sunday.

This would place this national observance of the Constitution near the date each year when, at Philadelphia in 1787, George Washington and his compatriots in free government placed their

Senate Joint Resolution 100 on March 27 in an attempt to prevent this "red-letter day from becoming a dead-letter day."

ANNUAL OBSERVANCE OF DAY IS URGED

This resolution calls for the designation of Sunday immediately preceding September 17 of each year as Constitution Sunday, to be observed in grateful remembrance for the privileges enjoyed under the Constitution of the United States. The President would be authorized and requested to issue annually a proclamation calling upon the people to observe it in an appropriate manner.

Needs of New England

EXTENSION OF REMARKS

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES Tuesday, May 16 (legislative day of Monday, May 8), 1939

ADDRESS BY RALPH E. FLANDERS

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the Congressional Record the address of Ralph E. Flanders, president of Jones & Lamson Machine Co., Springfield, Vt., and a director of the New England Council, at the all-New England dinner, Washington, May 3, 1939, on the subject Needs of New England.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

printed in the Record, as follows:

It is something of a responsibility to be asked to present New England needs and possibilities before its representatives in the Senate and House, as I have been asked to do. The difficulty lies in the fact that no one man can see the whole picture; nor can any two New Englanders, with their traditional independence of opinion. fully agree on just what it is that we want and in just what direction we should go. You must then discount this as an authoritative presentation and give it only the importance which your own judgment assigns to it.

New England has had an interesting history. The industry of modern America was established there. The iron industry started there. The cotton-textile industry started there, and so did many another of our great industrial developments. Meanwhile we fed ourselves as well as manufacturing for the rest of the infant nation. Our fields of grain, flocks of sheep, and herds of dairy cattle supplied us with food and clothing. Our industries paid the highest wages, and our workers enjoyed the highest standard of living of any part of the country.

Meanwhile our fishermen drew the heaviest catches from the ocean, and our merchant ships salled the world around and were the undisputed masters of the seas. New England led the Nation in industrial and mercantile enterprise for more than half of the nineteenth century.

Her subsequent history has not been so spectacular. The limited

nineteenth century.

nineteenth century.

Her subsequent history has not been so spectacular. The limited sources of iron yielded place to the vast deposits of Pennsylvania, the South, and the Lake Superior region. The lower wages of the South attracted the cotton industry, and much of this has left New England forever. Shoemaking drifted away from our cities and towns nearer to the sources of leather and to the centers of population of the Nation. New England wool gave place to that from vast flocks raised on the open ranges of the West, made available by the building of the transcontinental railroads. Our grain

from vast flocks raised on the open ranges of the West, made available by the building of the transcontinental railroads. Our grain supplies come from the West. And while our milk is for the most part raised within our boundaries, yet cream and butter come to Boston markets from beyond the Mississippi.

New England geographically, industrially, and agriculturally is "out on a limb." The air is bracing and the view is unexcelled—but still we are "out on a limb." To leave the picture here, however, would be to give a very false impresison of what is really a heartening rather than a disheartening picture, for when New England found it necessary to give up providing the rest of the Nation with bulk and staple goods, she turned her energies to the production of quality goods; and in the production of those goods she finds her present field of activity and her present source of

employment for her workers and of income for her industries. Wherever material cost is high and the amount added to the production by labor is inconsiderable, we relinquish the field to our

competitors. Wherever skill of hand and brain is applied to the refined manipulation of quality products, there we find our field.

Although much of the low-priced shoe trade has left us, we still find a market for the highest grade of men's and women's shoes. It has become difficult for us to compete in the manufacture of staple cotton textiles; but the finer weaves and the artistic specialties meeting the demand of enlightened style—these we can and will produce. We no longer sell pig iron to the rest of the country; but we continue to manufacture the highest type of machine tools and find our market in the Waltham watch rather than in structural

Thus for the industries which we retain we still pay the highest wages and enable our workers to live at the highest standard of living of any section of the country. We have abandoned the quantity ideal and have become a region whose industries are based on quality. This has been made possible by the fact that we have as a foundation for our production of quality products a quality population, whose native ingenuity, skill, and character fit them for our type of industry to an extent not to be matched elsewhere in the Nation.

in the Nation.

in the Nation.

Carrying this idea still further into other fields than that of industry, we see the new opportunities of agriculture pointing in the same direction. Our future lies in food specialties which will bring a price above the market. Butter, cheese, hams, country sausage, bacon, each stamped with a trade-mark whose reputation has been founded on cleanliness of preparation, delicacy of flavor, and unvarying high standards point the way to the future of New England agriculture. Add to this the New England tradition of farming as a way of life and we have not only the background for a solid success in agricultural pursuits, we have as well a continuation of the New England countryside as a source of the finest human material for the replacement of the leaders of the Nation in commerce, industry, education, and statesmanship.

As our final resource we again have quality in the recreational facilities which we have to offer. There is quietness, beauty, and regenerating peace in our landscape. Those who live in the region and minister to its visitors have such a real though unconscious

and minister to its visitors have such a real though unconscious participation in the quality of the scene that they are at unity with it, and the discerning visitor seldom finds himself disturbed by the jarring note of dissonance between the seashore, the mountain, or the valley and its inhabitants.

A region whose prosperity is based on quality has difficult prob-lems to face, some of which come very clearly within the influ-ence of national legislation. Let us consider a few of these matters with which you, our representatives in Congress, are particularly concerning yourselves.

There is, of course, the ever-present question of the tariff, with

There is, of course, the ever-present question of the tariii, with relation to which our region presents no unusual problems. I must say that the terms of the recent reciprocal arrangements with Great Britain and Canada made it look as though New England had either been kept too much or too little in mind, when such things as milk, maple sugar, and fisheries had their protection decreased. I do not know that it is yet time to appraise the results of this action, and perhaps we had better wait until the results are clear before we try to make protest; for there are other legislative problems which do affect us more directly. lems which do affect us more directly.

Items which do affect us more directly.

The Wages and Hours Act is a serious matter. Here we find ourselves on the horns of a dilemma. I am sure that most of us are opposed to the setting of wage rates and hours by national legislation. The lack of flexibility, the widely varying conditions, the impossibility of granting exemptions with even-handed justice, the inevitable necessity for the building up of great bureaucratic administrative institutions, and the choking of natural developments in accordance with economic needs are only a few of the difficulties which follow an attempt to introduce totalitarian administration which follow an attempt to introduce totalitarian administration into a highly developed and elaborately organized society like ours. Yet, on the other hand, a region which must subsist on quality

yet, on the other hand, a region which must subsist on quanty products, paying high wages, is ever sensitive to the disadvantages which those high wages entail. Our region has led the Nation in its wage and hour standards. It has placed itself at a definite disadvantage thereby, and the temptation is strong to support wage and hour limitations and to demand their extension.

However advantageous such a course might be for New England, I believe that it would be bad for the Nation as a whole and ultimately bad for us. The most we should ask for, it seems to me, is such a wage rate as gives minimum standards of decency, giving assurance that the industry is just above the sweatshop level. Thirty-five cents an hour or even 32 cents an hour as a minimum would even to weet these requirements for goods made for interwould seem to meet these requirements for goods made for inter-state distribution.

A quality region also has its definite problems with relation to taxation. For one thing it is subject to greater fluctuations of income. It has years of loss in its operations and then a few years of profit. The net result over a period of years is a tax on its average profits higher than the normal rate of taxation for any one year. We are thus far more heavily taxed than regions engaged in more stable occupations, such as the food industries. We have a particular interest in taxation policies which carry over gains and losses so that the taxation is on the basis of our average conditions instead of on the abnormal ones. instead of on the abnormal ones.

In a region renowned for its inventiveness and its enterprise, we have been hard hit by the special forms of taxation which have

been devised, it would seem, specifically to penalize business risk. The undistributed-profits tax bore heavily on businesses whose earning power fluctuated widely, but it bore still more heavily on the growing industry, attempting to make for itself a place as a new venture against the competition of established businesses. The capital-gains tax, like the undistributed-profits tax, has been somewhat lightened, but even in its present form its effect is to discourage "venturesome capital." There is nothing this Nation needs more than a revival of the spirit of business risk and enterprise, and the ability to realize on profits from risk and enterprise is an essential necessity. Full reemployment waits on risk and enterprise and at this moment it waits on little else.

While these things of which we have been speaking are specific, there is a general requirement still unmet which it is most

While these things of which we have been speaking are specific, there is a general requirement still unmet which it is most difficult to put into words. That general requirement relates to the atmosphere or the "weather" in which business enterprise must live and act. The weather has not been good. The weather is made in part by business itself and in part by the conditions which surround it, which in the last few years have been primarily determined by the Federal Government. I think that I may safely say that the arrival of good business weather and consequent revival of employment and a decrease of the excuse for large governmental expenditures depends very little upon the passing of new legislation. It depends, on the whole, rather more on the refraining from legislation or from the threat of legislation. on the refraining from legislation or from the threat of legislation. We are indeed in a dangerous position when we assume that business depends on positive action by government for its health

and activity.

There are certain business evils from which government must protect the body of its citizens. There are certain evils from which some sections have to be protected as against other sections. There are certain disasters which come to business from the raids of speculation, for instance, from which protection must be provided. But, take it altogether, these various protections are of a general sort and fall far short of the regulation of the details of general sort and fall far short of the regulation of the details of business by government on which we have embarked in the last few years. Such detailed regulation is impossible. The attempt to enforce such legislation meets with difficulties such as to require an ever-expanding and ever-elaborating administrative machinery. It is not too much to say that the attempt to govern the details of business by government, if persisted in, will destroy popular government, and destroy the useful functions which our representatives in Congress now perform. Only the totalitarian government can give detailed management to business, and in the totalitarian government the people's representatives play no part.

I might properly close by calling attention to the fact that New England's particular forte of providing the more refined goods and services for the rest of the country gives her a particular interest in the welfare of the country as a whole. It is New England's industries which suffer first and most if the Nation's business is not sound. We have, therefore, no special favors to ask. We ask only that our Nation be permitted to continue on its old course of private enterprise and activity with only the necessary checks on the evils which have hindered that enterprise and activity.

activity.

activity.

I hope that this picture will appeal to you as clarifying and simplifying the responsibilities and opportunities of you who are responsible for national legislation. We are dependent on you, and we believe that the requirements which we feel must be met in your sphere are requirements which you are as well fitted to carry out in the future as you have shown yourselves to be in the past.

Manuel A. DeFreitas

EXTENSION OF REMARKS

HON, HENRY CABOT LODGE, Jr. OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES Tuesday, May 16 (legislative day of Monday, May 8), 1939

ADDRESS BY EDWARD G. PENNIMAN

Mr. LODGE. Mr. President, Manuel A. DeFreitas was a well-known citizen of Massachusetts and a leader among Americans of Portuguese extraction. Never forgetting Portuguese culture, he was also a stalwart American and instilled Americanism among all with whom he came in contact.

It is particularly appropriate that in the city of Peabody, Mass., a square should be named for Manuel A. DeFreitas, and that on May 6 last His Excellency Dr. Joao Antonio de Bianchi, Envoy Extraordinary and Minister Plenipotentiary from Portugal, should have made a trip from Washington in order to unveil the monument erected in honor of Mr. DeFreitas. It is estimated that more than 10,000 persons

attended the dedication; and I ask unanimous consent to have printed in the RECORD the speech delivered on that occasion by Edward G. Penniman, editor of the Peabody Enterprise.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We gather here today to humbly dedicate this junction in grateful memory of a departed friend, who for more than a quarter century personified the highest traditions of service, sacrifice, and

century personified the highest traditions of service, sacrifice, and loyalty, which were so broad and so deep that, although he has crossed the bar to God's kingdom, we today revere that memory with thanksgiving and with praise. That life and character was the late Manuel A. DeFreitas.

Born in the Azores 48 years ago, the son of humble but proud parents, Manuel was one of 13 children. At the age of 17 he came to the United States, the land of promised opportunity, where among free men and women Manuel found a society that held boundless careers for those who dared to live and to serve.

He soon found employment in a factory, where he learned the improved processes of making shoes. But he also had an unflinching desire to learn the customs, the language, and the traditions of the American people. Aggressive, alert, and intellectually honest, Manuel made friends easily; and always a keen student of conversation, he was pleased to find how close the spirit of America was to that of Portugal, and what a great similarity existed in the patterns of both great countries.

the patterns of both great countries.

In 1917, Manuel achieved a great personal victory, one that to him offered a challenge to serve the United States. He became a naturalized citizen after many years of patient study and effort; and although he always held close the tradition and history of his own native land, he had an understanding and vision to appreciate the jewel of his American citizenship better than most American-

born citizens.

For more than twoscore years, four organizations—the symbol of American cooperation—felt the radiating glow of his friendship, and progressed on the unfailing wisdom of his mind, and kindness and progressed on the unfailing wisdom of his mind, and kindness of his heart. He served as president of the Portuguese-American Civic Club, not alone because of the personal joy that came in that responsibility but because he appreciated the opportunity which such a unit in a democratic nation offered. He knew that the success of democracy depended upon the fine and harmonious interweaving of the two patterns—of the Old World and the New World. Manuel envisioned that dream of a better world because through mutual understanding of our backgrounds there would develop a closer and more beautiful life. Indeed, Banks' stanza is the most expressive of Manuel's life in the poem:

I live for those who love me And for those who know me true, For the heavens that shine above me And the good that I can do.

These words must have been enshrined in the heart of Manuel A. DeFreitas because wherever we saw him—in the store, in the lodge, or community, he was always striving to do all the good that he

For 18 years Manuel was the village storekeeper. Perhaps more than in any other chapter of his life it was here that we had the opportunity to know him best. Cheerful, friendly, honest, aggressive, and intensely interested in promoting the best interests of the cooperative Popular Grocery Store, Manuel so served that cause that cooperative Popular Grocery Store, Manuel so served that cause that it became one of the pioneer units in retail merchandising in the State. During prosperous times and depression days Manuel made the store successful, and yet, not one Portuguese family in this community went hungry. The door of kindness in the heart of this man was never closed and the light of service in his soul never flickered, but grew brighter when there was adversity, when trouble and even death cast its shadows over the homes of his friends.

In these days with so much misery throughout the world and when nations are disturbed by factors of great alarm, we might well look at the life of Manuel DeFreitas for many lessons of character which give strength and renewed determination to keep our two great countries, the Republic of Portugal and the Republic of the United States, ever free and glorious.

For Manuel was given the rare quality of a calm mind, which in the midst of strife and of uncertainty remained clear and determined. He was never confused, and at trials which would tax the patience of the ordinary man beyond endurance his would never be clouded.

be clouded.

We can well emulate his quality of kindness, not in the ordinary We can well emulate his quality of kindness, not in the ordinary sense, but to a very profound degree. Yes, in his veins not only flowed the milk of human kindness, but his heart was the pump and his spirit was the fountain. I remember many deeds, to rich and poor alike, which Manuel did that gave unmistakable evidence that God's own hand of kindness moved when Manuel raised his arms in service for those who came in contact with him. How many of you here today remember his kindness toward children, and how he was never too busy at the store to stop for a few seconds to pat some child on the forehead or give some undernourished boy who seemed faint from hunger a sandwich and piece of cake. Friends, we live, oh, so short a time, and eternity is, oh, so long, that if there could be more kindness as practiced by this leader there would be more happiness.

We might well engender into our lives the sense of duty, of

We might well engender into our lives the sense of duty, of obligation and of being faithful, the like of which is seen in few men, but certainly among those few was Manuel DeFreitas. Words

are easy like the wind, but faithful friends are hard to find. Manuel was faithful to his God, his native land, and his adopted country. He was faithful to a code among men which was founded only on the highest and finest principles of living. He was faithful to his wonderful wife, and splendid children, and to countless friends who sought his wisdom and were made happy by his kindness. Today, when nations and peoples tear down those institutions which made them great; when there are too many examples of broken faith, the spirit of fidelity as personified by Manuel DeFreitas should point the way to a better understanding and a greater victory. and a greater victory.

Manuel lived for humanity, for a sincere fatherhood of God and brotherhood of man. He turned away bitterness and ill feeling with a smile, and never allowed the spirit of guile, of trickery, or vindictiveness to enter his life. Wherever you met him, on his lips were words of hope and courage, words of joy and praise, and words of God's teachings. For men who could be so loyal to their creeds so profoundly consistent with a desire to correct the course there is a correct to the consistent with a desire to correct the correct to the consistent with a desire to correct the correct to the correct to the correct three is a correct to the correct to th creeds, so profoundly consistent with a desire to serve, there is a great place for them in this world, and a greater place in that world above.

So it is fitting that not only the people of Portuguese origin, but the citizenry of Peabody, today commemorate this life for posterity by dedicating this square, in the section of our community where he served most. People in other communities whose lives were enriched by some little deed of his kindness join hands with us today

in this tribute.

For in dedicating this square, the Manuel A. DeFreitas Square, we solemnly and sincerely thank Almighty God that such a spirit moved in our community, and for the manifold lessons of character which Mr. DeFreitas bequeathed to us. For without character, there can be no nation strong enough to endure, and no happiness

or achievement that can be fine enough to be permanent.

For his qualities of leadership, of cooperation, and of service, this monument will ever be a shrine. For years to come this square will bring to those living a deeper and better understanding of true

Americanism.

For his modesty and sincerity this bronze tablet will ever serve as a guide to us in our powers to distinguish the flimsy from

the gold of life.

For his contributions to this community, as a representative of a great race of industrious, honest, and God-fearing people, this shrine will ever have a purpose so great as to make those who will feel its genuine influence better Christians and more patriotic

Therefore, we dedicate in loving memory this square to a great American, and likewise, before God and Manuel DeFreitas in heaven, we dedicate our lives as he did, in useful service to our church and our country. Long may the memory of this departed citizen remain in the hearts of men and women in our com-The influence of such a memory, etched in gold by the munity. The influence of such a memory, etched in gold by the strong hand of God, will help our community go forward with a more united spirit and a more determined vigor.

"Little Sir Echoes" of the American Tariff League

EXTENSION OF REMARKS OF

HON. WADE H. KITCHENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES Thursday, May 11, 1939

Mr. KITCHENS. Mr. Speaker, in his speech of April 26 attacking trade agreements, the gentleman from Massachusetts [Mr. TREADWAY] stated that some of the speeches made in defense of trade agreements had the earmarks of State Department propaganda. As one who has spoken in favor of trade agreements, I want to say that I depend upon various departments of the Government to furnish me with reliable statistical and other information regarding the operations of congressional acts and results of trade treaties. In my estimation, the gentleman and other hard-pressed critics of trade treaties and of this administration would not go so far afield in some of their statements and unsupported charges if they should obtain their information from reliable sources rather than such organizations as the American Tariff League and the Republican National Committee.

If anyone will go to the trouble of reading the July, August 1938, and other bulletins of the American Tariff League, and particularly the February 1939 bulletin of that league, and then read the remarks and speeches of various gentlemen now opposing trade treaties, he will see more than earmarks. The people are not going to take bulletins of the American Tariff League as reliable authority for anything. As to the Republican National Committee, it has a most

elaborate and expensive establishment here in the Capital with 49 employees, and numerous advisers, managers, and directors. As to their duties, the public is probably not fully aware. However, one wonders whence comes the enormous contributions necessary to pay their expenses.

In the newspapers recently an account was given of a Republican banquet here in the Capital at so much per plate. That banquet was attended by Republican leaders, and the ostensible purpose was raising of party political funds. Sad to relate, according to the papers, only a profit of 40 cents was reported. There was general wonderment as to what became of the profits from that banquet, but not for long. A reasonable explanation is that the banqueters simply consumed them at the banquet table, then as usual handed an empty bag to the public to fill, and later the American Tariff League to make nice political contributions from a portion of the bag, retaining the most.

We do not know all the names of those who attended that banquet. Therefore I feel justified in absolving the gen-

tleman who speaks of "earmarks."

During my short term in the Congress I have learned to respect and admire the gentleman from Massachusetts [Mr. TREADWAY! for his amiableness, integrity, honesty, ability, and partisanship, but fear he may be playing "Little Sir Echo" to that organization known as the American Tariff League, which took such a prominent and incredible part in the enactment of the infamous Hawley-Smoot Tariff Act.

The public cannot forget, and will recall easily, that during the consideration of that act the American Tariff League was the spearhead of the experienced, profit-reaping tariff industrialists, otherwise known as tariff barons with special privileges, who wrote their own tariff ticket, and which brought, in 1930 and thereafter, so many disastrous retaliations against and destruction of our own and foreign commerce.

We can never forget that the secretary of that organization, Faubel by name, lobbied from the offices here in the Capitol of a former Senator, Grundy, during the consideration of the Hawley-Smoot Tariff Act. We are not going to forget the fact that Mr. Grundy, the United States Senator, still an official of the American Tariff League, in a congressional investigation admitted that he believed tariff benefits should be given to certain industrial interests in proportion to their political campaign contributions. Grundy believed in the special protection by law of the large political campaign contributors so they can extract more money from the consumers of America, and, as he thought, be able thereby to remain politically in power over the American people.

Mr. Speaker, the record shows that the secretary of the American Tariff League was called before the committee investigating tariff lobbyists to explain his pernicious activities in 1929 and 1930 during the consideration of the Hawley-Smoot tariff bill, and, according to the lobby hearings, part 6, page 2352, the American Tariff League was an adjunct of the Republican National Committee. It would be most interesting if we had details of the present relationship. The evidence indicates we are now hearing from time to time the voice of Jacob while the hand of Esau is felt in the background.

It will not be forgotten, and was brought out in those hearings, that the American Tariff League employed important confidential clerks of the congressional committees to write tariff articles for its bulletins and publications. Such tactics flaunted the people's interest for the interests of a few. The public will not forget that an employee of an organization, the Manufacturers Association of Connecticut, interested in tariff increases, was actually placed on the public pay roll and taken into the secret meetings of the congressional committees. We will never forget that the Tariff Act of 1930 was the culmination of previous maneuvers and secret manipulation for special tariff advantages by selfish interests that precipitated this depression. This is the true story that we must remember when those responsible for that act now, directly and indirectly, renew their exertion and attack trade agreements, which is an endeavor to repair some of the damage and correct some of the evils of the Smoot-Hawley Act enacted under that questionable procedure.

LXXXIV—App——126

A simple examination and comparison of the monthly bulletins issued and being issued by the American Tariff League, with the remarks of those now opposing trade agreements. will show a very close correlation in topics discussed tabulation of statistics, and statements made against trade agreements. Of course, if gentlemen wish to depend upon the American Tariff League for information and their views, that is their privilege. In the meantime, they might become wiser and more reliable if they should ignore the American Tariff League and read some able editorials in well-informed Republican newspapers approving Hull's trade-treaty program.

For their information, as a mere example, I ask that an editorial of the Star, a very ably edited Republican paper of Terre Haute, Ind., be made a part of my remarks at this

IT WORKS

The reciprocal-trade policies of Secretary Hull are already being Hull has adduced figures to show that the 16 countries with which the United States has reciprocal treaties increased their purchases of American goods 39.8 percent in 1936–38 as compared

by only 1.8 percent during the same period.

Secretary Hull believes this is ample proof that the Americantrade policy of equal treatment and equal opportunity for all is
well able to hold its own in competition with any aggressive form

of trade yet developed.

Many people lose sight of the scope of Hull's policy in watching the detail of its working out. It is not merely a competitive method to offset other methods. It is grounded in the idea that freedom of trade means an increased volume of trade, whereas special barter and two-sided trade arrangements inevitably decrease the total volume of trade of the world.

Thus far events have to a large extent vindicated Secretary Hull

and his policy of seeking more instead of less intercourse between

That great paper in its editorial of April 22, 1939, in a discussion of the trade policies of Secretary Hull and his program, under the title "It Works," states that such policies and program are already being vindicated. That great, unbiased paper is interested more in the general welfare and prosperity of all the people of the United States than in the restoration to power of such men as Grundy, the American Tariff League, or even the resurrection or resuscitation of a political party supported, dominated, and discredited by that

It is to be regretted that the American people will be forced again to decide whether to return to "Grundyism," "Smoot-Hawleyism," and the American Tariff League so as to help a few, or retain the trade-building program of Hon. Cordell Hull and of this administration, and thereby recover and permanently restore trade with all nations as far as possible for the benefit and prosperity of the many. I have no misgivings as to what the decision will be if the people do not forget or be misled.

Mr. Speaker, we need and must have a larger market for our goods and farm products. One hundred and twenty-five millions of our people produce crops and manufacture goods for export, and this trade must be fostered, enlarged, and protected so as to make better and larger our own market.

Sad experience teaches us that if we impose excessive tariffs and thereby raise around us a wall against trade with others, then trade walls will be erected against us. Under such conditions a few in this country will reap a rich harvest of profit from their neighbors, but not for long, because such neighbors will be surely, slowly, and gradually exhausted.

I have been hoping that the American Tariff League, heretofore quiescent and thought submerged, would not again raise its head in a fight for private and special interests. I have been hoping that the trade treaties now being negotiated would be given reasonable time for fulfillment of their great purpose, but that hope is now being dissipated, and the people of America might as well prepare and be on guard for a flood of propaganda such as they have never experienced before. I appeal to every Member of Congress, to everyone in an official position, to all thinking people to weigh guardedly and consider most carefully the aims and purposes of those who seek to destroy the outlets of trade for and with the American people, and if that be done without bias, without political prejudice, without selfishness, then the American Tariff League will enter a sleep that knows no waking.

When American Packers Will Manufacture Canned Corned Beef and Sell It to the Government in Sufficient Quantities to Meet the Demands, No Doubt Our Government Will No Longer Buy From South American Countries—Packers Find It More Profitable to Use American Beef for Hot Dogs and Hamburger

EXTENSION OF REMARKS

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 16, 1939

ARTICLE BY ARTHUR KROCK

Mr. COCHRAN. Mr. Speaker, if the article in the New York Times written by Mr. Arthur Krock is correct, there is certainly a lot of "bull" to the cry that the President has destroyed the market for canned corned beef in this country when he permitted the Navy to purchase this product in Argentina.

According to Mr. Krock, the packers make more money by using that part of our beef that would go into corned beef for hot dogs and hamburger, thus creating a shortage of canned corn beef in the United States.

As I told the gentleman from Pennsylvania this morning. the way to prevent the purchase of food from other countries by the Government is for the Congress to pass a law. We passed a law that requires Government agencies to use domestic material in the construction of our public buildings. That bill came from the committee of which I am chairman.

Probably it would be well, Mr. Speaker, if we did have an investigation about the purchase of canned corned beef in South America. The people would then find, according to Mr. Krock, and I might personally add the farmers and stock raisers would find, that the packers increase their profits by refusing to manufacture canned corned beef in quantities sufficient to supply the Army and Navy. the packers guarantee they will manufacture canned corned beef in sufficient quantities if Congress insists the Navy and Army buy in this country? Will the packers agree to sell to the Government canned corned beef equal in quality and for a reasonable price if Congress passes such a law?

It is clearly evident that the farmer and stock raiser have in no way been hurt by the purchase of this canned beef in the Argentine if Mr. Krock is correct.

Under leave to print, I include Mr. Krock's article in this morning's New York Times:

[From the New York Times]

IN THE NATION-THE GREAT BEEF TEMPEST IN NONEXISTENT CANS (By Arthur Krock)

WASHINGTON, May 15 .- Ever since the President told the Navy that since Argentine canned corned beef is better and cheaper than the local product it should be purchased, Members of Congress from the cattle country have been erupting in speeches. The President, they said, was destroying a great local industry in an effort to curry favor with the Argentine for his hemisphere policy. Are American cattlemen and packers to go penniless to enrich the estanciero and the gaucho of the pampas? The Capitol today resounded with such oratory.

The facts of the case suggest, among other things, that either the western Members of Congress don't know them or that they see a good chance to win favor at home through wild exaggeration and good chance to win favor at home through wild exaggeration and imaginary injury to a local activity. Whichever is true, or whether the truth is a combination of both, the facts are known to the President and the Departments of State and Commerce. They are also familiar to the packers, the chain-store supply men, and to the meat processors of South America. If the western beef animals could do anything more than moo or bellow, perhaps they would express complete indifference over the whole affair. For however they are sliced, they are eaten just the same.

On the testimony of experts the situation appears to be this:

On the testimony of experts, the situation appears to be this: A good percentage of American cattle used to be turned into canned corned beef. The only time people thought much about this product was during the Spanish-American War when the quality of the canned beef was so bad there was a scandal. Probably that was the reason why canned beef became unpopular in this country. At any rate, the bellies, or "plates," of cattle from which canned beef is made were ingeniously diverted to other foods in this country.

ENTER THE HOT DOG AND HAMBURGER

Maybe a shrewd publicity campaign developed the substitute appetite. But at any rate in the years succeeding the rout of Spain from the Philippines and the New World there developed the great American yen for hot dogs and hamburgers. These, like the canned corn beef of odorous memory, are made from the same plates of the cattle.

plates of the cattle.

From Maine to California, from Florida to Vancouver, the hot dog and the hamburger entered upon a rapid rise in consumption. Booths and counters began to spring up like mushrooms on the highways and the city street corners. The scent of the griddle was inhaled in the land. Since good prices and good profits were to be made in these commodities, 95 percent or more of the plates of cattle were thus processed. The result is that large orders for canned beef cannot be filled in any store or wholesele packing plant. wholesale packing plant.

In South America and the European countries where the products of cattle plates are sold there is no relish of the hot dog and the hamburger. If alien peoples are relapsing into barbarism, as American isolationists insist they are, this sad lack of appreciation for our great domestic delicacies may be offered as proof. So the beefraising countries to the southward—Argentina, Uruguay, Brazil, and Paraguay—have used most of the cattle plates—and even better cuts—for canned corned beef. For this and other reasons they can deliver the product here cheaper and better, as the President said

Canned beef is handy ration for the Army and the Navy. Not only is it scarce here, because unprofitable in contrast with the hot dog and the hamburger, but its manufacture is held to a mini-mum therefor. The law of supply and demand has almost extin-guished the American product. But the plates are completely used and sold at home. No American steer or cow, no domestic cattle raiser or processor, is being discriminated against by the President or anybody else. Through our choice, the Spanish War experience, and the acquired native taste for hamburgers and hot dogs, we have found a better commercial use for this portion of our cattle.

A SMALL CAN, INDEED

The United States absorbs its own beef product and thus imports little. But canned beef comes in because it isn't profitable to manufacture much of it here. In 1938 four South American countries sent about 79,000,000 pounds. Argentina can sell it in whole-sale lots in the United States for 16 cents a pound, of which 6 of which 6 cents represents duty and another portion the hauling charge.

American bidders wanted to charge the Navy 24 cents a pound for canned beef in which only cattle plates, and none of the better South American cuts, were the base. Their price was high because they don't find it interesting to make much of the stuff. And they don't find it interesting because they are doing better with hot dogs and hamburgers.

The Navy order given to the Argentine was for only 48,000 pounds of canned beef. Compare that with the 79,000,000 pounds imported in 1938; take the other facts into account; and try to believe what the western Members of Congress are saying about the President. Then forget the whole business over a hot dog or a hamburger, assured that the western cows and steers are the only constituents of the Members of Congress who are really getting the worst of it.

But they would be no better off in a can than on a roll, anyhow.

The Path to Recovery-Thrift or Spending-From the Republican and Democratic Viewpoints

EXTENSION OF REMARKS

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1939

RADIO DISCUSSION BY HON. ROBERT A. TAFT, OF OHIO, AND HON. T. V. SMITH, OF ILLINOIS, TUESDAY, MAY 9, 1939

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a timely and important discussion on The Path to Recovery-Thrift or Spending, disclosing the Democratic and Republican points of view on the subject as presented by Senator Robert A. Taft, of Ohio, and Representative T. V. Smith, of Illinois, Tuesday, May 9, over the Columbia Broadcasting System:

SENATOR TAFT

Citizens and taxpayers of the United States of America, the Roosevelt administration has adopted the theory that this Nation can spend itself into prosperity. It is the first administration in the history of the United States, and probably the first responsible government in the world, to be dominated by the spending philosophy. In 1932 the President advocated economy in government. From time to time thereafter he has promised a balancing of the Budget, but it is a long time now since he has even fixed a date, no matter how distant, for such a return to normal financial policy. Mr. Hopkins this morning expressly endorsed the spending policy for at least another year. In spite of feeble protests from Mr. Morgenthau, the spending philosophy dominated both executive and legislative departments. Those who believe in it see little reason for ever reducing an appropriation, because, if Government spending leads to prosperity, obviously the larger and more wasteful every appropriation can be made the more prosperous the people will become. To some extent the American people themselves were swept away by this philosophy. It was too easy to swallow the attractive theory advanced by plausible economic quacks that spending, rather than saving, is the new way to the abundant life. But the continued acceptance of the spending philosophy by responsible officials of government is unique and extraordinary. If any theory was ever completely disproved by results, this one has been disproved. We have spent twice as much money in the last 6 years as in any other 6 previous years. The public debt since 1933 has increased by \$20,000,000,000, and we have spent that much Citizens and taxpayers of the United States of America,

6 years as in any other 6 previous years. The public debt since 1933 has increased by \$20,000,000,000, and we have spent that much more money than we have received even from heavy, increased taxation. The Government expenditures today are still increasing. taxation. The Government expenditures today are still increasing. And yet after all that spending and borrowing we fell into another depression in 1937, from which we have not recovered. To cure that depression, the New Deal has found but one panacea—to spend still more money. The deficit deliberately planned by the President for the fiscal year which is about to close July 1 will be about \$4,000,000,000. The Budget for the year which begins on July 1, 1939, will probably create a deficit of at least \$4,000,000,000 more. The deficit spending at this rate has been going on steadily now for a year, and yet the country is substantially in the same condition it was in a year ago. I read only yesterday that the optimistic estimates for a large national income in 1939 had been abandoned. The national income is to be less than \$70,000,000,000, far under what it was 10 years ago, in 1928, when there were 10,000,000 fewer

what it was 10 years ago, in 1928, when there were 10,000,000 fewer people. If \$20,000,000,000 of borrowed money produced another depression instead of prosperity, if a large additional monthly deficit during 1938 and 1939 has not improved national income, what possible hope is there that any improvement can be obtained from more spending?

As a matter of fact the huge spending tends to deter recovery. Lack of financial restraint encourages the Government into all kinds of activities where private enterprise can no longer operate in competition. It justifies vast Government bureaus to regulate every industry, regulations which nearly always discourage individuals from going into that kind of business. It leads to increased taxation which makes profitable operations in private industry almost impossible. Spending feeds on itself. If one pressure group ob-tains a subsidy it is almost impossible to turn down another pressure group whose arguments and interests are just as powerful. Spending builds up activities and whether those activities are wise or not their sudden abandonment would throw many men out of work and perhaps start a downward spiral of further unemployment and business depression. Spending once undertaken cannot be suddenly abandoned but must be tapered off gradually.

So long as the spending program continues there always looms ahead the threat of national bankruptcy and while that threat exists men are not encouraged to risk their money in enterprizes exists men are not encouraged to risk their money in enterprizes which may be wiped out in the general break-down involved in such a result. No nation ever has continued indefinitely an unbalanced budget without ultimate collapse. Already our annual charge for interest amounts to a billion dollars. A slight increase in the rate of interest might easily make it a billion and a half dollars a year. Sooner or later this interest bill will become a tremendous burden and already we hear proposals that the debt be paid off in irredeemable paper money. Inflation of the currency is the means which governments use to repudiate their debts but inflation of the currency always leads to a tremendous rise in prices, which finally breaks down all business activity. It bears particularly hard on the poor and the people with fixed salaries. The savings of a lifetime and all life-insurance policies are destroyed by inflation, because dollars are depreciated until they will buy nothing. If we ever have real inflation, it is doubtful if we could reinstate the American system of individual freedom and initiative state the American system of individual freedom and initiative until we had wasted many years under state socialism. The spend-ing philosophy not only has failed to bring recovery but it contains

ing philosophy not only has falled to bring recovery but it contains the seeds of hardship and poverty, and even civil war.

Of course, it is true that the prosperity of the country increased from 1933 to 1937, but there has always been a recovery as the inevitable reaction from every depression, and it has always occurred before without substantial Government deficits. As a matter of fact, recovery from 1933 to 1937 was more rapid in England, where the budget was balanced throughout that period; and it was more rapid in many other countries throughout the world.

To support their theory, every New Dealer asserts without argument that the 1937 depression in the United States was due to the fact that the Government stopped spending. This proves too much. If the Government can never stop spending without producing a depression, it would be far better never to begin, for

on this hypothesis we must go on spending indefinitely and constantly piling up the debt until we reach the inevitable collapse. stantly pilling up the debt until we reach the inevitable collapse. But, as a matter of fact, there never was any cessation of Government spending. The 1937 depression began about the end of the fiscal year which ended on July 1, 1937. In that year the Government expenditures reached a new all-time high (excluding the soldiers' bonus payments), and the deficit amounted to approximately \$3,000,000,000, not as large as the super-deficits of 1934, 1935, 1936, and 1939, but still a very respectable deficit. Certainly the depression was not caused because the deficit was reduced \$1,000,000,000, through on the present in the present that we required. reduced \$1,000,000,000 through an increase in tax receipts. Nor does a study of what happened in 1937 justify the claim that the 1937 depression was caused by any reduction in the deficit. It resulted rather from Government interference, the lack of saving, and the unwillingness of individuals to invest in permanent

The depression first appeared in the capital-goods industries. The steel industry fell from 100 percent of capacity to 20 percent of capacity in 6 months. Hardly a domestic order was given for machinery. The demand for all the goods which go into permanent construction disappeared overnight. Gradually the unemployment in these industries which make things that go into permanent construction disappeared overnights. ployment in these industries which make things that go into permanent structures reduced buying power until the same condition was reflected in all of the other industries in the United States. The fall in business activity in the last 6 months of 1937 was greater than in any 6 months of the previous depression. What happened is quite clear. The railroads buy one-fifth of all the steel produced in the United States. Their taxes, wages, and other costs increased so fast under Government stimulation that other costs increased so fast under Government stimulation that no margin was left between their income and their increased expenses to provide for replacements or even ordinary maintenance. The costs of the utilities were increased, while their rates must remain the same, and they faced also the the threat of Government competition, so that naturally they could not spend for permanent expansion. Other industries which could legally increase their prices were afraid to manufacture many goods at increased costs for fear they could not sell them at the increased prices they were obliged to charge. There were no new models in prices they were obliged to charge. There were no new models in the automobile industry in 1938. The immediate cause of the depression, therefore, was Government interference to increase too rapidly wages, taxes, and other costs—so rapidly that prices

could not keep up.

But there would not have been such a complete collapse in these industries except for the fact that there had been less saving in the United States and even less willingness to invest savings in per-United States and even less willingness to invest savings in permanent improvements. In the twenties we saved in the neighborhood of \$10,000,000,000 a year and put this money back into buildings and machinery expansion. By 1937 savings had dropped to around \$3,000,000,000 a year, and most of these savings went into Government and municipal bonds.

America has been built up by thrift and the investment of savings, through life insurance, building and loan associations, banks, and corporate securities, in permanent improvements which would earn a return for their owners. In the United States today we have

earn a return for their owners. In the United States today we have a tremendous plant, thousands of cities with buildings from small residences up to giant skyscrapers, thousands of factories, a great railroad and utility system, all constructed by private enterprise, with the idea that a return could be earned so that the man who saved his money would have some income during the rest of his life to take care of himself and of his family after his death. This process has largely come to an end. No one is willing to put his money into anything permanent, because, with Government regulation, taxation, and competition staring him in the face, he cannot feel confident of any return. But a resumption of that process is the only way to put men back to work.

This condition was the underlying cause of the sudden collapse of 1937, a collapse which did not occur in any other important country in the world. Far from checking the depression, Government spending only aggravated it. The Government's activities made a return on private investment much less promising. That activity should have been devoted, not to public spending but to the stimulation of private spending. An excellent example of how this can be done is found in the Federal Housing Administration. where the Government, without cost to itself, has stimulated the building of houses by private industry and afforded almost the only real stimulation to business which the present administration has provided. Neither in practice nor in theory is there the slightest basis for the claim that Government spending can produce pros-

perity.

The new dealers, I believe, embrace the spending philosophy with ease and eagerness because they want to expand Government activity and regulation in every field and yet don't dare to levy the taxes which are necessary to meet the expense. If they did levy more taxes, they would almost certainly discourage all that is left of private industry and, incidentally, put an end to their own political

How far can Government expense go, assuming you could increase taxes to eliminate the deficit? Today the taxes are taking 22 percent of the national income, but total expenditures, local, State, and National amount to 30 percent of the national income. That means that if the Budget were balanced by more taxes, 70 percent of the state of the

That means that if the Budget were balanced by more taxes, 70 percent of a man's time would be used in working for himself, the other 30 percent in working for the Government. Perhaps what the Government gave him might be worth the 30 percent, but he at any rate has nothing to say about how that 30 percent is spent, and the chances are that most of it does him very little good. In any heavy tax bill the inclination is to levy the taxes first on

profits, so that the incentive to expand industry and develop new industry is tremendously reduced, because most of the earnings must be turned over to the Government. If we ever get to the point at which 50 percent of the national income is taken by the Government, I doubt very much if we can keep the other 50 percent in the hands of private industry. The burden on the private activities remaining would be so great that probably we would soon develop a hundred percent socialized state. Up to date no one has devised a system of taxation which can get more than 22 percent of the national income, and even that seems to be a tremendous of the national income, and even that seems to be a tremendous handicap to growth.

Many of the Government activities are most attractive. Taken one by one, there is the utmost justification to continue them, but the truth is that the people at the present time cannot afford everything they are getting, and someone must decide what is essential and what is not. The average workman knows that there are many expenditures he would like to make. Probably there are few who would not like a new and better house, a new automobile, more and better clothes; but the individual knows that he only has a certain income and can afford only a certain number of pleasant things each year. That is the condition the Government is in today. Dams and canals and slum-clearance projects, farm benefits, and P. W. A. may all be attractive and justifiable, but if we try to buy them all, we are only fooling ourselves. Sooner or later we will have to pay our notes in national dishonor, weakness, poverty.

have to pay our notes in national dishonor, weakness, poverty.

It is not easy to stop the present spending. Friday I cast the only vote in the committee against the \$1,300,000,000 farm bill. Our committees are considering another billion for the Federal Housing Authority, eight hundred million for the slum-clearance projects. A general education bill would add two hundred million a year, and a general health bill four hundred million a year to the annual charges of the Federal Government. Everyone is interested in spending. No one ever appears against an appropriation. No advocate of any of these spending proposals feels the slightest responsibility for suggesting where the money is coming from to pay for his proposal. A conservative Democratic Senator said to me for his proposal. A conservative Democratic Senator said to me last week that in his opinion spending could never be stopped until we went on and on to the final inevitable collapse. I don't agree with him. I believe that if the Executive accepts the responsibilities cost upon but by Commercial and the Proposition of the proposition o ties cast upon him by Congress under the Budget law, he can work out a plan which will give us all the essentials of the present program within a figure which the Nation can pay in taxes. I believe those taxes can be adjusted to interfere less with the industrious businessman and the industrious workman. If the President will not do it, I believe that Congress should create a committee to work out the editor and that mittee to work out the policy, and that a great public opinion can be created behind that policy to compel its acceptance. I have a determined confidence in the sound judgment of the American

REPRESENTATIVE SMITH

Kinsmen in Texas, neighbors in Illinois, friends in Ohio, men Kinsmen in Texas, neighbors in Illinois, friends in Ohio, men and women of America, greetings from Washington. That was a very sobering picture which the Senator has just painted for you of our national predicament. You note, however, that he knows the cure—just get the right President, or failing that, a congressional committee. Simple as the cure is, the picture of the predicament is, of course, extreme, extreme in color and extreme in urgency. It illustrates very well the common presumption that it is the business of those out of power to oppose those in public urgency. It illustrates very well the common presumption that it is the business of those out of power to oppose those in public office. The chief conservative method of opposing is to view liberal achievements with alarm. So Mr. Tatt's lifted voice and lowered brow. Why, to listen to the Senator, you'd think that debt itself was something unclean and national debt a public disserter. Such a view I repeat, reflects the alarm of extremists. aster. Such a view, I repeat, reflects the alarm of extremists. But we have extremists on our side also who leave the impression on many that debt is something delightful and national debt a peculiar delight.

Now, extremists are good-but chiefly good to balance other extremists. (A pessimist, you remember, is a person who has to live with an optimist.) Another good thing about extremists is that they make necessary a middle course. Leaving both sets of extremists, then—to hold each other in check—I invite you to seek with me a middle ground, some golden mean between the overthrifty and the overextravagant. And I ask you to take with me the strictly realistic view, that in such matters only those who sleep on the floor will not fall out of bed.

The Senator voted against the farm bill last Friday, he says, The Senator voted against the farm bill last Friday, he says, he alone of the whole Senate committee. But he did not some days before vote against some 6,000 war planes at a cost of some \$300,000,000. That time, indeed, he did his part to spend on one roll call approximately as much money as through the centuries Harvard, Yale, and Columbia have accumulated in total endowments for educational purposes. Why, the best of these planes will cost \$175,000 each. For one such bomber your whole high school graduating class, up to 50 boys and girls, could be sent through 4 years of one of these colleges to be turned out as happy, useful citizens. Such price the Senator pays for folly, and borrowed money it is, too. Borrowed money for instruments of destruction, \$175,000 per unit. The cost of the bomber is terrible, its work is horrible, its life is short.

Has Senator Taff gone crazy to worse than waste money like

Has Senator TAFT gone crazy to worse than waste money like that, and borrowed money to boot? You might think so. But I tell you otherwise. I know because I voted for the planes also. You must believe by this time that what the Senator and I both

vote for is likely to represent the lowest common denominator of sanity.

Though voting against the agricultural bill, why did Mr. Taff vote for these evil things, and that on borrowed money? I imagine for much the same reason that I did. He chose between two great evils, hoping and believing that he'd chosen the least. Confronted, not by a theory but by a stern condition which he had not created, he had to do the best he could. So the air bombers, and that

So also, my fellow countrymen, our peace spending program and the resulting national debt. We Democrats, whom the Senator derides, came to responsibility in 1933 to learn that officeholding is not a paradise of power but a predicament that tries the souls of honest men. Recall how it was in 1932. Rebellion on the farms was ugly. Insolvency in the banks was terrifying. Prospects of starvation stalked the city streets. Fear was the steady food of more millions than it takes to make a majority of our fellow citizens. We Democrats didn't make that situation; we found it full blown and not disposed to wait on our convenience. I do not say the Republicans outright caused the great depression of 1929—any more than we single-handed caused the recession of 1937—but the Republicans were themselves in power, long and strong in power, when the great depression happened. That's a funny place to be if later you expect to affect injured innocence about the whole matter—injured innocence in a carping voice. Certainly we Democrats did not make the conditions, though we must take our share of the blame for 1937. Indeed, we did not understand how serious things were then. We underestimated 1929, as the Senator overestimated 1937, seeing we're already pulling out of the recession. From 1929 to 1932 we'd heard it so often as to have our hope raised that prosperity wasn't dead—that it was only waiting "around the corner." In our innocence we promised to reduce spending, and, once in power, proceeded to do what we'd promised—inflicting a 10-percent cut right down the line. Well, the joke was on us, but we didn't see any Republicans around who could laugh other than sheepishly.

To grumble is cheap indeed, when you're grumbling at what on borrowed money.

So also, my fellow countrymen, our peace spending program and

sheepishly.

To grumble is cheap, indeed, when you're grumbling at what you yourself would have done had you been the one that had to do it. We have doubled the country's debt, yes; but for the same kind of reason Mr. Tarr and I voted for the airplanes the other day, and for a purpose infinitely more constructive than bombers. A good deal of our spending represents permanent improvements, capital investments, as it were. You have but to look around you, wherever in America you are, to see examples of this type of spending. A good deal more of our spending represents repayable loans to almost every group of citizens from big business to little home owners, and the remainder of the spending represents fortification against hunger and insurance against civil strife.

Allowing 10 percent—I doubt if Mr. Taft would charge more—

against hunger and insurance against civil strife.

Allowing 10 percent—I doubt if Mr. Tatt would charge more—to that louse, the chiseler, the remainder of our national debt represented when not the greatest good the least of evils. Mr. Tart will hardly dare say that he would not have run the Government heavily in debt. He is not irresponsible, and he is not cruel. Don't choose what you want, said a wise man, but stand by the choices you thought wise to make when you had to make them. Knowing why we contracted the debt, we Democrats are not privileged now, as some Republicans think themselves to be, to go back on the noble though hard choice of our manhood in power. We cannot renege like spoiled children; we must face our responsibility cannot renege like spoiled children; we must face our responsibility like men. The "push" of our spending has been fear, and you know it as well as I. But there was also a "pull" to the spending, and that pull was hope—hope of scotching the wheels against disaster, yes; but hope also of rolling the old wagon on ahead.

Now the spending has, by and large, relieved our fears, but it has not yet fulfilled our hopes. It has not yet brought us back to such a level of national income as to balance the Budget and to begin paying off the debt. Indeed, it has not yet brought us to where we dare safely stop the spending itself. Mr. TAFT has given you a grand Republican explanation of our democratic recession of '37. grand Republican explanation of our democratic recession of '37. I dare say that there is some truth in it. I'm not an economist, nor is Mr. Taft. But I dare say that there's some truth in what he says, as there's some truth in our partisan democratic explanation. I know only this: That we worked to save the lives, the property, and the morale of the American people until substantial recovery had returned. In '37 we thought it safe to move for a balanced Budget. We cut down rather steeply on spending, a recession set in and the conservatives were among the first to demand resumption of the spending program that had saved them from disaster and had seemed to be promoting general recovery.

Everybody was in favor of Government's spending in '33, even

Everybody was in favor of Government's spending in '33, even Mr. Hoover, I believe. Everybody knows that it's a delicate job, this job of tapering off. Mr. Taft is right about that, and Mr. Taft, I believe, is not in favor of the risk of stopping spending at at once. It's a delicate job. We have no adequate precedents to go by, unless '37 really tells us to go but to go slow on reducing aids to business, agriculture, and unemployed consumers. The economists are not agreed on how to proceed, and the conservatives are, as usual, hysterical. It's a good time for men in power to keep their heads.

keep their heads.

"But this spending cannot go on forever," yell the hysterical.

"Who said it could?" we calmly reply. "Not we. We know that it cannot go on forever. We're doing our utmost to keep it from going on forever; for we're doing all we can to save the profit system. If you let that system go down through your obstruction and to the tune of your hysteria, you'll see that the spending can go on and on. That's what's happening in Italy and Germany, and

in no small degree, because the chambers of commerce, so to say, were not willing to keep their heads and to cooperate themselves out of the jam into which our capitalistic system has got itself

the world over.'

the world over."

We Democrats propose to keep our heads. We know that the Budget must be balanced, but we also know that it must be approached cautiously. Leave it to conservative extremists to say "today." Leave it to radical extremists to say "never." We propose, exactly as Alexander Hamilton proposed when he put the young Nation \$80,000,000 in debt, to balance the Budget as soon as we can out of rising income and to pay the debt from a stabilized prosperity. But isn't that playing for the breaks? Yes. Isn't that gambling on the future? Yes. The same future of this same great country upon which we all must stake both our hopes and our lives. The debt is disturbing but not alarming. Insofar as the proposal is not personal and political, I wish Senator TAFT's congressional committee well, if he does not get the President he wants. But the committee, if it gets beyond the microphone, will face not merely the Senator's beautiful theory dated from days of Republican lethargy; it will also face the hard facts which we Democrats have been facing since the heavy economic hangover from the

have been facing since the heavy economic hangover from the Republican spree of 1927 and 1928. I like the leeway between us and disaster which Mr. TAFT himself seems to leave his favorite President or, that failing, his congressional committee, if I understand properly his distinction between bad taxes of 22 percent of disastrous taxes of 50 percent of our national income. If the Redisastrous taxes of 50 percent of our national income. If the Republicans will but be as generous and patient with us Democrats as Mr. TAFT is with himself, I think we'll make it all right.

as Mr. TAFT is with himself, I think we'll make it all right.

Meantime, treasuring that suggested leeway, conditions are not without hope today. Everybody not running for office admits, I believe, that times are getting better, though not as rapidly as any of us wish. The hungry are mostly being fed, and many of the able-bodied are being given work. Labor is enjoying collective bargaining, and farmers have democratic power to help themselves, if it can be done politically. More businessmen are making profits than like to admit it. The health of the Nation is at last honestly recognized as a problem, and the morale of our people is by no means shot.

means shot.

"But all of this is on borrowed money," is the constant refrain of the conservative hysterical. Mr. Taft has during these debates hardly been able to give his undivided attention to any other problem than borrowed money. "Yes, on borrowed money," reply problem than borrowed money. "Yes, on borrowed money," reply the calm, "just as the doctor and the hospital bills we all run up for our sick children are for most of us borrowed money." But for our sick children are for most of us borrowed money." But there are few things more worth borrowing money for than boys and girls, than men and women, than private credit, and a nation's morale. It is borrowed money; but it is money borrowed on credit that's good and that remains good even in the face of all the conservative hysteria. Our national debt is something that we can perfectly well and easily carry until we begin paying it back, for the interest rates are very reasonable today.

Mr. Tafr admits the bearing of this upon the ease of carrying our debt, but his fear returns, this time fear that the interest rates may go up. Well, now they could go up a long way before the carrying charges would be comparable with those paid by Republicans on their national debt. With or without the Senator's fear, the truth is that interest rates have steadily gone down as the debt has gone up, keeping thus the carrying charge

down as the debt has gone up, keeping thus the carrying charge remarkably reasonable. Indeed, while our national debt was increasing some 90 percent between 1932 and 1938, our interest charges increased only about 40 percent. This means that instead of some twenty billions of debt at 3½ percent we have now some forty billions of debt at 3% percent.

of some twenty billions of debt at $3\frac{1}{2}$ percent we have now some forty billions of debt at $2\frac{9}{10}$ percent.

Nor does this tell more than half the hopeful truth about our national soundness. The Nation's total debt, private and public, appears no larger than it was in the twenties. Our national debt itself is as large as it is in part because the Government has saved the credit of others by taking on its broader shoulders debts they simply could not bear. We know this is true of farmers, who otherwise would have lost their farms; of home owners, who otherwise would have lost their homes; of businessmen, big and little: of banks and of railroads. But equally deserving of recognitions little; of banks and of railroads. But equally deserving of recognition is the fact that the governmental units of cities, States, and counties have in untold cases been able to pull through solely because of the National Government's willingness to keep them solvent. Count this as the simple explanation of what the Senator explained in a way that sounded downright cynical. Let us give him the benefit of the doubt, however, and count as a slip of the tongue his notion that we have spent money because we wanted to expand governmental activity for its own sake. It will take more charity however to explode his left headed slep at wanted to expand governmental activity for its own sake. It will take more charity, however, to overlook his left-handed slap at both the power of the people and the integrity of their representatives when he suggests that the citizen has nothing to say about how the taxes are spent and that the chances are that most of it does him very little good. I'm always amazed when conservatives talk with the unrestraint which one associates with loose-tongued satisfact alone. To the interpresental expent methods talk. To the irresponsible such reckless talk!

When the Budget is balanced by a prosperity which Republicans and Democrats alike must depend upon, but which neither of us and Democrats alike must depend upon, but which heither of us knows how to cause, the national debt can and will be repaid out of the normal tax returns of a prosperous nation. To pay the debt out of a proper national income will not be hard; to carry it meantime is easy. To have saved the Nation by courage and honesty meantime is reward enough for the Democratic Party. Once on the highroad again, we will present to the Nation as unearned increment of these trying years a new governmental efficiency for this new and dynamic age. Our new federalism

APPENDIX TO THE CONGRESSIONAL RECORD

represents the orderly liquidation of provincial lethargy along the whole front and the creation of public equities in fields previously reserved for private exploitation. As a humanitarian, I do not apologize for relief debt; as a farmer's son I'm proud of what we've done for both agriculture and labor; as a city dweller and State patriot I'm proud of the debt-shifting from narrow to broad shoulders; but as a student of government and a believer in the democratic way of life, I'm proudest of our peaceful passage from a government of lethargy to this new federalism for our speedy and heady age.

The Real Farm Problem

EXTENSION OF REMARKS

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1939

ARTICLE BY ERNEST D. MACDOUGALL

Mr. HILL. Mr. Speaker, the able master of the Washington State Grange, Mr. Ervin E. King, has manifested great interest in an article by Ernest D. MacDougall appearing in the Washington Grange News of May 6. Because of the interest of the leader of the Grange in my State, I ask unanimous consent to print the article in the Appendix, as

[From the Washington Grange News of May 6, 1939] THE REAL UNITED STATES FARM PROBLEM—NO AGRICULTURAL PROGRAM
CAN WORK WHILE PERPETUATING CROP SPECULATION

(By Ernest D. MacDougall)

All farm plans fall into two classes. Some are calculated to hold prices of farm products, both at home and abroad, in line with world prices. Other farm plans are calculated to lift prices in the domestic market off of the world-price level. Plans of the former domestic market off of the world-price level. Plans of the former sort require the payment of a subsidy to the producers to compensate them for price deficiency due to lower production costs of competing products imported from foreign countries.

The United States Department of Agriculture, under its present Secretary, has consistently adhered to the theory of holding our agricultural prices in line with world prices and supplementing the low income of our farmers by relief (benefit) payments.

PROMISE UNKEPT

Secretary of Agriculture Wallace, when first appointed to the Cabinet, said much about parity prices. He soon changed the term to parity income. Secretary Wallace has been continually promising the farmers parity income—that is, low world prices plus benefit payments sufficient to bring up their income to a parity with domestic prices of American industrial goods in purchasing power. chasing power.

chasing power.

This promise has never been kept. The benefit payments have fallen far short of bringing the income of farmers to parity. These substitutes for parity prices have been tragically inadequate considering the fact that farmers must buy, under the Wallace type of farm plan, in a high, protected domestic market and sell in a low, unprotected world market.

Obviously, in order to rectify this gross injustice to agriculture, one of two things must be done. Either the protection our Government affords to industrial prices and wages must be withdrawn and industrial prices and wages forced down to the level of world prices and wages, or agricultural prices must be lifted up to and protected at the level of American industrial prices and wages.

ROOM FOR WONDERMENT

ROOM FOR WONDERMENT

The Wallace program definitely repudiates the latter objective and falls far short of attaining the former. The policy of reciprocal-trade agreements is a sly but feeble effort to withdraw governmental protection from American prices and wages and to reduce our American standard of living to world-cost levels. It is unlikely, however, that American industry or labor will permit that sort of thing to go very far.

This situation causes wonder as to why Secretary Wallace refuses to permit our Government to afford to agriculture the same protection it affords to industry and to labor. There is but one

protection it affords to industry and to labor. There is but one

protection it affords to industry and to labor. There is but one possible answer, namely, the fixed determination to hold our agricultural prices in line with world prices.

But that does not explain the real purpose of that fixed determination. The real purpose is to protect and perpetuate the market operations of the futures traders. Futures trading cannot be done on an American price level. There is no futures trading on American industrial prices. But there are no agricultural prices in the American protect event world prices reflected. prices in the American market except world prices, as reflected on the futures market ticker tape. There is no such thing as American agricultural prices of crops of which we produce an exportable surplus.

THE REAL EXPLANATION

Futures trading is possible only in world trade with world prices. Futures trading can be done only on a constantly fluctuating world-price basis. Futures trading cannot be done on a stabilized price level, either high or low. Futures trading requires (1) fluctuation of prices (2) on world-price levels. This is the explanation of the Wallace farm program.

Turning to the other type of farm plan, it should be noted that the protection offered by the Government to industry is protection of price. Industry fixes an American price for its products sold in

of price. Industry fixes an American price for its products sold in the domestic market and the Government protects that price by means of tariffs or import duties. Unless and until an American price, as distinguished from a world price, is fixed for agricultural

price, as distinguished from a world price, is fixed for agricultural products there is no price for an American tariff to protect. Lack of protection for agriculture does not arise from lack of agricultural tariffs. It arises from lack of an American price for the tariff to protect. In agriculture, the only price we know is world price, and "futures quotations set the pace for cash prices."

Several plans have been suggested, but never seriously considered by Secretary Wallace, to lift our agricultural prices in the domestic market off of and away from world-price levels. One is the cost-of-production plan. Another is the parity-price plan. Another is the commodity-index plan. Another is the loan-value-above-world-price plan. None of these is acceptable to Secretary Wallace because they would destroy commodity speculation in the Wallace because they would destroy commodity speculation in the

futures markets.

It may be assumed that it is not within the power of mortal man to devise any farm plan, or other plan, that will operate 100-percent perfectly. The choice is not between a perfect plan and an imperfect plan. The choice is between a plan that will, in a general way, hold our prices in the domestic market in line with world prices and a plan that will, in a general way, lift our prices off of and away from world-price levels.

It is, without a doubt, possible for the Congress to draft and enact legislation that will, in a general way, give to agriculture much the same protection that the Congress has afforded to industry. It has always been a difficult thing to adjust and regulate prices, freight rates, utility rates, minimum wages, protective tariffs, and the like. The difficulty of the task has never deterred the Congress from making the effort where industrial prosperity has been at stake. It is only in the field of agriculture that the task has been considered to be too difficult to be undertaken.

has been considered to be too difficult to be undertaken.

The secret of this whole dark, deep, difficult problem of agriculture is that the most powerful lobby in the land cleverly, effectively, but quietly, is determined that our prices of farm products, which are gambled in on boards of trade, shall be held in line with fluctuating world prices, so that the gambling game, for the great gain of the gamblers, may go merrily on. It is fairly obvious that no effective farm legislation ever can be enacted into law until and unless the deep, dark, mysterious game of the commodity gamblers is exposed to the light of day.

This situation clearly indicates the great need for an honest

This situation clearly indicates the great need for an honest investigation of the fine art of commodity gambling and futures trading, and obviously explains why no such investigation has ever

been made

Wage Differentials

EXTENSION OF REMARKS

HON. SAM HOBBS

OF ALABAMA IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1939

ARTICLE BY JOHN TEMPLE GRAVES II

Mr. HOBBS. Mr. Speaker, under leave to extend my remarks in the RECORD I insert the following article from the gifted pen of John Temple Graves II, which appeared in the Birmingham Age-Herald recently in his This Morning column. This worthy son of a distinguished sire, is one of the outstanding columnists of America. Whatever subject may engage his pen or tongue is always illuminated by his thought.

When P. O. Davis, director of the Alabama Extension Service, When P. O. Davis, director of the Alabama Extension Service, addresses the Exchange Club this Wednesday on the Essentials of Prosperity, Birminghamians will be listening to one of the all-too-rare economic leaders who are able to judge things on merit without regard to their undying hate or deathless love of the New Deal. As a member of the wage-hour law textile industry committee, Mr. Davis voted with the minority recently against the establishment of a uniform minimum wage of 32½ cents an hour which would eliminate the southern differential, while some of his fellow liberals—with their "feet in the clouds"—voted blindly in favor of it for its beautiful sound.

To wipe out southern wage differentials is to wipe out southern wages. Level-headed liberals like P. O. Davis face the fact.

The textile industry committee, upon which the South is outnumbered, proposes a uniform minimum wages of 32½ cents an hour in lieu of the existing 25-cent minimum, with no differential for southern mills. The 25-cent minimum has been low enough to permit the differentials between North and South, but if the minimum is raised to 321/2 cents there will be no room for them. Under mum is raised to 32½ cents there will be no room for them. Under N. R. A. the cotton-textile industry paid a minimum of 30 cents an hour in the South and 32½ in the North. Under the present Wage Hour Act the minimum for all industries steps up from 25 cents to 30 cents next October. The textile committee could, in its discretion, classify the southern textile mills in a manner to restore the old N. R. A. differential—30 cents for the South, 32½ for the North. Instead, it proposes a dead level everywhere of 32½ cents. If, as competent testimony from the South indicates, this new minimum and the wiping out of the differential results in the closing of southern mills, it is going to be hard for the majority members of the committee to prove that they are friends to labor rather than just friends to New England and the North. And it is going to be hard for those who call the South a No. 1 problem to prove that they have any desire really to solve that problem.

prove that they have any desire really to solve that problem.

The answer to the problem of the South is industry. Industry to absorb the excess products and populations of the farms, to keep more of the profits of production at home, to save transportation costs to southern consumers. Not the industry which portation costs to southern consumers. Not the industry which exploits and bleeds a land, of course. Not the industry which looks upon this area as a colony rather than as a region. But proper industry, healthy industry, industry that pays that highest possible wages and that recognizes these wages as part of the pur-

chasing power to which it must cater.

Naturally New England hasn't liked the southern move of cotton textiles. Naturally the industrial North doesn't like to see the agricultural South attracting smokestacks. It isn't in human nature or common sense not to stand up for your own, fight for it against those who attempt to take it away or against circumstances that remove it. New England has a right to serve its own regional interests, and so have New York, and the other areas of the North and East. But so has the South, and where the United States of America is concerned, where national policy must choose one region over another, the rule of reason, economy, and justice is plain that the region whose problem is named one should be chosen.

But the South has yet to be shown that even with equity and economics on its side it can get anywhere without having politics, too, on its side.

Willamette Valley Project in Oregon

EXTENSION OF REMARKS

HON, HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 16, 1939

Mr. ANGELL. Mr. Speaker, this project having for its purpose the development of the Willamette River and its tributaries lies partially within my congressional district in Oregon and partially in that of Representative Mott. The report of the Secretary of War, the Board of Engineers, and the district engineer on this project is contained in Document No. 544, Seventy-fifth Congress, third session. The Seventyfifth Congress, third session, on June 28, 1938, in chapter 795, Public, No. 761, approved the plan for this improvement and authorized \$11,300,000 for the initial development, the reservoirs and related works to be selected and approved by the Chief of Engineers.

The Willamette Valley is one of the most fertile agricultural areas in the State of Oregon, and, I believe, compares favorably with any in the United States. The Willamette River flows in a general northern direction through this broad valley and joins the Columbia River 99 miles above its mouth. It has a length of some 189 miles. The Willamette River Basin has an area of 11,200 square miles and is located between the Cascade Range of mountains on the east and the coast range on the west. In addition to the valley land there is a large mountain area within the drainage basin which is rugged and covered with extensive commercial forests. Some 3,800 square miles of the watershed area are in nationalforest reservations. Timber and wood products are an extensive industry in this area. The bottom lands have rich soil and are well adapted for agricultural purposes of a diversified nature. There is a population in the Willamette Basin of approximately 575,000, of which some 325,000 are in the city of Portland. There is an extensive rainfall throughout the whole area with the exception of the summer months, during which time natural rainfall is insufficient for best crop production and some irrigation is desirable.

Logging is carried on extensively in Willamette Basin, and during the 9-year period from 1925 to 1933 production in this industry averaged 9.000,000 board feet per annum. It consisted mostly of Douglas fir and amounted to approximately 121/2 percent of the total cut during this period in the western Oregon and western Washington Douglas fir region. Most of this product goes north through the Willamette Valley to Portland and the lower Columbia River mills. The 1930 census shows that 2,663,000 acres, or approximately 30 percent of the gross area of the counties lying within the basin, are contained in farms. This is 16 percent of the total Oregon farm acreage. Seventy percent of the farms are less than 100 acres in size.

Over 80 percent are operated by full or part owners. Dry farming is generally followed in this area, although there are some 12,000 acres under irrigation, by means of pumping, gravity, and diversion. Crops raised in that area are hay, oats, wheat, hops, fiber flax, grass and other seeds, flower bulbs, nursery stock, small fruits, prunes, cherries, apples, pears, peaches, strawberries, and nuts. Sheep and goat raising for wool and mohair is extensively engaged in, and dairying, as well as the raising of hogs, sheep, and other livestock, are major activities. The 1930 census data gives the total value of farm products for the eight counties lying within the basin as \$50,880,000. In 1929 the mineral output for these

counties was valued at approximately \$1,225,000. In addition to the agricultural industries proper, industrial activity is carried on to a considerable extent mainly in the processing of forestry and agricultural products. There are some 290 sawmills situated in the basin, with a combined capacity, on an 8-hour shift, of 2,200,000,000 board feet annually. The Portland mills obtain a considerable portion of their logs outside of the Willamette Basin. The average annual production of Portland mills for the period from 1925 to 1933 amounted to 675,000,000 board feet. Agricultural products are processed in Portland and at various other points throughout the Willamette Valley. Large fruit and vegetable canning, drying, and packing plants, as well as nutpacking plants, are located throughout the central area. The manufacture of butter, cheese, canned milk, and other milk products is extensively engaged in throughout the whole area. Flax retting and scutching plants are also established in the cities of Eugene, Mount Angel, Canby, and Salem, within the area.

Transportation is furnished by the Pacific Highway, running north and south through the valley, and numerous branch highways leading to it. Water transportation is afforded by the Willamette River and its tributaries and railroad facilities exist throughout the area. The Willamette River is navigable at low water from its mouth to Portland for oceangoing vessels of 30-foot draft; and from Portland to Oregon City for boats drawing about 6 feet; and generally throughout the year to Salem for boats not exceeding 21/2foot draft. Only boats of shallow draft can navigate the river above Salem during low-water period. Yamhill River is navigable for boats of 21/2-foot draft to Lafayette and for smaller-draft boats to McMinnville. None of the other tributaries of the Willamette are commercially navigable except for the floating of logs.

From November through April floods may be normally expected. Major floods, however, are confined to the period of late in November until early February. There is backwater from the Columbia River as far as the Willamette Falls, which are 26 miles above the mouth of the river. This results in floods when the Columbia River is in flood stage. Floods occur in this area on an average of every 5 years causing great damage. The most destructive one occurred in December 1861 when the peak discharge at Portland was 635,000 cubic feet per second. At a point 120 miles from the mouth of the river the flood exceeded bank-full stage by 19 feet and flooded some 353,000 acres. In February of 1927 at the same point flood stage was exceeded by 10 feet and 273,000 acres were inundated. The United States

division engineer, as shown by his report, estimates the average annual flood damage for the basin at \$1,693,000.

For some 40 years local interests have been attacking this problem and have expended some \$250,000 on various flood-control works for the protection of highways, railroads, and bridges. My own city of Portland has constructed concrete retaining walls, intercepting sewers, and pumping facilities costing \$2,871,000. The Federal Government, through allotment from relief funds, has expended some \$300,000 for bank protection along the Willamette near Independence and between Harrisburg and Eugene.

The division engineer, following exhaustive study, survey, and examinations, pursuant to the authorizations I have referred to, recommended as the logical, initial step the construction of seven reservoirs with provision at three for future raising of dams to give additional storage for the development of power and for the reconstruction of the Willamette Falls locks, and open river navigation improvement from the locks to Albany. Major General Schley, Chief of Engineers, as well as the Board of Engineers, concurred in the recommendations of the division engineer, holding that, notwithstanding the direct benefits that would accrue in the proposed initial development would not be fully commensurate with the cost, nevertheless, other considerations and indirect benefits justified the project. Major General Schley said (H. Doc. No. 544, 75th Cong., 3d sess.):

Other considerations, however, enter into the determination of the advisability of undertaking a project of the scope and magnitude of the one under consideration. The Willamette Valley is a rich agricultural area, and extensive further developments are to be anticipated should reasonably adequate flood protection be provided. It is difficult to estimate the extent of future growth or to evaluate benefits that would result therefrom; but in such a comparatively undeveloped territory of great future possibilities these benefits would unquestionably be important. I believe that, taking into consideration these more or less intangible future benefits and the possibilities for the future development of large quantities of power, the improvements proposed under the plan for initial development are justified. With respect to requirements for local cooperation under the plan for initial development, I concur with the Board that since the reservoirs are designed primarily for the control of floods, the provisions of the 1936 Flood Control Act with respect to requirements of local cooperation should be complied with, and that local interests should be required to bear the costs of lands and damages as provided in that act, including the cost of railroad relocations and the facilities for the propagation of fish and related works, and should be required to maintain the reservoirs upon their completion. I recommend that the existing navigation and flood-control projects for the Willamette River and tributaries, Oregon, be modified to provide: For the construction of a system of reservoirs for the regulation of stream flow in the interest of flood control, navigation, irrigation, power development, and stream purification, substantially as proposed under the plan for initial development; for such channel improvement and contraction works as may be necessary to secure with stream-flow regulation controlling depths of 6 feet to the mouth of the Santiam fiver and 5 feet thence to Albany, and for the reconstruction and enlarge

Mr. Speaker, under the plan as proposed and approved by the division engineer, the Board of Engineers, and the Chief of Engineers, the modification of the existing navigation and flood-control project for the Willamette River and its tributaries would provide for the construction of a system of reservoirs which would regulate the stream flow and provide flood control, navigation, irrigation, and stream purification; and eventually, if conditions warranted, power development. The initial project as approved would provide channel improvement and construction work necessary to secure stream-flow regulation controlling depths of 6 feet

at the mouth of the Santiam River and 5 feet not quite to Albany, and for the reconstruction and enlargement of the locks at Oregon City. This is a project that is in keeping with the general plan of waterway development and conservation of water resources followed and practiced by the Government in connection with development work through the Board of Engineers of the War Department. It is fully justified as shown by the record of the hearings and the reports of the engineers. It will result in great savings to the people affected in the Willamette Valley area, result in annual savings from flood waste, provide additional river transportation facilities, and afford water supply for irrigation purposes during the dry summer months. It will also assist in stream purification and result generally in substantial, direct benefits, as well as indirect benefits, fully justifying the appropriation requested at this time to initiate the work.

The Library of Congress

EXTENSION OF REMARKS

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 16, 1939

STATEMENT BY RECTOR H. (REX) FLOYD

Mr. ELLIS. Mr. Speaker, I have the honor of representing the Third Congressional District of Arkansas, which district was represented in this august body from 1904 to 1914, inclusive, by a very distinguished son of Arkansas, the Honorable J. C. Floyd. Today one of his illustrious sons, Rector H. (Rex) Floyd, occupies a position on the staff of the Library of Congress; he is considered one of the best authorities of its growth and history. With the opening of the new annex, which is even larger than the original and which is designed to meet the needs of the country for another half century, Mr. Floyd has compiled a brief history and description of this great institution.

In this rapidly changing age, in a world of unsettled conditions, it is always worth while for us as individuals to keep ourselves abreast of the times by interpreting as best we can the trends of civilized man, as reflected by a better knowledge of the roads we have traveled.

To this end, I am happy to quote the article in full:

As the Library of Congress enters another period of its growth and evolution by expansion into the new annex and the inauguration of its ninth Librarian, the time seems appropriate to assert anew our praise to the noble men of the past who have contributed so much to our benefit in the development of this greatest institution of its kind in the entire world. May the people of the United States encourage future administrations to keep this storehouse of knowledge at the top of the stratosphere of fame where it so majestically soars in the year 1939.

Due to the complicated arrangement of corridors, balconies, and pavilions, it is difficult to outline in writing a comprehensive guide to the myriad objects of interest. In this brochure, however, one finds a general picture which gives the casual visitor some knowledge of the Library's history, its buildings, and its functions.

The Library was founded in 1800 by an act of Congress. For the first 97 years of its existence it was located in the Capitol building, being completely destroyed by fire when the British invaded Washington in 1814. The following year Congress purchased the complete library of Thomas Jefferson, which is the nucleus of the present collection. (These Jefferson volumes may be seen, as well as used, in the rare book reading room.)

The present main structure was occupied in 1897. Its construction consists of New Hampshire granite and marble collected from all sections of the earth. It is of the Italian Renaissance order of architecture. The building is crowned with a dome which terminates in a gilded finial known as the Torch of Science, ever burning.

As you approach the building you encounter on the sidewalk the "Court of King Neptune," with his Triton sons, sea nymphs, sea

horses, serpents, frogs, and turtles. This is a very interesting study in bronze and worth a moment of one's time.

The main entrance consists of three massive bronze doors, commemorating tradition, writing, and printing, from left to right

Inside, just what is the first impression?

Bear in mind that as the purpose of this booklet is only to help the visitor to become acquainted with objects of outstanding interest, it is necessary to omit many notable details.

MAIN ENTRANCE LOBBY

This magnificent hall is lined throughout with white Italian marble. The arches are adorned with marble rosettes and foliated designs of an exquisite finish and delicacy. The stairways have 26 miniature figures carved in relief, representing the various arts and sciences. The newel posts are beautifully decorated with festoons of fruits and flowers and are surmounted with bronze torchbearers, holding aloft electric lights. Over staircase buttresses are small children with hands resting on globes, representing America and Africa on the one side, with Indian and resenting America and Africa on the one side, with Indian and Negro children, and Europe and Asia on the other, with Caucasian and Mongolian children. From the center of the floor radiate the points of the compass from a conventional sun surrounded by the signs of the zodiac, all in brass inlaid in a marble field. Rising on all sides are lofty rounded columns with elaborately carved capitals of Corinthian design. With a height of 72 feet to the skylight, the vaulted ceiling, the marble balustrades, and the neighboring decorations, it offers an architectural effect which is most imposing

THE EVOLUTION OF THE BOOK

In the first corridor toward the center of the building we find a series of paintings which show the different steps in the development of the modern book.

Starting at the south end of the corridor on the left the first scene is called the "Cairn." This is merely a heap of boulders, piled up as a reminder of shipwreck, battle, or other unusual happening. The observer will remember this to have been an ancient pening. practice.

Next comes "Oral Tradition," depicting an ancient spokesman, Next comes "Oral Tradition," depicting an ancient spokesman, relating his tale or story to absorbed listeners. This mouth-to-ear process of information of the past was carried on for centuries.

Then comes the "Hieroglyphics," those crude characters chiseled on the rocks by the ancient Egyptians, Babylonians, and others who

recorded the various outstanding accomplishments.

Continuing to the opposite end of the corridor we find at the left the "Pictograph," showing the American Indian recording war trails and the like on the back of buffalo hides.

On the right of this is the "Manuscripts." This portrays monastic continuous and illuminations.

tic scribes, engrossing and illuminating hand-written manuscripts,

a practice carried on for many centuries.

The last in this series of the development of the modern book depicts Mr. Gutenberg, the inventor of movable type, displaying proof of his work together with the printing press, out of which have evolved our books, libraries, and education in general.

The mosaic ceiling in this corridor is dedicated to theology, law,

and medicine.

GOVERNMENT OF THE REPUBLIC

Beneath the arches next to the main reading-room entrance are a series of five murals by Elihu Vedder. Everyone should know the symbolic significance of these murals.

Beginning over the entrance door we find "Government," majestic of mien and laurel crowned, holding the scepter and a tablet, upon which is inscribed Abraham Lincoln's words, "Government of the people, by the people, for the people." She is attended by genii, or guardian spirits, who bear the sword of authority and the bridle of restraint. In the background is an oak tree typifying strength

strength.

On the right is "Good Administration," the genius of America. She is seated beneath an arch, every stone of which offers its office of support to every other, as each State must contribute its share to the upholding of the Union. In her lap is the open book of the law. In her right hand are the evenly balanced scales of justice. Her left hand rests upon a shield, the divisions of which represent the political parties of this country. At one ballot urn youth is casting its first vote. In the other, public opinion is winnowing the wheat from the chaff. In the background is the wheat field and the fig tree which indicate domestic tranquility.

Next on the right over the south elevator, "Peace and Prosperity" are represented by a goddess who extends the laurel wreath to agriculture and art, symbolic of appreciation and reward. An olive tree graces the background.

since there is nothing in nature which does not possess a negative, as well as a positive, element, directly opposite over the north elevator, Mr. Vedder gives us two illustrations of the danger of corrupt government.

"Anarchy" holds aloft as a brand the flaming scroll of the Consti

"Anarchy" holds aloft as a brand the flaming scroll of the Constitution and the cup of madness. She is the presiding genius amid universal waste and ruin. Her left foot rests on the downfallen arch of state. Her right foot is spurning law, learning, religion, and art. She is attended by ignorance and violence. The broken cogwheel and grindstone are evidence of complete devastation. On the right is "Corrupt Legislation," who has gathered unto herself cornucopias of gold, the source of which is indicated by the briber slipping his bribe onto her sliding scale. That legislation

might have been influenced by purchase is indicated by the briber accepting the book of law with the overturned ballot box at his The small female figure on the left represents honest industry, seeking recognition in vain. The smokeless chimneys are evidence of the idleness of the factories. In the background is the poisonoak vine dying and with falling leaves.

(This group of paintings has graced these arches for 42 years, and, unfortunately, the thousands who view them daily have no

way of knowing their meaning.)
(Take elevator to the balcony of the main reading room.)
You are now viewing the main reading room from the visitors' rou are now viewing the main reading room from the visitors gallery. All business radiates from the round center desk where the reference assistants serve the public in any way possible. As a rule the reader is familiar with the system and goes directly to the card catalog (on the far side) and searches for the book under the author or title. Once located, the number of the book is written on the supplied order slip. A vacant seat is then located and the number of the desk is written on the same slip. This slip is then hearded in at the central desk and it is transported to slip is then handed in at the central desk and it is transported to the proper book stack by a pneumatic tube. Here the order is filled and the book sent to the central desk in a mechanical carriage. The book is then delivered to the reader by messenger. It requires about 15 minutes to complete the order for a book after the slip has been filed at the central desk.

The daily attendance in this reading room varies from 800 to

a thousand persons.

The attendants at the central desk also serve all Government departments, fill requests of the President, the Supreme Court Justices, Senators, and Representatives. They also arrange for the packing and shipping of books throughout the city.

In the dome are painted allegorical figures. The countries named re those which have been most instrumental in the evolution of civilization. Below the name of the country is an outstanding contribution of that respective nation. The stained-glass windows display the seal of the United States and each State of the Union. Circling the balcony are 16 bronze statues, commemorating men of the past who have excelled in arts, sciences, and letters. Their names appear on the wall behind each statue. The brown marble

names appear on the wall behind each statue. The brown marble is from the Sienna quarries of Italy. As a whole, this rotunda is generally accepted as being the most effective and beautifully arranged spectacle of its type to be found in the world.

Descending from the gallery by stair, we encounter Mr. Vedder's master mosaic portraying Minerva, the goddess of wisdom. She displays a scroll upon which is inscribed the various arts, sciences, and letters. She carries the spear. A Gorgon's head, steel plated, bordered with serpents, is about her neck. Below at her right is the owl and in front, her helmet and shield. Standing on a globe at her left is a statuette of Nike, the winged victor of the Greeks, extending the laurel wreath of victory and the palm branch of peace. In the background is a far-stretching landscape, with the sun of prosperity shining over all. Before passing this mosaic, stand on one side of the steps and observe the angle of her feet. Then step across to the other side as the feet reverse themselves. The illusion is quite mystical.

Nil invita Minerva quae monumentum aere perennius exegit. (Freely translated: "Minerva was at her best when she erected this monument more lasting than bronze.")

GUTENBERG BIBLE

In the mahogany case immediately ahead of the steps we find the famous Gutenberg Bible. Published in the year 1454, it was the first book printed in movable type. It is valued at \$350,000. The Bible is in three parts, bound with pigskin. There are only three complete Gutenberg Bibles extant. It is printed on vellum

and written in old Latin.

From facing the Bible cabinet, continue around the balustrade to the left. These exhibit cases are changed from time to time and contain interesting bindings, manuscripts, and the like which would take hours to study in detail.

Over the windows and doors are famous quotations in red letters on a gold field.

At the four corners of the quadrangle may be seen flying female figures, personifying the eight virtues: Justice, fortitude, industry, concordia, temperance, prudence, patriotism, and courage, divided two to a corner.

Continuing around to the left over the entrance to the north wing may be seen four paintings, representing wisdom, understanding, knowledge, and philosophy, viewing from right to left, respectively. Directly overhead, running the full extent of the ceiling, is cleverly sketched the five senses, taste, touch, smell, hearing and seeing in the order names. ing, and seeing, in the order named.

Before continuing around to the left, examine the first case on the right as you enter the north wing. Here may be seen the smallest book in the world, and immediately behind it in a long frame is the first telegram transmitted by wire. It reads, "What hath God wrought," and was sent from Baltimore to Washington.

While a brief tour of the Library permits only skimpy observa-tion of the many objects of interest, return and continue around the balustrade to the last exhibit case. Pause here for a moment and study one of the most beautiful examples of American literature—the first draft of the Gettysburg Address which is in the handwriting of President Lincoln. It is written partly in ink on White House stationery and partly in pencil on a plain sheet, as if to represent all classes of society. This document was left at the White House when the President departed for Gettysburg, contradictory to the story of its inspiration aboard a train en route to the battlefield.

On the opposite side of this same exhibit case is a photostatic copy of the Star Spangled Banner, showing how the original appears in the Walter's Museum in Baltimore City.

pears in the Walter's Museum in Baltimore City.

Now we come to the shrine of the Constitution of the United States of America. This shrine is under guard of a police officer 24 hours a day. In the marble table under yellow glass are the four original parchments as executed by 39 men, headed by General Washington, 152 years ago. It is the oldest active constitution in the history of the world. This fundamental law of our rountry was penned by Jacob Shallus, a clerk of the Pennsylvania Legislature, who was selected to do the work on account of his excellent penmanship. He used a goose-quill pen and was paid \$30 for the task. \$30 for the task

Immediately above the Constitution in a gold case may be seen the original Declaration of Independence executed on July 4, the original Declaration of Independence executed on July 4, 1776. It is signed by 56 men headed by John Hancock, of signature fame. In 1829 President John Quincy Adams ordered a copper plate made of this document in order that the then living signers might have a true copy. Unfortunately this plate removed much of the ink, obliterating many of the signatures. No attempt has been made to retouch it in order to preserve its originality. After the damage referred to, both the Constitution and the Declaration of Independence were kept in various dark vaults of the Government departments, unseen by the public, until 16 years ago, when the Library of Congress was made custodian. The shrine was erected as seen here and dedicated by President Calvin Coolidge. As many as 10,000 people have viewed it in 1 day.

As we continue around the balustrade we encounter cases containing the genesis of the Declaration of Independence and portraits of the signers.

The next wing branching off to the right contains etchings,

The next wing branching off to the right contains etchings, prints, and lithographs. This is known as the fine-arts section. The extent of our tour does not permit a visit to this section, but if one's time is not limited, many interesting examples of art may be seen.

Over the doors entering the fine-arts wing are medallions idealizing in female figures the seasons: spring with the bud, summer with the full blossom, fall with barren trees, and winter looking icv and cold.

In the ceiling directly overhead are the Three Graces, typifying

all that is lovely in nature, human life, and art.

We here turn left and descend the staircase to the point of beginning.

NEW ANNEX

The cost of the Library Building and the new annex total \$18,-747,000 to date.

The annex covers the two blocks square immediately east and is connected to the main building by tunnel. This new addition contains 249 miles of fireproof book shelving, giving a total of 414 miles in the two buildings. Books are transported from one building to the other in pneumatic tubes in 29 seconds. The annex is, as was intended, a house of utility. Most of the 27 major divisions of the Library will occupy this addition and the extent of their operations in the new quarters are such that one can hardly realize that these divisions were tucked away in the old building to the contract of the con up until a few weeks ago.

There are no exhibition halls in the annex but a visit to its two large reading rooms will make a lasting impression. The building is faced with white Georgia marble in the modern style of archi-

tecture.

It now seems pertinent to know some facts about the function of the Library.

The institution is directed by the Librarian of Congress. He is assisted by 27 chiefs of major divisions and a personnel of approxi-

mately 1,100 persons. The most recent inventory discloses that the Library contains 5,591,710 books and pamphlets, 1,402,658 maps and views, 1,194,697 pieces and volumes of music, 542,074 prints, 95,000 bound volumes of newspapers, and so many manuscripts that a numerical statement is not feasible.

Encyclopedic in nature, the Library covers the subject of knowledge from the dawn of civilization down to the present time. With the system of classification and cataloging in use any 1 of the 8,826,139 items can be secured in a few moments' time for the free

use of the public.

In the 40 years of his directorship as Librarian of Congress, Dr. Herbert Putnam has seen this institution grow from a comparatively small library to the greatest source of information in the recorded history of man, and it seems at this time that his name will be associated with the library world and with the Library of Congress in particular as are the names of Washington and Lincoln with

Often the visitor neglects a visit to the Library, thinking it just another collection of books like the home-town establishment. But to the amazement of all, here are the most magnificent buildings and the most interesting exhibits to be found anywhere in the

Exploring Federal Aid for Education

EXTENSION OF REMARKS OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 16, 1939

RADIO ADDRESS OF HON. FRED L. CRAWFORD, OF MICHIGAN, ON MAY 14, 1939

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by Hon. Fred L. Crawford, of Michigan, on May 14, 1939:

It is a pleasure to join in this discussion tonight, because one of the cherished rights which I inherited when I was born was that of freedom of speech. In that connection I desire at this point to add my word of commendation to the Mutual Broadcasting System for devoting this hour of each week to an open discussion of major issues pending before the people of the United States. In few other nations of the world could we meet in this manner and debate in

unbridled and uncensored fashion a Government proposal.

It has been ably said that "The way to defend our liberties and our fundamental democratic institutions for the future is to develop closer cooperation between education and the agencies of communication. Both are servants of the people. They should never be their masters."

This program each week is a demonstration of what those words ean. Through this means of communication our people are being mean. mean. Through this means of communication our people are being better educated on national problems, and tonight we are airing our thoughts on the subject of education itself.

In joining this discussion this evening I have no thought of entering as an antagonist. But I am convinced there is some exploratory work into which we should enter.

The bill of which Senator Thomas is the author, and upon which he has elaborated in his usual able manner, has been carefully drawn and cleverly worded. I advisedly use the word "cleverly." I am not going to quarrel at this point about the general provisions of his proposal.

I am in full agreement with the theory that education is the first

line of defense in a democracy. In my great State of Michigan we are still proud of the type of district schools which were made famous as the "little red schoolhouse." We are proud of them despite some of the uncomplimentary things said about them by some of the endorsers of this legislation appearing before Senator

some of the endorsers of this legislation appearing before Senator Thomas' hearing.

As I approach the issue before us tonight—that of Federal aid to education—the question in my mind is this: Are the American people ready to take that next to the final step and accept the embrace of the Federal Government in control of education?

I say "next to the final step" because the second question with which I am confronted is this: After we receive the embrace, will we then receive the kiss of death by having the Federal Government move into complete control of our educational system?

Were we to confine our remarks here tonight strictly to the Thomas bill, such questions would be entirely out of order. But the problem here dealt with goes far beyond this legislative proposal, and that is why I said at the outset that this particular bill is cleverly worded. is cleverly worded.

I do not for one moment entertain the thought that Senator Thomas, or any of the others who have been working with him, have ever had any idea of complete Federal control of our educational system. Their statements clearly indicate their purpose is

affiliated with no such intent.

affiliated with no such intent.

However, we are living in a streamlined era, where rapid changes in our habits and lives are taken for granted by our generation. We must look a few years into the future and consider what some other Congress might do toward completely encircling our educational system and draw it into the network of complete Federal domination on the basis and argument that in 1939 a Congress opened the way for such Federal control. We must ask ourselves whether in this case the camel of the Federal Government is permitted to stick its nose into the tent of the State-controlled educational systems only to move completely in at some future time.

mitted to stick its nose into the tent of the State-controlled educational systems, only to move completely in at some future time.

Federal aid for education is by no means new, as you have already been told. In fact, it dates back as far as 1785 in connection with the Northwest Territory when the Federal Government divided the land into townships and dedicated lot No. 16 in each township to "the maintenance of public schools within each township."

each township."

each township."
Proponents of this legislation claim that there is nothing in the Constitution to indicate the founding fathers opposed Federal aid to education. Yet it is interesting to note that in the Constitutional Convention, May 29, 1787, Mr. Charles Pinckney sub-

mitted a draft of a constitution in which it proposed to give power to Congress "to establish and provide for a national university at the seat of government of the United States." In the following few weeks three other proposals relating to national education were presented to the Constitutional Convention—two of them by Mr. Madison. In that short period in the Constitutional Convention we find that four efforts were made to give to Congress the patronage of education, art, and science in one manner or another, but whenever and in whatever form present, it was refused.

it was refused. Several decades later Clay made a very forceful argument in this connection in the Senate. Pointing out the great difference in powers of the National Congress and the legislatures of the various States, Senator Clay said—I quote from the Congressional Globe of February 7, 1859—"The powers of the Federal Government are few and defined; those of the States numerous and indefinite. Its powers are fully enumerated, those of the States unenumerated. Its powers are measured and limited, not only by prohibitions and reservations of ungranted rights but by specifications of the powers granted; those of the States unmeasured and unlimited except by prohibitions. The States may dowhatever is not forbidden by the Constitution; the Federal Government can do nothing that is not authorized by its charter or letter of attorney—the Federal Constitution. * * They were intended to move in different orbits, to attain different ends, and to exert different means. * * No one, on comparing the Federal and State Constitutions can fail to observe that while to the Federal Government is entrusted those common and ex-Several decades later Clay made a very forceful argument in to the Federal Government is entrusted those common and exto the recera Government is entrusted those common and external objects, such as war, peace, finance, negotiation, and commerce, to the State governments are reserved the care of whatever

merce, to the State governments are reserved the care of whatever is local or domestic, agriculture, education, trades, manufactures, poverty, crime, domestic relations, corporations, roads, bridges, ferries, and rights of property."

Thus we have Mr. Clay's views on restrictions on the Federal Government and the liberal powers of the State governments. It is likewise interesting to note just how many of the fields of States' rights enumerated by Senator Clay have been invaded in recent years by the Federal Government. Agriculture in the States no longer operates under the privilege of States' rights, but the Federal Government has moved in and taken over control of agriculture, as evidenced by the untilled acres and idle processing plants in my own State as well as other States—all due to restrictions imposed by the Federal Government.

The Federal Government has invaded other fields enumerated by

The Federal Government has invaded other fields enumerated by Clay. I quoted him because education was identified as a State right by Clay along with other rights now usurped by the Federal

Government.

And while commenting on the remarks of this prominent figure in American history, I desire to add a few lines from that same speech he made on Federal education, and ask you to draw your

speech he made on Federal education, and ask you to draw your own conclusion as to whether there is any existing parallel.

At that time—1859—Clay said he desired to invoke the attention of the country to the fact that such legislation was proposed—I quote him—"at a time when the country was \$60,000,000 in debt; when its revenues are insufficient to supply its ordinary wants; when we are told we must either increase the supplies or reduce the

demands upon the Treasury."

This great statesman was concerned at a new venture in the face of a \$60,000,000 debt. But consider our predicament at this hour, with a direct Federal debt almost 700 times greater than in Clay's time. The current year's deficit has already reached \$3,000,000,000,

and more to come.

But there the parallel stops. In our day we are not told we must either increase the supplies or reduce the demands on the The supply is not being increased, nor are the demands

on the Treasury being reduced.

Centuries ago, it was said: "The descent to the nether world is Centuries ago, it was said: "The descent to the nether world is easy. To retrace one's steps thence and regain the air above, this is the toil, the laborious task." Another observation is made to the effect that "units of industry, farmers, lending institutions (such as banks and building and loan associations), insurance companies, professional people and others, cannot compete with the United States Government. Each day more of our people comprehend this fact. "Equality under the law" calls for the Government to "lend to all" if loans are to be "made at all." Each day we enlarge the opening of the door of the Treasury. We say this is a democracy. We say this is a self-government. We say this is popular government. The trend is for Government agencies to lend money or to guarantee the debts of "all" the people, "on such security as they require and at such rates as they demand." There are those who contend that having gone so far, we must go "all the way." Everybody must be "equal under the law." As we proceed further down the incline, more people and more groups are saying, "You either lend to me, or give to me. and more groups are saying, "You either lend to me, or give to me, or guarantee for me, on my terms, or I will vote against you."

Let me again remind you that "no government is strong enough to support the people. The people must support the govern-

I desire to turn for a moment to another controversial phase of this proposed legislation. I refer to the possibility that the question of a step toward union of church and State exists in this measure. Powers given to the States under this bill do not pro-hibit any State from providing funds for the operation of certain

parochial schools. Thus we step into extremely dangerous territory and tread upon a sacred ground specifically set out in the Federal Constitution.

Federal Constitution.

Freedom of religious worship is purely an American institution. It is provided for by a primary law of the land and has been repeatedly protected by the highest court in the Nation.

I respect the right of Catholics to teach Catholicism in their parochial schools. I recognize the right of the Lutherans, Baptists or Seventh Day Adventists or other denominations to teach their religions in schools which their members establish for the education of their children and which they finance out of the funds which they themselves provide. That is a right inherent to American citizenship.

American citizenship.

President Grant clearly stated the duty of the State in education of its children when he said in an address at Des Moines in 1875—
I quote the President: "Encourage free schools, resolve that not one dollar appropriated to them shall go to the support of any sectarian school; resolve that neither State nor Nation shall support any institution save those where every child may get a com-mon-school education unmixed with any atheistic, pagan, or sectarian teaching; leave the matter of religious teaching to the family altar, the church, and the private school, supported enby private contribution. Keep church and state forever separate.

separate."

Former Governor Pollard, of Virginia, in discussing Federal aid for education purposes and religious liberty, pointed out that the phrase "religious liberty" means not only the right of every man to worship God according to his conscience but it means absolute separation of church and state. It means, said he, that the state has no religious function except to protect all of its citizens in the sacred right of conscience, just as it protects them in their rights of property and person.

them in their rights of property and person.

In reviewing this Federal-aid bill recently, one of the Roman Catholic weekly papers said, I quote: "The plain truth is that whatever the Federal Government subsidizes the Federal Government sooner

the Federal Government subsidizes the Federal Government sconer or later controls."

The Pittsburgh Catholic, the official organ of the Catholic Church in the Pittsburgh diocese, recently commented on the report of the recommendations of the President's committee out of which this legislation grew and said; I quote: "The entire history of the church, emphasized by recent events, shows that public funds come at too dear a price. Mexico had state aid, and so had Spain and Germany and Italy and France. And it proved a weakening, demoralizing connection. Better the sacrifice and the limitations which independence requires than the unsound edifice built on the deceptive, treacherous basis of state aid."

I am convinced these fears are well founded. Any legislation of this type, if considered favorably, must definitely separate the State from the church. If religious liberty is to be maintained in America, and the common schools are to serve as a bulwark of the

America, and the common schools are to serve as a bulwark of the State, then the State and the church must each attend to its own business and operate separately and independently in its own respective and distinctive field. There can be no commingling of interests without the clashing of spiritual and secular swords in deadly conflict

I have failed to find a clear provision in any of these bills to the effect that the funds are available only for tax supported free public schools, but I find much evidence to support a contrary opinion. There are other phases of this immediate bill which are debatable

but in my opinion the two questions which I have presented transcend in importance, at the moment, all other questions.

Let us consider whether parents of our boys and girls of school age want this legislation. Despite the claims that have been made I fail to find convincing evidence to the effect that our people are anywhere united on wanting a Federal-aid education program of this type. In fact, I find in the hearings a statement of a repre-sentative of the National Congress of Parent-Teachers, in which it is admitted that among the 48 States there are wide differences of opinion in this matter.

Likewise, I find of record a statement of Alexander G. Ruthven, president of the University of Michigan, in my own State, in which he says, I quote: "No one feels more keenly than I do the attempts that are being made by the Federal Government to capture education in the United States."

Neither have I found explanation to the statement, both in the printed hearings and in the Senate committee report, in which it is revealed by the Acting Director of the Budget that this matter had been taken up with the President and that it would not be in

line with his program.

Despite the fact that this legislation has been pending several years, I am sure the country as a whole has not had the opportunity of hearing it discussed or of studying its ramifications and

possibilities.

Let us have full opportunity to consider whether such a plan to finance education through the Federal Treasury is taking a step toward purchasing for the Federal Government a measure of control over education—regardless of how small a beginning.

Let us ponder whether if Uncle Sam takes his children onto his

knees, whether they be from 5 years to 90 years—as is possible under this bill—and attempts to finance their education, then will his next move be to issue to them schoolbooks written under a writers project of Federal employees and printed in the Government Printing Office? If so, will this not then next lead to the establishment of the Commissioner of Education, already provided

in this bill, with authority of greater dictator proportions over the lives of American people than the Minister of Propaganda in German or other totalitarian states as they now exist? Shall we not likewise ponder the fact that despite the claims for this legislation that it contains specific provisions for the di-vorcement of Federal control under the program, yet the suspicion remains that any provisions against Federal control must necessarily tend to be relaxed at some future time?

The greatest need of thousands of those it is intended to benefit under this program is not education, but bread, milk, and other nourishing provisions. The traditional three R's of education are of no avail if the stomach is empty and the cupboard is bare.

The Public Works Construction Program

EXTENSION OF REMARKS OF

HON. MICHAEL J. BRADLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 16, 1939

ADDRESS OF JAMES M. MYLES, VICE PRESIDENT AND LEGIS-LATIVE REPRESENTATIVE, OPERATIVE PLASTERERS' AND CEMENT FINISHERS' INTERNATIONAL ASSOCIATION

Mr. BRADLEY of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of James M. Myles, vice president and legislative representative, Operative Plasterers and Cement Finishers' International Association, before the Pennsylvania Federation of Labor (A. F. of L.) convention held at Philadelphia, Pa., May 11, 1939:

Mr. President, officers, and delegates to this convention, it is my purpose to discuss with you the Public Works Administration program as compared to the "made work" type of relief project. I intend to discuss, from the standpoint of labor, the benefits derived from past public-works programs and ask for your united support for legislation now pending in the Congress of the United States to continue the P. W. A.

The last appropriation for P. W. A. was made available on June 21, 1938. It made available \$200,000,000 for Federal projects and

21, 1938. It made available \$200,000,000 for Federal projects and \$750,000,000 for loans and grants for non-Federal projects of States, school districts, municipalities, and other public agencies throughout the United States. The Public Works Administration Act of 1938 permitted the receipt of applications for loans and grants through September 30, 1938, and provided a dead-line date of January 1, 1939, for the start of all construction work.

This appropriation provided the sponsors with funds for the construction of school buildings, auditoriums, city halls, courthouses, hospitals, colleges, dormitories, power and disposal plants, bridges, tunnels, traffic arteries, waterworks, and other worth-while public improvements. This building and construction program has made the P. W. A. one of the greatest employing factors in the history of our Nation.

our Nation.

The Public Works program has not only served the purpose of putting building and construction tradesmen and laborers to work at the job site but its purchasing power has extended to industries supplying construction with cement, stone, sand, lumber, clay products, copper, glass, paints, lead, lime, plaster, steel, power, tools, trucks, machinery, transportation, and other materials.

The Bureau of Labor Statistics has made a study of the manhours of labor furnished by the P. W. A. programs and the orders for miscellaneous industrial products which have been filled during this huge construction undertaking. It is significant to note that in addition to the million workmen currently employed as a result of the P. W. A. program, thousands of other workers are engaged in of the P. W. A. program, thousands of other workers are engaged in the preparation of plans and in the consumer goods industries which, of course, directly benefit from the P. W. A. It is well to emphasize that the million workmen directly engaged on P. W. A. work are not on the Federal pay rolls. They are paid by private contractors at prevailing wage rates and are working in their own

The P. W. A. construction program in its entirety provides for the awarding of contracts under the competitive bidding system. Its employment regulations recognize the rights of labor to bargain

Statistics tell us from the time of man that construction has been the greatest single employment force. It is this Nation's greatest single capital investment. It is one of the greatest forces toward diminishing unemployment and elevating the living conditions and standards of the citizens of this country. If we are to continue our war against unemployment and depression we who are engaged in the building trades must unite our efforts to continue the Public Works Administration.

Congressman Joe Starnes, Member of Congress from Alabama, has introduced in the House of Representatives a bill

known as H. R. 4576, which provides for the continuation of the Public Works Authority and an appropriation of \$500,000,000 for loans and grants for new construction projects. A similar bill has been introduced in the Senate by Senator James M. Mead, of New York, known as S. 2063. The Starnes-Mead bill provides for the release, in times of depression, of worth-while projects for immediate operation. It is a long-range program and should have the active support of every building-trades worker.

This bill accepts the theory that P. W. A. should be retained as a permanent part of our Government structure. Long-range planning of public works is vitally necessary if we are to prepare to take up the slack in private building occurring during periods of depression. This bill recognizes that if we are to provide ways and means to transfer men from relief to pay rolls some method must be employed which will enable employers in private industry to absorb them. Since the works projects undertaken by P. W. A. are let to private contractors, this means that work is provided in private industry to the unemployed in their chosen trades, rein private industry to the unemployed in their chosen trades, regardless of their relief status.

The plan proposed by Senator Mead and Congressman Starnes would permit loans and grants to public bodies as in the past, and, in addition, permits loans and grants to nonprofit corporations for the construction of hospitals, sewage treatment and

disposal plants, and for elimination of stream pollution.

If this new program is made possible by Congress, it will result in the construction of projects costing over \$1,000,000,000. Over 5,000 the construction of projects costing over \$1,000,000,000. Over 5,000 applications are now pending in the Public Works Administration, which were filed prior to the expiration date for accepting new applications under the 1938 act. Since these applications have been approved it would appear that they might be eligible for allotments if further funds are provided. In this connection I might point out that there are 966 approved applications, with estimated construction costs of \$289,450,945, now pending in P. W. A. from Pennsylvania communities. Under past programs the General State Authority of Pennsylvania received Federal aid, which made possible a \$65,000,000 institutional construction program, which included public buildings, State arsenals, armories, military reserves, State airports and landing fields, college and school buildings and additions, swimming pools, etc. swimming pools, etc.

swimming pools, etc.

I am a firm believer in the public-works program. I believe that every public dollar expended in this manner pays dividends. I ask your support in having the program continued and the necessary funds appropriated to relieve unemployment in the building trades and heavy industries. I appeal to this convention and all affiliated unions to contact local Members of Congress and Senators requesting their active support of the P. W. A. appropriation bills. The Starnes-Mead bill is the only pending bill in Congress which carries an appropriation for P. W. A.—keep this fact in mind—and the only bill which embraces the principles for which the American Federation of Labor stands. It is the only pending bill which continues the authority of P. W. A.—the agency which is one of the outstanding instruments of government on which the American Federation of Labor is dependent for a livelihood. We must support this legislation and appeal to our Representatives in Congress to do so.

It has come to my attention that some of the Members of Congress are under the impression that a transfer of P. W. A. to the newly created Federal Works Agency under the President's first

gress are under the impression that a transfer of P. W. A. to the newly created Federal Works Agency under the President's first reorganization plan obviates the necessity for new legislation. This is very erroneous and it should be stated here that unless the Starnes-Mead bill is enacted into law the Public Works Administration ceases to exist and its authority expires. Unless this bill is enacted the more than 5,000 pending approved projects will not be put under construction and the members of our federation will lose the employment it carries with it.

Lalso want to leave with you this thought: That the responsibil-

I also want to leave with you this thought: That the responsibility of the Works Progress Administration, as originally intended by the Congress, is to provide work for those who are eligible for relief. This means white-collar employment, sewing projects, research projects, art projects, and the like. It should not embrace construction of any kind. The construction work should properly be undertaken by the Public Works Administration, the construction unit of Government, and I ask your support in securing congressional approval of such a plan. All building construction must be done on a contract basis under contracts which provide that the contracts shell pay the prevailing rate of wages. In this way only tractors shall pay the prevailing rate of wages. In this way only can the building-trades workers secure proper working conditions and ample wages. Wholesale operations in the construction industry by the Works Progress Administration plan of operation will ultimately result in a break-down of the workers' morale and, what is equally important, in his wage schedules. Any future relief programs must provide that construction projects shall be placed under the Public Works Administration to be successful. I ask your support to this end. It is suggested that you contact your Congressmen and Senators urging this provision in the next relief bill.

bill.

If we are successful in our drive to secure enactment of the Starnes-Mead public-works bill, and to secure amendments to any future relief legislation whereby construction work will be placed solely with the P. W. A., then we may be assured of a new work program which will permit the members of our federation to keep on working in their own trades and under normal and happy conditions. This, I believe, is the goal we all want to reach. Your work tions. This, I believe, is the goal we all want to reach. Your work in presenting the rights of our workers to Congress and making our needs known will surely be crowned with success. We need only to persevere and success is ours.

I thank you.

Neutrality Legislation

EXTENSION OF REMARKS

HON. L. L. MARSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 16, 1939

RADIO ADDRESS BY HON. L. L. MARSHALL, OF OHIO, ON MAY 13, 1939

Mr. MARSHALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by me recently over the radio:

I shall speak this evening on a subject which is engrossing the attention of the American people more than any other that has commanded their interest in recent months. That is the subject of legislation affecting peace, foreign policies, and neutrality.

Congress has been struggling with this problem for weeks. Volumes of evidence have been taken before the Senate Committee on Foreign Affairs. Yet no clear opinion has been crystallized and no legislation developed which, up to now, could be said to command majority support of either branch of Congress.

To properly appreciate the perplexities under which most Congressmen labor a clear understanding of the essential provisions of the present Neutrality Act, as well as the various proposals now before Congress affecting this subject, is necessary.

The so-called neutrality law as first passed in 1935 provided that when two or more nations became involved in an armed controversy the President might decide that a state of war existed and proceed to put into effect the terms of the act. These provide that when the President has made such determination an embargo on the sale of arms and war munitions to belligerents must be on the sale of arms and war munitions to belligerents must be established.

The category of war munitions was strictly limited by procla-mation to manufactured and finished articles suitable for war

purposes.

purposes.

The act was amended in 1936 and 1937 to provide a so-called cash-and-carry plan (which lapsed on May 1) which placed certain raw materials in a group which were not to be embargoed, but which might only be obtained from the United States by a belligerent who was able to come and get them in his own ships.

Let us see how this law has worked out. For instance, let us take the case of the Sino-Japanese conflict. The act has never been brought into operation in this instance—on the slim technicality that Japan has not officially declared war on China, and therefore, a state of war does not exist.

The real reason of course, is that application of the law would

The real reason, of course, is that application of the law would

The real reason, of course, is that application of the law would work a greater hardship upon China than Japan—a result of which 99 percent of our people do not wish to see effected. China has no means of converting any considerable quantity of raw materials into war supplies. Invoking the provisions of the act would deprive her of all help she might be able to secure from us in the nature of finished war commodities.

Such action, however, would not seriously affect Japan, as she has ample industrial machinery to convert raw materials into war supplies, and could easily come and get in her own ships any materials in that small category, which prior to May 1 were under the "cash and carry" provisions.

The result is, that while thousands of Chinese people are being killed or maimed by bombs made from American scrap iron and activated by gun cotton made from American cotton, invoking the Neutrality Act would make the situation of the Chinese even more desperate.

more desperate.

A large group of our citizens, even numbering among them many who thought the present neutrality law a model act at the time of its passage, now feel that it does not meet such situations as the Sino-Japanese conflict, and that it ought to be repealed or amended. Other complaints against the existing law are that it gives notice in advance that the United States will exercise no moral judgment

in a war anywhere in the world but will put the aggressor and the victim of aggression on an exactly equal footing.

It is correctly contended that the present law makes no distinction between a nation which violates its treaty obligations with us and other nations and one which respects its obligations and adheres to its treaties.

adheres to its treaties.

If the present Neutrality Act is not to be retained, Congress has two alternatives. It may repeal the law outright, or it may be amended in one of a number of ways. There is some opinion, both in Congress and out, that we would be well-advised to repeal the present act in toto and develop and adapt our foreign policy

to each situation as it arises.

It is argued that this procedure would give flexibility to the handling of our foreign relations and permit each separate condition to be dealt with with a free hand, and in the hope of better results.

The proponents of this policy realize, however, that repeal of the law would take us back to much the same position we occupied in

1917 when our foreign policy was predicated upon adherence to principles of International Law, then much more clearly defined than they are at the present time. It would revive such questions as the doctrine of freedom of the seas and rights of neutrals.

In wartime it would require many delicate and dangerous decisions on such questions as our interpretation of what constitutes a contraband and what is an effective blockade. Millions of Americans remember all too well that these are the decisions and this

the path through which we became involved in war in 1917.

In my judgment, there is little likelihood that repeal of the existing law will be the course finally taken by Congress. There are several proposals before Congress which represent amendments

to the present act.

The Pittman bill provides for the reenactment of the "cash and carry" provisions but places no embargo on arms and other war munitions. It permits any nation at war to purchase any com-modity in this country without any limitations as to character or use, requiring only that the purchaser take title in this country and take the risk of transporting his purchases wherever he pleases. In the case of European war, such an act would undoubtedly favor

In the case of European war, such an act would undoubtedly favor Britain and France because they have control of the seas and would be the only nations in position to take advantage of it.

The argument for this provision is based upon our experiences in the last war. It is claimed that we would never get into trouble by attempting to assert our rights as neutrals on the high seas, as our own vessels would be entirely innocent of any traffic in goods even remotely resembling war material, and consequently would have no cause for entering a foreign conflict.

The view that the United States has some obligation to treat

have no cause for entering a foreign conflict.

The view that the United States has some obligation to treat aggressor nations in a different fashion than others is embodied in the amendments proposed by Senator Thomas of Utah. The provisions of this amendment are, roughly, as follows: When foreign nations became involved in war, the President would immediately put into effect the provisions of the law providing embargo of supplies to all the nations involved. He would then examine the character of the nations involved; and if he determined that one or more of them were guilty of violations of treaty obligations with us, he would have authority, with consent of Congress, to release the innocent nations from the provisions of the embargo and make them apply only to the treaty-breaking nation or nations.

It is argued for this policy that by it America would serve notice

them apply only to the treaty-breaking nation or nations.

It is argued for this policy that by it America would serve notice in advance that such nations as were guilty of aggression or violation of treaty obligations could not expect the same support from us as nations which had been guiltless of such violations. The contention is that, knowing our disposition to make such discriminations, nations otherwise disposed to start a foreign conflict would hold back and refrain from aggression, and thus we would avoid war for curvalues by requesting two to the countries.

Mhatever else such a law may be, it certainly would not be a neutrality act, if neutrality is to carry the meaning of equal treatment by us of all other nations. The backers of such provisions frankly admit that it does not pretend to be a neutrality act, but is the type of legislation which our position among the powers of the world requires us to take if we ever expect to assist in establishing a world not constantly convulsed with warfare.

The opponents of this proposal insist that by thus selecting the aggressor in any foreign conflict, we have practically committed an act of war, and that our involvement in such conflicts would only be a matter of a short time.

I think it is clear that if such an act is passed, we have already selected the aggressor because nothing is clearer than that Germany has violated the Pact of Paris of which both Germany and

ourselves were signers.

The Thomas amendments represent a course further removed from the policy of isolation than any other pending before the

Congress.

It seems to me that there is only one other policy which might be suggested, and that would be a policy of complete isolation. Such a policy would provide that in the event of war in Europe or any other part of the world, the United States would sever itself completely from all relations with the combatants and refuse to trade or deal with them in any manner whatsoever. Such a policy would demand embargoes on all goods destined for any of the warring countries. It is doubtful if support could be secured for any such extreme isolationist policy.

Students of history will recall that Jefferson put into effect such

Students of history will recall that Jefferson put into effect such a policy, but that its repeal was speedily forced when its effect on American trade became apparent.

These then represent in rather sketchy form various ideas on peace, neutrality, and foreign affairs with which Congress is struggling.

It is interesting and sometimes amusing to note the manner in which individuals or groups of individuals who seek to advise Congress come to their decisions on these matters. The rule that such persons follow seems to be, first, to select their favorite in the European or Asiatic "sweepstakes" and then support a policy which will tend to give advantage to their selection.

It seems to me that the best approach to this question is to determine what policy is of advantage to the United States and the Western Hemisphere and is best calculated to keep our country from involvement in foreign wars; and having determined such a course, to let the chips fall where they may.

Many will contend that this is a program of self-interest, but who can conclude that the foreign policies of any other nation with whom we deal is actuated by any other motive?

From my observation, the country may be well assured that every Congressman is determined to support a policy which in his judgment will prevent any American boy being transported to foreign shores to engage in foreign war.

I think the policy of Congress, as well as the country, is to keep out of foreign war at all costs, and in the meantime provide such defenses for the United States that no power or group of powers will dare contemplate the domination of any portion of the Western Hemisphere.

Paying the Government Debt With a Fountain Pen in the Hands of the People, in the Same Manner the Debt Was Created With the Pen in the Hands of the International Banker

EXTENSION OF REMARKS

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1939

CONGRESSIONAL BREAKFAST TALK, MAY 9, 1939

Mr. MURDOCK of Arizona. Mr. Speaker, I have asked to extend my remarks in the RECORD, and include therein a radio talk made over Station WOL, Washington, D. C., on May 9 as a part of the Congressional Breakfast Talk series by some of my colleagues. This series of broadcasts is by the Constitutional Money League of America under the personal supervision and direction of former Congressman Charles G. Binderup, of Nebraska.

I have been listening in on these broadcasts for several weeks and have been instructed greatly by the numerous Members of the House who have presented their views. I feel that the money question is one of the paramount issues or questions of today. While my own mind is not thoroughly made up, and I do not necessarily endorse all that these radio speakers may say, I do take this opportunity to pass on their comments, and feel that the public may be greatly enlightened thereby.

Mr. BINDERUP. In behalf of the Constitutional Money League of America, I take pleasure in extending our morning greetings to our President Roosevelt, Members of Congress, and others. through my mind this morning for the most expressive words of appreciation for the privilege of these broadcasts, I can only find the same old words, "Thank you, WOL." We are grateful also to our guest speakers for their efforts to promote our work and for coming down to the station at this early hour before breakfast. I have always considered the subject which we will discuss this coming down to the station at this early hour before breakfast. I have always considered the subject which we will discuss this morning the most difficult to explain, perhaps because it is so new to all, and seems so impossible to all, and yet so simple in fact. May I suggest to you, our honored guest speakers, that in discussing this morning's subject we dramatize it in this manner: Suppose, Congressman Gehrmann, that you represent "We the banks," and you, Congressman Massingale, if you will, represent "Uncle Sam," and, if agreeable, let me represent "We the people." In this manner I believe we can explain it so that even a child could understand. And now may I introduce to our vast audience scattered over the entire Nation our guest speakers on our congresscattered over the entire Nation our guest speakers on our congres sional breakfast talk for this morning—Congressman Gehrmann, of Wisconsin, and Congressman Massingale, of Oklahoma.

Mr. GEHRMANN. Well, then, as I am representing "We the bankmr. GEHRMANN. Well, then, as I am representing we the bank-ers," let me ask the first natural question which probably would come to a banker's mind. Mr. Binderup, as a Congressman repre-senting the people, you said on the floor of the House and wrote it in your book called "Uncle Sam's Hospital Chart": "Our monetary bill must provide a plan for retiring the national debt without one cent of inflation or deflation, and without disrupting even in the cent of inflation or deflation, and without disrupting even in the slightest degree either our monetary system or our banking system, and without one cent of taxation or repudiation." Still quoting from your Uncle Sam's Hospital Chart, you said: "Every cent of United States bonded indebtedness can be liquidated by a mere switching of credits by merging the interests of the creditor and the debtor, or fusing the interests of the payer and the payee. All these bonds were originally bought from Uncle Sam with 'fountain pen' money, and they are now being paid in the same manner, with 'fountain pen' money." Well, if this peculiar monetary magic or economic sleight-of-hand performance can be done, it certainly would be quite a trick, wouldn't it, and mighty good news?

Mr. BINDERUP. Yes; it certainly will be welcome news. We use just the same magic pen you bankers have been using for many years. Congressman Gehrmann, or rather "You the bankers," how

many billions of dollars do you hold of Uncle Sam's obligations or notes?

Mr. GEHRMANN. Well, for the information of "You the people,"

we hold now aitogether \$20,000,000,000.

Mr. Binderup. Let me ask another question. Now, just where did you get all this money to buy \$20,000,000 in Government bonds or notes? All the capital stock of all your banks amounts to only \$8,208,000,000, and that includes preferred stock. Also your capital stock by lighting and distributed by the stock of the s stock includes farms and other real estate, buildings and fixtures. You couldn't buy Uncle Sam's bonds for these. I ask again, Where did you get the approximate twenty billions wherewith to buy these

Ind you get the approximate twenty billions wherewith to buy these bonds?

Mr. Gehrmann. Well, Mr. "We the people," we bought these bonds with the people's demand deposits.

Mr. Binderup. Oh, you did! Well, then, the bonds really belong to us, do they not? We paid for them, didn't we? It was our money that bought the bonds, was it not, "Mr. Banker"?

Mr. Gehrmann. Well, of course, that is part of the profits "We the bankers" take for ourselves for taking care of your money.

Mr. Binderup. But "We the people" pay you for that service specifically when we pay you \$1 a month for a checking account and a fee for every check we cash. If you have invested our money in Government bonds, the bonds surely belong to "Us the people." To say that the bonds belong to you merely because you purchased them with our money is as absurd as though I should go out and buy a business car with my firm's money and then claim, as you do, that I own the car because I bought it. How much do "We the people" have deposited in your banking system in demand deposits?

Mr. Gehrmann. For the information of "You the people," you have deposited in our banks \$26,126,000,000.

Mr. Binderup. Of this you have invested twenty billion in Government bonds, have you not?

Mr. Gehrmann. Yes, approximately so. We have done that, because of the people of the people of the people of the people of the people.

Mr. Gehrmann. Yes, approximately so. We have done that, because we wanted to be safe, so we invested it in Uncle Sam's

obligations.

Mr. Binderup. But United States bonds are not safe, and "We the people" don't want you to invest our money in anything. We want it right here in your bank. That is what we pay you for. Uncle Sam, suppose you settle this. If "They the banks" bought the bonds for our own money and we had already paid the banker for his services as our agent, don't you think your bonds, Uncle Sam's bonds, belong to "Us the people"?

Mr. Massingale. Of course, your Uncle Sam's bonds belong to "You the people." "They the banks" could not possibly have a claim on them. But first I want to say, don't be too sure about investing in my bonds, Mr. Banker, so long as they are left in the hands of Wall Street for speculation, a football for money monopoly. You will remember in 1920 my bonds sold for 80 cents on the dollar. In case industrial bonds and commodities should go up in value to where they were in 1920, 1929, with cents on the dollar. In case industrial bonds and commodities should go up in value to where they were in 1920, 1929, with all the billions of bonds Congress has issued against me, your Uncle Sam, at a very cheap rate of interest, will go to the lowest price my bonds have ever been. You haven't forgotten April 1937, just 2 years ago, when for several months previous, industrial bonds and stocks and commodities were beginning to raise in price, and it did look as if prosperity were coming back, how hundreds of millions of my bonds were thrown on the market daily at reduced prices by people who sought investments which would yield a greater income than did my bonds.

Mr. BINDERUP. And it looked like another bankers' panic was inevitable until Morgenthau, Eccles, and company saved the day for the bankers by sacrificing the interests of the people by creating another depression to destroy prosperity, to destroy the incentive to sell Government bonds and buy commodities and indus-

tive to sell Government bonds and buy commodities and industrial bonds, knowing that another experience like the year 1920,

trial bonds, knowing that another experience like the year 1920, with bonds 20 percent below par, would bankrupt practically every bank in the Nation, as it would cost the banks, based on their present bond holdings, approximately \$4,000,000,000.

Mr. Gehrmann. Yes; and "We the bankers" have always been mighty thankful for the assistance the Secretary of the Treasury, Mr. Morgenthau, together with "We the bankers" representative, Mr. Eccles, of the Federal Reserve Board, rendered to us bankers when they went in on the market and bought up Uncle Sam's falling bonds above par with the people's money. Of course, it was too bad that it necessitated another depression, but we all knew that the banks could not stand a drop of 20 percent or even

was too bad that it necessitated another depression, but we all knew that the banks could not stand a drop of 20 percent or even 10 percent in Government bonds without bankrupting 95 percent of the banks who held the people's demand deposits invested in Uncle Sam's bonds. So something had to be done.

Mr. Massingale. But, listen, "You the bankers," to the warning of your Uncle Sam. What you say means that we can't have prosperity without 95 percent of our banks busting up unless you find some way to take my bonds out of the Wall Street international banker bond jugglers' hands. If not, it will mean the worst money panic we have ever had. If we have prosperity, your Uncle Sam's bonds will fall 20 percent and the banks holding them will go broke, and "You the people" will be pulled down as usual with the banks. And if we don't have prosperity, the sheriff will come and take what little "You the people" have left. You seem to have gotten yourselves into a nine-hole—it's damned if you do and damned if you don't.

Mr. BINDERUP. But surely "You the bankers" should feel ever-

Mr. BINDERUP. But surely "You the bankers" should feel everlastingly grateful to your able lieutenant, Chairman Eccles of the Board of Governors of the Federal Reserve banks, for creating this recession of 1937.
Mr. Gehrmann. Mr. Binderup, how do you know Mr. Eccles and

the Board caused the recession of 1937?

Mr. BINDERUP, Mr. Eccles himself has said so repeatedly. I have heard him say it myself, and I saw it happen.

Mr. Gehrmann. Did Mr. Eccles state any reason why he caused

the recession of 1937?

Mr. Binderup. Oh, yes. He said there was a threatened inflation and he cited the fact that copper and steel and some trust-controlled monopolies were above normal.

Mr. Gehrmann. Well, but wasn't that true?

Mr. Gehrmann. Well, but wasn't that true?

Mr. Binderup. Because of European war preparations; yes. But it never looked much like inflation to me. The farmer was selling his products at 25 percent of the cost of production and 11,000,000 people were still unemployed, and our relief rolls still crowded and grants and charity still the rule.

Mr. Massingale. Please explain again why everyone wanted to sell your Uncle Sam's bonds.

Mr. Binderup all right let me repeat it once more. Because of

Mr. Binderup. All right, let me repeat it once more. Because of their volume and low-interest rate and the potential profits in investing in property or purchasing industrial bonds and stocks and all commodities which were on a rising market.

Mr. Massingale. Then do you mean to say that "they the banks"

prevented a raise in wheat, cotton, and corn, and all commodities, and labor just to stimulate my bonds on the market?

Mr. Binderup. Exactly. That is what I mean. And that is what

Mr. Massingale. Why not tell our audience how the banks do

this?

Mr. Binderup. Oh, that is very simple. It's just the old trick. Make money scarce and the prices of all commodities will go down, and the premium of United States bonds go up. They just advise the Federal Reserve banks to advise the member banks to reduce the amount of check-book money among the people by forcing the collection of old loans and refusing to make new loans. And thus they took out of circulatin in 1937 in a few months almost \$3,000,000,000.

Mr. Gehrmann. But "We the bankers" have always been willing to make loans on good securities.

Mr. Binderup. Certainly. But there is no such thing as good securities with a reduced volume and velocity of money which the bankers themselves create. Everything goes down with money scarcity except Government bonds, which go to a premium when

commodities go down.

You said, Uncle Sam, that we would all go broke with the banks if we had prosperity. But "We the people" could live and thrive if we had prosperity and a raised price level, and so could the bankers if they hadn't invested our demand deposits in your bonds, which they had no business doing. What we want them to do now is to just hand over these bonds which they admit they purchased for our money, and we will see to it that these bonds are not put on the market.

Mr. Gehrmann. But "You the people" would not expect "Us the bankers" to let you continue checking on your account and you hold the bonds also, would you?

Mr. BINDERUP. Well, "You the bankers" would certainly not expect us to let you invest our money in Government bonds and let you hold our bonds, would you, and exact from us interest besides?

Mr. Massingale. Let your Uncle Sam settle this. Suppose both of you let me hold the bonds as a custodian for both of you. How would that suit would.

would that suit you?

Mr. GEHRMANN. Well, that's all right if you turn over the interest

Mr. Massingale. Well, what would "You the people" say? Sup-we let the banks continue drawing the interest on these bonds until they are due, but I will hold them in my vault where they will be safe and keep them off the market so you won't all die of prosperity.

Mr. Binderup. Well, while this is more than "They the bankers" could expect, "We the people" will do this with the bonds they now hold, just to be safe and in order to take the bonds off the

market

Mr. Gehrmann. But when the bonds are due, how about paying "Us the bankers"?

Mr. Massingale. Pay you! Why, we have assumed your obliga-tions to the people for their demand deposits, haven't we? You have thereby received your payment in full, haven't you?

Mr. Gehrmann. Yes; I guess that's right.
Mr. Binderup. When the bonds are due, Uncle Sam, then what?
Mr. Massingale. I, your Uncle Sam, will just renew the bonds.
Mr. Gehrmann. Renew the bonds? In whose name?
Mr. Massingale. Why, in the name of the people, of course. It's their money that is invested in the bond's isn't it?

Mr. GEHRMANN. But where does the profit come in to "Us the

Mr. Massingale. Just exactly the same as it does now. It doesn't affect the balance in your banks a penny. You get your interest on the bonds until they are due and paid for. The only difference is that your Uncle Sam is custodian of the people's deposits.

Mr. BINDERUP. But how about "Us the people"? How will it affect us?

ffect us?

Mr. Massingale. Go right on and check against the bonds, just
the bankers' vaults. The exactly as you did when the bonds were in the bankers' vaults.

only difference is that Uncle Sam holds all demand deposits.

Mr. Binderup. But who gets the interest on the bonds?

Mr. Massingale. Nobody has a right to interest. You don't want, do you? You never did get interest on your demand deposits efore. All you want is a checking account that is safe, so you can always get your money; and the banks have been paid their interest in cash and the par value of the bonds by Uncle Sam's assuming

their demand deposits to the people.

Mr. Binderup. Yes; that is all we could expect.

Mr. Binderdy. Yes; that is all we could expect.

Mr. Gehermann. But I have some Government bonds that I bought
with my own money. How about these?

Mr. Massingale. Well, then, naturally those bonds are yours and
must be paid for in full and are not considered at all in this plan;
but we are protecting the cash value of your own bonds by taking
twenty billions off the market.

Mr. Gehrmann. Well, this did seem like money magic, but, after all, it's just good, honest, common sense. "We the bankers" get every cent that is coming to us and a little more, and it makes our banking safe. We are no longer afraid of the Government-bond market crashing and destroying our deposit balances. We understand that this cone of the features of the property of the features of the features. stand that this is one of the features of your 100-percent reserve plan, which makes it possible for every one of the 50,000,000 de-positors in the Nation to call at the banks the same minute and all get every cent of their deposits. It will eliminate Federal de-posit insurance and will insure all deposits for their full amount. at any time without cost to the bankers or to Uncle Sam. This

will make the bankers happy.

Mr. Binderup. And believe me, it will make the people happy, for now we will know that our deposits are safe and that we will have no more banker-created panics. Believe me, we will sleep better at

night.

Mr. Massingale. And it isn't a bad deal for your Uncle Sam, for it cancels approximately \$20,000,000,000 of his bonded indebtedness. No; there is no money magic about this. We have only merged the interests of the debtor and the creditor. We have fused the interests of the payer and the payee. It is simple. If I owe you a dollar and you owe me a dollar, no money is necessary in order to pay these bills—just a fountain pen. The people owed the banks bonds and the banks owed the people deposits, so we just used the fountain pen.

Mr. Gehrmann. But how about the other \$17,000,000,000 in bonds

Mr. Gehrmann. But how about the other \$17,000,000,000 in bonds outstanding? How will you pay these with a fountain pen?

Mr. Massingale. When prosperity comes back, as it will with a safe monetary system, and I, your Uncle Sam, will have increased your money supply approximately \$15,000,000 a day, at least for a number of years, among the lower income groups, this money will drift into the banks immediately as demand deposits primarily, and your Uncle Sam will hold these deposits for the people and will invest them in the balance of outstanding bonds. Thus the nightmares of repudiation and taxation, inflation and deflation, and starvation will disappear like the dew before the morning sun. And, listen, it will save "You the people" a billion dollars a year in interest, which is practically enough to pay all the old-age pensions. pensions.

The Duty of Italians of America

EXTENSION OF REMARKS OF

HON, JAMES H. FAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 16, 1939

NEWSPAPER ARTICLE BY GENEROSO POPE, PUBLISHER AND EDITOR OF PROGRESSO ITALO-AMERICANO

Mr. FAY. Mr. Speaker, under leave to extend my remarks in the RECORD. I include the following newspaper article by Mr. Generoso Pope, publisher and editor of the Progresso Italo-Americano, a translation of which appeared in the New York Times on Saturday, April 29, 1939:

WHAT IS THE DUTY OF THE ITALIANS OF AMERICA?

Today, more than ever, separate and associated citizens and organizations have the duty to unite in stabilizing and maintaining relations of friendship, cordiality, collaboration with every other racial group of the great American family.

We are and we remain most loyal citizens of this great hospitable We are and we remain most loyal citizens of this great hospitable land, to which the Italian people have given not only the best of their intellectual and moral strength but also, in the last war, tangible proofs of their profound attachment with a percentage of soldiers which constitutes a great title of worth for our immigrants and for our new generations born here.

This loyalty of ours, this faith and the record of our conduct in these of record and in time of war given as greater moral strength.

time of peace and in time of war give us a greater moral strength to defend, today and always, internal peace and peace with other peoples, who, like those from which we spring, have no cause for enmity with the United States; they confer on us the right and the duty energetically to oppose every mischievous propaganda calculated to draw this country into war for interests not its own; they urge us to encourage every precaution of the Government which visions a stronger defense of the Nation, that would be and ought to be ready to repulse victoriously every eventual enemy attack.

In short, the Italians of America should strive to live in the best relations with the rest of the people of the United States and should labor together with them to create, to preserve, and to solid-ify friendship with all the nations of the Old World, whatever may

be their political systems or their religious faith.

be their political systems or their religious faith.

And we can render America great service if we are vigilant and active in clarifying situations, badly known because badly viewed; if we know how to substitute for a propaganda of lies and of hatred a propaganda of demonstrable truth, of serene, impartial, and convincing opinions. It is the surest way to relieve America from the perils of unjustifiable conflicts and to assure to this Nation a durable and benevolent peace, by means of which domestic problems, even the most grave, can find more urgent, more radical, more definite, and more satisfactory solutions. definite, and more satisfactory solutions.

Germans in America

EXTENSION OF REMARKS

HON. FRED C. GARTNER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 16, 1939

ADDRESS BY HON. PAUL W. SHAFER, OF MICHIGAN

Mr. GARTNER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address made by my colleague, Hon. Paul W. Shafer, of Michigan, at a dinner commemorating the ninetieth anniversary of the founding of the Philadelphia Turgemeinde, Philadelphia, Pa., May 14, 1939:

I wish tonight to pay tribute to a people who have contributed as much to the building of this Nation and have had as great an influence upon the American way of life as any other—those Germans who have made this country their home.

The Germans, as we have known them, are a family-loving, law-abiding, thrifty, industrious, culture-loving, creative people. They have demonstrated a deep social sense and an earnest civic pride. Active in public affairs, they have always contributed much to the communities in which they lived. German hospitality is traditional. German charity is always ready and generous. Our Germans have not only been absorbed into American life; they have helped to create it. They have not only taken their place among helped to create it. They have not only taken their place among our finest citizens; they have been among our foremost leaders. Their patriotic love for their adopted land and their value to her

have been proven through more than a century.

It would be impossible to enumerate tonight the countless contributions which Germans have made to American life and the vital part they have played in our history. Books have been devoted to the subject. I can mention here only a few instances.

The German influence was felt from the earliest days of American

colonization. Soon after the discovery of the Hudson River, Hendrick Christiansen, of Kleve, a German, made seven expeditions to its shores. He built the first houses on Manhattan Island in 1613, and laid the foundations for the trading stations of Fort Nassau and New Amsterdam, now the cities of Albany and New York. A little later another German, Peter Minnewit, of Wesel, on the lower Rhine, became director general of the Dutch colony of New Netherland. It was he who closed the bargain with the Indians to buy

land. It was he who closed the bargain with the Indians to buy the island of Manhattan for trinkets valued at about \$24.

It has been well said that Germantown is the Plymouth Rock of Americans of German descent. On October 6, 1683, a little group of 33 Mennonites arrived in Philadelphia, after a voyage of 73 days, from Crefield on the lower Rhine. Led by Franz Daniel Pastorius, they settled near the Schuylkill River. Suffering untold hardships, they built a home in the wilderness. When complete, Germantown had a street 60 feet wide, with peach trees on each side. Every house boasted a garden of 3 acres. And so well did these early Germans cultivate their flowers and vegetables they were soon sup-Germans cultivate their flowers and vegetables they were soon sup-

plying Philadelphia.
On February 18, 1688, the leading citizens of Germantown drew up one of the most remarkable documents in American colonial

history. It was a protest against the increasing slave trade from Africa, and a tribute to the humanitarianism and love of freedom of the Germans.
"Is there any that would be done or handled at this manner?" it asked, "to be sold or made a slave for all the time of his life? How asked, "to be sold or made a slave for all the time of his life? How fearful and faint-hearted are many on sea when they see a strange vessel, being afraid it should be a Turk, and they should be taken and sold for slaves into Turkey. Now, what is this better done as Turcks doe? Yea, rather it is worse for them that say they are Christians; for we hear that ye most part of such Negers are brought hither against their will and consent; and that many of them are stollen. Now, tho', they are black, we cannot conceive there is more library to heave them closes as it is to have the work. there is more liberty to have them slaves, as it is to have other white ones. There is a saying, that we shall doe to all men, like as we will be done our selves; making no difference of what generation,

descent or colour they are. And those who steal or robb men,

and those who buy or purchase them, are they not all alike?"
Was ever a more eloquent denunciation of the practice of slavery made, even in the later years when slavery became an issue in this

country?

Another epoch in the German struggle to establish freedom in this country was marked by a dramatic court scene which took place in New York in January 1735. Johann Peter Zengler, publisher of the New York Weekly Journal, had been jailed for publishing denunciations of the court system. When he was set free the entire population of New York celebrated the victory with wild

Freedom of the press had been established in America. In accounts of our American Revolution one always hears of the

Hessian troops that fought for King George. Far too little is said of the splendid part played by the Germans in this country.

The spirit of the American Germans was typified by that of a Virginia Lutheran minister, Peter Muhlenberg. When the war clouds threatened he informed the community that he intended clouds threatened he informed the community that he intended to resign, and would preach but once more. His eloquent sermon reminded his hearers of their duty to their country. In conclusion he announced, "There is a time for preaching and praying. But there is also a time for fighting. Now this time has come."

Throwing off his clerical gaiment, he suddenly stood revealed in the uniform of a colonel of the Continental Army. Slowly he descended from the pulpit, amidst wild outbursts of cheering. Outside was heard the beat of drums, calling men to arms. Before sunset several hundred Germans had enlisted in the fight for freedom.

freedom.

At the siege of Boston German sharpshooters performed an in-At the siege of Boston German sharpshooters performed an invaluable service, using bored rifles which were then made only by the German gunsmiths of Pennsylvania. On May 25, 1776, Congress called for the formation of an entire German battalion, which served valiantly throughout the war. George Washington's bodyguard was composed entirely of Pennsylvania Germans, 150 strong, who protected him faithfully during all 7 years of the struggle.

The greatest German name in the drama of the American Revolution was that of Baron Friedrich Wilhelm von Steuben. At great personal sacrifice, he offered his services to the struggling American Colonies. It was he who took the ragged troops at Valley Forge and transformed them into an army capable of meeting the trained forces of the English. In 1781, at the siege of Yorktown, the regiments of Yon Steuben held the front trenches. Thus,

town, the regiments of Von Steuben held the front trenches. Thus, the British Cornwallis surrendered to a German.

Von Steuben is truly the father of the American Army; for it was he who laid the plans for a standing army of 25,000 and for a military academy, which became our West Point.

During the War of 1812, when the British had captured and burned Washington, they started for Baltimore. Fort McHenry was valiantly defended under the leadership of a German, Capt. George Armstadt, while Francis Scott Key, held a prisoner by the British, wrote the inspiring words of our national anthem. It was due to the gallant defense by Captain Armstadt and his men that The Star-Spangled Banner was still waving our Fort McHenry the next morning.

McHenry the next morning.

During the War with Mexico it was a German, Brig. Gen. Johann Quitman, who in 1846 led his troops at Monterey and raised the American flag on the church tower. In 1847 he commanded the land troops which company hoppherdment on Vers Cruz on Senland troops which opened bombardment on Vera Cruz on September 14, and entered the city on the 15th. He was appointed governor of the city until order was established.

governor of the city until order was established.

It was natural that the Germans, who had so long been opposed to slavery, should have rallied to the defense of the Union at the outbreak of the Civil War. It was partly due to their influence that the doubtful border State of Missouri remained with the Union. Entire German regiments were formed in the States of Ohio, New York, Pennsylvania, Indiana, Illinois, Wisconsin, and Missouri.

consin, and Missouri.

The name of Gen. Peter Osterhaus is associated with the famous "Battle Above the Clouds" on Lookout Mountain. The great victory of Pea Ridge, Ark., was largely due to the genius of Gen. Franz Sigel, who also participated gallantly in the Battle of Bull Run. At the fateful Battle of Gettysburg the German regiments of Generals Schurz and Von Steinwehr held the exposed and strategic position on Cemetery Ridge. Indeed, so outstanding were the German troops that it is reported that Gen. Robert E. Lee once exclaimed: "Take only these Dutch out of the Union Army and we claimed: "Take only these Dutch out of the Union Army and we will whip the Yankees easily."

During the Spanish-American War the hero of the great naval battle at Santiago de Cuba was Admiral Winfield Scott Schley, a veteran of the Civil War, whose ancestor, Johann Schley, a German schoolmaster, built the first house in Frederick, Md.

So much for the part the Germans played in battle for the ideals of freedom. However, the Germans are a creative people. Their greatest contributions have been made in time of peace, for they

greatest contributions have been made in time of peace, for they have enriched every phase of American life.

They have given us statesmen. The greatest of these was Carl Schurz, who was born near Cologne, and fled to this country during the Revolution of 1848. Ardently opposed to slavery, Schurz became a most eloquent orator and powerful leader of the abolitionists. He was active in the councils of the new Republican Party, and in the campaign which resulted in the election of Abraham Threely. Lincoln. In recognition of his services he was appointed Minister to Spain. At the outbreak of the Civil War, however, he resigned this post to become a general in the Union Army. At the end of the war it was Schurz whom President Johnson chose to make a tour of the Southern States and report on conditions.

In 1877 President Hayes appointed Schurz Secretary of the Interior. With characteristic German frugality, he was the first Government official to emphasize the necessity of preserving our forests and other natural resources, which had been exploited without regard for the future generations. He was the first to introduce a merit system and the principles of civil service in a department regard for the rather principles of civil service in a department of the Government. It was also Schurz who constantly preached the grave dangers of paper money, the "silver craze," and other financial panaceas which threatened the fundamental principles of sound currency from 1860 to 1896.

Schurz remains a personification of the American spirit. His

Schurz remains a personification of the American spirit. His motto was one which we today would do well to cherish. "My country! When right keep it right; when wrong, set it right!"

Germans have been leaders in agriculture, industry, and commerce from the early colonial days. In 1716 Thomas Ruetter founded the first iron works in Pennsylvania. In 1738 Kaspar Wuster started the first glass factory, near Salem, N. J., with the help of German workmen. In 1750 Johannes Huber established the first hammer works and smelting furnaces in America.

A pennsylvat rublished in 1759 antitled "An account of the Management of the

A pamphlet published in 1789, entitled "An account of the Manners of the German Inhabitants," describes their skill in farming, their development of horticulture, and states that they were the first to use artificial fertilizer. The author of this interesting book concludes:

"Citizens of the United States, learn from the German inhabi-tants of Pennsylvania to prize knowledge and industry in agricul-ture and manufacture as the basis of domestic happiness and

ture and manufacture as the basis of domestic nappiness and national prosperity."

As for the manufacture of food products, consider but a few of our prominent companies today. The Quaker Oats Co. was organized by Ferdinand Schumacher and the American Sugar Refining Co. by the Havemeyers. The H. J. Heinz Co., famous for its "57 varieties" of preserved fruits and vegetables, was founded by a Pennsylvania German, Heinrich Heinz. The founder of the Royal Baking Powder Co. was William Zeigler. Two brothers, Karl and Maximilian Fleischmann. were the organizers of the Fleischmann Maximilian Fleischmann, were the organizers of the Fleischmann Yeast Co. In the art of brewing, the names of Pabst, Schlitz, and Ruppert, and a host of others are outstanding.

Turning to other industries, need one point out what the name of Schwab has meant in the steel industry, Studebaker in automobiles, Steinway in pianos, Weyerhaeuser in lumber, Rockefeller

in oil, and Wanamaker in department stores?

in oil, and Wanamaker in department stores?

In the Nation's physical development, we owe a debt of gratitude to the German Americans. It was due to Carl Beck, Carl Follen, and Franz Lieber that the gymnastic system of the German, Dr. Friedrich Ludwig Jahn, was introduced into the United States and incorporated in the curriculum of American colleges and universities. The first gymnasiums in this country were established in 1826 at Harvard University, in Boston, and at Northampton, Mass.

The movement to build "a sound mind in a sound body" was given new impetus in 1848, when thousands of Germans came to this country to escape the revolution in their native land. Everywhere they organized the "Turn-Vereine," or gymnastic societies. The first of these was the Cincinnati Turngemeinde, established in November 1848. This was followed by one in Philadelphia in 1849, and countless others. In 1850 these were incorporated into the North American Turnerbund. From the beginning they have

the North American Turnerbund. From the beginning they have carried forward the most advanced ideas in physical education. At their convention in Indianapolis in 1880 they recommended that physical training be introduced into the public schools. Largely due to their work in communities all over the Nation, this goal has been realized today.

Nor have the turners confined themselves to physical culture. Nor have the turners confined themselves to physical culture. Many of their societies have singing and dramatic sections as well. Many of them maintain elementary schools, freehand and mechanical drawing schools, schools for the study of German, girls' industrial schools and children's camps. Their regular national gymnastic festivals, with competition between the societies, have added to the public interest, and bring together many of the finest examples of American young manhood and womanhood from all over the country.

Thus the turners have played an increasingly important and valuable part in our American life during the 90 years of their

The Germans, who are proverbial philosophers and scholars, were naturally pioneers in American education. Among the many early schools established by them was a seminary for female teachers in Bethlehem, Pa. How far advanced were their views on the education of women as compared with those of Puritan New England is illustrated by the fact that when it was suggested, in 1793, that a similar school be established in Plymouth, Mass., the proposal was rejected. The reason given was that "in such a school women might become more learned than their future husbands." Perhaps this fear has leavely been realized. this fear has largely been realized.

Through the years Germans have been prominent on the faculties of American universities and have been instrumental in raising their standards. They have indeed left their mark on American

education and methods.

German contributions to the founding and development of science in America have been equally great. Gotthilf Heinrich Muhlenberg was the first to publish a series of books on the flora of Pennsylvania. Georg Engelmann wrote the first descriptions of the unknown vegetation of the Far West, after hazardous trips through the wilderness. The first to make a study of American fishes was David Schopf, a German doctor. Gerhard Troost was the first to lecture in America on geology. In the fields of archaelogy and ethnology are such names as Karl Hermann Berendt, Gustav Bruhl, and Franz Boas. To these and to a host of other German scientists we owe the information secured on numerous expeditions all over the world, many of our most valuable books on and some of the finest scientific courses at our these subjects. leading universities.

Germans have played no less important a part in American engineering. It was they who built many of our first bridges, tunnels, and canals. It was Johann Roebling who constructed the suspension bridge over Niagara, the Ohio River bridge, and finally, the suspension bridge between New York and Brooklyn. Another German-American, Gustav Lindenthal, built the great Hell Gate

German-American, Gustav Lindenthal, built the great Hell Gate Bridge at New York.

But German-Americans have done more than add to our fund of knowledge, our physical comfort, and our material well-being. They have brought beauty into our lives as well, and, if for no other reason, deserve our undying gratitude.

The first Handel and Hayden Society was organized in 1786 in Stoughton, Mass. In June 1815 a similar group was formed in Boston by Gottlieb Grapuner, who also founded the first orchestra, the Philharmonic Society. This was largely composed of German. Boston by Gottlieb Grapuner, who also founded the first orchestra, the Philharmonic Society. This was largely composed of German members and led by German conductors. The Germania Orchestra was formed by refugees of the Revolution of 1848. Its leader, Karl Bergmann, made a concert tour of the Eastern States with great success. The first singing society was the Philadelphia Manner-chor, which was founded in 1835 and is still flourishing. German theaters were early founded in New York, Philadelphia, Baltimore, Cincinnati, Chicago, Milwaukee, and St. Louis, and exerted a great influence upon the American theater. It was due to these German-Americans that German opera was brought to this country, and it was largely due to the efforts of Leopold Damrosch that German opera was introduced at the Metropolitan Opera Co.

On the canvasses of German-American artists are portrayed every

On the canvasses of German-American artists are portrayed every On the canvasses of German-American artists are portrayed every phase of American life, the rich variety of American scenery, and the great events and characters of our history. Many of these are now in the Metropolitan Museum or the Corcoran Art Gallery. The greatest of the nineteenth century historical painters was Emanuel Leutze, whose painting of Washington crossing the Delaware is known to every American school child. Murals and paintings by Friedrich Dielman are to be found in the Congressional Library.

In the field of architecture there are many outstanding names. Thomas U. Walter designed and executed the dome of the United States Capitol, as well as the extensions of the Houses of Senate and Representatives. He also constructed the United States Treasury Building, the east and west wings of the Patent Office, and the beautiful Girard College in Philadelphia. To Johann Schmitmeyer and Paul Johannes Pelz we owe the United States Congressional Library. G. L. Heins, as a member of the firm of Heins & LaFarge, is responsible for the beautiful Cathedral of St. John the Divine in New York.

No tribute to the German-Americans is complete without mention of their philanthropies, which date back to the colonial days. On Christmas Day 1764 a group of Lutherans founded the German Society of Pennsylvania, whose object was to fight the German Society of Pennsylvania, whose object was to fight the evils of immigration by which many an unfortunate immigrant was tricked into virtual slavery. The German Society of New York provides needy persons with cash, meal tickets, lodging, coal, and medication. From this resulted the German Hospital and the Legal Aid Society of New York. Similar organizations were established in Boston, Washington, Philadelphia, Newark, Chicago, Cincinnati, San Francisco, and other cities.

It was William Muhlenberg who founded St. Luke's Hospital in New York and was superintendent until his death in 1877. Ho

New York, and was superintendent until his death in 1877. He was also the originator of St. John's Land on Long Island, with homes for old men and crippled children. It was likewise a man

homes for old men and crippled children. It was likewise a man of German ancestry, Henry Bergh, who founded the Society for the Prevention of Cruelty to Animals in 1866, and later the Society for the Prevention of Cruelty to Children.

The tradition of German-Americans has given their descendants much to live up to, and every American a glowing example, America has need of Germans today of the type who have come to her shores in the past, pioneers who made homes in the wilderness, ever developing knowledge and culture, ever making life richer and more beautiful wherever they went. America needs citizens today with the devotion to the ideal of freedom which has inspired German immigrants to make her their adopted land. has inspired German immigrants to make her their adopted land, and to carry aloft the torch of liberty. America needs citizens today with the passionate love of truth and tolerance that have

characterized so many of our German-Americans.

The vast problems facing us today are not insoluble if we have but their courage, their industry, their thrift, their thirst for knowledge, and their determination to build a better world.

Twenty-five years ago, when general conflict broke out in Europe,

Twenty-five years ago, when general conflict broke out in Europe, the Germans in this country suffered intensely and unjustly. Today, there is no war. Yet once again a propaganda campaign is being waged to arouse the people of this country against the people of Germany.

Such a spirit must strike at the heart of every man and woman who has come to this country from Germany, or who is of German parentage. Their love and loyalty to their adopted land cannot and should not erase their affection for their fatherland.

That any barriers of hatred and suspicion should arise between

That any barriers of hatred and suspicion should arise between the German-Americans and the rest of the American people is unthinkable.

In conclusion, I can do no better than to quote from a speech made in Congress by the German, Richard Bartholdt, who served as Representative of the Tenth District of Missouri for 22 years. "There should never be a division in the United States upon racial or national lines. Under the American sun, in their capacity

LXXXIV-App-127

as citizens, the Teuton and the Slav, the Irishman and the Englishman, the German and the Frenchman extend to each other the hand of brotherhood as equals, and the great flag covers them all. Ancient prejudices have melted away under the sun of freedom until, no longer English, Irish, German, Scandinavian, we are, one and all, heart and soul, Americans."

In this spirit, we will not fail to go forward together.

King of England Should Bring War Debt

EXTENSION OF REMARKS

HON. JOSEPH A. GAVAGAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 16, 1939

ARTICLE FROM THE NEW YORK ENQUIRER OF MAY 8, 1939

Mr. GAVAGAN. Mr. Speaker, ladies and gentlemen of the House, by permission of the House, I insert in the RECORD a news article entitled "King of England Should Bring War Debt," written by William W. Griffin, editor and publisher of the New York Enquirer, and appearing in its issue of May 8, 1939.

In these days of stress and storm we hear much preachment on the sanctity of contracts, and while we, as a Nation, have always maintained our sacred honor and preserved our written as well as our spoken word, sad experience has taught us that others do not. Almost every nation in Europe owes to this Nation great and accumulating debts as a result of the late war, and in spite of the fact that each and every one of these nations are spending billions of dollars for armaments, no honest attempt is made by any of them to even make a token payment to the United States of America. In my opinion, therefore, the following article by Mr. Griffin is very much to the point:

[From the New York Enquirer of May 8, 1939]

KING OF ENGLAND SHOULD BRING WAR DEBT, SAYS GRIFFIN

(Reprinted from the January 16 edition of the New York Enquirer) Within a few months the King and Queen of England will visit

the United States.

It will mark the first occasion upon which a reigning British monarch set foot upon the soil of this Republic. Nothing is more important than that all Americans should know the reasons why George VI and his Queen are coming to this country, to the end that John Bull and his partners in Washington shall not succeed in pulling the wool over Uncle Sam's eyes once more for the honor and glory and material benefit of the British Empire.

We are told that England's King and Queen are traveling to the United States in order to render due honor to this Republic on the occasion of our celebrating the hundred and fiftieth anniversary of the assumption of the Presidency by George Washington and the

the assumption of the Presidency by George Washington and the coming into full effect of the Constitution of the United States.

That is the ostensible reason for their visit.

In reality, England has taken advantage of this momentous event to promote her political and economic interests in this land through the medium of her imperial salespeople George VI and Queen Elizabeth.

SEEKS OUR CASH

She seeks our cash. She seeks our guns. She seeks the blood of our youth. She seeks an alliance with us so that she can the more

easily exploit and betray us.

The success with which Britain, with the aid of her allies in America, has been able to fool some Americans is simply aston-

Of all the lands on the face of the globe, England is the greatest

Of all the lands on the face of the globe, England is the greatest enemy of the United States, not alone potentially, but actually. Never has that country, since the days of 1776, thought of or done any unselfish act of friendship toward the United States of America. In this year of grace 1939 Britain is the foremost debtor of the American people. She owes us \$5,000,000,000. And she not only owes this stupendous sum but in addition resolutely refuses to repay it. Moreover, she is responsible for the united swindlers' front whereby we are being defrauded of a further sum of \$8,000,000,000 by other nations, making a total of \$13,000,000,000 in all. What other foreign nation has inflicted a loss of this astounding character upon America? The answer is none.

And this by no means tells the full story of England's hostility

And this by no means tells the full story of England's hostility

to our country.

In the face of this situation the American people are being asked by Wilsonian internationalists entrenched in temporary authority at Washington to repose implicit faith in England and to receive her Sovereigns with acclaim when they put in an appearance here a few short months from now.

A SIMPLE TEST

Here is a simple way to test Britain's professed sincerity in her attitude toward this Republic:
Will England cease mainta

Will England cease maintaining her \$13,000,000,000 united swindlers' front against the American taxpayer, and will George VI bring with him to America a certified check repaying in full England's war debt to the American taxpayer?

If the British Government will guarantee that these things will be done, then our people will gladly receive George VI and Queen Elizabeth as the representatives of a country that has proven its good faith

proven its good faith.

Prime Minister Chamberlain boasts that England has the money. Will King George bring it with him?

AMERICANS WRONGED

It can be said right now as a matter of absolute certainty that this happy eventuality will not take place. George VI and his Queen will come to America as the agents of a land that for more than 17 decades has continuously and outrageously wronged the American people and that gives no proof of the slightest change

what a mockery it will be and what a descration, when George VI of England, descendant of George III who scourged us in the War of Independence, lays a wreath upon the tomb of George Washington, the man whom John Bull longed beyond all else to hang by the neck upon the gallows of British revenue.

We Americans need not thank John Bull that in 1939 we are to celebrate the sesquicentennial of our Federal Government and inauguration of the Father of his Country as our first President.

Who has forgotten how England, with fire and sword, with ter-rorism and bloodshed and devastation, tried to smash our na-tional independence in the days of 1776 and in the War of 1812?

BURNED WHITE HOUSE

In the last-named conflict, she, the self-proclaimed torch bearer of civilization and international good faith, did not hesitate to burn down our National Capitol and the mansion of our Presidents—where, by the way, George VI, descendant of George III, will be housed in state next spring at the expense of the American taxpayers.

American taxpayers.

It is not forgotten in this land how, on the eve of our harrowing Civil War, the then Prince of Wales visited the United States and was accorded an enthusiastic national welcome, and how England requited our good will toward the grandfather of her present monarch by putting forth superhuman efforts to enable the secessionists to destroy the Union and leave this vast and precious land at the mercy of the British Empire.

Nor is it forgotten how John Bull lured us into the World War by protestations and promises as false as Satan and thus set us on the toboggan of disaster which has landed us in the fix in which we find ourselves today.

we find ourselves today.

JEFFERSON'S WARNING

Americans, be not deceived by the glamor of British royalty or by the sophistry of John Bull and his partisans upon American soil as to the vital necessity of our having confidence in England and cooperating wholeheartedly with her. Listen to these words of the man who penned the Declaration of Independence:

"England, on the contrary, is an ever-present danger not to be relied upon as an ally, for she would make a separate peace and leave us in the lurch. Her good faith? The faith of a nation of merchants. The punica fides of modern Carthage. Of the friend of the protectress of Copenhagen of the nation who never admitted a chapter of morality into her political code."

a chapter of morality into her political code."

Never was it more vital for the American people to be guided by this solemn warning of Thomas Jefferson than it is in the sesquicentennial year of 1939.

WILLIAM GRIFFIN, Editor and Publisher, New York Enquirer.

The Silver Question

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 16, 1939

EDITORIAL FROM THE AMERICAN METAL MARKET OF FEBRUARY 17, 1939

Mr. WILLIAMS of Delaware. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the American Metal Market:

[From the American Metal Market of February 17, 1939] THE SILVER RACKET

The special Senate Silver Committee has held public hearings in Washington to discuss the operations of the administration's silver policy. Such an investigation is highly desirable. However, conducted under the aegis of Senator Pittman one may despair of results since the Senator himself is responsible for our present policy. One may indulge in the hope that this committee investigation may educate Pittman as to the fallacy of his silver policy which he has held since his first Nevada election, but this is more or less of a forlorn hope. Certain it is, however, that Pittman have more characteristics that it is the controlled the silver that it is the controlled to the silver that knows more about silver that isn't so than any other silverite in the world.

At one committee meeting last week Henry Morgenthau, Jr., Secretary of the Treasury, was heard. An Associated Press dis-

patch says that:

patch says that:

"Pressed by Senator William H. King, Democrat, of Utah, as to the possibility that Mexican silver was still finding its way into the United States, Mr. Morgenthau said he had no knowledge of this since the Treasury broke off an agreement with Mexico last March under which it was taking \$5,000,000 of silver monthly."

This is an outrageous reply. The Secretary cannot help knowing that the Mexican silver is coming to this country. The Secretary reported to the committee that in 1938 the Treasury bought

reported to the committee that in 1938 the Treasury bought 355,000,000 ounces of silver.

The world production was just under 265,000,000 ounces. Of this Mexico produced 85,000,000 and in addition supplied 35,000,000 ounces from accumulated supplies, making a total of Mexican silver in 1938 of 120,000,000 ounces. The world consumption of silver, as estimated by Handy & Harman, was 90,800,000 ounces. Consequently, Mexico supplied to the world market about 30,000,000 ounces more than the world consumed. Even on this basis the United States would have taken this 30,000,000 ounces of Mexican silver on Morgenthau's own statement, which the A. P. quotes as silver on Morgenthau's own statement, which the A. P. quotes, as

"Under the direction of Congress," Mr. Morgenthau said, "the Treasury buys each day all of the silver offered to it. We have no

way of knowing the origin of that silver."

Of course the United States bought more Mexican silver than 30,000,000 ounces because to assume otherwise is to assume that the Indian, German, and English consumption was all of Mexican

silver, which was not so.

The Secretary said, "We have no way of knowing the origin of that silver" (which the Treasury buys). A year ago when owing The Secretary said, "We have no way of knowing the origin of that silver" (which the Treasury buys). A year ago when, owing to Mexican expropriation of American property, the administration was besieged with demands to stop buying Mexican silver, the Secretary said, regarding the Treasury's silver purchases, it did not know where it comes from and "we don't care." The Treasury did cancel the contract to buy directly from the Mexican Government but it continued to buy the Mexican silver in the open market and everybody in the metal world knows it. Morgenthau knows it and his reply to Pittman's committee was an evasion unworthy of one in such high office and one of Alexander Hamilton's successors

But there is no need to resort to these arguments to show that the Treasury does know where the silver comes from which it buys. Every bar of refined silver bullion which the Treasury buys has a brand on it which indicates the country from which it comes. More-over, every importation of silver into this country has to come over, every importation of siver into this country has to come through the customs house and has to be accompanied by various certificates among which is a certificate of origin. Mr. Morgenthau personally does not see all this bullion and can truthfully say he does not know and does not care, but his Department not only does know but would refuse to accept the silver if it did not know.

On January 4 Senator Townsend, of Delaware, introduced a joint resolution providing for the appointment of a special joint committee to investigate the silver program. The preamble contains 52 "whereases" and as it is the most succinct survey of the silver situ-

ation available, it is worth reproducing as follows:

"Whereas the purchase of vast quantities of newly mined and demonetized silver from Asia, Europe, Latin America, Canada, Australia, and Africa has failed to accomplish the economic purposes stated by the program's advocates and apologists; and "Whereas no government in the world has deemed it advisable to

remonetize silver, despite the conspicuous measures on behalf of that metal taken by the United States, and despite the expectations of silver advocates that such a development would occur; and "Whereas no foreign government or central bank deems silver an acceptable substitute for gold in payment of its international

credit balances; and

"Whereas there is no prospect of foreign countries ever restoring silver to its former position either as a standard of value or as a reserve material against currency and bank deposits; and "Whereas this country's silver purchases in fact have caused the last silver-standard countries to give up that metal; and "Whereas today, due to the Silver Purchase Act, silver nowhere in the world remains a standard of value; and

'Whereas this country's silver program has caused silver to be taken from circulation, melted, and sold, even in non-silver-standard countries, including Bolivia, Chile, China, Costa Rica, Colombia, Ecuador, Ethiopia, Hong Kong, Iran, Mexico, Peru, Salvador, and

Uruguay; and "Whereas the London silver agreement of 1933 was violated, failed, and was permitted by its signatories to expire without being

renewed; and

"Whereas the execution of the American silver program has re-eatedly caused public confusion and criticism at home and peatedly car abroad; and

"Whereas the Silver Purchase Act since its inception in June 1934 has created disturbances and evoked ill will toward the United States in various countries, including England, British India, China, Colombia, Hong Kong, Iran, Mexico, and Peru; and

"Whereas the purposes and effects of the silver program are very inadequately understood by the American public and members of

Congress; and
"Whereas the American silver program is very widely regarded as an economic and political hodgepodge which does not serve the best interests of the American people and is inconsistent with currency management as it is sought to be practiced by the Federal Reserve System and the Treasury; and
"Whereas economists have overwhelmingly and repeatedly gone

on record to condemn the purchase of silver; and
"Whereas no economist of standing here or abroad has endorsed
the Silver Purchase Act as being in the interests of the United States; and "Whereas purchases of silver to date already represent a dissipa-

tion of over \$1,000,000,000 of American national wealth for the benefit of a mere handful of individuals; and "Whereas more than 82 percent of the silver acquired since 1933,

not including silver nationalized in 1934, has been purchased from abroad and not at home; and

"Whereas it is entirely unnecessary, undesirable, and indefensibly wasteful for this country to purchase foreign silver; and "Whereas the Silver Purchase Act has clearly failed to have the

"Whereas the Silver Purchase Act has clearly failed to have the depression-eliminating effects promised by its supporters; and "Whereas the importation of over a billion and a half ounces of foreign silver has not had the promised stimulating effects on our merchandise export trade; and "Whereas the price of foreign silver is today actually lower than it was when the Silver Purchase Act was passed by Congress; and "Whereas silver is a very minor commodity in the United States' economy, the Department of Labor assigning it an importance of only seven one-hundredths of 1 percent in a list of 784 commodities: and

"Whereas the Department of Labor statistics show that the normal importance of silver compares with that of grape jelly, lemons, wire nails, packers' prime tallow, or anhydrous ammonia; and

"Whereas the purchase of foreign silver tends to encourage the production in this and other silver-mining countries of other non-ferrous metals and thereby to depress their prices in the world markets, thus aggravating the world's economic problems; and "Whereas the artificial price paid for imported silver by this Government is far interesses, the same of the seconomic problems."

"Whereas the artificial price paid for imported silver by this Government is far in excess of the metal's economic value; and "Whereas artificial support of the price of foreign silver is injurious to American silver consumers in photographic, chemical, and industrial lines, and in the arts, since due to the existence of a special premium paid by the Government for domestic-mined silver, those consumers depend entirely upon imports of the metal from abroad; and

from abroad; and
"Whereas Treasury regulations necessary to the administration
of the silver program have devitalized New York as a silver bullion
market and driven open-market trading abroad; and
"Whereas the purchase of foreign silver tends to involve us in
Asiatic political troubles; and
"Whereas the State Department has been greatly embarrassed
by the silver program on various occasions; and
"Whereas the purchase of foreign silver by the Treasury still
continues week after week, under mandate of Congress; and
"Whereas the Treasury continues to buy Mexican silver, despite
the treatment accorded by Mexico to American interests; and
"Whereas the technical goal of the Silver Purchase Act, after
approximately 4 years of large-scale silver purchases, actually is
further from attainment than it was at the time the act was
passed by Congress; and

"Whereas there is absolutely no way of knowing how much additional silver ultimately will have to be purchased to fulfill the requirements of the Silver Purchase Act because the act links the silver program to a fluctuating and far more than ample gold

the silver program to a fluctuating and far more than ample gold stock; and "Whereas the injection of silver into the United States monetary system has been in conflict with and disturbing to this country's other monetary policies such as the sterilization of gold and the regulation of bank reserve requirements; and "Whereas the 'Circulation statement of the United States money—November 30, 1938,' shows that over 25 percent of the currency in the hands of the public now consists of silver, as compared with less than 8 percent in February 1933; and "Whereas there are now three times as many standard silver dollars and silver certificates in public use in the United States as in 1933, prior to initiation of silver purchases; and

dollars and silver certificates in public use in the officed States as in 1933, prior to initiation of silver purchases; and "Whereas the importation and monetization of foreign silver by the United States adds to the problems raised by the inflow of foreign capital and complicates the public finances; and "Whereas the American Government—alone among the government that the price of silver."

"Whereas the American Government—alone among the governments of the world—is attempting to maintain the price of silver, thus engaging in a futile gesture in defiance of economic law and foredoomed to fail; and
"Whereas for generations the American public has rejected and continues to refuse silver coin other than fractional denominations and exhibits a distinct preference for paper money; and
"Whereas the Treasury is pressed for space to store the metal which the public will not handle; and
"Whereas it has been found necessary to construct extra vaults

which the public will not handle; and

"Whereas it has been found necessary to construct extra vaults
outside of existing Treasury establishments to hold the silver which
is being accumulated without useful purpose; and

"Whereas the United States now has the dubious distinction of
holding in its vaults the largest hoard of silver bullion and coin
ever accumulated anywhere in the history of the world; and

"Whereas in addition to approximately \$1,580,000,000 of silver
coin and bullion held as reserve against certificates outstanding,

the Treasury holds no less than \$530,636,000 cost value (993,000,000 ounces) of sterilized, unutilized silver bullion still awaiting issu-

"Whereas the continued purchase of silver increases the stock of sterilized bullion in the Treasury and of silver in monetary use as backing for silver certificates; and

"Whereas the continued issuance of silver currency adds to the already large rigid element in our monetary system represented by nonwithdrawable silver certificates; and

"Whereas it would be entirely impossible to find buyers for the silver which has been accumulated by the United States Treasury during the past 5 years excepting if the silver were offered at a

mere fraction of its cost to the American people; and "Whereas the silver program to date represents a tremendous loss to the American Nation and a corresponding benefit to foreigners;

"Whereas the Treasury has never endorsed the silver program;

"Whereas the Secretary of the Treasury has stated that he is opposed to all subsidies; and "Whereas various persons who once actively supported the silver program have evidenced a conviction that it should now be recon-

sidered by Congress; and

"Whereas on December 10, 1938, the Northwest Mining Associa-tion meeting in Spokane, Wash., advocated the immediate discon-tinuance of the present program of purchasing large quantities of foreign silver; and
"Whereas on November 3, 1938, the Chamber of Commerce of the

whereas on November 3, 1956, the Chamber of Commerce of the State of New York urged the termination of all buying of silver bullion by the Government; and "Whereas the termination of the present silver program depends entirely upon action by Congress: Now, therefore, etc."

The Coast Guard Retirement Legislation

EXTENSION OF REMARKS

HON. COLGATE W. DARDEN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 16, 1939

Mr. DARDEN. Mr. Speaker, on yesterday there passed the House S. 595, a bill to increase further the efficiency of the Coast Guard by authorizing, under certain conditions, the retirement of enlisted personnel. This legislation is of great importance and benefit to the Coast Guard personnel many of whom, I am glad to say, are stationed in the Norfolk-Portsmouth, Va., area.

It has been my pleasure to work with their representatives in securing favorable consideration of this bill. I want to congratulate this splendid service on their successful effort. No service is closer to the American people than is the Coast Guard. They have played a great part in our national development. In peace and in war their service has been outstanding. Those of us who see them on duty along our coasts know their sterling worth. They have richly earned our respect and admiration.

Character Loans

EXTENSION OF REMARKS

HON. WALTER S. JEFFRIES OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 16, 1939

RADIO ADDRESS BY HON. WALTER S. JEFFRIES, OF NEW JERSEY

Mr. JEFFRIES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered recently over the radio:

As I look out of the window of this studio, this very minute, I see houses which are sadly in need of repair. They require labor and material. The people walking on the streets are not as well dressed as they were 6 years ago.

There are many reasons for this condition, a stagnant condition which is retarding the progress of this country. I do not intend to delve into each and every reason, for my time is limited. But

I will explain one of the prime causes of this stagnancy.

That reason goes back to the old business maxim of supply and demand. Both are essential to prosperity. Both exist now, perhaps more than they ever did before. But the middleman—the retailer—cannot supply the consumer with goods that are demanded because he does not have sufficient capital to purchase the goods at the outset.

The merchants know full well that the people are clamoring for merchandise, and he knows the merchandise is available to be distributed. He reaches down in his pocket, or looks at his bank book, however, and finds he hasn't enough money with which to replenish his stock.

Or perhaps he wants to rebuild his store, make it modern and more attractive. He knows that pays dividends too. He knows

more attractive. He knows that pays dividends, too. He knows he isn't betting on a long shot or embarking on a risky venture which may wipe him out. For once, he has a "sure thing."

which may wipe him out. For once, he has a "sure thing."
Our retailer, though, has one asset, however intangible it may be. He has a good reputation. He's been in the town for years. Everybody knows him. Why, he went to school with So-and-So, the district attorney, and he did his homework with the mayor. He is the town. He grew up with it; proudly watched its progress as he progressed. Without him there would be no town.

The town—your town—exists today because the so-called "little fellow" had confidence in it. He made it his life's work.

An almost total lack of credit is paralyzing the country today, increasing unemployment, throwing builders out of work and industrialists into bankruptcy, creating surpluses and discouraging initiative, ingenuity, and inventiveness.

To rectify this condition I have introduced in the House of Representatives a bill known as H. R. 5429, or the "character loan" bill. Briefly, here are its fundamental points:

bill. Briefly, here are its fundamental points:

(1) The bill authorizes the Reconstruction Finance Corporation to guarantee loans made to merchants by local and Federal Reserve banks in amounts not exceeding \$2,500.

(2) It sets an interest rate of 6 percent yearly.

(3) Loans made to merchants shall be secured by a promissory note, with 7 years given in which to repay.

(4) In order to secure these loans, however, the merchant must have operated his business for a period not less than 5 years, and shall have enjoyed a good personal and business reputation.

(5) A lack of commercial assets, collateral, or security will not prohibit the loan, and need not even enter into the negotiations.

(6) The bank making the loan shall pay 2 percent interest on the amount outstanding to the R. F. C. This money shall be deposited by the R. F. C. in a fund to underwrite service charges and possible losses.

(7) The repayment of loans made by the banks shall be guar-

(7) The repayment of loans made by the banks shall be guaranteed by the R. F. C. up to 90 percent.

In connection with this all-too-obvious business stagnancy, it is interesting to note that the R. F. C., recently cut its interest rate on loans to business from 5 to 4 percent. This step, as announced by R. F. C. Chairman Jesse Jones, has been interpreted to be a part of a business-recovery program sponsored by the administration.

I contend, however, that this action on the part of Mr. Jones is nothing more than a camouflage. Certainly, it does not solve the problem. Credit is just as difficult to secure. It is like adding a tempting improvement to an island city without first building a bridge to enable people to reach the city.

Mr. Jones has reduced the interest rate on loans. But he has done nothing to enable the merchant to secure the loan in the

first place.

first place.

One of the secrets of our country's great economic development through the years was the availability of "risk money." There always had been the little village banker who staked his claim in a new settlement with the barber and the butcher. He was liberal with loans, for he had great vision. Because of his liberality, he saw the settlement expand. He saw it become a thriving community. Such vision exists no more, thanks to the lessons of the 1929 crash. Yes, we all admit 1929 must never be repeated, but we are still struggling in the chaos it created. We have been frightened, like the turtle, and have drawn our heads in. But, like the timid turtle again who cannot move forward as long as his head is pulled in, neither can we. neither can we.

My character-loan bill will revive the country's courage. It will rid the country of the fear that is gripping it. It will insure the banker in loaning this credit, and the little retailer will get his loan. He will spend it, put it into circulation; he will buy new stock, or he will rebuild his store. The wheels of commerce will begin gathering speed, people will be put to work—builders, painters, con-tractors, laborers. The Gordian knot has been cut.

You may ask: Is there sufficient capital in the banks to meet such demands? The answer is, Yes. There is plenty of money in the Nation's banks, but it is frozen. It is frozen and useless because of

the Federal Deposit Insurance Corporation, which morally allows banks to stay open or closed. The banks are afraid to extend any such "risk" loans because, every so often, the F. D. I. C. pays a visit and looks over the collateral. The appraising impairs the banks'

The banker says: "Well, if I lend this money, without physical security, the F. D. I. C. will say it isn't good enough. Immediately, the investigator writes it off." In my bill, there is a billion-dollar fund to be used to insure such loans. The F. D. I. C. cannot write a loan off as long as it is liquid and the merchant is paying something on it.

There is no doubt in the mind of any thinking person but that such purchasing power has broken down. The merchandise of the average small-business man is being eaten up by his overhead. That which he has on hand has become out-of-date. If the merchant has a purchasing power of \$2,500, as allowed in my bill, the purchase of materials would create an immediate demand in manufacturing and only a superior materials. facturing and employment.

The Government would only be lending its credit—not giving it. The Government would not go into debt, as it is guarded against losses. The bill creates a reserve to take care of any losses. We are blessed by a sufficiency of resources and we have the demand. Why not take measures to bring them together?

The Government has come to the aid of the cotton growers, the railroads, the farmers, and, to some extent, to the unemployed. But the independent retailer—the backbone of the Nation—is the forgotten man. He has been totally overlooked.

If the small retailer wants money advanced to him today, he never thinks of his former comrade—the banker. He is forced to apply elsewhere, to a corporation or another established business, and he pays well for it. The penalty—or interest—he must pay in 99 cases out of 100 is prohibitive.

For the most part, the retailer must apply to the small-loan companies, which will advance only a few hundred dollars at rate of interest averaging 30 percent a year. Moreover, the term of the loan is so short that the retailer cannot properly utilize the money he borrowed.

As a matter of record, I would like to point out that, for a quarter of a century or more, the banks have lost rarely because of a liberal credit policy to the small-business man. Only when the general depression of post 1929 gripped the country, were some losses sustained by the banks, and the depression was not the fault of the merchant, but rather the merchant became a victim of circum-

It has been pointed out by the Temporary National Economic Committee that there has been, in recent years, an overwhelming concentration of financial assets. Without castigating any group or institution or individual in respect to this condition, it is undeniable that one result has been the inability of the small merchant to secure credit facilities.

Frankly, I am unable to explain the present situation in which we see a reputable businessman on one hand, unable to obtain money, and banks, on the other hand, fairly bulging with ready cash which is denied circulation. Certainly, it is an unhealthy condition.

But, if such a condition exists—and we wouldn't be discussing it if it didn't—some other steps must be taken to "de-ice" these funds. Call it artificial respiration if you will, but it is the only remedy known. My character-loan bill, which I submit as that remedy, is

not a panacea, but it is a big step in the right direction.

For proof I can show you the hundreds of letters I have received from retailers all over the country. Some are almost pitifully grateful; all agree it would solve their problems. Each presents his own individual case for illustration.

One merchant points out the following paradox: In 1921, 10 years after he had established his business, he asked for and got a loan of \$10,000 from a bank. The loan was repaid without a hitch, and his credit was intact. A few years later he applied for another loan, this time for \$7,500. This, too, was granted.

His business by then had expanded sufficiently to satisfy him for a decade. Then he took inventory of his stock and his establishment, and decided that he should make quite a few additions and replacements. Back to the same bank he went and asked for \$2,000.

replacements. Back to the same bank he went and asked for \$2.000. After lengthy deliberations—which were akin to pulling teeth—our bewildered retailer managed to obtain \$1.000—exactly half of what he had asked. He had reason to be bewildered. Nothing had happened to impair his credit standing; in fact, it had risen. He was definitely entrenched in the community's business life. With a lower credit rating before, he had secured much larger loans from the banks without any trouble. Now he is hamstrung.

Another retailer wrote as follows:

"I have a furniture store, the largest in my city. I have been in business here for the past 25 years. I think I can safely say that I am a part of the city; if not myself personally, then my establishment.

"I occupy an entire first floor of a 3-story building. I employ 20 persons, and I am making a fair living. I believe I could make even greater profits if I expanded, took over at least the second floor, and added to my stock not only modern furniture which is demanded, but also other incidentals, odds and ends, which may be considered supplemental to a furniture business. At the present

I am selling beds, chairs, tables, and a few floor lamps. I have the demand, however, for other articles, such as cushions, rugs, mirrors, furnishings, such as book ends, ash trays, and innumer-able other appliances. People nowadays would like to furnish their home in one store-not buy a table here and a lamp somewhere else, and so on.

"Because I am aware of such a trend, I want to enlarge my business. I am convinced it would more than pay were it a semi-department store, because there is a crying need for such a place

"But I require capital. I read in the newspapers where the banks are overflowing with money, so I apply there for a loan. Their collateral demands are prohibitive, and I cannot meet them. I point out my standing in the community, the longevity of my business, and I explain the uses to which I intend to make of the money. All in vain.

"Naturally, if I were loaned the money I need and went through with my enlargement plans, the result would be felt throughout the city. I would hire local workers to fix the second floor; I would buy stock; I would increase my advertising budget; I would hire painters, electricians, plumbers. More important, I would relieve unemployment by almost doubling my staff of permanent employees.

"I sincerely trust that your bill will be enacted into law. It would be a lifesaver for me and for thousands of others who are in similar predicaments."

Here, then, is the key to the most vital problem now confronting the United States. Here is the "open sesame" to the door which leads to a return of economic well-being. Here is the path which

will lead to the solution of other problems.

I am firmly convinced that the importance, the gravity, of the situation I have attempted to outline cannot be underestimated. I am just as sincerely convinced that my "character loan bill" would assist immeasurably in making the depression—or recession a thing of the past.

I made this small-loan problem one of the principal planks of my preelection campaign, and I am doing all in my power to fulfill the promises I made then concerning it. I believe the people of my Congressional District recognized the problem and my plans to solve it and voted accordingly. I am convinced that public sentiment is 100 percent behind the bill.

As representatives of the people, Congress is duty bound to adhere to their desires. It is imperative that action be taken now. Further delay will result not in stagnancy, but a worse fate—that

of slipping back.

Congress, then, has the power to shift in reverse or in high gear. Small-business men—the retailers—throughout the Nation are silently praying, for the good of the country, that it decides to go

I now ask the people to unite in supporting this bill. Everyone is affected directly or indirectly by the present situation. By the same token everyone should aid in rectifying it. Get in touch with your Congressman today; let him know how you feel about it. I thank you.

"Upon What Meat Doth This Our Caesar Feed. That He Has Grown So Great?"

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1939

Mr. REED of New York. Mr. Speaker, we have been told by President Roosevelt ever since he assumed office that his aim and object was to raise the price of farm products for the benefit of the farmers. I had assumed that he meant the American farmer, but apparently he had in mind the foreign farmer, because there seems to be no other conclusion to be drawn from President Roosevelt's letter directing the Navy Department to purchase Argentine beef, in which he is quoted as saying:

I am impressed with the fact that the price quoted by the Argentine meat producers' cooperative is \$0.157 per pound, against the lowest bid on an American product of \$0.2361. After payment of the duty of \$0.06 per pound on Argentine beef, the net cost to the Government would be about \$0.097 per pound.

I shall not mention the slur cast by the President upon the quality of this important American farm product, which will reduce the sale of American beef in every market in the world. I believe the American consumers, however, will prefer the higher-priced domestic brand of beef rather than the lower priced hoof-and-mouth disease brands of foreign countries.

America Cannot Forget

EXTENSION OF REMARKS

HON, JOSEPH A. GAVAGAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1939

EDITORIAL FROM THE NEW YORK ENQUIRER OF MAY 15, 1939

Mr. GAVAGAN. Mr. Speaker, ladies and gentlemen of the House, by permission of the House I insert in the RECORD an editorial entitled "America Cannot Forget," which appeared in the New York Enquirer, a New York newspaper, under date of May 15, 1939. In my opinion this editorial is timely and food for thought. The editorial reads as follows:

> [From the New York Enquirer, May 15, 1939] AMERICA CANNOT FORGET

George VI and his Queen had hardly embarked for their trip to the United States, ostensibly to manifest the warm friendship of England for America but in reality to advance England's material and other interests in and through this Republic at the expense of the American people, than it was announced that a valuable discovery, testifying to the intensity of Anglo-American concord of other days, had been made in Brooklyn. Reporting this incident the Daily News stated: the Daily News stated:

"W. P. A. workmen extending Building Ways No. 2 in the New York Navy Yard, Brooklyn, to provide for construction of a new 45,000-ton battleship, unearthed the bones of what is believed to be one of the 12,000 American soldiers who died on British prison ships anchored in Wallabout Bay during the War of Independence." For a considerable period America has been subjected to an intense campaign on the part of England and her tools and dupes in the United States, in order to induce the people of this land to believe that the destiny of their country and that of the British Empire are one.

Empire are one.

The present occupant of the British throne, descendant of George III, under whom those 12,000 Americans met a barbarous death at the hands of England, is coming to the United States to do his part in the promotion of that treacherous campaign. During the presence of the British sovereigns in our country, the American people will be treated to an unprecedented exhibition

of servility to England and England's interests by people in high and not-so-high places, people who call themselves Americans, but who in heart and soul are descendants of Benedict Arnold.

Like Arnold, they are eager to betray this Republic for the glory and benefit of the British Empire.

and benefit of the British Empire.

The 12,000 Americans savagely murdered by England on her prison ships in Wallabout Bay mean nothing to them. Neither do the other atrocties committed by John Bull upon American soil during the fight of Washington and his compatriots to free this country forever from British domination mean anything to them.

Nor are they at all concerned over the diabolical acts of England in our second war of independence—the War of 1812—when, among other lurid evidences of British civilization, the mansion of our Presidents and the Capitol of the United States were given to flames by the armed forces of John Bull.

Nor are they worried in the least over the manner in which England scourged us in our Civil War agony, or how, in our own day, she lured us into the Great War, with collossal losses to us in blood and gold, or how, even as her King and Queen come to visit us, she continues to withhold the \$5,000,000,000 she owes the American people in her defaulted war debt.

It is nonsensical to talk of Anglo-American concord while the It is nonsensical to talk of Anglo-American concord while the British Empire maintains its traditional attitude and policy toward this Republic. Ill will has ever governed that attitude and that policy. America's most dangerous enemy today, as ever, is John Bull. It is he, and he alone, that keeps the United States and England so far apart—and they are very far apart, despite the flowery words and cocksure claims of England's spokesmen and the descendants of "Benedict the Betrayer."

Criticism of Recent Findings of Federal Communications Commission in the Subject of Superpower and Engineering Practices

EXTENSION OF REMARKS

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1939

Mr. SWEENEY. Mr. Speaker, the long-awaited report of the Federal Communications Commission proposing new rules to govern broadcast stations and containing additional standards of engineering practice was made public April 7, after an exhaustive hearing held in June of last year, before a committee consisting of Commissioners Norman S. Case, T. A. M. Craven, and George Henry Payne. I am not going to deal with many of the proposed rules governing standard broadcast stations, nor will I touch upon the standards of good engineering practice as suggested by this committee. The standards of good engineering practice are of a purely technical nature, and I grant to the committee any benefit of doubt and resolve in its favor any question as far as the engineering aspects of the report are concerned. They cannot nearly be so controversial as the policy to be adopted by the Commission itself with reference to the subject of socalled superpower.

From the report of the committee no subject considered in the June hearing was more controversial than this so-called superpower proposal supported by the progressive and enterprising clear channel group of stations. The report goes on to say that the use of power in excess of 50 kilowatts has certain distinct advantages, especially in the form of increased rural service. Notwithstanding this pointed economic argument, the committee finally comes to the conclusion, in its solitary effort to protect the networks and other radio monopolies, to toss superpower out the window and decides to remain in status quo so far as any advance in radio science is

What is this thing called superpower? Stripped of all its confusing ramifications the basic question confronting the radio industry and the Federal Communications Commission is: Shall the rural listeners be denied good radio reception under all conditions?

Further, shall the rural or small-town listener be entitled to any semblance of parity with his urban brother in the matter of radio reception and choice of programs? Boiled down to its last analysis, that remains the only question of superpower. The fact remains uncontroverted that a superpower station does nothing more than furnish radio parity to rural listeners, a parity not now available. It does not interfere with existing facilities operated with less power, nor does it "squeeze out" smaller licensees. Yet the F. C. C. says "no" to any advance that would insure program equality. The Commission grants that the only reason why clearchannel stations were created was because only clear-channel stations could give secondary service; that is to say, service to remote rural areas. The 42 clear-channel stations operating in the United States today do not share frequencies with local and other regional stations. They are therefore in a position to offer reception and program excellence to some people who reside outside the metropolitan areas, but cannot reach the great listening public, which depends upon superpower stations for any reception whatsoever. The amount of power used by any clear-channel station does not interfere in any way with reception of regional or local stations, and by experiment it was found that despite the single license issued for a superpower station the number of radio stations in the United States has increased from 625 to 769 as of April 1, 1939. Does this look like superpower creates a radio monopoly?

While the city listener has 18 percent more stations and, consequently, 18 percent more programs from which to choose out of the signals delivered to him, rural America, with 54,000,000 people, which never had good radio service and which must depend upon long-traveling radio waves from clear-channel stations, is given no consideration whatsoever by the Federal Communications Commission. In denying all clear-channel stations the right to increase their power output above 50 kilowatts, while urban America with 18 percent more stations in the last couple of years has enjoyed excellent radio reception, rural America has lost 30 percent of its clear-channel stations. And now by the policy to be adopted by the Federal Communications Commission the rural listener will be denied good reception and good programs because the Commission refuses to deal with superpower. Rural America has been sidetracked from the trunk line of broadcasting progress and finds itself, despite the effort of its national leaders, headed into an oblivion which cannot even be penetrated by the powerful X-ray of modern radio. How long the farmers and the small-town residents of the United States must remain in this purgatory depends upon the continued and unconscionable refusal of the F. C. C. to deal intelligently with high power.

In its anxiety to protect the networks the Federal Communications Commission has conveniently overlooked the fact that the National Broadcasting Co. operates seven or more 50-kilowatt stations, and the Columbia Broadcasting Co. operates six or more of the same type stations in the United States. The networks have agreed that superpower would be a serious competitor with chain broadcasting, in that one station with a power output of 500 kilowatts would reach a greater share of the rural listening public, with its stronger signals, than that furnished by the chain which makes no attempt to reach the outlying farm communities at the present time. The question then is, Shall rural America in the West and the South be denied the same program excellence and the same good reception as is furnished in the metropolitan districts of the North and East by the chains and regional outlets?

The committee devotes 20 pages of its report to the subject of superpower, and if this report is carefully analyzed it is the best argument yet brought forward in support of high power. It was pointed out in this report that serious doubts as to the ability of clear-channel stations to operate at 500 kilowatts with financial success in cities of substantial size were not voiced at the hearing.

By the committee's own language it can be deduced that all economic evidence can be resolved in favor of superpower. The evidence further points out and the committee recognizes in its report that from a technical standpoint superpower creates a radio parity for all listeners. It knows no East, it knows no West. It affords to the sparsely settled districts of the scattered South and the same programs and the same reception that is now afforded to the industrialized North. I quote from this report:

The use of power in excess of 50 kilowatts has a distinct advantage because it provides better quality service to the vast population residing in rural areas and in towns which neither have broadcasting stations of their own nor are located within the primary service area of any station. The public residing under these circumstances must now rely for their only program service upon distant clear-channel stations having not more than 50 kilowatts power. Therefore, from a technical standpoint, it is safe to conclude that the higher signal intensities produced by greater kilowatt power, with the consequent improvement in technical service, tends to equalize the quality of service rendered to the population in rural areas as compared to the service rendered the population in urban communities more fortunately equipped with broadcast transmission facilities of their own.

Then the committee indicates its unwillingness, despite the distinct advantages to rural listeners and without any interference to the urban population by the use of superpower, to handle the subject in a constructive and statesmanlike manner. The committee refuses to recognize any advancement in the field of radio science. It arbitrarily refuses to grant to the South and the West the same advantages of

radio as are presently enjoyed by the North and metropolitan East. It summarily revives the Mason and Dixon's line in the field of radio. It shuts the door to progress and serves notice to those engaged in radio research that present conditions are satisfactory; that we do not want to know anything more about the intricate science of reception and communication; and says in effect that we have gone far enough so let well enough alone.

We might as well close doors to the Patent Office. We might as well tell every inventive genius in the United States to devote his time and energy to fields other than radio. What would have happened in the nineteenth and early part of the twentieth century if a similar regulatory body had said to Alexander Graham Bell, to Thomas A. Edison, to Marconi, and others that the present means of communication were entirely satisfactory, and therefore any improvement would be looked upon with askance. Where would we be today? We would still be using the pony express, the mails, and means of communication other than radio, telephone, and telegraph. Fortunately for this country we had far-seeing people at the helm in those days, and the United States of America proceeded from 13 colonial possessions to a point now where it comprises 48 integral united States. several Territories, and districts not separated beyond the space of telephone, telegraph, or radio communication.

For the past several years and until an unprecedented. arbitrary, and capricious action by the Communications Commission denied it a renewal of its broadcast license, one station located in the great State of Ohio has operated on superpower; that is to say, on 500 kilowatts. It has been demonstrated throughout by the operation of this station and even to the ultimate satisfaction of the Communications Commission, that its operation was not destructive. and in no way squeezed out local stations which are dependent upon local and some network advertising. It has been argued by the clear channel group, which is anxious to use superpower, that local advertising now enjoyed by this group of stations would be lost. That is true, and now what becomes of this local advertising? It goes to the local and regional stations because the larger clear channel superpower stations, as demonstrated by the only license in existence for superpower, use practically nothing but national and some network advertising which is not available to the purely local or regional stations anyway. By this the Commission admits that if a clear channel station was permitted to increase its power and if local business was lost as argued, the only benefactors of the loss of local advertising by the superpower stations would be other smaller stations located in the same metropolitan area as the superpower station losing such business. This admission is on page 130, paragraph 2, of the committee's report.

The committee hides behind the inevitable result and begs the question by stating that local stations are still available for national network and national spot advertising, despite the fact that they do not get it now anyway and declares that by removing national spot advertising entirely to the clear channel group would be in effect "squeezing out" of the field the small 100-watt operators, a field never at any time open to this class of stations. This, they say, would be contrary to the Communications Act, which provides equitable distribution of radio broadcast transmission facilities to the several States.

It might be well by way of analogy to compare the Federal Communications Commission as it is presently constituted with the Interstate Commerce Commission back in 1887, when that administrative agency came into being to bring the railroads and other transportation systems out of chaos and economic insecurity. Conditions then in the rail industry were comparable to the broadcasting situation at the present time.

Did the I. C. C. refuse to face the problem as it was presented at that time? Did it refuse to lay down the law to belligerent small carriers and refuse to declare that the common good of the several States should be subordinated

to the whims and fancies of few who feared a union of the East with the West and the North with the South?

Did it evade the issue at any point? The answer in each case is emphatically "no." The I. C. C. provided the long and short haul and in effect said the trunk-line carriers did not have to short haul themselves. It was backed up by the courts at that time, and especially during the regime of Chief Justice Edward Douglas White. The I. C. C. brought the rails out of chaos and had absolute power to provide these through routes from Maine to California with a division of rates for all carriers, thereby protecting the weak and assuring an adequate return for the strong. These regulations are still in effect, and that is one reason why the transportation system in the United States now is second to none in the world. The I. C. C. back in the year beginning 1887 did not try to support the narrow-gage railroad as against the great interstate carrier, but it provided through routes for all traffic traveling between States and was supported in this by innumerable jurists who included besides Chief Justice White, Mr. Justice Holmes, Mr. Justice Brandeis, and later, Mr. Justice Cardozo. Now the F. C. C., a similar regulatory body, refuses to provide the same facilities in another field just because it will not deal with the subject of superpower. In one stroke the F. C. C. decides not to profit by the experience of the I. C. C., the grandfather of all administrative bodies, and casts its lot with the chains to provide instead of adequate broadcasting facilities for the whole United States, a system that admittedly covers only a part of the country.

The committee itself agrees that there is raised a conflict between good service to listeners and distribution of transmission facilities to the various communities in the country. The question therefore is, Shall good service to listeners be damned just because a 500-kilowatt station may get reception in Florida, and the Florida listening public be serviced by a program excellence that cannot be attained by 100-watt stations located in some urban area in that State? Shall the F. C. C. promiscuously issue 100-watt licenses, holding out the bait of a possible chain connection that will never materialize

now or henceforth?

The question was raised by the committee of the possible social effect of permitting a few persons in the United States to control the operation of the means of mass communication. This is easily answered. The only excuse for the F. C. C. at the present time is to stand guard over the communications system of the country, radio, telephone, and telegraph. By raising this question the Commission practically admits that it is not capable of controlling the field of communications and backs away from the subject of superpower. Had the I. C. C. made this admission back in 1887 what would be the status of the transportation system in the United States today? In place of 100 or so class-A railroads we would have today thousands of short lines without semblance of schedule and no regulations, except those administered in each of the various 48 States.

In recommending against superpower the Commission avoided the substantive question and said it could proceed only after a more extensive accumulation of facts and a further study of the economic factors involved. How are you going to get a more extensive accumulation of facts and a further study of the economic factors involved in superpower by denying a license to a superpower station? You cannot continue to assay the gold after you kill the goose that lays the golden egg. This fact is undeniable. Until you see a superpower in operation and its effect on other stations you cannot draw any conclusions as to its favorable or adverse effects. While the committee engineers admit that America is only one step away from superpower the Commission denies a renewal of a high-power license to an existing station and tells every other clear-channel operator that it cannot favorably consider its application for more power until more facts are at hand. Every other country in the world has tried superpower, but it remained for the Yankee ingenuity of an Ohio pioneer in the field of radio to make it work.

Now England, Russia, and Mexico are using it to propagandize the rest of the world. For the past 4 years we had a station operating on 500 kilowatts power in Ohio, and this station did not affect adversely any other licensee in Cincinnati, in the State of Ohio, or in the United States, yet the committee has come to the surprising conclusion, and entirely against the weight of evidence, that superpower is not yet here. It has been "here" in Ohio for 4 long years or more.

In its absolute and unbounded desire to protect the national and regional networks, the committee points out that if there were twenty-five 500-kilowatt stations throughout the United States there might be a natural trend toward the exclusive use of these superpower stations by the largest national advertisers at a subsequent loss in profit to the networks. What stakes have the networks in radio? No investment in transmission and technical equipment other than scattered studios and talent under exclusive contract available for programming. Yet the interest of this group controls.

It boils down to the fact that the networks have brought such a tremendous amount of pressure to bear upon the Commission against the use of superpower that the Commission has been blinded to the need of this type of transmission, and has decided, as I said, against the weight of evidence, to protect the monopoly now enjoyed by the National and Columbia Broadcasting Systems, condemning the rural listener to a fate

on a par with the peasants of communistic Russia.

By the words of the Commission itself, superpower is only a step away. Irrespective of what pressure can be brought upon the present membership of the Federal Communications Commission, this organization cannot stop the progress of radio by an arbitrary finding that has no support from anyone except the lobbyists who have impressed upon the Commission members themselves the advisability of maintaining a noncompetitive field for the networks which admittedly do not serve the South and the West and have made no attempt to service the backbone of these United States, rural America.

Rural America today stands condemned to the "tongue-

less silence of the dreamless dust."

Protection for the American Farmer Against **Foreign Competition**

EXTENSION OF REMARKS

HON. JOHN McDOWELL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1939

RESOLUTION OF THE HOUSE OF REPRESENTATIVES OF PENNSYLVANIA

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the House of Representatives of the State of Pennsylvania.

House Resolution 27

The American farmer, upon whose prosperity depends the pros-perity of the Nation is being deprived of his opportunity to earn a living by means of not being able to compete with the cheap imports from other countries.

Crops can be grown and cattle raised abroad at much lower cost an can be done here where the standard of living to which the American farmer is accustomed demands a larger compensa-

tion for labor.

tion for labor.

The importation of cheaply grown grains, foodstuffs, cattle, and meat products from abroad has done much to deny to our farmers the prosperity their efforts deserve: Therefore be it Resolved, That it is the opinion of this House of Representatives of the General Assembly of the Commonwealth of Pennsylvania that action should be taken by the Federal Government to prevent the importation of such grains and foodstuffs, cattle and meat products, the sale of which in the American markets contributes so largely to the economic plight of the American farmer either by the imposition of a high tariff on such importation or the closing of our ports of entry to such articles: And be it further

Resolved, That a copy of this resolution be immediately transmitted by the chief clerk of this house to the officers of the Congress of the United States and to the Members of the Senate and House of Representatives in that Congress from the Commonwealth of Pennsylvania.

Works Progress Administration

EXTENSION OF REMARKS

HON. WILLIAM D. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1939

Mr. BYRON. Mr. Speaker, Mayor Hawken has written me regarding the W. P. A. situation in Williamsport, and I want to make a few observations on the situation there as I have known it and as I see it at this time.

Williamsport, a small community of about 2,500 people, was the recipient of the first W. P. A. project in the State of Maryland. At that time, some 4 years ago, I was not in Congress, but, having been mayor, I was naturally interested in the physical development of the community and the idea of putting its needy unemployed to work.

I was and still am interested, as one of the main employers of the town, in seeing that those who suffered from the depression would have some way of earning their livelihood. I assure you that this work has been absolutely necessary from the point of view that people on W. P. A. in the community today have not had, nor have now, any other means of support for themselves and families. The W. P. A. program of this community has achieved remarkable results.

The mayor's letter gives you in detail what has been accomplished and I want to simply add my word of commendation

of it.

There has never been the slightest breath of scandal and, insofar as I know, politics have been kept out. I have never had anyone say to me that he could not get work because of his political affiliation. I, of course, realize that the W. P. A. has not worked out this well in every locality. Mistakes have been made which naturally go with a huge organization such as has been set up by the administration. However. I have been in Congress 4 months and, so far as I know, no one has offered a satisfactory substitution for work relief. The dole system in this country would be ridiculous and the smaller communities and States would be unable to finance worth-while projects completely without Federal aid.

I am making these few remarks not only as Congressman from the Sixth District of Maryland but, as I have said before, one whose business interests have played a large part in the industrial development of Washington County. While I would like to see business at the point where every man is employed in private industry, the situation does not now exist where this can be done, and I am making this plea for the proper continuance of work relief while the country is getting back to normal.

Burgess and Commissioners, Williamsport, Md., April 26, 1939.

Hon. William D. Byron,

Room 316, House Office Building, Washington, D. C.

Dear Congressman: With the investigation of the Works Progress Administration we feel that you, as the Representative from the Sixth District of Maryland, should be reminded of its operations and successful accomplishments in Williamsport and the resultant benefits to the entire community.

benefits to the entire community.

Permit me to state, as an official and citizen, that Williamsport is a 75 percent better town economically and physically at present than it was before the W. P. A. came into our community life.

than it was before the W. P. A. came into our community life.

This estimate of the importance of the W. P. A. in the development of Williamsport in the past 4 years is shared by 90 percent of the citizens, including merchants and all dealers who depend upon the public for their patronage. This fact has been personally communicated to me by the businessmen of the town and I am pleased to state that the support they have received from this source has been one of the chief sustaining factors of their economic existence through the depression and until the present. I

am not overstating a fact which you will probably recall, that before we applied for and began receiving Federal aid through the W. P. A., Williamsport, like many other communities, was experiencing a period of business stagnation.

The two principal industries of the town being at low ebb in operations and at times closed down with an estimated 250 and 200 employees being cut of employment some of the conditions.

operations and at times closed down with an estimated 250 and 300 employees being out of employment, some of the conditions existing then and now may be familiar to you, but to give you a complete picture of the situation with its W. P. A. background, permit me to summarize as follows:

No. 1. Grading and building of all the streets. Construction of concrete curbing, relaying brick sidewalks, and the grading and sodding of street parkways.

No. 2. Excavation, grading, and macadamizing of all alleys within the corporate limits, together with necessary storm water drainage

the corporate limits, together with necessary storm water drainage incidental thereto.

No. 3. Construction of the Memorial Library Building in memory of the 14 high-school students who lost their lives in the Rock-

ory of the 14 high-school students who lost their lives in the Rock-ville, Md., bus accident April 11, 1935.

No. 4. Construction of the Community Recreational Building of native stone, which houses the nursery school for underprivileged children and serves, as its name implies, the community as a recreational center.

No. 5. Improvements to the community park, building of tennis courts, road, and walkways; rip rapping of the existing stream; construction of a stone main entrance; repairs to the bandstand, construction of a stone refreshment building, and grading and landscaping, and other incidental work thereto.

No. 6. Construction of a native stone municipal building which will give the town modern and elegants facilities will great the town modern and elegants facilities will great the town modern and elegants facilities will great the form modern and elegants facilities will be supported to the construction of the

will give the town modern and adequate facilities, viz, administration offices, fire house, courtroom, town garages, supply storage rooms, and public comfort station.

I desire especially to call your attention to what the town officials and the citizens consider to be the most important and outstanding of the improvements mentioned, the Recreational Building and the Municipal Building, both being important assets to the community and architecturally of beautiful appearance. These buildings and the memorial library building have elicited admiration and praise from the citizens and visitors.

The construction of the Recreational Building and the Municipal Building particularly evidence the latent ability which was developed.

Building particularly evidence the latent ability which was developed in the raw W. P. A. workmen in dressing and laying the stone, the manufacture of fire tools and in framing and trimming the buildings which could not have been excelled under private con-

In conclusion and a vitally important feature of the contribution of the Works Progress Administration to the community has been the employment of the heads of approximately 150 needy families, the interest they have shown in their work, and their expressed appreciation of the general benefits they have derived therefrom.

Respectfully yours,

BURGESS AND COMMISSIONERS, R. G. HAWKEN, Burgess.

The Enfield Dam

EXTENSION OF REMARKS

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 16, 1939

EDITORIAL FROM THE HARTFORD (CONN.) COURANT OF MAY 14, 1939

Mr. MILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Hartford Courant:

> [From the Hartford (Conn.) Courant of May 14, 1939] ENFIELD DAM AGAIN

The Rivers and Harbors Committee of the House of Representatives has at last temporarily removed the \$12,000,000 project for improving navigation on the Connecticut between Hartford and Holyoke from the pigeonhole to which it was consigned when the committee voted not to include it in the omnibus rivers and harbors bill. On Friday the committee announced its intention of giving

bill. On Friday the committee announced its intention of giving the proposal a rehearing tomorrow. Manifestly, this unexpected announcement does not give the opposition to the project an opportunity to martial its forces and again present the powerful objections that Connecticut has to the scheme.

Connecticut's case was presented some weeks ago at the original hearing on the bill. Its arguments against the proposal were based on solid ground. It showed, on the testimony of the Army engineers themselves, that the proposed dam at Enfield, which is an essential part of the project, would increase the potential flood crest, the estimates running from a few inches to nearly a foot. It

showed that the only way the project could be economically justified was by counting on the revenues from a public power plant. It showed that there was no demand in this part of the State for the snowed that there was no demand in this part of the State for the sort of power that a hydroelectric station at Enfield would produce and that it could only be sold on a seasonal basis, thereby cutting into the revenues of the privately owned stream plants which were designed for year-round service. Finally, this State demonstrated that the protest against the project was not, as Representative RANKIN, of Mississippi, tried to make it appear, confined to "the interests"; the bill is supported by no member of the Connecticut delegation in Congress, Democratic or Republican; it is opposed by the State water commission, and by other spokesmen for the State's the State water commission, and by other spokesmen for the State's interests and by a great majority of the farmers in the affected area.

The public power bloc in Congress, which is behind the proposal, knows that the proposal could never become law on its own merits. What they hope to do is to include it in the omnibus bill, where it will stand or fall with a host of other projects, many of them beneficial and some of them essential. The attempt to attach it to the coattails of the omnibus bill ought again to be defeated.

Walsh-Healey Act Changes

EXTENSION OF REMARKS

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 16, 1939

RESOLUTION OF THE GENERAL ASSEMBLY OF WISCONSIN

Mr. BOLLES. Mr. Speaker, the inconsistencies and injustices in the Walsh-Healey Act have been recognized by many labor organizations. A memorial was sent to the General Assembly of the State of Wisconsin by the members of a union of the Simmons Bed Co., of Kenosha, Wis. The General Assembly of Wisconsin passed it, and it is worthy of the consideration of every Member of Congress. The resolutions follow:

Joint resolution memorializing Congress to amend the Walsh-Healey Act so as to provide more stringent conditions for the purchase of supplies and the making of contracts by the United States

Whereas the Walsh-Healey Act provides in part that all Government specifications and contracts involving the purchase of \$10,000 or more of supplies must contain provisions for the payment of a prevailing rate of wages to be determined by the Secretary of Labor and that employees of contractors must not work more than 8 hours in any day or 40 hours in any week; and

Whereas such act is designed to obtain social benefits from a public policy based on the limitation of expenditure of Government funds to contractors who apply fair labor conditions and that decent and general labor standards may be applied on governmental projects regardless of geographical location; and

Whereas operation under such act indicates that somewhat more than 10 percent of the total Government purchases are made there-under and that industry has capitulated to the principles thereof;

whereas the Walsh-Healey Act by definition has not included manufacturers who now supply the Government through dealers, subcontractors, service contractors, and by its limitations to contracts of \$10,000 or more and the indefinite prevailing wage rate has thereby permitted circumvention and evasion of the terms thereof; and

Whereas the differential in wages permitted in various States under the prevailing wage rate has made it both imprecises and

under the prevailing wage rate has made it both impractical and impossible for the industries of Wisconsin paying a fair wage rate to competitively and successfully bid on Government contracts;

Whereas it is manifestly unjust that the industry of a State maintaining a respectable wage rate in conformity with the policy of the act should be penalized by losing contracts, thereby creating

of the act should be penalized by losing contracts, thereby creating local unemployment, to industries of other States unscrupulously availing themselves of technical loopholes; and

Whereas Federal Labor Union, Local No. 18456, of Kenosha, Wis., through its committee, has given much time and study to the subject, and respectfully urges the Congress of the United States to enact legislation that will place the industry of the entire country on an equal and commensurate wage plane, include the regular dealer in supplies to be manufactured, subcontractors and service contractors, and define more minutely and rigorously the minimum wages to be paid under the prevailing rate to persons employed in similar work in the particular or similar industries of the country: Now, therefore, be it Now, therefore, be it

Resolved by the senate (the assembly concurring), That this legislature respectfully petitions and urges the Congress of the United States to enact necessary legislation to impose more stringent and rigorous conditions to prevent evasion and circumvention

of the Waish-Healy Act in the purchase of supplies and the making of contracts by the United States; be it further Resolved, That properly attested copies of this resolution be sent to the President of the United States, to both Houses of Congress, and to each Wisconsin Member thereof.

Alien-Baiting Legislation and Its Danger

EXTENSION OF REMARKS

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1939

Mr. COFFEE of Washington. Mr. Speaker, because intellectuals throughout the United States are tremendously concerned lest the Hobbs bill be the harbinger of similar and more drastic alien-baiting bills, there is tremendous interest in efforts now being made by the foremost progressive thinkers of America to combat such proposed legislation regarded as subversive and un-American by most true lovers of civil liberties and of the principles enunciated in the Declaration of Independence.

The National Emergency Conference was convened on the week end of May 13. The purpose of this conference was to discuss ways and means of arousing the general public to the menace inherent in the lack of numerical opposition in the Congress to such bills as the Hobbs bill, which recently sailed through the House of Representatives with a majority of 5 to 1, only 61 Members being willing to register in a record vote their opposition to this form of legislation. Was the Hobbs bill a trial balloon? Was it to serve as an indicator? Was it a prelude to repeated and persistent efforts to persecute and prosecute every alien resident within these United States? Have we become so arrogant and selfsatisfied, so egotistical and contemptuous of history, that we ignore the lessons of the past century and fail to recognize that the influx of foreign blood and intelligence was the most potent contributing factor in making our Nation the preeminent country of the world? Are we going to tolerate a Fascist pogrom against another because the latter is not a citizen? Is the Constitution only for American citizens and not for foreign residents within our borders?

Let us awaken, Mr. Speaker, to the danger in our midst. Surely alert Americans, conscious of the contributions of democracy and its teachings, want no pogroms against the alien per se. Nor do we want any drives of the character of anti-Semitism, anti-Negro, or anti-Catholic. Racial and religious hatreds have no place in the American make-up.

Recently the Washington Post printed an editorial entitled "Threats From Within," which well deserves the careful scrutiny of every Member of Congress and of all citizens. The Washington Post is edited by Felix Morley, brilliant member of the Morley family, whose writings have achieved national prominence. The editorial is as follows:

[From the Washington Post] THREATS FROM WITHIN

Without debate and without publicity the House recently passed the Dempsey bill, providing for deportation of aliens advocating any change in the American form of government. Last week, by an impressive majority, the House also approved the Hobbs bill, which authorizes internment for an indeterminate period of certain classes of aliens subject to deportation but unable to obtain passports from their native countries.

These are only two of many bills now before Congress which constitute a threat to the civil rights and liberties of alien resi-There are, for example, bills requiring the registration and fingerprinting of aliens and the deportation of aliens who have been on relief for a year. There is also a bill providing for the deportation of aliens who do not take out citizenship papers within a year as well as proposals to ban all immigration and to cut

quotas drastically.

Under the present Relief Act aliens have already been deprived of the privilege of holding W. P. A. jobs, whereas at first need alone was the test of eligibility. This change of policy, making proof of citizenship a condition of W. P. A. employment, is indicative of the increasing pressure being brought to bear upon aliens either to become American citizens or to get out of the country.

There may be justification for excluding aliens from Federal relief work when American citizens are without employment. But there is no valid excuse for repressive legislation of the type which the justly named national emergency conference has been called upon to combat. Convening in Washington today, that conference, rep-resenting 150 different organizations, will discuss pending measures which are not only a menace to aliens but a threat to the freedom and security of American citizens as well.

The sponsors of the conference are men and women who have

distinguished themselves in law, science, social work, and the academic professions. The speakers have been recruited from many different fields of activity. Prominent among them are Mgr. John A. Ryan, of the National Catholic Welfare Conference; Dr. Harold

A. Ryan, of the National Catholic Welfare Conference; Dr. Harold C. Urey, Nobel prize physicist; Senator James E. Murray, of Montana; and John Brophy, director of the C. I. O.

The strongest defense of our form of government lies in a firm stand against those misguided patriots who assume that democracy can be preserved by tyrannical procedure. The laws against sedition and crime which apply to citizens are also applicable to aliens, and should provide sufficient protection against subversive and criminal activities of all residents. To threaten with deportation aliens who indulge in criticism of our institutions, or to detain aliens not charged with any crime for unreasonably long periods, is to deprive them of fundamental liberties which our Bill of Rights guarantees to all. to all.

The National Emergency Conference has not been called any too soon. Its sponsors are justified in saying that the bills directed against aliens "point toward universal police surveillance and State regimentation of every one of us." They are calculated "to set man against man, to sow the seeds of race hatred and discord among us, and to split and divide the American people.'

A Toast to Colorado

EXTENSION OF REMARKS OF

HON. LAWRENCE LEWIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 16, 1939

TOAST PROPOSED BY HON. JOHN A. MARTIN, OF COLORADO

Mr. LEWIS of Colorado. Mr. Speaker, at an all-States banquet held by the First Methodist Church of Lamar, Colo., the following toast, written by the Honorable John A. Martin, who so ably represents the Third Congressional District of our State, was read:

> A TOAST TO COLORADO (By John A. Martin)

I propose a toast to Colorado, its immensity: It has properly been called the Switzerland of America. It is the mother of mountains, containing within its borders the Sangre de Cristo Range, the longest and highest in North America, and more than 40 peaks reaching an altitude of 14,000 feet. To see most of the States of the Union is merely a matter of a few days driving on a few highways. To really see Colorado would mean a campaign of travel involving months. I have longed to see all of Colorado, but I never expect to do so. It is too immense.

I propose a toast to Colorado, its scenery: The scenery of Colorado is proportionate to its immensity and, like its immensity, has been seen by but few people. Nowhere else in the United States can one reach viewpoints where one will stand in awe before such a panorama of peaks and ranges and forests and valleys, thrown out by

rama of peaks and ranges and forests and valleys, thrown out by the hand of Nature in a giant profusion as far as the eye can reach, Pike and Long and James Peaks, names known all over the United States; the beautiful Spanish Peaks, so near and yet so far by reason of their immensity that a wilderness of untrod beauty surrounds them; the enchanted Mesa Verde; the Royal Gorge; these are but a few of the high lights of what a prodigal Nature has lavished on Colorado.

I propose a toast to Colorado. Its history: It has the distinction of being the Centennial State, admitted to the Union 100 years after the signing of the Declaration of Independence. Its territory was once part of the far-off kingdoms of Spain and of France, with the Arkansas River the boundary line of these kingdoms. Along this stream ran the famous Santa Fe Trail. Passing up this stream with his soldiers, the eyes of Zebulon Pike first saw the sight which with his soldiers, the eyes of Zebulon Pike first saw the sight which he described as "a blue cloud no larger than a man's hand," which first gave the East the knowledge of a strange new world in America. It was the peak which Pike later declared no man could scale. Yet Pikes Peak was only the sentinel of a land of great peaks. The description which John C. Fremont, the pathfinder, gave of the lone rock of the Huerfano on the highway north of Walsenburg inspired Senator Thomas H. Benton, of Missouri, to say upon the floor of the Senate that there should be set upon the great rock a tablet pointing to the west and bearing the legend, "There is the east; there lie the Indies." I propose a toast to Colorado. Its resources: Their variety forbids even mention in 10 minutes. Its great mines are part of the romance of the golden West. Its coal and other mineral resources are scarcely touched. It is the mother of waters as well as of mountains. They flow into or kiss the soil of 19 States, these waters that rise in the mountain ranges of Colorado. It has such a variety of excitations of certification of the states of potential to the state of the states of the states of potential to the states of the states

waters that rise in the mountain ranges of Colorado. It has such a variety of agriculture, of cattle and sheep, of sugar beets, of potatoes, of alfalfa, of melons, of beans, of celery, of peas, of corn, of wheat, of oats, of seed-producing vegetables, that many counties specially adapted to one variety or the other have very little in common with other counties.

I propose a toast to Colorado. Its people: How can they fail to measure up to its immensity, its scenery, its history, and its resources? They are of the pioneer type, the people who settled, conquered, and developed this great domain, unearthing its mineral riches, and with infinite pains building the water systems which produce its agricultural wealth and maintain its towns and cities. They have subdued a stern and rugged nature. They have built a Colorado worthy of the eminence given it by its location in the heart of the Nation and at the top of the world.

Neutrality

EXTENSION OF REMARKS

HON. HIRAM W. JOHNSON

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES Wednesday, May 17 (legislative day of Monday, May 8), 1939

RADIO ADDRESS BY HON. HENRIK SHIPSTEAD, OF MINNESOTA, MAY 16, 1939

Mr. JOHNSON of California. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered last night by the senior Senator from Minnesota [Mr. Shipstead] on the subject of Neutrality.

There being no objection, the address was ordered to be

printed in the RECORD, as follows:

Good evening, folks. I am thankful to the Columbia Broadcasting System for the opportunity of speaking to you tonight. I propose to speak to you about neutrality and war.

All winter we have been discussing neutrality in the Foreign Relations Committee of the Senate; also throughout the country in newspapers, in the pulpit, and from other forums.

From the correspondence that I receive from the different parts of the country, I have come to the conclusion that the more neutrality is discussed the more confused we become.

We have several specular neutrality resolutions pending before

We have several so-called neutrality resolutions pending before

the Senate Foreign Relations Committee. Sponsors of these various resolutions all say they want to keep us out of war. Some of these resolutions, if they become law, would, in my opinion, start us on the road to war—and still they are called neutrality resolutions. It seems to me that the first thing we ought to do in discussing neutrality is to make it plain what we mean by the word "neutr

trality.'

what is it for a nation to be neutral in an international contest? I have always been of the opinion that unless a country intends to go to war its government should remain neutral in an international controversy involving war.

Neutrality means not to take sides to help either side. It is defined as follows in international law, according to Webster's International Dictionary:

"The condition of a state or government which refrains from taking part, directly or indirectly, in a war between other powers. The right to observe neutrality and the name 'neutrality' are both comparatively modern, all persons anciently having been considered as friends or foes." as friends or foes.'

Having come to an understanding on what neutrality is, the next thing for us to determine is, do we want to be neutral? Do we want to keep out of foreign controversies? If so, are we willing to remain

neutral in these controversies?

If we don't, then the thing for us to decide is on what side are we going to take our position?

On the other hand, if we are going to keep this Nation at peace and out of war, we must keep neutral—if humanly possible. must not take sides with one side or the other.

I know there are organizations of many well-meaning persons in this country who have taken the position ever since the last war that in another war we cannot keep neutral.

There are also many good people who think we should not keep neutral. There are people who think that our duty to the world is to mix into every international controversy that arises between patterns. nations.

In answer to this very insidious propaganda that we cannot keep out of war I will say that it depends a great deal upon our will to keep out. It is almost entirely a matter of will rather than law.

If we do, the first thing we ought to do is to repudiate this propaganda of the inevitableness of the coming tragedy if war should come. This propaganda is undermining our peoples' will should come. This prop for neutrality and peace.

for neutrality and peace.

I know the people of the United States do not want war any more than the people of any country in Europe. It is only governments that make war, and they make it because of economic conditions—or the ego of rulers—or for the benefit of private interests, who want raw materials, trade routes, oil fields, and power. To get these things they are willing to go to war, and they try to get as many nations to help them as they can.

There are also domestic business interests that think a war would bring prosperity to industry and agriculture. These people I would ask, What prosperity are you enjoying now as a result of the last war?

the last war?

It is needless to comment on politicians who think that a war would help their political status.

The first thought of a nation that wants to advance its interests in an international controversy is to try to convince other nations that it is good and that those with whom it has controversies are bad

This kind of propaganda is spread to mislead the people and to throw a "smoke screen" over the real issues in controversy in the belief that people will sympathize with and aid the good people and punish the bad. The fallacy of such an argument is apparent to every sensible person who knows that no nation is wholly good

wholly bad and no nation is wholly good.

Agencies of propaganda are created to stir up hate against an opponent in a controversy and all nations have them. The machinery of hate is always operating overtime whenever a con-

troversy arises.

We always have mass production of misrepresentation in order to arouse the spirit of hate, and the more of such propaganda we have the more difficult it is for nations to peacefully adjust their

It was said that peace shall come on earth to men of good will. War propaganda is manufactured for the purpose of destroying good will among men, and of that we have a surplus in every country. And the purpose of it is to effect something like an operation upon our intellectual vision in order to make the most will things look heaviful

operation upon our intellectual vision in order to make the most vile things look beautiful.

In countries not parties to the controversy, it is used to break down the people's will to remain neutral. It is employed to stir up the emotions of hate in order to get the people to abandon neutrality and to enter upon an unneutral policy to take the side of favor of one or the other of the nations in a controversy.

Every country contemplating war has in its war budget large sums of money for the purpose of manufacturing and spreading propaganda in neutral countries, in order to get sympathy and aid for themselves in such controversy.

aid for themselves in such controversy.

The object of the propaganda in the present controversy is largely to make the people believe that this is a struggle between democracies and dictatorships.

democracies and dictatorships.

And, in my opinion, nothing could be farther from the truth. It is a matter of nations who have little and want more, and nations who have a great deal—who took what they have by war and want to keep what they have taken.

It just so happens that nations who pride themselves on their democracy have taken plenty. In fact, they have taken so much that they have made conditions in other countries so bad as to make it possible for dictators to come to power.

The democratic governments who dictated the terms of peace must assume the responsibility for the dictatorships that are now in existence. In writing that treaty of peace they sowed the seeds for most of the troubles that are afflicting the world today. The Senate of the United States did not ratify that treaty, and so in a legal sense we have no responsibility for the terrible conditions resulting from it. resulting from it.

Statesmen of Europe realize that these adjustments that are now going on must be made. They are trying to make them peacefully. They have succeeded to some extent.

Of course, peaceful settlements cost something, and injustice will be done, and when economic conditions become very bad, persecutions of minorities will take place, and these things we deplore. But let us not forget they come as a result of the last war; and, in my opinion, if there is another world war, they will be multiplied many times more than we have experienced since the last war.

many times more than we have experienced since the last war.

The last war increased the number of dictators. It increased the burden of the taxes upon the people. It reduced the standard of living in every country in the world, including our own.

In my opinion, if we should be so unfortunate as to have another world war, we will have still more dictators than we have now. We will have more debts and more misery and a lower standard of living than we have now. There will be more persecutions of minorities than now, and there will be less democracy for the protection of the people than now.

But we hear so many good people say that we cannot keep out of a war. One is almost led to believe they do not want to keep out. They say they are for peace, but they say we must go to war

and do our duty and our share.

What is our first duty if not to our own people and to our own

Much as we deplore the troubles and persecutions and suffering in other countries, isn't it a fact that our first duty is to ourselves as citizens and that of our Government to its citizens, is to protect our own interests first?

To remain neutral and keep our country peaceful may cost some-thing, and if it does, I say it is worth it. War will cost a thousand times more in suffering and misery.

In my opinion we can best serve the cause of democracy and the welfare of the United States by keeping as friendly as possible under the circumstances with all nations and put our own house in

We have plenty of opportunity here to exercise whatever common sense we have in so arranging our affairs that we can get out of this

depression that has been with us since 1929.

We have something like ten or eleven million people out of work.

Something like 20,000,000 are living directly or indirectly on relief.

Our farmers are being sold out through mortgage foreclosures.

We are piling up debt upon debt, local, State, and Federal. Our taxes are becoming more and more heavy to bear as a result

of these conditions.

If we permit them to continue and appropriate millions upon millions for a purpose of putting the rest of the world in order, we may find ourselves in the condition of the man who did not know how to run his own business but was spending his time trying to straighten out the business troubles of his neighbors.

In this connection I would like to call your attention to a recent statement by the Premier of Canada, Hon. MacKenzie King.

In speaking for Canada, he said he could see no reason why "every 20 years it should automatically and as a matter of course take part in a war overseas for democracy or self-determination of other small nations; * * * that a country which has all it can do to run itself should feel called upon to save periodically a continent that cannot run itself, and to these ends risk the lives of its people—risk headquarter and political disquired—seems to many a night mare risk bankruptcy and political disunion—seems to many a nightmare and sheer madness.

That is also my view, and, I believe, the view of the American

people.

people.

In order to uphold that policy we must remain honestly neutral.

Let me remind you that during the last war Holland, Switzerland, Denmark, Norway, and Sweden, all being democracies and having parliamentary government, kept neutral. They kept out of the war, although the war was being conducted all around them. Of course, neutrality cost them something, not only in inconvenience and in human lives. They had ships torpedoed and their nationals killed. However, they emerged after the war with increased respect and prestige for not having entered the war.

Their statesmen, under great difficulties, managed to keep their people from becoming involved. They did this under great difficulty, but with great ability.

Would it not be well for us to emulate their prudence for the protection of our people and our institutions?

I think it would. Thank you and good night.

American Exports and Reciprocal-Trade Agreements

EXTENSION OF REMARKS

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Wednesday, May 17 (legislative day of Monday, May 8), 1939

LETTER FROM THE FOREIGN TRADE DIRECTOR OF THE ROYAL TYPEWRITER CO.

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD a letter which I have received from the foreign trade director of the Royal Typewriter Co. setting forth, at least in part, the benefits to industry resulting from the trade policies of our State Department under the Reciprocal Trade Agreement Act.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ROYAL TYPEWRITER Co., INC., New York City, April 19, 1939.

Hon. JAMES M. MEAD.

United States Senate, Washington, D. C.

MY DEAR SENATOR MEAD: A recently completed comparison of the typewriter exports from the four leading typewriter-exporting countries, for the calendar years 1937 and 1938, presents very convincingly some facts about the trade which should be most interesting to the deputies of the market falling off in the total volume. Mean ingly some facts about the trade which should be most interesting to you despite the marked falling off in the total volume. Many factors, other than the existence of a score of trade agreements in effect, influenced trade one way or the other during 1938, but at the very least we may conclude, from the following facts, that without those trade agreements our position in the world's trade would have been far worse than it was.

The total international movement of typewriters was decidedly smaller in 1938 than in 1937. The United States remains the larg-

est single exporter but supplied a much smaller proportion of the total trade. All references to United States exports in the following comments are to new typewriters exclusively, and all comparisons are based on number of units rather than value.

In 1938, compared with 1937, United States exports dropped 30.8 percent, Canada 11.6 percent, Germany 12.1 percent, and Switzerland 8 percent. The United States lost volume in each of the six major geographical divisions. Germany made gains in Australasia and Africa, losing in the other four. Switzerland gained in Africa. and Africa, losing in the other four. Switzerland gained in Africa, lost in all others.

United States exports are shown to 126 individual markets; of these, 30 are areas which were covered by trade agreements effective in 1938. The trade loss in these areas in 1938 compared with 1937 was 18.3 percent. The drop in the other 96 markets was 37.4 percent. Among the 30 trade-agreement areas increases were scored in 10. Also, among the 30 were 4 markets where severe trade losses occurred because of acute economic or political developments: France, Czechoslovakia, Cuba, and Brazil. If trade had fallen off in the trade-agreement areas to the same extent as in the remain-

in the trade-agreement areas to the same extent as in the remaining markets (37.4 percent), our 1938 exports would have been about 17,000 units less than they were.

In 1937, 34 percent of United States exports of typewriters went to trade-agreement countries, which in 1938 took 41 percent. (This applies to the 30 areas in both years, although agreements with Czechoslovakia and Ecuador were not in effect in 1937.)

Germany's exports of typewriters to areas where the United States had trade agreements dropped 19.6 percent in 1938 as compared with a total average drop of 12.1 percent, or 6.3 percent in countries where the United States had no trade agreements.

Switzerland's exports to trade-agreement countries dropped 42.5 percent as compared to 8 percent in the total, or a gain of 43.4 percent in the nonagreement countries.

cent in the nonagreement countries.

It gives me sincere pleasure to present these comparisons for your information, evidencing, as they do, definite benefits to the export business of our industry, attributable, at least in part, to the trade policies of our State Department under the Reciprocal Trade Agreement Act.

Sincerely yours,

Jos L. RYAN, Foreign Director.

Pan Americanism Versus European Meddling

EXTENSION OF REMARKS

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES Wednesday, May 17 (legislative day of Monday, May 8), 1939

RADIO ADDRESS BY HON. DENNIS CHAVEZ, OF NEW MEXICO, MAY 11, 1939

Mr. BILBO. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able and timely address delivered by the junior Senator from New Mexico [Mr. Chavez] over the National Broadcasting Co.'s network on May 11, 1939, on the subject Pan Americanism Versus European Meddling.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Our foreign relations are possibly the most important question facing the American people today. Because of the seriousness of the situation in Europe, from whence none but ominous tidings reach us, a mistake in foreign policy today is very likely to prove costly. Peace, which all Americans love so dearly, the welfare of our people, the fate of this Nation and its institutions, will most certainly be placed in jeopardy if we become involved in another

We favor the policy of the good neighbor—yet the good neighbor does not interfere with the domestic matters of his fellow man. To do so is meddling. In our case meddling can have but one consequence-war.

Meddling in European affairs is contrary to the concepts of our early statesmen. America grew great on a policy of noninterference in European affairs and a strict confinement of our foreign interests to the geographical sector in which we had been placed. The foreign lecturers and propagandists with whom we are plagued challenge the wisdom of Washington and the others. They say the United States cannot isolate itself; that therefore we must have part in European disputes.

say the United States cannot is take part in European disputes.

It is perfectly true that we cannot live in economic isolation from the rest of the world and maintain our prosperity. The world today does not permit this. Modern conditions force all nations into closer ties.

It is one thing, however, to speak of economic isolation and quite another thing to speak of political isolation.

It is political isolation from the border disputes and blood feuds

of Europe that is desired and most certainly possible.

In my few remarks this evening I will try to develop the thought that it is vital that this Nation cease meddling in European affairs and that Pan Americanism is the answer to the isolation problem.

I am aware of the danger of continually talking of war, but it seems logical that we should plan now for the course we would take in the event of a European conflict.

seems logical that we should plan now for the course we would take in the event of a European conflict.

The experience of the last war should teach us that we should cushion the economic effects of a widespread war. In the event of war, European markets will be cut off from us and as in the last war, trade will be diverted to neutral markets. Those markets will be in Latin America. This is why it is important that we develop our relations with Latin America now.

Senator Borah hit the nail on the head when he said recently that the very cornerstone of our foreign policy should be the Monroe Doctrine, if by the Monroe Doctrine is intended the new interpretation which makes it bilateral and the responsibility of all the

roe Doctrine, if by the Monroe Doctrine is intended the new interpretation which makes it bilateral and the responsibility of all the nations of this hemisphere, because we live in the Western Hemisphere and it is here that we should entrench ourselves.

By reason of our similar history, because of the similarity of our institutions, because of our geographic situation, our destiny lies parallel to that of the nations of the New World. It is only common sense, in view of the chaotic conditions in Europe today, that we should promote at all costs commercial, cultural, and political relations with these countries which are most apt to remain neutral in the event of a future war. in the event of a future war.

It is obvious that if we are thrown into a European war it will be because our commercial and political relations are almost exclusively concentrated in Europe; why not then reverse this and see to it that our relations are just as advanced with South America?

I am convinced that if we devoted ourselves principally to the

Western Hemisphere as far as political questions are concerned, a European war could not be brought to our shores. The combined might of the Americas would make it impossible and the united Americas would insure international respect for our territory and our institutions; it would not matter who dominated the remainder of the world.

We can choose European meddling and war or we can choose Latin America and peace. The choice is ours. There is a road to peace if we will only take it.

peace if we will only take it.

With war in the air our rule now should be to cultivate such markets and friends on whom we can depend in the event of a conflict. By developing markets with nations which are likely to be neutral and are remote from the scenes of the disputes, we insure stability to our economic machine and guarantee an even keel in the event of the disruption which must come with war.

Our safest and best bet is South America. By developing our ties with Latin America we will be taking out insurance against the day of war just as effectively as the broker who insures himself with Lloyds against lost markets in the event of war.

It is impossible to overestimate the importance of South America in the world picture. The world realizes this even if we do not.

in the world picture. The world realizes this even if we do not. Other nations appreciate the tremendously rich resources of the 20 Hispanic countries, and they know that these resources are absolutely indispensable to their economic and political advancement. We meanwhile give lip service to democracy but continue to involve ourselves in the quarrels of Europe and sit back and let the very nations whose actions we have been decrying beat us to South American good will and trade. For us to overcome this is a tremendous task

mendous task.

An examination of the history of our relations with the Latin-American republics reveals countless black pages. They reveal events which totally eclipse the pious but hypocritical platitudes of our statesmen who, while boasting of friendship and nonaggres-sion, set out methodically and successfully to impose our might on our American neighbors

on our American neighbors.

It is a familiar story. Our imperialism explains it. Texas was torn out of the arms of the Mexican Republic, our nearest neighbor to the south. In short order followed California, New Mexico, and the rest of the West, which were wrested from Mexico and added to the rest of the west, which were wrested from Mexico and added to this Nation. We intervened time and time again in the economic and political affairs of Central and South American nations. We wanted a Panama Canal, and there were no steps we did not take to get it. Our acts in Mexico, Nicaragua, Haiti, and Santo Domingo, etc., earned for us the hatred and distrust of our southern neigh-

Latin American literature is filled with expressions of hatred of this country. We are the "Yankee imperialists"; our Nation is the "Colossus of the North." Because Latin America to us was nothing more than vast expanses of jungle and desert and a land peopled by savages, we felt it was our divine mission to save these helpless by savages, we left it was our divine mission to save these helpless people by giving them the blessings of American sanitation and the joys of American technical progress. We crammed sewers and public utilities down the throats of our neighbor, but in so doing we earned for ourselves their hatred rather than their friendship.

That is why, in spite of 6 years of New Deal good-neighbor policy, we are still making little or no headway in Latin America. However much these countries may welcome the new American policy, they find it hard to forget the past.

As a result Latin America is a ripe field for the aggressive diplo-

they find it hard to forget the past.

As a result Latin America is a ripe field for the aggressive diplomacy and vigorous trade policy of the rising nations of Europe and Asia. However much we may preach to them of the dangers of fascism and of the aggressor nations, the Latin American is not so naive as to forget a more familiar and closer-to-home example of aggression. Sandino and the marines are by no means forgotten.

We are making some progress, however.

The good-neighbor policy has been in effect since 1932. The South American countries have had opportunity to test the new spirit of friendship which characterizes it. Without a doubt, they are ready for concrete evidence of friendship from us. ready to be convinced that we value and seek their friendship.

The rest of the world is interested. Germany is interested.

There are more Germans in every South American country than there are Americans, with the possible exception of Cuba and Mexico. German trade increases year by year. German communications outrank our own. We are familiar, of course, with the extent of our Pan American airways. We do not stop to realize that the German Lufthanza network in South America is more extensive, serves more territory, and connects with more cities than the Pan American and strangely enough. Berlin by air is 2 than the Pan American, and strangely enough, Berlin by air is 2 days closer to Rio de Janeiro than is New York.

The Germans are leaving no stone unturned in promoting Latin American friendship. Every man who enters the Latin American field must take a special course at a central bureau in Berlin where he is thoroughly grounded in the culture, customs, law, history, habits, and trade relations of the Iberic countries. At this bureau he is trained in the perfect use of Spanish and Portuguese, and what should interest us is that he is thoroughly instructed in the propagation of Nazi doctrines. In other words, he becomes a missionary for the state. Is it any wonder that German officials in South America accomplish more than Americans who know little or nothing about the countries to which they are sent and sometimes care less?

Germany at Zeesen has eleven 100,000-watt short-wave broadcast-ing stations. These stations have 15 angle directional beams. With these they practically dominate radio reception in South America.

Contrast this with our broadcasting station at Boston, which sup

posedly handles our official propaganda. The Boston station is only one-fifth as strong as one of these German stations.

Italy is not taking a back step and in many respects leads German stations.

many in the effectiveness of her propaganda and diplomacy. Time does not permit anything but a superficial outline of what she is doing. Needless to say it brings results.

Like Germany, she subsidizes free press service and student experience and student experiences.

changes and maintains Italian professors paid by her at the insti-tutions of learning in South America. Italian radio stations send Latin America a steady stream of propaganda. She promotes trade and military missions. Italy is well repaid in friendship for these

And what are we doing? In the first place, there are countless reasons why we should be close to these people, yet everything we have done tends to separate us further.

Writers of textbooks and of novels have furnished us with unfavorable conceptions of these countries. We think of Latin America as a land of deserts and jungles, reeking in revolutions, and peopled by bandits. We do not realize that South America boasts a culture older than our own, that their literature and art equals any in the world, and their cities are nowhere outranked in modernness and beauty. Therefore, there is every reason for them to resent attempts to treat them on the basis of superiority, and equal reason to believe that they will welcome efforts, diplomatic or otherwise, which meet them on the basis of equality and friendship.

friendship.

There is no use deceiving ourselves about the true state of affairs. It is our fault if South America is closer to Europe than to the United States. Their ties are closer to European nations.

For example, at the Lima Conference, the South American nations were quite anxious to point out that however much they might want to promote amity among the nations of the New World, they by no means intended to sever their ties with Europe. Today the Latin American faces the future much as we did in this great nation 50 years ago. He has lands, unlimited resources, thriving and ambitious populations, beautiful cities, and only lacks capital to make himself great and prosperous.

The nations to our south are on the march and it is up to us

The nations to our south are on the march and it is up to us to participate in their progress.

Granted that it is necessary to cultivate relations with Latin

Granted that it is necessary to cultivate relations with Latin America, what can we do?

In the first place, we should recognize that radio is the greatest force existing today by which people of different nations can be brought close together. We need a powerful Government shortwave broadcasting station. Outside of the General Electric station and the World Wide radio station at Boston, and the efforts of the National Broadcasting Co. through the intelligent and expert guidance of its vice president, Mr. Frank Mason, who has devoted considerable study to the Latin American field, little or nothing is being done. These stations are woefully ineffective. Travelers tell us that nowhere in South America are they able to get reception and that in Central America it is inadequate and only partially successful.

There is no reason why this Government cannot operate a radio

There is no reason why this Government cannot operate a radio station exclusively devoted to promoting cultural ties with the Western Hemisphere. Through such a radio station we can acquaint our Latin neighbors with the sincerity of our good-

neighbor policy.

Secondly, we should prove our sincerity toward the Latins by adopting a definite policy toward Puerto Rico.

All Latin America is eyeing our action toward this island pos-

The feeling concerning the fate of her 2,000,000 souls is very deep.

If we treat Puerto Rico as a vassal state, no matter how much we boast of our friendship and of our hatred of aggressors and our love for democracy, it will be of no avail. Our Puerto Rican

our love for democracy, it will be of no avail. Our Puerto Rican policy will be a glaring example of our real attitude.

I personally believe that a definite policy leading toward the eventual status of statehood should be adopted. New Mexico and Arizona faced similar problems and are part of the Union today. However, the Congress should at least offer Puerto Rico its choice of autonomy or statehood. The condition of vassalage should be ended.

should be ended.

Thirdly, a definite policy must be adopted in respect to our nationals and their investments abroad. There is no reason why they should expect different treatment under the law of the land in which they make their investment than the citizen of that land. Such a policy would serve to eliminate sources of future trouble and occasion for intervention.

It would be a concrete illustration of our sincerity if we could say that we desire to meet even the smallest South American country on the basis of equality; and when we condemn the aggressor nations for their treatment of the weak we will do so

with clean hands.

Pan Americanism is vitally important to us because it offers a solution to the problem of isolation. It represents a haven in which the people of the United States and of this continent can seek refuge from the international tyranny of the world. It is absolutely necessary that we devote all our energy toward devoted the continent of the world. veloping our relations with the Latin Americans.

Meddling in the affairs of Europe can have but one result. It

will lead to war and disaster.

Pan Americanism, on the other hand, tends toward peace. The choice between these two will have to be made. To me the choice is simple. Pan Americanism is the answer. It creates for us a barrier more extensive than our own shores to the hatred and bitterness of Europe. Toward it we can strive with joyous hearts because there's a recommendation. hearts because it leads to peace.

Purchase of Argentine Canned Beef

EXTENSION OF REMARKS

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Wednesday, May 17 (legislative day of Monday, May 8), 1939

ARTICLE BY ARTHUR KROCK IN THE NEW YORK TIMES OF MAY 16, 1939

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the New York Times of May 16, 1939, by Arthur Krock, entitled "The Great Beef Tempest in Nonexistent Cans."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of May 16, 1939]

IN THE NATION-THE GREAT BEEF TEMPEST IN NONEXISTENT CANS (By Arthur Krock)

WASHINGTON, May 15 .- Ever since the President told the Navy WASHINGTON, May 15.—Ever since the President told the Navy that, since Argentine canned corned beef is better and cheaper than the local product, it should be purchased, Members of Congress from the cattle country have been erupting in speeches. The President, they said, was destroying a great local industry in an effort to curry favor with the Argentine for his hemisphere policy. Are American cattlemen and packers to go penniless to enrich the estanciero and the gaucho of the pampas? The Capitol today

estanciero and the gaucho of the pampas? The Capitol today resounded with such oratory.

The facts of the case suggest, among other things, that either the western Members of Congress don't know them, or that they see a good chance to win favor at home through wild exaggeration and imaginary injury to a local activity. Whichever is true, or whether the truth is a combination of both, the facts are known to the President and the Departments of State and Commerce. They are also familiar to the packers, the chain-store supply men, and to the meat processors of South America. If the western beef animals could do anything more than moo or bellow, perhaps they would express complete indifference over the whole affair. For, however they are sliced, they are eaten just the same.

On the testimony of experts, the situation appears to be this:

A good percentage of American cattle used to be turned into canned

A good percentage of American cattle used to be turned into canned corned beef. The only time people thought much about this product was during the Spanish-American War, when the quality of the canned beef was so bad there was a scandal. Probably that was the reason why canned beef became unpopular in this country. At any

rate, the bellies, or "plates," of cattle from which canned beef is made were ingeniously diverted to other foods in this country.

ENTER THE HOT DOG AND HAMBURGER

Maybe a shrewd publicity campaign developed the substitute appetite. But, at any rate, in the years succeeding the rout of Spain from the Philippines and the New World there developed the great American yen for hot dogs and hamburgers. These, like the canned corned beef of odorous memory, are made from the same plates of the cattle.

From Maine to California, from Florida to Vancouver, the hot dog From Maine to California, from Florida to Vancouver, the hot dog and the hamburger entered upon a rapid rise in consumption. Booths and counters began to spring up like mushrooms on the highways and the city street corners. The scent of the griddle was inhaled in the land. Since good prices and good profits were to be made in these commodities, 95 percent or more of the plates of cattle were thus processed. The result is that large orders for canned beef cannot be filled in any store or wholesale packing

In South America and the European countries where the prod-In South America and the European countries where the products of cattle plates are sold there is no relish of the hot dog and the hamburger. If alien peoples are relapsing into barbarism, as American isolationists insist they are, this sad lack of appreciation for our great domestic delicacies may be offered as proof. So the beef-raising countries to the southward—Argentina, Uruguay, Brazil, and Paraguay—have used most of the cattle plates—and even better cuts—for canned corned beef. For this and other reasons they can deliver the product here cheaper and better, as the President said.

the President said.

Canned beef is handy ration for the Army and the Navy. only is it scarce here, because unprofitable in contrast with the hot only is it scarce here, because unprontable in contrast with the hold dog and the hamburger, but its manufacture is held to a minimum therefor. The law of supply and demand has almost extinguished the American product. But the plates are completely used and sold at home. No American steer or cow, no domestic cattle raiser or processor, is being discriminated against by the President or anybody else. Through our choice, the Spanish War experience, and the acquired native taste for hamburgers and hot dogs, we have found a better commercial use for this portion of dogs, we have found a better commercial use for this portion of

our cattle.

A SMALL CAN INDEED

The United States absorbs its own beef product and thus imports little. But canned beef comes in because it isn't profitable to manufacture much of it here. In 1938 four South American countries sent about 79,000,000 pounds. Argentina can sell it in wholesale lots in the United States for 16 cents a pound, of which 6 cents represents duty and another portion the hauling charge. American bidders wanted to charge the Navy 24 cents a pound for canned beef in which only cattle plates, and none of the better South American cuts, were the base. Their price was high because they don't find it interesting to make much of the stuff. And they don't find it interesting because they are doing better with hot dogs and hamburgers. dcgs and hamburgers.

The Navy order given to the Argentine was for only 48,000 pounds of canned beef. Compare that with the 79,000,000 pounds imported in 1938; take the other facts into account, and try to believe what the western Members of Congress are saying about the President. Then forget the whole business over a hot dog or a hamburger, assured that the western cows and steers are the only constituents of the Members of Congress who are really getting the worst

But they would be no better cff in a can than on a roll, anyhow.

Proposed Parity Payments on Corn

EXTENSION OF REMARKS

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 17 (legislative day of Monday, May 8), 1939

LETTER FROM HON. EDWIN C. JOHNSON, OF COLORADO, TO HON. CHARLES L. McNARY, OF OREGON

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I have written to the senior Senator from Oregon [Mr. McNary] on the subject of proposed parity payments on corn. The purpose of this letter is to clear up considerable misinformation brought out in the Senate debates on the subject, recorded on pages 5496 to 5500, inclusive, of the Congressional Record.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE, May 17, 1939.

Hon. CHARLES L. MCNARY,

Member of Conference Committee on Agricultural Appropriation Bill, United States Senate.

Dear Senator: Please refer to the debate on the Senate floor
Friday last, May 12, pages 5496 to 5500, upon my motion to strike
from the agricultural appropriation bill the language which denies
parity payments to corn grown outside of the "commercial corn
area."

You were of the opinion then that the substantive law enacted

last year contained prohibitions against making parity payments to corn outside the said area, and that therefore my proposed amendment to strike from the bill the language "in the commercial cornproducing area" would not be effective. I find that you were mistaken. The substantive law does limit corn loans in such areas to 75 percent of the "commercial area" loans, but makes no declaration whatever about restrictions where we restrictions whether we have the striction where the strict

taken. The substantive law does limit corn loans in such areas to 75 percent of the "commercial area" loans, but makes no declaration whatever about restrictions upon parity payments to corn grown outside the "commercial areas." The parity-payment appropriation bill last year carried the language found in this bill which must be in H. R. 5269 if the restriction on parity payments to the noncommercial corn-producing areas is to be continued next year.

In 1938 the "commercial corn-producing area" was limited to 12 States and 586 counties, which harvested 42,815,500 acres, yielding 36.3 bushels per acre, and producing a total of 1,553,713,000 bushels. The noncommercial area, on the other hand, harvested 49,330,500 acres, with a yield of 20.5 bushels per acre, and produced a total of 1,012,508,000 bushels. Under the provisions of this appropriation bill the Federal Government would make parity payments upon 42,815,500 acres and deny parity payments upon 49,330,500 acres. When this appropriation bill was being considered in the House, the restrictive language to which I object was stricken from it, but the Senate committee, unfortunately, put it back and made it a special-privilege, parity-payment bill instead of one of general application insofar as corn produced in the United States is concerned.

Please note the following tables made available by the Department of Agriculture, which illustrate more eloquently than my poor efforts the unfairness of the Senate amendment:

[From U. S. Department of Agriculture, Bureau of Agricultural

1938 AGRICULTURAL CONSERVATION PROGRAM BULLETIN AS AMENDED APRIL 16, 1938

(A compilation of the provisions of the 1938 agricultural conservation program, effective as of April 16, 1938)

Commercial corn-producing area means the area included in the

following counties of the States specified:

Illinois: All counties.

Indiana: All counties except Brown, Clark, Crawford, Floyd,
Harrison, Jefferson, Lawrence, Martin, Monroe, Ohio, Orange, Perry, Scott, Spencer, and Switzerland.

Iowa: All counties.

Michigan: Branch, Hillsdale, Lenawee, Monroe, and St. Joseph.

Minnesota: Big Stone, Blue Earth, Brown, Carver, Chippewa,
Cottonwood, Dakota, Dodge, Faribault, Fillmore, Freeborn, Goodhue, Grant, Houston, Jackson, Kandiyohi, Lac qui Parle, La Sueur,

hue, Grant, Houston, Jackson, Kandiyohi, Lac qui Parle, La Sueur, Lincoln, Lyon, McLeod, Martin, Meeker, Mower, Murray, Niccollet, Nobles, Olmstead, Pipestone, Redwood, Renville, Rice, Rock, Scott, Sibley, Steele, Stevens, Swift, Traverse, Wabasha, Waseca, Watonwan, Winona, Wright, and Yellow Medicine.

Missouri: Adair, Andrew, Atchison, Audrain, Barton, Bates, Benton, Boone, Buchanan, Caldwell, Callaway, Cape Girardeau, Carroll, Cass, Chariton, Clark, Clay, Clinton, Cooper, Daviess, DeKalb, Gentry, Grundy, Harrison, Henry, Holt, Howard, Jackson, Johnson, Knox, Lafayette, Lewis, Lincoln, Linn, Livingston, Macon, Marion, Mercer, Mississippi, Moniteau, Monroe, Montgomery, New Madrid, Nodaway, Pemiscot, Perry, Pettis, Pike, Platte, Putnam, Ralls, Randolph, Ray, St. Charles, St. Clair, Saline, Schuyler, Scotland, Scott, Shelby, Stoddard, Vernon, and Worth.

Nebraska: All counties except Arthur, Banner, Blaine, Box Butte,

Nebraska: All counties except Arthur, Banner, Blaine, Box Butte, Brown, Chase, Cherry, Cheyenne, Dawes, Deuel, Garden, Garfield, Grant, Holt, Hooker, Keith, Keyapaha, Kimball, Lincoln, Logan, Loup, McPherson, Morrill, Rock, Scotts Bluff, Sheridan, Sloux, Thomas, and Wheeler.

Ohio: All counties except Ashtabula, Athens, Belmont, Carroll, Columbiana, Cuyahoga, Gallia, Geauga, Guernsey, Harrison, Hocking, Jackson, Jefferson, Lake, Lawrence, Lorain, Mahoning, Medina,

ing, Jackson, Jefferson, Lake, Lawrence, Lorain, Mahoning, Medina, Melgs, Monroe, Morgan, Muskingum, Noble, Portage, Stark, Summit, Trumbull, Tuscarawas, Vinton, Washington, and Wayne. South Dakota: Bon Homme, Brookings, Charles Mix, Clay, Davison, Douglas, Hanson, Hutchinson, Kingsbury, Lake, Lincoln, McCook, Minnehaha, Moody, Turner, Union, and Yankton. Wisconsin: Dane, Grant, Green, Iowa, Lafayette, and Rock. Kansas: Anderson, Atchison, Brown, Coffey, Crawford, Doniphan, Douglas, Franklin, Jackson, Jefferson, Jewell, Johnson, Leavenworth, Linn, Lyon, Marshall, Miami, Nemaha, Norton, Osage, Philips, Pottawatomie, Republic, Riley, Shawnee, Smith, and Washington. lips, Pottav Washington.

Kentucky: Fulton, Henderson, Hickman, and Union. Done at Washington, D. C., this 16th day of April 1938. Witness my hand and the seal of the Department of Agriculture.

You will note that Oregon in 1938, for instance, had 29,000 acres in corn with a yield of 29 bushels to the acre producing 841,000 bushels and that Colorado had 819,000 acres and a production of 9,418,000 bushels. The corn growers in 36 States, including Oregon and Colorado, will be denied all parity payments by the Senate amendment on 50,000,000 acres of corn producing more than a billion bushels for the direct benefit of corn growers in the 12 parityleged States.

privileged States. It is my opinion that the 72 Senators in these 36 States would not approve the Senate amendment if they understood its perni-

cious purpose. Sincerely,

Bainbridge Colby Shows America How to Avoid War

EXTENSION OF REMARKS

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 16, 1939

EDITORIAL FROM THE NEW YORK ENQUIRER

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following front-page editorial from the New York Enquirer by William W. Griffin, the editor and publisher:

BAINBRIDGE COLBY SHOWS AMERICA HOW TO AVOID WAR

The evidence given by Bainbridge Colby before the United States

Senate Committee on Foreign Relations in connection with proposed neutrality legislation is of a momentous character.

Mr. Colby is one of the most distinguished men whom America has produced since she became an independent nation. A brilliant lawyer, a brilliant statesman, and an uncompromising American, his words carry a weight that commands the respect of all

lawyer, a brilliant statesman, and an uncompromising American, his words carry a weight that commands the respect of all.

No statement of the many made before the Committee on Foreign Relations with regard to projected neutrality legislation measures up to the importance of that voiced by Mr. Colby, when, in response to a question as to whether he looked upon America's entering the Great War as a mistake, he affirmed:

"In the light of its results and in the light of our sober subsequent judgment, who can regard it otherwise? Perhaps it would be more becoming of me to say a calamity."

Mr. Colby served as Secretary of State to President Woodrow Wilson. He is, therefore, no novice in affairs diplomatic.

His knowledge of international law and the inner workings of intergovernment relations is profound. He has a thorough grasp of the dealings of this Republic with other nations from the days of the Revolution to the present.

When he counsels America as to the course she should pursue in

When he counsels America as to the course she should pursue in

When he counsels America as to the course she should pursue in the present dangerous condition of world affairs, his advice is the advice of ripe wisdom born of rich knowledge and wide experience. And the counsel which Bainbridge Colby gives the American people and their Government in this crucial juncture of world history is that they follow the course mapped out 14 decades ago by the Father of his Country, namely, to insulate themselves against the broils of the Old World and to work for the best interests of America at all times.

It was no easy matter for Mr. Colby to declare the

It was no easy matter for Mr. Colby to declare that our becoming involved in the World War was more than a mistake.

Everyone knows that President Woodrow Wilson played a major

part in bringing about our involvement in that catastrophic struggle between two types of Old World imperialism. Mr. Colby is deeply devoted to the memory of the war President. Under a sense

of mistaken loyalty to his former White House chief, a weak man in his position would have shrunk from branding our entry into the World War in the terms used by Mr. Colby. Our former Secretary of State merits the highest encomium for the manly, patriotic, enlightened, and effective manner in which he told the Senate Committee on Foreign Relations what he thought of our getting ourselves mixed up in the Great War.

Mr. Colby's lengthy testimorph before that hedr decorate to be

Mr. Colby's lengthy testimony before that body deserves to be spread broadcast throughout the land.

It constitutes a masterly presentation of America's case for self-reliance, self-respect, and self-salvation against the cunning and traitorous forces that are seeking to bring about, under the guise of neutrality legislation, the enactment of a measure that would be self-respect to the control of the self-respect to the self-respect mean our inevitable and perpetual involvement in war on the side of one favored class of nations.

of one favored class of nations.

This Republic is more than fortunate in having a man of the commanding ability of Bainbridge Colby to admonish and counsel it in these perilous days.

It is said that comparisons are odious. They generally are. But there are times when it would be highly censurable to avoid them. In the present instance it is both fair and necessary to contrast the attitude of former Secretary of State Stimeon with the test.

the attitude of former Secretary of State Stimson with that of former Secretary of State Colby.

The one is an internationalist who would have us repeat our astounding folly of Good Friday 1917, when we marched into the World War. The other is an American who boldly tells us to follow an independent American course and keep America at peace.
WILLIAM W. GRIFFIN,
Editor and Publisher, New York Enquirer.

A "Mountain" That Proved To Be a Molehill

EXTENSION OF REMARKS

HON, JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 16, 1939

LETTER TO THE EDITOR OF COLLIER'S

Mr. JOHNSON of Oklahoma. Mr. Speaker, within the past several months there has been a general movement on the part of many leading citizens in and out of Congress to "smear" the Works Progress Administration. Many charges have been made by individuals, newspapers, magazines, and others in an effort to fully discredit that organization. Some of the charges against the W. P. A. are no doubt true. Undoubtedly there have been wrongdoings on the part of those in responsibility in certain States and areas.

Considering the hundreds of millions of dollars expended and the millions of people who have been given a livelihood as a result of the W. P. A., I submit that such wrongdoings and inefficiency have been negligible. Merely because a few chiselers have managed to find their way on the W. P. A. rolls and a few projects out of more than a hundred thousand that have been provided by the work-relief program are open to criticism is no evidence why the entire program should be held up and ridiculed and scorned, nor why the entire program should be junked or seriously curtailed at this time as long as there are millions of people willing and anxious to work in order to earn their livelihood.

Mr. Speaker, recently I had a letter from a well-known citizen of my district, who can see no good in any of the Roosevelt administration. It is all bad from his viewpoint. Evidently he gets up an hour early every morning in order to hate President Roosevelt or anyone sympathetic to the objectives of the New Deal. In order to prove to me that the Roosevelt administration is all bad he recently sent me an article from an issue of Collier's magazine in which a particular case of a Texas citizen was pointed out, wherein it undertook to discredit the relief program. I sent this article to the W. P. A. and asked for a thorough investigation and the letter below, which I have secured permission to print, speaks for itself. It follows:

MAY 8, 1939.

To the Editor, Collier's, 250 Park Avenue, New York, N. Y.

Sir: In your column Any Week, of April 15, you published an excerpt from a letter by J. C. Richaberger, of Vinton, Tex., which caused a lot of comment. Naturally, anything published in your LXXXIV-App-128

magazine would. Of course, you didn't have time to check on the facts, but we did. We found that the statements made by Mr. Richaberger were completely false. Since they have already done considerable harm, we feel you owe the W. P. A. workers of the country a retraction.

Mr. Richaberger states that a friend of his could not get a house-maid named Maria to work for him because she was on a W. P. A. sewing project at \$40 a month; that her daughter was working for W. P. A., too, at \$38 a month; that her son was in the C. C. getting \$30; that her husband Miguel was "working for relief" also, at

ting \$30; that her husband Miguel was "working for relief" also, at \$12 a week; and, finally, that Miguel was thinking of becoming a citizen so that he could vote against such niggardly treatment.

Collier's ought to know that W. P. A. does not hire two people from one family; also that aliens are ineligible for W. P. A. employment. Evidently you gave some weight to Mr. Richaberger's fantastic story, for you printed it as "a hot symptom" of something wrong with America. Upon investigation the symptom turns out to be not so hot. Hundreds of thousands of Collier's readers probably took Mr. Richaberger's folk tale as seriously as you did, however, and one Congressman has already received a letter from a constituent citing the story as evidence that a "puree" of

did, however, and one Congressman has already received a letter from a constituent citing the story as evidence that a "purge" of ineligibles on W. P. A. is needed at once.

Now, here are the facts. I quote from affidavits made on the spot. Upon direct questioning by a W. P. A. field representative, Mr. Richaberger stated that the names he gave in his letter were fictitious; that the friend who had looked for a housemaid was a Captain Reinburg, but that he did not know the identity of any of the persons referred to in the story, which had been told to him not by Captain Reinburg himself but by one Jack Williams sometime last March. Mr. Richaberger further stated that he was sorry that his story had done so much harm, but he explained: "That is what Collier's picked out and used of my letter." He stated that a housemaid working for him received a salary of \$3.50 a week, but that he had no evidence that any housemaids or other workers on W. P. A. had refused jobs offered them.

Capt. J. E. Reinburg was then asked to testify. He said the story was based on a case that occurred several years ago but that he did not think there had been any such thing as W. P. A. at

Capt. J. E. Reinburg was then asked to testify. He said the story was based on a case that occurred several years ago but that he did not think there had been any such thing as W. P. A. at that time. The story did not originate with him but was a common legend in the district. He was not the person who attempted to hire the maid, and he did not suppose anybody had. He stated that the account of the original case was told him by a person he refused to name "for fear it would get him into trouble." He refused to give the investigator any clue to the identities of any of the persons allegedly involved. "It was just a good story, that was all," Captain Reinburg said. He added that it was very difficult to get labor in his district and implied that this labor shortage was due to better wages on relief. He admitted, however, that he had never asked for labor from the National Reemployment Service or from the W. P. A., and that he knew nothing whatever about the W. P. A. or any other relief agency.

Mr. Jack Williams was then questioned. He said that he had told the story to Mr. Richaberger and that it had been related to him by Captain Reinburg as though it had happened to him personally. Captain Reinburg had told Mr. Williams that he "thought it was a darn shame when he needed a girl, not only to find the girl employed on relief but the whole darn family." Mr. Williams admitted that he had never heard of a specific case of a W. P. A. worker refusing a private job and that his own assertions that there were such cases were based entirely on hearsay. He stated that the use of machinery had thrown many workers out of employment in his area, that 7 farms out of 10 were equipped with tractors, that the local branch of the National Reemployment Service had been very cooperative, and finally that "there must have been a reason for the Government program. We were not using these men. They were starving to death."

The affidavits from which I have quoted are on file in my office with thousands of other investigations of comp

The affidavits from which I have quoted are on file in my office with thousands of other investigations of complaints of job refusals by W. P. A. workers, and may be studied by anyone who wishes to learn the facts in any or all cases. Less than 1 percent of these complaints were actually based on anything more than

rumor, ax-grinding, or wish-fulfillment.
Sincerely yours,

DEAN R. BRIMHALL Director, Section on Special Employment Problems.

Spendthrift United States Policy Spells Inflation

EXTENSION OF REMARKS

HON, ALBERT J. ENGEL OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 17, 1939

ARTICLE FROM THE CHICAGO HERALD AND EXAMINER

Mr. ENGEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by me, which was published recently in the Chicago Herald and Examiner:

[From the Chicago Herald and Examiner]

"SPENDTHRIFT UNITED STATES POLICY," SAYS ENGEL, "SPELLS INFLATION"

(By Albert J. Engel, Republican Representative from Michigan and noted congressional authority on taxation

Washington.—Appropriations aggregating \$65.000,000,000 in 7 years, necessitating an increase in our national debt of \$24,000,000,000, exceeding the all-time high mark by nine billions, will force Congress to follow one of three courses:

First. Drastic economy with a pittless cutting of expenses.

Second. New and added taxes approaching confiscation.

Third. Spending, borrowing, and inflation.

Drastic economy means less political pap for constituents of those

Members of Congress who were elected on an "I brought home the

hembers of Congress who were elected on all I blodgit home the bacon" platform.

In 1937 the 48 States paid into the United States Treasury in internal revenue the sum of \$4,653,195,315. When we deducted \$3,746,175,683 direct payments made to and within the States, and deducted \$866,384,331 interest paid on the public debt for that year, it left \$40,635,301 to operate the Government, and a resulting deficit of \$2,774,106,545.
Some chambers of commerce and other organizations send letters

and telegrams asking Congress for more Federal aid, while businessmen represented by these organizations are groaning under the weight of taxes and are asking tax relief.

ECONOMY PLEDGES ONLY EMPTY GESTURE

ECONOMY PLEDGES ONLY EMPTY GESTURE

Members of Congress who were elected on a "gimme platform" and because of their ability to "bring home the bacon" will not invite certain defeat by voting to cork the political pap bottle which nursed them safely through one or more elections.

The appropriation for the Gilbertsville Dam and its subsidiaries, which the Democratic chairman of the Rivers and Harbors Committee said would ultimately cost \$392,000,000, and which was passed over his protest, and other similar appropriations were passed by a spending Congress in one breath while it vowed in the next breath to cut expenses and economize.

While Congress speaks of economy the President approves Passamaquoddy and the Florida ship canal. There is nothing in a policy of this kind to encourage business recovery.

The second choice is for Congress to raise sufficient new taxes to balance the Budget. This will require double the amount of taxes now levied and means a tax that will approach confiscation and a capital levy. That we are reaching the saturation point where the law of diminishing returns will begin to operate is evident to every student of fiscal affairs.

CANNOT REDUCE TAXES UNTIL COSTS ARE CUT

CANNOT REDUCE TAXES UNTIL COSTS ARE CUT

To tax business more when there is no business will ultimately mean less revenue.

There is one other source, and that is to levy consumers or sales

There is one other source, and that is to levy consumers or sales taxes and lower income-tax exemptions.

No tax short of a capital levy will produce sufficient revenue to balance the Budget unless such tax is accompanied by a substantial reduction of expenditures. No substantial reduction of expenditures is possible unless we drastically reduce benefit payments to States and to groups within the several States.

The third alternative is to continue trying to spend and borrow superlying into received business.

ourselves into prosperity, hoping that ultimately increased business will pay sufficient taxes to balance the Budget without levying new

This policy will lead us farther and farther on the road to spending and borrowing, and will inevitably be followed by unlimited inflation.

Inflation means the wiping out of the investments of millions of life-insurance policyholders, endowment funds of colleges, universities, churches, and charitable institutions, including the social-security fund.

It will mean the wiping out of the investment of every bank depositor and bond and mortgage holder, big and small. Its greatest burden will, as in Germany, fall on the working classes of the

The national debt, by June 30, 1940, will have reached the enormous sum of \$44,457,845,000, or 34 percent of the assessed valuation of every piece of real and personal property in the 48 States. It is only when we add this sum to some \$20,000,000,000 of State and local public indebtedness and some \$20,000,000,000,000 in private indebtedness that we realize the weight of this debt

The picture I paint is not a cheerful one. The debt limit of \$45,000,000,000 will be reached on or about June 30, 1940. The President then will have to ask Congress for an increase before he can borrow more money.

CONGRESS CURB URGED ON EXECUTIVE SPENDING

The practice of raising that debt limit by large lump sums is as victous as the policy of giving the President blank checks by making lump-sum appropriations. The two together have brought us to the brink of ruin.

One House of Congress can stop this spending orgy by refusing to increase the debt limit beyond the immediate needs of each annual Budget. Congress should require each annual Budget to show, first, the total amount required for the year, as shown by a minimum of appropriations necessary; second, the estimated

revenue for the year, and, third, the amount necessary to be borrowed over and above the amount of estimated revenue to meet the amount of the Budget.

Congress should authorize the President to borrow only the

Congress should authorize the President to borrow only the amount shown to be necessary by that Budget and increase the debt limit only to that extent each year.

Congress should adopt a plan for an annual definite deficit reduction which, together with drastic economies and increased taxation, will put the Government on a "pay-as-you-go" basis and bring about a balanced Budget not later than 1944. The Congress as at present constituted will not do this.

Only an aroused public opinion demonstrated at the polls can compel this action.

Cotton Pulp Bill (H. R. 5991) a Real Solution of the Surplus Cotton Problem

EXTENSION OF REMARKS

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 17, 1939

ARTICLE BY SCIENCE SERVICE STAFF WRITER

Mr. FULMER. Mr. Speaker, since introducing H. R. 5991 known as the "Fulmer cotton pulp bill," I have received numerous letters and telegrams stating that this bill is the only suggestion or bill offered that will really solve the surpluscotton problem.

As stated some days ago, many suggestions and many bills have been made and submitted to the Congress proposing to solve this most serious problem; but up to date nothing has been offered that will really tend to solve the same except

in a temporary manner.

I have listened to many statements and have read many speeches on this important matter, but in practically every instance those speaking on this problem state that they realize that what they have to offer or what they are proposing is only a stopgap proposition.

Those of you who are interested in solving this problemand certainly every Member of Congress should be interested because this problem is affecting seriously every section of the country-should read my extension of remarks in the Appendix of the RECORD, page 1368, and my radio address delivered over the N. B. C. network on the evening of May 10, 1939, which I have inserted in the Appendix of the Congres-SIONAL RECORD, page 1948.

I am inserting herein an article written by one of the Science Service staff writers, Mr. Engel, which also states that, out of hundreds of suggestions for the solution of one of America's most serious farm problems, only two thus far give any hope, and refers to the purpose of my bill.

You will notice in this statement the reference to the manufacturers of artificial fibers in foreign countries.

As stated by me in my previous remarks, the increased use of these fibers is largely responsible for the loss of our foreign cotton markets.

That is also true in this country.

As stated by Mr. Engel, the growth of synthetic fibers in 1926 represented only 400,000 bales of cotton; but in 1937 the synthetic fiber, which is made from wood pulp, represented 4.000,000 bales of cotton.

[From Science Service of May 5, 1939]

(By Leonard H. Engel, Science Service staff writer)

Washington.—Cotton experts, about ready to give up attempts to dissipate by purely economic means of a growing cotton surplus, are in the market today for new uses of cotton which will remove the downy white stuff from the textile field and which do not compete with already overabundant materials of other kinds, as the only immediate hope for permanent solution of one of America's most serious farm problems.

Hundreds of suggestions for its use have been made, it is reported here, but only two thus far give any hope of absorbing significant amounts of cotton without at the same time striking hard at some other material produced in the United States.

Addition of 5 percent of cotton to cheap wood-pulp paper and of 15 percent to superior grades of paper would at the same time improve the quality of the paper generally used here and cut down on American imports of wood pulp, as well as reduce to a slight extent cutting of America's forests.

A second possibility for consumption of cotton bales by the 10,000 is use of a cheap cotton-fabric base for secondary roads. Most of the side roads in this country are still unsurfaced, though miles of concrete highway give a contrary impression. The cotton fabric serves as a cheap reinforcement for the crushed-stone dressings and bituminous materials widely used.

Neither of these suggestions is, however, capable of application this year on the scale required to move a substantial portion of the surplus.

Cotton's difficulties are due partly to the rise of other cotton-producing areas outside the United States and partly to the growth of synthetic fibers. In 1926 world rayon production represented only 400,000 bales of cotton, but in 1937 the synthetic fiber, which is made usually from wood pulp, represented 4,000,000 bales of cotton—11 percent of the 1937 cotton crop throughout the world and 15 percent of the 1938 crop.

Rayon will continue its phenomenal growth as long as it is superior to cotton for many purposes. Among the leaders in the manufacture of artificial fibers, incidentally, are precisely those countries which were among the largest customers for American cotton—Japan, Germany, and Italy. A new fiber—nylon, a synthetic substitute for silk—may be expected not only to hit silk but cotton as well.

cotton as well.

It would require an incredible amount of clothes to move the mountains of cotton that must be disposed of. About 683,000,000 shirts can be made from 1,000,000 bales of cotton—more than 5 shirts can be made from 1,000,000 bales of cotton—more than 5 shirts for every man, woman, and child in the United States, an Agriculture Department expert has calculated. And the Government is currently keeping out of the market 11,391,000 bales—almost the amount of an entire year's crop. Finding methods of putting more cotton into textiles would, therefore, achieve little. Almost every pound of Government cotton put into cloth would mean 1 pound less of currently grown cotton used.

Should the Wagner Law Be Amended?

EXTENSION OF REMARKS

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1939

RADIO ADDRESS BY HON. CLARE E. HOFFMAN, OF MICHIGAN, MAY 12, 1939

Mr. HOFFMAN. Mr. Speaker, under leave to extend my remarks, I include the following talk made by me over the Mutual Broadcasting System from station WOL in Washington on Friday evening, May 12, 1939:

As expressed in its title, the National Labor Relations Act, commonly known as the Wagner law, was passed "to diminish the causes of labor disputes burdening or obstructing interstate and foreign

commerce."

If figures mean anything, it has not lessened the causes of such labor disputes, for, from the Department of Labor's own figures, we find that in one year, 1937, which might well be said to be the first year during which the Wagner law manifested its full strength, we had 4.740 strikes, or almost twice as many as we had during the 4-year period beginning in 1928, and these strikes involved 740,000 more men than did the strikes which occurred during the 4-year period ending in 1921. period ending in 1931.

The American Federation of Labor might well be termed the

father of the Wagner Act. Nevertheless, the law is so defective, the Board has so administered it, that the A. F. of L. now charges that it is being used "to nullify the rights of unions established during being a continue".

The A. F. of L. charges that, while "under this act, workers were to be safeguarded in organizing, free from employer interference," instead, "labor has found itself coerced by a new and powerful bureaucracy"; that is, the Labor Board.

Its general counsel charged that, while section 7 of the act is supposed to guarantee to every employee the absolute right to

supposed to guarantee to every employee the absolute right to freedom of choice in respect to representatives for the purpose of collective bargaining, it does nothing of the kind.

And so the A. F. of L. and hundreds of thousands of protesting, indignant citizens and workers are demanding the amendment of this law.

The National Labor Relations Board, whose political life depends upon maintaining the act as it is, and the C. I. O., in whose ranks are many Communists and which has been using the act—assisted by the Board's interpretation of it—in its attempt to force all employees into the ranks of the C. I. O., hail the act as perfect, and bitterly and vigorously oppose all amendments.

The Board, realizing that the general public has lost all confidence in either its ability or its integrity; that many regard it as prejudiced and biased and as favoring the C. I. O., as charged by the A. F. of L., and are demanding its abolition, during the past week most commendably went into conference with the A. F. of L. on the question of amendments.

Immediately the C. I. O., like a jealous suitor, jumped on the A. F. of L. for attempting to negotiate—may I say bargain collectively—with the Board; accused the A. F. of L. of using back-door methods, and demanded that the C. I. O. be admitted to the conference—a privilege which the C. I. O. has frequently demanded that the Board refuse to extend to the membership of rival unions.

This demand of the C. I. O. demonstrates its idea that it has

This demand of the C. I. O. demonstrates its idea that it has proprietary rights over the Board.

The presumptuous contention that the officers of the A. F. of L., a labor organization with a history of a half century of constructive activities behind it, should not be permitted to sit in conference with a Federal agency over amendments proposed by the A. F. of L., unless the C. I. O. representatives were present, is in keeping with that organization's intolerant attitude toward everyone who does not agree wholeheartedly with its entire

program.

True friends of labor should beware of going to extremes. They should profit by the errors of the Anti-Saloon League, of those who brought about the prohibition amendment—and I was one of them—and by the mistake which is now being made by liquor dealers, who by their extreme "wetness" will again bring restrictive

legislation.

If we are to avoid the hardships which have been imposed upon labor in foreign lands, we will fight unceasingly to maintain the freedom of the worker in this land of ours, not only to join but to refuse to join a union.

If once we submit to the contention that no man shall work if once we submit to the contention that no man shall work until he has joined a union, employees will soon find that the tyranny and the oppression in years gone by inflicted upon them by a few greedy, unscrupulous employers was mild indeed when compared with the methods of a dictator; and a dictatorship over

labor Lewis is seeking to establish.

This past week Lewis demanded and, apparently backed in his demand by the administration, insisted that no man shall be permitted to dig coal unless he joins the United Mine Workers, pays dues to that organization, and submits to its rules and regulations.

Lewis, like some others, expresses great solicitude for the welfare of the man who must work with his hands, but he has no aversion to accepting a salary of \$25,000 per year, a generous expense account, and living in luxury on the fees and dues wrung from the man who goes down into the earth to earn a livelihood for himself

and his family.

Doubtless Lewis, passing in his limousine, with his liveried chauffeur, the trudging miner going to his daily work, waves his hand in friendly greeting. But the miner still walks and lives upon what Lewis terms a "meager wage," while Lewis himself basks in the sunshine of that prosperity which he has condemned so-called economic royalists for enjoying.

The purpose of the Wagner law is most laudable.

But the law itself is unfair in that it imposes penalties only upon the employers; never upon employees, no matter how reprehensible.

But the law itself is unfair in that it imposes penalties only upon the employers; never upon employees, no matter how reprehensible their conduct. It defines and grants rights and privileges to employees, while giving none to employers.

Any law which, when applied, affects two great classes of people, as does this law, and which fails to recognize the fact that each class may at times be in error will never receive popular support and popular support is essential if a law is to be effective.

Those opposing all amendment to the Wagner law fail to recognize the fact that, while the employee must have a living wage, there will be no wage at all, if employers are not permitted to exist and to make a profit.

Perhaps they have heard the old, old adage that we should not

Perhaps they have heard the old, old adage that we should not kill the goose that lays the golden egg, but they fail to accept the fact known to at least all farmers that we must feed the cow which gives the milk.

Unless employers can sell the goods which they manufacture at a profit they will be forced out of business and there will be no jobs.

If, to the cost of production and the wage to be paid the worker, If, to the cost of production and the wage to be paid the worker, there be added a membership fee and monthly dues to be paid to John L. Lewis or his organization, to be collected through the check-off from every man who desires to work, the amount so paid must be either added to the cost of the finished product or deducted from the worker's pay check.

The Wagner law should be amended so as to protect the employee, the man who does the work in factory, mill, or mine from coercion, intimidation, and extortion, not only from the employer, but from labor racketeers, who are just as greedy, selfish, and avaricious as ever was any employer.

The Wagner law, as interpreted by the Board, has been used by the C. I. O. to raid the membership of the A. F. of L. and to

the C. I. O. to raid the membership of the A. F. of L. and to destroy some of its affiliates. About this there is no question.

The law expressly provides that the unit from which the representatives for collective bargaining shall be chosen "shall be the employer unit, craft unit, plant unit, or subdivision thereof."

Nevertheless, the Board, in a case where it knew, or, at least, should have known, that its action would result in destroying A. F. of L. affiliates, in giving the Harry Bridges communistic-controlled C. I. O. the advantage, designated as the bargaining unit or election precinct all that territory on the west coast extending from Canada on the north to Mexico on the south.

It includes in this 1 unit Portland, Seattle, San Francisco, Los Angeles, and 25 smaller ports. The decision united in one unit many independent employers engaged in different businesses,

in different towns.

From this decision the union took an appeal to the Circuit Court of Appeals for the District of Columbia, claiming that "In ascertaining the appropriate representative of the men the Board ignored the identity of separate employers or of separate ports and extended the employer unit to include the entire Pacific coast, with the result that the rival union was designated and certified as the sole representative, in consequence of which its own union was 'put out of business' and its members obliged to become members of its rival and deal with the employer either exclusively through it or not at all."

The Court, holding that it had no jurisdiction to entertain this appeal for the reason that the order designating the bargaining unit was not a "final order," said:

"So that what happened was precisely what in a proper case the act designed should happen, but, as we have seen, with the result that petitioner in the localities in which its members constituted a majority, was, if the Board's decision as to the representative unit is valid, deprived of the very thing which petitioner insists it was the purpose of Congress to secure and protect."—

that is, that the American Federation of Labor affiliates and the members of those affiliates were denied the right to bargain collec-tively through representatives of their own choosing in the plants where their members constituted a majority of the employees and were forced into the Congress of Industrial Organization (American Federation of Labor et al v. National Labor Relations Board, decided February 27, 1939, by the Circuit Court of Appeals for the District of Columbia).

The first amendment to the Constitution provides that "Congress hall make no law * * * abridging the freedom of speech or of shall make no law

The law should be amended so that the Board will no longer be

permitted to deny this right.
On April 1937 Richard Frankensteen, a C. I. O. organizer, in Detroit, according to the press, made the statement:
"Henry (meaning Ford) will either recognize the union or he won't build automobiles."

About the same time John L. Lewis, according to the public press,

said, with reference to Ford recognizing the union:

"Henry Ford will change his mind or he won't build cars."

This was free speech and a free press. Nevertheless, when Henry
Ford attempted to tell the employees of the Ford Motor Co. that they did not need to pay tribute to him or any man in order to obtain or hold a job in the Ford Motor Co., the Board held that such statements on his part were an unfair labor practice. One rule for the labor organizer, another for the employer.

The board has held that the distribution of an illustrated speech

made by a Congressman on the floor of the House, upholding the right of a man to join or not to join a labor organization, in plants where the C. I. O. was attempting to organize, was an unfair labor

practice.

The present Board should be abolished; a new Board, consisting of three or five unbiased men from different sections of the country,

should be appointed.

The law should be amended so as to give an appeal by either employees or employer from any order of the Board designating a bargaining unit or certifying the representatives for collective bargaining.

The law should be amended so that in a case of a jurisdictional or other dispute, if neither union will ask for an election to determine the question, the employer may be permitted to ask for an

The law should be amended so that the Board may not indefinitely, as it now can, make orders and then, when challenged in the courts, withdraw its orders; make other orders and again, when challenged, withdraw its decision; thus playing the old game of "now you see it and now you don't" with the rights of not only employees.

employers but employees.

The law should be amended so that all, whether members of unions, employees, or employers, shall stand equal before it.

To that end I have introduced H. R. 4980, and am asking Congress for its passage.

American Foreign Policy

EXTENSION OF REMARKS

HON. LEE E. GEYER OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 17, 1939

STATEMENT OF MRS. GEORGE FITCH BEFORE THE HOUSE FOREIGN AFFAIRS COMMITTEE ON APRIL 24, 1939

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I include the statement made before the Foreign Affairs Committee of this House by Mrs. George Fitch. Mrs. Fitch has spent many years of her life in the Orient. Few people are better qualified to discuss this subject than she. Her statement is as follows:

Mr. Chairman and members of the Committee on Foreign Affairs, I appear before you as an American to speak for myself and some 30,000 others from my part of California—whose signatures I present to you—on American foreign policy, especially as it relates to the Far East, where I have lived for the past 20 years.

I am sure, gentlemen, you have heard of cross-questions and

crooked answers. With a list of questions, such as: "Alexander Graham Bell wrote Uncle Tom's Cabin," or "Benjamin Franklin discovered America," the question is, If he didn't, who did? Again, "Christopher Columbus invented the telephone. If he didn't, who did?" Somewhere on the list would be every right answer, though in the wrong place.

in the wrong place.

I am reminded of this little game when people hedge at any distinction in attitude and action between aggressor and victim, between treaty breaker and law-abiding nation. Much attention has been focused this week on events in Europe moving with kaleidoscopic rapidity. My remarks will deal more directly with the Far East, and this for a very definite reason. The American people and Government are more concerned about the situation there, where American interests—economic, political, and cultural—are already badly disrupted, and the future is threatened with worse already badly disrupted, and the future is threatened with worse potentialities.

But what about the right answers in the wrong place, or vice But what about the right answers in the wrong place, or vice versa? Neutrality sounds right; therefore many people say, "If only the President had invoked the Neutrality Act, everything would have been fine." Would it? Would the American people have been happy about legislation which would have done more harm to the victim than to the aggressor, which is just what the Neutrality Act would have done in the Far East. The sale of munitions would have been prohibited to both countries, while to Japan raw materials for her munition factories would have continued to flow on the cash-and-carry (come-and-get-it) plan. As far as the public mind is concerned, the time of apathy has passed.

"We don't want war! We don't want war!" is so convincing and has been repeated so often that it has become a parrotlike slogan.

has been repeated so often that it has become a parrotlike slogan, coupled with no constructive efforts toward preventing wars. "Keep America out of war" sounds so noble that few have realized that America out of war" sounds so noble that rew have realized that there is ultimately only one way to keep America out of war. That, gentlemen, is to keep war out of the world—no longer an impossibility, paradoxical as that must sound today. This passive pacifism has nearly led us into another great world conflagration. The green light of our Neutrality Act has been the "go ahead" signal for every aggressor who has thus been reassured that America would never take action stronger than words. Today the "ganging up" of aggressors has become a threat to every nation, large or small, that loves freedom. It is forcing us into apother agreement tree that makes freedom. It is forcing us into another armament race that makes past armaments look like kiddy-car races. "We don't want war." But neither did China. But China has war, and so will we if we don't stop helping the Rome-Berlin-Tokyo axis. The most vulnerable arm of this axis, fortunately, is the one with which we are most concerned, and, incidentally, the one we have done most to strengthen. strengthen.

Peace organizations, any number of them, talk about "poor, suffering China," but many people meet the suggestion of severing trade with the outcry, "This would make innocent Japanese suffer" or "We would offend Japan, and that means war." Innocent Chinese are suffering—millions of them. No one explains why all the suffering that the suffering thad the suffering that the suffering that the suffering that the s ing should be on one side. No one explains why we should be afraid of offending Japan, but think nothing of offending 450,000,000 of long-suffering Chinese. We count too much on their cosmic patience. No; the fear of offending is the fear of war. The usual statement is, Japan would immediately retaliate on American

citizens and American properties.

When anyone makes this statement he forgets (or is uninformed) on two points. (1) That the Japanese military will do anything to American citizens or American properties whenever they get ready, regardless of what we do or don't do. One would think the sinking of the U.S.S. Panay, the machine gunning of the British Ambassador's party, the looting of all our American homes (as well as every other nationality) in Chinese territory, the slapping of an American Embassy official's face would be sufficient illustration of this. (2) That the Japanese war machine cannot move without American aid. Her whole fabric of heavy industries is geared to the American plan. To illustrate: 61 percent of her oil comes from this country—petrol and oil products, motor lubricating oil for metal works, high-octane gasoline—and America is the only place to get the kind of oil her American machinery requires.

American machinery requires.

Now, as a matter of fact, innocent Japanese are suffering, and are due to suffer more. (See Japan's Silent Millions, Reader's Digest, November 1938.) Not because of us, but because of their own military clique. Though in no sense comparable to the unparalleled suffering of the Chinese people, the suffering of the Japanese under suppression of democratic rights, under an inverted pyramid of mounting taxation, under unemployment when war industries lapse, will go on into the years ahead, unless the military war lords—robbing the people of prestige and power—are defeated. There is no freedom for the Japanese people until they again achieve control of their Government. The 100,000 businessmen in Japan arrested for violation of Fascist control, the Osaka industrial group, the exporters, the labor groups, the farmers—whose sons are not in Japan tilling the soil but in China

killing the Chinese—these are the basis of a new democratic government once the military clique has been defeated. For the sake of Japan, as well as of China, that clique must be defeated. Make no mistake, gentlemen, what we are witnessing in the Far East is not only the assassination of China. It is also the national suicide of Japan. Those who work to stop the war in the Far East are working for the double good of the people of China and of the people of Japan, and—with expediency and self-interest. fortunately, on the side of right—for the best interests of and of the people of Japan, and—with expectative and servanteest, fortunately, on the side of right—for the best interests of America as well.

and of the people of Japan, and—with expediency and self-interest, fortunately, on the side of right—for the best interests of America as well.

There is another right answer frequently used in the wrong place. An oft-repeated alibi for doing nothing in the present situation—also to be laid at the door of the pacifist (as I, who am a pacifist, dare say) is that all nations have been guilty in the past. Gentlemen, I submit that this is the poorest reason for not doing better now that I have ever heard. It is not a question of "Who will cast the first stone?" or of taking up Japan's own strong-arm methods against her. Japan joined with other powers in achieving a new world order, an order based on treaties which outlawed war, renounced it as a means of settling disputes, agreed to respect the sovereignty and territorial integrity of China in this period of her reconstruction. No nation which agreed to the new relations in international affairs, the new rules of the game, can now be excused or condoned for breaking them. Nor is it any help to the people of Japan for western nations to strengthen her military clique and keep her war machine going. I want to make this point clear.

I am not afraid of the eventual outcome The war is more than a headache to the Japanese military today. It is a nightmare. I believe the Generalissimo Chiang Kai-shek was right when he said not so long ago: "Japan has lost the war. China has not yet won it!" What I am concerned about is how much more of China must be destroyed, how many more civilians killed and maimed, or burned to death in incendiary raids. (For how the war is being waged, I refer you to Reader's Digest, July 1938—my husband's eyewitness account in Nanking.) A recent report from an American observer in Shansi Province says: "We estimate that between three and four million civilians have been killed in the rural areas of this one province alone." I have circularized Congress with copies of an open letter from my husband in the new capital to Pres'dent Roosevelt. Take the

clothes at the river front, were mercllessly machine-gunned from the air."

We all know what Sherman called war. You know in a general way what the war in China is like. I venture to say that never since modern mechanical devices have been invented have they way what the war in China is like. I venture to say that next since modern mechanical devices have been invented have they been used with such inhumanity to man. I do not need to labor this point. I simply want to say: To end the whole ghastly business quickly is to release the people of Japan from insuperable burdens of suppressed rights, mounting taxation, disastrous loss of manpower. The manpower of China is to that of Japan as 7 to 1. Which country will suffer more in the next generation? Miss Haru Matsui, Japanese woman in New York City, says: "Anything you do to stop the war is a help to my people."

You may very well reply, "Granting all this, what of it? The Japanese have brought this unfortunate situation on themselves—let them get out of it the best way they can." True, except that the Japanese military and the Japanese people are two different entities. Also, that peace in the Orient is very much to our own best interests, and, conversely, to strengthen the Japanese military is to menace our best interests.

is to menace our best interests.

best interests, and, conversely, to strengthen the Japanese military is to menace our best interests.

But there is an important point yet to consider. The game we play in 1950 may read: "In 1937-39 Japan defeated China in an undeclared war. If she didn't, who did?" If that day ever comes (as I do not grant) the answer which fits will be: "American airplanes, with American high-test gas to fly them, loaded with American bombs, and only Japanese aviators to operate them, destroyed law-abiding, peace-loving Chinese in 1939!" Whose war is this, and what can we do about it?

It's our war for many reasons, three of which—with your permission, gentlemen—I shall mention:

1. It's our war because we claim to be on the side of democracy, and in China we have the largest number of people in any country on the face of the earth—450,000,000 of them—who want to stand for democracy, and we are helping their enemy to destroy them.

2. It's our war also because Japan is ruining our best potential market of the future. She is ruining her own best market, too, by destroying China's purchasing power. But we are helping Japan ruin a present, and a greater future, market for us. Does that make sense? Have we any trade with Formosa or Korea or even Manchuria (except in war supplies)? There is no "open door" in any of them.

Let us get this straight. If Japan wins, she exploits the 450,-000,000 as serf labor and finds her raw materials in China. We lose Japan's trade and commerce. We lose also the potential trade in China. I have figures for the six southern and western provinces only, which are still "free China." Szechwan Province alone has a coal reserve of 9,874,000,000 tons. Its yearly output is above

600,000 tons. Hunan has an annual production of 1,000,000 tons. 600,000 tons. Hunan has an annual production of 1,000,000 tons. These same two provinces produce about 20,000 tons of pig iron annually. Yunnan, Szechwan, and Kweichow produce approximately 500 tons of excellent copper yearly. Yunnan turns out 8,000 tons of tin every 20 months. I might go on with antimony, tungsten, zinc, manganese, etc. China has also an oversupply of tea, bristles, leather, hides, silk, and, most important of all, tung oil or wood oil. This commodity backs the \$25,000,000 credit loan from the Import-Export Bank and so far, despite the difficulties of transportation, the quote has been maintained.

or wood oil. This commodity backs the \$25,000,000 credit loan from the Import-Export Bank and so far, despite the difficulties of transportation, the quota has been maintained.

On the other hand, if Japan loses the war, she must still trade with us. Take cotton, for example, as one commodity of great concern to America. And steel.

North China had a cotton surplus before the war. The Japanese with improved American cotton (at a conservative estimate) could increase that surplus by 20 times, helping to free her of all dependence on American cotton and, at the same time, putting her in the world market as a competitor. With China's raw materials mentioned above, Japan will be able to lay down steel products in the shadow of the steel mills of Pittsburgh, and the shadows will be as long as the mills are silent. If she conquers China, gentlemen, why should we build up a Frankenstein in the Orient to menace our interests through all the years to come? Much has been said of treaty-breakers and refusing to trade with them. I believe in the principle thoroughly. I do not think it means setting ourselves up as judge. I believe nations define themselves as aggressors when they break treaties to which we also are signatory. Because I believe in the principle referred to above, I am for the Thomas amendment or any other legislation which (out of our moral apathy of 20 years) will say: "We believe in the sanctity of treaties, and we will not trade with treaty-breakers." But I want you also to look at this from the most realistic, cold-blooded standpoint of our trade and commerce, and ask if it is to our interest to support a war-machine which will eliminate American shipping from the Pacific. Gentlemen, if we want to live in a world where freely moving trade insures the prosperity of our own and other nations, we have a problem here of immediate concern.

3. In the third place, it's our war because we are Japan's largest

3. In the third place, it's our war because we are Japan's largest arther, furnishing 54.4 percent of all the raw materials and finished products which Japan needs to carry on her aggression. We are far from being neutral vis-a-vis this war in China, and we are still farther from being right. I take it that you gentlemen of the Foreign Affairs Committee know the general divisions of this 54.4 percent average. Japan gets from us:

Of trucks, autos, and parts
Of copper
All oil
Pig iron
Other iron (scrap)
Machinery and engines
Of high-potane gesoline 93 41 60 Of high-octane gasoline____

Much the same is true of the other raw materials. The difficul-ties of finding new markets, or markets at higher prices, would now ties of finding new markets, or markets at higher prices, would now be disastrous in a campaign which is already bogging down. This is the most vulnerable arm of the Rome-Berlin-Tokyo axis. It is the easiest arm to amputate. It is an embargo on our own people, not a punishment of Japan. One day in a democratic Japan her people will thank us for helping to defeat the clique which has throttled the soul of Japan. Japan has not enough credits left to change to higher-priced markets. Other nations, especially those to whom she would naturally look, are busy with their own armament program. The risk is nonexistent; the benefits enormous to China, to Japan, and to the United States. Just keep in mind that Japan's war machine cannot move without our help.

Just keep in mind that Japan's war machine cannot move without our help.

Some of us—I refer chiefly to the Committee of 100 for Concerted Peace Action (of which I am a member)—believe we have found the means of preventing future wars—the method, too, that will make our participation in another war unnecessary. The economic strength of the United States—the nation which turned the left was the participation which turned the nomic strength of the United States—the nation which turned the tide in the last great war, the nation stronger and more nearly self-sufficient than any other country today, the nation without whose help no war anywhere can long continue—the United States can today both prevent and stop wars if we rise to our political and economic maturity. But as Dr. H. H. Kung, Premier of China, says: "Amazing insanity—instead of helping us, you are helping Japan." While we strengthen the war machine of Japan, she endeavors to conquer China, and at the same time prepares her bases in the Western Hemisphere, in Ecuador, in western Mexico, and along the Panama Canal, where she has cut down the cocoa trees on recently acquired territory for an air base. We sit back in a strange apathy saying, "No navy can safely cross the ocean and attack us, no country can land a large expeditionary force on foreign and hostile shores." Japan prepares her own bases and her friendly shores to attack from South or Central America, when she has established her empire on the continent of Asia, commands the Pacific, and is ready with the coercion of 450,000,000 of enslaved Chinese to take on the rest of the world. It is easy now to cripple the three-power axis. It will be quite a different thing if ever any considerable part of China comes under her control.

China's present morale and her present progress are a thrilling China's present morale and her present progress are a thrilling chapter, which there is no time to relate. I could read you from my husband's letters of the silk experts bringing 1,000 mulberry seedlings from the coastal region into west China to start a silk culture which will capture much of Japan's silk trade with India and Burma. Of a Chinese friend who moved all his machinery from Shanghai to Kweichow Province to reestablish his cotton mill where it is now supplying one-third the needs of the Province. Of college students who have treked more than a thousand miles on foot, following their universities to improvised quarters in "free or college students who have treked more than a thousand miles on foot, following their universities to improvised quarters in "free China"—the leaders of the next generation are not being conscripted for the war of this. Of medical students and national health administrators carrying on under almost insuperable difficulties, copying their few medical texts by mimeograph, having Chinese artists reproduce their charts and drawings, sleeping in double-decked bunks less comfortable than the factory girls have in Kweiyang. But carrying on. China's present morale is superb.

But, gentlemen, as I look to the Orient in the face of the support.

But carrying on. China's present morale is superb.

But, gentlemen, as I look to the Orient in the face of the support for the cash-and-carry proposal of the so-called Pittman Peace Act. I beg to inform you that it would have a psychological effect disastrous to China. China may not be getting great quantities of supplies at present from us. She expects to get a great deal more through Rangoon, through French Indo-China, shipped on Scandinavian boats or what have you. China will find a way if you do not deny her the right. But I dare to say that the psychological effect on China of what she can only interpret as an alinement with Japan might even break this superb morale which has so far been China's salvation. If by any legislation we pass here we should do to China what all the vicious bombings of 21 months of incessant warfare have failed to do, i. e., break China's morale, then we bear a burden of guilt for all future time that I dare not contemplate.

contemplate.

contemplate.

As I understand American foreign policy, it has always stood for three things: (1) The Monroe Doctrine for the Western-Hemisphere, (2) disentanglement in Europe, (3) the open door in China. What support have we in the country for insisting that the open door should be kept open? Six hundred and ninety out of seven hundred newspapers in this country examined editorially urged an embargo on Japan. Such an embargo has been urged by such organizations as the national board of the Y. W. C. A., the American Association of University Women, the General Federation of Women's Clubs, the National Federation of Business and Professional Women's Clubs, the National League of Women Voters, the National W. C. T. U., the National Council of Jewish Women, the American Youth Congress, the National Trade Union League, the C. I. O., the recent Gallup poll. Representatives of a number of the organizations referred to have appeared before this committee. mittee.

Congressman Coffee, of the State of Washington, said (as reported in the Appendix of the Record, p. 635), "In advocating an embargo of aggressors I am following good precedent. All save one of the peace organizations of the United States advocate this viewpoint. In insisting upon this attitude toward Japan I am heeding the precepts of every Republican Secretary of State for 40 years." He

"Twenty-five years ago international bankers fomented sentiment for war. Today no one advocates war, but a clarion voice is rising in increasing volume from the throats of millions, demanding that we stop sending scrap iron to Japan, where it will be made into machine guns, insisting that we no longer stand aloof incurring the hatred of the entire world but take our proper place in it, lest we be engulfed and destroyed."

machine guns, insisting that we no longer stand aloof incurring the hatred of the entire world but take our proper place in it, lest we be engulfed and destroyed."

"Nothing from Japan; nothing to Japan" would end the war in China very quickly. With increasing momentum and cumulative effect the American people are expressing their will as regards the first. "Let American legs defeat Japanese arms" would be a good slogan for them. Japan must sell silk if she buys scrap iron, and she can sell enough of it nowhere else. What I ask of you, gentlemen, is to make the second premise a fact. How? By the Thomas amendment, if you will. By repeal, removing the strait jacket from the administration, if you prefer. By action under the tariff act similar to the 25-percent curtailment duties on German goods, if preferable. Certainly Japan is discriminating against our goods and subsidizing her trade with this country. By even the Pittman cash-and-carry amendment (I say it with reservations), provided it is made clear that the Far Eastern situation will be dealt with separately—and I would say first. More satisfactory would be such an inclusion of the Coffee bill in the Pittman amendment as to satisfy your constituents that supplies will be withheld from Japan. The legislative process is yours. The principle is the important thing. The mandate of the people that this traffic with Japan must stop is clear. These petitions signed by sincere and earnest people from my State indicate the feeling on the Pacific coast. One hundred and seventy-five thousand signatures to the same

petition in New York add their emphasis from the opposite side of petition in New York add their emphasis from the opposite side of the country. The American people want something done about this infamous traffic which makes us a partner with Japan in this attempt to destroy China, and they will continue to make their voice heard until you act. Neutrality? As impossible as calling black white, or night day. Participation in Japan's war guilt? No longer. Go to war in the Orient? Preposterous. China has more manpower than anything else. America's self-defense and best interests and moral responsibility simply require that we stop helping Japan. helping Japan.

Filipinos and Independence—President of Philippine National Volunteers Says Philippine Independence Must Be Certainty

EXTENSION OF REMARKS

HON. KARL STEFAN

OF NEBRASKA IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1939

LETTER FROM PRESIDENT OF THE PHILIPPINE NATIONAL VOLUNTEERS

Mr. STEFAN. Mr. Speaker, it is high time that the membership of this House learn more about what the Filipino people themselves say about independence. We are being told almost every day that the ordinary Filipino in the islands, the "man on the street," does not want independence; that he would prefer to leave things as they are.

I wish to remind Members that in the Philippine Islands there is a great organization known as the Philippine National Volunteers. It has a membership of over 100,000 men who have rendered and are continuing to render meritorious and valuable service to their country. These volunteers are located in every corner of the Philippine Archipelago. Their distinguished president is the Honorable Panfilo Laconico. a man of high character, high ideals, a man imbued with a great sense of responsibility and one who is tremendously patriotic to his own country and who has a great love in his heart for the people of the United States. I have recently received a letter from President Laconico which tells just how he and his great organization feel about Philippine independence. It is one of the best arguments I have read regarding the question of independence, and it should set at rest many of the arguments with which we have been confronted during the past few weeks. I have the honor, Mr. Speaker, of setting forth herewith the letter from President Laconico:

Office of the President, PHILIPPINE NATIONAL VOLUNTEERS, Manila, April 18, 1939.

The Honorable Congressman Karl Stefan,

Member, United States Congress, Washington, D. C.

My Dear Mr. Stefan: In your last letter, you inquired from me regarding my stand on the question of independence. It is quite comprehensible that you should, since there have been statements in the American press interpreting or purporting to interpret the seemingly enigmatic stand of the Filipinos on the question of independence in the face of perplexing far eastern and affairs.

affairs.

However, I presume that my previous statements are still too fresh to you on the subject of independence. On various occasions in the past I have made plain to you my unequivocal stand on the question of Philippine freedom. We Filipinos remain true to that stand; conscious as we are of the heritage given us by Filipino heroes who died for liberty and of the heritage which liberty-loving Americans have nurtured in our hearts.

Permit me to take this convertunity to retrace for you the history.

Permit me to take this opportunity to retrace for you the history of the fight of the Filipinos for freedom in order to give you a fitting background to our cherished ideal and to justify before the eyes of the American people our love for liberty—and why that love is so deep-rooted and patent.

Historical events have been piled one upon another to demonstrate the ardent love of the Filipinos for freedom. The pages of our history, covering the period from the coming of Magellan to the inauguration of the Commonwealth, are filled with unsullied, untrammeled efforts on the part of the Filipinos to attain a desired goal to be free and independent. The valorous fighters of the

island of Mactan opposed foreign invasion and demonstrated it (unfortunately for history) by sacrificing the life of a great navigator at the altar of independence and freedom from foreign yoke. It took the Filipinos, oppressed and kept ignorant, 3 centuries to unite and assert their national ideal. Under the leadership of patriots we rose up in arms and battled the sovereignty of Spain in the Philippines in 1896. In the intervening period from the occupation of the Philippines to the revolution of 1896, there were series of rebellions and expressions of protest against foreign sovereignty.

there were series of rebellions and expressions of protest against foreign sovereignty.

Needless to relate here, we won that war against Spain. An unexpected turn in our history brought America to our shores just after the reins of the Government were being transferred into the hands of the Filipinos. In 1899 (American history confirms it) the Philippine revolutionary government under Gen. Emilio Aguinaldo made its determination to establish an independent Philippines known to the American authorities; the Filipinos would not accept the American fiag and the American sovereignty unless their independence or their right to independence was recognized and safeguarded; that they would rather defy the might of the greatest republic on earth than unconditionally submit to American domirepublic on earth than unconditionally submit to American domination. That the leaders voiced the unanimous sentiment of the liberty-loving mass of the Filipino people was proved by the 3 years of exasperating warfare that followed—a war which cost the Philippines thousands of lives, the devastation of fields, the misery of innumerable families, and the United States thousands of lives and help a billion dellars. We tried at the cost of lives and worse.

of innumerable families, and the United States thousands of lives and half a billion dollars. We tried, at the cost of lives and money, to prevent Philippine occupation. We sent envoys abroad and sought recognition for the independence we won in our fight against Spain.

America came and poured into the country her wealth in order to help us develop what she fondly called her far-eastern outpost. American also sent us great teachers, who taught us to love Americanisms and all the embodiments of American doctrines of democracy, equity, and justice. But, above all, she also taught our children the essence of American liberty. The lives of great American patriots were taught to our children and soon became the gospel of Filipino youth. These lives, part of the great American history, soon became part of the ideals of the Filipinos, who have learned to recite and revere the biographies of American statesmen and learned the lessons of these biographies by heart. George Washington, Thomas Jefferson, Abraham Lincoln, Benjamin Franklin are the object of emulation everywhere in the Philippines.

In are the object of emulation everywhere in the Philippines.

The Filipinos realized what America did for them and, both by words and by deeds, expressed heartfelt gratitude toward the great American Nation.

Meanwhile missions after missions were sent to America, reiter-Meanwhite missions after missions were sent to America, reterating the great desire of the Filipinos to be free and independent.

America honored her pledge as promised, and gave the Philippines the independence she asked. The Commonwealth of the Philippines was inaugurated, with America sponsoring the inauguration. The world looked upon this occasion with astonishment and surprise; the first example in world history where a country was granted her freedom, through peace and not through bloodshed. Representatives of all nations of the world were gathered in Manila on November 15 1935 to witness America's great award.

shed. Representatives of all nations of the world were gathered in Manila on November 15, 1935, to witness America's great award. But the attachment of the Filipinos toward America has not been severed; neither is the love of the Filipinos for their mother country dimmed. On the contrary, the Filipinos never hesitate to reiterate their gratitude toward their liberator. Organizations in the country, like the National Volunteers of the Philippines, have expressed their absolute and earnest gratitude toward America.

The Filipinos, since the inauguration of the Commonwealth, have heen preparing themselves for the final grant of independent state-

been preparing themselves for the final grant of independent state-hood in 1946. The Commonwealth has embarked on an industrialiration program which is designed to make the country economically self-sufficient. Millions of pesos from the government treasury have been poured into the vaults of the National Development Co.

for this purpose.

The Commonwealth, too, has embarked upon a program of national defense which may cost the country P180,000,000 in 10 years. The amount is not to be scoffed at, especially if one considers the financial position of our government, but the Filipinos have explicit trust in their military adviser and in their President. Money does not matter to them if in spending that money they are assured of security and permanent independence. With that money we are practically buying the price of our future safety. Our young men, in answer to the call for training, have left their homes, forsaken both their families and their jobs, in order to prepare themselves

in military training camps.

Lastly, it might be mentioned that the J. P. C. P. A. was created in order to insure the economic and political independence of the Philippines. Both the American and the Filipino Nations believe in our attaining an independence which shall be a living, perma-

nent thing and not a mere chimera or dream.

Accordingly, and after all these steps have been taken, it is the hope of the Filipinos that they are building a Republic in this section of the Orient which shall be the pride of the great Amer-

section of the Orient which shall be the pride of the great American Nation and that our independence shall exist long after 1946, both economically and politically.

Current world conditions have been pointed out as reasons for a reexamination of the Philippine question. To my mind, and to the minds of a great majoriy of the Filipinos, current world conditions should not work against our national aspirations. We have faith in the justice of God. With such faith, we do not exhibit

any trace of fear in the face of a threatening world debacle; instead of a "stop the totalitarians" the Filipinos are today more concerned with combating fear. It is our hope and our belief that the world will settle back to normaley, that the world will not always be on the throes of chaos, crisis, and threats. With the help of the Almighty, it is our hope and our prayer that we shall attain what we have always dreamed of attaining under quiet and peaceful auspices and circumstances.

Very sincerely yours,

PANFILO LACONICO. President.

Religious Persecution

EXTENSION OF REMARKS

HON. BRUCE BARTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1939

ADDRESS BY JOSEPH V. CONNOLLY, GENERAL MANAGER OF THE HEARST NEWSPAPERS

Mr. BARTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Joseph V. Connolly, general manager of the Hearst Newspapers and president of King Features Syndicate, Inc., delivered before the National Eucharistic Congress, October 18, 1938:

When my mother heard the tough kids of our neighborhood use the name of Christ irreverently, she used to warn them they might

lose their tongues.

This had some effect upon the volume of profanity on our block, but it was the first time I gave thought to the power of Christ over the actions of people, and was the beginning of the shaping of pictures of Him in my mind, which through the uncharted space of my youth, companied me into the forest of maturity, strengthened my staff on dark journeys of sorrow, and laughed with me when happiness lighted my noth

happiness lighted my path.

We were taught in those days to accept triumph and failure in His name, and that not irreverently but realistically in the whispered prayer to His mother, whether in victory or despair, He comes to all who want Him.

And so, when His Excellency the Archbishop Rummell, invited that the proof to the Archbishop Rummell, invited the Archbishop Rummell, invited that the Archbishop Rummell, invited the Archbishop Rummell Rummell

And so, when His Excellency the Archbishop Rummell, invited me to speak to you at this National Eucharistic Congress, I was reviewing in my mind some of the things I might say to you. I was in California, and boarded an eastward plane.

Before boarding the plane, a hundred thousand words tell the story of the world march had passed my eyes that day—and no fragment was there in the vast mosaic of trained correspondents' reports that did not signal the rest of the world: "It can happen anywhere!" So, as my ship flung itself over the black vault of the Sierras, my fervent hope was that my voyage might be blessed with a single idea that might inspire not only me but also the Catholic press of America to organize and energize their full strength now toward the defense of our faith, a battle that must begin now against the destructive movements in the Old World, which if not checked now are certain to break the dikes of Germany and Italy and Russia and Spain, and drench the other from many and Italy and Russia and Spain, and drench the other fron-

tiers of the civilized world.

Night had gathered her sable robes over the highest cliffs, and my ship reached through a shoreless sea of silver cloudlets brushed with the glint of the moon and myriad jewels in the dome above. Earth was behind as though my soul itself had left it. Heaven

must be like this, I said.

The roar of giant motors that a moment before pressed on my

eardrums stopped. The silence was deafening, stunning. And the peace of birth and death seemed to be about me.

And then I thought how wonderful it would be, here away from earth, if I could talk to Him, and ask Him about the things of earth and the darkness that is upon it which He must see from

of earth and the darkness that is upon it which He must see from the throne of His heavenly Father above.

He would not be awesome, though His garments be etched in dazzling light, for He is man as well as God. I thought how He, Christ, the man, must weep this night, looking down upon this torn world. He must weep as He wept over the city of Jerusalem when He cried: "If thou hadst known, and that in this thy day, the things that are to thy peace."

He looks out upon that same world and sees strife and hatred and confusion and bloodshed. He sees even more. He had hoped

He fooks out upon that same world and sees strile and natrea and confusion and bloodshed. He sees even more. He had hoped for better; He had prayed for better; He had died for better.

No need to ask Him why this seeming failure of the world. It is written through weary centuries of misery, wherever and whenever the world has forgotten Him.

He has not failed men; men have failed Him.

He left an eternal pattern upon which men might weave the happiness of the world.

Whenever or wherever Christianity fails, it is the failure of Christians. There was a time when the pagans marveled: "Behold how the Christians love one another."

Behold today the pagan jeers of this day echoing over land and

"Kill the Jew!"
"Burn the bishops!"

"Starve them!"
"Pillage!"
"Whip!" "Despoil them!" "Disgrace them!"

"Disgrace them!"

And so, on my way here to this celebration of the mystery of Christ with us, Emmanuel, the Eucharistic King whom we honor and addre, I thought what must this Man God who gave His lifeblocd for love of humanity think of those who have made a mockery of His beatitudes, who have drenched earth with the blood of His innocent children and the persecuted in their fanatical, tragic pursuit of an ideology that springs from the womb

of paganism.

My plane seemed suspended between heaven and earth. A snow-lipped mountain in the west penciled the sky.

And I thought of the words from His Sermon on the Mount:

And I thought of the words from His Sermon on the Mount: "Blessed are the peacemakers, for they shall be called the children of God. Blessed are they that suffer persecution for justice's sake, for theirs is the kingdom of heaven." And again the words from Matthew: "But I say unto you that whosoever is angry with his brother shall be in danger of the judgment."

And I thought of Jesus when asked by one of the scribes which is the first commandment of all. He answered, "The first commandent of all is Hear, O Israel: The Lord our God is one God. And thou shalt love the Lord thy God with thy whole heart, and with thy whole soul, and with thy whole mind, and with thy whole strength. This is the first commandment. And the second is like to it: Thou shalt love thy neighbor as thyself. There is no other commandment greater than these." And the scribe said to him, "Well, Master, thou hast said in truth that there is one God, and there is no other besides Him. And that He should be loved with the whole soul, and with the whole understanding, and with the whole soul, and with the whole strength; and to love one's neighbor whole soul, and with the whole understanding, and with the whole soul, and with the whole strength; and to love one's neighbor as one's self is a greater thing than all holocausts and sacrifices." And Jesus, seeing that he had answered wisely, said unto him, "Thou art not far from the kingdom of God."

As recorded in the opening verses of the Gospel according to Matthew, Jesus was a Jew, directly descended from King David. Our beloved Mother Mary was a Jewess; and when Jesus was born the wise men of the East came to Jerusalem saying, "Where is He that is born King of the Jews?" Jesus, like John the Baptist, was normally addressed as "Rabbi," which means "master," the title used by the Jewish talmud students for their teachers.

Always this should be borne in mind by all Catholic journalists who must look with horror upon the cancer of race batted and

who must look with horror upon the cancer of race hatred and religious persecution that has fixed itself upon the body of Europe and threatens to infect the western areas of the world. The cries of fleeing Jewish children 1,900 years after the time of Herod must, in the name of Christ, be answered now by Catholic press and Catholic action and Catholic force and power of every kind.

"And he that shall receive one such little child in my name receiveth Me. But he that shall scandalize one of these little ones

that believe in Me, it were better for him that a millstone should be hanged about his neck and that he should be drowned in the depth of the sea."

"And they brought to Him young children, that He might touch them. And the disciples rebuked those that brought them. Whom when Jesus saw, He was much displeased, and saith to them: "Suffer the little children to come unto me, and forbid them not; for of such is the kingdom of God."

Thus on this flight came to me one idea that might sink into the hearts and minds of thinking newspapermen and thinking Catholic journalists: That the army of intelligent American public opinion be marshaled now to rededicate this great democracy of ours to the principles of religious freedom and tolerance upon which

our forefathers founded these United States.

Make no mistake. We are in danger. Make no mistake. We are multiplying the elements of danger by our inaction, by our selfish-

ness, and by our apathy, if not by our ignorance.

I say that the Catholic forces throughout the world today should join now in crusade in defense of those who suffer persecution, Jew

and Christian alike.

I say that if the Christians of Europe, warned of the diabolical paganism behind Nazi and Communist persecutions, had acted as Christians and fought for the protection of the persecuted of any creed, madmen would not now burn a crucifix in Cardinal Innitzer's palace, imprison innocent priests and nuns, defile holy monks, and

palace, imprison innocent priests and nuns, deflie holy monks, and drive little Catholic children from their schools.

The poisonous doctrines of present-day paganism, spawned in Soviet Russia, have stifled the natural religious yearnings in that country of Catholic, Protestant, and Jew alike. The cadaverous specter of Marxism, with its murderous philosophy of class hatred, has an insidious manner of cloaking its greedy materialism with promises of Utopia. What kind of Utopia the Communists have in mind we have been able to observe in Soviet Russia with its rising crescendo of mass murder, its reign of terror, its long list of degrad-

ing crimes against humanity and against all of the highest ideals of civilized man.

The time to fight in America is now. Every instrument of Catholic power and force must be coordinated in defense of our sacred American institutions. The brains and the strength of Catholics must be employed to expose and denounce and wipe out not only anti-Semitism but also other forms of intolerance wherever it lifts its head, because if no other lesson were needed, the history of the past 5 years proves that one injustice begets another, and the man who attacks the Jew. attacks a Christian. And unless the Christian is a follower of Christ in deed as well as name, and fights in defense of the Jews or any persecuted minority group, he is not a son of God, he has ignored the first teachings of Jesus Christ.

Catholic journalists see about them in the world today the terrible onslaughts against Jew and Christian alike. Both are in the broadest sense of the household of Christ, whom we honor in this

Eucharistic Congress.

That abnormal or ignorant men should indulge in bigotry, persecution, or oppression because of race or color or creed is hard to understand. But that intelligent and at times intelligent Christian men and women should be guilty of such is something beyond

We as Catholics have for centuries borne the burden of oppression. We as journalists realize that such persecution is founded on ignorance and bigotry. But what is our attitude today as we kneel before the God who knows no black or white, bond or free, Jew or Gentile, but knows each of us and all of us as His children redeemed

by His sacred blood?

I don't have to make a plea to Catholic journalists for tolerance. But I do make a plea for a demonstration of true Christian charity founded on the principle and code of Christ. We expect tolerance from intelligent beings, but we demand more from intelligent Christians. Race and color and creed are the accidents of life. We are all men, sons of God, heirs to heaven. The enemy of God has sown the cockle of division in the field of Christianity. and bigotry exist among us. Race pride and exaggerated national-ism are the common faults of Christians. Well might we be proud of our birth, of our race, or our ancestry, but that pride is sinful and foolish if we forget that we are Christians and sons of a common

Catholic journalists are guided by the code of Christ. In a world that has nearly forgotten the meaning of the word justice, the code of Christ may sound unrealistic. Little nations and nationalistic groups cry tonight that justice might be done to them. cries seem in vain. Oppressed nations for political or social reasons cry for justice. Minorities in strong countries cry for justice. The Catholics and Christians in Spain and Mexico, in Germany, and Russia cry for justice. The Jew under the scourge of dictators cries for justice in this day of injustice. Why is the cry unheard? Because the world must follow the other principles of the code of Christ before it can see justice.

His Holiness Pope Pius, on the occasion of the International Hospital Congress, indicted the injustice of nazi-ism when he said: "We must realize that if the German program of paganism is extended to and accepted by other nations, incalculable damage will result for the world." In his Christmas message he said: "Germany's persecution has seldom been matched in history for its power and gravity, its willful and violent brutality, united with insidious falsehood and cheating denials." And again he said: "Here are signs and portents of terrifying reality of what is being prepared for Europe and the whole world if they do not hasten to adopt necessary remedies of defense."

Catholic journalists here and abroad should take up the fight against this increasing terrorism. But, as I said before, justice can only follow if the world understands the rest of the code of Christ.

The code inveighs against greed—greed for power, and wealth, and prestige, and position, as is the way of the world. Economic greed threw the nations of Europe to the brink of disaster a month ago. Economic greed inkindles the fire flaming into revolution in the world of labor. Greed for riches destroys the fabric of our social life. For men are forsaking all, that they might possess the goods of the earth.

But most important is the principle of the code which says, "Blessed are the clean of heart." Unrest rules the world, because the world is emotionally disturbed and the sons of men are in anguish and turmoil because they have left the paths of justice

and honor and sobriety.

"Blessed are the clean of heart," Christ says to a world that is on a holiday of license, and not before it cleans its heart and returns to the principles of purity in family life and personal life will it see justice. For only the clean of heart see God in their fellow men

When Christ said, "Blessed are the peacemakers," He meant those who brought to the world lasting peace—a peace founded on justice and mercy; a peace that takes into consideration the code of Christ. The peace of Versailles, which was not made in the name or spirit of the peace of Christ, could never have been a leating peace.

To be lasting, peace must be founded upon the determination of governments and peoples to forget antipathies and race hatreds; they must put aside the desire for conquest, and they must see that all may survive and prosper, or none shall.

The General Welfare Act

EXTENSION OF REMARKS

HON. ED. V. IZAC

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 17, 1939

LETTER FROM J. HARRY KELLY

Mr. IZAC. Mr. Speaker, under leave to extend my remarks in the RECORD. I include herein an interesting letter written by J. Harry Kelly, of Brule County, which recently appeared in the Dakota Farmer and which relates to the General Welfare Act:

GENERAL WELFARE ACT, H. R. 2

TO DAKOTA FARMER:

To Dakota Farmer:

We hear a lot these days from almost every quarter and from every public man and woman expressing their conviction that "something must be done" to solve the unemployment problem and to put more money into circulation. Every day we hear radio talks and read articles by supposedly smart men giving graphic descriptions of our deplorable financial condition; and, while hoping for a remedy to be suggested, all too often they have none to offer, but instead close with the following remarks: "Something must be done." "Some plan must be devised." "The unemployed must be put to work." "We cannot maintain our democracy with 10,000,000 people idle."

I will not take space calling attention to the distressful condi-

I will not take space calling attention to the distressful conditions. They are all too well known. Let me say, the people who advocate the Townsend recovery plan suggest a remedy and have been explaining the plan as a recovery measure for 5 years, and no one has offered a reasonable or successful argument against it or been able to explain how it would not do the things claimed

WIDELY ENDORSED

It has also made steady and definite progress, until it is receiving the endorsement of many of our leading men of the Nation. As evidence of its growing favor, let me call attention to the fact that evidence of its growing favor, let me call attention to the fact that our own State legislature unanimously passed a memorial asking Congress to bring this bill, H. R. 2, out on the floor for complete discussion and consideration. Nearby neighboring States whose legislatures have passed similar memorials to Congress asking for the enactment of H. R. 2 are Montana, which passed it in the house 80 to 2 and in the senate 53 to 1; Wyoming, Colorado, Nebraska, North Dakota, and Iowa. Many other States have done likewise, but these are our neighbors. Certainly the legislatures of those States are composed of the most representative groups that can be found, and express the general sentiment of the people of their States. I suggest that any skeptic who feels the plan is not sound investigate to find the reason why the representatives of those investigate to find the reason why the representatives of those States have asked the Congress to enact this law. Those men are the choice of the people and are not all dummies.

HOW IT WORKS

The Townsend bill, H. R. 2, provides for a 2-percent transaction or gross business turn-over tax, which is a broader tax than the gross income tax—which comes the closest to a transaction tax of gross income tax—which comes the closest to a transaction tax or any form or type of transaction. From the receipts of this tax it is proposed to pay it out pro rata to all who care to apply and who are 60 years old and over, who will agree to stop all gainful occupation and spend the whole amount in 30 days. Any person can, however, apply for a lesser amount than the pro rata share if he feels he cannot conveniently and reasonably spend the full amount in 30 days. But in no case shall the amount be more than \$200 a month

a month.

There are about 8,000,000 persons who could and perhaps would apply and qualify, and about half, or 4,000,000 of them, are now gainfully employed. When they step out it will provide jobs for 4,000,000 younger persons who are now unemployed. The spending of the money they receive will immediately put many more millions to work and to replace the goods they consume and supply the services demanded. This will repeat the next month and soon all will be employed. It is a pension only as a secondary matter. Within 30 days all the money will be in the hands of the younger people who will, in turn spend it, and again the next month another amount will pass into the channels of trade, with all the transactions carrying a 2-percent tax going to the fund for the next transactions carrying a 2-percent tax going to the fund for the next month's distribution. It is a recovery plan first. It will solve the problems of old-age security, relief, business depression, unemployment, and our national crime bill.

THIS IS WHAT IT WILL SAVE US

J. Edgar Hoover, no doubt the best authority on crime, says crime is costing us \$15,000,000,000 a year. He also says that if we

can find employment for our young men when they get out of school and put them to work, we can cut this crime cost in half. That will mean a saving of \$7,500,000,000. Poorhouses and homes for aged, etc., cost \$2,500,000,000. This would be saved. Present Government pensions cost \$750,000,000. This positively would be deducted from the cost of the Townsend plan. W. P. A., P. W. A., C. C. C., etc., cost \$2,000,000,000. This could be saved. We have delinquent taxes in the amount of \$3,000,000,000. If the unemployed could go to work at good wages, those would be paid. The above amounts to a saving of \$15,750,000,000, or almost the total cost of the Townsend plan.

ployed could go to work at good wages, those would be paid. The above amounts to a saving of \$15,750,000,000, or almost the total cost of the Townsend plan.

We hear some say the plan will cost too much money; that it will wreck the country. Let us see. We propose a flat 2-percent tax. This is spread over all alike according to the business they enjoy. The present Social Security is now costing 2 percent (1 percent on the employee who will benefit and 1 percent on the employer who will not get any benefit). This tax gradually increases until in 1949 it will reach 3 percent on each.

This is 6 percent. This money is not coming back into the channels of trade, but is being spent for general governmental expense—and bonds drawing 3-percent interest are placed in the fund instead. Who pays the interest for our Government? The people. When this money is needed for the purpose for which it was collected, another tax will have to be imposed to provide it. If my figuring is correct, that makes 9 percent. If not, let someone else figure it. This last 3 percent is where all the people will be remembered. Under the Townsend plan all people will contribute and all will share in the benefits. Which is "crackpot?" Which is "cockeyed?" Which is "fantastic?" Every person should study this plan well before passing judgment on it.

After it is understood, there are few who will not agree it will do the things claimed for it. The bill, H. R. No. 2, is now being given a hearing before the House Ways and Means Committee and all who are interested in recovery should write their Representatives and Senators asking them to do all they can to make it a law.

J. HARRY KELLY.

Brule County.

Our Trade Relations With the Philippines

EXTENSION OF REMARKS

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1939

Mr. STEFAN. Mr. Speaker, it is again necessary at this time to call to the attention of the House the fact that the very controversial subject of our trade relations with the Philippines seems likely to again come before Congress. The press has carried the news that leaders of this administration are urging that some action be taken. In addition to bills which were introduced in both Houses some months ago, a new proposal has now appeared in the upper Chamber with the intimation that it is to be given early consideration and urged for enactment into law.

We have not in this House yet had the matter brought before us by the introduction of any bill. It appears that unless attention is given in advance we may be called on to act hastily and without the consideration this matter deserves at our hands.

My colleagues will recall that on several occasions in the past I have expressed my views on this subject. I have made it plain that these views are not the result of listening to the special interests of Filipinos specially favored by past conditions. Neither are they the result of the efforts of favored American interests seeking to perpetuate their own favored position. Instead of this I have tried to present the facts based on my own experience in the Philippines, and my long study of the problems involved.

These views, as those who have heard me before well know, are that the political and economic independence of the Philippines, which is provided for in the Tydings-Mc-Duffie Independence Act should be carried through to full performance. This should be done without delay, and without any intervening action which can be taken as an intimation, much less a promise, that after the time of such independence, the favored treatments which have been mutually

existing for long years in the past should be continued in any way. The Filipino people, I am convinced, by a very large majority, want their full independence just as they have asked for it almost ever since our first occupation of the islands. A handful of interests want to trade that freedom for their own financial and trade interests at the expense of the American taxpayers.

The bills which have been presented to the two Houses of Congress earlier in this session clearly represent the interests of those who wish to prolong the period of favored trade relationships. The analyses of this measure which has been presented before a committee of the other House clearly show that this is the case. The appearances before that committee in favor of that legislation show even more clearly which American interests favor the legislation. Only those who seek to continue financial benefits through cheap materials from the low-paid Filipino agricultural industries or who have an interest in the sale of a few American-made commodities in the islands are supporting those proposals.

The current information is that this proposal has met such strong opposition that its enactment is impossible. The American people are waking up to the real facts of the minor character of the interests benefited by our treatment of the Filipino compared with the mounting costs to this Government and its taxpayers of continued occupation and continued free trade relations. Continued drafts on the Treasury of the United States for subsidies to Filipino cane growers, in competition with our own, for erecting factories in the islands to produce products in competition with those they now buy in the United States, to maintain expensive representation in the islands, and to maintain armed military forces there, and support a section of the American Fleet, ostensibly for their protection, are forceful arguments against continued occupation and control. It is time-that time will be fully ripe when 1946 rolls around-for the dissolution of all political ties which bind the Philippines to the United States, and to end for all time this continued drain on the Treasury of the United States.

It is time now—more than time—for the withdrawal of a good part of the American Army now maintained in the Philippines. I have suggested such withdrawal in the past. I emphasize it again at this time.

Because the proposal for a 15-year continuance of favored trade has proven impractical of enactment at this session of Congress, a new measure, as stated at the beginning of this statement, has appeared. That measure is of a different character. To its credit it is to be said that it deals entirely with a few changes in the Tydings-McDuffle Act to become operative only up to July 4, 1946, the date set for Philippine independence.

I have had prepared a brief abstract of this bill and wish to call your attention to its major provisions, as follows:

This bill is evidently an interim proposal intended to set up trade arrangements between January 1, 1940, and July 3, 1946, differing in some particulars from the provisions of the previously introduced measure which was supposed to represent the carefully worked out ideas of the Joint Commission on Philippine Trade Relations. No provisions found in this bill relating to definite trade relations, tariffs, duties, taxes, quotas, and so forth, is so stated as to extend beyond the date July 3, 1946, which is, under all existing law, the definite date upon which the political independence of the Philippine Commonwealth becomes fully effective.

Provisions of the previously introduced bills (Tydings bill S. 1028 and Kocialkowski bill, H. R. 3330) were written to cover certain trade relationships for a period of 15 years beyond July 3, 1946. The introduction of the new Tydings bill at this time, and its possible enactment into law before the end of this session, does not forecast any cessation of the effort to carry on preferential trade relationships after July 3, 1946. It only postpones the time when the Congress will probably be called on to meet and face that proposal of the interests in both the United States and the Philippine Islands, who seek special privileges and special financial profits by special privileges.

The more important provisions of the new Tydings bill are as follows:

First. An export tax on certain items of Philippine production shipped from the Philippines to the United States is provided for to take effect on January 1, 1941. The money produced from this Philippine export tax is to be turned over to the Treasury of the United States for the general purpose of paying interests and principal on bonds of the Philippine Government or its subdivisions, or of providing a sinking fund for their retirement. Several pages of the bill are devoted to the details of these bond-paying transactions.

Second. This export tax is required to be paid on all articles of export from the Philippines to the United States except those items for which other specific provision is made. The rate of such export tax is for the first year beginning January 1, 1941, 5 percent of the United States duty, and for each succeeding year is to be progressively increased by an additional 5 percent of the United States duty. From January 1, 1946, through July 3, 1946—independence date—the rate will be 25 percent of the United States duty.

Third. Specific exemption from this export duty is made and a duty-free quota is provided as follows: Cigars, 200,000,000; scrap, stemmed, and unstemmed tobacco, 4,500,000 pounds; coconut oil, 200,000 long tons; buttons of pearl or shell, 850,000 gross.

These quotas become effective for the calendar year 1940 and are to be decreased for each calendar year after the first year by 5 percent of the first year's quota. Exports above quota limits are subject to the full United States duty.

Sugar is relieved from export tax and given duty-free entry up to 850,000 long tons, of which not more than 50,000 long tons may be refined sugar, this without progressive reductions.

Cordage is relieved from export tax, and the tariff-free quota fixed at 4,000,000 pounds between May 1, 1941, and December 31, 1941, and at the rate of 6,000,000 pounds for each calendar year thereafter from January 1, 1946, to July 3, 1946, not more than 3,000,000 pounds may be entered.

Fourth. A provision is included providing for the exchange or purchase of properties found desirable for consular or diplomatic establishments.

Fifth. Existing provisions concerning the use of the excise taxes and import taxes now collected by the United States on Philippine articles imported or used in the United States are changed in two particulars. The present prohibition of the use of the coconut-oil excise-tax moneys for subsidization of copra of coconut-oil production is repealed, and in its place there is a general authorization for the use of these and other tax moneys, worded as follows:

Shall be held as separate funds and be paid into the treasury of the Philippines to be used for the purpose of meeting new or additional expenditures which will be necessary in adjusting Philippine economy to a position independent of trade preferences in the United States, and in preparing the Philippines for the assumption of the responsibilities of an independent state.

Sixth. Provision is made that on and after the 1st day of the second month following the passage of this act customs receipts from Philippine imports shall be covered into the general fund of the Treasury of the United States and shall not be paid into the treasury of the Philippines.

The act in general is to become effective on January 1, 1940; provided, however, that before that date the Philippine Government has enacted the necessary laws to conform to its provisions.

With reference to this bill I want to say that if any changes in the provisions of the Tydings-McDuffie Independence Act are necessary, the changes herein provided seem to be the least dangerous of anything that has been proposed. The coconut-oil quota set in the Independence Act, namely, 200,000 long tons per year, is unnecessarily large, larger than has ever been reached under unlimited free trade. So the proposal to bring about a 5-percent per year reduction over a 5-year period is a step in the right direction. However, since our present tariff law, the act of 1930, provides that copra, which is the dried meat of the

coconut and the source of coconut oil, is on the free list, the setting of a quota of one size or another for free coconut oil from the Philippines will hardly affect the total coconut oil in our markets and means nothing to the producers of fats and oils in the United States. The size of the free quota is a matter of concern only as between the coconut-oil crushers in the Philippines and the copra merchants there, each seeking to outdo the other in sales to the United States.

Let me appeal to my colleagues on both sides of this Chamber not to lose sight of the importance of the issues presented whenever Philippine policy comes before Congress. As the matter now stands, the fruition of the work which was done when the Tydings-McDuffie Act was placed on the statute books will be freeing the United States in 1946 from a drain of millions of dollars per year now turned into the islands, partly in governmental expenses there, partly in subsidies to Filipino enterprises, as pointed out, and partly, most largely, perhaps, as the adverse trade balance which accumulates year after year without exertion. It will free us from the heavy and, as many believe, impossible burden of military and naval protection. It will carry out the promises made as binding covenants to the Filipino people. It will set the seal of final and permanent disapproval on colonial and jingoistic plans and ideals. These worthy results will come about unless legislation is enacted which robs the Tydings-McDuffie Act of its purposes by indirection, by granting special trade privileges, by long-continuing trade agreements, and the other subterfuges which the few financial interests concerned in petty profits of unnecessary trade so well know how to use. Congress must stand firm in protecting the Philippine Independence Act and in refusing to pass any amendments to this act, even the one now proposed, unless it is clear that it will aid rather than obstruct the culmination of full and free political and economic independence of the whole Filipino people on July 3, 1946.

Buy American

EXTENSION OF REMARKS

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1939

Mr. HOUSTON. Mr. Speaker, it was with amazement and dismay that I read press reports of a few days ago to the effect that President Roosevelt had authorized the United States Navy to purchase 48,000 pounds of corned beef from the Argentine Meat Producers' Cooperative, and that he was reported to have said their product was superior to that prepared by our packers and could be obtained at a much lower price.

It was encouraging to read last evening an Associated Press dispatch from Buenos Aires reporting the Argentine Government has assigned \$8,000,000 of treasury bonds to United States automobile importers and hopes to dispose of an additional \$12,000,000 to importers of other United States manufactures, and I do not join those who charge that our farms and cattlemen have been "sold down the river" by this purchase of corned beef which probably does not represent over 200 head of cattle, and I am not opposed to the principle of a reasonable amount of give and take in foreign trade; but I do not like the implication that our great packing companies do not produce an item comparable in quality with that of foreign packers nor do I like the idea of our purchasing outside of the United States competing goods for our naval forces.

It has long been the boast of the Navy that practically all money appropriated for that service is spent for American goods and services, even to fueling of vessels at far-distant naval bases.

If we are to believe the reports that have been made to us in recent months, certain foreign builders of aircraft are in position to build airplanes superior, perhaps not "infinitely" better but somewhat better to those which our factories produce, and it is reasonable to assume such planes can be bought at a lower price; but the mention of a purchase of bombers for our armed forces is unthinkable.

We have tried to better the condition of American labor. and in 1936 passed the Walsh-Healey Act providing that all Government specifications and contracts involving the purchase of \$10,000 or more of supplies, or loans, or grants must contain the provision for paying the prevailing rate of wages to be determined by the Secretary of Labor; that employees of these contractors must not work more than 8 hours in any day or 40 hours in any week; that boys under 16 years of age and girls under 18 years of age must not be employed; and that all work must be done in sanitary buildings and decent surroundings. That act is an example of what we have done to limit expenditure of Government funds to contractors who apply fair labor conditions, and our American packing houses are undoubtedly living up to these requirements at a sacrifice in profits; but what do we know about the fair-labor policy of the Argentine Meat Producers' Cooperative, or the sanitary conditions in their plants, or their inspection of animals, or their wage scales?

During the past few years it has been necessary for the Federal Government to aid more than 1,000,000 destitute farm families through rehabilitation measures, and this administration's agricultural policy has been directed toward raising farm prices and farmers' income and to guard the domestic market from bargain-counter prices. But it seems we can do some shopping down in Argentine for beef while our Department of Agriculture develops inbred strains homozygous for characteristics of economic importance; develops new and superior strains by means of hybridization followed by selection and inbreeding; and finds the progeny sired by bulls of one strain of beef shorthorns averaged 17.24 pounds of gain for 100 pounds of digestible nutrients consumed, whereas those of another strain average but 15.37 pounds.

The State of Kansas is third in the production of beef cattle for slaughter and is one of the leaders in the production of purebred livestock, fourth in meat packing, and has been called the breadbasket of the world; but I have just read the Kansas crop report for May 1939 and noted the Kansas winter wheat crop is estimated at about 116,000,000 bushels, or a decline of almost 2,000,000 bushels from the April forecast; that almost one-fourth of the acres sown last fall will be abandoned; while pasture condition for cattle grazing is the highest since 1932. That means that this year Kansas farmers will be forced to look to livestock more than ever before for a large share of their income, or many more of them will be forced to join that million of destitute farm families on relief.

The livestock industry is the most important phase of agriculture, and agriculture is the biggest business in the United States. Forty-eight thousand pounds of corned beef is not what I am "beefing" about; I am talking about the principle of using the American taxpayers' money, appropriated for national defense, to import a product in competition with one of our own and at a time when the livestock industry, agriculture, business, and labor needs all the aid and assistance we can give them.

I hope the time is here when every appropriation bill for the Army and Navy will contain a provision that will prevent a recurrence of this exceedingly exasperating and unfortunate affair. It is my belief that American livestock producers can easily supply the American market with all the beef it can consume, and the American packing houses can supply all the corned beef at a reasonable price and of excellent quality that the Navy can stow away. Classification of Fur Farming as Agricultural Work

EXTENSION OF REMARKS

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 17, 1939

LETTER FROM THE MINNESOTA FOX AND FUR BREEDERS' ASSOCIATION

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and brief received by me from the Minnesota Fox and Fur Breeders' Association:

MINNESOTA FOX & FUR BREEDERS' ASSOCIATION, Minneapolis, Minn., May 12, 1939.

JOHN G. ALEXANDER,

United States Representative, House of Representatives, Washington, D. C. DEAR SIR: The members of our association has requested the officers to present information to our Senators and Representatives, and to many other Congressmen who kindly acknowledged our petition in the former session when we asked their consideration of supporting proper classification of fur farmers from that of "industry" to that of "agricultural labor."

The former Wage and Hour Act passed after the Social Security

The former Wage and Hour Act passed after the Social Security Act properly exempted fur-farm labor, and this fair classification indicates the views of Congress as intending exemption toward farm groups of raw products where there is no processing or opportunity of such farmers to have a voice in the selling price of their product.

As the Social Security Act will be under consideration of the Congress at this session, may we kindly ask your support and consideration for such exemption. Where such taxes cannot be passed on and where market prices are already below cost of pro-

passed on and where market prices are already below cost of production in the great majority of fur-farmer ranches, the placing of such farmers under "industry" develops a heavy jeopardy against the farm home, farm land, and the stock of such farmer who must shoulder such a special tax as a direct farm loss, thus mak-ing it a problem to meet other important taxes of the real estate and personal property class

It is apparent that a special tax levied under the theory of addition in the selling price to the next buyer as in industry is not applicable to "farm products," and that there is a definite point of existence involved in the same manner as provision is made for exemption of certain personal or household property, otherwise unpaid real and personal taxes cause confiscation. This situation is already present among many of our formers.

is already present among many of our farmers.

Respectfully yours,

MINNESOTA FOX & FUR BREEDERS' ASSOCIATION, GEORGE PLAGMAN,

Secretary, Columbia Heights, Minn.

INFORMATIONAL BRIEF SHOWING FUR FARMING AS A DEFINITE AGRICUL-TURAL WORK

The raw product from fur farms is identical to other farm prod-The raw product from fur farms is identical to other farm products, exempted under the Social Security Act, as we have the production and marketing conditions and problems in which the selling price is set and fixed by others than the farmer himself. In "industry" it is recognized and expected that the processor or manufacturer will have a voice in matters relating to the first selling price, and it is only under such a situation that taxes of this nature can be included in each selling price.

Thus the following dependable information is given in detail to

Thus the following dependable information is given in detail to support all contentions that fur farming is a pure farming enterprise and should be classified as an "agricultural occupation."

1. The Social Security Act no doubt anticipated such farmers as coming under the "agricultural exemption" in designating livestock, farms, and ranches under the exemption, however, it was unjustly ruled that this farm occupation was not farming but industry.

2. Requests for reconsideration and designation as to proper farm classification was at once made to the Secretaries of the Treasury and Internal Revenue Bureau, as well as to the Department of Agriculture, and protest was made, however, same has remained under the unwise ruling awaiting changes in the act.

3. Senators, Representatives, and departments have been written and detail information has been given which points out the unworkable factors on true farmers, and most all have joined in declaring the fur-farming work to be an agriculture work, rightfully under the Department of Agriculture.

4. Prior to the act funds have been expended over a long period of time in the development of fur farming as an agricultural work.

5. States have recognized the work on fur farms as being within the term "agricultural efforts."6. The Department of Agriculture has in the past advanced loans

under the A. A. A. and recognized the crop as eligible for farm product security.
7. States recognize fur farms as entitled to homestead exemption

due to the farmer making his own living on his own farm.

8. The following defines the farm procedure on fur farms, control of buying prices by others than the farmer, and shows effect

of applying industrial taxes on agricultural producers:

(a) All the farm work is pure breeding and raising of livestock.

(b) Feeding and enclosing of livestock on farm lands.

(c) Raising and selling of a raw product only, without processing of any nature or industrial handling.

(d) Using country farm help in monthly and seasonal periods.

(e) Generally providing for extra or part-time men, who must be dropped in low-price periods if the theory of industry must be

be dropped in low-price periods if the theory of industry must be applied to farm work.

(f) An entire farm occupation unable to add up costs of feed, labor, overhead, plus special taxes or even profit of any amount, because the selling prices are made and set (like most other farm products) entirely outside of this farmer's control. This raw-product farm has no possible opportunity of passing any tax or definite cost on to the next buyer or consumer, due to the nature of all farming efforts, which cannot be directed to setting his own price.

(g) There is no monthly income or return from the farm labor or investment like most industry enjoys. A 1-year crop makes it possible for middlemen or others to set and determine the producer's price.

possible for middlemen or others to set and determine the producer's price.

(h) There is no short-season stopping or shut-down period. Crop sale comes once yearly, and the market-price results become known too late to restrict operation, thus when low prices develop below the cost of production the losing operation must be carried on for the entire coming year. This alone jeopardizes the home and land of this farmer whose existence is under the control of outside price-setting sources.

(1) The fur farmer pays all of the imposed taxes of the agricul-

The fur farmer pays all of the imposed taxes of the agricul-(1) The fur farmer pays all of the imposed taxes of the agricultural farmer, such as personal property, real estate, income taxes, etc., and any other special tax aimed to be passed into the cost of finished goods further jeopardizes payment of his home and land tax, and where such special taxes cannot be included in the selling prices, development of nonemployment must occur or farm taxes remain unpaid when all such farm prices are below production costs.

taxes remain unpaid when all such farm prices are below production costs.

(J) Due to being a farmer and due to the unfair decision, a duplication of taxes is secured from this farmer; first, in making such tax payment, as an industrial tax, unreturnable in sale of the raw product; and, second, when paying the various industrial taxes on goods exchanged for the crop each year.

(k) The fur-farm product itself has no fixed standards and is influenced directly by propaganda and rumors by which actual outside industry controls the product without thought or consideration of perpetuating this farm enterprise.

(1) As a farm product, same is in no way connected with fur

tion of perpetuating this farm enterprise.

(1) As a farm product, same is in no way connected with fur trapping or wild furs as such where the items of foods, labor, land, and other costs are not a factor. The entire farm can be wiped out in one season, whereas the objective has been to establish and perpetuate domestic fur raising as a continued true farm enterprise.

(m) The fur farmer is a hard worker, willing to do all in his power to sustain his family, maintain his breeding stock, and keep extra help at work as well as pay regular taxes and remain an active consumer of goods coming out of "industry," but to do so as a farmer he must at all times be classified as performing or utilizing "agriculture labor." as a farmer ne must at an times be classified as performing titilizing "agriculture labor."

Respectfully submitted.

Minnesota Fox and Fur Breeders' Association,

By W. Beach, President.

George Plagman,

Secretary, Columbia Heights, Minn.

The Fur Farmers' Cooperative Association has jointly subscribed to the above brief and request.

WM. CUVELLIER. Secretary.

Nation-Wide Contest on Why America Should Keep Out of Foreign Wars

EXTENSION OF REMARKS

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 17, 1939

ANNOUNCEMENT OF ESSAY CONTEST BY THE NATIONAL COM-MITTEE TO KEEP AMERICA OUT OF FOREIGN WARS

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following announcement of a Nation-wide contest sponsored by the National Committee to Keep America Out of Foreign Wars, starting immediately and ending on Flag Day, June 14, 1939, for the best essay on Why America Should Keep Out of Foreign

Washington, D. C., May 16, 1939.—At a meeting of the executive committee of the National Committee to Keep America Out of Foreign Wars it was unanimously agreed to hold a Nation-wide contest, open to all American citizens, regardless of age, race, color, creed, or politics, on the subject Why America Should Keep Out of Foreign Wars.

All compositions submitted in this contest must be clearly

All compositions submitted in this contest must be clearly written (typewritten preferred) and must not exceed 200 words, and shall not include any quotation to exceed 10 words. They should be sent direct to the National Committee to Keep America Out of Foreign Wars, room 1424, New House Office Building, Washington, D. C., not later than Flag Day, June 14, 1939.

The committee offers as first award the sum of \$100 in cash and a trip to Washington, D. C., to be received by the committee, and a trip to the New York World's Fair, with all expenses paid. Second award will be \$50 in cash; third, \$25 in cash; fourth, \$10 in cash; and three additional awards of \$5 each for fifth, sixth, and seventh and seventh.

A committee was appointed to have charge of the contest, composed of Hon. John C. Schafer of Wisconsin, chairman; Hon. Dewey Short, of Missouri; and Hon. Francis H. Case of South

It is expected that the essays submitted in this contest will be judged and awards made on or before July 4, 1939.

Bankers and Recovery

EXTENSION OF REMARKS

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 17 (legislative day of Monday, May 8), 1939

ADDRESS BY E. C. LOVE, PRESIDENT OF THE OKLAHOMA BANKERS' ASSOCIATION

Mr. LEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. E. C. Love, president of the Oklahoma Bankers' Association, at its forty-third annual convention at Oklahoma City May 4 and 5, 1939. Mr. Love presented a very able and convincing argument in support of the fiscal policies of the present administration.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In addressing the Oklahoma Bankers Association I am speaking within the family. I do not include the investment bankers as members of our family to whom I am speaking directly. I know relatively little about their problems and the details of their business. I am only thankful to the Government for providing that their activities be carried on in a fish bowl so that I have full information about securities they distribute and, consequently, a good chance to make sound purchases of investments.

It is no accident that statements about business trends and legislation by us bankers receive great weight by the public. Bether

lation by us bankers receive great weight by the public. Rather is it the result of the strategic economic role of our banking indusis it the result of the strategic economic role of our banking industry. We bankers are a unique group in our economic system because we earn our living by trading in the most commanding of assets, money, and therefore are at the very fulcrum of economic activity—the balancer of savings and investment. We direct the conversion of the sterile money savings of the community into active investment spending, which increases the welfare of the community by providing for the production of goods and services. The economic counterpart of the sentimental French adage, "Love makes the world go 'round," is the capitalistic American saying, "Money greases the wheels of industry." It is our job to see that the greasing is properly done. In order to be successful we, more than any other group must be experts in the economics of total output or of the general functioning of the economic machine. Arising out of this fact is the feeling which we bankers have of our own importance. But still more important is the sensing of this own importance. But still more important is the sensing of this by our customers and by the public generally and the deep respect which our economic role engenders.

Respect for our judgment on problems of economic welfare seems

to be an inherent characteristic of our American economic system.

Even the hate and distrust of the 1929-32 period was not lasting. As an illustration of this, I am reminded of an incident which followed a "hard-hearted" request of a large midwestern city banker to a small country businessman to pay off loans in the fall of 1937.

Of course, the businessman thought the request was a pretty dirty trick, but he paid up. Some months later the businessman, while still struggling to make both ends meet without access to bank credit, made this statement: "Of course, paying off the bank made it pretty tough for us, but as I look back the bank was right. It was better for us to do so."

It was better for us to do so."

We could never have regained our position with our customers and with the public so quickly, if at all, after 1932 and 1933, had it not been for the assistance of the Federal Government. I am convinced of this, and I am sure all of you agree with me at least in part. Let me call to mind some of the more important measures taken to place and to maintain the banking system on a sound back. Ver all suret remember the healting beliefy and the provitaken to place and to maintain the banking system on a sound basis. You all must remember the banking holiday and the provisions for the orderly liquidation or reopening of closed banks. Loans by R. F. C. and liberalized rediscount privileges with the Federal Reserve banks enabled banks to meet the abnormal demands of depositors; purchases of preferred stock by R. F. C. bolstered the capital structure of the banking system, and especially of the weaker members; H. O. L. C. and the Federal Farm Mortgage Corporation substituted sound earning assets for the frozen assets which were clogging bank vaults. You all must know that the confidence of depositors was permanently restored by means of the F. D. I. C. You all know that the Government did not stop with these measures. but has continued its efforts to build a with these measures, but has continued its efforts to build a sounder and more useful banking system. Among the more recent important steps has been the more realistic attitude taken toward loans and investments embodied in the revisions of bank-exami-nation procedures. All of us recognize that these were necessary and effective measures for restoring the health of the banking system. Yet we seem to have forgotten the benefits bestowed upon us by a long list of governmental measures relating to the banking industry. According to a financial writer for the New York Times, we seem even to have forgotten the banking holiday.

The effect of the Government's measures has been not only to

restore the public's respect for us but also our own self-respect. Not only do the people now know that the bankers will not let themselves down but they also know that the Government will not

themselves down but they also know that the Government will not let the bankers down. And this firm position of the Government behind our lines is a far more potent influence on public opinion with regard to banking than we have been willing to admit.

We all know—and I am not so simple as to believe otherwise—that the Government has worked to rehabilitate the banking system, not for love of bankers but for other deeper reasons. The economic welfare of the whole Nation—not only our own—requires a sound banking system. And it was to provide the necessary condition for high levels of national income that the Government acted. We bankers were only a convenient medium through which a broader national purpose was attained.

Even though Government activities in the banking field have been undertaken for the benefit of the whole Nation, they have not been pursued in a spirit of antagonism or rancor toward bankers.

been undertaken for the benefit of the whole Nation, they have not been pursued in a spirit of antagonism or rancor toward bankers. Had it been otherwise, our Government would not have been worthy of the people in whose interests it operates. Let us not forget that nationalizing the banks was a real alternative in 1933. Nor should we close our eyes to the fact that even today there are those who believe the Government should take over the banking system.

Our Government has made every effort to restore the banker to his traditional position in the community, to maintain and widen the scope of his activities and to provide the basis for sound and profitable operations. I hardly need remind you that the fear of the examiner's visit has practically disappeared, particularly in those banks which are under Federal supervision. Nor should I need to remind you that during the 4 years, 1935–38, bank suspensions averaged less than 50 per year and deposits in those banks less than \$14,000,000 per year; the comparable figures for the twenties are 635 banks with deposits of \$181,000,000. I think the fact that the recent banking difficulties in New Jersey—probably the major headache of F. D. I. C.—caused so little interest is ample evidence of the general confidence in and soundness of the banks achieved during the past 6 years, as well as of the value of F. D. I. C.—d. R. F. C.

the banks achieved during the past 6 years, as well as of the value of F. D. I. C. and R. F. C.

The talk I have heard about the Government trying to elbow us out of the banking business is just sheer nonsense. You and I known that the Government has not engaged in lending activities known that the Government has not engaged in lending activities out of any desire to take over the banking industry. The Government has the responsibility for getting increased business activity. Lending was necessary to attain that end. When for one reason or another we were unable to do the lending, the Government was forced to do so in order to fulfill its obligations. R. F. C. loans were extended only after banks had declined to take the business; only defaulted farm mortgages were taken over by the Federal Farm Mortgage Corporation, and so on.

Long before the New Deal arrived in Washington such a policy was pursued by the Federal land banks and the Federal intermediate credit banks. We may say that the Government has played the role of guarantor for our weaker borrowers—at a fee of course—and has provided credit when no private credit was available. Now that it turns out that the Government judged the risks involved with considerable accuracy we bankers seem to be cover-

able. Now that it turns out that the Government judged the risks involved with considerable accuracy we bankers seem to be covering up our own mistakes by raising the bugaboo of Government competition. Today there is no lending business that the banks cannot have if they want it. If this be competition between Government and bankers, then competition is based on brotherly love and not, as every economist since Adam Smith has maintained, on the law of the jungle.

Nor has banking been profitless since the Government stepped in to repair the rickety structure of our industry. I know—and

you know—that while bank profits are infinitely better than in 1931-34, they are not so great as they were in the bankers' heyday of the twenties. But what other industry with an invested capital of \$7,000,000,000 can boast of a more than 5-percent annual net profit rate on capital, surplus, undivided profits and contingency reserves for the recession half of 1938? And what other industry has been able to cut its largest single cost item—interest paid on deposits—by 75 percent, largely by Government regulation? May I remark that that cut in costs alone was greater than the net profits of banks in 1929.

profits of banks in 1929.

I think it may fairly be said that there is no other industry for which the Government has done more than for banking. Yet by and large the only return to the administration has been violent verbal abuse. I have attended numerous meetings of bankers verbal abuse. I have attended numerous meetings of bankers during the past few years and with very, very few exceptions the speeches I have heard were antiadministration. Bankers, big and little, city and country, have all joined in the chorus; each delivered a tirade against the administration, then sat down and stuck out his chest in the firm belief that he had done his bit to save the country. We are prone to forget difficulties, hardships, and miseries once we escape them: We are at the same time, inclined to be increase. to be ingrates.

Neither you nor I can gage with accuracy the effects of the continuous stream of antiadministration utterances from such an influential group as we bankers. I know that the effect in my own community has been to keep at an unduly low level the kind of investment spending which starts and keeps recovery going. I profoundly believe that for the Nation as a whole, similar effects must have been of tremendous magnitude. And our own business, of course, has suffered with the rest of the Nation as the limited

outlets for loans and investments indicate.

All this does not make sense to me.

I suppose it is too much to expect us to explain to the public just what the Government has done for bankers and the banking system. After all, we were carried away by the "new era," just as everyone else was. In the tempo of the time, we departed from sound banking practices on occasion, and we failed to discourage others from similar departures. Consequently we cannot avoid our share of the blame for the ruins in the economic system which we could not reconstruct. And if we talked about what assistance could not reconstruct. And if we talked about what assistance the Government had given, we would have to swallow our pride and admit we could not have solved our difficulties alone.

and admit we could not have solved our difficulties alone.

But there are other measures which the Government has taken and is contemplating which we bankers can discuss without loss of pride or prestige. Is it too much for us to do so with a view to helping the Government in its efforts to attain and then to maintain high levels of activity? We drew the first large dividends from the New Deal program carried out for everyone's benefit. It is not too much for us now to lend a hand so that other groups, too, may have opportunities to obtain corresponding dividends. And for us to do so would not be gratuitous benevolence but rather shrewd and enlightened selfishness.

Our economic functions are all that they have ever been. The

Our economic functions are all that they have ever been. The public still entrusts vast sums of its savings and surplus funds to us. It is still our job to see that these funds get invested—put to use. We are still the primary mechanism for expanding credit so that the volume of deposit money will be adequate to carry on the Nation's business.

Right here I would like to say we have an immense responsibility with regard to credit creation. Because we did not live up to that responsibility in the twenties, when we permitted—in fact, stimulated—excessive credit expansion, our leeway has been restricted to prevent damage to us as well as to the rest of the economy. I am sure that should it ever be to the best interests of the Nation to permit a greater expansion of credit than is now possible, the Government will relax those restrictions.

Because of our central economic role with regard to credit and Because of our central economic role with regard to credit and the prestige it engenders, we are in a particularly strategic position to be helpful. We are in intimate contact with private enterprise and know how and why it functions. We know the circumstances under which funds are wanted or not wanted and why. We understand the importance of keeping funds flowing. And we know the depressions and recoveries which may be anticipated with a high degree of certainty from changes in the flow and use of funds. All this grows out of our everyday practical experience, and because of that our economic knowledge and judgment can be of the greatest value to the Nation. greatest value to the Nation.

Take Government spending as an example. I know it is strange for a banker to support the Government's spending policies. But in spite of the shock such an almost unprecedented position may involve I am going to use them as an example.

I know of no other group of private citizens who could do a better job of explaining the Government's deficit spending activities than bankers. They strike at the very spot in the economic system at which we function—the conversion of idle savings into active investment spending. We know that when deposits pile up while loans and investment decline them is a lack of the property ment spending. We know that when deposits pile up while loans and investments decline there is a lack of investment spending. We know that unless the money savings which banks get as deposits are put to use, business activity and national income would decline, and with them our earnings and safety. We know from practical experience that a business firm will not invest when the volume of its products sold and consumed is far from capacity output. We know that with the existing productive capacity the present level of consumption, whether maintained by Government spending or not, will not bring forward any great increases in private investment until the existing capacities have been liquidated by wear and tear and obsolescence. obsolescence.

We know that were Government spending now stopped in an effort to balance the Budget activity would decline and with it tax receipts, so that the Budget would remain unbalanced; that the falling off of orders due to a contraction of Government spending would have the same drastic effects as a stoppage originating in private sources. In short, we know that if recovery is to be speeded up orders going to private enterprise must be brought to a high enough level so that pressures on productive capacities will be sufficient to induce new loans and investments. When the volume of consumption or activity generally is not enough to create the of consumption or activity generally is not enough to create the necessary pressure there are two alternatives: The Nation can let it ride and wait until capital equipment wears down to the low levels of activity. This is a long, hard trail, as everyone knows from 1929–32; in 4 years it was not possible to wear our productive assets down enough. While the Nation was trying to do so business never did get fully reimbursed for the physical capital assets used up. (I might say on the side that while the people wait they might also pray for rain in the form of technological changes, foreign wars, foreign investments, or some hitherto unknown economic

wars, foreign investments, or some markets stimulant.)

On the other hand, the Nation can actively seek to raise the level of activity. This is exactly what Government spending does. As we bankers know, if the volume is sustained and great enough, it will raise activity to a level where it pays private industry to invest. This is exactly the same proposition we are up against in dealing with an individual business; if its sales are coming in regularly at high levels, it comes to us for funds—short or long term—and we extend credit. If its sales are erratic and at low levels, the firm may come to us for funds but won't get them, because we're not in the business of financing bankruptcies.

Instead of criticizing the spending program, we bankers should be explaining the economic necessity for it on the basis of our

Instead of criticizing the spending program, we bankers should be explaining the economic necessity for it on the basis of our knowledge of the mechanics of industry. If we really paid heed to the lessons from our own experience, we would ask the Government not to balance the Budget but to provide for a large enough and sustained enough volume of spending to provide the volume of orders necessary to bring forth high investment. And only when private investment was adequate would we think of asking the surfailment of Government spending.

curtailment of Government spending.

Yet what have the banking spokesmen been saying? I quote from a speech by one of our own Oklahoma bankers:

"Why company on the property of the property

"Why cannot we, as bankers, arouse a * * * protest against a continuation of our present fiscal policies—policies which, if con-tinued indefinitely, will result in only one thing—chaos?" And from a speech by a former president of the American Bank-

And from a speech by a former process.

ers' Association:

"The truth is that through unsound financial practices * * *

they have impaired the country's economic strength and beaten
business down until it is remarkable that it has left as much
vitality as it displays."

These are the scarecrows most bankers are putting in the path

These are the scarecrows most bankers are putting in the path of earnest efforts by government, which we know are sound, to keep activity moving up. So far as facts are concerned, they do not bear out such attacks on the spending policy. And so far as the economic effects on business are concerned, I think it is time bankers recognized that the finances of business were never in better shape. Need I mention the mute figures on bank loans and deposits as symbolic of the financial liquidity of business? Need I mention that the liquidity is a direct result of cash inflow being in excess of cash outgo made possible by the flow of Government expenditures through business channels?

Let me hold up just one more banker on the question of fiscal policies—the chairman of the board of the world's largest bank. I quote from testimony before a special Senate investigating committee:

mittee:

mittee:

"The thing which gives me more concern * * * than anything else * * * is this continually unbalanced Budget."

"* * * every businessman that I know and every banker I know appreciates the danger of this Budget situation. I do not mean, when I say that, the fear of any immediate collapse."

Now here is a charge of impending bankruptcy made almost a year and a half ago. Is it a true appraisal of the financial condition of the Federal Government? If it is, the quotations on Government obligations should be near bottom in view of what has occurred since the statement was made, and most banks should be on the verge if not actually in bankruptcy. the verge if not actually in bankruptcy.

Bankers ought to know how to make a sound analysis of financial conditions—of assets and liabilities, of debts and credits. More than any other group, we know the realities and the fantasies of debt in modern times. We know debt must be expanded in order for business activity, particularly our own, to increase, and that is why modern credit institutions exist. We know, or we ought to learn, there is nothing but nonsense involved in the contention that debt must remain helow some mystically determined level. Such a debt must remain below some mystically determined level. Such a contention is tantamount to saying that an arbitrary psychological fear of debt should limit economic expansion all by itself without

regard to the necessity of debt creation for the effective functioning of modern corporate enterprise.

The plain fact of the matter is this: So long as people save in money terms—in bank deposits and insurance policies, for example—and not in physical asset terms, then there must be debt if economic expansion is to occur. So long as savers will not, because of a desire for safety and liquidity, or cannot, because of the physical arrangements of production, hold direct title to real assets, then there must be one or two or three or even more layers of debt in the financial structure underlying those assets. For example, our railroads and utilities could not have been built had it not been

for a huge increase in debt—an increase which was beyond conception 60 or 50 or 40 years ago. Without debt creation our economic machine cannot function. If business does not create debt, then someone else must; otherwise only business stagnation and decline can be expected. Government, because of its responsibility to make can be expected. Government, because of its responsibility to make the system function, has been doing the necessary debt-creating job. Instead of wasting time complaining about it, we ought to be developing methods for gearing financial arrangements to the highest national output the Nation can attain.

The least bankers can do is to make a sound analysis of the financial condition of the Federal Government. And since most of them have failed to do so I'm going to start the ball a-rolling. I Just want to sort of lay a few facts about the debt and Budget on the line.

First of all I want to dispel some impressions about the size and increase of the public debt. At the turn of the year the gross debt was \$39,400,000,000, an increase of over \$18,000,000,000 since March

No banker that I know would throw away the asset side of a balance sheet and view with alarm the financial position of a business solely from the size and trend of the total liabilities. So, as hess solely from the size and trend of the total habilities. So, as bankers making a factual analysis, I think we should start by subtracting the cash and earning asset items—the balance in the general fund, the stabilization fund, and the proprietary interest in Government corporations and credit agencies. This shows the net debt was \$30,300,000,000. And the increase since early 1933 was less than \$12,000,000,000, some 35 percent less than the increase in the gross debt.

in the gross debt.

But the greatest asset of the Government is the earning power of the people. I don't know how to appraise this for balance-sneet purposes. One of my difficulties is that I've never had much experience with business bankruptcy situations similar to that of the Nation in 1932. I do know, however, that the earning power—
not the capital value—has increased by at least \$25,000,000,000
since early 1933—from no more than forty to no less than sixty-five
billion dollars. Whatever else we bankers say, I think we must
recognize that the increase in this asset has been many times the increase in the whole gross debt, not only the \$12,000,000,000 increase in the net debt. And we must recognize that the size of the debt is purely relative—that its relation to the national income

is the crucial point.

Nor should we forget the restoration of the earning power of the corporate system in adding up the assets behind the Government.

In 1937 profits of all corporations totaled about \$8,000,000,000, according to an estimate of the United States News. This was out according to an estimate of the United States News. This was out of a national income of \$70,000,000,000. In 1929 the "new era" peak profit year, corporate profits totaled eight and seven-tenths billion dollars. Of course this is higher than 1937, but remember that in 1929 the national income was \$81,000,000,000 and prices were about 10 percent higher. Certainly the 1937 results for the corporate system do not suffer by comparison with those of 1929. Certainly the corporate system has regained its full vitality since 1932 when it lost over \$5,500,000,000.

So much for the balance-sheet analysis. Let's turn to the P and L statement. I have already shown the huge increases in the gross income item. Tax collections are about the governmental equivalent of net income before operating charges for a private organization. These are running around \$6,000,000,000 annually, an increase of \$4,000,000,000 over the 1932-33 rate. And cold analysis shows that most of the increase was the result not of higher tax rates but of the higher income of the Nation; the Twentieth Century Fund has estimated that tax collections on the basis of the

tury Fund has estimated that tax collections on the basis of the 1933 national income would be around \$3,000,000,000.

And the burden that the debt places upon revenues has actually decreased. Interest charges are now around \$1,000,000,000, compared with about \$700,000,000 in 1932-33. Instead of 35 percent of revenues they are now about 17 percent of revenues. Not only that, but relative to the national income, interest charges on the public debt are one-seventh less than in 1932-33. I submit that even the best of financial analysts cannot support a charge of overcapitalization against the Federal Government.

I do not deny that the financial position could be better. But I also remember that scarcely any private firm is in so good a position that it could not be improved. As debtors go, the Federal Government is still in A No. 1 shape. Even should the national income remain at its current level, which I do not expect, while the debt increases in accordance with the last Budget, the financial position would be better than it was in 1932-33.

Not only has no harm been done to the financial position of the Federal Government by its fiscal policies, but the financial position

Federal Government by its fiscal policies, but the financial position of the Federal Government by its fiscal policies, but the financial position of other debtors has been improved. That is shown by two facts about debt discovered by the Twentieth Century Fund in a recent study. First, the net debt of State and local governments has declined by about \$2,500,000,000; and, second, the net-debt position of private individuals has shown an improvement of at least \$12,000,000,000—not to mention a decline of at least a few billion in the net debt of nonfinancial corporations. Thus the total governmental debt the people might have to pay off by taxes increased by less than \$10,000,000,000, while the net-debt position of private individuals improved by at least \$12,000,000,000. May I point out that by appropriate tax collections the Government during the years could have balanced the Budget and still have left past 6 years could have balanced the Budget and stin have left private individuals in a better debt position than they were in early 1933? Need I also add that such a Budget policy can be adopted at any time the Nation so desires? The existence of public debts and unbalanced budgets is purely a matter of discretion on the part of the people. Just as a private business firm may choose to have a large volume of assets and a large debt, rather than a small volume of assets and a small debt, so may a nation.

About 6 weeks ago Chairman Eccles, of the Federal Reserve Board,

pointed out that, by drastic reductions in expenditures, the Budget pointed out that, by drastic reductions in expenditures, the Budget can be balanced at any time the people decide they want to do so. There would be a price, of course—the price involved in lower levels of business activity. But, if the people are willing to make the necessary sacrifices, they can have a balanced Budget. I do not believe the people—and I include bankers—are willing to suffer the consequences of balancing the Budget by reducing expenditures. But there is another way of balancing the Budget—increasing taxes and maintaining expenditures. In this way also the people can have a balanced Budget at any time they decide that they prefer a smaller public debt and a less favorable private debt position than now exists.

In pointing out that increasing taxes is a real alternative to

prefer a smaller public debt and a less favorable private debt position than now exists.

In pointing out that increasing taxes is a real alternative to Budget balancing by reducing expenditures, I am pointing the way for those bankers—like the chairman of the board of the world's largest bank—whose No. 1 worry is the continually unbalanced Budget. If their worries are really a heavy burden, they can get rid of them. Let them say increased taxes are necessary; and let them say they are willing to pay their fair share. Let them do this rather than howl for curtailed expenditures at the expense of those without means of support in private industry. And if they do, I for one should be more than glad to back them up, particularly if their proposals were also directed toward modifying the tax structure so that it would bear less heavily on consumption and more heavily on income. Whether popular support would be forthcoming I do not know. It is difficult for everyone—not only bankers—to vote taxes upon themselves. But the leadership of bankers—the financial experts of the Nation—would go a long way toward breaking down resistance.

I have gone at some length into the fiscal policies of government because I am concerned lest an attempt be made to curtail Government spending before private industry has any need to increase its volume of investment significantly—an attempt similar to that made in 1936 and 1937 under business and banking pressure and which can have only about the same kind of results. I am concerned about the possibility that alarmist talk by bankers may be particularly damaging to the recovery now in process and to

concerned about the possibility that alarmist talk by bankers may be particularly damaging to the recovery now in process and to

bankers themselves.

As technical experts on business and economic affairs we bankers should be supporting the spending policies. We don't have to make arguments based upon humanitarian principles—although it would be well for us to listen to them when made by others; we can make the case on the basis of economic and financial prin-

can make the case on the basis of economic and financial principles. As I have already said, we are in the best position to explain the necessity for Government spending when industry is operating below par and to point out that the fiscal position of the Government is sound.

I think, also, we can go a little further at the present time and express dissatisfaction with the administration's plan to let the volume of spending decline during the next fiscal year. I think we may well ask that the present Congress provide, if not definite funds to be spent in any case at least some sort of reserve which we may well ask that the present Congress provide, if not definite funds to be spent in any case, at least some sort of reserve which could be thrown into the breach should private investment not increase during the next year or two as rapidly as the last Budget apparently contemplates. I say this advisedly. The index of industrial production is now around 100 percent of the 1923–25 average. And I know and you know that business is not going to put up any really large volume of investment spending until that index gets above 110 and then keeps going up. And I think we may well advise on the basis of our practical knowledge and experience the desirability of providing adequate safeguards against an economic decline when we are still far from full use of our productive resources.

productive resources.

In saying that we should support the spending program I by no means want to imply that we should give unqualified and uncritical

means want to imply that we should give unqualified and uncritical support to particular activities or methods under that program. All I mean to imply by approval of Federal fiscal policies in this proposition: Spending by Government is necessary to attain recovery in the absence of adequate spending by private parties. How the money is to be spent and for what are entirely different questions. For example, we in Oklahoma know that it is necessary to bolster the incomes of farmers through Government action. Whether the arrangements for doing so should be cost-of-production formulas, parity payments, surplus commodity purchases, soil-conservation benefits, or export subsidies requires further analysis. Another example is public employment for the unemployed. That it is necessary we all admit. But whether it should be on a relief or regular essary we all admit. But whether it should be on a relief or regular wage basis, on road or bridge or power or hospital or school or sewing or music or other types of projects, and on a direct Government operation or a contract basis raises a whole series of economic and social questions which bankers may well discuss on their merits.

What I want particularly to stress, however, is the fact that there is a very large element of practical economics, not abstract justice or sentiment, involved. The major criterion is: How can the money or sentiment, involved. The major criterion is: How can the money be most effectively spent to attain recovery? At the same time, of course, we do want to get the maximum return for the expenditures in terms of lasting improvements to the physical and human resources of the Nation. But it is in the light of the recovery objective that we can make our major contributions to the formulation of the most effective methods of spending the amounts required.

As bankers we know better than anyone else that money spent by private parties as well as governments has the maximum effect on

recovery if the persons receiving it respend it quickly. Now it is quite obvious under the recent economic conditions that the perquite obvious under the recent economic conditions that the persons who will do that kind of respending are by and large those who have the least to spend for consumption. Those who have enough available for consumption and would spend additional amounts for investment purposes have not done so, and will not do so under existing circumstances, simply because with low levels of activity there are no outlets for investment in productive capacities. The plain fact is that those groups who have been and are still able to save have vast liquid resources already; a larger flow of funds to them would only increase savings without increasing investments. investments.

So the conclusion is that the economics of the situation require So the conclusion is that the economics of the situation require money to be put in at the consumption line—to flow to the low-income groups. This is what the administration has been earnestly trying to do. We bankers can help by proposing improvements such as modifications of the Social Security Act to prevent the deflationary effect of building excessive reserves. And in addition why should we not criticize private groups—for example, those pursuing monopolistic price practices—which are preventing the full recovery effect of the spending measures to take place? At times—as in 1936 and 1937—such practices by private groups have a far more potent adverse effect on economic activity than the beneficial effects of the largest volume of deficit spending the Government has undertaken during recent years. undertaken during recent years.

In the narrower confines of our own professional banking activities we also can—and advisedly I add, must—make greater contributions to recovery than we have been making during the past

few years.

I am not going to become party to the blanket charge made by some that we have staged a sit-down strike and are refusing to loan money. My own experience indicates that there is nothing to the charge. And common-sense observation leads me to believe to the charge. And common-sense observation leads me to believe that bankers are no different from other people in gobbling up opportunities to turn an honest dollar. While it may be true that some few bankers intentionally and some few inadvertently have turned down sound loans, the large majority, I am convinced, have made every loan consistent with the current conception of soundness. But, whatever the facts, we are not so aggressive in seeking outlets for our funds that there is no room for greater aggressiveness. Far better for us and for the Nation to transfer our salesmanship from rampant political criticism to making loans. There is another point at which we can try a little economic

our salesmanship from rampant political criticism to making loans. There is another point at which we can try a little economic stimulation. This is interest rates. Even a cursory examination of bank statements shows that banks can lend money very profitably at pretty low rates. What we need is a greater volume of business from private borrowers than we now have. I know a wide range of circumstances affect loan rates and maturities. Yet I feel that something might be done to shave rates down and lengthen maturities in an effort to increase loans. That the rates in some cases are too high is amply indicated by the offers of two New York banks to lend under F. H. A. terms at 4½ percent—undoubtedly an experiment, but I feel sure they haven't gone the whole hog.

whole hog.

I know it is always difficult for us to reconcile ourselves to low interest rates, particularly for long-term investments. But at the present time it will be well for us to ponder the question that unless we do we may not be bankers on the hypothetical maturity

dates of unborn loans.

There is still another thing which we can do. We can offer to do something in conjunction with the Government. And I don't mean one-sided offers similar to those recently made by the stock exchanges. I mean a really earnest effort to sit down with Government officials and figure out how the useless money banks now heald on health to work the west to work. hold can be put to work.

Is it too much to ask of us that we do something for our own

businesses and for ourselves as individuals?

businesses and for ourselves as individuals?

All of us in the Nation are not far from desperate straits if not already in them. While employment is some six or seven million greater than in early 1933, unemployment is still around 11,000,-000, not to mention a couple of million in agriculture and other millions in industry who don't even have the semblance of decent economic opportunities. This is only one symbol of the under use of resources and of the boiling pot of social and economic explosives we are trying to cool off before it explodes. How fast we must travel along the recovery road is indicated by the fact that 50,000 new workers net are added to the labor force every month. Thus far the Government, largely through spending, has carried the major burden, not because it has seen its destinies in that course of action but because so little help has been forthcoming from private sources. It is high time the Government got some real assistance sources. It is high time the Government got some real assistance from those private groups which have the greatest stakes in the economy as it is now organized.

We bankers have at least one of the biggest if not the biggest stake in the United States. It is to our advantage to rebuild the cld economic pump and not to have it replaced with a new pump. For if a new pump is installed I am sure that the bankers and industrialists of today will not again be given the privilege of drawing the first water or the right to hold the most strategic positions on the handle. We ought to be realistic about the whole matter. Unless we use the water we already have, it will not be long before we may have to content ourselves with painful mental images of what might have been. If we do take a belated advantage of our opportunities, we shall be able justly to participate in an economy once again expanding. We bankers have at least one of the biggest if not the biggest

The choice is clear.

Builders of the Future

EXTENSION OF REMARKS

HON. LYNN J. FRAZIER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Wednesday, May 17 (legislative day of Monday, May 8), 1939

ADDRESS BY PHILIP C. EBELING

Mr. FRAZIER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. Philip C. Ebeling, president of the United States Junior Chamber of Commerce, at Valley City, N. Dak.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Every once in a while it is important that we return to fundamentals. Tonight I shall do just that—discuss with you the underlying philosophy of the junior chamber movement. I shall answer your question, "What is it all about?"

No doubt everyone in this room has at some time been asked the questions: "What is the junior chamber of commerce?" "Is it like a chamber of commerce, a service club, a social club?" "Just what

a chamber of commerce, a service club, a social club? "Just what is it?"

It is not a chamber of commerce. While we are interested generally in business and business affairs, our primary concern is not business protection, promotion, or stimulation. We are interested in many other things of a civic, educational, philanthropic, or cultural nature. A chamber of commerce is concerned with the civic as it affects business. We are concerned fundamentally with civic

It is not a service club. Our definition of the word "service" is broader than that of "welfare," and includes generally a man's duties and responsibilities as a citizen—the true definition of "civic." Therefore, you will find us in the forefront of programs or projects that will improve the community, State, or Nation, even though they might involve governmental action—something a service club never does.

It is not a social club, a lodge, or a fraternity. While we encourage fellowship and fraternalism among our members, we use them merely as means to an end—to get effective action by young men

in worthy projects.

Therefore, when people ask you what a junior chamber of commerce is, the only answer you can give is that it is a junior chamber of commerce. It is an organization with a personality all its own.

own.

Listen carefully, as this is the first time you have heard a comprehensive definition of a junior chamber in one sentence: "A junior chamber of commerce is a supplementary educational organization wherein the young men of Valley City may join together in a friendly spirit to inculcate civic consciousness in its membership by means of active participation in constructive projects which will improve the community. State and Nation."

friendly spirit to inculcate civic consciousness in its membership by means of active participation in constructive projects which will improve the community, State, and Nation."

That is a junior chamber of commerce as the concept has finally crystallized. You will notice there are seven ideas expressed in it.

The first idea expressed is that it is "a supplementary educational organization." An intelligent man's education does not stop when he has completed his formal education in school or college. It is a lifelong process. Until this organization was founded a young man had no organized group wherein he could broaden his knowledge or develop his skills in the company of his contemporaries. He either was forced to hopelessly compete in groups with men many years his senior or spend his leisure hours in lonely solitude or "stepping out" in pleasure haunts. In the junior chamber he can supplement his formal education in practical ways and "step in" to his full share of civic responsibility.

It has been said that education consists of three processes: (1) Acquiring information; (2) developing skills; (3) creating attitudes. Here he can acquire first-hand information on the pressing problems of community, State, and Nation. He can develop quickly his skills in leadership cooperation, working with other people, persuasiveness, tact, and all those traits and personal characteristics which will make him a man among men. He can create correct attitudes of fairness, tolerance, patience, faith. This supplementary educational process can work more efficiently, with greater speed, and with practical effect in this company of friendly contemporaries free from artificial barriers.

The best definition of education I have heard is, "It is a preparation which enables a man to better understand his environment.

The best definition of education I have heard is, "It is a preparation which enables a man to better understand his environment, so that he might live in it happily and usefully." Certainly the junior chamber of commerce meets this test and can justly be called a supplementary educational organization.

The second idea expressed in the definition is that it is "a young man's organization." It is the only truly national young men's organization in this country. In 1931, we had 81 member organizations. We now have over 550 organizations with a basic membership of 110,000 young men. These exist in 44 States, the District of Columbia, Alaska, and Hawaii. We have associate members

in Canada, Australia, and China. The idea has been so worth while that it has spread to 16 foreign countries. We can now proudly say, just like the British Empire, that "the sun never sets" on a junior chamber of commerce. And even more proudly we can point out that this has been builded by the voluntary effort of young men without a dime being paid to organizers.

It is strictly a young man's organization with its membership composed of, its policies determined by, and financed by young business and professional men between the ages of 21 and 35 years of age. It must always remain a young man's group, as by this age limit new leadership, membership, and activity are assured. It is a veritable fountain of youth.

It is a representative group wherein worthy young men can find a place. In it Jew and gentile, Catholic and Protestant, Democrat and Republican, rich and poor will be found working shoulder to shoulder for a common goal.

and Republican, rich and poor will be found working shoulder to shoulder for a common goal.

Why shouldn't young men have an organization of their own? There is too much of a tendency to underestimate the abilities of young men. The pages of history chronicle the achievements of young men. Washington was a colonel in the Virginia army when he was 19; William Pitt was Prime Minister of Great Britain when he was 24; Napoleon was Emperor of France when he was 33; Mc-Cormick had invented the reaper and Westinghouse the air brake when they were 23; Shakespeare had written 10 of his greatest plays when he was 32; Sir Isaac Newton discovered the law of gravitation when he was 34; Alexander Hamilton was Secretary of the Treasury when he was 32; and the average age of the Continental Congress, the men who conducted the Revolutionary War, was slightly below 34 years of age. Energy, enthusiasm, and willingness to try—those attributes of virile young manhood can accomplish much. accomplish much.

They can accomplish more by being banded together in their own organization where those attributes are allowed free play. This idea is not new. A short time ago I was in Independence Hall in Philadelphia, the birthplace of this Nation. There I was told that Benjamin Franklin, whose name is synonymous with wisdom, when he was slightly over 21 years old, joined together with other young

Benjamin Franklin, whose name is synonymous with wisdom, when he was slightly over 21 years old, joined together with other young men of Philadelphia into a civic-service organization called the Junto Club. History records that many of the fine things Philadelphia enjoys today were started by that young men's organization—a forerunner of the junior chamber of commerce.

The third idea expressed is "in a friendly spirit." We do not operate as a cold business type of organization. We endeavor through luncheons, dinners, and social events to bring about a spirit of fellowship. The junior chamber makes acquaintances, develops friends, and keeps friendships in repair. Need I say more of the importance of this? We all recognize that friendship is "life's sweetest influence." It is desired by king and peasant alike.

The fourth idea expressed in the definition is "to inculcate civic consciousness." Here we have the fundamental purpose of every junior chamber. Personally, I can think of no more important purpose for which an organization can stand.

What can be more important than impressing people with their duties of citizenship? Too often we prate about the privileges of citizenship and overlook the duties. Too many think that they fulfill their obligations of citizenship if they pay their taxes, contribute to some worthy causes, vote and vote for the best man—or the least bad. Civic consciousness involves far more than that.

It means that we must think in terms of the general welfare and

the least bad. Civic consciousness involves far more than that.

It means that we must think in terms of the general welfare and not individual welfare. An alarming tendency in this country has been the growth of class groups and blocs of all kind. We almost have government by pressure groups. Pressure groups have their proper place, but when they think in terms of their selfish end only they become a threat to democracy.

It means that we must actually put the needs of others above our own selfish interests. The outstanding thing about George Washington to me is the fact that as the richest man in the Colonies, with everything material to lose and little to gain, he nevertheless, put the welfare of his countrymen above his own interest and chose Valley Forge.

It means having faith in your fellowmen, in your leaders, and in the eventual triumph of right. It means tolerance, patience, and "striving unceasingly to quicken the public sense of civic duty; that we may transmit this country not less, but greater, better, and more beautiful than it was transmitted to us," as the last sentence of the Athenian oath of citizenship from ancient Greece tells us.

"High-minded," you say. Yes, high-minded! And there will never be any permanent solution of the problems that bedevil and befuddle us until more and more individuals become high-minded! Intelligence is not enough. Knowledge is not enough. Industry is not enough. We may have any or all of these, and yet the direction in which we go may be wrong.

Laws will not solve our problems. You can't legislate goodness. James Whitcomb Riley said, "the meanest man I ever knew operated within the law." It will ever be thus with laws.

Gold will not solve our problems. The poet reminds us:

"Not gold, but only men can make A people great and strong. Men who for truth and honor's sake, Stand fast and suffer long.
Brave men, who work while others sleep, Who die while others fly—
They build a nation's pillars deep
And lift them to the sky." LXXXIV-App--129

It is only as more and more men accept the philosophy of life consistent with good citizenship that selfishness, greed, and thoughtlessness—those enemies of progress—will give way. Only four philosophies tug at man for his acceptance. "Know thyself," said Socrates, the Greek father of philosophy—knowledge is the highest good. "Be thyself," said Marcus Aurelius, the Roman stoic—personal virtue—as long as I am personally good—that is the highest good. "Exalt thyself," said Nietzsche, the German realist—power—the power that comes from position and money—that is the highest good. But the philosophy of citizenship and the most important one was uttered by a young man 33 years of age. "Give thyself," said Christ—service for your neighbor—if you give your life for him, you will not lose it. You know that philosophy of life. I submit until more and more individuals accept that last philosophy of civic consciousness very little else is of lasting importance.

I submit until more and more individuals accept that last philosophy of civic consciousness very little else is of lasting importance. Fellow Jaycees, you are therefore engaged in very important work. How important is well illustrated by this little story. A man was trying to read the newspaper one night. His small son was playing and making a terrible racket, as children often do. Finally, in desperation, the father tossed down on the floor a picture puzzle of the world cut out from a magazine and told the little boy to put it together. In just a few minutes the son reported that it was completed. The father asked him how he had managed to do it so quickly. The son replied, "Oh, that was easy. There was a picture of a man on the reverse side of the puzzle, and just as soon as I put the man together right the world came out right."

You are engaged in putting young men together right.

You are engaged in putting young men together right.

The fifth idea expressed is by means of active participation in projects. This is an important point—an unique contribution particularly appropriate for a group of energetic, enthusiastic young men. A junior chamber of commerce is not composed of joiners, but rather of doers. It is not another bunch of resoluters. It is not another one of these organizations that meet, eat, belch, and adjourn. It has always been, and may it always be, a project organization. Ever since Henry Giessenbier conceived this idea in St. Louis in 1915, it has been dedicated to action. With the energy, enthusiasm, and willingness to try anything once, so characteristic of young men, it is proper that it should have as its motto, "It will be done." We inculcate civic consciousness by doing, not by talking about it.

In this country we seem to have a fetish for committee meetings and conferences. Too many times that meeting is the last thing ever heard of a worthy project. A familiar way of solving a problem is to appoint a committee, have a meeting, draft a report, file it away. Next year you do the same thing all over again.

away. Next year you do the same thing all over again.

Clarence Day has written an interesting little book called "This Simian World." It is a soliloquizing or philosophizing on what would have happened if some other animal than the monkey had been selected as the base of the evolutionary process. He takes up these animals one by one. It might have been the tiger. Then we would have been slinky, terrifying kind of people, preying on each other and having a great time. It might have been the cow. Then we would have been ruminative, phlegmatic, Carnation Milk contented kind of people. Interesting, however, is the fact that the monkey was selected, and the outstanding characteristic of the monkey is chatter.

Lots of chatter oftentimes but very little action.

The greatest pleasure I get from traveling around the country this year is to see the many concrete evidences of the up and doingness of these young men—in Oklahoma City, to drive in the warm Oklahoma night to the beautiful Taft Stadium to hear the fine symhoma night to the beautiful Taft Stadium to hear the fine symphony orchestra, both junior chamber projects, and hear there that night the first rendition of the new Oklahoma State song, "In Old Oklahoma," a State Jaycee project—in Mobile, to be driven along the beautiful Azalea Trail, a junior chamber project that has brought a personality of its own to Mobile and thousands of tourists every year—in San Francisco to look out into San Francisco Bay, see beautiful Treasure Island rising from the bottom of the bay, and realize that it would not be there with the gorgeous Pacific Exposition thereon, except for the ingenuity, intelligence, and industry of the San Francisco Jaycees. These, and the many others I have seen in many places, are living proof of the worthwhileness of this young man's organization with its inexhaustible leg power. If I had to define a junior chamber in a phrase, the best I know

If I had to define a junior chamber in a phrase, the best I know

is "Young manpower at work"—emphasis on work.

The sixth idea expressed is "in a constructive manner." enough to be doing. It must be constructive and not destructive. It is hard to be constructive—easy to be destructive—hard to be "for" something—easy to be "against" things. This city is full of people who can get excited against civic improvements, but I will wager there are not many who will fight the "good, long, hard fight" for a thing for the public good. I often wish everybody had this little poem emblazoned on their hearts.

"I saw them tearing a building down, A gang of men in a busy town.
With a ho-heave-ho and a lusty yell, They swung a beam and the side wall fell.

"I asked the foreman, 'Are these men skilled, As the men you would hire if you had to build?' He laughed and said, 'No, indeed; Just common labor is all I need. I can easily wreck in a day or two, What builders have taken a year to do.'

"I asked myself as I went my way. Which of these roles have I tried to play?

Am I a builder who works with care,

Measuring life by the rule and square,

Or am I a wrecker who walks the town, Content with the labor of tearing down."

Builders—not wreckers! That is part of our "doing."

The seventh and last idea expressed in the definition is "for community, State and Nation." Of course, the community or city is important. I heard George Verity, chairman of the American Rolling Mills Co., say that he liked to think of a junior chamber as a "philoptimists' club." Philoptimists—not optimists—meaning "lovers of cities." We desire to make our home cities "alabaster cities undimmed by human tears," as the last line of that great song America the Beautiful says. We do want to make our communities happy places where we can live, own property, and raise familles.

I pity, however, the young man whose vision is circumscribed by the city limits. The problems which baffle us now, and whose solution are wrapped up intimately with our future as young men, are State and national questions. We must be concerned with them.

We can't avoid them.

That is one of the reasons why your State and national organizations exist—to express the young man's viewpoint in State and national affairs and to interest you in these questions. We primarily We primarily are concerned, and do a splendid job, in giving parentage, prestige, purpose, and inspiration to member bodies. With just a fraction of the dues that comparable national organizations receive, we enable you to do a good job locally by unloosing a veritable flood of ideas and accumulated experience for you. But part of our function is to make your voice heard beyond the confines of Valley City by joining it with the voices from hundreds of other cities in a non-partisan, nonsectarian manner toward the solution of State and national affairs.

national affairs.

That is the reason why last year your national organization was one of the sponsoring groups behind the McCarran-Lea bill. That bill is called oftentimes the "bill of rights of commercial aviation." That bill, now law, resulted in the Civil Aeronautics Authority being established with powers to forward commercial aviation.

We also were one of the original sponsors behind the Pittman-Robertson bill, which was designed to force the use of conservation tax moneys for conservation purposes. The heads of the United States Biological Survey recently expressed to me their debt to us for the splendid help we gave.

That is the reason why within the past few weeks we have vigorously made known to the public officials of Arkansas, Maryland, and other States our stand for the furtherance and improvement of civil service in the public personnel.

civil service in the public personnel.

That is the reason why this year and last year we have joined health associations in urging the passage of and proper financing of the Venereal Disease Control Act—commonly called the La Follette Act.

Follette Act.

That is why we, as sponsors, have arranged to have introduced in the present Congress two bills. One of these would enable the Post Office Department to put a safety message on every letter as part of the stamp cancelation. The other would authorize the creation of a national defense committee, composed of the ranking members of each of the five committees of the House and Senate that would otherwise dabble piecemeal in this important question. This committee would hold public hearings in order to define just what we are trying to defend, and then operate as a define just what we are trying to defend, and then operate as a

unit in its solution.

That is the reason why we are now undertaking a national survey of the long-term financing needs of small- and intermediate size businesses through our member organizations, which when completed will be turned over to the Securities and Exchange Commission and Congress as a basis for legislation in this im-

portant field.

Notice two things about these things that I have mentioned. First, that we are not a "pressure group" seeking to further the aims of young men only. All the things mentioned are concerned with the general welfare. We don't want any subsidy for young men. We want those things that will make this country a happier and better place for all groups. Secondly, that we, as young men, had better be interested in these significant problems. Con-

men, had better be interested in these significant problems. Consider the last one mentioned, for example—defense. The reason is obvious—21 to 35—we are first-class cannon fodder.

It is important that you be heard. Goethe said, "The destiny of any nation at any particular time depends upon the opinions of its men below twenty and five." Since medical science has advanced man's span of life 10 years, we may now say that the destiny of the particular destination will be determined by the particular of the

tiny of the nation will be determined by the opinions of its young men under thirty and five.

I have given you a definition of a junior chamber of commerce and its philosophy in these seven thoughts. However, I must say more about its educational value. I said before that education involves the creation of attitudes. This is the most vital of the three because it gives direction to the information acquired and the skills developed, and further because attitudes remain after the other two have

departed.

It is, therefore, encouraging to discover that young men have an

attitude of fairness

Fairness will solve nearly any of the problems that bother us. If you had to boil down into one word what Americanism is, you couldn't find a better word than "fairness." "Fairness is the one

indispensable feature of the American tradition," recently said the Supreme Court. Just being fair about matters seems to be the crying need of the time. If businessmen want protective tariffs, if they are fair, they will consider subsidies for others. If farmers want crop control, in fairness, they will want to consider the inter-ests of consumers. If labor insists in certain demands, in fairness, ests of consumers. If labor insists in certain demands, in rairness, the employers' interests must be considered. Fairness implies thinking of the other fellow. It does not lend itself to supreme confidence in one side of the story. Fairness would not result in thinking of America as a grab bag, but rather as a treasure chest in which we place everything we hold dear. It would exalt the spirit of compromise, remembering that this Nation was founded to compromise.

spirit of compromise, remembering that this Nation was compromise.

This is not a true democracy in which we live. Democracies have always failed. It is a democracy in a republic with a limit set beyond which even the majority may not go. Every citizen has certain rights. In this type of government we must have a spirit of fairness developed to the highest degree. Isn't it encouraging to know that an attitude of fairness is being instilled successfully in the young men of America?

Young men also have an attitude of optimism. They have faith and confidence in the future. Skeptics often say to us when they look at some of our committees, "You young fellows are crazy. You can't do anything about that problem, or that problem, or that

can't do anything about that problem, or that problem, or that one." They look at our public personnel standards committee, for example, and say, "Look at that one. You can't do anything about that. The spoils system is literally steeped in people's nature." It is a long hard fight—but we have faith and confidence. Young

men's faith insures progress.

Yes. We have faith and confidence even when the world is in the terrible state of affairs it is in now. And, gentlemen, it is in a bad way. Let me read to you this quotation from a well-known magazine:

"It is a gloomy moment in history. Not for many years; not in the lifetime of most men who read this—has there been so much grave and deep apprehension; never has the future seemed so ingrave and deep apprehension; never has the future seemed so incalculable as at this time. In our own country there is universal commercial prostration and panic, and thousands of our poorest fellow citizens are turned out against the approaching winter without employment and without prospect of it."

Consider this excerpt from a speech in Congress:
"We all know that the people were oppressed and borne down by an enormous load of debt; that the value of property was at the lowest point of depression; that ruinous sales and sacrifices were everywhere made of real estate; that relief laws were adopted to save the people from impending destruction: that deficit in the

save the people from impending destruction; that deficit in the public revenue existed; and that our commerce and navigation

public revenue existed; and that our commerce and navigation were threatened with complete paralysis."

Do those sound familiar to you? You would swear they had been spoken or written within the past 5 or 6 years by some Jeremiah. As a matter of fact, the statement from the magazine is from Harpers of the year 1857—82 years ago, and the speech in Congress was by Henry Clay in the year 1832—107 years ago.

Why shouldn't these young men have faith and confidence? Certainly they recognize history does make carbon copies of itself, and that the bitterest controversies of today will be mere footnotes in the history books of tomorrow. They are a part of a movement that is trying to create attitudes of faith, reverence, self-reliance, tolerance, good will, persistent striving—those pioneer qualities that will solve any problem, regardless of how imponderable the solution may seem.

qualities that will solve any problem, regardless of how imponderable the solution may seem.

I address my concluding remarks primarily to the older men present. When I say "older," I refer to those over 35 years of age. We know that a man may be 75 years of age and yet have the spirit of 25. Probably I should say "more experienced young men." We refer in junior chamber circles jokingly and fondly to those who pass beyond their thirty-sixth birthday as "exhausted roosters." May I say then to you "exhausted roosters." that we have no quarrel with you. We are proud of your accomplishments. We solicit your advice, your interest, your friendship. These young men are not callow youth. We trust you receive them not in the "father and son" attitude, but rather in the "older brother and younger brother" spirit. As brothers we can cooperatively do much.

cooperatively do much.

I have mentioned "young men" many times tonight and stressed their virtues. Here is what Sir Francis Bacon has to say on the

subject in his essays:

"Young men, in the conduct and management of actions, embrace more than they can hold; stir more than they can quiet; fly to the end without consideration of the means and degrees; pursue some few principles which they chanced upon absurdly; are reckless in innovating; use extreme remedies at first; and that which doubleth all errors, will not acknowledge or retract any. Like a badly trained horse they will neither stop nor turn."

(That should take us young fellows down a bit.) But Sir Francis continues:

"Men of age object too much; consult too long; adventure too little; repent too soon; and seldom drive things to a full completion, but content themselves with a mediocrity of success."

Then to prove the point I made of marching along together, he makes it all right by concluding:

"Certain it is good to compound employments of both because the virtues of either may correct the faults of both."

The Bible says, "Old men shall see visions; and young men shall some few principles which they chanced upon absurdly;

The Bible says, "Old men shall see visions; and young men shall dream dreams." We fully realize that we need your visions if our dreams are to come true. We know that you know that these

dreams of energetic, enthusiastic young manhood are needed if your visions are to be immortalized.

These young men are engaged in a very serious business. From them will come the builders of the future. While all the fine young men in this community are not members of this group, certainly from ones with attitudes like these will come those who will

tainly from ones with attitudes like these will come those who will immortalize your visions of a better world.

Back in the days of Mohammed, the prophet, people had great respect for horses with intelligence. The most intelligent ones were selected for war purposes. These war horses were trained to follow the bugle in battle. The great prophet himself had occasion to have some of these horses and went to a famous farm to make personal selections. The horses were pastured in a pasture next to the river. The prophet gave orders that the horses were to be fenced off from the river and left unwatered for 3 days. At the end of 3 days, the bars were taken down, and, of course, the horses rushed in a mad body to the water to quench their thirst. Just as they were about to plunge into the water, the bugle was sounded, and of that great number of horses only 10 answered the call of duty despite their physical needs. Those 10 constituted the

sounded, and of that great number of horses only 10 answered the call of duty despite their physical needs. Those 10 constituted the beginning of the famous "prophet breed" of Arabian horses.

My point is—we seek to breed such a passion for civic service and a desire to sublimate the individual welfare for the general welfare—that from this kind of young men, this "prophet breed" kind of young men, will come the builders of the future.

Yes! Builders of the future. Builders perhaps not of material wealth achieved oftentimes by devious means and by the sacrifices of others. Builders not of a reputation attained by the cheers of the crowd and the huzzas of the thoughtless. Builders, rather, of a type of character that will seek with a hungry heart for a larger and richer life. larger and richer life.

"Isn't it strange that princes and kings, And clowns that caper in sawdust rings, And common folk like you and me Are builders for eternity. To each is given a bag of tools, A shapeless mass, a book of rules, And each must build e'er life has flown, A stumbling block or stepping stone.'

Builders of stepping-stone kind of people because they are the ones who not only hold the secret of personal triumphant living but likewise will be the builders of the future.

Doesn't it make your heart leap with joy to be able to say, "The young men of Russia are marching under the red banners of communism, the young men of Italy are wearing the black shirts of fascism, the young men of Germany are wearing the brown shirts of nazi-ism—but, thank God, the young men of America are wearing the white shirts of constructive effort and peace in this civic service organization of and by young men, but for a better, finer, and greater America"?

Importation of Meat Products

EXTENSION OF REMARKS

HON. BERTRAND W. GEARHART OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 16, 1939

Mr. GEARHART. Mr. Speaker, in the light of President Roosevelt's recent approval of a Government contract for the purchase of beef from far away Argentina for use in the galleys of the American armada the attention of the people has again been called to the alarming increase in the importations of meat and meat products which has occurred within

the last 5 years.

A hasty glance at the record discloses that in 1934, the year when the tariff-reducing policies of the present administration first began to find expression in the so-called reciprocal trade agreements, only 59,000 head of cattle were imported into this country from abroad. In 1937, under the new foreign trade-tariff reducing policies of the Government, the figure was increased to 494,945 head. Only 8,000 pounds of live hogs were imported in 1934. In 1937 this item grew to 16,555,218 pounds, a colossal figure. During the same period the importation of canned-meat products jumped from 46,781,000 pounds to 88,087,000 pounds. These are significant figures.

In the face of the President's assertion that Argentina's corned beef is superior in quality to that which is produced in the United States and of the flooding of the American market with foreign-produced meat products as a direct consequence of our present-day tariff policies, it will be interesting to note just what is happening to our domestic livestock industry from day to day.

Because of the kindness of Mr. Carl H. Wilken, executive secretary of the Raw Materials Institute, who culled the items from the National Provisioner, a foodstuffs traders' magazine, I am able to hand to the Public Printer for inclusion in the Congressional Record as a part of these remarks, the membership of the House having unanimously consented thereto, a tabulation of the figures in respect to the importation of meat and meat products through but one port of entry, the port of New York, during but 1 week of the current year, the week of March 10, 1939.

Mr. Speaker, I am sure that the membership of the House of Representatives and the people of the country will find that which the tabulation reveals very interesting indeed.

The figures and facts follow:

Argentina: Canned corned beef	Pounds 170, 737
Roast beef in tins	28, 026
Brazil, canned corned beef	270,000
Canada:	
Fresh chilled pork cuts	3,985
Fresh frozen ham	4, 890
Fresh frozen beef livers	607
Fresh frozen beef cuts	7, 624
Smoked sausageSmoked bacon	677
Denmark: Cooked ham in tins	3, 224 25, 817
England: Meat paste in jars	20, 017
ESCONIA:	100
Cooked ham in tins	91, 155
Smoked bacon	99
Cooked bichics in tins	13 630
Cooked pork loins in tins	504
Tinned cooked pork butts	402
France: Liver paste in tins	423
Germany:	
Cooked hams in tins	5, 866
Smoked hams	1, 153
Smoked sausage	7, 216
Holland:	
Cooked ham in tins	120, 760
Cooked pork loins in tins	2, 287
Smoked hams	3,320
Tinned cooked shoulders	24, 685
Cooked picnics in tins	13, 362
Cooked pork butts in tins	7,914
Tinned liver paste	994
Hungary:	
Cooked ham in tins	62,907
Cooked picnics in tins	26, 204

Cooked picnics in tins	46, 156 20, 532 227

Mr. Speaker, every pound, every ounce, of that which is listed above could have been produced within the territorial boundaries of the United States by, for, and to the profit of Americans. That it was not is indeed a sad commentary upon the failure of those who are presently charged with the duty of guarding our tariff walls to properly execute the trust that is theirs.

It is high time that something is done to return the American market to the American farmer and the American livestock raiser.

Address by the Postmaster General at Rock Island, III.

EXTENSION OF REMARKS OF

HON. JAMES M. SLATTERY

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES Thursday, May 18 (legislative day of Monday, May 8), 1939

ADDRESS BY HON. JAMES A. FARLEY, MAY 13, 1939

Mr. SLATTERY. Mr. President, I ask unanimous consent of the Senate for the publication in the Appendix of the proceedings of an address delivered by the Postmaster General at the convention of the Illinois chapter of the National Association of Postmasters held at Rock Island, Ill., on May 13, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Illinois is a progressive State and the postmasters of Illinois offer evidence of their progressive spirit by assembling here in such large numbers today. It is always a pleasure to come here. It is good to meet my old friends again and to make new acquaintances. I sincerely regret that my schedule for this trip does not permit me to spend more time with this splendid group. As you

permit me to spend more time with this splendid group. As you probably know, I visited with the Missouri postmasters yesterday at St. Louis, and have an appointment to meet with the Iowa chapter of your organization at Des Moines this evening.

I repeat that Illinois is a progressive State. It is second in the Nation in postal receipts, being outranked only by New York State. The ordinary postal revenues for Illinois for the fiscal year of 1938 totaled more than \$76,000,000, or in excess of 10 percent of the entire postal revenues, and in the current fiscal year you have maintained your position in second place, being far ahead of the next State.

next State

I know you will be interested to learn that the country as a whole, insofar as the postal establishment is concerned, is continuing to show increases in business, and there is no doubt the revenues for this year will set another all-time high. When postal business is good it is generally accepted that commerce and industry are progressing satisfactorily. I know of no one who questions the fact that postal revenues are an accurate barometer of the Nation's business.

I am pleased to inform you that the Postal Service is keeping its place of leadership among the agencies of the Government, and is encouraging all forms of transportation by making use of fast is encouraging all forms of transportation by making use of fast planes, fast trains, and all other speedy transportation methods. The money we pay to the airlines and to the railroads for hauling the mails is of material assistance in the development of these private enterprises. We are using planes to carry mail in all directions in our domestic service. We are sending mail by plane across the Pacific, and are now inaugurating regularly scheduled mailings by plane across the Atlantic.

mailings by plane across the Atlantic.

In addition to a vastly improved air service that is making such rapid strides as to make the whole world neighbors, we are witnessing in this country a marked improvement in railway transportation. The facilities of the major transportation agencies are being constantly improved to provide greater safety, greater comfort for passengers, and greater speed. We in the Postal Service are so closely associated with transportation that we sense

Service are so closely associated with transportation that we sense these improvements and appreciate them more quickly than some of our fellow citizens. The owners and operators of the transportation systems in this country are the real pioneers of progress. They command the respect and admiration of the Nation.

Just a few weeks ago I was called upon to make a trip from New York to Los Angeles to be present at the dedication of the magnificent new post-office building in that city, and made the round trip by rall in 1 week with a whole day spent on the west coast. In making that trip I left New York at 11: 40 on the night of March 8 and went west by way of Chicago, arriving in Los of March 8 and went west by way of Chicago, arriving in Los Angeles at 8 o'clock on Saturday morning, March 11. Returning, I left Los Angeles at 11:30 Sunday morning, March 12, and arrived in Washington at 8:25 on Wednesday morning, March 15. Such a speedy trip by rail in a comfortable, modern, de luxe train both ways offers ample testimony of the efficiency and ingenuity of the relired management of today.

of the railroad management of today.

When we compare the present-day transportation methods with those of the early days of the Postal Service we get some idea of how grateful we should be to the men who have had the courage to pioneer and plan and to provide these modern travel con-

In the early days of the Post, as it was then known, the function of the post office was merely to receive, transport, and deliver letters and newspapers. Postage rates then were higher than rates prevailing today; the rate for a single letter was 6 cents for a zone distance of 30 miles, while today it is only 3 cents for more than 100 times that distance in many directions. The carrying of the mails was very slow but as fast as could be expected in those days. The horse was the fastest carrier available. The roadways and lanes were rough. In many instances travel over the trails was hazardous. Yet even under those conditions the mails moved with reasonable regularity from the more populated sections to the remote outposts.

In the early days the mail carriers really blazed the trails—going onward in the march of progress until mail was carried in regular and orderly fashion from coast to coast. Mechanical means of transportation followed; passenger service was combined with of transportation followed; passenger service was combined with the carrying of mail and express, and improvements made from time to time eventually resulted in the amazingly efficient system which is in operation today. An agency that started for the sole purpose of carrying mail matter has developed with the country, and following the improvement of business practices has introduced special features for the accommodation of the people, such as postage stamps for the prepayment of postage; registered mail for the protection of valuable articles; city, village, and rural delivery; nostal money orders; special delivery; nostal savings; and livery; postal money orders; special delivery; postal savings; and the air mail.

The postal establishment occupies an enviable position. It serves all of the people at all times. Throughout its long history it has been regarded as the most necessary agency of Government. Those who are privileged to serve in it have a rare opportunity to do something really worth while for their fellow man.

Since I have been Postmaster General I have had an opportunity agreed the with and observe mettly closely the postmasters and

Since I have been Postmaster General I have had an opportunity to associate with and observe pretty closely the postmasters and postal employees, and I am proud to say that the personnel of this Department for loyalty, industry, and efficiency is not excelled by any other group in America. There have been brought to my attention so many cases of self-sacrificing service, accounts of men and women who have done things far beyond the ordinary requirements, that I could spend hours relating them to you. I know that the people of this country appreciate the fine work you are doing, and I take advantage of every opportunity to meet with you at your conventions so I can tell you about it and thank you for your whole-hearted cooperation. Postmasters are doing good work and the postal employees are doing a good job because they are good people, carefully selected, and happy in their jobs.

The Postal Service is well-timed, well-disciplined, and sensitive to the needs of the people. It is a friendly organization. Knowing that we enjoy such a reputation and that we enjoy to the fullest extent the confidence of our customers should make us all assume

that we enjoy such a reputation and that we enjoy to the times extent the confidence of our customers should make us all assume the full responsibilities of our positions. I am sure that the postmasters of the State of Illinois appreciate the importance of their places and are ready and eager to do their part in keeping up to the high standards set for them. If this is to be accomplished, we the high standards set for them. It this is to be accomplished, we must not assume a self-satisfied attitude, take it for granted that we are well organized and sit back complacently and watch the wheels go round. What we need is eternal vigilance on the part of everyone. This is a tremendously busy and vitally important communication system, and we dare not relax our supervision even

communication system, and we dare not relax our supervision even for a moment.

We in the Department adopt policies, promulgate regulations, and in the broader sense manage the affairs of the postal establishment. But you men and women in the field are face to face with the everyday service problems which at times must become monotonous. Some of you may feel that your part in this vast organization is not so very important—but let me assure you that the postmaster in the smallest office, the carrier on the most sparsely settled rural route, the employee in the assure you that the postmaster in the smallest office, the carrier on the most sparsely settled rural route, the employee in the most obscure position in the service is just as important as the postmaster in the largest city. Stop and consider for a moment what would happen to the millions of pieces of mail that are deposited with our service in the principal cities of the Nation if the post offices in those cities did not have means of transporting them to the smaller offices through which they reach the addressees. On the other hand, the big post offices would not be so big if they did not receive mail for delivery to their patrons from the thousands of cities, towns, and hamlets throughout the country. So I say to you in all sincerity that the Postal patrons from the thousands of cities, towns, and hamiets throughout the country. So, I say to you in all sincerity, that the Postal Service of the United States is an organization which depends for its efficiency on the thousands of small organizations and units maintained within the system itself. So, bear in mind always that your part in this organization is most important. Be proug of your opportunity to do your share and be assured that your efforts are greatly appreciated.

of your opportunity to do your share and be assured that your efforts are greatly appreciated.

This is a great country because it is a democracy, made up of a confederation of States, which in turn are composed of a group of individual communities. Like the individual post office the community operates independently insofar as its local needs and requirements are concerned, and like the organization of the postal system these communities all band together and form into one nation under a single government for the protection of the national interest and for the common good

interest and for the common good.

The Government of the United States is based on a Constitution calculated to grant equal rights and privileges to all, and those montrol of Government are subject to the will of the people. We are weathering the storm of the present-day unrest throughout government, and have chosen for our leader a great statesman and great humanitarian, a great leader, who has worked untiringly for the preservation of our American institutions, Franklin D. Roosevelt. the world because we have maintained our democratic form of

I am very proud to serve in this administration and I congratulate you men and women on the part you have played in attaining our objectives. I say this without any partisan feeling whatsoever, and bespeak your continued cooperation in keeping the Postal Service where it rightfully belongs—as the leader of all Government activities.

Activities of National Labor Relations Board

EXTENSION OF REMARKS

HON, SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES Thursday, May 18 (legislative day of Monday, May 8), 1939

STATEMENT BY HON. ROBERT F. WAGNER, OF NEW YORK, BEFORE HOUSE COMMITTEE ON LABOR

Mr. MINTON. Mr. President, this morning the senior Senator from New York [Mr. WAGNER] appeared before the Committee on Labor in the House and made a very interesting and informative statement concerning the National Labor Relations Act and the activities of the National Labor Relations Board. I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to

be printed in the RECORD, as follows:

Mme. Chairman and members of the committee, when I appeared before this committee in 1935 to urge the enactment of the national labor relations bill I did not present credentials from organized labor or organized business. I could not do so then and I cannot do so now. I spoke to you then as I speak to you today only as one who believes profoundly in a very simple principle. This principle is that democracy cannot work unless its homeoned in the feature as well as the realing beath and these men principle. This principle is that democracy cannot work unless it is honored in the factory as well as the polling booth, and that men cannot be truly free in body and in spirit unless their freedom extends into the places where they earn their daily bread.

To translate this very simple principle into practice, I drafted and introduced in Congress the law now before you in order that

those who work in industry might have the same right of self-organization and self-expression, the same power to protest against injustice and to advance their mutual interests, which is enjoyed by those who run industry. This committee, under the chairman-ship of that friend of justice and of man, Billy Connery, the co-sponsor of the measure, placed its stamp of approval upon the national labor relations bill in 1935, because he believed, as I did,

national labor relations bill in 1935, because he believed, as I did, that the bill protected a very fundamental American right.

In the 4 years that have passed since then there has been nothing to change my views, and I sincerely believe that there has been nothing to change your views, about the fundamental soundness and justice of the National Labor Relations Act.

If we look abroad, we find that the suppression of the rights which the Labor Act seeks to preserve and defend was almost invariably the first step of those dictators who have supplanted democracy with the totalitarian state. Look to those lands where the liberties of the workingman have been crushed or restricted, and you will find the places where liberty of thought, liberty of and you will find the places where liberty of thought, liberty of expression, liberty of religion, and government by the people have been slain and buried. Look to those lands abroad where the basic principles of the Labor Act are so well accepted that they are no longer even a subject for debate or discussion, and you will see there the torch of democracy still held high above the darkness and confusion of the Old World.

Within the boundaries of our own fair country, the wisdom of within the boundaries of our own fair country, the wisdom of the step we took 4 years ago in approving the Labor Act is even more clearly revealed. Not even once in 18 sucessive decisions has the Supreme Court of the United States nullified a single line of the act. Not even one leading industrialist in the country today, who has the respect of his fellow citizens, disagrees openly with the who has the respect of his fellow citizens, disagrees openly will the underlying purposes of the act. Not even one important labor leader in the United States today wants to repeal the act. No important political party in the United States today has failed to declare itself in favor of the rights the act protects. To those of us who remember the past, it seems almost incredible to believe, but we know it to be true, that the bickering and differences about the labor Act have now reduced themselves to mere matters of detail. Labor Act have now reduced themselves to mere matters of detail.

It seems to me tremendously important to recognize the vital

progress represented by the general acceptance of the need for the machinery already established and functioning for the pres-ervation of a fair industrial peace. It is even more important that the whole Nation now is persuaded that the hallmark of industrial peace is economic freedom. It is hard for us to realize that as recently as the administration of President Cleveland, which some of us here can remember, the only machinery the President of the United States had for settling strikes was the Federal Army. It is hard for us to realize that in the year 1935, when this law

was enacted, 58 leaders of the American Bar expressed publicly their belief that it was unconstitutional for the Government to protect the most precious of all industrial liberties. We are prone protect the most precious of all industrial liberties. We are prone to forget that before the act could benefit by the Supreme Court approval of it, a great industrial controversy arose in which more than 300 persons were injured by violence and 18 workers were killed by men bearing the emblems of the law.

Despite all the din and commotion about the Labor Act today, we have come a long way since the times to which I have just referred—a long way in bringing peace to industry, a long way in bringing liberty to labor, a long way in applying the American idea of freedom on a 100-percent basis.

The National Labor Relations Act, as none today will deny, is the symbol of this progress. To destroy or emasculate the act

the symbol of this progress. To destroy or emasculate the act would be to repudiate and betray this progress. On the other hand, to say that the act is perfect, that nothing can possibly be done to improve its effectiveness, would be to deny the principles of growth upon which all progress rests. I have always tried to avoid, and I know that all thoughtful citizens are desirous of

avoiding both extremes.

The National Labor Relations Act and the national policy which it embodies are not before this committee under indictment as a culprit, begging for vindication, or running the risk of conviction and punishment. The act and the policy it represents come before this committee in the full pride of achievement, asking only for a fair hearing, a chance to demonstrate great accomplishments, and a willingness to let reason guide the pathway to the future.

The law as adopted by Congress was simple in outline and sound in conception. It did not propose to establish compulsory arbitration, to fix hours, wages, or working conditions. It did not displace the conciliation functions of the Department of Labor. It did not interfere with the normal exercise of the employer's rights to hire or fire, or to operate his business in his own ployer's rights to hire or fire, or to operate his business in his own way. All it did was to codify and clarify the age-old bill of industrial rights, and to prohibit the specific practices that were antagonistic to the realization of these rights. The discriminatory discharge, the "yellow dog" contract, and the company-dominated union were proscribed. The law required the employer to bargain collectively with representatives chosen by a majority of employees in the appropriate unit, and authorized the holding of elections to determine employee representation. By these means the act was designed to mitigate bitter industrial strife over employee organization and representation, and to encourage the voluntary settlement of controversies over wages, hours, and working conditions around the conference table. The procedural provisions of the law followed almost verbatim the text of the Federal Trade Commission Act. Commission Act.

The task before this committee is difficult, not because of any uncertainty about the essential soundness of the act, but rather because of the multiplicity, the complexity, and the contradictory character of the proposed amendments to the act. Some of these amendments, whatever their intent, would clearly destroy the basic purposes of the act. Some of them, whether wise or unwise, are the product of an unfortunate labor struggle which we all hope will quickly end. Some of them, undoubtedly, are based upon a genuine desire to make the Labor Act a more effective method of accomplishing its accepted objectives.

method of accomplishing its accepted objectives.

The first step toward a fair-minded inquiry as to what, if anything, should be done to improve and perfect the Labor Act is necessarily an examination of what has already been accomplished under the act. The real birth of the act came with the five Supreme Court decisions of April 12, 1937, upholding the law in full and giving the Labor Board the power to seek its enforcement through the circuit courts of appeals. In order to demonstrate the effectiveness of the Labor Act toward promoting industrial peace, once it was implemented by the courts, I have prepared a number of charts, demonstrating in graphic detail the resolute march toward peace and justice in industry. Chart No. 1 shows that in 1938, the first full year of the act's operation under the Supreme Court's mandate, there were only about half as many strikes, one-third as many workers involved, and less than one-third as much working time lost as in the year 1937. Indeed, the number of workers involved in American strikes

1937. Indeed, the number of workers involved in American strikes last year, in relation to total population, was substantially lower than in Great Britain, notwithstanding that country's much-

heralded progress in labor relations.

The record for 1938 not only shows a tremendous improvement over 1937 but it represents the best record in recent years.

The steady upward trend in the number of strikes during 8 successive years beginning in 1930 was definitely reversed.

Fewer workers were involved in strikes during 1938 than in any year since 1932.

Less aggregate working time was lost through strikes in 1938 than in any year since 1931, although the tempo of business activity for the year 1938 as a whole was higher than in 1932, 1933, 1934, and 1935. Moreover, the rapid stepping-up of business activity in the second half of 1938 was not accompanied by a corresponding increase in labor strife, and no such increase is on the horizon at the present time.

This solid improvement in labor relations is due largely to the

operation of the Labor Act, which is rapidly eliminating the causes of strikes over the fundamental rights to organize and bargain of strikes over the fundamental rights to organize and bargain collectively. In chart No. 2, the black area at the base of the bars represents disputes over wages and hours; the heavy shaded area in the middle of the bars represents disputes involving the major issues, in whole or in part, of union recognition, discrimination, closed shop, or other organization matters; the light area at the top of the bars represents miscellaneous controversies.

Chart No. 2 shows that the proportion of workers involved in "organization" strikes declined from about 60 percent in 1937 to 33 percent in 1938, a level far lower than the average for the past

percent in 1886, a 1886.

10 years.

Chart No. 3 shows that the proportion of working time lost through "organization" strikes declined from 76 percent in 1937 to 44 percent in 1938, a level lower than in any year since 1932.

And these are figures for all strikes in the United States, not simple these which occur in interstate industry or are involved in ply those which occur in interstate industry or are involved in cases before the Labor Board.

cases before the Labor Board.

Chart No. 4 shows very clearly just how industrial strife is giving way to the orderly processes of law. For each month between the appointment of the Labor Board in 1935, and the end of the last fiscal year (June 1938), the chart indicates in a shaded bar the number of new strikes, and in a black bar the number of new cases filed with the Board. Notice how significantly the trend is disclosed. In the first few months of the Board's operation, there were more cases filed with the Board than strikes called. But as resistance to the law stiffened and injunction suits multiplied this proportion shifted. All during 1936 in this strikes caned. But as resistance to the law stiffened and in-junction suits multiplied, this proportion shifted. All during 1936 and through March 1937, there were more strikes called than cases filed. The turning point came in April 1937, with the Supreme Court decisions upholding the law. Beginning in May 1937, and in every month since, the number of cases filed with the Board has averaged three and one-half times the number of strikes.

The contrast is even more significant when limited—as it should e—to "organization" strikes, represented by the darker area at the be-to base of the shaded bar. Since May 1937 the number of new Board cases each month has ranged from three and one-half to ten times the number of "organization" strikes.

ten times the number of "organization" strikes.

Substantially the same story is told by chart No. 5, comparing the number of workers involved in new Board cases with those involved in new strikes. Since May 1937 the number of workers involved in Board cases has ranged from one and one-half to eighteen times the number of workers involved in "organization" strikes. The tendency of workers to take their cases to the Board rather than go on strike is even more marked today than in June 1938, the left month indicated on this particular chart.

than go on strike is even more marked today than in June 1938, the last month indicated on this particular chart.

Finally, let us look at the record on sit-down strikes. The Supreme Court put the final stamp of illegality on sit-down strikes in its very recent decision in the Fansteel case, which embodied views I have expressed from the beginning. But let it be noted that it was not the Fansteel case that stopped sit-downs. The sit-down flared in the early months of 1937 preceding the Supreme Court was not the Fansteel case that stopped sit-downs. The sit-down flared in the early months of 1937, preceding the Supreme Court decisions upholding the Labor Act, and as promptly declined in the months following these decisions in 1937. This is demonstrated graphically by chart No. 6, showing the number of sit-down strikes and workers involved since January 1937. At the peak, in March 1937, there were 170 sit-downs, involving 167,000 workers. The chart shows the very steep decline that followed promptly upon the Supreme Court decisions upholding the act. All through 1938 both the number of sit-down strikes and the number of workers involved hugged the zero baselines.

In brief, when workers were afforded a peaceful, valid remedy for eliminating the grievances at the root of the sit-down strikes, the sit-downs virtually disappeared from the American scene. Once again the American people have demonstrated the wisdom of the philosopher's statement that "It is only by instigation of the wrongs of men that what we call the rights of men become turbulent and

These statistics of declining labor disputes tell only part of the story about the better industrial order which is gradually emerging. story about the better industrial order which is gradually emerging. In the last 2 years alone, several thousand new labor agreements have been signed, and the ranks of organized labor have more than doubled. Almost entirely through the informal method of achieving compliance, the law has provided a peaceful forum for over 20,700 cases involving close to 5,000,000 workers. Ninety-four percent of the cases under the act have been adjusted without even issuing a complaint or holding a formal hearing. Almost 250,000 workers have been restored to their jobs after strikes or lockouts and over 15,000 after discriminatory discharges. More than 600,000 workers have participated in about 2,000 elections conducted under the law, and over 2,000,000 workers have joined in petitions for elections or certifications of representatives. Resort to the democratic procedure of the ballot box has become so frequent that in the last fiscal year, such cases involved a majority of the workers the last fiscal year, such cases involved a majority of the workers who invoked the machinery of the act. The interesting fact is that this simple procedure for industrial democracy, once vigor-

ously opposed in some quarters when invoked by workers, is now being demanded by employers themselves.

Going hand in hand with the increased enjoyment of industrial freedom is the increased enjoyment of civil liberties in hundreds of communities which had never before known their full blessings.

While the law has been exerting its pacific influence in the day-

While the law has been exerting its pacific influence in the day-to-day life of industry, it has stood up well in the courts. In 18 successive cases before the Supreme Court, as I have said, not a line of the statute has ever been held to contravene the constitutional rights of any citizen.

These facts, Mme. Chairman and members of the committee, are the fuel to feed our thinking about the future of the Labor Act. If we nourish ourselves on these facts instead of getting our minds giddy with frothy innuendoes and half-baked propaganda, we shall do justice to the great responsibility before us. These facts demonstrate that the basic objectives and philosophy of the act are sound. For this reason the ultimate test of whether any

particular amendment is sound or unsound is whether it advances the main purposes of the act and conforms to its essential

philosophy

In studying the transcript of the testimony given by the sponsors of amendments before your committee I have noted that they freely criticized the act or its administration, generally or in specific instances. But none of them presented a detailed explanation of each amendment, just how it would eliminate the alleged evils described, and just what effect it would have upon particular groups or upon the operation of the act as a whole.

Without questioning in the slightest the motives of those offering amendments, I believe that some of the amendments proposed are unsound, on the basis of sufficient knowledge and experience already available. But in discussing some of them I do not mean to imply that I approve of all others, or that my views about those I discuss are unalterably fixed, no matter what these hearings may

reveal.

For example, the amendments of Mr. Anderson, as well as those of Mr. Hoffman, deny the protection of the Labor Act to workers who strike to enforce legitimate demands regarding hours, wages, and working conditions. In other words, the employer would be entirely free under these amendments to refuse to meet or talk to the strikers' representatives and to destroy their organization by methods of coercion and intimidation. No amendment could have

more unfortunate results.

When Congress included strikers within the definition of "emwhen Congress included strikers within the definition of "employee" for the purposes of this act, it did not create a new status or invest them with new rights. It merely followed the common-sense rule that a strike was the very time when fair play and collective bargaining became most critically necessary to restore peace. To nullify the Labor Act when a strike starts, would be like turning off the water hose when a fire breaks out. Would be like turning on the water nose when a fire breaks out. This rule that a strike or lockout does not terminate the employment relationship was established by our courts long before the Labor Act was passed. And the American Law Institute in its restatement of labor law has given this principle its stamp of approval.

Another class of amendments, also sponsored by Mr. HOFFMAN. would impose restraints of various kinds upon employees. These proposals, such as the now famous proposal to prevent interference from any source, are put forward on the broad ground that

the law as now written is one-sided and unfair.

The frequently heard charge that the Labor Relations Act is unfair results from the device of looking at the act in an intellectual vacuum instead of placing it in the context of our whole industrial life. In this intellectual vacuum, since the law confers direct protection upon employees alone, it is one-sided in the same sense that a workmen's compensation law is one-sided because it pays compensation to employees alone. But when we take the Labor Relations Act out of this intel-

lectual vacuum and place it in the living context of our whole social system, the criticism that the act is one-sided or unfair social system, the criticism that the act is one-sided or uniant is stripped of its improper setting and shown in its true light. For laws are not sterile propositions of logic, but instruments of human adjustment among the various individuals and groups in a real world. The test of whether a law is fair, is whether in conjunction with the other laws and facts of society, it establishes a fair relationship among the people and groups with which it deals. By this test, the Labor Act is eminently fair.

which it deals. By this test, the Labor Act is eminently fair. Certainly the employer has the right to bargain collectively through the corporation and through the Nation-wide trade associations. Certainly, in dealing with labor and in all other business affairs, he has the privilege of selecting his own spokesman by majority rule. No working group has ever challenged the employer's right to use the collective bargaining procedure in dealing with his employees, his competitors, and the general public. As for the claim that the act should be amended to prevent labor unions as well as employers from "interfering" with the organization of workers, one might as well say that the law should be amended to prevent trade associations from "interfering" with the organization of employer groups.

should be amended to prevent trade associations from "interfering" with the organization of employer groups.

At the present time, there are over 400,000 active corporations operating in the United States, with total net assets exceeding \$303,000,000,000. In addition to these aggregations of organized capital, there are 6,000 State and local trade associations, 2,300 chambers of commerce, and 2,000 interstate and national trade associations embracing every line of industry. The National Association of Manufacturers, when it came before Congress in opposition to the Labor Act, spoke for 50 trade associations covering tion to the Labor Act, spoke for 50 trade associations, covering about 70,000 corporations employing over 2,000,000 workers. I do not need to go into the story of interlocking directorates, super-holding companies, and financial empires, to prove that the simple right to organize afforded labor under the Labor Act has been and is being enjoyed in greater measure by industry without challenge

In recognition of these facts, the Supreme Court of the United States has declared that the act is not "onesided." Chief Justice Hughes said for the Court in the Jones and Laughlin case:
"In its present application the statute goes no further than to safeguard the right of employees to self-organization and to select

representatives of their own choosing, for collective bargaining or other mutual protection without restraint or coercion by their employer. That is a fundamental right. Employees have as clear a right to organize and select their representatives for lawful purposes as the respondent has to organize its business and to select its own officers and agents."

Nor is it true that the Labor Act affords legal remedies to the worker in the economic struggle that are "unfair" in comparison with the legal remedies afforded to the employer. So far as violence in industrial disputes is concerned, the laws of the States and municipalities affording protection against violence apply to the worker as well as to the employer; and the employer, because of his superior economic strength and political position, can invoke these laws much more easily in his behalf. The use of the injunction in labor disputes in many State courts is another powerful weapon which the employer has at his disposal in the labor struggle. And it is an historic commonplace, reinforced by the recent gle. And it is an historic commonplace, reinforced by the recent \$700,000 treble damage judgment in the Apex Hosiery case, that the antitrust laws have been used more drastically against labor than against the monopolies they were designed to eliminate.

In addition to a legal system weighted heavily in his favor, the

employer has at his disposal superior economic staying power, more money, better legal counsel, and better access to the instruments of public opinion. Against all this, the Labor Act gives the worker nothing but the right to institute a lengthy legal proceeding to protect his right to organize and bargain collectively, a right theoretically recognized by our law for a hundred years. To call this act "unfair" is, to my mind, to evince a case of

economic astigmatism.

There is nothing new about this charge of "unfairness." It has been raised again and again in recent years—and raised uniformly, I may add, by people who have never lifted a finger to protect the legitimate rights of labor. It came up in the hearings on the Norris-LaGuardia Act, on section 7 (a) of the N. I. R. A., and on the Railway Labor Act amendments of 1934. It was fully considered by this committee when the Labor Act was passed, and the report of this committee clearly revealed the animus behind all proposals based upon this claim. This report said:

"What is really sought is a legal strait jacket upon labor organizations, on the specious theory that such organizations have no more legitimate concern in the organization of employees than have the employers themselves. But the bill seeks to redress an inequality of bargaining power by forbidding employers to interfere with the development of employee organization, thereby reand raised uniformly, been raised again and again in recent years

fere with the development of employee organization, thereby removing one of the issues most provocative of industrial strife and bringing about a general acceptance of the orderly procedure of collective bargaining under circumstances in which the employer cannot trade upon the economic weakness of his employees."

Your report further recognized that such proposals would nullify the sound purposes of the Norris-LaGuardia Act, and would re-establish all the abuses of the unfair labor injunction, abuses

establish all the abuses of the unfair labor injunction, abuses which it took 7 years to have removed from the Federal courts by congressional action.

Therefore I say that the proposals to make the Labor Act less "one-sided," to "equalize" it, to prevent "interference from any source," are based upon the reactionary view that the worker should not have the right to organize, or upon the false view that today the worker has become a privileged character, receiving more than the just fruits of his labor. Such proposals are designed more than the just fruits of his labor. Such proposals are designed to destroy the equality of bargaining power that the Labor Act strives to make possible, and to restore labor to its earlier status

as the economic underling.

Fair-minded and far-sighted employers who have given the principles of the act a fair trial, realize that while the Labor Act is limited in its scope, it is not one-sided, since it confers benefits upon employers who are wise enough to appreciate its value. These employers—and they now represent the great majority—are not numbered among the unremitting critics of the

act and of its administration.

act and of its administration.

The unremitting critics of all the Labor Act stands for do not represent the typical American employer. To understand better what they do represent, let us take for example the anti-labor activities of the National Metal Trades Association, brilliantly exposed in a recent report by the Senate Civil Liberties Committee. This employers' association, embracing 952 metal products manufacturing plants east of the Mississippi River, has for years carried on a ruthless campaign against the right of labor to organize and bargain collectively. Through a closely-knit organization, the association has exercised complete control over the labor policies of its members and made available a variety of ganization, the association has exercised complete control over the labor policies of its members and made available a variety of union-wrecking services in time of need. It promoted company-dominated labor organizations and gave advice and assistance in combating free trade unions. It maintained a blacklist of union members. It mobilized strikebreakers and supplied strike guards, many of whom had been convicted of felonious crimes. It supplied labor spies who ferreted out the organization activities of workers, rose to influential positions in unions, created dissension, and incited strikers to riot and violence. To meet emergency demands for spies, guards and strikebreakers, the association maintained at all times a substantial war chest or reserve fund. In these activities, the association did not hesitate to violate or circumvent State laws requiring the licensing of espionage agencies. espionage agencies.

It goes without saying that the association opposed the passage and enforcement of section 7 (a) of the N. I. R. A. It likewise fought the National Labor Relations bill in Congress, and 4 days after its enactment circulated to its members an opinion of the National Association of Manufacturers that the law was unconstitutional. The efforts of the Federal Government since 1933 to protect labor's rights only intensified the terroristic activities of the association to defeat those rights, going even to the point of bringing economic pressure on businessmen who counselled a more enlightened labor policy.

For advocating obedience to the law of the land, a great in-dustrialist of my State was denounced as "a dangerous man." Gustrialist of my State was denounced as "a dangerous man." For advocating recognition of labor unions, another industrialist was denounced as a "yes" man for labor racketeers. Even after the Labor act was upheld by the Supreme Court, the association defied its principles by advising its members to post "statements of policy" instead of entering into signed agreements with labor organizations. Today, while some of the association's activities have been modified as a result of the Senate exposé, its leadership, its structure, and its fundamental opposition to collective bargaining remain unchanged. bargaining remain unchanged.

The Senate Civil Liberties Committee did not exaggerate when it concluded that this powerful association of manufacturers, engaged in a concerted and planned campaign to nullify the duly enacted national labor policy, presented a challenge to Govern-

ment itself.

In the light of the committee's disclosures, it is easily understood why the association anticipated the Senate investigation by stripping its files of information on espionage and strikebereaking, and altering its bookkeeping methods to conceal its espionage account. It is more difficult to understand, however, how the association for years avoided paying income taxes to the Federal Government under the claim that its functions were civic and

Congress and the public will be interested to know that while the association's labor spies were plying their nefarious trade, many of the association's members were enjoying the benefits of millions of dollars' worth of United States Government contracts. Thus has the Federal Government unwittingly subsidized the most inexcusable violations of its own laws. For example, the Yale & Towne Manufacturing Co., one of the association's leading members, obtained over \$1,000,000 in Government contracts while employing a Metal Trades Association spy to worm his way into the confidence of its employees. This industrial termite made regular reports to the company officials. In 1936, he managed to get himself elected vice president of the local union; within a year, its membership fell from 243 to 21.

Just as I warn against affirmative amendments placing danger-

ous new obstacles in the way of the worker's right to organize, so I do not favor negative amendments, reducing the scope of the fair rights accorded to workers under the present act. Thus, I oppose Mr. Hoffman's amendment to destroy majority rule, a rule which simply applies to our economic life the honored principles of our political system. Another of Mr. Hoffman's amendments would require the majority of those representing employees in collective bargaining to be employees of the employer in question, and his bill goes so far as to exclude from the purview of the act all labor disputes in which the participants do not stand in the proximate relation of employer and employees. Your committee report in 1935 rightly denounced such proposals as depriving workers of the aid and the benefits of national labor organizations.

I likewise oppose Mr. Anderson's amendment to eliminate completely the prohibition against interference, restraint, or coercion of employees in the exercise of their right terrestrict.

of employees in the exercise of their right to organize. If this amendment were adopted, there would be no Labor Act.

While I appreciate the good spirit in which they are offered, I

While I appreciate the good spirit in which they are offered, I do not agree with the amendments of Mr. Barden and Mr. Hartley, removing the present provision that employers shall not "interfere" with the self-organization of their workers. This amendment would remove a form of protection recognized by the principles of the War Labor Board and section 7 (a) of the N. I. R. A., and which labor now enjoys also under the Railway Labor Act, the Bankruptcy Act, the act to create the Coordinator of Transportation, the Norris-LaGuardia Act, and the various State anti-injunction and labor-relations laws.

The ban against "interference" has been of central importance in protecting the right to organize under all these statutes, since it embraces a multitude of activities which would not be reached by specific prohibitions written into law, and would not be included within the range of such narrower concepts as "restraint" or "coercion."

or "coercion."

What I have in mind is illustrated by the following employer activity in the Remington-Rand case, involving several A. F. of L.

(1) Mr. Rand, president of the company, hired "Crying Nat" Shaw, so-called "prince of provocateurs," to do undercover work and furnish information on "radicals" among the strikers. Shaw found none, and Rand refused to pay him for his services.

(2) Shaw tried unsuccessfully to bribe the president of the Connecticut State Federation of Labor.

(3) Rand paid bonuses to strikers who went back to work, or who had their pictures taken walking into the plant.

(4) Rand arranged with Pearl L. Bergoff, "king of strikebreakers," for 80 men to enter the plant as if in reply to his fake advertisement for "millwrights" to dismantle machinery.

(5) Rand hired many Bergoff men to go among the strikers and their families, stir up dissension, and "confuse their logic."

(6) Rand's supervisory employees at the Ilion plant visited the strikers' homes and told them "the American Federation of Labor is a thing of the past in Ilion."

All of these acts were rightly held by the Board to constitute "interference." The amendment removing the prohibition against "interference" would cast doubt on hundreds of decisions of this type issued under the act, many affecting A. F. of L. unions, and put in question many victories in the courts, under this act as well as under the Railway Labor Act and many State laws.

Because it is alleged, rightly or wrongly, that the Board has misinterpreted this provision in a relatively few cases is no good reason for removing it altogether. Any misinterpretation of the Labor Act is subject to full judicial review before any final order can become effective. No matter what language is written into any law, and no matter who is engaged in its administration, we cannot remove the inevitable margin of human error nor eliminate the treatment of littlestient accuract such error. That is the

the inconvenience of litigation to correct such error. That is the price we must pay for orderly legal processes in a democracy.

Last but not least among these substantive proposals, one of Mr. Hoffman's amendments involves a wholesale denial of labor's protection under the act. It provides that whenever an employer has committed a wrong against an employee as defined in the Labor Act, the employee is denied redress if the employer can show Labor Act, the employee is defined redress it the employer can show that the employee or his labor union has committed some other wrong, even if already fully covered by local law. Certainly it would be a novel precedent for Congress to provide by law that two wrongs make a right, and that grave abuses shall be excused because small ones have also been committed on the other side.

because small ones have also been committed on the other side. To do that would be to substitute recrimination for justice.

While this proposal is supposed to "equalize" the act, it actually operates only against the employee and his labor organization, to whom the protection of this act means the difference between economic life and death. Is Mr. HOFFMAN ready truly to "equalize" the act by proposing that an employer who violates a local criminal ordinance or breaks a contract with a labor union shall be deprived of his corporate franchise? When that proposal is made it will be time to consider the wisdom of loading upon a Federal deprived of his corporate franchise? When that proposal is made it will be time to consider the wisdom of loading upon a Federal agency the enforcement of the multitude of local laws and ordinances that exist in every State in the Union.

I turn now to various procedural amendments which seem to me

threaten the effective administration of the National Labor

Relations Act.

The amendments of Mr. Hoffman would separate the investigatory from the fact-finding functions under the act, and Mr. Anderson's amendments would transfer this fact-finding function Anderson's amendments would transfer this fact-finding function bodily to the district courts—both novel suggestions for this type of quasi-judicial agency. Another of Mr. Hoffman's proposals would authorize the reviewing court to substitute completely its judgment as to the facts for that of the administrative body—another novel procedure. Mr. Hoffman further proposes to permit any employer to transfer his case to the district courts at the start, thus completely avoiding recourse to the administrative tribunal. One of Mr. Barden's and Mr. Hartley's amendments would authorize the district courts to issue proper writs at any time to compel the Board to perform its functions and duties. This would enable a party to shuffle every point in a case back and forth continually between district court and Labor Board, to the eternal delay of the workers seeking to vindicate their rights. All of the above-mentioned procedural amendments would result in abandoning or seriously impairing the principles of adminis-

in abandoning or seriously impairing the principles of administrative law that have evolved gradually since the pioneer establishment of the Interstate Commerce Commission in 1887. The concept of the administrative agency, growing up in necessary response to the manifold complexities of modern government, has been championed by Charles Evans Hughes, and by countless other luminaries of bench and bar. In a very vital sense, these admin-istrative agencies have come to be regarded as the people's instruments of government, created to effectuate a particular policy more expertly, more sympathetically, and more efficiently than was possible under the rigid formalism of court procedure. Above all, these agencies give the worker a fairer chance, because he afford to plunge into the costly arena of Federal court

litigation.

In a decision last Monday, the Supreme Court took occasion to deny the premise, which seems to underlie these procedural amendments, that administrative agencies and reviewing courts are in a relation of mutual hostility. "Court and agency," said Mr. Justice Stone, "are the means adopted to attain the prescribed end * * * Neither can rightly be regarded by the other as an alien intruder, to be tolerated if must be, but never to be encouraged or aided by the other in the attainment of the common aim."

The Neitheral Taker Paletimes Act was astablished in accordance.

aided by the other in the attainment of the common aim."

The National Labor Relations Act was established in accordance with the well-established concepts of administrative procedure, tested by 50 years of American experience. It is, of course, possible that special factors involved in labor relations make this traditional method unsatisfactory and require the substitution of a new and untried procedure. If this is the case, the Supreme Court of the United States has given us no indication to that effect. Chief Justice Hughes, writing for the Court after the first five cases involving the Leber Act were heard acid:

volving the Labor Act were heard, said:

volving the Labor Act were heard, said:

"The act establishes standards to which the Board must conform. There must be complaint, notice, and hearing. The findings as to the facts are to be conclusive but only if supported by evidence. The order of the Board is subject to review by the designated court, and only when sustained by the court may the order be enforced. Upon that review all questions of the jurisdiction of the Board and the regularity of its proceedings, all questions of constitutional right or statutory authority are open to examination by the court. We construe the procedural provisions as affording adequate opportunity to secure judicial protection against arbitrary action in accordance with the well-settled rules applicable to administrative agencies set up by Congress to aid in the enforcement of valid legislation."

The subsequent decisions of the Supreme Court in Labor Board cases have not only failed to modify this statement of the Chief Justice but have demonstrated also that under the present act, the

Court can and will check what it regards to be any false step by the Labor Board.

The only argument advanced to defend distorting the procedure under the Labor Act out of all relationship to precedent, custom, and experience is that, according to Mr. Anderson, the administrative procedure is "not necessary or justified in any private or class interest."

for one, will not concede that legal protection of workers' rights is any more a matter of private or class interest than legal protection of investors' rights or shippers' rights or the rights of competitors in trade. I am sure that this committee will not scribe to the proposition that the advantages of quasi-judicial fair competitors in trade.

fair competitors in trade. I am sure that this committee will not subscribe to the proposition that the advantages of quasi-judicial tribunals, which are available to other groups of the population through the Securities and Exchange Act, the Interstate Commerce Act, and the Federal Trade Commission Act, shall be denied to laboring men for the vindication of labor's inalienable, industrial rights. As this committee well said in its original report in 1935:

"No private right of action is contemplated. Essentially the unfair labor practices listed are matters of public concern, by their nature and consequences, present or potential. * * * The form of injunctive and affirmative order is necessary to effectuate the purpose of the bill to remove obstructions to interstate commerce which are by the law declared to be detrimental to the public weal."

While these proposals that I have been discussing are, in my opinion, detrimental to the objectives of the act, there are some others that merit the most careful study. Merely as an example, there is wide support for an amendment which would permit employers to petition for elections. As I have always said, there is nothing in the present act which denies this privilege to employers. The prohibition rests upon a ruling of the Labor Board. This ruling evolved before the current labor split, to meet the situation where an employer might attempt prematurely to "freeze" a situation produced by a long tradition of opposition to unionism. While there should still be safeguards against this situation, the labor split has introduced a novel situation where a well-intentioned employer is caught between the cross-fire of rival unions. In such circumstances, under appropriate safeguards which these hearings should develop, I feel that the employer certainly should have the right to petition for an election.

If the hearings now in progress disclose other perfecting amend-

have the right to petition for an election.

If the hearings now in progress disclose other perfecting amendments which are sound in principle and practical in operation, I have pledged to introduce or support such amendments and help enact them into law.

I come finally to the portion of the amendments proposed by Mr. BARDEN and Mr. HARTLEY, which deal with the thorny questions of the appropriate bargaining unit and the validity of contracts

contracts.

No legislator, and certainly none who, like yourselves, are in daily contact with labor legislation, can fail to be impressed with the profound consequences of the division which now exists in labor's ranks. This division, which I sincerely hope will soon end, was not created by the Labor Act, but its repercussions have greatly complicated all problems of administration.

I said at the time this law was under consideration in Congress, and I repeat today, that the act itself did not put the stamp of Government favor on any particular type of union—outside or inside, craft or industrial. Its only concern was to foster and protect the free choice of representation by the employees themselves. There is no claim to the contrary by any of those now sponsoring any amendments, but there is the claim that in its application to situations nonexistent when the act was written application to situations nonexistent when the act was written certain inequities have grown up. The only fair approach to these issues is that being taken by the Senate committee in its hearings on similar amendments, that is, to make a detailed study of the facts and issues in all the disputed cases, comparatively

of the facts and issues in all the disputed cases, comparatively few in number, where this question is the critical one.

Finally, I suggest that these hearings, to be truly constructive and complete, should consider whether any additional governmental machinery is necessary to round out public action in labor relations and further promote the objective of industrial peace. Few realize today that the splendid work of the United States Conciliation Service in adjusting labor controversies over wages, hours, and working conditions is based on no statutory authorization, except a single phrase in the organic act setting up the ization, except a single phrase in the organic act setting up the Department of Labor more than 25 years ago.

I share the growing opinion among students of our labor prob-I share the growing opinion among students of our labor prob-lems that the time may well be at hand to reconstitute the con-ciliation service, not by putting restrictions on the right to strike, not by confusing its functions with the protection of labor's fundamental rights, but by placing Federal mediation on a firmer statutory basis and making more adequate appropriations for its effective operation. In my own State, the establishment of a mediation agency to complement the work of the State labor board has brought increasingly gratifying benefits to all concerned. In closing, let me say:

has brought increasingly gratifying benefits to all concerned.

In closing, let me say:

First, the Labor Act is the most effective instrument yet devised for substituting the processes of law and the methods of reason in place of the rule of the jungle in dealing with labor disputes. It has brought a more wholesome industrial system to workers, employers, and the public at large. To dull this instrument would be an act of unreason; to discard it would be an act of folly.

Second, the amendments to the act, proposed by labor groups and by labor's friends, deserve the most careful consideration.

Second, the amendments to the act, proposed by labor groups and by labor's friends, deserve the most careful consideration. At the same time, every worker in America should realize that while the friends of the Labor Act's main objectives are weakened by factional strife, the opponents of labor are strong and united.

It is already apparent from these hearings and those in the Senate that while labor has some complaints to make against the Labor Act—and they may be just ones—many of those who are indicting the Labor Act can lay no claims to having ever been the friends of labor. For these reasons, I urge every worker who wants to remain free, to look long and searchingly at each proposal designed

remain free, to look long and searchingly at each proposal designed to change the act that has helped so much to make him free. Third, every fair-minded employer in America should likewise realize that he has long been made the unwilling victim of a reactionary minority which has forced strife upon industry by refusing to accept the principles of honorable industrial peace. I therefore appeal to every employer who wants to remain at peace, to look long and searchingly at every proposal to change the act which has done so much to bring him peace. Fourth, reactionary forces, encouraged by the breach in labor's ranks to make assaults upon the gains won by labor after years of struggle, are now marshaled to destroy the Labor Act. Their high-powered and highly financed campaign failed to prevent its

high-powered and highly financed campaign failed to prevent its passage by Congress; their expensive lawyers failed to prevent its approval by the courts; their misleading propaganda failed to poison the public mind against it. Now, it is once more the responsibility of Congress to make sure that this selfish minority shall again fail in their remorseless and relentless efforts to make

industry once more their feudal estate.

Fifth, it is only those who profit by ceaseless litigation at the expense of others, and only those who have something to gain from confusion in the minds of industry, labor, and the public, who would profit from reckless or unnecessary tampering with the Labor Act. Every change in the act means new lawsuits, new uncertainties, new areas of doubt and dissension and disagreement. While this is no reason for falling to cure real defects, it is surely the strongest kind of reason for making those who want to change the Labor Act carry the burden of proof. Nobody with good intentions will profit by inconsiderate meddling with a sound law.

I am confident this committee is too mature in judgment, too I am confident this committee is too mature in judgment, too ripe in experience, and too courageous and forward looking in its intentions, to be stampeded by mere agitation. Every statute that has made America a more just and decent land in which to live, by removing certain inequities from our social system, has had to run through the same long trials which have beset the Labor Act. It is obvious that only the innocuous statute provokes no opposition. We may be sure that the level-headed judgment of the American people, which has preserved our greatest social gains against the dangers that beset them, will rally to the defense and the preservation in its full strength of the National Labor Relations Act. For the American people know that the act is a foundation-stone of our economic well-being, and a realization of our democratic faith. our democratic faith.

Why I Think the War Referendum Resolution Should Be Adopted

EXTENSION OF REMARKS

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 18, 1939

STATEMENT BY HON. LOUIS LUDLOW, OF INDIANA

Mr. LUDLOW. Mr. Speaker, by unanimous consent of the House, I present the address I made on May 18 before the Senate subcommittee during hearings on the resolution for a referendum on foreign wars. It follows:

In the brief time I may properly consume today, I would like to approach the subject before us—the war referendum—from the standpoint of our democracy and what we may do to enlarge it in the public interest.

At the outset I want to confess that I am a follower of Jefferson, devoted to his philosophy and sharing implicitly his belief in the ultimate righteousness of the people's decisions.

So believing, it is my firm conviction that the sooner we decentralize the war-making power, the sooner we remove the making of war from a few individuals—however well-meaning those individuals may be—and vest the authority over participation in foreign or nondefensive wars in the great jury of the people themselves, the sooner we shall reach the objective for which all of us are striving, the answer to the question, "How can we keep America out of war?"

Putting it in another way, we will get rid of war as we build up democracy. We will get rid of war as we unshackle public opinion and give it free opportunity to exercise its power.

The same idea was expressed by Daniel Webster more than 100 years ago when he said in a speech on the Greek Revolution:

"It may be asked, perhaps, what can we do? Are we to go to war? Are we to interfere in the Greek cause, or any other European cause? Are we to endanger our pacific relations? No; certainly not. What then, the question recurs, remains for us? If we will not endanger our own peace; if we will neither furnish armies nor navies to the cause which we think the just one, what

is there within our power?

"Moral causes come into consideration in proportion as the progress of knowledge is advanced, and the public opinion of the world is rapidly gaining an ascendency over mere brutal force. It is already able to oppose the most formidable obstruction to the progress of injustice and oppression, and as it grows more intelligent and more intense, it will be more and more formidable. It may be silenced by military power, but it cannot be conquered. It is elastic, irrepressible, and invulnerable to the weapons of ordinary warfare."

Since those words were uttered the world has passed through

some of the darkest nights of history because public opinion has been too weak and inarticulate to exercise its leavening influence, but it is still a great potential power for peace, and, as Webster said, though it may be silenced temporarily it cannot be conquered. Webster was right when he asserted that as public opinion grows more intelligent and more intense, it will be more and more formidable as an artifacte for war.

midable as an antidote for war.

But we need not go back as far as Webster for testimony to cor-But we need not go back as far as Webster for testimony to corroborate this truth. Woodrow Wilson asserted in many of his speeches that he had known of governments making war on governments, but never in the range of his reading and observation had he known of "peoples making war on peoples"; and the present Chief Executive of the United States, Franklin D. Roosevelt, uttered a sentiment of hope and inspiration to the human race around the world when, in addressing the Woodrow Wilson Foundation on December 28, 1933, he said that "war by governments" must give way to "peace by peoples." With admirable directness the President expressed in one brief phrase the philosophy that has brought this war-referendum peace amendment into existence.

Faith in the people's decision on war was expressed with great

Faith in the people's decision on war was expressed with great earnestness and impressiveness by the Young Democrats of America, that splendid organization of 5,000,000 young men and women who are the coming citizens of our country, when at their national convention held at Indianapolis in August 1937 they passed the

following resolution:

"Resolved, That we favor a Nation-wide referendum before declaration of war, except in case of invasion or internal rebellion."

When James Roosevelt, the chairman of the convention, put the question there was not a single negative vote, and the resolution was adopted unanimously and with stirring emotion. It shows the vision of our young people—the future defenders of the Nation—on this subject.

As President Wilson so well said, it is not the peoples who make As President Wilson so well said, it is not the peoples who make wars. I do not believe that there is anywhere under the shining sun today a people that wants to go to war with any other people, and I think that is as true of the people of Germany, Italy, and Japan as it is of the people of the United States. Unfortunately for those nations they have no free speech and no freedom of action. They are under the thumbs of tyrants and must obey their masters. Fortunately for us, we live in a free country and have authority, if we will exercise it, to settle these great tragic questions by counsel among ourselves.

questions by counsel among ourselves.

I repeat that, in my opinion, the best way for Americans to keep out of war is to exercise the inherent right of decision that belongs to them in a democratic form of government. We should not only insist on that right but we should take the necessary steps to enlarge and perfect the processes of democracy so that it will be possible to exercise that right. The essential change needed is to reconstruct the war-declaring mechanism so that the people shall have a right to a direct vote on participation in foreign wars. The existing war-declaring mechanism is not a democratic mechanism at all. It is an autocratic mechanism. Under its operation 267 Members of Congress, a bare majority of both bodies, subject to all kinds of pressures, and singularly influenced by one other individual, the President of the United States, may plunge America into the most horrible war imaginable. Unfortunately our democracy stops at the water's edge. In its foreign relations our country is not a democracy at all but a pure

eign relations our country is not a democracy at all but a pure autocracy.

It is true that our democracy applies in our domestic concerns but it is singularly absent in our foreign affairs. The citizen may vote on the location of a waterworks or a pesthouse. He may exercise the right of suffrage in choosing a constable or a dog catcher, but he is not allowed to vote on the most tragic and important of all questions where the decision involves the life and death of loved ones, the sundering of family ties, an inexpressible load of grief and woe and debt and the possibility of a change in the form of government which will rob him and his family and posterity of the inestimable franchise of freedom.

The war referendum amendment would broaden the democratic processes so that the American citizen would have the right to

processes so that the American citizen would have the right to processes so that the American citizen would have the right to vote not only on domestic matters but on the international question of war or peace, which affects him more vitally and closely than any domestic question that could possibly be imagined. If we are to concede any potency whatever to democracy, why should it not apply to the greater things of life, as well as to the relatively minor and inconsequential things?

The war referendum principle is based on the philosophy that those who have to do the dying and the suffering and to bear

the unspeakable burdens and griefs of war, should have something to say as to whether war shall be declared. What could be more elementally just than that? What could harmonize more perfectly with the purposes for which this free Government was founded and the traditions of American history?

I am for this referendum on foreign wars, not only because I believe it is a right that belongs to the citizen in a democracy, but because I believe it would be a great stabilizing influence for peace. With the lessons of the past vividly in the public mind, I believe it would keep us out of foreign wars for a hundred years, and, indeed, out of all wars, for I do not believe that there is a nation on earth that has, or ever will have, the remotest thought of attacking us. Without this referendum I would not undertake to forecast how soon we may be dragged into another horrible foreign war. rible foreign war

To show how undependable the existing war mechanism may be as a means of registering the popular will it is only necessary to revert to what happened in the House of Representatives a year ago last January, when the vote was taken on discharging the Committee on the Judiciary from the consideration of my war referendum resolution, which was first introduced in January 1935. referendum resolution, which was first introduced in January 1935, and which the committee consistently and persistently throttled until December 14, 1937, when the two hundred and eighteenth Member of the House signed the discharge petition, which I had filed to bring the resolution before the House for debate and a vote. More Members were waiting to sign, but when 218 had affixed their signatures the petition became automatically effective and was withdrawn. Under the rules the question came up on January 10, 1938, on the motion to discharge the committee, which could be done if a majority of the House so voted.

Let me tell you what happened on that day, not in my own language but in the language of a more facile and entertaining writer, James A. Farley, Postmaster General and chairman of the Democratic National Committee. I quote from Mr. Farley's article on page 134 of the American magazine of November 1938, as follows:

"Time and again, when Congress has been about to vote on an important measure, I have appealed personally to Members of the Senate and House to vote as the administration wanted them to vote. For instance, in the spring of 1938 a resolution in the House of Representatives provided, in effect, that the United States could not go to war outside its own territorial limits unless the Federal Government was first authorized to do so by a national referendum of the record. which the committee consistently and persistently throttled

Government was first authorized to do so by a national referendum of the people. The resolution had many strong points. But it was a different time in the realized particular figure. a difficult time in the realm of national affairs.

a difficult time in the realm of national affairs. "
"I spent an entire day on the telephone asking Democratic Members of the House of Representatives to vote against bringing up the war referendum resolution. Many of them had already voted to discharge the resolution from the committee, the first move in the parliamentary skirmish, thus in effect committing themselves to its passage. Some Members frankly said they were unable to go along with the administration. Others said they would stand by the administration and vote in the negative. This appeal by telephone had an influence in blocking consideration resolution."

As to the truth of the last sentence of Mr. Farley's article, I, being the defeated party, can bear eloquent testimony. As already stated, 218 Members of the House, a majority, had signed the discharge

Many other Members who are opposed to signing petitions had told me that when the resolution came up in the House they would vote for it, and the combined support was so great that I am convinced that if the House had been free to vote without outside pressure the constitutional amendment would have been adopted and sent on its way toward ratification. The best evidence of Mr. Farley's extreme diligence and effective work for the antireferendum cause is the fact that on a show-down the proposal received only 188 votes while 209 Members voted against it and our side lost by the narrow margin of 21 votes.

I have no complaint of the President for throwing the tremendous force of his administration in the scales against my resolution, which in its perfected form as it was read to the House, was in the identical language of the resolution now before the Senate subcommittee. I grant to him the same honesty of purpose I claim for myself. I am sure he follows the dictates of his conscience, just as

I seek to follow the dictates of mine.

In any activities of mine in regard to the war referendum there is no criticism by me, direct or implied, of the present occupant of the White House. It is not the present I have in mind so much as the future. A constitutional amendment such as we are advocating in all probability could not be adopted during the term of cating in all probability could not be adopted during the term of the President now in office. What we are contending for, therefore, has very little bearing upon the immediate present, but it has an enormous bearing upon the interminable future and contemplates the possibility, nay, the certainty, that we shall have all kinds of Presidents in the years to come, some militaristic, dictatorial, and eager to plunge the country into war. A tyrant or dictator who wishes to lead this country into a war of conquest or aggrandizement would find few obstacles in his way. If a President now has such power over Congress that he can prevent a peace measure from even being debated, what chance would there be to avert war if some future dictatorial President should decide to force a decif some future dictatorial President should decide to force a declaration of war? These are matters we should be thinking about, and my mention of them is in no sense a reflection on our present President, for whom I have the highest respect. But there will be many more who will follow him in the long train of years, some of whom will not be as altruistic as he is, some of whom will be tyrannically inclined and bent on making war. The point I am trying to make is that the existing war-making mechanism is grossly defective in that it centralizes too much power in Congress and the White House.

White House.

But you may ask, "If the lodgment of the war power with the people is so essential to the functioning of democracy, why was that not done in the first instance when the Constitution was adopted?" Let me say that no one holds the Constitution in higher reverence than I do as the sheet anchor of our liberties and the arch stone of our public welfare, and I would never be a party to amending it for light or inconsequential causes.

The question referred to is a perfectly legitimate one, just as other questions that have been asked me, such as, "Why did not Washington favor a referendum on war?" and "Why did not Jefferson include it in his cherished Bill of Rights?" Certainly no one doubts the breadth and depths of the altruism of the seers who founded this Republic.

who founded this Republic.

who founded this Republic.

There is one answer to all of these questions and it is the obvious one. Means of communication were so slow when the Constitution was adopted that a referendum on war was not only impracticable, it was unthinkable. A perusal of the debates of the Constitutional Convention shows that there were two schools of thought on war. The delegates of monarchial tendencies wanted to lodge the war power with the President. The liberals wanted it lodged in Congress, which was the closest to the people it could be placed in the conditions then existing, and the liberals, led by Thomas Jefferson, finally won, so that after the action was taken we find this curious observation in a letter written by Thomas Jefferson to James Madison:

"We have already given in example one effectual check to the dogs of war by transferring the power of declaring war from the Executive to the legislative body, from those who have to spend to those who have to pay."

Executive to the legislative body, from those who have to spend to those who have to pay."

In colonial days there were no good roads, and a letter mailed on the Atlantic seaboard was 6 months reaching the uttermost frontiers, if indeed it ever reached there at all. Now it is all different. The fast train roars its way across the country in 100 hours, the airplane in less than 24. The President, sitting before the microphone in Washington, talks to the entire Nation. The automobile, fast trains, airplanes, telephone, telegraph, and radio have annihilated time and space. Modern perfection in the means of communication has made a referendum on war possible.

of communication has made a referendum on war possible.

The war-referendum proposal now pending before both branches of Congress, as embraced in the La Follette resolution in the Senate and my resolution in the House, applies only to participation in foreign wars. If the United States or any other country in the Western Hemisphere is invaded or attacked the referendum would not apply.

the Western Hemisphere is invaded or attacked the referendum would not apply.

It does not interfere in any way, shape, form, or degree with national defense, but only has reference to the mechanism by which war shall be declared. I personally believe that a combination of strong national defense, coupled with a referendum on foreign wars, is the very best peace insurance this country could possibly have. There are defense wars and there are policy wars, and this resolution goes only to the point of determining that when it comes to a decision as to whether our boys shall be sent to die in foreign lands in the settlement of age-old quarrels of alien when it comes to a decision as to whether our boys shall be sent to die in foreign lands in the settlement of age-old quarrels of alien origin over boundary disputes, blood feuds, and the like, the people of America shall have a right to vote on the question, with women having equal voting rights with men. The place to decide that question is in the privacy of the ballot booths where every voter will have the right to register his free and untrammeled opinion, alone with his Maker. In that way we shall have the real verdict of the composite judgment and conscience of the American people on the most important question that can affect our national life. on the most important question that can affect our national life.

Admission of German Refugee Children

EXTENSION OF REMARKS

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 18 (legislative day of Monday, May 8), 1939

TELEGRAM FROM THE MINISTERIAL ASSOCIATION OF RALEIGH AND WAKE COUNTY, N. C., AND EDITORIALS FROM VARIOUS NEWSPAPERS

Mr. WAGNER. Mr. President, I ask unanimous consent to have inserted in the Appendix a telegram from the Ministerial Association of Raleigh and Wake County, N. C., regarding the admisison of German refugee children, and also editorials from various newspapers.

There being no objection, the telegram and editorials were ordered to be printed in the RECORD, as follows:

RALEIGH, N. C., May 9, 1939.

Senator Robert F. Wagner, Washington, D. C.:

The Ministerial Association of Raleigh and Wake County, N. C., have today, in regular meeting assembled, voted their endorse-ment of your child-refugee bill. We are so informing Senators Bailey and Reynolds and Representative Cooley, of our State.

CLARENCE E. NORMAN, Secretary.

[From the Albuquerque (N. Mex.) Tribune of February 20, 1939] REFUGEE CHILDREN

The most tragic picture painted on the hideous Nazi canvas is that of young children bidding their parents good-bye forever and departing from Germany with 40 cents in their pockets and a tag

on their lapel. That chapter will live long in history.

There is now pending in Congress a resolution introduced by Senator Wagner providing asylum in America for 20,000 of these children. Immigration restrictions would be lifted for a 2-year period during which 10,000 little refugees would be permitted to enter each year.

enter each year.

The children can never become a charge upon American communities because they must be located in homes or institutions before they are permitted to sail. Members of Temple Albert congregation here are planning to adopt some of the children if the

resolution is adopted by Congress.

We hope the resolution is adopted by Congress. It seems to us that the very least America can do in the name of ordinary decency is to help make life happier for these tragic little victims

[From the Sterling (Ill.) Gazette of April 22, 1939] SHOULD 20,000 CHILDREN BE ADMITTED?

Despite the economic hardships of our own citizens, Senator WAGNER'S proposal to admit 20,000 German refugee children into the United States in 1939 and 1940, over and above quota restrictions, has received widespread support. It has been approved by such newspapers as the New York Herald Tribune and the Richmond

such newspapers as the New York Herald Tribune and the Richmond Times-Dispatch, by ex-President Hoover, by Mrs. Calvin Coolidge, who thus breaks her rule of silence toward pending legislation; by Cardinal Mundelein and, in principle by C. I. O. and A. F. of L. The children to be admitted are all under the age of 14 and would thus offer no immediate competition in the labor market. It would be necessary for each to have sponsors—persons willing to receive and support them guaranteeing that they would not become public charges. Mrs. Coolidge for instance is a member of a group of Northampton, Mass., women who wish to take 25 of the refugees. About half of the children are full-blooded Jews; the remaining half are Catholics and Protestants who may have had a non-Arvan grandparent or whose parents have incurred the

the remaining half are Catholics and Protestants who may have had a non-Aryan grandparent or whose parents have incurred the disfavor of ruling authorities in Germany.

Other countries have already acted to provide homes for these unfortunate youngsters. Great Britain waiving the usual entrance regulations has taken 2,800 and has made preparations to take 5,000 more. Holland, Belgium, and France have opened their doors to others. Little Holland alone has accepted 1,700 children and has not yet closed her doors. None of these countries is as well able as our own to makes places for the children.

It is hardly necessary to point out that the condition of the

It is hardly necessary to point out that the condition of the children is tragic in the extreme; the parents of many are in con-centration camps or so reduced in circumstances and so devoid of hope that they are willing to undergo the excruciating experience of breaking up the family to permit the youngsters to have a fair chance in life.

No longer is this country open to the oppressed of all lands, as it was once, and the distress of many of our own people is great. Yet the case of these European children, reduced to poverty and cast adrift through no fault of their own, is a very special one. cast adrift through no fault of their own, is a very special one. Among them there are, no doubt, some who will add luster to their adopted countries; and most of them will become useful citizens, passionately attached to the land which gave them their only chance to lead normal lives.

[From the Meadville (Pa.) Tribune Republic of April 25, 1939] AN APPEAL FOR CHILD REFUGEES

It is natural that mothers should be interested in a proposed congressional resolution which would permit entry to our shores during each of the next 2 calendar years of 10,000 European refugee children under 15 years of age over and above the immigrant quotas, provided that a home of appropriate religious faith is first assured for each child.

Helen Hayes, who went to Washington to plead for the measure,

Helen Hayes, who went to Washington to plead for the measure, may have been presented primarily as an actress, but she reminded a congressional committee that she also is a mother. Her 9-year-old daughter was the famous "Act-of-God Baby," while she and her husband, Charles MacArthur, later adopted a boy.

Maternal yearnings over helpless little ones involve no logic. Doing something for terrified, orphaned, hungry, and still endangered children is an opportunity with which our essential immigrant precautions have little concern. It becomes an issue for hearts rather than cerebral processes.—Philadelphia Inquirer.

[From the Rochester (N. Y.) Times Union of April 22, 1939] WHY NOT?

Favorable reports on the Wagner-Rogers bill to permit entry of 20,000 German refugee children without regard to quota restrictions was urged today by Helen Hayes, Senator Wagner, and others at a hearing before a joint Senate-House immigration subcommittee. The measure would permit entrance of 10,000 children of various faiths this year and the same number in 1940, upon satisfactory assurance that they would be adequately cared for by responsible individuals or private organizations.

Any lowering of immigration restrictions, as a general policy.

Any lowering of immigration restrictions, as a general policy, would be widely opposed. There seems no valid objection, however, to giving these children a haven of refuge under the terms proposed. It assuredly would be a truly humanitarian act, putting some substance behind our expressions of sympathy for the oppressed.

[From the Portsmouth (Va.) Star of April 29, 1939] LITTLE REFUGEES

Helen Hayes, urging Congress to admit 20,000 German refugee children during the next 2 years in addition to regular immigrant quotas, spoke not as actress but as mother. She pleaded:

"I beg of you to let them come in. The real feeling of every American is that there is always room for one more. When I read that England and Holland had opened their doors to them, I prayed that we would do the same. I just can't believe that this country of mine and yours has no room for them. It just isn't like us. These are children, little children, who now turn to us with outstretched hands."

She will take one herself she says "sight unseen." By a striking

with outstretched hands."

She will take one herself, she says, "sight unseen." By a striking coincidence, at the same time that this plea was being made, Adolf Hitler, whose policies are responsible for this pitiful problem of refugees, was shown in newspapers and films in a kindly, fatherly pose, surrounded by children and holding them by the hand.

Never mind that. Cruelty and sentimentality often go together. People who are kindly with both their hearts and their heads will do their best to ease the hard lot of those little refugees.

[From the Aliquippa (Pa.) Gazette of April 29, 1939] AN OPEN DOOR FOR REFUGEE CHILDREN

There are in the United States thousands of homes where adopted children would be welcome. Childless couples seeking children to brighten their lives, strengthen their homes, and bring a measure of happiness and stability for their old age, wealthy couples with small family but able and eager to care for more children; well-to-do widows seeking companionship and a new interest in lives—these are the people who would make almost any sacrifice if a child could be obtained for adoption.

On the records of almost any orphanage the story is told. With-

out exception their waiting lists extend into hundreds of names. Despite the depression and the uncertainty of the future today a legion of American homes would leap at the chance to secure a child

for adoption.

All this helps to explain the logic behind the resolution by All this helps to explain the logic behind the resolution by Senator Wagner, of New York, now in the Committee on Immigration in the Senate, which would permit 10,000 refugee children from Germany or German-controlled territory to enter the United States each year, regardless of immigration restrictions.

Holland and Belgium have taken similar action. Hundreds of such children, refugees, have been given temporary shelter on British soil. A long list of prominent Americans from Herbert Hoover to Helen Hayes have endorsed the idea.

Children present the most pathetic spectacle of the whole Ger-

Children present the most pathetic spectacle of the whole German refugee situation. Helpless, homeless, and hopeless they are shunted back from frontier to frontier. In Senator Wagners, resolution, it would seem, is an opportunity for the United States to do its part in meeting this crisis in a humanitarian way, and at the same time bring happiness to tens of thousands of American

[From the Birmingham (Ala.) News, of April 27, 1939] "SUFFER LITTLE CHILDREN"-AN OPPORTUNITY FOR AMERICA

It was an eloquent, moving plea which Helen Hayes, mother of one child and adopted mother of another, made to the congressional committee considering the enactment of legislation which would permit 10,000 German children to enter this country annually for 2 years.

Miss Hayes, who is in private life Mrs. Charles MacArthur, must have been proved by the update of what would be proved by the country wou

have been moved by thoughts of what would happen to her own children if it ever became necessary for them to seek sanctuary. The tradition that the United States is a haven for the oppressed of the world is deeply imbedded. In this decade there has been a sharp decline in the number of immigrants admitted to this country, and it is probable that never again will there be any considerable number who will find homes here. Our imposes the country and the number of the country and the number who will find homes here. any considerable number who will find homes here. Our immigration gates have been practically shut. Over a period of the last 6 years, more people have left the United States than have entered.

In offering a home to 20,000 children, the United States has an opportunity to accept a "token" quota, which will be little more than a gesture, although it will be a powerful gesture at this time in world history.

From 1921 to 1930, 4,100,000 people entered this country. In the preceding decade, 1911 to 1920, 5,700,000 entered.

From these figures it can be seen that 20,000 is a negligible number. All would be 14 years old or younger—still at an impressionable age, when assimilation would be easy. These children, after their harrowing experiences in Germany, would eagerly adapt themselves to American traditions and American opportunities. Only those would come who are guaranteed homes and support.

Catholics, Protestants, and Jews are included in the number of children refugees. Their parents have become victims of German persecution either because of their race, their religious convictions,

or their political views.

or their political views.

Dean Dudley D. Carroll, of the University of North Carolina, made a point of particular significance to the South in supporting the proposed measure. He cited the fact that this region had not been in "the stream of immigration" and expressed the belief that the South could profit by immigrants of good stock from Europe. The South has the highest percentage of native stock of any section of the Nation, yet those who have come to this region as immigrants consistently have made good citizens.

When it is considered that the number is small (they would

When it is considered that the number is small (they would amount to only 1 to 6,500 of the country's inhabitants), when we think of the circumstances of their present plight, when we take into account the falling birth rate within our own country—when one is conscious of these factors it is difficult to refuse.

Belgium, France, Switzerland, England, and other countries far more crowded than our own, have made sacrifices far out of proportion to what is asked of us.

We have damned dictatorship loudly and long. Can we not make one unselfish gesture to demonstrate our convictions?

[From the Austin (Tex.) American of May 5, 1939] REFUGEE CHILDREN

Senator Wagner, of New York, has introduced in Congress a joint resolution authorizing the admission into the United States of 10,000 German refugee children "of every race and creed" during the calendar years 1939 and 1940.

The proviso is made that "such children will be supported and properly cared for through the voluntary action of responsible citizens or responsible private organizations of the United States, and consequently will not become public charges." This resolution has the endorsement of a numerous body of religious leaders representing Protestant, Catholic, and Jewish organizations.

While the increase in permissible immigration is not large, it should at least offer cooperation with England, Holland, and other

while the increase in permissible immigration is not large, it should at least offer cooperation with England, Holland, and other countries that are extending hospitality to German refugees. If proper safeguards are maintained to insure that children so received shall not become public charges, there would seem no serious objection to the resolution; it would, in fact, be a humane act.

[From the Dayton (Ohio) Journal of May 7, 1939] LET THE CHILDREN COME IN

Among the legislative items credited with having a 50–50 chance of passing at this session of Congress is the Wagner bill to admit 10,000 refugee children a year for 2 years. Why there should be so much opposition to this humanitarian proposal is a mystery. Under the terms of the Wagner proposal, the children to be admitted would be so young that they could not displace American

These children would not become public charges, because a home and a future would be required for each boy or girl before admit-

The young refugees would be selected carefully with a view to physical and mental fitness to become useful American citizens.

The total number permitted to enter the United States under the Wagner proposal, which would temporarily supplement existing quotas, constitutes only a small fraction of those whose future is very dark because of totalitarian persecution. Humanitarian instincts should dictate the passage of this bill.

[From the St. Louis (Mo.) Post-Dispatch of May 7, 1939] ACTION ON THE WAGNER-ROGERS BILL

The Wagner-Rogers bill, permitting entry of 20,000 German refu-The Wagner-Rogers bill, permitting entry of 20,000 German refugee children to this country in the next 2 years, has been approved by the joint subcommittee of the Senate and House Immigration Committees. In connection with the action the point is again emphasized that no child will be admitted unless "satisfactory assurances" are presented that a responsible individual or organiza-

assurances" are presented that a responsible individual or organization will care for it. This is a detail frequently disregarded by critics of the proposal.

Under the Federal law affidavits guaranteeing support of every immigrant are required, together with detailed statements as to the guarantor's property, income, and general responsibility. This means, of course, that the children will not be a charge upon the Government, but will be fully cared for by their sponsors.

The argument also is advanced that the children will aggravate the country's unemployment problem. Were there any basis whatever for this contention, then the Nation's great labor organizations, the A. F. of L. and C. I. O., would certainly be found fighting the proposal. Yet they are among the great number of organizations that approve it. proposal. Yet t

The move is a highly humanitarian one. It means American participation, through private citizens and groups, toward alleviating the distress of youthful persecution victims, and in giving them a chance to lead normal lives in a land of freedom.

[From the Los Angeles (Calif.) Times of May 7, 1939] CHILD REFUGEES

Shall we admit refugee children from Germany to homes in this country? There are 20,000 waifs, victims of Nazi persecution, left without shelter on the doorstep of the world. About 50 percent of them are Catholics and 50 percent Jewish, all of good, strong "rebel" stock. Since the pending legislation to admit them requires that they must be privately cared for, they would not become public charges.

The humaintarian element in our people naturally wishes to be helpful. Pragmatists, with their eyes on the cash register, oppose the refugee bill which would open the American door to admit the child without a country. The question that divides these groups is whether the United States, in the long run, would or would not benefit by absorbing a fair share of these children into our national

No one understands a problem of this nature better than our ex-President, Herbert Hoover. No one has been a better boy's friend or initiated more movements for the benefit of the young. No one has been so intimately connected with relief on a colossal scale as was Herbert Hoover in his postwar activities in Belgium, Poland, and Russia. No one knows better the potential character of these

future men and women.

And he has added his voice to those of the many social and religious spokesmen who sponsor the legislation that would admit these child refugees. "No harm and only good," he said, "can come to a nation by such humane action." And as it concerns children of 14 and under, he is correct in believing they would prove an

asset to the country.

For these children, with grateful hearts for their deliverance, would receive a grounding in what constitutes a good American while they were still in a receptive stage of development. After that they would easily fit into the customs of their adopted country. The majority would become useful citizens and some might develop traits of leadership.

As it is, the older members of the Nation are increasing faster than the younger. These children will reach maturity at an important national crisis when the pension receivers are getting ahead of the pension producers. They would help restore the balance.

Britain, France, Beigium, and the Netherlands have waived their immigration restrictions and are caring for as many of these world

waifs as they can find room for. America cannot afford to be less humanitarian.

[From the New York World-Telegram of May 9, 1939] MAP COMPROMISES ON YOUNG REFUGEES-SPONSORS SEEKING HOUSE APPROVAL

Washington, May 9.—Faced by growing opposition from the South and Middle West, friends of the Wagner-Rogers bill admitting German refugee children into this country today planned two pos-

sible compromises to gain House control.

The bill as it stands, admitting 10,000 refugees under 16 years each year, for 2 years, is believed to have a better chance of passage in the Senate than in the House.

The compromises being discussed include:
Reduction of the number to be admitted to 10,000 for 2 years, or

5,000 each year.

A provision that the children admitted would be counted against

the regular German immigration quota, but only as they become of age in this country.

The latter provision would make it possible to admit the 20,000

children in the next 2 years without slowing down immigration.

Representative Entry Nourse Rocers (Republican, Massachusetts), cosponsor of the bill, indicated she would be willing to accept either one or both of the amendments. Senator Wagner has not indicated whether he would.

[From the Indianapolis (Ind.) News of May 8, 1939] CHILD REFUGEES

A joint Senate and House committee has unanimously approved a bill to admit 20,000 German refugee children to the United States. The plan is to allow 10,000 to enter next year and 10,000 in 1941. Federal consent is necessary to exceed the quota. Further than giving consent, the bill obligates the Government in no way. It does not appropriate a cent for the transportation or care of the children.

If the bill goes through as approved, persons or organizations desiring to afford a refuge for these children will have to have Germany's consent for their departure, and, of course, the approval of their parents or guardians. They will have to satisfy the Department of Labor that the children will be satisfactorily cared for upon arrival in the United States and will not become public charges.

public charges.

About all the bill does, in fact, is provide the legal means by which people in the United States who wish to rescue abused and, in some cases, tortured children from Nazi brutality can do so. In most instances, the children will be taken in by Ameri-

can relatives. The supporters of the bill feel assured that it bestows no benefit on an alien child at the expense of an American

This country has always offered asylum to political refugees, and these children are essentially the victims of political persecution. With most of them it is a case of cellar huddling in Germany or a decent childhood in a decent country.

[From the New York Herald Tribune of May 9, 1939] PEOPLE ARE VALUABLE

PEOPLE ARE VALUABLE

It is rather surprising how much bad but bitter argument has been evoked by the Wagner bill to raise the quota restrictions for 20,000 German refugee children. The possible arrival of 20,000 children (they would come under all the other restrictions as to health, means of support, and so on) is being opposed with as fiercely narrow a sincerity as if they were an invading host; and even the great majority who support the bill support it as an act of humanitarian altruism, as if to receive these children were an unmitigated sacrifice on the part of the United States.

We know now that there can be pressure, if not upon our still almost boundless resources, at any rate upon our mechanisms of developing and distributing them. We know that immigration can be too heavy for assimilation, and that a national community must take thought to adjust its population trends to its economy.

can be too heavy for assimilation, and that a national community must take thought to adjust its population trends to its economy. But in learning this, have we forgotten that it is people who create everything we have as well as consume it? Dr. Clarence Pickett observes that refugees have already started some 25 new industries in the United States and that at least I refugee has made jobs for some 3,000 Americans. People are valuable, even on a direct economic calculation; and even though one points to the relief rolls, it is still a fact that if every relief recipient in the country were suddenly anihilated the first result for the result of us would not be prosperity but a shattering economic dislocation, a destruction of markets, and a downward plunge into worse unemployment than before.

worse unemployment than before.

Nations can no longer hold their doors wide open. There are limits of assimilability and adjustability. But people are valuable; and for Americans to be afraid of 20,000 children is for them to make a singularly craven obeisance to the brute myths of the new nationalistic obsession.

[From the Wichita (Kans.) Beacon of May 11, 1939] TWENTY THOUSAND VICTIMS OF MISFORTUNE

More than 3 centuries ago the Pilgrim Fathers left Europe and journeyed to America to escape the religious and political persecution there and to found a new country based on the right of personal and religious freedom. In the years that followed all down the Atlantic coast men and women settled because they wanted to

escape from the tyranny of Europe.

America has become known as the land of the free, the refuge of those who desired a life unfettered by the religious and political persecutions of the despots of Europe. Of late years it has been necessary to curtail the flow of those seeking entry into the United States to safeguard the economic welfare of those who arrived before them.

before them.

Recent conditions in Europe have left thousands of children, too young to meet the battle of life, orphaned by the persecution of a ruthless government or left to shift for themselves while their parents rest in concentration camps. It is the hope of the Friends Society—Quakers dedicated to the cause of humanity regardless of nationality or religious conviction—to rescue some 20,000 of these young waifs of war and bloodshed.

The Wagner-Rogers bill has been introduced in Congress to raise the German quota so that these 20,000 youngsters, the oldest no

The Wagner-Rogers bill has been introduced in Congress to raise the German quota so that these 20,000 youngsters, the oldest no more than 14, may be brought to this country and given an opportunity to live. Homes are waiting for them. They would be no economic burden on the country. They would deprive no one of a job. They would bring joy to many firesides.

All that is needed to bring this about is a temporary change in the immigration law as provided in the Wagner-Rogers law. If you believe that these small children, victims of misfortune through no

fault of their own, are entitled to a fair chance at life, liberty, and the pursuit of happiness, then write your Congressman and Senator and ask him to vote for this measure.

Imports of Certain Agricultural Products

EXTENSION OF REMARKS

HON. FRANK H. BUCK

OF CALIFORNIA IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1939

Mr. BUCK. Mr. Speaker, there has been so much said recently regarding the imports of certain agricultural products, and so much misleading information published in the CONGRESSIONAL RECORD on this subject that one might be led to believe that such importations are something new in this history of our country.

As a matter of fact, with few exceptions, agricultural imports are very considerably below the 1929 level to which opponents of the agricultural and reciprocal trade agreement programs of the administration like to refer. Figures, when accurate, speak for themselves, and I submit, with the consent of the House, the following table, derived from the Statistical Abstract of the United States, Monthly Summaries of the United States Department of Commerce, Agricultural Situation U. S. D. A., and Foreign Crops and Markets, published by the United States Department of Agriculture. This table, which is self-explanatory and which will convey rather startling information to some of my colleagues in Congress and to some of my agricultural constituents who have been misinformed as to the import situation, compares imports of some agricultural products of 1929 and 1938.

Commodity	Unit	1929	1938
Corn	1,000 bushels	407	404
Wheat	1,000 bushels	714, 582	3, 722
Rye	Bushels.	275	2
Tapioca	1,000 pounds	173, 318	230, 879
Hay	Tons	30, 787	18, 954
Soybean oil cake and oil cake meal.	1,000 pounds	171, 855	26, 270
Cottonseed oil cake and oil-cake meal.	1,000 pounds	43, 770	6, 591
Butter	1,000 pounds	2,773	1,624
Cheese	1,000 pounds		54, 432
Cattle	Number		424, 022
Hogs	1,000 pounds		57
Fresh pork	1,000 pounds		4, 287
Hams, bacon, etc			44, 347
Fresh beef and veal	1,000 pounds		1, 737
Canned beef	1,000 pounds		78, 597
Total, meat products	1,000 pounds	203, 614	148, 250
Eggs in shell	1,000 dozen	308	232
Wool and mohair	1,000 pounds	280, 371	104, 274
Dried and malted milk	1,000 pounds	5, 234	81
Hides	1,000 pounds	515, 659	181, 951
Cotton	1,000 pounds	223, 275	106, 382
Potatoes	1,000 bushels	4, 276	764
agricultural products 2	Commission of the Commission o	\$2, 218, 000, 000	\$955, 637, 000

Includes wheat imported for grinding in bond and reexport.
 Includes tropical products not produced in the United States.

The Dairy Farmer

EXTENSION OF REMARKS

HON. HARRY W. GRISWOLD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, May 18, 1939

Mr. GRISWOLD. Mr. Speaker, a great deal has been said in regard to subsidy payments to farmers, and I wish to submit a table in the RECORD showing the total payments in agricultural subsidies for every State since subsidy payments were started in 1933. I also wish to include farm value in each State and the Federal taxes paid by each State. I believe this table will be of great interest not only to every Member of Congress but to various branches of agriculture and the public in general.

From the table it must be clear to every Representative of a dairy State or section that this industry has been particularly discriminated against in every form of subsidy payments. If we are to have a system of subsidy payments, they should apply equally to every kind of agriculture and to every section or district of the country. If parity payments are to be continued, it should be on a basis that would be fair to the dairy farmer.

If the administration is going to refuse to give the dairy farmer a fair share of agricultural payments and insist on trade treaties that take from him his American market, the dairy farmer and the whole dairy industry is facing ruin.

Mr. BERT LORD, the very able Representative from New York, has gone to great pains in assembling the following table. Due to illness he is unable to be present.

Total farm value subsidy payments and tax collected, years 1933-38

State	Total farm value 1	Total subsidy 2	Tax collected from States ³ \$68, 160, 728	
Alabama	\$368,000,000	\$72, 751, 409		
Arizona	133, 000, 000	7, 108, 667	15, 300, 327	
Arkansas	376, 000, 000	79, 613, 675	28, 190, 452	
California	2, 325, 000, 000	35, 612, 497	1, 304, 035, 426	
Colorado	419, 000, 000	33, 877, 177	134, 256, 560	
Connecticut	284, 000, 000	3, 668, 913	339, 402, 188	
Delaware	51, 000, 000	1, 580, 880	275, 719, 126

Anniversary of Arrival of First Permanent English Settlers in America at Jamestown, Va.

EXTENSION OF REMARKS

HON. COLGATE W. DARDEN, JR.

IN THE HOUSE OF REPRESENTATIVES Thursday, May 18, 1939

ADDRESS BY HON. DAVE E. SATTERFIELD, JR., OF VIRGINIA, MAY 13, 1939

Mr. DARDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the Honorable Dave E. Satterfield, Jr., at Jamestown, Va., at services conducted within the Old Church, May 13, 1939, in commemoration of the landing of the first permanent English settlers in America on that spot:

I am deeply grateful to the Board for the Preservation of Virginia Antiquities for its kind and gracious invitation permitting me to attend and to have a small part in these exercises commemorating attend and to have a small part in these exercises commemorating the anniversary of the arrival of the first permanent English settlers in America here on this spot 332 years ago. That event marked the beginning of a miracle. What has been accomplished on this side of the Atlantic since that memorable day has never been matched in all the annals of history. Those who love their country delight to come here and to commune within the ancient borders of this noble shrine.

From that bleak day in December 1606, when the little company set sail from Blackwall, England, to be buffeted by the winds from every quarter, history records a steady advance and progress; please God may it ever be thus. True, this progression was never unruffled. It was beset with famine, disease, and privations untold, but throughout the trail of years the fine line of achievement is unbroken

unbroken.

Out of it all has come a new race of men and women, a race willing to die if needs be for their country and yet a race in no sense aggressive from the military point of view. A race proud of the progress of democracy and knowing its imperfections, ready, willing, and eager to maintain it, no matter what the odds. A Godloving people; a people who know the value and the wisdom of the preachments of the Reverend Robert Hunt of sainted memory; that man of God, who spiritually inspired those who came here for the first time long long ago.

that man of God, who spiritually inspired those who came here for the first time long, long ago.

It is clear that the history of American institutions begins not with those who braved here the dangers and hardships of early colonial life. We turn the mellowed pages of history, if on this occasion it is meet and proper to briefly trace the development of freedom and democracy from seedling to fruition, to a day long ago when the Normans under the leadership of William the Conqueror invaded England to seize the property of the English. William's successors promised to rule justly after the fashion of the Saxon kings. These promises were broken and the English became vassals of the Norman overlords. On a sunny day in June in the year of 1215, when knighthood was in flower and chivalry largely a matter of might, when the singing troubador wended his caroling way along the ancient roads of England. * * * When Robin Hood ranged Sherwood Forest and government of the people and for the along the ancient roads of England. * * * When Robin Hood ranged Sherwood Forest and government of the people and for the people was yet unheard of, a little group of English barons resolved to risk their lives in an effort to break the autocratic power of Norman kings. They assembled in a little place called Runnymede and there they wrested from King John, attested by the King's seal, a great document, Magna Carta, in which he promised among other things that no "Freeman shall be taken or imprisoned or outlewed or benished or any property of the state of th among other things that no "Freeman shall be taken or imprisoned or outlawed or banished or anyways destroyed unless by the legal judgment of his peers, or by the law of the land." Long before these early settlers had begun to till the soil of Virginia their ancestors had curbed the power of kings and planted the germ of

representative government.

They came as one with the blessings of the church and the guid-They came as one with the blessings of the church and the guidance of the most progressive statesmanship of that day. Their purpose was broad, distinct, comprehensive. They came to establish the claim of England to a part in the New World; to establish here upon this spot a unit representative of English law, English Government, religion, and civilization.

About the beginning of the seventeenth century profound economic changes were in progress. There is something strongly reminiscent in the chronicles of that period. The ceaseless flow of goods from the pay Spain had thrown cld price structures of goods.

gold from the new Spain had thrown old price structures of goods and labor into confusion. The transition from feudalism to capitalism and from agriculture to the faint beginnings of incipient industrialism was having very much the same effect upon the long-established conditions of the England of that day as inventive genius has wrought in a later day here in America. There was unrest and unemployment among the laboring people. The gentry of that day found it difficult to adjust themselves to the new order and were losing caste rapidly * * *. Money was gentry of that day found it difficult to adjust themselves to the new order and were losing caste rapidly * * *. Money was plentiful and many taking advantage of that circumstance were making ventures in new trade overseas and were growing rich. Many "companies" were formed and on April 10, 1606, James I granted a charter to two groups of capitalists, one group resident in London, the other in and around Plymouth. This was the Virginia charter in which England definitely claimed rights in certain in London, the other in and around Plymouth. This was the Virginia charter in which England definitely claimed rights in certain parts of North America. The failure of Gilbert and Raleigh to found colonies had not dampened the ardor of Englishmen to successfully colonize these shores. Sir Walter Raleigh never abandoned hope, not even after the new country, America, had proven his undoing, for when near death he said, "I shall yet see it an English nation." English nation.

On a blustering wintry day, the last in the year 1606, this little band boarded at Blackwall on the Thames, a pinoac and two small ships, the Discovery, the Sarah Constant, the Goodspeed. Perseverance and tenacity of purpose was amply evident, for stormy weather confined the little ships to the Downs until the middle of February 1607. Near the end of April three small vessels entered the locally cases of the Chaseneste February mounts affect. tered the lonely capes of the Chesapeake. Four months afloat upon a lonely sea and then "fair meadows and goodly tall trees, fresh waters running through the woods." Listen to one of that

fresh waters running through the woods." Listen to one of that company who possessed the gift of narrative. Capt. John Smith, he of rugged and direct speech, hardihood, and action. In attempting to describe to his countrymen this new country he wrote:

"The cape on the south is called Cape Henry in honor of our most noble prince. The land, white hilly sands, like unto our downes, and all along the shores great plentie of pines and firres. The north cape is called Cape Charles in honor of the worthy Duke of Yorke. Within is a country that may have the prerogative over the most pleasant places known, for large and pleasant navigable rivers. Heaven and earth never agreed better to frame a place for man's habitation, were it inhabited by industrious people."

Familiar episodes, starving time, Bacon's Rebellion, familiar faces, Sir Thomas Gates, Sir Thomas Dale, Yeardly, Berkeley, and all the rest kept pace with the viclositudes of the growing Colony and its confidence in governing itself. By 1625 there were living in Virginia 1,095 people. This foothold had been dearly bought, for more than 4,500 people had perished from starvation, massacre, or disease.

For the first 10 years the colonists had little or no voice in the managing of their own political affairs. Sir George Yeardly brought from London in 1619 instructions as Governor that thereafter the people were to have a share in their own government, and that 22 burgesses were to be elected to form the lower house of the new legislature. At first there were 11 "hundreds" or "plantations," each represented by 2 persons in the lower house. This, with the council of 6 as an upper house, and the Governor, brought the governmental machinery to a type that was to be familiar in its broad outlines throughout America and down to this very day. Thus, on July 30, 1619, the first legislative body ever to assemble in North America was formally inaugurated. Little did they dream that in just 170 years the first meeting of the Congress of the United States, an arm of the infant Republic, would be holding its first session under its newly adopted Constitution in the city of New York, nor did they envisage a nation celebrating a little over a month ago the one hundred and fiftieth anniversary of that memorable session of its National Legislature, nor were they to grasp the majestic sweep of a government destined and dedicated to demon-London in 1619 instructions as Governor that thereafter the majestic sweep of a government destined and dedicated to demonstrate that-

> There is none so high as to be beyond its power, And none so humble as to be beneath its care.

The transition of our colonial government was slow, labored, and beset and encouraged in turn by all the actors, dramatists, clowns, tragedians, and crackpots who make their entrances and exits in a more modern theater. There were demagogues and traitors, tories and patriots. These facts do no violence to the canvas. Our achievements are all the more wonderful. From Magna Carta to achievements are all the more wonderful. From Magna Carta to this very good day we have sought democracy. It is a great ideal, never a reality. It is like happiness, you never altogether catch her. The Constitution does not include a guarantee of happiness, it only grants you the right and privilege to pursue it. It lies always just over the hill, almost in reach but never quite attainable. It is the quest of a golden fleece that brings stability of mind and heart. It is a quality. Someone has said democracy is not a system; it is a bloom and a quality of public character.

The last century brought us through the golden age, the era of good feeling, the Jacksonian period, and ante bellum days. We Americans had come to believe that the idea of democracy would pervade the universe. International recognition of the blessings

Americans had come to believe that the idea of democracy would pervade the universe. International recognition of the blessings of our form of government was meeting with enthusiastic response. France presented the Republic with the Statue of Liberty. Everywhere men were speaking of that liberty which enlighteneth the world. The orators of that day were saying that all the ills and woes with which civilization had been afflicted would be cured and that the benign influence of liberty would alleviate the suffering and banish the problems of the world. But today, with the twentieth century not half spent, this democracy which began here to recompose the great design of human living—a challenge to the world—finds the world a challenge to democracy.

Whatever has been accomplished in this direction is largely due

Whatever has been accomplished in this direction is largely due to the clergy of that early day. The influence of the church was enormous. The advances which democracy has made are largely due to men of sainted memory, and its progress is dedicated to the memory of the colonial clergy of Virginia, who from 1607 established and maintained the church of the motherland and the faith inshed and maintained the church of the motherland and the faith once delivered to the saints. How completely region was a part of the warp and the woof of colonial government is quantly revealed by this language in the charter of Rhode Island:

"And whereas in their humble address they have freely declared that it is much on their hearts to hold forth a lively example that a most flourishing civil state may stand and best be maintained with a full liberty in religious concernment."

That was a mighty propouncement but mark the said to the

That was a mighty pronouncement, but, mark you, not a proclamation of religious liberty only; it was a clear statement that religion was related to government. I think that the President of the United States had some such thought in mind when in his message to the Congress in January he said: "Storms from abroad directly challenge three institutions indispensable to Americans now as always. The first is religion. It is the source of the other two as always. The first is religion. It is the source of the other two

* * democracy and international good faith."

I do not mean for a moment to attempt to make the point that in other days Virginians were saints. I do say that today most of us while believing in the essential principle of the teachings of Jesus Christ we are living cheap, shoddy, down at the heel Christian lives. I dare to say that, because within me I have the conviction that a race of men and women of faith in theory, but not provide are not implementing what they believe but are now viction that a race of men and women of faith in theory, but not in practice, are not implementing what they believe but are proving themselves the Judas to betray and the blind Samsons to pull down the pillars of democracy. Make no mistake the place and influence that religion has occupied and wrought in the development of this Nation is truly colossal. It began as the Reverend Hunt lifted up his voice in thanksgiving at Cape Henry before they had come here, it continued beneath the old sailcloth yonder and later here within these secret wells. and later here within these sacred walls.

I think it can be truly said that our fathers found a deeper meaning in matters of religion than have we. They knew that this world is not the result of chance and the sport of atoms. They found within themselves the wells and springs of deep spiritual resources. They know that life's real meaning was not to be found in the things that served them, but rather in the spiritual causes that they served. No people have ever more closely adhered causes that they served. No people have ever more closely adhered to the principle that the only way to expand their lives and leave behind them a fairer world was to identify themselves with something far greater than themselves.

A little while ago I sat enthralled within the ballroom of the palace at Williamsburg, listening to sixteenth century music rendered by a great artist upon that sweet instrument of antiquity, the harpsichord. Long ago that charming room was lighted with the harpsichord. Long ago that charming room was lighted with candles, and tallow dips guided your feet to the entrance of that great house. Electricity was unknown. Within the last century men relied upon their agility with a quill pen to communicate their thought to others; today I use a microphone and speak to many in distant places. Yesterday the hands of many were the instruments of labor; today inventive ingenuity has laid in the lap of the world the forces of the universe. Is it not an amazing civilization? But it is sadly lacking in one thing. The supplying of gadgets of utility, the machine, the genius of the inventor is not enough. We have been busy in conquering the forces of nature, but we have neglected to conquer ourselves. We have no quarrel with those who assist in man's conquest of nature; we do have a

but we have neglected to conquer ourselves. We have no quarrel with those who assist in man's conquest of nature; we do have a grievance against those who assist in man's conquest of man.

The peoples of all the world may progress, the nations of the earth may advance, but each succeeding generation knows that something greater than science, something deeper than education, something more inclusive than patriotism has always been the mainspring of our endeavors, and to the end of time will be the supreme necessity if we are to save and preserve civilization.

The challenge is to us. How will we answer it? The fashion nowadays is to sound a warning that society as we know it may collapse, that we live in a day fully as hazardous to the constituted order of things as when the Roman Empire fell, when the Rennaissance came, when the Reformation followed. On the one hand, we witness the fact that over and above the violence of all hand, we witness the fact that over and above the violence of all change in the past the great framework of human living has been steadily recomposed. On the other hand, we see the lines of battle forming between dictatorship and democracy. This is a struggle not of our making. We Americans are content to continue our experiments in democracy here in this great experimental laboratory we call America. One dictator boldly declares, "The struggle between the two can permit no compromise. It is either we or they. Either their ideas or ours will triumph." Whether the they. Either their ideas or ours will triumph." Whether the chaos of the moment is but a phase of constant and logical process, or whether as General Smuts, that great soldier and statesman, has said, "The tents have been struck and the great caravan of humanity is once more on the march," is a question the answer to which is to be found in the courses and attitudes of the remaining democracies. Today as Virginians we have a pardonable pride in the knowledge of the fact that here at Jamestown the early beginnings of the great struggle for political equality, freedom of religion, and economic equality of opportunity were had. Shall we easily forget the trials and tribulations of our fathers here? here?

here?

Scarcely established, the Burgesses dissolved by King and Privy Council in 1623. A bitter, uncompromising, unceasing fight to regain this cherished right. The capitulation of Charles I and the restoration of this ancient lawmaking body in 1627 is a familiar and glorious page out of the past. How different the picture today. I believe it was Charles Beard who said that today the people of this country may be divided into three groups, these being, in effect.

(1) The people who are in the driver's seat enacting the measures necessary, in their opinion, to keep the affairs of the Nation in order.

(2) The people directly opposed to the group in power on all

(2) The people directly opposed to the group in power on an matters of policy.

(3) The great mass of the people who move tranquilly about paying little or no attention to the affairs of government for the most part, but now and then stirred to action in this or that direction as a result of propagandizing activities of the first and second groups.

has made this sad state of affairs possible? The answer, What has made this sad state of affairs possible? The answer, as paradoxical as it may seem, is the extraordinary success of the American constitutional system. Its achievements have endangered its own existence. Little by little the citizen has yielded ground to centralized government. Complacency and diffidence are enthroned in places where vigilance and intelligent interest ought to be found. Listlessness will deny us the preservation of democracy, no matter how providently it may have been secured. One hundred and fifty years ago the men who formed and fashioned it, entertained considerable doubt as to its efficacy. General Washington characterized it as "the best thing that could be done." Wise as were the founding fathers, as great a document as the Constitution is, it was the generations of living.

be done." Wise as were the founding fathers, as great a document as the Constitution is, it was the generations of living, pulsing Americans that came after them that invested it with the pulsing Americans that came after them that invested it with the attributes of greatness. The pattern of our Government is the individual. All political power, sovereignty, is lodged in the citizen. He is the source of public authority, and government merely a device by which his efforts can be made more effective. By the same token he will through neglect and the shifting of his constitutional responsibilities to others play his part in its destruction. The slow and erosive practice of delegating through the pressure of the steady march of expanding government, the powers of local and self-government is the surest and swiftest way to transform the system inaugurated here and under which we have become one of the greatest powers in the world.

Men who lived here and those who followed them would have

Men who lived here and those who followed them would have been the last to be ensnared by the delusion and enchantment of the shibboleth that they could gather a harvest without work-ing, or that others would sow in the spring in order that they might reap in the fall.

In April the President stated to the Congress:

"Confident in our Republic's 150 years of successful resistance to all subversive attempts upon it, whether from without or within, nevertheless we must be constantly alert to the importance of keeping the tools of American democracy up to date. It is our responsibility to make sure that the people's Government is in condition to carry out the people's will effectively without waste or lost motion."

waste or lost motion."

This is clearly an objective to be desired, but it is an objective which cannot long be securely held if we are too hasty, move too swiftly in seeking to acquire it. The gait of democracles as distinguished from the totalitarian states is lumbering and shuffling. Democracy moves slowly but it arrives surely, and in good company of the governed. Advance can mean but little under our system unless ample time be given to consolidate advances made. Externe measures are sometimes processory, but the notion; if he is treme measures are sometimes necessary, but the patient, if he is to recover, must earnestly do his best to aid the physician to the end that a return to normal ministrations will render him well again. We in Virginia are keenly aware of this necessity. I think Capt. John Smith correctly described the attitude of Virginians who were to follow him three centuries and more when attempting to describe to Englishmen this new country called Virginia he said, "The chiefe of winter is December, January, February, and halfe March. The cold is extreame sharpe, but here the proverb is true that no extreame long continueth."

The break-down in economic conditions, the growth of debt resulting in demands for a strong government to straighten out

The break-down in economic conditions, the growth of debt resulting in demands for a strong government to straighten out chaos, has created a new problem in America. It is a task for a people politically mature and clear thinking. It demands not only devotion to country, but for all the moderation and clarity of mind that we can command. There are people who say that if we are to retain American liberty we must throw overboard most of the great social advances that have been made in the last 6 years. They say that unless the country abandons these measures we might as well resign ourselves to the loss of all our essential liberties.

This is no less an extreme view than that presented by those who can see no fault in any of the objectives undertaken and won by the present administration, nor any vice in the administrative details incident to the execution of the covering law. Both schools of thought represent the "extreme view." Our common problem is to find a way through reconciliation and harmonization of these excursions in government with our traditional liberties. The centralization of government must be kept within reasonable bounds

tralization of government must be kept within reasonable bounds and its powers reconciled with individual rights if we are to retain the specific rights of mankind assured by the Bill of Rights.

Religion and democracy—men and women everywhere are beginning to ask if, after all, they are not inseparable. The pulpit, the poet, and author long ago defined the relationship, and now the press and the hustings join in the universal question, Is religion the key to all freedom? Let millions who dwell in other lands summon the pagan deities of distant days, let them substitute for spiritual freedom the absolute nationalistic state with its dogmes its rituals. freedom the absolute nationalistic state with its dogmas, its rituals, and its symbols. You and I know that our lives are divided into two sections—the means by which we live and the ends for which we live. Nothing shall disturb that conclusion. We know that the period of cynicism and frustration through which we are passing is transient and that the revolt against irreligion is on in earnest here

in our country.

Let me conclude with the prophetic words of King James I. You will find them on the second page of the printed program:

"Lastly and chiefly the way to prosper and achieve good success is to make yourselves all of one mind, for the good of your country and your own, and to serve and fear God the Giver of all goodness, for every plantation which our Heavenly Father hath not planted shall be rooted out."

Economy

EXTENSION OF REMARKS

HON. CHARLES L. McNARY

IN THE SENATE OF THE UNITED STATES Thursday, May 18 (legislative day of Monday, May 8), 1939

ADDRESS BY HON. JOHN G. TOWNSEND, JR., OF DELAWARE BEFORE NATIONAL ECONOMY LEAGUE

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by the Senator from Delaware [Mr. Townsend] on May 16, 1939, at the seventh annual dinner of the National Economy League of New York.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members of the National Economy League, ladies, and gentlemen, when I received the kind invitation of the Na-

tional Economy League to address you on this occasion my eye was attracted by that word "economy."

Here we find the National Economy League. of the word "economy" has not been completely forgotten its meaning most certainly must have changed or have become mis-

meaning most certainly must have changed or have become misunderstood. I so reason because at the same time we find a
group called "economic planners"—and the views of that group
and the views of your group seem wide apart, to say the least.

I always thought that economy meant management of expenditures—or, as Adam Smith put it—"the art of managing the
resources of a people and of its government"; that is, careful management, frugality of labor and money. That seems to be the
view of this organization. Consequently, I am left confused by
the term "economic planners," when I see what they are doing.

In view of my own confusion I shall try, in my brief remarks,
to choose words descriptive of what is happening sufficiently oldfashioned to be understood. I shall, however, be compelled to
adopt a relatively new expression, because the subject upon which
I have been invited to speak requires it.

The term "deficit spending" we all know. It is the spending

I have been invited to speak requires it.

The term "deficit spending" we all know. It is the spending of more money each year than we take in. Every man on the street knows that we have been doing this for 9 long years—and he has been deluded into thinking that it is for his present and future benefit. What he has not been told is that this deficit spending has been financed not by taxes, not by loans out of savings, but by a new process which we will call greenback deposits—and that this spells inflation. This fact, and the consequences of inflation, have not been brought to the attention of the people by the economic planners.

back deposits—and that this spells inflation. This fact, and the consequences of inflation, have not been brought to the attention of the people by the economic planners.

It is my firm conviction that we have been pursuing a course leading to the debasement of our currency. Much damage has already been done, but we can escape the type of run-away inflation which European countries experienced after the World War, if steps are taken tending to bring the Budget into balance, eventually to balance the Budget, and to retire the vast debt accumulated in a decade of deficits.

No one can expect governmental expenditures to be covered by receipts in every single year. Under our system of revenue, which relies heavily on taxes on incomes and capital gains, there is a sharp drop in receipts in periods of business depression. Expenditures on the other hand do not automatically decrease with the decline in business and employment, but actually increase.

But the Federal deficits in recent years have not been primarily due to low revenues, nor to the normal expansion of government nor even to the burden of unemployment relief. They have been chiefly due to a deliberate policy of spending in excess of receipts to promote prosperity.

Federal tax receipts fell from a little over \$4,000,000,000 in 1930 to \$2,000,000,000 in 1931 and 1932. Then tax receipts, both because of new and increased taxes and improved business conditions, steadily rose until they reached six and a quarter billions in the fiscal year 1938 which ended June 30, last. In the current fiscal year tax receipts will be about five and a quarter billions. Expenditures, on the other hand, have far outstripped rising

fiscal year tax receipts will be about five and a quarter billions. Expenditures, on the other hand, have far outstripped rising revenues. To put the figures on a comparable basis, bonus payrevenues. To put the figures on a comparable basis, bonus payments and debt-retirement payments should be omitted. In 1931, the first deficit year, expenditures were three and a half billion dollars. In the next 2 years expenditures were about four and a half billions annually because of R. F. C., relief grants, and a modest program of emergency public works.

In the next 3 fiscal years—1934 to 1936—expenditures were about six and three-quarter billion dollars a year. During the current fiscal year we shall spend over nine and one-half billions.

As a result of continued deficits, the public debt, in the last 10 years, has increased by \$24,000,000,000, and by the end of the next fiscal year the total increase will be about \$28,000,000,000.

It is significant that the debt increase resulting from these peace-time deficits is greater than the increase because of our participation

time deficits is greater than the increase because of our participation in the World War.

in the World War.

The amounts are so staggering that our minds can hardly grasp what they really mean in terms of money or of anything else.

But let me tell you that if we were to save \$1 a minute it would take 1,905 years to save \$1,000,000,000.

If we were assured of an attempt to balance the Budget after 1939, and of an eventual balanced Budget, we could relax a bit and 1939, and of an eventual balanced Budget, we could relax a bit and try to figure out how to reduce the national debt of \$41,000,000,000; that is, \$1 a minute for 78,105 years, or \$1 a second for 1,300 years. But we are still going in the opposite direction. Every appropriation bill calls for expenditures to swell the deficit. While a small group, so far inarticulate, begs for efforts toward a balanced Budget, the pressure groups demand and get appropriations which remove any possibility of a balanced Budget. Those in favor of deficit spending as a means of recovery are in control.

To those of us who firmly believe that you cannot spend yourself out of a depression any more than you can lift yourself by your bootstraps, to those of us who believe that economy in government and a balanced Budget are essential, there arise two questions

questions

1. Is it understood clearly by the advocates of continuous deficit spending and by the people just how this continued deficit spending is resulting in real inflation?

2. Do these same people realize the consequences which must follow inflation?

A fact which most people do not seem to recognize is that the Government's deficit is not being financed by the sale of Government bonds to persons having savings to invest. The

practice has been to saddle the bulk of the annual deficits on the

The Reserve banks and the commercial banks, either because of the necessity of protecting their already high investments in Government obligations, or perhaps because the Government owns preferred stock in some 6,000 banks and has an agency in control

of others—have been financing the deficit.

According to the Twentieth Century Fund, our banks and credit institutions have absorbed four-fifths of the new debt, while only one-fifth has been absorbed by individual investors and corpora-

Now, here is the inflationary nature of this deficit financing.

The process is simple.

The Government sells its bonds and notes to the banks. banks in turn create deposit credit to pay the Government for its bonds. This deposit credit the Government checks against to meet its expenses. This process I call "greenback deposits." It cannot be called anything but inflationary, to the full extent to which the banks do not make resales to investors of savings.

If this process is continued at the pace at which we have been going, with paper money and book credit, we can expect in the end an inflation which can wipe out our currency.

The only difference between this sort of book-credit inflation and the inflation in post-war Germany is that the circulating credit there was chiefly in the form of bank notes instead of bank

deposits.

If anyone will explain to me so that I may understand it, what essential difference there is between greenback notes and greenback.

I will gladly listen.

deposits, I will gladly listen.

In each case the book credit is not supported by new values, but rests entirely upon the capacity of the Government to pay its debts at some future time. This practice is just as inflationary as would be the payment of the Government's bills with printing-press money.

The deposits, which have increased by billions in the last few years, are, at least to the extent of one-half, the result of the printing of Government bonds and writing their values in figures in

the banks' ledgers

the banks' ledgers.

From 1930 through 1937 the Federal Government issued \$21,700,000,000 of securities, exclusive of \$7,500,000,000 held by Government agencies and trust funds. Of this total, \$17,600,000,000, or 81 percent, was absorbed by banks and insurance companies. The banks alone absorbed 63 percent. This increased bank deposits and gave a false appearance of prosperity. Professor Spahr has shown that from June 30, 1933, to June 30, 1937, total bank deposits increased by \$18,000,000,000, and that fully half of the increase was due to increased holdings by the banks of \$9,000,000,000 in Government securities.

What about the low-interest rate prevailing on Government issues? The average rate on long-term bonds is less than 2½ percent, and recently the Government sold short-term issues for as little as one one-hundredth of 1 percent. Actually some people bought on a negative yield basis. When the Government can borrow from the banks at these low rates, we are for all practical purposes on a flat-money basis.

purposes on a flat-money basis.

While on the subject of Federal spending and of inflation, I want to call your attention to a type of spending which has nothing to do with the Federal deficit, but which is not for that reason less important. This invisible spending runs into the hundreds of millions of dollars, and yet not one cent of it appears on the red-ink side of the Budget. Perhaps that is why it has been permitted to go on year after year. I refer to the spending of American wealth for silver for silver.

Not long ago a Senate banking and currency subcommittee held public hearings on a bill introduced by me—S. 785—to repeal the Silver Purchase Act of 1934. Responsible witnesses before the committee introduced very impressive evidence of the great waste

involved in this program.

involved in this program.

One witness pointed out that over \$1,000,000,000 of American wealth had been spent for silver by the Federal Government since the beginning of 1934, and that over 80 percent of the silver acquired by the Government has come from abroad.

You may wonder how all this money can be spent and yet not appear on the Budget. It happens through a process of inflation—pure and unadulterated watering of the currency. The Government takes in silver, divides it into two piles, issues silver certificates, which are legal-tender currency, to the sellers of silver, and then puts the metal in two different Government pockets. This is perfectly legal and has congressional sanction.

On the average, since the initiation of the silver program, approximately \$17,700,000 has passed from the American people into the

On the average, since the initiation of the silver program, approximately \$17,700,000 has passed from the American people into the pockets of silver sellers, chiefly foreigners, each and every month. One of the principal beneficiaries of this official share-the-wealth movement has been a country which has been seizing American properties at the very time we have been buying from it at a very fancy price millions of ounces of a metal which Chairman Eccles, of the Federal Reserve System, and other witnesses before the committee, have testified is not only absolutely unneeded by this country, but actually and materially complicates the problem of inflation control by the monetary authorities.

In its last annual report the Federal Reserve System described the tremendous growth in the excess reserves of the commercial banks which constitute its members. Owing to the inflationary gold and silver policies, and to the inflow of foreign capital, the total increase in member bank reserves during the 5 years preceding December 31. 1938, was about \$6,000,000,000.

LXXXIV—Ann——130

During the same period, the Federal Reserve System states, additions to member bank reserves attributable to the issuance of silver certificates was \$1,221,000,000, or one-fifth of the total increase in member bank reserves!

And this is only part of the story. The Treasury today holds over 1,100,000,000 ounces of silver against which it has not yet exercised its prerogative of issuing silver certificates. Moreover, the administration possesses the power to revalue both gold and silver. If it had used all its powers last month, it could have issued \$3,432,000,000 in brand new silver certificates without buying a single additional ounce of silver.

Inasmuch as a prominent mining engineer a few months ago said that the real value of silver is not more than 10 cents or 15 cents an ounce and inasmuch as the Treasury now issues silver certificates at \$1.29 an ounce and through one or another power, the Government is able to issue certificates at \$2.58 an ounce, I see very little difference between this type of inflation and green-backs.

backs.

What it boils down to is that the Government today is buying 10 cents or 15 cents worth of silver for 43 cents, and is then turning around and selling that silver to us at \$1.29 an ounce. The difference is called a seigniorage "profit," and is so recorded in the Budget.

When we think how we stint on some highly important services to the public, the shameful waste of the silver program becomes more apparent. As I stated a moment ago a single month's average expenditure on silver comes to \$17,700,000. This would be enough money to support the important Bureau of Foreign and Domestic Commerce for 6 entire years.

Fermers who have supported our westeful silver program do not

Domestic Commerce for 6 entire years.

Farmers who have supported our wasteful silver program do not realize that 1 month's average expenditure on silver would support the Bureau of Plant Industry for over 3½ years and the Bureau of Dairy Industry for 25 full years.

One month's silver purchases would support the Public Health Service or the Coast Guard for the greater part of a year and would maintain the vital Panama Canal for almost 2 years.

It is a fact that we are now supporting such vital services either through taxation or with borrowed funds, whereas we are supporting the silver sellers through a plain inflationary process. While I am not advocating that we should support vital Government functions by silver or greenback inflation, the distribution of "cigar coupon" money to American Government employees would at least confine the subsidy to American citizens, whereas over three-fourths of the wealth which has been squandered on silver since 1933 has gone directly to foreigners.

But, however ill-advised and wasteful these expenditures have

But, however ill-advised and wasteful these expenditures have been, the damage to the American people that could be caused by the improper use of this metal is many times worse. It is a cause

the improper use of this metal is many times worse. It is a cause for real concern.

I doubt that the public is fully aware of the threat to the value of the dollar, directly resulting from deficit spending and "greenback deposits"—and from the broad powers over the currency, gold and silver, which the administration possesses.

The time may soon come when the banks either cannot or will not safely absorb further Government issues. When that time comes we shall face a real crisis.

Should banks and other credit institutions refuse to have Government.

Should banks and other credit institutions refuse to buy Government bonds, the Government would be forced to extend public control over the financial system. Initially the Federal Reserve banks would provide a first line of defense in absorbing unwanted Government paper. Selling new bonds to the Reserve banks, how-ever, would not be a satisfactory or lasting device. Nationaliza-

ever, would not be a satisfactory or lasting device. Nationalization of the commercial banks might soon follow.

The dangers of Government control of the central banking system are self-apparent. It means that the chief borrower controls the chief lender. Already our Government exercises a powerful influence on the policy of the Federal Reserve System. Any further increase in the Federal Government's voice in purely central banking functions should be deplored. This country needs a clearer monetary and credit policy. This is the main reason why I have introduced Senate Concurrent Resolution No. 11.

If the time ever comes when our Government takes over the banking system to continue deficit financing, we are headed for

If the time ever comes when our Government takes over the banking system to continue deficit financing, we are headed for disastrous inflation. That is exactly the procedure followed in Germany, France, and other countries in the early post-war years. If we add to this the acceleration which would result from devaluation of our metal and the issuing of greenbacks against it, the experience of Europe would soon be paralleled.

The savings of our people would be completely wiped out. The millions of home owners, including those financed by the Government, would lose their homes. The States require trustees, insurance companies, and savings banks to invest in the very securities which would be wiped out by inflation. The surplus income of our insurance companies would be inadequate to meet their obligations if the surplus were not entirely wiped out. The endowments of our colleges and universities, which are variously estimated at of our colleges and universities, which are variously estimated at about one and one-half billion dollars, would be wiped out; or if not, certainly their income would be so inadequate to meet their needs that many would be unable to carry on in any satisfactory manner. Wages will not follow the rising prices, so that even the persons employed would be unable to get many of the necessities of life.

That this is possible can well be seen from the experience in Europe following the war. In France, four-fifths of the savings of the thrifty was wiped out. In Austria and Germany, such savings were entirely wiped out. Unemployment and business fallures were widespread. Intense suffering followed. If and when inflation gathers momentum, the groups who will suffer most will be those on fixed incomes and wage earners.

Nearly 100 years ago, Daniel Webster wrote:

"The very man of all others who has the deepest interest in a sound currency and who suffers most by mischievous legislation in money matters is the man who earns his daily bread by his daily toil."

The economic planners notwithstanding, nothing has since oc-

curred to alter this fact.

curred to alter this fact.

We cannot escape some degree of inflation after 9 years of deficits, but the worst effects still can be avoided by the definite assurance of an attempt to balance the Budget, and reduced expenditures for the future with a balanced Budget eventually. You can all help in that direction. A Nation-wide campaign to bring to the attention of the people the inevitable result of further increases in the debt, the inevitable results of deficit spending financed by greenback deposits, the dangers of inflation from the silver-purchase program and the gold powers—is absospending financed by greenback deposits, the dangers of financial from the silver-purchase program and the gold powers—is absolutely essential. The pressure of the people, fully informed of the dangers and consequences of this inflation, alone can overcome the pressure groups, the planners, and the planless whave misled them into thinking that these Government expenditures and practices are in the interest of the wage earner, the unemployed, and the people generally.

Chain Lobby Lies About Labor

EXTENSION OF REMARKS

HON. FRANK W. FRIES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, May 18, 1939

ARTICLE FROM THE BRICKLAYER, MASON, AND PLASTERER FOR APRIL 1939

Mr. FRIES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the April issue of the Bricklayer, Mason, and Plasterer:

[From the Bricklayer, Mason, and Plasterer for April 1939] CHAIN LOBBY LIES ABOUT LABOR

Lie is an ugly term

It is the only one, however, that properly describes the attempt of the chain-store lobbyists to make honest trade-unionists, Congress, and the world at large believe that the endorsement of their fight on the Patman bill they sought to buy at the Houston Convention of the American Federation of Labor was delivered.

Undaunted by their failure in Houston, and the subsequent flop

Ordaunted by their failure in Houston, and the subsequent hop of the attempt to dine and wine the executive council into favorable action at Miami, they are now seeking to obtain the assistance of State, central, and local bodies by trying to make it appear they succeeded in Houston, while their masters by making union agreements to cover a few employees and promising to make others deceive decent labor people into believing antiunion devils have become union saints overnight.

Sad to relate, they are meeting with some small degree of success.

Thus, George Googe, southern representative of the American Federation of Labor, addressing the Florida State Federation of Labor convention held in Jacksonville, told that body of great benefits to flow to the building trades through the conversion of the Great Atlantic & Pacific Co.

In an address to the convention, Mr. Googe told the delegates the company had just expreed to unionize its clerks in Florida and

the company had just agreed to unionize its clerks in Florida and Georgia, and extended something stronger than hope that the

building trades would also be favored.

"I am," he said, "happy to announce to the building mechanics that we will in all likelihood execute contracts requiring union conditions, the closed shop, and union wage scale in every locality in Florida."

It is not to question Mr. Googe's good faith to note that over-building in the great "gold rush" days provided the corporations with more than enough buildings in Florida to cover its needs for years to come.

Did he know that as he spoke that the A. & P. was on the unfair list of the Building Trades and Construction Council of New York, where the concern has more work in 6 months than it is likely to have in Florida in Mr. Googe's lifetime?

There is no doubt Mr. Googe meant well.

Possibly he had forgotten the ancient rhyme on promises in our last issue:

"When the devil was sick The devil a monk would be, But when the devil got well, The devil a monk was he."

Neither is there any doubt that as he spoke there were at least one chain-store lobbyist associated with a so-called labor group on the job in Jacksonville to tell delegates to the convention of the good to flow from the conversion of the great enemy of labor who knew that A. S. P. was on the unfair list.

who knew the A. & P. was on the unfair list.

Nor that the few clerks could not have gotten all they got and perhaps more by exercising their rights under the Wagner-

Connery bill.

Comparable efforts are being made by the labor lobbyists of the

chains in other States.

That our members in subordinate, central, and State bodies may have the exact facts with which to confront, not only the men working for the chains, but honest men who may be deceived, the Journal presents these parts of the record of the Houston convention dealing with the subject.

On page 44 of the proceedings of the convention appear two resolutions presented by one whose honesty and good faith is not questioned. They read:

DISAPPROVING PATMAN BILL FOR TAXATION OF CHAIN STORES "Resolution No. 86

"Whereas there has been introduced in Congress a bill (H. R. whereas there has been introduced in Congress a bin (h. k. 9464), Seventy-fifth Congress, third session, otherwise known as the 'Patman bill,' providing for a steeply pyramiding series of license taxes on chain stores, graduated from \$50 per store for chains with 500 or more stores, and further providing that such tax shall be multiplied by the number of States in which such chains operate;

and
"Whereas the intention of reintroducing this bill has been

"Whereas the intention of reintroducing this bill has been announced; and "Whereas the object of this proposed punitive tax is not the raising of revenue but the openly stated destruction of one form of retail distribution for the benefit of other firms; and "Whereas the destruction of chain-store operation which would result from this proposed law would dislocate upward of 1,000,000 wage earners, many, and an increasing number of whom, are members of organized labor, and have an immediate effect on living costs: Therefore, be it "Resolved, That the Fifty-eighth Annual Convention of the American Federation of Labor does go on record as condemning and disapproving the Patman bill and all forms of taxation which prostitute the taxing power of the Government to a weapon for the destruction of worthy enterprises by business rivals." (Referred to committee on legislation.)

(Referred to committee on legislation.)

PROPOSING A. F. OF L. COMMITTEE FOR STUDY OF EQUITABLE DISTRIBUTION OF TAXES

"Resolution No. 87

"Whereas a constantly mounting burden of taxation makes this subject one of the greatest concern to the American people; and

"Whereas the adjustment and even increase of taxation may be required for the purpose of continuing and perfecting the various social and economic objectives of wage earners, not only as workers

social and economic objectives of wage earners, not only as workers but as consumers; and
"Whereas there is a manifest effort upon the part of different branches of industry and business to shift this burden from themselves to others, and particularly to the necessities of life, so that agitation for certain forms of taxation is not bona fide effort for the raising of revenue upon an equitable basis but punitive and discriminatory and confiscatory in form and intent; and
"Whereas inequitable, discriminatory, and punitive taxes frequently have detrimental effect not only upon cost of living, but upon wages, hours, working conditions, and employment: Therefore be it

fore be it "Resolved. "Resolved, That the Fifty-eighth Annual Convention of the American Federation of Labor authorizes and instructs the executive council to establish a committee for the purpose of study and appropriate action concerning the crucial problem of equitable distribution of the tax burden, with especial reference to taxes of discriminatory and punitive character."

(Referred to committee on resolutions.)

The second resolution (87), providing for a study of all taxa-

The second resolution (87), providing for a study of all taxation, was reported on first.

The report, on page 424, of the convention reads:

"Your committee is of the opinion that a careful and complete study should be made of the problem of taxation under the direction of the executive council, and therefore recommends that the resolution be referred to the executive council with the request to take such action as will secure a complete study upon the subject of taxation as referred to in the resolution."

The report was unanimously adopted without debate.

The report was unanimously adopted without debate.

The resolution (86) specifically attacking the Patman bill, and which if adopted would have placed the Federation of Labor squarely against it, reappears on page 570 of the record, where, after reviewing the nature of the bill, the committee reported:

"It (the committee) therefore recommends that the resolution be referred to the executive council for such action as it deems proper in connection with the tax study authorized by the previous resolution (86)."

This report was also accepted without debate or discussion.

The prochain bill is therefore in exactly the position it was when presented in the convention—it has not been adopted and it cannot be pending study of the entire tax question of which it is Its adoption cannot even be moved. It is fast behind the

eight ball.

We have no delusion that publication of this record will stop the efforts of the prochain advocates. It may make them more

careful.

But it will do one thing: It won't make it easy for the boys to pull the wool over the eyes of members of the Bricklayers, Masons, and Plasterers' International Union, and it will make the going

Let's Not Blunder Again

EXTENSION OF REMARKS

HON. FRANK C. OSMERS, Jr.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1939

RADIO ADDRESS BY HON. FRANK C. OSMERS, JR., OF NEW JERSEY, APRIL 6, 1939

Mr. OSMERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over the radio on April 6, 1939:

Twenty-five years ago today—April 6, 1914—America was a happy, prosperous, peaceful nation. The great tide of immigration had brought here the brains and the brawn and a love of liberty and equal opportunity from every corner of the globe. We stood on the threshold of an era unprecedented in the history of the world. Industry and agriculture were coming into their own. Social reform had begun to lighten the load of the worker. Class lines were disappearing. Our Government was financially sound and its cost low

In the next 3 years a change came over our America that can hardly be described. Little by little the rock of our traditional national policy dissolved beneath our feet. Led on by bloody war profits, foreign propagandists, and inept diplomacy, we were sucked into the senseless maeistrom of the first World War.

Into the senseless maelstrom of the first World War.

Tonight we celebrate the twenty-second sad anniversary of that momentous event. Gone and forgotten are those stunning phrases "The war to end war" and "Make the world safe for democracy." The bones of 15,000,000 men lie scattered on the battlefields and at the bottom of the sea. More millions are blind, malmed, and suffering as a result. Hundreds of billions in wealth are gone. With what high hopes did America greet the acceptance by our then ponderous enemies of the 14 points of Woodrow Wilson, with their promise of a just and lasting peace based on understanding and good will, and how sadly those hopes were dashed by the gorging of our fellow allies at the conference table at Versailles. Thoughtful men knew then that contained in that treaty were the seeds of the second world war. We seem now about to reap the terrible harvest of those seeds. harvest of those seeds.

Let everyone ask himself whether the first World War was a war to end war, as we were told, or whether that war made the world safe for democracy? We have learned one bitter lesson as a result of our participation, which, if remembered, would well be worth whatever the war cost us. That lesson is that no international problem can be solved by war. We have learned, too, that while it is impossible for America to dictate a victory in Europe, it is impossible for us to dictate a just peace as a result of a victory

gained through our strength.

gained through our strength.

Patriotic Americans who think of their country's welfare first should make a careful study of the steps that led us to the battle-fields of Europe in 1917. There will be noted an alarming similarity between present conditions and those that maintained between 1914 and 1917, with the exception: America today is much further along the road to war than it was in 1914-15, or even 1916. Again we hear that the internal affairs of other nations are a matter of vital interest to America. The tragic part of most of these pronouncements about foreign governments is that the loudest and most abusive are made by those Americans who have been outstanding failures in the successful administration of their own affairs.

The time has come for us to decide whether we are going to join

The time has come for us to decide whether we are going to join the mad scramble of world-power politics, or whether we are going to remain neutral. The first course will lead us into foreign battlefields, where the flower of our manhood will be destroyed, our wealth dissipated, and our internal economy ruined. On the other hand, the course of strict neutrality offers us an opportunity to

nand, the course of strict heutranty offers us an opportunity to preserve our youth, enjoy our wealth, and keep our economy sound. To reach this latter ideal, we must exert a quality of control not now evident in the United States. There are many shades of opinion on this subject, ranging all the way from those who would send an expeditionary force into every foreign squabble, to those who would erect a wall around our country and live within it. Those advocating that America be the world's policeman, generally expect somebody else's son, husband, or father, to do the policing.

The President's belief is that we should show our feelings by methods stronger than mere words and yet short of war. We tried this method from 1914 until 1917 by supplying one side with money, arms, and materials. The futile results of that course are too well known to be discussed at length here.

Every American who wants his country to remain neutral, is confused by the multitude of suggestions made daily to bring that about, particularly by Members of the Senate and House of Representatives. Many feel, and I am one of them, that America should exert its moral leadership in the world, in one last effort to stem the inevitable tide. On March 22, I addressed a letter to Cordell Hull, Secretary of State, expressing my hope that America might lead in a world discussion of international problems. I quote in part from that letter:

quote in part from that letter:

"As one of America's younger generation, who would be called upon to be the cannon fodder in the next war, and a taxpayer after it to defray its cost, I feel compelled to write you on present

world events.

"While not being elected to serve the interests of youth alone, my age naturally inclines me toward their viewpoint. I can say that the youth of America does not want war, and, in fact, to use the words of the President, 'We hate war.' But hating war, with all its useless devastation, horror, death, and depression, is not enough. The American public has the unhappy habit of studying its foreign relations only when world conditions have reached the crisis stage, such as now.

"Even a casual observer notes the feeling of inevitability that is creeping over our Nation. We are living again those drifting

"Even a casual observer notes the feeling of inevitability that is creeping over our Nation. We are living again those drifting years of 1914 to 1917, when we slowly sank into the morass of European hates and ambitions. This time the pace is much quicker. Paths once traveled are covered faster on the return trip. Again we see the effort to make European interests appear as our own. Again the 'blood-money brigade' is telling America that we can enjoy the profits of war, but not its horrors. We should know better, but the human memory is short. Again we are being invited to join in military collaboration with one set of powers against another. Again we hear that the internal government of other nations is our business. On that basis we would be meddling in the affairs of every nation in the world because of their laws, customs, or treatment of colonies and minorities of which we did not approve. This does not mean that we should cease our humaninot approve. This does not mean that we should cease our humanitarian efforts to remove unwanted minorities to parts of the world

where they may live in peace and security.

"Billions of dollars of debt owed to the American taxpayers by foreign nations as a result of the World War stand defaulted, and the mad rush for more arms in Europe increases daily. We are now reaping the harvest of Versailles—the 20-year armistice is ended. "The empty stomachs in those nations of the world that have

few of the necessary foods and raw materials for modern living are going to cause an explosion that will destroy the world as we know it.

going to cause an explosion that will destroy the world as we know it.

"While I have differed with you on occasion, there is no doubt that your policy of peace achieved through normal commerce with other nations is sound. We are now starting on a contrary course that in my opinion is dangerous.

"In view of these conditions, I respectfully urge you to use the authority vested in you to call together those charged with the foreign affairs of all the other nations of the world, in an effort to save our present civilization. At such a meeting all controversial issues among nations should be discussed: Colonies, raw materials, trade relations, unwanted minorities, frontiers, naval and military disarmament, and any other subject of international conflict.

"No nation but ours is disengaged enough to take such a lead. The United States owes this effort to its youth and to its posterity. Our armament program is not the solution, but merely a small imitation of what we condemn elsewhere in the world.

"It is possible that such an effort will fail of complete or even partial success, but war has proved only a bitter and tragic solution of international dispute. Any effort to avert it, even though it may fall, is better than supine resignation to bloodshed.

"May God bless any efforts you may make to bring peace to the peoples of this troubled world."

Mr. Hull replied, and I quote as follows:

"I am compelled to state, however, that there seems to be at present little basis for hope that such a conference would serve a useful purpose."

While not wishing to unnecessarily prolong our correspondence.

present little basis for hope that such a conference would serve a useful purpose."

While not wishing to unnecessarily prolong our correspondence, I could see no other alternative than to answer that this is the same excuse offered for the refusal to negotiate for peace before and during the World War. What must happen before we will try to exert our influence? When would be a better time than right now? May I point out that each day of the last war cost the lives of approximately 5,000 men. America should make this one supreme effort to halt the destruction of civilization. History shows us that peaceful relations between nations can only be maintained by constant negotiation and arbitration. by constant negotiation and arbitration.

by constant negotiation and arbitration.

It is my hope that this Congress will adopt measures designed to preserve strict neutrality. I believe that we should restrict the exportation of war materials to all belligerents upon the determination by Congress, and not by the President alone, that a state of war exists. This legislation should also apply to the transshipment of war material to warring nations through a neutral country. Further, I believe that the shipment of secondary war materials should be carefully restricted and on a cash-and-carry basis, and only to those belligerents who are not violators of any treaty they may have with the United States. This decision should also be

made by the whole Congress. The same restrictions that apply to the shipment of munitions also apply to financial assistance. American citizens using the vessels of belligerents must do so

American citizens using the vessels of beingerents must do so strictly at their own risk.

I believe that all proposals for a referendum before our entrance into a foreign war, and before the conscription of men to fight such a war, should be given the most careful study. I further believe that all nations buying munitions for cash in this country should pay an equal amount on their debts to us of the last war, if any are in default from them. This may remind them that the American teaching the state of the last war, if the last war. ican taxpayer is standing a good share of their cost of the last war.

It seems to me that our present administration should devote itself to a solution of the pressing domestic problems that have been with us so long. There can be no better answer to abhorrent forms of government than a peaceful, prosperous, democratic America. In that way we can best show the world that democracy is the better form of government.

ica. In that way we can best show the world that deflictacy is the better form of government.

Let us have an end of "war mongering," with its attendant ill effects on business and employment.

I call tonight especially on the youth of America to stand shoulder to shoulder against any attempt to have us pull foreign chestnuts out of the fire of central Europe. Let us fight for democracy not on the eastern front or the western front but right have on the American front. here on the American front.

Thank you.

Presentation of Portrait of Senator Connally to **Texas Senate**

EXTENSION OF REMARKS

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES Thursday, May 18 (legislative day of Monday, May 8), 1939

EXCERPT FROM THE JOURNAL OF THE SENATE OF THE STATE

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the proceedings of the Texas State Senate of Tuesday, May 2, 1939, when a portrait of our distinguished and esteemed friend and colleague the junior Senator from Texas [Mr. Connally] was presented to the Texas Senate by his friends and admirers. It was a deserved and high honor and worthily bestowed.

There being no objection, the proceedings were ordered to be printed in the RECORD, as follows:

[Senate Journal—Forty-sixth legislature—Regular session—Austin, Tex., Tuesday, May 2, 1939]

PROCEEDINGS

PRESENTATION OF PORTRAIT OF HON. TOM CONNALLY TO THE SENATE

At 11 o'clock a. m. the president announced that the hour had arrived for the presentation to the senate of a portrait of Hon. Tom Connally, United States Senator from Texas, in accordance with the provisions of Senate Resolution No. 63, adopted on April 12, 1939.

Accordingly, the courtesies and privileges of the floor were extended the friends of Senator Connally, and Gov. W. Lee O'Daniel, Chief Justice C. M. Cureton, Hon. McDonald Meachum, Hon. Dan Moody, and Hon. W. A. Keeling, by invitation of the president, occupied seats on the president's stand.

The following is a complete transcript of the entire presenta-tion ceremony, which, on motion of Senator Redditt, was ordered printed in the journal:

Lieutenant Governor Stevenson. Members of the senate, and ladies and gentlemen, the second called session of the forty-fifth legislature, by resolution, authorized the placing of a portrait of

legislature, by resolution, authorized the placing of a portrait of Senator Connally in the senate chamber. This session of the legislature, by resolution, has set apart this particular hour for the ceremonies incident to the presentation of that portrait.

I now present to you a man who has had as much to do with this entire ceremony as any other individual in Texas, and perhaps more, and it is entirely fitting that a former member of this body be selected by the friends of Senator Connally as the man to present that portrait. I introduce to you a man who served for 3 years in this senate chamber, and who rendered distinguished service to Texas in that capacity. Perhaps he might not be as distinguished today if he had to engage in competition with the present senate, which in my judgment is the best that ever sat within these walls. [Applause.] Nevertheless, he was distinguished in his day and time, and I now present to you the Honorable McDonald Meachum, who will present the portrait of Senator Connally. [Prolonged applause.] of Senator Connally. [Prolonged applause.]

Mr. Meachum. Mr. President, Governor O'Daniel, Judge Cureton, Mr. Keeling, Governor Moody, gentlemen of the Senate, ladies and gentlemen, looking back through the corridors of time I think I can very well endorse what Governor Stevenson said of this senate. I think the boys you have here now would stack up with any of them. I have many friends here, of whom I am very fond, as you know.

I have just received this telegram from Senator Connally, who is unavoidably detained on pressing business at Washington:

WASHINGTON, D. C. May 2.

WASHINGTON, D. C., May 2.

Hon. McDonald Meachum,

Care of Senate Chamber:

I am inexpressibly grateful to you and other partial friends whose generosity provided the portrait which you today are presenting to the State senate. I am deeply touched by the consideration and kindness of all those having a part in the presentation exercises, and beg to request that you convey to them my deep sense of appreciation.

(Signed) TOM CONNALLY.

In the interest of brevity and accuracy I have departed from my usual custom to speak extemporarily, and will ask your in-dulgence while I read this address.

In the interest of brevity and accuracy I have departed from my usual custom to speak extemporarily, and will ask your indulgence while I read this address.

Mr. President, gentlemen of the Senate, ladies and gentlemen, it is a pleasing experience to me to be present with you at this hour, not alone because this occasion affords us an opportunity to pay a just tribute of respect and esteem to a gifted and distinguished public servant, our beloved Senator Tom Connally, but this brief visit with you revives within me treasured memories of service and associations here, now long past. Include me to say that I can think of no official position where greater opportunity is presented for the exercise of a real and substantial devotion to the welfare of the people of Texas, than as a member of the State senate, and while at times in the adjustments of State policies and its legislative conflicts there may be those who underestimate its value, in the future and when your membership has terminated, you will cherish its memories, its friendships, and its accomplishments, more and more as they ripen with the years.

In grateful appreciation of your recent action in resolving that the portrait of Senator Tom Connally be presented to the State of Texas and to the Sanate of Texas in recognition of his outstanding service to the State and to the Nation, a number of patriotic and public-spirited citizens of Texas, represented by a committee consisting of E. J. Fountain, Esq., of Houston, Tex.; Senator John S. Redditt, of Lufkin, Tex.; Gen. W. A. Keeling, of Austin, Tex.; Mr. E. L. Kurth, of Lufkin, Tex.; and Mr. George S. Heyer, of Houston, Tex., have authorized this presentation to be made. For one to be thus favored is a very great honor, but it is a greater honor to be so deserving of it.

A great southerner once said: "The sturdlest romantic tradition of American public life has been the rise into power and fame of the youth who struggled up to his heights from humble and unlovely beginnings."

The life of Tom Connally is

present desire for their betterment and happiness, as manifested in all of his official acts.

It was inevitable that, with such a background and possessing excellent natural endowments, with his friendliness and faith in his fellow men, his honesty and sincerity of purpose, he should enjoy further promotion as a Representative in Congress for a number of years and then the exalted station of United States Senator from Texas.

When we contamilate his house, it is the property of the prope

When we contemplate his humble beginning, his steady and consistent advancement, his career and achievement, his life and character constitute at once an inspiration of hope, faith, and encouragement to the struggling youth of our land. It all exemplifies what the late Dr. Edward Anderson Alderman, then president of the University of Virginia, so truthfully and beautifully expressed

of the University of Virginia, so truthfully and beautifully expressed in these words:

"The southern boy of this generation has found himself at last in American life and made himself at home at the moment when the Republic has most need of his tempered strength. He is a fine, hopeful figure, this southern boy whom I know so well, of strong political instincts, facing tardily a fierce industrialism and a democracy, with its grandeurs and temptations, his ambitions and dreams moving about them, and yet holding fast, through the conservatism in his blood, to the noble concepts of public probity and scorn of dishonor. And there is a fine justice that this should be true at the climax of the heroic renaissance of his section, so long overborne with burdens and misconceptions and tragedies, but at last unhindered and free to run the course which Jefferson but at last unhindered and free to run the course which Jefferson foresaw and Washington blessed with his transparent integrity and his glorified common sense."

Senator Connally's youthful and steady promptings of heart and mind brought him to an early undiminishing and ever-increasing realization and appreciation of the glorious heritage that is ours in this free America, and which abundantly offers opportunity to every youth in the fact that living under a constitution providing by its organic and fundamental law that no patents of nobility may be conferred, but are expressly inhibited, assures him of reaching the heights in the service of his State and country, if he but

Some months ago it was my privilege to visit the Tower of London, first built by William the Conqueror. I there saw the royal crowns studded with diamonds, emeralds, rubies, pearls, sapphires, and brilliants of great value which had adorned the brow of many of the early Kings and Queens of England. I beheld for the first time the scepters of power, made of gold and precious stones, which royalty had wielded in its hands, and I thought, as history records, of all the misery, suffering, and death which many of these ambitious men and women, born to rule under the so-called "divine right of kings," had caused to their helpless countrymen in the days of old, and I thanked God for our glorious America where every man, however humble he may be, is free to reach the heights of preferment to which his character and ability entitle him under our blessed Government. blessed Government. What a sacred duty it is for us to preserve it in all its constitutional vigor and privileges! So long as we are represented in the American Congress by men like Tom Connally, who inherently believe in its sacred principles as guaranteed to us by its incomparable Constitution, we need have no fear of its destruction. Even in this day and at this moment, what is happening across the waters reminds us of its sacred value and of our solemn duty to preserve it for all time, not only for ourselves and our children but for all mankind. Who, in the light of the recent past compared with the present outlook as it exists on foreign shores, can doubt that it behooves us to be mindful of our free institutions? It was but a little while ago, in December 1914, when that learned clergyman, Dr. Lyman Abbott, used these prophetic words:

"Who, looking across the Atlantic Ocean with those telescopic eyes which the press furnishes us, and listening to the boom of the cannon and the rattle of the infantry, the groans of the dying, and the sobbing of the women and children—who can doubt that there is in this world yet a barbarism that regards might as right and acknowledges no allegiance and no loyalty eyes the force." except force.

In the face of such warning, let us renew our faith by an expression of our appreciation of the loyal and efficient service of those who, standing in high places, have it in their hearts to preserve our America and its glorious concepts in their full force and vigor. Let us also here now appropriately resolve that our boys shall never again suffer and die in a foreign country, except in the defense of and to prevent the invasion of our beloved leads.

Mindful of these noble sentiments, Mr. President and gentlemen Mindful of these noble sentiments, Mr. President and gentlemen of the senate, we present to you and to the people of Texas the portrait of our beloved, courageous, and patriotic Senator, Tom Connally, of Texas. Let it be placed upon the walls of this senate and in the capitol of our great people, that it may be preserved not only for ourselves but to those who shall come after us, as an expression of our appreciation of his faithful service, and as an inspiration to the youth of our State.

Lieutenant Governor Stevenson: The year 1928 was a particularly fortunate one for Texas. That is the year in which Senator Connally was first elected to the Senate. Incidentally, it is the same year in which I was elected to the legislature. [Laughter.]

ter.

When I arrived in Austin we found a man here heroically endetvoring to save the State, trying to save us from the woes and the pitfalls and trial and tribulations which the professional polithe pitfalls and trial and tribulations which the professional politicians had theretofore inflicted on us. [Laughter and applause.] And that man really completed the job, and when the friends of Senator Connally were looking about for someone to make appropriate comments incident to the ceremonies of this morning, they decided to select the man who was Governor of the State at the time Senator Connally began his services in the United States Senate; and so I present to you this morning Governor Moody, who will speak to you on the life and character of Senator Connally. [Prolonged applause.]

Moody, who will speak to you on the life and character of Senator Connally. [Prolonged applause.]

Mr. Moody. Mr. President, Governor O'Daniel, members of the senate, and friends of Senator Connally, the admiration and respect for Senator Connally which prompted the donors to present the portrait and the senate to accept it will meet with the approbation of his hundreds of thousands of friends throughout the State. His friends are many; they are everywhere in Texas; they are people of all ages and of all stations in life. Their number and their personal loyalty to him attest anew that republics appreciate an honest and faithful public officer, and that the most satisfactory reward of the public service, the confidence of the people, is paid in liberal measure to the officer who discharges his trust with fidelity.

Born on a farm in McLennan County, educated in the public schools, at Baylor University and the University of Texas, Senator Connally has proved again that in this country rectitude of conduct, loyalty to principle, courage of conviction, intelligent devotion to duty and faithfulness to trust will win a secure and permanent place in the hearts of the people.

In early youth Senator Connally planned a career in the law, and in preparation for it attended the law school of the University approbation of his hundreds of thousands of friends throughout

of Texas. After being admitted to the bar he entered upon the practice of law in Marlin. I am told by his contemporaries in the practice that he lost no time in demonstrating that he possessed the qualities of the superb advocate; that before he was 30 he had made a record as a trial lawyer and as prosecuting attorney of Falis County, which even today is the goal young men strive to attain. How distinguished and notable a career he would have had in the law, had other fields of service not been more alluring, those who law, had other helds of service hot been more alluring, those who know his character and talents readily testify. Nature endowed him with the intellect, the personality, fine strength of body, and he acquired the habits of self-discipline and developed the character, which inevitably would have placed him in the company of the greatest lawyers this State has produced.

In 1916 he offered for Representative in Congress from the Eleventh District. His opponents were older men from the more populous counties in the district, but the idealism, the force of character, and warm engaging personality of the young men from

populous counties in the district, but the idealism, the force of character, and warm engaging personality of the young man from Falls County captured the imagination of the people of the district and he was elected over all opposition by a substantial majority. That was in 1916, and before the young Congressman had learned his way about Congress, or even the office building, this Nation was at war. His position was one of security so far as war was concerned, but he felt that his country had a greater need for him in other fields than in the Halls of Congress, and, as in 1898, before he was 21 wears of each he enlisted for service in the Spanish

him in other fields than in the Halls of Congress, and, as in 1898, before he was 21 years of age, he enlisted for service in the Spanish-American War, so in the World War he left Congress to enlist as a soldier in the United States Army. He had served his country in time of peace; in time of war he chose the place of danger.

Interrupted only by his service in the Army, he served continuously from the Sixty-fifth Congress through the Seventieth Congress as a Member of the House of Representatives. It was in those days that the people throughout the State began to hear more and more of Tom Connally. His membership on the Committee on Foreign Affairs, his aptness in debate, his willingness to challenge the overwhelming and erring majority that the Republicans held in Congress in that day appealed to the people of Texas; and in 1928, when he offered as a candidate for the United States Senate, his election seemed assured from the day of his announcement. He has now served in the United States Senate one term and a part of a second term.

Let me direct attention to some of his achievements in the way of legislation that are of immediate, lasting, and substantial benefit to the people of Texas. But in cataloging some of his accomplishments for Texas, I would not have it thought that his service has been hampered by the blight of a narrow or purely sectional interest. He has envisioned the needs of the Nation and its proper relation with other nations, and in that respect has been an ideal legislator. Having been born and reared in the Southwest, he went to Congress with knowledge of the evil effects of a tariff policy that offered protection to the manufacturing centers and denied protection to the with knowledge of the evil effects of a tariff policy that offered protection to the manufacturing centers and denied protection to the producing sections; and early in his career he proposed and secured the adoption of an amendment to the Tariff Act which imposed a duty upon cheaply produced foreign cattle. Later he secured the enactment of a law levying a tax upon foreign-produced animal and vegetable oils and fats. These measures were of inestimable value to the two basic industries of Texas, cotton and livestock raising, and for that matter of value to all people of the South and Southwest.

A few years ago the rich reserves of oil in this State, notwith-standing the effort that the State legislature and State officials had standing the effort that the State legislature and State officials had put forward to protect them, were being subjected to a reckless and wanton waste. Texas, the richest of all States in these reserves, was not able to prevent this destructive waste because the channels of interstate commerce were open to the transportation of oil without regard to whether it had been produced in conformity with or in violation of the Texas laws. That fact alone was the basis of the inability of State authority to protect this valuable resource from a waste that amounted to vandalism. The situation was so aggravated and of such national importance that the threat was seriously made that the Federal Government would cross State lines and take control of the production of oil in Texas. Senator Conseriously made that the Federal Government would cross State lines and take control of the production of oil in Texas. Senator Connally put a stop to the evil and averted Federal interference by introducing and securing the passage of an act which barred from transportation in interstate commerce oil that had been produced in violation of State laws. The result of this bill was to make effective State laws and regulations designed to protect this State's natural resources from profligate waste. One cannot state in dollars the value of this State hecause there is no mind that can conceive its ultimate of this State, because there is no mind that can conceive its ultimate good to the people of Texas, and this without regard whether they good to the people of Texas, and this without regard whether they are or are not in the oil business. The Connally Act was recently condemned before some congressional committee as a measure that tended to monoply, but the fair man in the oil business, however small or circumscribed his activity may be, knows better and is ready to testify that the effect of this law has been to preserve his business and the business of all other small operators who had a desire to obey the laws of the State.

These and many other bills that I might mention have had more or less of a local application; but Senator Connally's field of more or less of a local application; but Senator Connally's field of service has not been local, and he is not just a local figure, as is manifest by other parts of his official record. The truth of the statement is attested by the fact that he has devoted his time and talents to those matters that are of national importance, and not to wrangling money out of the Federal Treasury for local uses. While neither afraid or unwilling to spend public money for public use, whether it be for an army and navy, for public improvements, or for relief of the needy, definitely he has not attempted to maintain himself in public favor by procuring the expenditure of public money. That he is not just a local figure is further attested by the fact that he is a member of the Finance Committee, of the Foreign Relations Committee, of the Judiciary Committee, of the Foreign Relations Committee, of the Judiciary Committee, and of the Committee on Privileges and Elections; and that he is the only Member of the United States Senate who holds membership on the three powerful committees—Finance, Foreign Relations, and Judiciary. His activities on these committees reach and touch all items of major legislation that affect the entire control of the committee of the entire country in its internal affairs and in its relation with

the entire country in its internal affairs and in its relation with foreign nations.

A further illustration of the breadth of his interest and vision is found in the fact that on January 24, 1933, he advocated the reduction of the gold content of the dollar and in a series of speeches thereafter explained the plan and analyzed its effect. He followed this by introducing a bill to provide for the adoption of the plan; the bill was enacted and immediately put into operation. It formed the basis and has been the keystone of the entire structure in the recovery program. His active mind and intense interest in national and world affairs would not find satisfaction in his being just a Senator from Texas. The horizon of his interest and service has been further flung. He has been his interest and service has been further flung. He has been and is a Senator of the United States.

There have been many to disagree with Senator Connally, but there have been none to doubt his courage, question his sincerity of purpose, or dispute his abilities. He has not sought controversy, but where he conceived principle or the public good to be versy, but where he conceived principle or the public good to be involved he has shown an utter disinclination to avoid controversy. He has not been one of those time-serving officers who maintained his position by keeping his ear to the ground. His course of conduct as a Member of the United States Senate warrants it being said of him that he has sought to serve the public welfare without regard to considerations of present personal political safety; and this attitude of deference to the public good and indifference to questions of personal political popularity have challenged respect and secured for him in abundant measure public confidence and estern. His course of conduct in this ure public confidence and esteem. His course of conduct in this respect and the resulting political security which it has brought him suggest that the words "whosoever will save his life shall lose it; and whosoever will lose his life * * * shall find it," may be given application to matters which are political as well

as to affairs which are spiritual and personal.

Senator Connally is devoted to the ideals of democratic government. The Constitution is his official touchstone. Confirmed by education, training, and thinking in faithfulness to the Constitution, loyalty to democratic government, and belief in States' rights, he has campaigned for them with the zeal and enthusiasm rights, he has campaigned for them with the zear and enthusiasm of a crusader. He is ever ready to espouse the cause of progressive and liberal government under the Constitution. At this time when alien influences are gnawing at the foundations of civil liberty and constitutional government and attempting to destroy confidence of the people, the world around, in the most progressive, liberal, and beneficent Government on earth, well it together the contraction of the progressive. is that Texas has such a watchman on the tower; and Texans are willing to trust the present and future in his hands.

Texas has had great men in the United States Senate. Portraits of Sam Houston, John H. Reagan, Richard Coke, Charles A. Culbertson, and Joseph Weldon Bailey, Senators from Texas, who added fame and luster to the name of this State, adorn these walls; and the portrait of Tom Connally should have a place in

walls; and the portrait of Tom Connally should have a place in their midst—for that is where the people of Texas would have his portrait. I thank you. [Prolonged applause.]

Lieutenant Governor Stevenson. I am sure it must be apparent to this audience that those who framed the program for today had in mind a particular relevancy to the proprieties of the occasion. One of these framers is General Keeling, a man who formerly served as attorney general of this State, who has been very active, both in bringing you this program and in the events which led to it. In keeping with this relevancy, it is entirely appropriate that this portrait be accepted today by that man among us who enjoys the veneration and respect of every colleague on this floor. I refer to the dean of the senate. It is quite an honor to become the dean of the senate, because it means service in length of years, but when that service has been performed by one who has discharged it with such signal ability and fidelity to the people's interest as the senator from Potter, it becomes a peculiar pleasure to any presiding officer to present him to the people of Texas, and I now present to you the Honorable Clint Small who will accept I now present to you the Honorable Clint Small who will accept this portrait for the Senate of Texas. [Prolonged applause.]

this portrait for the Senate of Texas. [Prolonged applause.] Senator SMALL. Mr. President, Governor O'Daniel, members of the senate, and distinguished visitors, I think my good friend, the Lieutenant Governor, probably overplayed his hand just a little bit with reference to my position as dean of this senate. We came here at the same time, he on one side of the capitol, I on the other. He has been transplanted as the presiding officer of the senate.

and I think that he deserves whatever distinction might come with the position of dean of this senate.

In behalf of the senate I want to say that we are delighted, we are honored to have these distinguished citizens of Texas with us on this mission. We are glad always to have the inspiration that comes from their presence, but we are particularly happy because they have made it possible for this senate at all hours and at all times to have the inspiration that comes from an opportunity to look at the portrait of a distinguished son of the State of Texas, to look at the portrait of the real human being whose heart beats in true unison with the impulses of the people of this State. Every man in this senate has confidence in the wisdom and in the ability of Senator Tom CONNALLY; every man in this senate looks upon him as his friend, as his counselor, and as his servant at Washington. There is something particularly human about this individual, something that ingratiates him into the feeling and friendship and the good fellowship of everybody—a happy big soul that makes you feel good to be in his presence.

Around the walls of this senate we find the portrait of distinguished citizens who have made the State of Texas great. This

tinguished citizens who have made the State of Texas great. morning our guests present to the senate the portrait of one who is going to keep Texas great. We are annotating and bringing down to date a series of select portraits of the individuals who have endeared themselves to the masses of the people of this State, and I am quite sure I voice the sentiments of my colleagues and of the officers of this legislative group when I say that no person in official life could come more nearly filling that niche than Senator

Governor Moody called your attention to the fact that when Tom Connally went to the Congress of the United States he had the courage and the nerve to challenge the position and the errors of the Republican Party. My friends, I don't think it takes any particular amount of nerve and courage to challenge the errors of your adversary; I don't think it takes any particular amount of nerve and courage for a Democrat to challenge the errors of a Republican; but, my friends, the reason I love Tom Connally is because he has the nerve and the courage to challenge the errors and the mistakes of his own political party, and it is along that line that I think Senator Connally has most endeared himself to this generation and has performed the most outstanding service of his career. I consider Tom Connally a conservative. What do I mean by that? I mean that Tom Connally is rational in his conservatism. We have in the Democratic Party a few, and in the Penyublican Party a great many who to my way of thisking are mean by that? I mean that IOM CONNALLY is rational in his conservatism. We have in the Democratic Party a few, and in the Republican Party a great many, who, to my way of thinking, are radical in what they choose to call their conservatism. We have men who want to cling to worn-out tradition; we have men who want to hang on to conditions of the past which do not fit the exigencies of the generation in which we live. Those persons I call radical conservatives. Tom Connally, I believe, is a conservative with a vision, a conservative whose eyes are turned to the future rather than to the past, a conservative who wants to interpret his statesmanship in terms that will be beneficial to a generation of people who are living in the most complex system this world has ever known. I think Tom Connally is a strict adherent to a sane and practical interpretation of the Constitution of these United States. The Constitution of the United States was ordained and created in order to enable the people of this Nation to strive toward some very definite purposes. One of those purposes was to create "a more perfect Union." That was not accomplished by the Declaration of Independence or by the adoption of the Constitution of the United States; that was the beginning of a struggle that has not yet been completed, and there is no one among us that can say that we at this time have a perfect union.

that can say that we at this time have a perfect union.

Another one of the avowed purposes for which the Constitution of the United States was established was to bring about more perfect justice among the people of this country. That purpose has not been accomplished, and you only have to look to the calendar of this Senate to show yourselves that there is a constant effort being made to bring about more uniformity in the administration of justice and to expedite its administration in this country of ours. Another thing for which the Constitution was ordained was to bring about domestic tranquillity, and it is with a great degree of regret that we look about us on every side and see that conditions in this country are not tranquil. side and see that conditions in this country are not tranquil.

Another purpose was the common defense of this Nation, and, sad to relate, in this hour which should be the hour of greatest civilito relate, in this nour which should be the hour of greatest civilization, we feel the need of more defense than ever before in the history of this country. Another thing was to promote the general welfare of the people of this Nation, and we find today a great clamor about that condition, the welfare of the people; and we see efforts being made in the National Congress and in this body and all other legislative bodies, to bring about conditions that will promote the general welfare. We hear about social security and all of those things that are new and novel and that a few short

years ago we heard nothing about.

Now, what I admire about Tom Connally is that with all of these changed conditions, with the need for securing the general welfare of the people of this Nation, with the need for the promotion of domestic tranquillity, with the need to surround this Nation with the defenses that the framers of the Constitution had in mind when they wrote the preamble to that great instrument, Tom Connally is not clinging to conditions that do not fit this day and age, but that he has a vision of legislation that is in step with the aims, the ambitions, the life, the aspirations, and the activities of the people of a growing, changing Nation, and that he is attempting to fit legislation designed according to our own conservative conception of the Constitution, in order that those things that are outlined in the Constitution may be beneficial, not to the past but to the living, breathing present in which he is such a vital factor.

There is another thing that I love Tom Connally for, and that is that he is not a "rubber stamp" United States Senator. He has his own convictions, and he has the courage of those convictions; and once he arrives at a conclusion, the political exigencies of the time do not deter him from carrying out those

My friends, I do not think that we need in the United States My friends, I do not think that we need in the United States Senate, or even in the State Senate of Texas, a "rubber stamp" individual that will blindly follow the lead of any person, regardless of how mighty and how powerful he may be. No person ever contributed anything to modern thought by blindly following a leader. We want somebody who will blaze a new trail, and once he has blazed that trail, to keep it open for the use of the public. Tom Connally is not up there following anybody. He stands on his own feet. He is a United States Senator from Texas who measures up to the stature of a truly great United States Senator.

measures up to the stature of a truly great United States Senator.

So, my friends, it is a happy privilege to be connected with the movement to bring to this Senate the portrait of the exponent of the type of government I have been trying to briefly scan and

sketch

sketch.

We bring a splendid portrait as our good friend. We know him here as a congenial, wholesome individual that refreshes you and inspires you by his presence and the good cheer that emanates from every portion of his being.

We know him as a beloved Texas citizen, respected by the high and by those of low estate. We know him here as a statesman who, in the hour of trial when popular opinion was running one way and when it was easy to follow the mob, had the courage to stand out as a beacon light and as a bulwark against things which the average American citizen does not think would contribute

way and when it was easy to follow the mob, had the courage to stand out as a beacon light and as a bulwark against things which the average American citizen does not think would contribute toward a more perfect justice, as put into the Constitution.

We know him as an individual who stands on his own feet and follows no person. He is not given to the "rubber stamp" tactics of this generation. We bring him here as a statesman who does not think that his greatest achievement is to run his hands into the Federal Treasury and to get out hard-earned tax dollars and to scatter them broadcast in a prolific fashion over this land; for doing things that are beyond the governmental province.

I know every one of you here is happy to have the portrait, and that you will receive inspiration from it; and on behalf of the senate, in which I have had several years of very pleasant service, and on behalf of the State of Texas and on behalf of the many citizens who trail in and out of this senate day in and day out, and who will be glad to find the portrait of their friend, not of days gone by, but of this immediate present, I wish to thank this committee for their thoughtfulness in bringing these flowers to Senator Tom Connally while he is able to enjoy them. I hope that he has an opportunity to visit us and see this portrait, and that this legislative body before it adjourns will have a chance to listen to the sound principles of government, as he believes them, and to interpret the conditions that now exist in the terms of the legislation that is pending at Washington. I thank you. [Prolonged applause.] longed applause.]

Lieutenant Governor Stevenson. The Chair recognizes the sena-

Lieutenant Governor Stevenson. The Chair recognizes the senator from Angelina.

Senator Reddit. I would like to move that the proceedings of the presentation and the acceptance of the portrait of Senator Tom Connally be printed in the senate journal.

Lieutenant Governor Stevenson. The senator from Angelina asks that the proceedings of the presentation and the acceptance of the portrait of Senator Tom Connally be printed in the journal. Is there objection? The Chair hears none, and it is so ordered.

I want to say, in conclusion, to the audience, that we deeply appreciate the presence this morning, not only of these eloquent and distinguished men who have addressed you, but that the Governor

distinguished men who have addressed you, but that the Governor and the chief justice of the Supreme Court of Texas have seen fit to grace this occasion with their presence. [Prolonged applause.]

The Umatilla Dam on Columbia River

EXTENSION OF REMARKS

HON. MARTIN F. SMITH

OF WASHINGTON IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1939

STATEMENT OF COL. THOMAS M. ROBINS, ENGINEERS FOR RIVERS AND HARBORS BOARD OF

Mr. SMITH of Washington. Mr. Speaker, in view of the interest of some of my constituents in the Umatilla Dam on the Columbia River in Oregon and Washington, I insert as part of my remarks the statement of Col. Thomas M. Robins, member of the Board of Engineers for Rivers and Harbors, made before the Committee on Rivers and Harbors of the House of Representatives during the hearings held on April 17, 1939.

The statement referred to is as follows:

STATEMENT OF COL. THOMAS M. ROBINS, BOARD OF ENGINEERS FOR RIVERS AND HARBORS

Colonel Robins. Mr. Chairman and gentlemen, I came up here today at the direction of the Chief of Engineers, to represent the

War Department, and to do my best to explain to the committee anything they desire to know about this Columbia and Snake Rivers improvement, including the Umatilla Dam.

Mr. Dondero. Right at that point, Colonel, are you a member of

Mr. Dondero. Right at that point, Colonel, are you a member of the Board of Army Engineers?

Colonel Robins. Yes, sir; I am. Before we get down to the Umatilla Dam itself, I would like to outline just briefly the whole situation on the Columbia and Snake Rivers system. The Columbia River, as you all know, rises in Canada and flows first to the north and then turns south and comes down through the State of Washington and flows between the States of Oregon and Washington to

ington and flows between the States of Oregon and Washington to the sea. It is about 1,200 miles long.

The Snake River rises in western Wyoming and flows south and west, and empties into the Columbia at Pasco, Wash. It is shown here on this map. The Snake River is about 1,000 miles long.

The two rivers drain a watershed of about 250,000 square miles, which is one-tenth of the territory of the United States, and larger than France. The country is very rich in agricultural, mineral, and forest products, but only partially developed, and is very sadly in need of cheap transportation as well as water for irrigation and power purposes.

power purposes.

Back in 1927, under the authorization of House Document 308, surveys were started by the War Department on the Columbia and Snake Rivers, and the first plan that was submitted for the comprehensive improvement of the Columbia River, in the joint interest of navigation, flood control, irrigation, and power, called for a series of 10 dams, beginning at Grand Coulee, shown here on the map, the dams running on down till we get to tidewater, the lowest dam being Bonneville. The dam here at Rock Island has already been constructed by a private power company and is in overstion. operation.

In Report No. 308, the Snake River was considered separately from the Columbia, and various schemes for dams for navigation and power were proposed on the Snake, but very largely in accord with this diagram here, which shows the plan recommended in the House document which we have under consideration today, No. 704, Seventy-fifth Congress, third session. The report in that document was submitted to Congress in accordance with several resolutions, and under the authority of the River and Harbor Act of 1936, which authorized continuation of the "308" surveys to keep up with new development.

The report in House Document 704 was made as a review report of all the previous reports, and had in view the formulation of the best plan for the coordinated development of the Columbia and Snake Rivers for navigation, in the light of all the new developments and all the new data that had become available. The plan ments and all the new data that had become available. The plan evolved in that report, House Document 704, is the construction of four dams on the Columbia between Bonneville and the mouth of the Snake, the upper one of these dams being the Umatilla Dam and the lowest one being the one at The Dalles, at the head of the pool of the Bonneville Dam.

On the Snake it is proposed to construct four dams which will drown out the worst rapids and improve the stretches of the river between these dams by open-river methods, thus providing a 6-foot channel on the Snake. On the Columbia, if all the dams were built, we would have a 9-foot channel above The Dalles. At the present time on the Columbia we have open-river improvement from The Dalles to Umatilla, which provides a 7-foot channel, a fairly good 7-foot channel.

On the Snake the existing project calls for a 5-foot channel, but we have never been able to secure that, and the channels are so narrow and tortuous, and the current so swift, that commercial navigation on the Snake today is impossible. It just will not pay, and you cannot get anywhere with it.

It has become evident to everyone that is working on the Columbia and the Snake that you cannot get anywhere with open-river improvement all the way through. You have got to supplement open-river improvement by locks and dams in order to get through commercial navigation from tidewater up to Snake River points, and that is the main objective in the interest of navigation in this and that is the main objective in the interest of navigation in this area, to get through barge navigation to the Snake River points. The Snake River, as you can see, is the logical stream to serve this area shown dotted here on the map, which is the Columbia Basin irrigation project. You cannot serve that area from the Columbia River, which runs up this way, as well as you can from the Snake; neither can you get as close to Spokane, which is a big center of population up there, from the Columbia River as you can from the Snake. It takes many more dams to get up here on the Columbia, and the Columbia does not lend itself to such use. It flows in a deep canyon and it is very difficult to get up and down from the river in this part of the country. It is much easier to handle traffic on the Snake to serve this area than on the Columbia. So that the whole gist of the situation is to treat this part of the Columbia and the Snake as one project, so far as navigation is concerned, and to make such improvements as will secure, as soon as possible, through commercial navigation from Lewiston down the Snake and down the commercial navigation from Lewiston down the Snake and down the Columbia.

Mr. SMITH of Washington. Colonel Robins, the project that is contemplated will serve a vast area, will it not? It will serve that entire region shown there?

Colonel Robins. Yes, sir; it will serve this way over into western Montana and northern Idaho, the territory there that could get joint rail and water rates if through navigation were possible up the Snake.

Mr. SMITH of Washington. There are really four States that would be served by the project, Washington, Oregon, Idaho, and Montana?

Colonel Robins. There are 90 counties that come within the area, so far as getting joint rail and water rates are concerned, spreading all over this territory, practically the whole Columbia River Basin above The Dalles, is what it would amount to.

Mr. Smith of Washington. That has been advocated, I think, for

many years, and now we are finally reaching our goal.

Colonel Robins. We finally have a plan which is the most reasonable and best coordinated, and one that seems possible of execution. able and best coordinated, and one that seems possible of execution. This plan was not gotten up without considering all the different schemes that have been proposed, including one scheme that contemplated a high dam at The Dalles, which would back water clear up to Rock Island. There is quite an element out there in the Northwest that advocated that. It would make an enormous block of power available at The Dalles.

Mr. Smith of Washington. Have you made any estimate of the saving per ton on commerce in freight rates?

Colonel Robins, Yes, the report, Mr. Smith, shows the tabulated

Colonel Robins. Yes; the report, Mr. Smrri, shows the tabulated savings. They vary from 28 cents a ton to 90 cents a ton, depending on the points on the river. The total amounts to about \$2,500,000 annual saving if the whole project were finished.

Mr. Smrri of Washington. That makes the project absolutely economical and feasible and sound?

Colonel Rosins. It does not make it economically sound on the navigation savings. You have got to be able to sell the power that is developed incidentally from the construction of the dam, to make it economically sound.

Mr. Smirh of Washington. It is shown that the power will be

marketed, is it not?

Colonel Robins. As stated in the report, it is possible to market that power in 50 years, but it is not exactly safe to assume now that that can be done until we know more about how soon it will take to dispose of the large blocks of power already provided.

Mr. Smith of Washington. That will be a gradual process over a period of years.

period of years.

Colonel Robins. Yes; but the navigation benefits and irrigation

Colonel Robins. Yes; but the navigation benefits and irrigation benefits—I am speaking about direct benefits now, actual savings that you can figure—will not be sufficient to warrant doing the whole project at this time.

Mr. Smith of Washington. That is, the entire project?

Colonel Robins. The entire project. Nor any part of it, without taking in the power. But the indirect benefits from those savings in transportation costs are very great. You cannot state it in dollars and cents, but it means everything to the development of that whole country to get this navigation now without waiting until you can sell all the power. It is a question of whether Congress in its wisdom would authorize this development to get navigation going without waiting for the development of the power, which would absolutely make the project pay out.

Mr. Smith of Washington. Well, you recommended this project originally as division engineer of that division, did you not, Colonel Robins?

Robins?

Colonel Robins. Well, my recommendation was that it be left to

Colonel Robins. Well, my recommendation was that it be left to the wisdom of Congress whether we should take such a step in advance now as to go ahead with this project without being certain that we can sell the power.

Mr. Smith of Washington. But your report was a favorable report, was it not, on the general merits of the project?

Colonel Robins. I recommended that this plan be adopted as the authorized plan of procedure on the Columbia River, but that the work be undertaken when Congress saw fit to do it. The Board of Engineers made the same recommendation and the Chief of Engineers made the same recommendation. In other Chief of Engineers made the same recommendation and the words, it may very well be that the indirect benefits are more than sufficient to warrant going ahead with the project, giving the people navigation now without having to wait 30 or 40 years until we know that we can sell all the power.

Mr. SMITH of Washington. Well, that is true of any project we undertake, that it is usually some time before we know definitely and positively that there is going to be a demand for all of the

Colonel Robins. Yes; and that is a function of Congress to do that, because, so far as engineering is concerned, we are required to report to Congress just the direct benefits, and the situation here is that the direct benefits without taking in the power will

here is that the direct benefits without taking in the power will not liquidate the project.

Mr. Green. There is about \$2,500,000 commercial savings there, and \$30,000,000 proposed savings. Is that for the entire project or for only the part which you propose to develop now?

Colonel Robins. That is for the entire project, Mr. Green, the \$2,500,000 savings. The saving on the construction of the Umatilla Dam would be only part of that, because Umatilla Dam is only one element in this whole plan.

Mr. Smith of Washington. What would be the cost of Umatilla Dam?

Colonel Robins About \$23,000,000

About \$23,000,000.

Mr. Smith of Washington. And the savings on that would amount to how much?

Colonel Robins. The navigation savings would be about \$250,000 a year.
Mr. SMITH of Washington. And what is the annual maintenance on

that?

Colonel Robins. That is given as \$1,200,000 in the report.

Mr. Smith of Washington. What page is that on?
Mr. Angell. What does that cover?
Colonel Robins. That is for the Umatilla Dam.
Mr. Williams. Is that upkeep and maintenance per year?

Colonel Robins. That is interest, amortization, maintenance, and operation

Mr. Williams. That amortization is figured over a period of how

Mr. WILLIAMS. That amortization is figured over a period of the many years?

Colonel Robins. Fifty years.

Mr. WILLIAMS. I would like to ask you a few questions there,
Colonel. Would this be a paying project, this Umatilla Dam, unless you put electricity on it?

Colonel Robins. Well, it will depend on what you mean by "paying project." It will not pay out on navigation benefits or irrigation

benefits alone.

Mr. WILLIAMS. But they will have to have electrical benefits in order to pay out? Is that right?

Colonel Robins. You will have to include the power benefits; yes. Mr. WILLIAMS. Now, do you recommend, or do the Army engineers recommend, the building of this dam at this time?

Colonel Robins. No, sir; they recommend that the time of building the dam be left to Congress.

Mr. Williams. You do not recommend it, or the Army engineers do not recommed it at this time?

Colonel Robins. Not on a strictly economic basis.

Mr. Williams. I wish I could get a "yes" or "no" answer.

[Laughter.]

Mr. Smith of Washington. Colonel, you have not rendered any adverse report on the project, have you? That is, the project has never been rejected?

Colonel ROBINS. We think that the Umatilla Dam-maybe it would give you the information you wish if I should read the recommendation in this report.

Mr. Williams. Well, you have seen your report, and you know whether the answer is "yes" or "no."

Colonel Robins. Well, it is "no." We recommend that the project

be carried out as soon as possible, but we leave it up to Congress as to when to start, because the only justification for the project at the present time that is possible are the indirect benefits that will

accrue to the people.

Mr. Angell. In that answer you are not taking into consideration, are you, Colonel, the intangible and indirect benefits that you mentioned a moment ago, that are mentioned in the recommendation?

Colonel Robins. We never take that into account, Mr. Angell. Mr. Angell. I notice that Major General Schley, in Document 704, in his recommendations states: "Furthermore, the indirect and intangible benefits, coupled with the tangible benefits, may be found sufficient to warrant construction."

Then he says in the concluding part of this report:
"I therefore recommend that the general plans presented herein for the initial and ultimate development of the Columbia and Snake Rivers between the pool of the Bonneville Dam and Lewiston, Idaho, be accepted by the Congress as a general guide for future develop-ment of the waterways in the combined interests of navigation, irrigation, and the development of hydroelectric power, and that the Congress authorize from time to time such portions of the plans as it wishes to initiate, revised as may be needed at the time to meet

changing conditions."

Mr. Smith of Washington. I think that is right.

Mr. Angell. Is not that what has been done? Taking first
Bonneville Dam and then Grand Coulee, and this as a third step in

that program?

that program?

Colonel Robins. This should be the next step in that program, unquestionably, building the Umatilla Dam. Umatilla is the key to the situation. You cannot get up in the Snake River by openriver methods. The Umatilla Rapids themselves are the biggest obstacle, and then above that there are the Homly Rapids, and it is impossible to improve those rapids by open-river methods at any reasonable cost, and the Umatilla Dam is absolutely essential to any navigation, any through navigation in the Snake River, and it should be the next dam constructed on the Columbia River, unquestionably. unquestionably.

Mr. Green. If this is constructed, how far up will that take navi-

gation up the river?
Colonel Robins. It will take it up to Pasco, the mouth of the

Snake River. Mr. Green. And from Pasco over to Lewiston is approximately how many miles?

Colonel Robins. About 140 miles.

Mr. GREEN. If I interpret this chart correctly, there are three further dams to construct in order to get up to Lewiston?

Colonel Robins. Four dams. Mr. Green. Yes; four dams.

How does the construction of those additional dams compare with the cost of the one at Umatilla?

Colonel Robins. All four of those dams will cost \$30,000,000. Mr. Green. And the one at Umatilla will cost about \$23,000,000?

Colonel Robins. About \$23,000,000.

Mr. Green. The others will be minor dams, each of them, compared to Umatilla?

Colonel Robins. Yes, sir; they are nowhere near the size of the

Umatilla Dam.

Mr. Green. Then, with these four additional small dams, you would have navigation on up to Lewiston?

Colonel Rosins. For \$53,000,000 you can get navigation from tide-

water right through up to Lewiston.

Mr. Green. And that would give you 8 or 9 feet?

Colonel Robins. Seven feet on the Columbia. We have a project now from The Dalles to Umatilla for a 7-foot depth, and with these four dams on the Snake and open-river improvement as called for in the report under consideration, we would have 6 feet on the

Mr. Green. And that would take care of your wheat barges and such traffic?

Colonel Robins. Wheat and petroleum products would be the

main cargo.

Mr. Green. What is the approximate distance across from Riparia
Dam or Lewiston up to Spokane?

Colonel Rosins. It is about 100 miles from Riparia to Spokane.

Mr. Green. That would bring into development the area between the Snake River from Lewiston up to Spokane and back to the Columbia River? Is that right?

Columbia River? Is that right?

Colonel Robins. Yes, sir.

Mr. Green. That is quite an area.

Colonel Robins. It is quite an area. At the present time they are towing gasoline in barges up through the Umatilla Rapids, but they cannot get through the Homly Rapids. They stop and haul the gasoline by truck into Spokane.

Mr. Green. Are the lands in that project capable of being cultivated?

Colonel Robins. The data of the spokane.

vated?
Colonel Robins. This dotted area here on the map is the Columbia Basin irrigation project, which will come under water from the Grand Coulee Dam. Down here, this other area, is an area that can be irrigated from the Umatilla and Arlington Dams. This area down here, right at the mouth of the Snake, can be irrigated from the Five Mile Dam on the Snake, and in all that country the irrigation and the development of farming is tied up with cheap water transportation. There is no question about that.

Mr. Green. It probably would restore the 10-cents-per-bushel rate that Governor Pierce spoke about.

Colonel Robins. Of course, there would be a big effect on freight rates that would affect a lot of traffic that would not move by the river, but we do not take that into account. That is part of the indirect benefits that you might consider.

indirect benefits that you might consider.

Mr. Smith of Washingon. Mr. Chairman, I find a very significant statement by Colonel Robins in his report, which I would like to read for the record. I think it clarifies his own position and would

be informative to the committee:

"Provision of low-cost water transportation between tidewater and the interior will promote the economic security and future development of agriculture and industry in the Pacific Northwest, and is more or less essential to the success of the Federal projects already undertaken with a view to construction and utilization of already undertaken with a view to construction and utilization of water resources in the Columbia Basin. The indirect benefits to be expected from the improvements proposed in this report are, therefore, very material and may well be sufficient to warrant starting construction work at this time without waiting for further development of the power market. Whether such a step in advance should be taken appears to be a question which must be left to the wisdom of Congress."

Mr. Green. Well, that is a recommendation.

Colonel ROBINS. Yes; that is what I wanted to read a few moments

ago.

Mr. Dondero. Colonel Robins, if you divorce power from this

Colonel Robins. Well, you are investing \$23,000,000 in the case of the Umatilla Dam, to get navigation with a fair chance that in due course the power can be put in and will eventually pay out, but you have no assurance of that.

Mr. Dondero. There is no market there for the power now? Colonel Robins. No, sir; not until the Bonneville power and Grand Coulee power is disposed of.

Mr. Dondero. How much of this \$23,000,000 is allocated for the generation of power? Colonel Robins. None. There will be just the foundation for the

powerhouse. Mr. DONDERO. Is it all for irrigation and navigation?

Colonel Robins. Well, it is proposed to furnish water in the future for irrigation purposes, but there is no investment in the dam that could be consistently charged to irrigation.

Mr. Dondero. I understand you to say that if you permit this \$23,000,000 to stand alone for navigation, it cannot be economi-

cally justified?

Colonel Robins. No, sir; it cannot.

Mr. Dondero. You have got to depend on some time in the future with some income from power to amortize it or to pay the

future with some income from power to amortize it or to pay the carrying charges?

Colonel Robins. That is right. Of course, you have plenty of power to do that, providing you can sell it.

Mr. Dondero. That potential power has been there for all the time that the Nation has been in existence, but nobody has seen fit to go in and develop it. Is not that true?

Colonel Robins. That is true; yes, sir.

Mr. Dondero. And undoubtedly on the ground that there was no economical justification for it, in other words, no market for it?

Colonel Robins. Well, there might have been a market for it if it had been developed ahead of Bonneville or Grand Coulee.

Mr. Dondero. In other words, if it was established and then wait until beenle came and settled in that region to demand that

wait until people came and settled in that region to demand that power, that would create the demand? That is your position?

Colonel Robins. Yes, sir.

Mr. Dondero. I have been interested in your testimony, but I notice on page 43, over your signature, Colonel, this significant statement:

"It is recommended that the coordinated plan outlined in this report for further improvement of the Columbia River between The Dalles and the mouth of the Snake River, and of the Snake

River below Lewiston, Idaho, be approved as a basis for modification of the existing projects for these waterways when such action appears to be justified, but that no modification in the existing projects be made at this time."

Colonel Robins. Yes; that is my official recommendation to Congress, leaving out any question of indirect benefits or anything of

Mr. Dondero. Well, this is the point I am coming to: It is your judgment, Colonel Robins, that when this step is taken, Congress should take the step and the Board of Army Engineers is not willing to say now whether or not they should do so? Is that your position?

Colonel Robins. Well, we could not. That is a function of Con-ress. That is for Congress to decide, not for the Board of Army

Mr. Dondero. On page 13, over General Tyler's signature, appears practically the same statement, and on page 3, over General Schley's signature, appears practically the same statement in para-

graph 6, in which he says:

"I therefore recommend that the general plans presented herein for the initial and ultimate development of the Columbia and Snake Rivers between the pool of the Bonneville Dam and Lewiston, Idaho, be accepted by the Congress as a general guide for future development of the waterway in the combined interests of navigation, irrigation, and the development of hydroelectric power, and that the Congress authorize from time to time such portions of the plan as it wishes to initiate registed as may be needed at

of the plan as it wishes to initiate, revised as may be needed at the time to meet changing conditions."

In paragraph 3, however, on that same page, he says:
"For this reason I am unable to recommend the adoption now of this project by Congress in the sense that appropriations will thereafter be at once justified to commence the development."

In other words, he does not recommend it. Colonel Robins. That is right.

Mr. Dondero. In other words, Colonel Robins, we are faced in this committee with this proposition: The engineers think this is a good plan, that it will pay out if we can sell the power, but the Board of Army Engineers does not say that there is any market for power at the present time. Is not that the situation in a nutshell?

in a nutshell?

Colonel ROBINS. Yes, sir; that is it.

Mr. ANGELL. May I suggest that those recommendations to which you refer are for projects entailing an expense of \$180,000,000, not this one dam that we are talking about today. We are only talking about taking up one step of the whole project that was recommended by the Board of Engineers that Congress provide for from time to time. The whole project amounts to \$180,000,000; this one dam costs \$23,700,000.

Mr. GUERN, And this \$23,700,000 dam is specifically recom-

GREEN. And this \$23,700,000 dam is specifically recom-

mended?

mended?

Mr. Dondero. Just one second. I think I understand the English language, and I cannot determine from Colonel Robins' testimony that it is specifically recommended unless we have a market there to sell this power; that it is not economically justified until that sale is apparent. It is not yet apparent that it is there. Colonel Robins. That is true. All the reports arrive at the same conclusion, that you cannot justify on direct benefits any part of the project or all of the project without selling power, and you have got to have your receipts from the power to make the thing pay out.

Mr. Dondero. And is it not substantially a power project?
Colonel Robins. Well, it is transportation that we are after, trying to get cheap water transportation and trying to get it started ahead of the power, although in the last analysis it has got to be receipts from power that will justify the construction of these big dams.

Mr. Dondero. Colonel Robins, it has been the policy of this Government to generate power only as an incident to water transpor-

Colonel Robins. That is correct.

Mr. Dondero. But in this project we have that policy reversed.

It is power that has got to sustain the navigation and not navigation that is to sustain the power.

Colonel Robins. Well, there is a joint purpose there.

Mr. Dondero. Which of the two is the larger portion, power or navigation?

Colonel Rosins. You mean in cost?

Mr. Dondero. Yes; in this plan. Colonel Robins. Well, the power will have to pay a larger proportion of the cost.

Mr. Dondero. What proportion would you say, Colonel? To simplify the question, what portion is power and what portion is navigation?

Colonel Robins. Well, take the project as a whole, the navigation benefits, as I stated before, are about \$2,500,000, and power would have to carry \$10,000,000.

Mr. Dondero. That is about 5 to 1?

Mr. Angell. That is the whole project, is it not?

Colonel Robins. That is on the whole project. But, of course, irrigation would carry some part of it—about half a million a year. Mr. Dondero. About how much?

Colonel Robins. About half a million.

Mr. DONDERO. That is rather insignificant.

Colonel Robins. Yes; it is not a controlling factor in the economic income.

Mr. Dondero. To reduce it to percentages, navigation is about 20 percent of the project and power is about 80 percent?

Colonel Robins. On the economic side; yes, sir.

Mr. Green. Would that ratio apply to the dam in question, or

Colonel Robins. Yes; about the same ratio.

Mr. Seger. Colonel, I was not here at the opening of this hear-ng. Are the dams at Arlington and The Dalles now operating, or ing. Are the dams at Arinigton and the Damare they building?
Colonel Robins. No, sir.
Mr. Seger. They are not building them?
Colonel Robins. The dam at Grand Coulee is under construction.
Bonneville Dam is built and Rock Island Dam is built.
Mr. Seger. And you plan now to go from The Dalles Dam right

up to Umatilla?

Colonel Robins. Well, we have set up a plan which proposes to build those four dams on the Columbia between The Dalles and

build those four dams on the Columbia between The Dalles and the mouth of the Snake.

Mr. Seger. That will take you to Lewiston, will it not?

Colonel Robins. It would, plus four dams on the Snake. The Umatilla Dam—the series there of The Dalles, Arlington, and Umatilla only takes you to the mouth of the Snake. Then to get on up the Snake to Lewiston you have to have four more dams and openriver improvement in between.

Mr. Seger. What will be the economic value of building just one or two of these dams now, say, The Dalles and Arlington, that have not been built?

not been built?

Colonel Robins. We have at the present time a fairly adequate 7-foot channel from The Dalles up the Umatilla, and the Umatilla Dam, which we are considering as the first step in this development—it is not proposed to do all of this at once; it is just a coordinated plan for step-by-step development, and to Umatilla Dam would enable navigation to get from the foot of Umatilla Rapids up to the mouth of the Snake and up to Pasco.

Mr. Griswold. How much depth will that give you?

Colonel ROBINS. Nine feet up to Pasco.

Mr. Griswold. If the Umatilla Dam is built, how much depth will that give you up to the mouth of the Snake?

Colonel ROBINS. About 9 feet.

Mr. GRISWOLD. How many miles is that?

Colonel Robins. About 34 or 35 miles, I think.

Mr. Griswold. We will be spending \$30,000,000 to make a 30-mile 9-foot channel? Is that right?

Colonel ROBINS. From a navigation standpoint; yes.

Mr. Dondero. Colonel Robins, there is one question I neglected to ask you. You said the total of these dams was \$53,000,000. Would that be in addition to the \$23,000,000, or would that include the \$23,000,000 for the Umatilla Dam?

Colonel Rosins. That would include \$53,000,000 for the first step, which would provide through barge navigation clear up to Lew-

iston.

Mr. DONDERO. I observe one virtue in this project which is not present in some others that have been presented; this plan at least does not contemplate displacing any other power that is now established by private money or private investment, because it is not there

Colonel ROBINS. It is not contemplated to install any power at all until there is a market for it.

Mr. Smith of Washington. I think the figures which appear on page 40 of the report answer some of the questions of the gentleman from Michigan. The estimate of transportation savings on the improvement of Umatilla are \$1,280,105. That is based on a potential tonnage of 1,855,225 tons. If you include The Dalles, with a potential tonnage of 1,158,330, that saving will be \$324,332. So the total savings in transportation costs will be over \$1,500,000. Now, if you figure the total cost of the two dams to be—you said, Colonel Robins, \$53,000,000, which compares favorably in ratio of savings to cost of many projects that come before this committee; is not that true? That is quite a substantial saving on the cost of transportation alone, not to say anything about the power feature.

Mr. Dondero. I think Colonel Robins' testimony justifies the statement on page 10 of the report, which shows that 80 percent power and 20 percent navigation is correct, because you will find the amount charged to power is \$7,835,000, and his testimony has confirmed that. Mr. Smith of Washington. I think the figures which appear on

confirmed that.

Colonel Robins. The great need for the project is for navigation

and not for power.

Mr. ANGELL. There is no power involved in this proposal before the committee now, is there, Colonel Robins?
Colonel Robins. No, sir; not a bit.
Mr. Angell. It is purely navigation.

Colonel Rosins. The estimate of \$23,000,000 for constructing the Umatilla Dam is entirely aside from power facilities, except the foundations for the powerhouse, which really form part of the dam.

Mr. Dondero. Economically, navigation is not justified unless we can look to some day in the future and see the benefits from power that might be developed? That is the way to reconcile this statement, is it not?

Colonel Robins. That is the only way the Government can get back its money on the investment, is to ultimately install power and sell it.

Mr. ANGELL. Is not that true of every improvement made under river and harbor legislation?

Mr. Angell. Is not that true of every improvement made under river and harbor legislation?

Colonel Robins. It is true of Grand Coulee and Bonneville Dams. Mr. Angell. And from many others the Government does not get back a penny.

Mr. Smith of Washington. I think that in some respects this project is superior to many projects which come before the committee, because you have the added feature of income derived from irrigation and the distribution and sale of electric power, which contributes to the amortization of the project, which you do not have on many purely navigation projects. So in that respect it is superior to many projects which are only navigation projects.

Mr. Dondero. The eloquence of my good friend from the State of Washington is most convincing with me, and I have such high regard for him that if I thought he was really serious about it I would accept everything he says; but this project, Colonel Robins, is nothing more or less than putting the Government deeper into the power business. That is all. Is not that true?

Colonel Robins. Well, it depends on how it is handled.

Mr. Smith of Washington. Colonel Robins, is it not—

Mr. Dondero (interposing). Let Colonel Robins answer it. I think his judgment on the matter is the best, both orally and in

think his judgment on the matter is the best, both orally and in

writing.

Colonel Robins. Well, that is true; but the Government is already in the power business on the Columbia River. I do not see how you are going to back out of it now.

Mr. Dondero. I concede that. We are in it.

Colonel Robins. We are in it, and if we are ever going to get navigation into that country, which is certainly very badly needed, we have got to rely on getting money from the sale of power in order to get the navigation in. And you have got to have navigation, and you have got to get power, too.

Mr. Griswold. You state the plans provide for laying the foundation for the power plant there. What will it cost then to put in the power plant? If we have electricity, how much additional expense will we have to go to then to provide the electricity?

Colonel Robins. You will have to go to considerable expense. I can give you the figures.

can give you the figures.

can give you the figures.

Mr. Griswold. How many millions will that cost? You say it will cost \$53,000,000 to get navigation up to Lewiston, but there is no power involved. There is the possibility of power. Now, suppose we want to put in power, how many more millions is that going to take to put the power in?

Colonel Robins. I am trying to find that for you here.

Mr. Griswold. Is that covered on page 41?

Colonel Robins. Page 37.

Mr. Angell. On page 37 it shows that the power plant at Umatilla will cost \$27,900,000. That is at the top of the page there.

Mr. Griswold. In other words, the power plant will cost more than the dam?

the dam?

Mr. ANGELL, Yes.

Mr. SMITH of Washington. Is it not also true that if you had the power development and in addition to the natural increase in tonnage, the commerce, which on page 40 it is estimated will double over a period of 50 years—if in addition to that you had the industrial development which would result from the generation and sale of power, it is altogether reasonable to assume that you would have a further increase in commercial tonnage which would make the project more profitable?

Mr. Greenen, You would have the project in the contract of the project in the contract of th Mr. SMITH of Washington. Is it not also true that if you had the

Mr. Griswold. You would have to put in another investment of \$27,000,000 before you could have any power at all.

Mr. Smith of Washington. You would have it if you had an invest-

Mr. Smrra of Washington. You would have it if you had an investment of \$53,000,000, would you not, Colonel?
Colonel Roeins, \$53,000,000 is for Umatilla Dam and four dams on the Snake River and the open river improvement on the Snake, with no power facilities whatever. The Umatilla Dam with the powerhouse will cost about the same as Bonneville Dam—about \$50,000,000. Leaving the powerhouse out, you can build it for \$23,000,000; leaving out the power machinery, too.

Mr. Seger. Colonel, would this project be justified as a navigation project only if we did not consider power?

Colonel Roeins. Not on the direct benefits; no. It has a lot of intangible values that are pretty hard to evaluate in dollars and cents. The people up there are in great need of cheap transportation.

cents. The

Mr. Angell. It would act as a yardstick, would it not, for that

whole inland empire?

Colonel Robins. It would. It would have a big effect on the freight rates throughout the whole territory.

Mr. Griswold. Would it not be cheaper for the Government to subsidize transportation, in order to bring the rate down, than it

would to build the dams provided here?

Colonel ROBINS. Well, I would not be prepared to answer that

question, Judge.

Mr. Griswold. I think it is pretty easy to answer. You j show the benefits and the cost of one compared with the other.

show the benefits and the cost of one compared with the other.

Mr. Smith of Washington. Colonel Robins, for purposes of transportation only, and purely as a navigation project, how much money would we have to spend at Umatilla?

Colonel Robins. \$23,000,000.

Mr. Smith of Washington. That is all we would have to spend for navigation, and, based on the present tonnage, that would result in a saving of \$1,280,105 a year, according to the reports, page 40, and if it is reasonable to assume that this tonnage would

double over a period of 50 years, as is also stated in the report, is not this a meritorious navigation project, if you confine it at this time, which I understand is being done, to the Umatilla Dam alone, and not take into account the rest of the dams and the power

Colonel Robins. Mr. Smith, that saving of \$1,000,000 there is not applicable to the Umatilla Dam alone. It takes in this whole stretch of river all the way up to Umatilla. The Umatilla Dam only effects a saving in the 35- or 45-mile stretch from Umatilla to

Pasca.

Mr. Dondero. That is above the dam, is it not?

Colonel Robins. Yes. You cannot apply those cumulated savings to one dam; you have got to apply them to all of them.

Mr. Smrri of Washington. That is the way I interpret this summary on page 40, because it reads "improvement to Umatilla."

Colonel Robins. That is this whole stretch of the river showing all these dams all the way up to here. You make that first saving; then you have the Umatilla Dam, and you make an additional saving, but the Umatilla Dam is only credited with the increment, in other words, the saving for improvement to Pasco. You subtract from that the saving for improvement to Umatilla, and you get what the benefit is for the Umatilla Dam alone.

what the saving for improvement to official, and you get what the benefit is for the Umatilla Dam alone.

Mr. Smith of Washington. The increment savings, then would be \$955,773? Is that right? That would make it approximately \$1,000,000 on an investment of \$23,000,000.

Colonel Robins, It would be the difference between \$1,540,000.

and \$1,280,000. The total savings for the improvement to Pasco are \$1,500,000. The savings for improvement to Umatilla are \$1,280,000, so that the Umatilla Dam would get credit for the difference between those two figures.

Mr. DONDERO. About how much is that?

Colonel Robins. About \$260,000. Mr. DONDERO. That is correct.

Mr. Dondero. That is correct.

Mr. Smrth of Washington (presiding). Thank you for your very clear and complete statement, Colonel Robins.

Mr. Angell. Mr. Chairman, we have a few other gentlemen to be heard. I would like to have you hear Mr. West at this time.

Mr. Smrth of Washington. We will be very glad to hear Mr. West. (Mr. Herbert G. West, executive vice president, Inland Empire Waterways Association, Walla Walla, Wash., testified.)

Freight-Rate Discriminations in Transportation of Gasoline and Kerosene

EXTENSION OF REMARKS

HON. WADE H. KITCHENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES Thursday, May 18, 1939

Mr. KITCHENS. Mr. Speaker, there are five zones for railroad rate-making purposes in the United States. Arkansas is in what is known as the southwestern zone. It has the highest freight rate, mile for mile, especially for processed goods, of any zone in the Nation. There is method in this rate business. Selfish interests exhaust a State of its natural resources, raw materials such as oil, gas, coal, timber, and minerals, by removing by rail and processing those raw materials in other distant sections for the present financial benefit of themselves regardless of the present or future welfare in general of the people. The creation of needless hauls so as to increase income seems unjustified, and certainly is uneconomic.

My congressional district for years has produced some of the finest pine, oak, hickory, gum, cypress, and other timbers of any district in the United States, but today these timbers are practically exhausted. Today it is developing into one of the greatest oil- and gas-producing districts in the United States. Our Creator is giving us another opportunity. It is reliably estimated by experienced oil experts that the new fields discovered last year in my county alone, and within 10 miles of my home town, will produce more than 160,000,000 barrels of oil. The adjoining counties of Lafayette, Nevada, Ouachita, and Union have been and are now producing great quantities of oil and gas with forecasts of almost unlimited production. The other counties in the district are potentially oil and gas producing.

Mr. Speaker, my people are vitally concerned today with that oil, its production, protection from waste, refining, transportation, and marketing. We have had heretofore in the area mentioned 14 small oil refineries, but all of them have perished unnaturally with the exception of two at El Dorado, Union County, Ark., and a small refinery at Stephens, Ark. This destruction was due almost wholly to advantages in freight rates possessed by other sections in the marketing and transportation of refined products of oil.

I shall not discuss other discriminations in freight rates at this time, but wish to call the attention of the Congress to the fact that an effort is now being made to further divert the oil and unfairly penalize the transportation of gasoline from the refineries now operating there, to other sections, and in favor of other sections. The purpose is to cripple, if not destroy, the refineries of my district by preventing fair competition through further discrimination in freight

rates on gasoline and kerosene.

The points of destination in several States for gasoline, for example, shipped from New Orleans and other coastal cities are the same as for the refineries at El Dorado, Ark., in my congressional district. The only difference is that the refineries at El Dorado, Ark., are much nearer the markets in certain States, such as Mississippi, Tennessee, Georgia, and Alabama. Yet it is now proposed to give, for example, the oil and refining interests at New Orleans and other coastal cities a cheaper rate, mile for mile, for transportation of gasoline a much longer distance to the markets in the States mentioned than the rates for a shorter distance from the refineries at El Dorado, Ark.

Mr. Speaker, if cheaper rail rates be given New Orleans, for example, to markets for gasoline than are given to the refineries of my district, then those refineries will not only suffer but the railroads and all the people in my section will suffer. The landowners, lease and royalty owners, oil interests, merchants, farmers, bankers, and laborers in my district will lose the benefit and have to bear the burden of the differential of this discrimination. The local refineries will be placed at a great competitive disadvantage if such be permitted, and certainly the intention of Congress will be ignored and the spirit of the Commerce Act will be defied and

My congressional district has two navigable rivers—the Mississippi and Ouachita-and the Red River potentially is navigable. The refineries of my district are using in part the Ouachita River, a tributary of the Mississippi, and which is navigable to Camden, Ark., and New Orleans, La. Two of these refineries have a pipe line that connects them with the barge lines at Calion on the Ouachita River. This connection was made at very great expense in a desperate attempt to compete in a small way with New Orleans, Baton Rouge, and the coastal cities of the United States.

El Dorado, Ark., the location of two of the refineries, is closer to Memphis, Tenn., by 140 miles than is New Orleans, La., yet the rail rate for 100 pounds of gasoline from El Dorado to Memphis is 33 cents per hundred pounds while the rail rate from New Orleans to Memphis is 15 cents per hundred pounds.

There is now proposed and published, I learn, a drastic reduction of the rail rate from New Orleans to other marketing points to where the rate will be even more discriminatory for the refineries of my district than the present rail rates to Memphis. We do not object to a reduction of rail rates from a certain point providing equidistant or nearer points be fairly protected.

Mr. Speaker, the publication by the railroads of a cheaper rail rate from New Orleans and Baton Rouge to Alabama. Mississippi, Georgia, and Tennessee for gasoline and kerosene than for the shipment of gasoline and kerosene from El Dorado, Ark., is a glaring discrimination which should be condemned. It is being established, no doubt, as stated, for the very purpose of injuring, if not destroying, the remaining refining industries in Arkansas, the destruction of private barge lines, and our river transportation.

I am not personally interested in the refining of oil nor in any oil company, nor railroad, nor in any barge line, but I can see that such action as proposed will deprive the railroads of my section of traffic and income to which they are entitled and in need. This reduction of traffic and income of the railroads in my section will be used as an argument and further handicap the equalization of freight rates by increasing the average cost per mile in the zone in which my State is located. The inevitable reduction of such traffic will mean the laboring men will be deprived of work, our refineries unjustly penalized, private barge lines destroyed, and the public will have to bear the burden of the extra cost in transportation of oil and gasoline. We are weary paying the freight on our material, both going and coming, and suffering an exhaustion of our natural resources, and leaving nothing for ourselves or for future generations.

It occurs to me that no sooner than we secure a little industry for our State and section-and this is true in some other States—there begins a maneuvering to destroy that industry so as to use the region merely as a province from which to obtain raw material for processing and for the benefit and building up of other interests. Railroads in desperation or not should consider carefully the present and future effect of their schedules of rates. They have a mighty

power for damage as well as for good.

Mr. Speaker, I do not believe in monopoly, much less in the creation of monopoly, but discrimination in freight rates will have that effect, and will centralize industry and population in one section and impoverish the other. It is the policy of this administration to prevent unjust discriminations or the giving of advantages in transportation charges. It seeks to insure the development and preservation of a national transportation system, adequate at all times to meet most economically and efficiently the full needs of commerce of the entire and every part of the Nation.

In Arkansas, a State of 2,000,000 fine justice-loving people, we are not idle. We are thinking, preparing, cooperating, working, planning, protesting, and will fight peaceably for fair treatment for all. We have a commission of agriculture and industry, a State planning board, a flood-control commission, and a corporation commission, and these commissions, with many other civic organizations, are diligently doing what they can to eliminate, so far as possible, all obstructions to State and interstate commerce and discriminations of every kind and character so that our people may have a fair and equal chance in the Nation.

In this connection, Mr. Speaker, I ask that a report, dated April 24, 1939, by the commissions mentioned, to the Governor of our State, be made at this point a part of my remarks.

The undersigned organizations are of the opinion that there should be no Federal regulation of water transportation enacted into law at this time, for the following reasons:

1. There is no necessity for regulation unless the rights of some

citizens are being violated. There has been no evidence presented in proof of such violations. The only evidence favoring regulation has been presented by railroad officials and employees' representatives who are naturally prejudiced against any mode of transportation other than rail.

General Ashburn, as operating head of the Inland Waterways Corporation, favors regulation, apparently because he believes regulation of contract carriers will divert business to common carriers, including his lines. Regulation could not adversely affect the operations of the Inland Waterways Corporation to the extent it would other contract and common carriers because the Inland Waterways Corporation is a corporation created by Federal statute and provided with public funds for operation regardless of what deficit may be incurred.

2. There has been sufficient experience in transportation upon inland waterways to reflect great benefit in the development of the Mississippi Valley area, which includes Arkansas, and these benefits should be permitted to accrue without regulation unless and until

the public is adversely affected.

3. The southwestern territory, including the States of Arkansas, Oklahoma, Louisiana (west of the Mississippi River), Texas, and southern portions of Kansas and Missouri, pay via rail the highest transportation charges in the United States, and this applies to transportation within, to, and from that territory. These rates are largely prescribed by the Interstate Commerce Commission as "maximum reasonable" rates, and the rail lines, wherever possible, essess the maximum rates. assess the maximum rates.

This basis of rates has retarded development, and if the competitive means of transportation, viz, water and highway, are to be regulated in such manner as to maintain via all modes of transportation the same or the approximate of the rail rates, which may

be done under this bill, the southwestern territory not only will fail to develop but such development as it has may disintegrate, especially where such development is not located at tidewater.

4. The conclusion that the Interstate Commerce Commission in

4. The conclusion that the Interstate Commerce Commission in regulating water transportation may fix transportation costs so related to the rail rates that transportation on the inland streams may disappear is fully warranted, proof of which will be found in hundreds of decisions and orders of the Interstate Commerce Commission wherein it has granted the railroads relief from the fourth section of the present act to meet not only existing water competition but probable water competition. Citations follow:

194 I. C. C. 31, Petroleum Products, New Orleans, La., group to Memphis, Tenn., and Ohio River points: This was a case where the railroads sought permission to meet water rates. They were granted this permission. At pages 44, 46 of the report, Commissioner Eastman registered his concurrence but indicated that the action of the Commission in permitting this meeting of water rates promised to be the beginning of a return of the policy of railroad rate making which would drive waterway transportation from our streams and the dry-land points would pay the cost incurred by the railroads in the elimination of this competition. The fact remains the railroads were permitted by the Commission The fact remains the railroads were permitted by the Commission to readjust their rates.

In Fourth Section Application No. 16066, Gasoline and Kerosene to River Points in Alabama, 229 I. C. C. 509, the railroads had contended that it was necessary to reduce rates from the New Orleans-Baton Rouge group and from Mobile, Ala., to Birmingham, Tulscaloosa, Montgomery, and Selma, Ala., in order to meet water competition. The Commission's order permitted a reduction in the rail rates and one alarming feature of its order is the following, appearing at page 513 of the report:

"While it does not appear that gasoline has moved by water from the New Orleans-Baton Rouge group to Montgomery and Selma the feetilities for the beautiful or the feetilities for the progression of the second or the

Selma, the facilities for such movements are available."

This indicates the rail lines were permitted to meet water com-

This indicates the rail lines were permitted to meet water competition before the actual competition even existed.

To show the adverse effect upon the dry-land producing points, there will be found at page 516 of the above report provision that the relationship in the rates, southwestern-origin groups to the New Orleans-Baton Rouge group, previously prescribed by the Interstate Commerce Commission would not have to be maintained, the Commission stating that the reduced rates could be established from the New Orleans-Baton Rouge group "without rendering necessary any changes in the rates from the southwestern-origin groups to the same destinations."

Another case is Fourth Section Application No. 17161, gravel from Montgomery, Ala. (231 I. C. C. 455), where the rail lines were permitted to reduce the prescribed rates of the Interstate Commerce Commission from Montgomery, Ala., to Fernandina, Fla., to meet water competition from the Delaware River near Philadelphia, Pa. In the many instances where the fourth-section relief is granted, it must be recognized that this permits the charging of higher rates

In the many instances where the fourth-section relief is granted, it must be recognized that this permits the charging of higher rates at intermediate dry-land points. The railroads meet the water competition on basis of what they term "out-of-pocket costs," meaning the actual cost of transportation without any relation to interest on investment or any other overhead charges.

Arkansa has been materially affected by this character of rate adjustment. The rate from the New Orleans-Baton Rouge group to Memphis was reduced by the railroads to meet water competition to a basis of 15 cents per 100 pounds. The rate from the El Dorado, Ark., field to Memphis is 33 cents. The rail distance from Baton Rouge to Memphis is 366 miles; from El Dorado to Memphis 226 miles. This rate applies to petroleum products.

Many other citations could be given, but these are sufficient to show the trend of the orders of the Interstate Commerce Commission in protection of the rail carriers to the detriment of the development of water transportation.

5. The preponderance of the tonnage carried on the interior

development of water transportation.

5. The preponderance of the tonnage carried on the interior streams is by private carrier, the lading being owned by the operator of the tow. The proposed bill does not apply to private carriers, and if common carriers are to be regulated with prescribed rates approaching the rail basis and not related to cost plus a reasonable profit, the small shipper will find his market absorbed by the larger shipper who is adequately financed to provide his own transportation.

6. We are opposed to regulation of water carriers at this time, except insofar as concerns hours of service and safety.

The conclusions reached by the undersigned organizations are the result of intense study of the effect upon the State of Arkansas and its agricultural and industrial interests, together with very careful consideration of past experience.

with very careful consideration of past experience.

It is the recommendation of the undersigned that these conclusions be submitted to the chairman of the Committee on Interstate and Foreign Commerce of the United States Senate, now giving consideration to this bill, and to the Arkansas delegation in both Houses of the Congress.

Why Quit Our Own?

EXTENSION OF REMARKS

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, May 18, 1939

EXCERPTS FROM BOOK BY GEORGE N. PEEK WITH SAMUEL CROWTHER

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following excerpt from a book entitled "Why Quit Our Own?" by George N. Peek with Samuel Crowther:

[From Why Quit Our Own? by George N. Peek with Samuel Crowther]

CUBA

The Cuban agreement was made hastily in order to "do something The Cuban agreement was made hastily in order to "do something for Cuba." On its face the agreement is a good one and it differs from all the other agreements in that it is purely bilateral. Our country has a special arrangement with Cuba, and hence any advantages given to Cuba did not have to be generalized to the advantage of all other countries with whom we have most-favored-nation treaties. The agreement possessed possibilities, but so many considerations other than trade entered into its making that, instead of a trade agreement to further American trade, it turned out to be a subsidy to Cuban sugar-plantation owners.

stead of a trade agreement to further American trade, it turned out to be a subsidy to Cuban sugar-plantation owners.

The agreement standing alone might well be a model—and I have publicly said so. But Secretary Wallace, under the sugar-quota system of the Jones-Costigan Act, turned the thing into an expensive farce. The duty on sugar was lowered, but Cuba, being given a monopoly on the supply of a certain portion of the sugar for the American market, raised the price and got the benefit both of the duty cut and the higher price. The quotas of American producers were cut and an attempt was made to make up the difference in output and price through benefit payments by the A. A. Thus the American consumer was levied on in two directions for the benefit of Cuba. The increase in trade to Cuba has A. A. A. Thus the American consumer was levied on in two directions for the benefit of Cuba. The increase in trade to Cuba has been negligible as compared to the subsidy granted. All of which goes to show the dangers of mixing diplomacy and trade without

goes to show the dangers of mixing diplomacy and trade without adding the priceless ingredient of common sense.

Cuban conditions in 1934 were grave. The island's peace and prosperity rises and falls with the price of sugar. Many great centrals owned by Americans through the large American banks and by British subjects through the Royal Bank of Canada were on the point of failure. The American bank loans to the Cuban Government were uncollectible. Upward of \$300,000,000 in Cuban securities were outstanding as a result of American flotations, and an unknown number of these was held in the United States. These issues were largely in default.

The basic sugar tariff under the 1930 act is 2.50 cents a pound for 96 degrees (degree test sugar). Under the reciprocity treaty of 1902, Cuba got a 20-percent reduction below other countries, bringing her rate to 2 cents. On May 9, 1934, President Roosevelt further reduced the rate, giving to Cuba a duty of 1.50 cents. The Tariff Commission had recommended this rate. In the agreement as proclaimed on September 3, 1934, the rate was cut to 0.90 cent—without explanation. The agreement gave certain concessions to

as proclaimed on September 3, 1934, the rate was cut to 0.90 cent—without explanation. The agreement gave certain concessions to the United States on both agricultural and industrial products. Now let us see what happened. We are the largest buyers of Cuban sugar and have had special trade arrangements of sorts ever since we set up the island as an independent state. In 1932 we sold goods to Cuba in the amount of \$23,755,000. In 1933 we sold \$25,093,000, in 1934 we sold \$45,323,374, and in 1935 we sold \$60,152,732. Of the 1934 exports, \$17,614,000 were accounted for in the September-December period after the execution of the agreement—therefore apparently proving that the reciprocal-trade agreement was a success. agreement was a succes

The Cuban agreement in no way involves the most-favored-nation clause, yet it has been exhibited as the star example of what we may expect to gain through reciprocal-trade agreements. The State Department took the extraordinary course of issuing a press release of Cuban opinion to show what a great success the agreement was from the Cuban viewpoint. But apparently the American effects

were not important.

After the Cuban agreement went into effect, duty was paid on about 1,100,000 tons of raw sugar and about 200,000 tons of refined. The loss in duties to the United States between the trade-agreement rates and the old tariff rates amounted to \$32,323,000.

rates and the old tariff rates amounted to \$32,323,000.

Under the quota system for sugar as fixed by the A. A. A., the Cubans had a practical monopoly of sugar shipments for the balance of 1934. Our insular possessions had sugar, but they had exhausted their quotas. The Cubans demanded a fancy price for sugar shipped to the United States. This price was brought down by negotiations to an average of 1.97 cents per pound (f. o. b. Cuba), although at the same time Cuba was selling to the world other than the United

States at an average of 0.80 cent. The result was that the American consumers of sugar, because of the coincidence of the trade agreement and the A. A. A. quota system, paid for about 500,000 tons of their sugar the sum of about \$15,000,000 over and above what they would have paid had our Government not intervened ostensibly to

help American trade.

Taking the loss of duty, which went into the pockets of the Cuban Taking the loss of duty, which went into the pockets of the Cuban producers and which was not reflected in the retail prices, and the additional sum exacted by the Cuban producers owing to their fortunate situation under the quota, the American people paid a total of about \$47,000,000 in order to sell \$45,323,374 in goods.

Since these total sales were only \$20,000,000 in excess of the low sales of 1933—which minimum of sales would likely have been made anyway—the American people as a whole paid over \$2 to promote each dollar's worth of gross sales to Cuba.

To summarize: Our sales to Cuba in 1934 amounted to \$45,323,-374. To obtain this amount of business we granted a subsidy of \$47,000,000.

To summarize: Our sales to Cuba in 1934 amounted to \$45,323,-374. To obtain this amount of business we granted a subsidy of \$47,000,000.

This, however, is not all. For the year 1935 the Cuban sugar quota was 1,658,055 tons. On this amount, at the new duties, we lost the sum of \$40,726,000. The Cuban price to the United States for sugar averaged about 1.19 cents a pound above the world price. We paid about \$43,000,000 extra on our sugar for the exclusive benefit of Cuba. Adding the loss of duties, the new tax amounts to over \$83,000,000.

Thus for \$60,000,000 of exports to Cuba in 1935 we paid a subsidy of around \$83,000,000. At the same time the A. A. A. was paying American beet- and cane-sugar producers not to produce. The average tax on Cuban sugar land is 29 cents an acre. The average tax on American beet-sugar land is \$2.59 an acre. The retail price of sugar in the United States as of December 31, 1932, was 5.10 cents per pound; in 1933 the price rose to 5.50 cents and stayed at that figure through 1934, rising to 5.80 cents in 1935.

From these figures the cost of the agreement to American citizens may be estimated. Instead of promoting trade with Cuba through Government action of this sort, it would be cheaper for us to take a census of everyone who wants to sell anything to Cuba, have him set the largest profit he can think of on his sales, and then pay him the profits directly on the promise that he will stay out of business.

Our general imports from Cuba were \$78,928,916 in 1934 and \$104,-

Our general imports from Cuba were \$78,928,916 in 1934 and \$104,-638,523 in 1935—an increase of \$25,709,607. Our exports to Cuba were \$45,323,374 in 1934 and \$60,152,732 in 1935—an increase of \$14,829,358, or about \$5,000,000 less than the increase of 1934 over 1933. We are steadly importing more from Cuba and exporting

1933. We are steadily importing more from Cuba and exporting proportionately less.

What is Cuba doing with the great balance to her credit in the United States over and above what she buys from us? Paying debts? Not at all. The American bondholders were not provided for in the agreement. They are still unpaid. In the absence of a comprehensive accounting of our trade and money relations with Cuba it is not possible to say exactly what Cuba is doing with the Cuba, it is not possible to say exactly what Cuba is doing with the money

Taking the dollar value of Cuban imports as a whole, they show an increase for 1934 over 1933 of \$31,026,000, or less than the amount of our subsidy. Of this increase, the United States obtained a slice amounting to \$18,551,000 (Cuban figures), while all other nations together obtained \$12,475,000. We did all the subsidizing but got only a part of the new trade. During the years 1931-33, without subsidy we supplied 57.4 percent, 54.2 percent, and 53.5 percent of the Cuban imports. In 1934, with the subsidy, we supplied 56.2 percent. In 1934 Cuban imports from the United States increased 82 percent over 1933, but at the same time Cuba increased her purchases from Japan by 265 percent over 1933.

The current figures are not now available to me, but it would appear that we are providing a subsidized purchasing power for Cuba which is being used only in part in the United States. We are subsidizing Cuban trade with Japan and Germany.

Cuba has been faced with two great problems—the overproduction of sugar and the overproduction of debt. Our contribution seems to have been the augmenting of both kinds of overproduction. And the country has been put in a position where a change in our sugar arrangements will cause great hardship and possibly another revolution in Cuba. Taking the dollar value of Cuban imports as a whole, they show

another revolution in Cuba.

Mother's Day

EXTENSION OF REMARKS

HON. FRED C. GARTNER OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 18, 1939

STATEMENT BY HON. ARTHUR H. JAMES, GOVERNOR OF PENNSYLVANIA

Mr. GARTNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the Honorable Arthur H. James, Governor of Pennsylvania, for Mother's Day, May 14, 1939:

Mother's Day, in accordance with the splendid custom of setting aside the second Sunday in May, will be observed on May 14 throughout Pennsylvania, the United States, and many parts of

throughout Pennsylvania, the United States, and many parts of the world.

It is heart-warming to recall that this observance originated in Pennsylvania, and that the woman who founded the day is a Pennsylvanian, Miss Anna Jarvis, of Philadelphia.

Mother's other 364 days in the year have been very trying of late, and her burdens have been many. She has had to save and conserve to properly feed her children and keep them in warm clothing. On Mother's Day let's remind her that we are truly appreciative of the struggle and sacrifices she has made and is making preciative of the struggle and sacrifices she has made and is making in our behalf.

When we look around us, we can see that our mothers have been doing a mighty fine job, because they have been getting us educated, giving us a little nest egg to start out in life, where possible, and instilling into us as we grow to adulthood the fine principles of manhood and womanhood. Our mothers' lives have made us men and women.

We are trying to apply those principles to the operation of State government, just as they applied them to their households and to us. Mothers' teachings should never be allowed to become old-

fashioned.

ARTHUR H. JAMES.

Should the Air Corps Be a Separate Unit?

EXTENSION OF REMARKS

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 17, 1939

RADIO ADDRESS BY MAJ. GEN. WILLIAM C. RIVERS, UNITED STATES ARMY, RETIRED, JANUARY 27, 1939

Mr. VOORHIS of California. Mr. Speaker, especially since it amounts practically to an argument in favor of my own bill, I am pleased to include in my remarks the following radio address by Maj. Gen. William C. Rivers:

Should our Air Corps be a separate unit? We have at the present time, and we have always had, distinct and separate Air Corps for the Navy and for the Army. Also, other departments of the Government have air forces—the Commerce Department, Post Office

Department, the Coast Guard, and so on.

Department, the Coast Guard, and so on.

Such discussions as ours tonight are concerned, however, with the national defense. These discussions refer to the air forces of our Army and of our Navy. Shall we continue these as they are at present, or shall we combine the air forces of the Army and of the Navy into one Air Corps? That would provide us with three armed defense services—Navy, Air, and Army. All the important nations except the United States have such a plan; they all have just one air corps. Nineteen countries have adopted this plan.

Of course, we ought to have only one Air Corps for defense purposes. In the interest of efficiency and economy, Congress should pass a law providing for the creation of a powerful, homogeneous Air Corps. The Air Corps ought to have its own laws for promotion, pay, and retirement. It should form one of the three coequal armed branches in the department of national defense. The part of the Air Corps which is to go to war under Navy command would, of course, be under Navy command in peace. It would thus be trained by the Navy.

trained by the Navy.

The contingent of the Air Corps which is to go to war with the Army would be under Army command in peace. It would therefore be trained by the Army. The Chief of this separate Air Corps would direct procurement, supply, and the preliminary training at the several land aviation schools and depots. The Chief of the Air Corps would also control a reserve of the air force subject to

the orders of the secretary of national defense.

The secretary of national defense.

The secretary of national defense would be a member of the President's Cabinet. He should be a man of good ordinary ability and experience. The secretary of national defense would inspect the work and progress of the Navy and of the Army and the Air Corps. He would represent them with Congress—one agent instead of three dealing with the Congress. The secretary of nation defense would control, not simply coordinate, the operations and the training of all three of the armed services.

Many able officers of our Navy and Army object to giving up the

Many able officers of our Navy and Army object to giving up the control of their present Air Corps to having one Air Corps coequal in rank with the older services. In my judgment, we have tried out the present plan well; my conviction is that we shall never get the best air force for our national defense until we take steps to have an Air Corps equal in rank and prestige with the Army and

the Navy.

Our Navy and Army officers are not disposed to be particularly solicitous about their own privileges. Many, however, fear the loss of prestige by the older services—if we combine the Air Corps and have a Cabinet officer of defense who will control the Army and the Navy. I do not fear this. The older services would not be consolidated. Each would retain its tradition and have its tactical unity of command, as at present.

There is much competition and duplication of effort on the part of the Navy and Army as matters are now. The Navy takes to

of the Navy and Army, as matters are now. The Navy takes to sea on its plane carriers and its warships about 1,000 of its 3,000 airplanes. That leaves a great many airplanes which the Navy operates from land bases, in addition to the large number of airplanes the Navy uses for training its pilots. All the Army air-planes operate from land bases. Both Navy and Army are at pres-ent seeking sites for new air bases in the Southeast of the United States, in the Northeast, and in the Alaska regions, in Puerto Rico, and elsewhere. Who is to coordinate these efforts? Who is to

prevent duplication and overlapping?

Control and coordination are much needed, especially in the fields of procurement and of administration. Air Corps general officers ought to have permanent tenure of rank, such as generals and admirals in the line of the Army and Navy now possess. At present the head of the Army, or of the Navy, has the authority to demote the high-ranking officials who are on duty with the air

forces.

It is true, as we are often told, that we have had many boards about aviation. We are not told, however, that practically all of these boards—the Baker Board, the Morrow Board, Drum Board, and so on—were appointed administratively by the Secretary of Warr, or in one case by the President, and that all these boards had Army general officers among the members.

Congress has authorized but one aviation board. That was the

Federal Aviation Commission in 1934. All the members were civilians and Congress allotted about \$60,000 for the investigation.

The 250-page report of this Federal Aviation Commission, in 1935, had fully 36 recommendations about coordinating the procurement, the research, the budgets, and many other phases of Army and New aviation. and Navy aviation.

and Navy aviation.

However, note the following striking and unusual character of the final comments of the Federal Aviation Commission about the present organization of Army and Navy aviation. The Federal Aviation Commission had authority, under the law authorizing the commission, to study only aviation matters. Here follow the final remarks of the Federal Aviation Commission:

"Intense study and prompt remedy should be given to the interrelationship of the national-defense services.

"While this matter lay beyond our own scope we have con-

"While this matter lay beyond our own scope, we have con-sidered it so serious that we recommend that the whole problem of military organization and of interservice relationships be made the subject of extended examination by some appropriate agency in the near future.

"The question of air force organization and utilization in their broadest aspects become questions of general national-defense organization and policy, and particularly involve the relations

organization and policy, and particularly involve the relations among the armed services.

"Though we appreciate the efforts now made for coordination, we are left with the feeling that the present degree of mutual understanding between the Army and Navy is less than might be desired; that the machinery for settling differences in matters of detail lacks something in effectiveness; and that the arrangements for keeping commanders in the field notified of their respective responsibilities in joint operations with neighboring units of the sister service are strikingly inadequate." sister service are strikingly inadequate."

America Should Clean Up Its Own Back Yard

EXTENSION OF REMARKS

HON. JAMES C. OLIVER OF MAINE

IN THE HOUSE OF REPRESENTATIVES Thursday, May 18, 1939

RADIO ADDRESS BY HON. JAMES C. OLIVER, OF MAINE

Mr. OLIVER. Mr. Speaker, under permission granted to me today by unanimous consent, I am pleased to incorporate in the Congressional Record herewith a copy of a radio broadcast recently delivered over station WCSH in Portland,

Citizens of the First District, in my broadcast of 2 weeks ago I called attention to the fact that New Dealism had stepped from its domestic and national role of planned economy into the foreign and international maelstrom of planned chaos, turning its face toward Europe and pretending to the mantle of the great international intermediary.

Tonight, ladies and gentlemen, the perilous folly of such foreign meddling must be painfully apparent to every thinking American. The obvious, the wholly to be expected, the inevitable, yet none-theless bitter fruit of that meddling has been the granting of opportunity for democracy's archenemy to express his scorn of up to the contract of the cont all and to insult and ridicule our President, rebuffing Mr. Roosevelt's appeal for peace by suggesting he clean up his own back yard and relieve the distress of his own people before presuming

yard and relieve the distress of his own people before presuming to police the rest of the world.

Coming from any source, such pills are bitter. Coming from the one man in all the world most detested and abhorred by all true lovers of liberty, the pill is bitter indeed, bitter because unpalatable truths are always bitter. Praise as we may the President's sincere craving for world peace, can we deny that this administration, by such intrusion into the affairs of others, by such unintered the statement of the st wited and senseless appeal to reason where there is no reason, has granted such opportunity for the exercise of Hitler's gall, for such further inflation of the little man's insane ego as may but

such further inflation of the little man's insane ego as may but spur him on to that very war from which President Roosevelt's appeal sought to swerve him?

Drunk with power, inflated by the attention showered upon him by the great leaders of the world, Hitler is brazenly contemptuous of all gods but the god of might. To grant him opportunity to couch his attacks upon democracy in the veil of right, to invite his criticism of our own national conduct, to permit him to hold up our own national distress and our mistakes of leadership as horrible examples of the failure of democracy—these are grave mistakes indeed. Greatly as we detest Hitler and his are grave mistakes, indeed. Greatly as we detest Hitler and his works, have we, after all, any legitimate right to butt into his affairs so long as they do not openly and directly threaten the United States of America? I, for one, do not believe we have. What is more, I believe that such unwarranted intrusion upon the part of this administration benders. the part of this administration borders upon the acutely perlious, borders upon an invitation to trouble in which we have no business.

The notes of Woodrow Wilson heralded our being sucked into the World War. Faces waxed red then, as some faces wax red now at this reply of Hitler's. Men's minds turned savage at the rebuff of Wilson's notes as even now, the minds of some know perilous resentment at Hitler's rebuff to President Roosevelt. Is history but repeating itself, or has the American people developed a degree of commonsense sturdy enough to turn aside the assault of such irritation, such appeal to passion, such fore-whisperer of war? That is the question, my fellow citizens.

such irritation, such appeal to passion, such fore-whisperer of war? That is the question, my fellow citizens.

Let us hope and pray that Hitler's reply suffices to turn the thoughts and the efforts and the energies of the administration back to its own rightful problem—its only real problem—the battle against unemployment, destitution, poverty, and all the other economic ills with which America is cursed. When these are cleaned up, when there no longer exists opportunity for foreign enemies of democracy to point in derision at our own back yard, then and then only may the administration have business elsewhere. Today and tomorrow and for many a day to come there's plenty to strain all powers of salvation here at home.

During the past 2 weeks a veritable deluge of correspondence in approval of my last broadcast has poured into my office from every part of the Union, a deluge that leaves no vestige of doubt of the American people's wholehearted condemnation of any administration activity tending to embroil us in the European muddle. Definitely, our people have no desire to see Uncle Sam become again the prize sucker that he was in 1917. Definitely, our people want to have nothing to do with the schemers and war profiteers and the putrid mess of hates these wily gentlemen have brewed across the sea. Definitely, the youth of America has no desire to become cannon fodder for the enrichment of foreign soil, of foreign or domestic schemers, of foreign or domestic munitions makers, those economic royalists against whom, but yesteryear, was raised the song of hate of these very New Dealers whose blunderings into the foreign field could so readily, so easily, so year, was raised the song of hate of these very New Dealers whose blunderings into the foreign field could so readily, so easily, so quickly embroil this Nation in a war from which the economic royalists alone might reap a profit.

royalists alone might reap a profit.

Is it not strange that today we hear no cry, no faintest peep of fear that these once so hated enemies of the New Deal now selling munitions to embattled peoples may embroil America in war? Is it not strange that we hear no demand from a peace-preaching administration, no insistence that the Congress ban exportation of any and all materials of war to any and every land without exception? What logic—what strange logic—impels perilous intervention in the name of peace while day in and day out ships sail from our shores laden with the very things destined to assure the continuance of war and aggression?

Are we not like England, permitting our own people to go on

Are we not, like England, permitting our own people to go on garnering profits from the supplying of the very things destined perchance one day to maim and destroy our own people? Are we not flinging away, for gold, our own protection, our own defense, in a world wherein stalk aggressors so frightening as to cause our President to cry forth warnings of meeting force with force? Are President to cry forth warnings of meeting force with force? Are we, as a people, profiting from such enterprise? Or are we, even now, impelled by folly as in the years before 1917, building here in America the guns, the shells, collecting the very scrap metal destined to be shot back at our own sons when, beguiled at last into the fray, we purchase the profits of munitions makers and money changers at the horrible price we did in World War days?

Ask yourselves, ladies and gentlemen, if we are being led, deliberately or by folly, into the sucker role we played in 1917. Is this administration seeking to distract attention from the muddle of

things at home, seeking to drown out the ever-mounting cries for salvation of its own people by shouting of the need of peace in Europe? Are not American millionaires, American munitions makers, American money changers, now, as before and during the World War, gleaning gold from the very strife and the preparations for strife this very administration so loudly condemns? Is this the

fruit of sound logic my friends or what?

Two weeks ago I invited your attention to this perilous med-dling in foreign affairs. Since then the fruit of that meddling has been made known to all. Is it not time to call a halt to such folly? Have we not occasion to feel ashamed that Hitler was granted opportunity to call attention to the need for cleaning our granted opportunity to call attention to the need for cleaning our own back yard—a privilege accorded to Americans and to them alone? Have we reached such a pass that truth must be told to our President only through the mouths of the enemies of democracy? I refuse to believe such can be true. It being the duty of Americans, I have faith that it will be done by Americans; that the administration will be told in no uncertain terms of America's desire to mind its own business and get busy on its own back

yard.

The past 2 weeks have brought to the Congress the President's plans for the reorganization of certain bureaus of the Government—chiefly those devoted to the dispensing of relief, social security, and loans. Such reorganization is recommended upon the ground that economies may be effected and confusion of effort be eliminated. But these realinements of bureaus in no way promise to put an end to the obvious faults of the existing system and their approval by the Congress can mean but the addition of many more high-salaried employees to the Government's roll. Economy. their approval by the Congress can mean but the addition of many more high-salaried employees to the Government's roll. Economy, if such there be, would have to come from the bottom of the pyramid, from the casting off of the helplessly dependent, and to any so-called economy effected at the expense of the unfortunate victims of poverty and economic mismanagement I am unalterably opposed. In a land where one of every three citizens is being fed from the public purse, I for one refuse to see betterment in any scheme designed to add \$10,000 figureheads to the pay roll and five a lot of starvation-wage earners in the name of economy. If fire a lot of starvation-wage earners in the name of economy. If that be economy, the less our suffering America is subjected to it

the better.

Also, during the past 2 weeks, the President has sent to the Congress a request for \$1,477,000,000 with which to run the W. P. A. during the fiscal year beginning on July 1, 1939. The President states that this amount would provide for 2,000,000 jobs instead of the 3,000,000 provided during the past year. Logically this presupposes the dropping of 1,000,000 persons from the present rolls. But since the President himself has estimated that—in periods of reemployment W. P. A. workers get only one job out of four—this proposed reduction of 1,000,000 workers would imply that Mr. Roosevelt expects at least 4,000,000 persons to be taken back into private employment. This makes no provision for the \$50,000 perprivate employment. This makes no provision for the 850,000 persons now certified as in need and waiting for W. P. A. placement, whose absorption by private industry would require, on the 1-to-4 basis, additional employment of some 2,550,000 persons, nor does it provide for the 500,000 young people annually added to the

ranks of those seeking employment

The employment by private industry of some 7,000,000 persons would be a miracle indeed. The obvious question is: By what would be a miracle indeed. The obvious question is: By what private industry? What sudden demand for production could require 7,000,000 new workers? Or five or even one million, for that matter? None in time of peace, my friends. And so I fear we must consign that dream to the realm whence have flown so many, many other dreams of the new dealers. This initial appropriation request, this call for \$1.477,000,000 for relief during the coning year is—as might say Captain Henry, of Show Boat fame, "Only the beginning, folks; only the beginning." Let us not delude ourselves that any living man knows how many millions will be destitute and dependent upon W. P. A. during the course of the coming year. We of the Congress have no doubts concerning the probability of further demands for duns when we meet next January. The ways of the New Dealers have become an old, old story, yet ever an increasingly saddening one.

increasingly saddening one.

Isn't it time, friends, to admit honestly that it isn't relief at all; that it's nothing more than craven procrastination, craven evasion? that it's nothing more than craven procrastination, craven evasion? Isn't it time common sense reasserted itself to make us abandon buck passing and pretense and call a spade a spade, a cancer a cancer? Ten billions of dollars—ten billions and more have been spent in this New Deal pretense that the unemployed are charity's children and belong on charity's doorstep. Is it not time to confess the falsity of that pretense and to admit that unemployment was born, not of charity but of faith and hope—the faith and hope incessantly impelling mankind to devise quicker, better methods of reproducing things known; to constantly seek things new with which to improve this business of living?

Why longer delude ourselves that lack of work is but a transitory economic rash or excite ourselves in efforts to attribute its existence to evil fortune? Why not place responsibility where it belongs—on an outworn, outmoded, misdirected, mismanaged distribution system and a fallacious monetary system which we have stubbornly persisted in perpetuating long after it was dead? Why

stubbornly persisted in perpetuating long after it was dead? Why not give support where support should rightfully be given, not to employables but to the old deserving of their time and rest from labor, to the blind and the lame and the halt, to dependent children, to the truly deserving dependent, the proper responsibility of

Give the able real work opportunities—not the poverty of niggardly existence wages; not destitution; not a sentence to an existence wherein lies no hope of betterment. That, friends, is

the cry of thoughtful Americans everywhere, the cry of an America heart-weary and soulsick of New Deal experiments and stopgaps, heart-weary and soulsick of New Deal experiments and stopgaps, of an unemployment situation waxing more hopeless, more desperate with every passing hour of every passing day. Can we wonder that Hitler, knowing, as must all the world, what a mess is here, what a debt we have amassed, how desperate is the plight of America today, can we wonder that Hitler sneers at us as a plutocracy and bids our President police his own country, clean up his own back yard, before pretending to the right to police European nations?

When America has solved its own pressing problems, when

European nations?

When America has solved its own pressing problems, when America summons the courage to rectify its own distribution and monetary systems to conform to the dictates of reason, when America can boast that it adequately cares for its own people, provides work opportunities for all the willing and proper care for its aged and its helpless, then and then only, my friends, may we look to the yards of our neighbors. Until that great day comes, red though our faces be at the insults heaped upon us by the enemies of democracy, let us refrain from throwing stones at other nations. For, friends, far better that our faces be red with a passing anger than that the battlefields of Europe be red again with the blood of the flower of American manhood, squandered in a senseless cause. We can redeem our dignity as we redeem America, but blood once spilled lies beyond redemption.

Please accept my sincerest thanks for your fine response to

Please accept my sincerest thanks for your fine response to these talks of mine and my assurance that requests for copies will be met as rapidly as possible. Until 2 weeks from tonight, my friends, good wishes and goodnight.

Crude Oil and Gasoline Movements

EXTENSION OF REMARKS

HON, GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1939

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following table from the Department of the Interior on the movement of oil by the different methods of transportation in this country:

Crude oil and gasoline movements, 1937

RAILROADS, CLASS I	
Originated on line:	Barrels
Petroleum, crude	
Refined oil and gasolines	295, 804, 716
Total	322, 303, 943
Total carried:	
Petroleum, crude	42, 541, 87
Refined oils and gasolines	529, 019, 843
Total	571, 561, 718
Tonnage converted into barrels by use of following tors: 6.4 barrels crude equals 1 short ton; 7.7 bar equals 1 short ton. The above does not include all petroleum products lubricating oils, etc., carried by railroads. Source: I. C. C. Freight Commodity Statistics, 1937.	rels gasoline , as fuel oil

H. R. 5435. To Amend the Fair Labor Standards Act

EXTENSION OF REMARKS

HON. MARY T. NORTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, May 18, 1939

LETTER FROM CERTAIN FARM ORGANIZATIONS AND REPLY THERETO

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and my reply thereto:

WASHINGTON, D. C., May 13, 1939.

To Members of the House of Representatives:
The chairman of the House Labor Committee has announced her intention of calling up H. R. 5435 under suspension of the rules on Monday, May 15. This announcement calls for a reassertion of the Monday, May 15. This announcement calls for a reassertion of the position of the undersigned farm groups toward the Norton bill. We object to the Norton bill for the following specific reasons:

(1) It nullifies most of the agricultural exemptions accorded under the present law.
(2) By conceding some new exemptions to a few agricultural groups, it seeks to split the forces of agriculture by giving some commodity groups "half a loaf," while depriving the major part of agriculture of exemptions contained in the existing law to protect the formers exempts forces by agriculture of exemptions contained in the existing law to protect

(3) If passed it will bring the great bulk of agriculture under the law both as to wages and hours.

(4) It is loaded with such vagueness that no one knows what it means and members of the committee themselves disagree as to the intent of the language.

to the intent of the language.

As the Members of Congress well know, agriculture has been working for parity. The Norton bill makes for disparity. The passage of the bill will greatly intensify the present hardships confronting agriculture. It will increase costs of preparing farm products for market—costs that come out of the farmer's pocket.

Since the Norton bill was reported out by the committee, there has been a concerted effort to lull Congress into the belief that it exempts agriculture. The Members of Congress should not be misled by such representations. The fact is that the bill, prepared by its backers at the behest of the Wage-Hour Administrator, would place agriculture in a strait jacket and leave it helpless. place agriculture in a strait jacket and leave it helpless.

At no time was the farmer given an opportunity to express his views before the committee. This despite repeated requests for public hearings. Yet all the while sessions were held with the Administrator, who, by reason of the issuance of an ill-advised and utterly illogical concept and definition of the term "area of producis largely responsible for the need which exists for amend-

ments to the wage-hour law.

If the move to have the Norton bill called up under suspension If the move to have the Norton bill called up under suspension of the rules succeeds, there will be no possibility for anyone to offer amendments. The effort to pass this ill-conceived measure under such conditions, where farmers were given no opportunity to appear before the committee to state their views, is entirely contrary to the concept of democratic principles and government. Under suspension of the rules, the House itself will be deprived of any opportunity to amend or modify the Norton bill or to preserve exemptions agriculture now has.

Believing in justice as we do, we desire to see all workers properly

exemptions agriculture now has.

Believing in justice as we do, we desire to see all workers properly compensated for their labor. But it must not be forgotten that those who are engaged in agriculture are also workers, and they are among the poorest paid in the entire country. The burden of shorter hours and minimum wages resulting from the Norton bill cannot fail to place agriculture at a greater disadvantage than that under which it now labors, making it increasingly difficult for those who are engaged in agriculture and for those engaged in industry to exchange their products on a workable basis, thus injuring the entire country.

to exchange their products on a workable basis, thus injuring the entire country.

A vote for suspension of the rules would be a vote against the farmer and of all the business and industrial groups that depend upon aggriculture. The Norton bill should be decisively defeated. The amendments on which the farm groups have agreed as necessary are embodied in the Barden bill, H. R. 5374.

Respectfully yours,

American Farm Bureau Federation, Edward A. O'Neal, president; National Grange, Fred Brenckman, Washington representative; National Cooperative Milk Producers' Federation, Charles W. Holman, secretary; National Cooperative Council, Ezra T. Benson, secretary; Agricultural Producers Labor Committee, Ivan G. McDaniel.

The American Farm Bureau Federation.
The National Grange.
The National Cooperative Milk Producers Federation.

The National Cooperative Council.

The Agricultural Producers Labor Committee.

Gentlemen: As chairman of the House Labor Committee, I feel it my duty to take cognizance of your letter of May 13, addressed to the Members of the House of Representatives in opposition to H. R. 5435, a bill to amend the Fair Labor Standards Act of 1938.

H. R. 5435, a bill to amend the Fair Labor Standards Act of 1938. You purport to speak for American agriculture. In an attempt to influence the action of the Congress, you make several charges as to the harmful effects which this bill will have upon agriculture. You even imply bad faith to the supporters of the bill. I feel impelled, therefore, in a public letter to show by an analysis of the present law and proposed amendments that your charges are not and cannot be substantiated. The following statements are not generalities; they are based on a comparison of the previous of the present law and the proposed amendments, and can be verified by anyone who takes the time to make such a comparison:

comparison:

(1) This bill does not affect any person who is employed on a farm or any person who is employed by a farmer. Such workers are exempt under the law at present and would continue to be exempt under the proposed amendments.

(2) What you term "agriculture" or "agricultural exemptions" does not refer to employees of the farmers but rather to employees of canners, packers, other industrial processors, etc.

(3) You state that most of the "agricultural exemptions" (you refer to exemptions for the employees of the canners, packers, etc.) accorded under the present law are being nullified by this bill. To use a familiar phrase, "let's take a look at the record" to see whether this statement is true. There follows a comparison of the exemptions contained in the present law with those proposed in the bill as they relate to the handling and processing of the principal agricultural commodities.

Under the present law, ginning is completely exempt from the hours provisions and is also exempt from the wage provisions where the operation is performed in the "area of production."

Under the proposed changes this operation would be completely exempt from both the wage and hour provisions wherever performed, irrespective of "area of production."

Under the present law storing has no hours exemption unless performed within the "area of production."

Under the proposed changes storing would be completely exempt from the hours provision for 14 workweeks a year and up to 60 hours a week for the remainder of the year wherever the opera-

hours a week for the remainder of the year wherever the operation is performed.

Under the present law compressing has a complete exemption from the hours provisions and an exemption from the wage pro-visions where the operation is performed within the "area of pro-

Under the proposed changes the exemption would be the same as

for storing.

TOBACCO

Under the present law it is doubtful whether any operation on tobacco after it has left the farm is exempt from the minimum-wage provisions. However, there is a 14 workweeks' exemption from the hour provisions for the first processing operations upon tobacco when performed within the "area of production."

Under the proposed changes the operations of handling, tying, drying, stripping, grading, redrying, fermenting, stemming, packing (when those operations are performed prior to storage), and storing of leaf tobacco would be completely exempt from both the wage and hour provisions

wage and hour provisions.

LIVESTOCK

Under the present law no exemption is granted from the wage provisions for slaughtering and dressing livestock. Such operations are exempt from the hours provisions for a limited period and for the balance of the year the 44-hour

workweek is applicable.
Under the proposed changes the handling, grading, loading, slaughtering or dressing of livestock would be completely exempt from the hour provisions for 14 workweeks, and exempt up to 60 hours a week during the remainder of the year, wherever the operations are performed.

POULTRY

Under the present law no exemption is granted from the wage provisions for slaughtering, dressing, and storing poultry. Such operations are exempt from the hour provisions for only 14 workweeks, and for the balance of the year the 44-hour workweek is

weeks, and for the balance of the year the 42-hour workweek is applicable.

Under the proposed changes the handling, storing, grading, slaughtering, refrigerating, picking, dressing, or packing of poultry would be completely exempt from the hour provisions for 14 workweeks, and exempt up to 60 hours a week for the remainder

GRAIN

Under the present law there is an exemption from both wages and hours for handling, cleaning, handpicking, drying, and storing grains, but only when these operations are performed within the "area of production." Further, there is an exemption from the hour provisions for 14 workweeks for the first processing of grains, but only when this is done within the "area of production."

Under the proposed changes handling, grading, cleaning, polishing, handpicking, hulling, delinting, fumigating, drying, and storing of grains would be completely exempt from the hour provisions for 14 workweeks and up to 60 hours a week during the remainder of the year.

of the year.

SUGAR

Under the present law there is no wage exemption for the processing of sugar beets, sugar-beet molasses, sugarcane, or maple sap LXXXIV—App——131

into sugar, molasses, or sirup, but there is an hours exemption

for such processing.

Under the proposed changes there would be an exemption from the hour provisions for 14 workweeks for such operations, and this change in the proposed changes the remainder. exemption would apply up to 60 hours a week during the remainder of the year.

DAIRY PRODUCTS

Under the present law there is an exemption from both wages and hours for the making of dairy products, but only within the "area of production." Further, there is an exemption from the hour provisions for the first processing of milk, cream, whey, or skimmed milk into dairy products.

Under the proposed changes the making of dairy products (except ice-cream mix, ice cream, malted milk, and processed cheese), including the cooling, pasteurizing, printing, or packing thereof would be completely exempt from the hour provisions for 14 work-weeks and up to 60 hours during the remainder of the year.

LUMBER

Under the proposed changes the felling of trees and logging lumbering operations except when performed by farmers. Under the proposed changes the felling of trees and logging operations performed prior to delivery of logs to a sawmill would be completely exempt from the hour provisions for 14 workweeks and up to 60 hours a week during the remainder of the year.

FRESH FRUITS AND VEGETABLES

Under the present law there is an exemption from both wages and hours for preparing, packing, and canning fresh fruits and vegetables, but only if those operations are performed within the "area of production"—"area of production" has been defined by the administrator for fresh fruits and vegetables as being a radius of 10 miles from the processing establishment, with the requirement the establishment be in a town of less than 2,500. There is also an exemption from the hour provisions for 14 workweeks for packing and capping fresh fruits and vegetables.

exemption from the hour provisions for 14 workweeks for packing and canning fresh fruits and vegetables.

Under the proposed changes the preparing, cleaning, grading, packing, drying, refrigerating, freezing, preserving, peeling, shelling, storing, or canning fresh or dried fruits and vegetables would be completely exempted from the hour provisions for 14 workweeks and for 60 hours a week during the remainder of the year. Further, there would be an exemption from both the wage and hour provisions for cleaning, packing, grading, or preparing fresh fruits and vegetables in their raw or natural state when such operations are performed immediately off the farm. This wage exemption is limited to the small packing operation conducted in the immediate limited to the small packing operation conducted in the immediate

limited to the small packing operation conducted in the immediate community where the produce is grown.

It should be noted that under the proposed changes the exemptions from the hour provisions, which would be granted to the handlers and processors of fresh fruits and vegetables, poultry, eggs, and grain, would not be granted to such handlers and processors if they constituted "terminal establishments." H. R. 5435 contains the commonly understood definition of the term "terminal establishment".

To summarize briefly, cotton processors are being given a broader hour exemption by these amendments than they now have under the present act; tobacco processors are being given a broader hour the present act; tobacco processors are being given a broader hour exemption; slaughterers of livestock and poultry are being given a broader hour exemption; grain elevators are being given a broader hour exemption; fresh fruit and vegetable packers and canners are being given a broader hour exemption; fresh fruit and vegetable packers and canners are being given a broader hour exemption; sugar processors are being given substantially the same hour exemption they now enjoy; and loggers are being given a broad hour exemption, although they do not have any hour exemption in the present law.

The primary need in the handling and processing of agricultural commodities is for flexibility in hours. It will be seen from the foregoing that the burdens of the hour provisions as applied to employees engaged in such handling and processing have been substantially eased.

It is true that an exemption from both the wage and hour pro-

It is true that an exemption from both the wage and hour provisions is granted by the statute to certain limited operations in the "area of production." The bill proposes to repeal these wage exemptions except as to the ginning of cotton and the packing of fruits and vegetables immediately off the farm. There is little indication that the application of the wage provisions to employees engaged in the processing and handling of agricultural commodities has been burdensome.

It is apparent to me that your fight against the proposed amend-

It is apparent to me that your fight against the proposed amendments has been induced by canners and packers of fresh fruits and vegetables. Such processors have made it clear that they will not be satisfied with anything less than a complete exemption of their employees from both the wage and hour provisions. An examination of the facts will clearly demonstrate that these demands are unjustified. For example, the State of California, from which your most active lobbyist comes, has a law which establishes a minimum wage of \$16 for a normal workweek for women engaged in canning and packing plants. Minimum wages which are equivalent to those fixed packing plants. Minimum wages which are equivalent to those fixed by the Federal law, or higher, are also required to be paid to women by the Federal raw, or higher, are also required to be paid to worker engaged in canning in many other States. It cannot be shown that the fresh fruit and vegetable industries have been handicapped in the States where such wage legislation exists. In view of the fact that all these commodities are competing in a national market, it is unjust and unfair for the Federal Government to exempt the employees in these industries from a national wage and hour law when such exemption will result in discriminatory production costs and cause a general depression of wage levels in such industries. Many canneries have been employing thousands of workers at wages which

are insufficient to maintain them in health and decency. Minimum wage legislation is needed in the canning and packing industry as much as or more than in any other industry in the United States.

I cannot help but feel that if American agriculture were apprised of the provisions of this bill with its broader hour exemption they would prefer it to the present law. I am advised by the Wage and Hour Division that most requests in connection with the coverage of employees engaged in canning and packing of fresh fruits and vegetables have been for longer hours rather than for exemption from wages. Particularly is this true with reference to the larger fresh fruit and vegetable producing States of California, Washington, Oregon, Florida, New Jersey, and Mississippi.

You state in your letter that the amendments will nullify most of the exemptions granted to the handlers and processors of agricultural commodities. It has already been shown that this is not

of the exemptions granted to the handlers and processors of agricultural commodities. It has already been shown that this is not true, and that, in fact, the amendments will considerably broaden these exemptions. Your real objection seems to be that the amendments stop short of complete exemption for these handlers and processors. I cannot but feel, therefore, that your opposition is part of an attempt to exclude from the benefits of the act the million employees or more who are engaged in the processing and handling of agricultural commodities. In fact, this is precisely what you are asking by recommending H. R. 5374, the Barden bill.

To me such a recommendation comes in bad grace from a group of farm organizations to a Congress which is asked by the same group to appropriate more than one and one-quarter billion dollars to agriculture. It would seem in all fairness that the workers engaged in these industries are entitled to the same minimumwage protection as other workers and, further, that the farm organizations should not attempt to better their economic position by depressing the lot of another economic group.

tion by depressing the lot of another economic group.

However, inasmuch as you who purport to speak for organized agriculture have raised objections to the changes in the act, ized agriculture have raised objections to the changes in the act, which the Labor Committee has proposed for the handling and processing of agricultural commodities, and have expressed a preference for the present act, I feel that I should not insist upon the retention in the legislation of those changes that you find objectionable. I am therefore introducing a bill today which contains all of the provisions of H. R. 5435 with the exception of the so-called agricultural exemptions.

Very truly yours,

MARY T. NORTON.

Importations of Pulp and Paper Products

EXTENSION OF REMARKS

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1939

LETTER FROM SECRETARY OF MARATHON LOCAL, NO. 319, OF ROTHSCHILD, WIS.

Mr. MURRAY. Mr. Speaker, the importance of the American market for the American laborer is evidenced in connection with the paper industry. I wish to call your attention to the fact that, according to the Monthly Summary of the United States Department of Commerce, in 1938 we exported \$11,654,690 worth of paper base stocks, which included pulpwood in cords, wood pulp, rags, and other paper stocks. During 1938 we imported \$86,354,332 worth of paper base stocks, including the same raw materials as those that were exported. In 1938 we exported \$25,913,334 worth of paper and manufactures and in the same year we imported \$112,878,458 worth of the same paper and manufactures.

The American laborer is beginning to realize that foreign importations result in a loss of our own labor; and with the number of unemployed that we have, this fact is beginning to be more evident to the people who are interested in the labor movement.

I ask unanimous consent to insert in the RECORD at this time a letter which I received from Mr. Tony Martin, secretary of the International Brotherhood of Paper Makers, Marathon Local No. 319, of Rothschild, Wis., together with copy of resolutions adopted by their labor union, as follows:

ROTHSCHILD, WIS., May 10, 1939.

Honorable Mr. MURRAY, Washington, D. C.

YOUR HONOR: For the past several years the importation of for-eign pulp and paper products into the United States has been steadily increasing, until it has become a very serious problem in the United States, and particularly in the Pacific Northwest.

The fact that foreign pulp and newsprint paper has been allowed to be imported into the United States duty-free ever since the year 1913 has had a tremendous effect on the pulp and newsprint mills in the United States, as none of them have worked at the capacity of which they are capable for the past 2 years

Obviously, when we import products that we can produce at home, we are exporting jobs; and with so many people out of work

home, we are exporting jobs; and with so many people out of work at this time in this country, it doesn't take much of a student of economics to know that we are exporting the thing we need most. This curtailment has affected some 100,000 people on the Pacific coast alone. This is taken on the basis that 13,000 people are directly employed in pulp mills on the coast, and the average family consists of 4, and those working in the woods would easily bring the figure to 100,000 people on the coast dependent upon the pulp and paper industry for a livelihood.

It is hard to understand why our Government allows duty-free pulp and paper products imported into the United States while mills in this country are forced to close down and place their employees on direct relief or W. P. A.; and in turn this causes a rising tax burden on both employer and employee to take care of the ever-increasing relief rolls.

ever-increasing relief rolls.

Sincerely and fraternally yours,
MARATHON LOCAL, NO. 319, I. B. P. M.,
TONY MARTIN, Secretary.

Whereas the imports of foreign pulp and newsprint is in excess of the pulp and newsprint paper manufactured in the United

Whereas the pulp and newsprint paper manufacturers, with millions of capital invested, have been idle or curtailed for the past 2 years, thereby suffering a great loss in the lapse of operating industry due to the importation of foreign pulp and newsprint paper; and

whereas this country enacted the wage and hour law, which set a minimum wage at 25 cents per hour and a maximum workweek of 44 hours so as to protect the American laboring people, and when we allow paper products manufactured by low-paid foreign labor to be imported into this country duty-free we are penalizing the American employer, who is forced by law to pay a decent wage or close down his plant; and

Whereas better than 25 percent of the pulp and approximately 78 percent of the newsprint paper used is imported into this country;

Whereas our imports of pulp and paper products are in value the largest single imports into this country in the past year, exceeding the imports of such commodities as rubber, sugar, coffee, and silk;

Whereas we can with exceedingly small exception produce all of the pulp and paper products necessary right in this country or in Alaska: Now, therefore, be it

Resolved, That our Congressmen and Senators be requested to use every means possible to obtain a quota of not less than 40 percent on the excessive importation of pulp and newsprint paper into the United States; and be it further

Resolved, That we request the International Brotherhood of Paper Makers Union and the International Brotherhood of Pulp Sulphite and Paper Mill Wokers Union use all measures possible to see that this resolution is carried out.

IN THE HOUSE OF REPRESENTATIVES Thursday, May 18, 1939

LETTER FROM B. J. HOVDE, ADMINISTRATOR OF HOUSING AUTHORITY OF THE CITY OF PITTSBURGH, PA.

Mr. CORBETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written to me recently by the administrator of housing authority of the city of Pittsburgh.

PITTSBURGH, May 6, 1939.

House of Representatives, Washington, D. C.
Dear Congressman Corbett: I am again writing you regarding
House bill 2888 providing for \$800,000,000 additional loan authorization and \$45,000,000 additional annual contributions for slum clearance and low-rent housing. In anticipation of the time when the bill is reported from the Banking and Currency Committee to the floor of the House for discussion, I am anxious to point out

certain significant facts concerning our program for your informa-

certain significant facts concerning our projects.

1. In the city of Pittsburgh we have a total of 64,000 families living in substandard housing conditions. Up to this time we have received loans from the United States Housing Authority which will develop 3,000 dwelling units. In other words, in this locality we will be able to accommodate under the present building program about 5 percent of our total slum population. The condition in Pittsburgh, we feel, is representative of the condition in practically every leading American city.

in Pittsburgh, we feel, is representative of the condition in practically every leading American city.

2. There has been a total of \$16,623,000 in loan contracts entered into between the housing authority of the city of Pittsburgh and the United States Housing Authority for the first three projects. On October 10, 1938, this authority applied for an additional earmarking of \$10,000,000 to cover the cost of additional projects on the north and south sides, which have been planned by us. These projects would accommodate approximately 1,750 additional slum families. This earmarking was denied by the United States Housing Authority on the ground that no additional funds were available at that time, although the United States Housing Authority ing Authority on the ground that no additional funds were available at that time, although the United States Housing Authority assured us that when and as additional money was available by the Federal Congress our request would be given immediate consideration. We have had indication to believe that the United States Housing Authority is well satisfied with the progress made by our authority thus far on our three initial developments, and that approval of further earmarkings would be immediately forthcoming after the Congress passes further loan authorizations. The entire population of both north and south sides has shown extreme interest in the extension of the slum-clearance program to their neighborhoods, and I know that they are anxious in their desire for this borhoods, and I know that they are anxious in their desire for this extension.

3. Under the present program contemplated for our city over 5,000 men will receive employment, and the stimulation which will be supplied to business and labor alike has received the enthusiastic endorsement of almost every Pittsburgh labor organization and business trade association. The population of the city at large approves our program because of the social benefits as well as the civic reclamation which is undertaken by the public housing

projects.

The Pittsburgh housing authority has estimated rentals on its three initial housing projects of less than \$4.50 per room per month for shelter. These rentals will satisfactorily allow families with annual incomes of \$700 to \$1,100 to live in the local project

homes.

5. It is important to note that in our city construction costs for this development of the public-housing projects will be extremely low for this locality. Estimates show that costs in this locality will average about \$3,400 per dwelling unit, including the general construction, plumbing, heating, and electrical work. This is materially less than the statutory limitations of the United States Housing Act. We hope to achieve an over-all cost, including the cost of land acquisition, construction, grading and site improvements, of less than \$6,000 on all of our projects.

6. According to the figures of the building inspection bureau of the city of Pittsburgh, the private construction average cost per dwelling unit for the first 8 months of 1938 amounted to \$4,587. The figures of the building inspection bureau, computed from the dwelling-unit permits issued by that bureau are usually representative of a cost about 10 percent lower than the actual construction cost. Speaking conservatively, if this figure is compared with the estimated construction cost per dwelling unit for our three initial projects, it will be immediately seen that the public-housing dwellings are being developed at a cost of over \$1,000 per unit less than private construction figures.

7. Under the Pittsburgh program there will be 3,000 slum dwell-

7. Under the Pittsburgh program there will be 3,000 slum dwell-7. Under the Pittsburgh program there will be 3,000 slum dwellings eliminated to compensate for the 3,000 new dwellings as required under the Federal statute. We are tearing down 700 dwelling units to make way for our first 3 projects, and the additional elimination will take place with the cooperation of the city building inspection bureau after the projects are completed. 8. The effects of the housing program in Pittsburgh on private industry are significant. There has been an upturn in business construction charts during the past several months, according to the Bureau of Business Research of the University of Pittsburgh. This bureau reveals that there has been an increase in construc-

the Bureau of Business Research of the University of Pittsburgh. This bureau reveals that there has been an increase in construction contracts amounting to 30 percent and upward during the days of the first several months of this year, compared with a year ago. We are confident that this upturn will continue.

9. We wish to point out that although actual figures are not readily available, the slum sections of our city receive by far the greatest amount of tax expenditures which are allocated to fire and police protection, city hospitals, juvenile-delinquency homes, and similar social institutions. At the same time the slum areas of this city provide a very small percentage of the total tax revenues. For example, our first three projects, located near the heart of the city of Pittsburgh, had total annual tax levies amounting to less than \$40,000. A very major percentage of these tax revenues are not collectible, and general delinquency among this type of tax-payer has been well known for a number of years.

It should be stated that a great amount of money in back taxes is paid to the municipality through the purchase of the site areas by the local authority. In each case when purchasing a large number of parcels for our first three developments we have discovered that thousands of dollars in delinquent taxes have been accumulated, and these taxes have been paid immediately at the time of settlement to the city government. They represent, I am certain, tax

revenues that the city would not otherwise have gotten for a very long time in the future, if ever.

10. We are proud of the fact that the city of Pittsburgh has gen-

10. We are proud of the fact that the city of Pittsburgh has generally acclaimed the slum-clearance and low-rent housing program perhaps the best public improvement project which has been undertaken here in recent years. All cross sections of the population, representing organized groups of workmen, businessmen, religious and educational leaders, racial and civic groups, have overwhelmingly supported this program. The chamber of commerce president, Mr. Frank Duggan, in several public addresses during the past year, here effects in the commerce president, which the chamber of commerce when the past year. has stated: "This is one Government expenditure which the chamber can unhesitatingly endorse."

11. You are well aware, I know, of the fact that private construc-

tion has never adequately taken care of the low-income population. It is unprofitable for them to do so. For this reason there has been a shortage of houses in the city of Pittsburgh for members of this group, and it is imperative that an extension of the public housing program be promulgated in order to alleviate this long-extant

shortage.
Very sincerely yours,

B. J. HOVDE. Administrator.

Toil and Taxes

EXTENSION OF REMARKS

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, May 18, 1939

RADIO ADDRESS BY HON. FRANK C. OSMERS, OF NEW JERSEY, ON MAY 10, 1939

Mr. OSMERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio on May 10, 1939:

"Taxes are paid by the sweat of every man who labors, because they are a burden on production and can be paid only by produc-

These are not my words, but the words of President Roosevelt when he was seeking election back in 1932; and so tonight, instead of addressing myself to businessmen, small or large, corporation executives, or others involved in the actual payment of business taxes to the Federal Government, I will address myself solely to those men and women whose labors produce the wherewithal to pay the taxes now exacted by the Federal Government.

I wish also to speak to those who wish to work, but through no fault of their own cannot find employment. For the last few years we have been told that if we will but "soak the rich," the rest of us will benefit. Well, your Government has soaked the rich beyond the point of endurance, and times are worse than ever.

Many Americans are fond of saying, "Why doesn't the Government do something to bring back better times?" There is a great deal that your Government can do, and it is about one of the most important of these that I wish to speak tonight. The revision of taxes upon business and individuals is the greatest single step toward recovery and reemployment that our Government can undertake at this time.

take at this time.

Each year in the last six we have heard that the curb rein was going to be relaxed. This year started no differently. The President indicated that appeasement was just around the corner. Secretary Morgenthau bedecked his desk with pretty slogans, while Secretary Hopkins flapped his new wings and soared benignly over business. It now appears that these indications must take their place with other high-sounding talk and broken promises which the American workers and unemployed have been these leaves the American workers and unemployed have heard these 6 long

How long will 13,000,000 American citizens be willing to accept a pittance of support from their Government without expecting real action on the part of their Government to set the wheels of progress in action once again? How long will the workers of America be able to stand the strain now imposed upon them by a wasteful administration that sits idly by and makes no move to release the great creative energy that is America?

The per capital expenditures now stand at an all-time high and

the great creative energy that is America?

The per capita expenditures now stand at an all-time high, and a family of four starts each year \$520 in the red. In other words, a man making \$25 a week and supporting a family of four spends nearly half his working days for the benefit of the Government. It used to be said that there are two things in the world from which there was no escape—death and taxes. Now we face death by taxes.

It is interesting to note that in the 10 years between 1919 and 1929 there was an annual average investment of private capital in industry of \$19,000,000,000. Between 1932 and 1935 this average dropped to about four and one-half billions a year. Everyone who reads the newspapers today or that has any dealings with the banks is aware of the fact that billions in money are unemployed, just as millions of individuals are unemployed; and that until we

can make the investment of capital attractive and profitable we cannot have reemployment on a large scale.

Briefly, let me outline the taxes that are holding back business and point to several ways in which they can be modified, so that we will again have at least a chance of prosperity in these United

States.

At the present time the main taxes which are preventing the investment of capital are the corporation income and undistributed-profits taxes, the increasing social-security taxes, and capital-stock and excess-profits taxes. The rates of taxation have been so increased and complicated by the New Deal that the profitable investment of new money in business and industry is well-nigh impossible. There are some in our country so foolish as to believe that prosperity is deliberately being held back because certain large interests do not like or approve of the present administration. In all my travels I have never met a single American who would turn down the chance of a reasonable profit, no matter who the administration might happen to be. The facts of the matter are that those owning or controlling large wealth can sit down with a pencil and paper and point out in 5 minutes why the return under existing tax laws would not warrant the risk of new investment. Whether we realize it or not, it is the investment of many under existing tax laws would not warrant the risk of new investment. Whether we realize it or not, it is the investment of many billions of private capital in sound, productive American enterprise that will bring recovery and not the spending of a few billions each year by the Government in this ridiculous pump priming. The unbalanced Federal Budget and accumulating huge debt as a result of this pump priming are merely helping to prevent the investment of private capital.

The present corporation income taxes are 50 percent higher than they were in 1929 and all credits to small corporations have been

Investment of private capital.

The present corporation income taxes are 50 percent higher than they were in 1929, and all credits to small corporations have been abolished, while the Government insists on taxing annual capital gains and restricting greatly or forbidding the credit for capital losses. It should be possible for corporations to deduct their losses in any 1 year from the income of at least the next 2 years. Small corporations, which form the backbone of American business, should be allowed an exemption of \$3,000 if their incomes are under \$25,000 a year. This was formerly done. The bulk of taxes from corporations should come from a flat rate on their net profit.

The present undistributed-profits tax should be thrown out of the window entirely, and I have introduced a bill to accomplish that purpose. This is the tax which prevents a corporation from accumulating a surplus for the expansion of its business, so necessary at this time, and from saving for a rainy day. It is this tax, more than any other, which has been responsible for lost opportunities to the jobless. Like a lot of other things done by this administration, it sounded well on the radio, but that is all.

The social-security tax now at 1 percent for the employee and 1 percent for the employee should certainly not be increased, as the present law provides, to the point where 3 percent will be exacted from the employee and a like amount from the employer. I have introduced a bill to keep these taxes at 1 percent. After all, this tax is merely an income tax on the workers of America. The establishment of the \$47,000,000,000 reserve fund has been so discredited that even the administration has indicated a willingness to repeal that part of it. At first, it was supposed that these contributions paid under the social-security law would be used to

ness to repeal that part of it. At first, it was supposed that these contributions paid under the social-security law would be used to buy existing Government securities and thereby not increase the Federal debt, but because of the provision requiring a 3-percent return on the funds, the Government has been giving 3 percent I O U's in exchange for our social-security cash. The money so I O U's in exchange for our social-security cash. The money so obtained is then thrown in the cash drawer and used to finance the current expenses of the Government. The result is that the worker, who is America's only real taxpayer, pays a special tax on his income for social security and then will be required to pay additional taxes to replace the funds to which he has already once contributed. In other words, it is double taxation, plus 3 percent interest. The sooner social security is placed upon a pay-as-you-go basis with a modest reserve fund, the better we will be. The social-security law should be changed to permit the funds to be invested in current Government obligations, regardless of the interest rate, thereby making unnecessary any mandatory increase terest rate, thereby making unnecessary any mandatory increase in the national debt. It is not important for the Treasury to abuse these funds in making its statement, terrible as it is, a little prettier. Workers want security, not artistic Treasury statements. The present capital stock and excess-profits taxes which have

ne present capital stock and excess-pronts taxes which have contributed so much to our economic troubles and so little to our National Treasury should be eliminated entirely. They have brought in only \$175,000,000 a year and they are not based upon the ability to pay, which is the only sound taxation formula.

The personal-income tax has done its share toward preventing the creation of new jobs and should be radically changed. Ridicu-lously high rates in higher brackets should be substantially re-They produce nothing in proportion to the harm they do. duced. They produce nothing in proportion to the harm they do. Large private capital has been driven into public tax-exempt securities and will stay there until given some incentive to return to private fields. One might argue that if we eliminated the tax-exemption privileges on existing public securities, it would automatically have that effect. It probably would. But in so doing it would also cause a rush of capital from tax-exempt securities. The resulting drop in the price of such securities would jeopardize the solvency of our banks and insurance companies which are large holders of these public obligations. If there is a chapter of reasonable return through tax revision applies there is a chance of reasonable return through tax revision, ample funds will be available for the creation of new jobs, whether tax-exemption privileges are removed or not.

Small-business men, especially those not employing accountants and attorneys, have found that an increasingly large part of their

time, which should be spent in productive work, is used to fathom Federal tax laws which defy comprehension. If the present trend in complicated tax laws continues, many small-business men will have to give up any thought of improving their business and devote their entire time and energy to filling out the multitude of forms required by present Federal legislation. Even where the amount of taxes involved is unimportant, the cost of filling out the forms in some cases exceeds the amount of taxes payable. Some businessmen are wondering whether they are still in business, or whether they have become Government clerks at no salary.

ness, or whether they have become Government clerks at no salary.

The whole problem of tax revision needs attention at this session of Congress. It must be simplified and based primarily upon actual income. If Congress will concentrate upon recovery, rather than upon reelection, we will again start the flow of capital, the lifeblood of any economy, back to its proper channels of private enterprise. Let us not kill private initiative, which for 150 years has been the goose that has laid America's golden eggs. Why should all American business suffer for the crimes of a few?

It has been said that some of the suggestions contained in my remarks may have the effect of lowering the revenue from these taxes. That is not true. With encouragement and proper tax laws, business would show immediate improvement, and, consequently, even at lower rates, returns would be much greater. The fight for tax revision should be no political football, because every American, employed or not, has a vital stake in it. This is the time for the forgotten man to rise in his wrath and make his wants known. can, employed or not, has a vital stake in it. This is the time for the forgotten man to rise in his wrath and make his wants known. This administration has been derelict in performing its proper function of assisting in the general welfare of all. Our tax system will determine whether we are to become again a nation of free and independent working men and women.

Though the President has forgotten, let everyone remember his great words, "Taxes are paid by the sweat of every man who labors."

Thank you.

National Debt Policy

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, May 18, 1939

REPORT OF THE REPUBLICAN CONFERENCE COMMITTEE ON NATIONAL DEBT POLICY

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD I include the report of the Republican Conference Committee on National Debt Policy, which was unanimously approved by the Republican conference of the House of Representatives on Tuesday, May 16, 1939:

During the 6 years of the New Deal the public debt of the United States has more than doubled. The revenue of the Federal Government increased from \$3,115,554,000 in 1934 to an estimated \$5,669,ment increased from \$3,115,054,000 in 1934 to an estimated \$5,669,-000,000 in 1939. During the same period expenditures of the Federal Government increased from \$7,105,050,000 in 1934 to an estimated \$8,995,000,000 in 1939. The annual deficits have resulted in a total deficit of \$20,889,000,000 during the 6 years and a corresponding increase in the public debt. It is therefore not surprising that the per capita public debt of the United States has more than doubled during the course of 8 years, increasing from \$131 in 1931 to \$305 in 1939.

Despite this tremendous increase in the public debt, each year a larger and larger proportion of the total national income is being devoted to paying the cost of government. In 1913 only 6.4 percent of the total national income went for Federal, State, and local taxes. In 1930, 14.2 percent went for the payment of such taxes, and in 1938, 23.6 percent of the total income of the American people was turned over to tax collectors. The share of the national income taken by the Federal Government has been increasing more rapidly than the share taken by the States and their political subdivisions. In 1913 only 1.9 percent of the total national income went for Federal taxes. In 1930, 4.8 percent was devoted to the payment of Federal taxes, and by 1933 it had increased to 10.9 percent. State and local taxes in 1913 took 4.5 percent of the total national income, 9.5 percent in 1930, and 12.7 percent in 1938.

9.5 percent in 1930, and 12.7 percent in 1938.

The increase of the Federal public debt from \$20,937,000,000 on March 4, 1933, to approximately \$41,000,000,000 as of June 30, 1939, does not reveal the total increase of the Federal debt. A number of Government-owned corporations have the capacity to issue bonds that are fully guaranteed by the Federal Government both as to principal and interest. In addition to this increase in the direct public debt of the United States, the contingent liabilities of the Federal Government have increased by more than \$5,416,000,000. When the New Deal commenced there were no contingent liabilities of the Federal Government in the hands of the public. As of February 1930, and 1930, and

ruary 15, 1939, the total contingent liabilities of the Federal Government guaranteed by it both as to principal and interest and in the hands of the public were as follows:

Outstanding Feb. 15, 1939

Reconstruction Finance Corporation	\$819, 100, 000
Commodity Credit Corporation	206, 200, 000
Federal Farm Mortgage Corporation	1, 387, 800, 000
Federal Housing Administration	1,700,000
Home Owners' Loan Corporation	2,887,600,000
U. S. Housing Authority	114, 150, 000

5, 416, 600, 000 Total ____

Thus, by June 30, 1939, the total debt of the United States, including these contingent liabilities, will be in excess of \$46,000,000,000. The present debt limit of the United States (not including contingent liabilities) was set by Congress in 1935 at \$45,000,000,000. Of this amount, not more than \$30,000,000,000 can be in bonds, and the remainder must be in short term notes and certificates. The the remainder must be in short-term notes and certificates. The bill now before the House of Representatives would permit the entire \$45,000,000,000 of the direct public debt of the United States to be in the form of long-term bonds. Before this statutory limitation is reached another \$4,000,000,000,000 of direct indebtedness can be incurred after June 30, 1939.

curred after June 30, 1939.

It should also be remembered that a number of Government-owned corporations can, under existing authorization from Congress, issue additional bonds that will be fully guaranteed both as to principal and interest by the Federal Government, and that these bonds are not included in the above debt limitation. Inasmuch as a number of these Government corporations are not subject to audit by the General Accounting Office in the case of their non-administrative expenditures, it is always possible that some of the money raised through the issuance of bonds by them could be used for purposes not contemplated by Congress. These corporations have the power, as yet unexercised, to issue more than \$9,483,000,000 of such guaranteed obligations. Such authorizations and the unused balances are as follows:

	Total authorized	Authorized but unissued
Reconstruction Finance Corporation. Commodities Credit Corporation Federal Farm Mortgage Corporation Federal Housing Administration Home Owners' Loan Corporation U. S. Housing Authority Tennessee Valley Authority	\$3, 750, 000, 000 500, 000, 000 2, 000, 000, 000 3, 000, 000, 000 4, 750, 000, 000 800, 000, 000 100, 000, 000	\$2, 930, 400, 000 293, 800, 000 612, 200, 000 2, 998, 300, 000 1, 862, 400, 000 685, 850, 000 100, 000, 000
Total	14, 900, 000, 000	9, 483, 400, 000

Furthermore, in 1934 Congress set up an exchange stabilization fund of \$2,000,000,000, and the money in this fund can be expended by the President as he sees fit without audit by the General Accounting Office. The President could utilize the money in this fund to meet the current expenses of the Federal Government if Congress should not authorize an increase in the debt limit.

In addition, and with even more dangerous potentialities, the President has been vested by Congress with authority to resort to various inflationary devices whereby he can issue flat money that can be used to meet the day-to-day expenditures of the Government if Congress should not authorize any additional increase in the debt. Under the Thomas amendment to the Agricultural Adjustment Act of May 12, 1933, the President can issue at any time \$3,000,000,000 of United States notes secured only by the promise of the Federal Government to pay. It also authorized the Federal Reserve banks, at the request of the President, to purchase up to \$3,000,000,000 of Treasury bills. Thus, in reality, the President can issue \$6,000,000,000 of printing-press money that could be used by the Government to meet its day-to-day obligations if Congress should not increase the debt limit. If the Government should resort to the issuance of such paper money, widespread and devastating inflation would be the consequence.

Congress has vested in the President certain monetary powers relative to gold and silver which can be exercised in such a way as to result in a profit to the Government out of which the day-to-day defects of the Government could be met. For example, if the

to result in a profit to the Government out of which the day-to-day deficits of the Government could be met. For example, if the

day deficits of the Government could be met. For example, if the President should exercise his power to devalue the dollar to 50 percent of its previous value or by the full amount authorized by statute, the profit on the increased gold stocks would be \$2,762,-000,000 in addition to the profit already realized in 1934.

Relative to silver the President is given the power to monetize our present silver stocks at \$1.29 an ounce. If this should be done on our present holdings of over two and one-half billion cunces, the profits over the purchase price would be \$1,612,000,000. Of course the President can also devalue the silver dollar to the same extent that he devalues the gold dollar. If he should devalue course the President can also devalue the silver dollar to the same extent that he devalues the gold dollar. If he should devalue silver to 59 percent and then monetize it, a profit of \$2,394,000,000 would result. The Silver Purchase Act of June 19, 1934, directs the President to purchase silver, both domestic and foreign, until the silver stocks shall equal one-fourth of the total monetary value of both the silver and gold stock of the country. If we should ever completely comply with this law, our total silver stock would amount to three and three-fourth billion ounces. Then, if the silver dollars were devalued to 50 percent of its present value and the entire silver stock thus acquired were monetized at \$2.58 an ounce, this would result in an issuance of \$9,600,000,000 of silver certificates which would be a clear profit to the Treasury at the ultimate expense of the people. Thus it appears that out of silver the Government can make a profit varying from \$1,612,000,000 to \$9,600,000,000, depending upon the circumstances and the extent of devaluation, and there is no question that the inflationary effects of this would be ruinous.

In summary, through direct inflationary means, the President has the following potential sources of funds which could be used to meet current expenditures of the Government: (1) \$3,000,000,000 of greenbacks; (2) \$3,000,000,000 of Treasury bills secured only by Government bonds; (3) a profit of \$2,762,000,000 that could result from the further devaluation of the gold dollar; and (4) a profit of not less than \$1,612,000,000 that could result from the monetization of the present silver stocks of the Government without devaluation.

The public-debt problem outlined above has resulted from The public-debt problem outlined above has resulted from varied New Deal attempts to promote a quick recovery by spending billions of borrowed money. In fact "spending," whether it is known as "priming the pump," "compensatory spending," or "investment for the future," has been the center of New Deal thought and action ever since June 16, 1933. On that date the President approved the National Industrial Recovery Act, title II of which provided for the appropriation of \$3,300,000,000 for a number of the program.

of which provided for the appropriation of \$3,300,000,000 for a pump-priming program.

While this was the beginning of the world's greatest spending spree, the date has additional significance. It was also the date on which President Roosevelt repudiated his party's campaign pledge "to accomplish a saving of not less than 25 percent in the cost of Federal Government" and the date on which he washed his hands of his own solemn "pledge and promise" to stop the deficits and to force "a stern and unremitting administration policy of living within our income."

Why he charged his views no one knows but this much is

Why he changed his views no one knows, but this much is certain: When President Roosevelt believed in a balanced Budget he had faith in the future of American enterprise, but when he became a spender, he accepted the collectivist attitude that our economic system could no longer expand along former lines, and that unemployment and relief were permanent problems. To this he added the belief that future progress would come only through governmental exting

this he added the belief that future progress would come only through governmental action.

We have now had 6 years' experience with the New Deal pumppriming or spending theory. We believe that this is sufficient time to test any theory, especially a theory the validity of which has always been questioned, and which, if invalid, can result in economic disaster. As a result of a careful and thorough study of all factors we reach the conclusion that a spending program, as such, has no place in a well-grounded and general recovery plan. Our condemnation is complete and emphatic. condemnation is complete and emphatic.

condemnation is complete and emphatic.

The best proof that spending has failed to promote recovery is the fact that eleven to twelve million unemployed American workers are looking for jobs. In the face of this alone it is folly to contend that spending has worked, for in the words of the President, "to put people back to work" was the one purpose of the first spending bill as well as every bill that has since been passed.

It is equally evident that the stimulation of consumption goods spending has not led to a revival of capital-goods spending. While there is no doubt that some stimulation of capital expenditures may be accomplished in this way, whatever amount has occurred has not been sufficient to promote a sustained recovery. Statistics contained in a study published recently by the National Bureau of Economic Research indicate that while total expenditures for durable goods and for private construction dropped from about \$14,500,000,000 in 1929 to \$3,300,000,000 in 1933, that they increased to only \$6,000,000,000 by 1935, after 2 years of heavy spending. The figures in this study only go through 1935, but if one allows for a further increase of capital-goods spending from 1936 to 1938, it is clear that the total still remains far short of the amount spent before the depression. amount spent before the depression.

In this connection it must be remembered that consumer spend-

In this connection it must be remembered that consumer spending has not always provided the original impetus for great periods of industrial expansion. For example, the railroads, automobiles, the telegraph and telephone, motion pictures, and radio, among countless other new products and facilities, were not the result of current spending. They happened because, as one economist has stated, "bold and enterprising men have had faith that future repeding could be stimulated and that profits could be stimulated and that profits could be derived. spending could be stimulated and that profits could be derived from such expansion."

from such expansion."

The New Deal administration claims that the depression beginning in 1937 resulted from a curtailment in public spending, and that the soundness of the spending theory was thus proven.

The contrary is the fact. There is no better proof than the depression which began in 1937 that the spending theory is unsound because after 3½ years of spending the only result was a lopsided recovery. It was dependent on consumption-goods buying and lacked the support of capital-goods buying, without which a full and sustained recovery cannot be achieved.

Our examination reveals weaknesses in the theory itself as well as

and sustained recovery cannot be achieved.

Our examination reveals weaknesses in the theory itself as well as practical reasons explaining the fallure of spending to produce the desired results. An analysis of the 6 years' experience reveals one bold, stark fact—that it is impossible to put men to work on public-works jobs with sufficient speed to maximize the effectiveness of a given amount of expenditure. Another administrative difficulty involves the determination of when to spend. Since the spending theory assumes that public spending will be increased when private spending falls off, it is necessary to know accurately whether any

given decline in private spending is temporary or whether the decline is to be prolonged and pronounced. It is questionable whether the art of economic forecasting has reached this highly developed stage. Furthermore, just as the spending theory involves the determination of when to spend, equally important is the determination of when to stop. Public spending, according to the theory, should be reduced when private spending is resumed. Work on large construction prefer heaven, according to the theory of the stage of th

be reduced when private spending is resumed. Work on large construction projects, however, cannot be stopped at will.

In addition to the above there are economic reasons why the theory failed. To a great extent these are psychological, but real, nonetheless. When the Federal Government set out to spend it fostered the rise of pressure groups, which in time have become imbued with the single objective of obtaining more and more aid.

The claims of one group, if satisfied are interprets for the claims. The claims of one group, if satisfied, are incitements for the claims

of other groups.

As a result Federal expenditures have increased year after year; and, since tax revenues failed to make up for the ever-increasing expenditures, the Budget has remained continually out of balance.

expenditures, the Budget has remained continually out of balance. Continuing deficits have made businessmen and others, especially those with funds to invest, distrustful of the future. As private spenders became fearful of the future they refused to invest, and the effectiveness of additional public spending was thereby reduced. There were other so-called "depressants" to a resumption in public or business spending. As spending and the deficits increased, the attempt was made to lessen the size of the deficits by increasing revenues from taxation. As businessmen and others felt the increased burden of those taxes, their attention was fixed felt the increased burden of those taxes, their attention was fixed not only upon the present burden but also upon the ultimate burden of taxation as well. No one can view this situation with anything short of alarm, for business stagnates in an atmosphere of uncertainty and governmental competition and oppression.

Equally important but more difficult to overlook is the fact that other New Deal activities reduced any positive results that might

other New Deal activities reduced any positive results that might have flowed from spending as such. While the plan assumed that capital expansion would follow, other New Deal policies and acts have prevented this from occurring. For example, the New Deal enacted many tax measures which took money out of the worker's enacted many tax measures which took money out of the workers pocket and thus decreased his power to buy, even though the objective in the first instance was to increase consumer purchasing power. For these and other reasons we find it difficult to appraise the spending program apart from New Deal policy as a whole. We stress this fact in our report to you.

So far we have discussed the program only from the standpoint of how it worked and why, and have left until last our discussion of the long-term effects that will inevitably follow if we continue to spend more than we collect in taxes. We approach this particular phase with a deep sense of its seriousness, for we believe that the future of the Nation depends upon a clear understanding of these vital facts by every man and woman in this country.

We refer here to the threat of inflation. The administration earnestly professes to promote the welfare of all, but at the same time adopts a program which has always, without fail, led to enslavement and to moral and financial bankruptcy. Our study convinces us that there is no essential difference in our current financial situation and that which finally led to run-away inflation in post-war Europe. Inflation in every instance that we have exin post-war Europe. Inflation in every instance that we have examined has been the result of a government spending more than it collected in taxes, and this is true whether the inflation was generated by a currency or credit expansion.

Inherent in the very nature of inflation is its irresistible tendency to burst the bounds of all control through public panic.

Inherent in the very hattire of inhation is its irresistible tendency to burst the bounds of all control through public panic.

We are further convinced that there are no greater hardships to be suffered by a people than those induced by such inflation. If we continue following the line of least resistance, we shall reach the limit of our credit. When this happens, all will fall before us. Savings, big and little, will lose most of their value. Insurance companies and banks will go to the wall. The endowments of our charitable, fraternal, social, religious, and educational institutions, endowments which have taken years to create, will be reduced to a mere pittance. The increase in the cost of living will put even the essentials of life—adequate food, clothing, and shelter—beyond the reach of a majority of the population. Even those yet unborn will pay the price for our folly.

No person or group of persons will escape. Wage earners will see the purchasing power of their pay envelopes shrink as inflation brings a ruinous rise in prices. As a result, the worker's standard of living will be reduced to the barest subsistence level. Salary workers will be hit even more quickly, for salaries are relatively fixed and adjustments are not made as rapidly. Those who live on pensions, annuities, or interest from lifetime savings will meet a like fate. Farmers will suffer even more than other groups, for though they might seem to gain temporarily while

will meet a like late. Farmers will stiller even more than other groups, for though they might seem to gain temporarily while prices are moving up, this in the end will be an illusive gain. Recall that the source of present farm problems lies in war inflation. Should we embark upon a similar inflation, the farmer can look forward to only more of the same troubles he has been fighting for 20 years.

fighting for 20 years.

Furthermore it is doubtful if our system of free government and free private enterprise could withstand this shock. In this respect we call your attention to the fact that dictators now rule the peoples in Europe where government spending and inflation first ran their course. As President Roosevelt recognized in his economy message to Congress in March 1933, "Too often in recent history liberal governments have been wrecked on the rocks of loose fiscal policy." The profound truth is that a government cannot

endure if through unsound financial policies and legislation it brings the nation to economic ruin. Such a condition produces all too often a man or group of men to whom the people in their despair may be persuaded to turn on the promise that economic security will be provided in exchange for their liberties.

security will be provided in exchange for their liberties.

Our present financial situation is serious. No one knows what
the limit of Government credit is or when this limit will be reached.
There is no exact figure for the limit depends upon circumstances and varies with conditions. Ultimately Government credit
rests solely on the confidence of lenders in the taxing power and
policies of the Government. There is no way to measure public
confidence. confidence.

While the New Deal has been able to finance its spending at low-interest rates and without apparent difficulties to date such excessively low-interest rates are not a sign of financial stability

excessively low-interest rates are not a sign of financial stability but the sign of economic ill health.

Furthermore, the New Deal deficits have been covered principally by borrowing in the financial markets, by the process of selling bonds and short-term Treasury obligations to the banks. The process of financing deficits by the creation of new deposit credits is potentially inflationary. The fact that this process has not resulted in actual inflation is no guarantee that it will not, or that it can be controlled once it comes. Regardless of this, the New Deal has created approximately \$9,000,000,000 of credit for the purchase of Government obligations and the financing of its deficits. The very fact that the banks have absorbed so large a proportion of the increased public debt has put them on a tread-

deficits. The very fact that the banks have absorbed so large a proportion of the increased public debt has put them on a treadmill, for they must continue buying to support the market, and the more they buy the more vulnerable they become.

Also of vital importance is the question of financial preparedness, in event of emergency. The spending plan assumes that public indebtedness will be reduced during the period of prosperity that follows spending, but what happens if prosperity does not follow? In that event, or if a sufficient period of prosperity does not ensue during which the debt can be appreciably reduced, we will enter the next emergency, perhaps war, with the odds heavily against us. Wars are costly, and should we enter a great war with an impaired credit, there would be the threat of inflation to contend with from the very start. Thus a sound fiscal policy is necessary for an adequate national defense.

Unless spending is reduced our only hope is that national income with which to balance the Budget. But this in itself is an utterly futile hope because under the New Deal we are relying upon spending to produce an increase in national income and spending

terly futile hope because under the New Deal we are relying upon spending to produce an increase in national income and spending has not worked that way, nor will it; it served only to make matters worse. It is for this reason that the monetary powers discussed earlier assume great importance, for as, if, and when it becomes impossible to force more Government securities into the banking system, currency inflation will follow. Thus, it becomes evident that sound policy involves not only a balanced Budget but revocation of the monetary powers of the President.

IV

If we are to prevent the disastrous conditions that may de-If we are to prevent the disastrous conditions that may develop as a consequence of spending more than we collect in taxes, it is imperative that Congress adopt a well-rounded program of Government action along the lines set forth below. A piecemeal program will not solve the problem. To have a maximum effect on the national welfare, all the elements herein suggested must be adopted. Above all the Budget must be balanced balanced.

(1) To accomplish this, Congress and the Government must adopt every possible means to increase the real national income. If the real income of the Nation increases, Government revenue will also increase and at the same time the alleged need for Government spending will disappear. The hindrances to production resulting from Government regulation, burdensome taxation and fear for the future have all contributed to hindering the increase in the real income of the American people.

A recent publication of the Brookings Institution has observed: "The vital problem is to secure a great increase in national production and income. The central issue, with respect to public finance, is whether such an expansion of production can best be stimulated by extravagant Federal expenditures, increasing deficits, and heavier taxes, or by some modifications of taxes and a reduction of Federal expenditures—within the limits set by essential requirements. * *

"Unless we can promptly secure a substantial increase in the national income it will be necessary to conclude that the United States has already reached the danger point in the growth of public indebtedness." (Taxation and Capital Investment, pp. 19 and 21.)

Real recovery in the United States will solve the problem of the

public debt, but real recovery in practically every way depends upon sound Government policies.

sound Government policies.

(2) In addition, it is highly desirable that a thoroughgoing and intensive study of how the National Budget can be balanced should be undertaken immediately. The Budget cannot be balanced by a mere pruning of expenditures here and there. To accomplish real reductions in Government expenditures it is necessary to evaluate the functions now being performed by the Federal Government and to determine how those functions which are desirable can be most advantageously performed at the most reasonable cost. Some present functions could probably be eliminated, and other functions could be performed in a much less expensive manner.

(3) As previously pointed out, the President has been vested by Congress with the power through various inflationary devices

to secure added funds to meet with the ordinary expenditures of the Government without incurring additional debt. The results of the use of such inflationary devices would be disastrous to the

national well-being.

Lump sum debt limit increases are as vicious in principle as

lump-sum appropriations and blank checks.

Lump-sum debt increases offer the temptation to a gigantic

Lump-sum debt increases offer the temptation to a gigantic political bureaucracy to spend up to the limit and ask for more. Submitted unanimously by the Republican Conference Committee on National Debt Policy.

Celebration of Golden Jubilee of the Corporation des Membres de l'Association Catholique

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1939

ADDRESS BY HON. EDITH NOURSE ROGERS, OF MASSA-CHUSETTS

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me last Sunday night before the Corporation des Membres de l'Association Catholique:

Your inviting me to address you today is a great honor. It is a great honor for several reasons. The Corporation des Membres de l'Association Catholique is one of the oldest and most eminent French-American fraternal and benefit organizations in America. This is a celebrated day in your wonderful history-your golden

jubilee.

I have known this organization a long time. I know personally many of the members. We are friends of long standing, and old friendships are fine and dependable. We know each other well. I know much about the activities and accomplishments of your C. M. A. C. I am proud of this fine American organization. I am proud of the fact that you are a part of Lowell and the Commonwealth of Massachusetts. I am proud to represent you in the Congress of the United States. I am proud of you, your character, your accomplishments, and all that you stand for.

Twenty-five years ago another great occasion in your history was celebrated. It was your silver jubilee. I remember that day very well, for on that eventful day you honored your then Representative in Congress by inviting him to speak to you. He was my predecessor in this high position of public service. He was my honorable and late husband, John Jacob Rogers. jubilee.

predecessor in this high position of public service. He was my honorable and late husband, John Jacob Rogers.

You invited him then to respond to the "toast" to "The United States." At that time he was serving his second term as your Member of Congress, and I know so well how deeply grateful he was for the honor you had given him. Today, 25 years after—a whole quarter of a century, a long and tragic period in the history of our country and of the rest of the world—you are meeting again in the celebration of your golden anniversary. This eventful day you have honored me by inviting me to respond to the "toast" to "The United States." I want all of you to know I am deeply grateful. grateful.

grateful.

On May 17, 1914, at the celebration of your silver jubilee, in responding to the "toast" to "The United States." your Member of Congress, John Rogers, described to you a significant scene. He said, "In the Hall of the House of Representatives at Washington hang two life-size portraits, one on either side of the Speaker's stand. That to his right, as we should expect, is a splendid painting of George Washington; that to his left is Lafayette, the Chevalier of France, who, like his forerunner, was 'Sans peur et sans reproche,' and who, in the darkest hours of the Revolution, was the inspiration of Washington and of his exhausted troops."

Today, in responding to the "toast" to "The United States" I went to reimpress in your minds this scene. During the vears of

want to reimpress in your minds this scene. During the years of my service in Congress I have noticed this scene so many times. I have looked at it from all angles on the floor of the House of Representatives. Many times I have sat in the House and thought of its significance, all that it portrays, all that it means. General Washington to the right of the Speaker, and General Lafayette on the left

These two great men gave much of their lives to establish a free country where men and women could think, act, and worship God in their own way, free from the bonds of autocratic injustice,

free from the constant violation of human rights, free from the tragedy of a static life. Those two great strong men made it possible to set up a new democratic system of government, in a new country, in which the citizens held the power and not some eccentric autocratic king or dictator. This newly created way of life was very popular because it was very right. This democratic government and the new country grew and expanded until today it stands as the United States of America—the greatest and most powerful country in the world. Every aggressor nation must clearly understand this fact.

Again, as I think of those paintings in the House of Representa-

Again, as I think of those paintings in the House of Representa-tives, I wonder how it is possible for any person, who has experi-enced all that this great country stands for, all of the opportunities, rights, and privileges, can try to destroy it with vicious propaganda of all kinds. Any person guilty of such a crime should be forced to give up his citizenship and his freedom. There is no

room in a free country for traitors.

Often, as I look at the faces of General Washington and General Lafayette, as portrayed in those wonderful paintings, I think of their tremendous courage and their great strength of character. I think of the enormous difficulties and problems they had to meet and solve. Possessing such character and such courage, failure was impossible. Truly, they were men of power.

Turning from these distinguished heroes of ours and all of their

Turning from these distinguished heroes of ours and all of their great accomplishments to the many difficulties we have faced during these last 25 years, I have reason to be proud of you. On many occasions you have shown the same strength of character, the same courage, the same determination that was shown by General Lafayette and his men. Twenty-five years ago our country was engaged in a conflict with Mexico. In July of 1914 the Great War started and in less than 3 years the United States was engaged in this conflict. In both of these conflicts the French distinguished themselves. Many boys from Lowell went to war some of whom themselves. Many boys from Lowell went to war some of whom were members of the C. M. A. C. Some of them did not return. Those who did come back know something of the courage and determination that was required of them. During these last 20 years we have been trying to readjust ourselves as well as recover from the tremendous shock caused by the war. It is a long, difficult read cult road.

This evening, in responding to the "toast" to the United States on this memorable occasion of your golden jubilee, I shall mention a few problems that concern vitally the whole country. They do not concern one part of the country and not another part. They do not concern New England alone, but also the entire East, and the people in the West and South as well. They are national in

scope.

Our country is made up of many different people. Our citizenry is composed of people of every nationality, of all the races, possessing many different beliefs regarding religion, as well as politics, government, social, and economic affairs. On the whole, our people are very courageous. In the beginning they came to America because America was a free country, wherein they could be free to conduct their own affairs as they wanted to, without any interference from government, except in the maintaining of law and order. They came because the United States offered an opportunity of a larger and a higher standard of living. They came because in this great land of freedom there was the opportunity to progress, to begin on the bottom and advance upward to a point of independent and happy living never before known in the history of the world. I say our people are courageous and industrious, energetic, and determined to progress. These are the very qualities which forced them to break old ways of life and old friendships in order to obtain a better way of life.

The Americans of French extraction are so outstanding for these

The Americans of French extraction are so outstanding for these qualities. From the very beginning, years before the coming of General Lafayette, the French people were here. They did much in founding America. Dr. John Finley has described beautifully the fortitude of the early French settlers in his book, The French in the Heart of America. They have worked long and hard in the development of the United States. They possess the old pioneer spirit that seems to be lacking in some of our people today. They still believe that the way of progress is the way of work. The Americans of French descent still hold fast to the one great ideal of our forefathers. They believe that in spite of any fact or condition, America, their country, comes first and the individual second. They never place any person above the country. The welfare of the country is first. Just as General Lafayette and his men were willing to give their lives that the country might be established, the Americans of French descent, I know, are willing to make the supreme sacrifice that their country shall The Americans of French extraction are so outstanding for these are willing to make the supreme sacrifice that their country shall never perish. The American fiag never must be lowered because of defeat. It is safe in the protective hands of such courageous and patriotic people as you members and friends of the C. M. A. C. Whenever the occasion has occurred you have responded willingly. That is the way it should be.

The fact that the American people are composed of many different nationalities and temperaments is one of our great problems. That problem is the necessity for an unqualified national spirit. I mean the necessity for every individual in the country, regardless of his nationality, regardless of the length of time his home has been the United States, regardless of the feeling he may possess for the so-called mother country, to not only realize that he has an obligation to the United States but that he has a duty to the United States that must always be first and that he is proud of the fact that he has this duty.

Whenever a question arises regarding the welfare of the United States every individual in the country accepting the benefits this great land offers should be proud to meet any sacrifice required. As has been always the case with the Americans of French na-tionality, the United States and its welfare should be forever first in the hearts of all the people. There must be complete national in the hearts of all the people. There must be complete national unity. There can be no progress without national security. And it is a fact that no country is secure that is diseased with disunity. A spirit of national unity is possible only if it is possessed by every person in the land. An Americanism supported by the unity of spirit of all the people is an important objective that must be obtained as soon as possible. I know members of the C. M. A. C. will work to obtain this objective.

The United States is a large country both in population and in territory. Because of this size the various sections or divisions of the country are occupied with different activities and occupations. Although human nature is very largely the same throughout America, the methods and ways of life are different. Some sec-

America, the methods and ways of life are different. Some sections of the country are devoted to industry, other sections to agriculture, some sections to mining, some to shipping, others to fishing, while existing over the whole country is a network of business and professional activity.

ness and professional activity.

These sectional occupations did not just occur. They became more or less sectionalized because of the particular advantages geographically to certain activities together with helpful qualities of climate and a general desire on the part of some people to live in a certain locality. Having developed and progressed in this way the people of these particular areas are primarily concerned with factors that will benefit the occupation in which concerned with factors that will benefit the occupation in which they are engaged and upon which they depend for their living. If they happen to be engaged in agriculture they have been not concerned with the problems of industry and those sections devoted to it. They have been concerned only with their own areas. On the other hand this is true of the people in the industrial sections in regard to the agricultural districts. In other words our people believed their only concern was their own immediate affairs. From the beginning of our country until 1925, this point of view seemed to work all right for the development of the particular sections throughout the United States. Whether right or wrong during this period of development, this method of of the particular sections throughout the United States. Whether right or wrong during this period of development, this method of sectional independence cannot be followed today. As a matured Nation, we cannot afford to benefit one section of the country, if in doing so we cause a detriment to others. We cannot at the same time enrich one district and pauperize another. We do not exist today as parts of a nation, which added together make the whole. We have passed that period. Today, the United States is one complete unit, politically, economically, and socially. The problem of sectionalism with all of its economic disorganization must be solved before our country again can be prosperous.

prosperous.

Economic disorganization encourages as well as breeds national disunity. A country that is in a state of economic disorganization lacks national security. When national security is lacking, we cannot be certain of our prosperity, our homes, our institutions, or our freedom. This cancer of our national life must be cured. Laws, legislation, methods of procedure, ways of doing things, which are beneficial to one group of our people while causing another group to suffer must be constantly opposed and those in operation now should be amended or repealed. Industry and business cannot offer steady jobs while there are laws already in existence, together with proposed new ones, that make it almost impossible for our institutions to operate. You cannot place a noose around the neck of business constantly threatening to hang it, and at the same time expect it to develop, go forward, and plan for the future. We must make the future certain if we want business and industry to progress and provide jobs for the millions of fine men and women unemployed at this very moment in our country. I know you members of the C. M. A. C. will agree with me regarding this objective. I know you will do all you can to urge upon those in authority and those who represent you in the affairs of Government to work for the abolition of sectionalism and disorganization within our country. All that I mean is, that we must work from now on for the best interest of the country as a unit rather than any particular section, in regard to matters that have a bearing on the welfare of the country as a whole.

Since that celebrated day of May 17, 1914, your Silver Jubilee, a quarter of a century as of the United States has engaged in a Economic disorganization encourages as well as breeds national

the country as a whole.

Since that celebrated day of May 17, 1914, your Silver Jubilee, a quarter of a century ago, the United States has engaged in a great World War, losing thousands of our splendid young men, permanently injuring thousands more, wrecking thousands of happy homes, losing billions of dollars, and suffering great losses during the period of readjustment, in addition to experiencing the greatest economic depression in the history of the world. Nothing was gained for the United States from that war. Instead it has forever crippled the present generation. When the war began in July 1914 we thought we could avoid it and remain neutral and attend to our own affairs. By economic forces, political maneuver-July 1914 we thought we could avoid it and remain neutral and attend to our own affairs. By economic forces, political maneuvering, victous lies, and propaganda we were pulled into it. America went in with a noble idea, "To make the world safe for democracy," while at the very moment we were allied side by side with one of the great autocracies of the world. Propaganda, greed, jealousy are the victous factors that forced this great Nation to marshall its strength and send an army to a foreign battlefield 3,500 miles away were streamed to come the common who across the ocean. We did it, and in honor of our brave men who gave everything in the cause, some of whom were members of this eminent organization of the C. M. A. C., let us say we did the job well, and we are glad our efforts brought victory. We are glad our

boys, with General Pershing and Colonel Stanton, were able to march to the tomb of General Lafayette in Picpus Cemetery, and, in the words of Colonel Stanton, proclaim, "Lafayette, we are here." That is all behind us now. That was 20 years ago. Let us profit by our experience, however, as we turn our eyes and thoughts to the problem of maintaining our peace in the troubled world of today. today

As your Representative in Congress, I have the honor to be a member of the great Committee on Foreign Affairs. This committee has part of the job of striving to keep the peace and to avoid war. Every Representative on that committee wants to constantly maintain the peace of this country with other nations. Every member is unqualifiedly opposed to war except in defense of our own country and our commitments regarding the Western Hemisphere. The question is, How can we do it? We have spent many hours together, as well as in private study, in trying to reach a satisfactory solution to this problem. We have not reached it yet, but we are not going to give up. Some of us know first hand much about the tragedy of modern warfare and we intend to save the people of our country from ever experiencing it again if it is the people of our country from ever experiencing it again if it is possible.

we know that the greatest accomplishment our Government could achieve in any way would be the finding of the way to save our young men and the Nation as a whole from becoming involved in the tragic fate which seems almost ready to break over the world today. Although it may cost to keep out, that cost will be insignificant compared to the cost of another world conflict. The members of the Foreign Affairs Committee, however, cannot control all forces that might lead us into war. Much of that responsibility is on you and the rest of the people of the country. First of all as a people we must be constantly alert to recognize the vicious propaganda that is spread over the country for the purpose of exciting passions and tempers into a war fever against some country that has become an enemy in the minds of the propagandists.

It is the job of every publisher in this country to constantly strive to obtain true facts before he publishes them. Otherwise the publication becomes a medium of spreading propaganda. As a people we must be willing to make certain sacrifices to stay out of war. As a government we must be willing to make certain sacrifices to stay out of

people we must be willing to make certain sacrifices to stay out of war. As a government we must be willing to make certain sacrifices. All of the sacrifices we make, however, will be far less than those we would be forced to make if we were engaged in war. I appeal to you to consider all that a war might mean to you personally and to your country. Do not permit propaganda to influence decisions. Seek out the truth and make the truth known. We must never again send our fine young men to slaughter on the altar of greed and jealousy. We must never again send them to their doom on the battlefields of Europe.

I appeal to you, therefore, in my response to the "toast" to "the United States" on this great occasion of your golden jubilee, to place your country first, and, in the spirit of General Washington and General Lafayette, try to influence others to do the same. As we look into the next quarter of a century, we must not only strive for but we must obtain a strong national unity. We must organize our resources and economic life. We must abolish as much as possible waste and disorganization. We must weld the various sections of our country together. We must work for the benefit of the whole instead of the part. We must put our national house in order and keep it that way.

Above all, I appeal to you and to your great C. M. A. C. to constants structs to keep war war of the service wat to keep the service was to service to keep war and to some service and to some service to keep war and to some services and services

Above all, I appeal to you and to your great C. M. A. C. to constantly strive to keep war out of America and to keep America

out of war.

In May of 1964, 25 years from now, when you celebrate your diamond jubilee, I hope all of you will be there, and you will look back over the years and be able to say, honestly, "We have made our country a happier and a more united place in which to live."

Comments and Criticisms, Questions and Answers, on Constitutional Money and Government Monetary Control

EXTENSION OF REMARKS

HON. R. T. BUCKLER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1939

RADIO DISCUSSION OF THE MONETARY PROBLEM AND LETTER

Mr. BUCKLER of Minnesota. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include therein the twelfth radio discussion over station WOL in a series of congressional breakfast talks conducted by Mr. Charles G. Binderup, former Congressman from Nebraska; also a brief letter which preceded this talk through the mail to 600 of the Nation's lawmakers calling attention to this breakfast talk on Constitutional Money and Government Monetary Control,

I believe the Congress and the Nation in general are becoming awakened to the danger of monetary control by Wall Street and that the advice of Thomas Jefferson, Andrew Jackson, Abraham Lincoln, Daniel Webster, James A. Garfield, W. J. Bryan, and other great statesmen who knew the real meaning of democracy, is being regarded more seriously today than any other time.

The letter and radio discussion are as follows:

UNROBING THE WALL STREET GHOSTS

(1) Fifty-cent dollars; (2) printing-press money; (3) flat money;

(4) inflation.

It was Nero, of Rome, who taught the international bankers the In building for himself fortification against any accusations, way. In building for himself fortification against any accusations, he created a poison called prejudice around the honorable name "Christian," and when the term was thoroughly steeped in the poison of gossip and prejudice he pointed to it as something combined with everything horrible. An uninformed public aped him, as they always ape those in power. Thus fortified—accused and guilty—he pointed and whispered, "The Christians." And blind and prejudiced humanity burned them at the stake.

And so today the international bankers point to the four Wall Street ghosts—50-cent dollars, printing-press money, flat money, and inflation—and whisper, "Horrible! Terrible! Look out, or those ghostly bogey men will get you!" And in Congress and out of Congress the uninformed, trembling, and frightened echo the

ory.

In previous letters we have unrobed their first ghost, 50-cent dollars, and their second ghost, printing-press money, so today we will unrobe the third ghost, fiat money.

Webster's Dictionary defines "fiat" as follows: "A mystical value obscure to human observation, a value created by law."

All money is flat money. It would not be legal-tender money

un'ess it was flat.

un'ess it was fiat.

All money is made by law. Gold is fiat money, because its value was created by law. Remove the fiat from gold, or demonetize gold and its value would be so small that you would be ashamed to wear a gold ring, or even to have the gold show in your teeth. In 1933 we increased the price of gold from \$20.67 an ounce to \$35—that is, we added another \$14 fiat to an ounce of gold, or we added to our gold holdings \$2,700,000,000 fiat on top of all the other fiat we already had in the gold.

Since all money is fiat money, then why all this continuous

Since all money is flat money, then why all this continuous alarm in the press and on the platform, in Congress and out of Congress, about flat money?

Sincerely yours,

C. G. BINDERUP.

CONGRESSIONAL BREAKFAST TALK, MAY 16, 1939

Announces. It is now 8:15 o'clock and we bring to you once more our regular Tuesday morning congressional breakfast talk by Members of the Senate and House under the direction of Hon Charles G. Binderup, former Congressman from Nebraska. Mr Binderup.

Mr. BINDERUP. We bid good morning to everybody in behalf of the Constitutional Money League of America, and with a feeling of gratitude we wish to again thank this broadcasting station, WoL, Washington, D. C., for the privilege they have granted us in featuring these congressional breakfast talks over their station. May we greet once more our President Roosevelt, his Cabinet, members of the Federal Reserve Board, and Members of the Senate and House.

It certainly is a great pleasure to introduce our guest speakers this morning, men whom we have invited because we knew their heart was in the right place—Congressman Pierce of Oregon and Congressman Harrington, of Iowa. Congressman Pierce, may I ask you, What is your opinion as to the importance of the money question?

Mr. Pierce. In my judgment, the money question is the funda-mental problem before the American people today, and until this is settled and settled right nothing can be done.

Mr. BINDERUP. Congressman HARRINGTON, we would like to have

an expression of your views.

Mr. Harrington. I think you are doing a wonderful work with your Constitutional Money League of America in striving to educate the public on this most important question. We all recognize that education is the foundation of democracy and that this great Nation cannot live, and civilization cannot endure, unless the reasonable wants of humanity are satisfied. We must have a consuming and purchasing power among the lower-income groups before we can have prosperity and before the factories can run. It is not control of production we need so much as it is control of distribution, and this cannot be accomplished without a sufficient supply of money to distribute commodities from the producer to the consumer.

Mr. Binderup. Our last congressional breakfast talk entitled "Paying the National Debt with a Fountain Pen," seems to have brought forth a great deal of comment. I believe I stated in the beginning of last Tuesday's broadcast that this subject would be a most difficult part of our plan for people to understand. Congressman Harsington, you are quite familiar with our plan for Government monetary control and constitutional money. Perhaps you can answer these questions in a clearer manner than we did in our last Tuesday's broadcast.

Mr. Harrington. I have always realized, and I speak with due respect to everyone, that if you want to get into a real fight, just try to pry the people out of an old mental rut, and, Mr. Binderup, that is just what you have been trying to do. I do not think it is difficult to understand this subject as explained in your last broadcast, and I believe the explanation as given by Congressman Massingale, who took the part of Uncle Sam, is quite plain. I know, however, that the thought is so new to most people that they cannot realize that the Government debt can be discharged so easily. To them it has become a nightmare, and it is not easy so easily. To them it has become a nightmare, and it is not easy for them to realize that there is nothing real about their fright. I think Congressman Massingale made it very plain in his example that if I owe you a dollar and you owe me a dollar, we can cancel the two debts with a fountain pen and a scrap of paper. Then if the people owe the banks \$20,000,000 in bonds and the banks owe the people \$20,000,000 in deposits, why not the same principle? The people owe the banks and the banks owe the people, so a fountain pen will do the work. We have had no less than 27 money panics wherein the people have lost their deposits, so this surely should teach us something. To me it seems only just and fair, and I think it does to everyone, that Uncle Sam should hold the bonds purchased by the bank for the people's money and in return be responsible to the people for all their deposits. This would relieve the banks as well as the Nation of further monetary catastrophes.

their deposits. This would relieve the banks as well as the Nation of further monetary catastrophes.

Mr. Pierce. I believe this is one of the very fundamental principles of your plan for constitutional money which provides for 100 percent reserves back of demand deposits in bonds and cash.

This prevents the banks from creating and destroying the people's money, and I think it is most necessary.

Mr. Binderup. Another comment which I received from another Congressman was in regard to the statement we had made in the last broadcast, that the demand deposits in banks belonged to the people. He claimed the people's deposits belonged to the banks and that they could use this money for anything they wanted to. Congressman Pierce, you have a splendid knowledge of money and banking. May I ask you for your opinion about this? If the people deposit their money in the banks and pay the banks a monthly charge and a fee on each check they handle, don't you think the demand deposits always and at all times belong to the people?

people?

Mr. Pierce. Well, if I place money in a trust fund and pay the trustees to take care of the funds and they invest it for me, the profits from the investment certainly belong to me, and the title and ownership does not shift. Demand deposits are a trust fund held by the banks for which service the people should pay them. Certainly they, the people, never surrender title or ownership. If we pay our county treasurer to take care of the county's money and he uses the money for his own profit, it becomes a criminal offense. Well, the people's demand deposits in a bank are no different provided the banker is being paid for his services. However, we must recognize that unless provided for by law, custom makes law. Strictly speaking, it would be embezzlement for the banker to use your demand deposits for which you pay him as a custodian, but if you deposit your money, knowing that he is using it, of course, you couldn't object. However, I say there can never be any question about the ownership of these demand deposits. deposits.

Mr. BINDERUP. Another comment on our plan for Government Mr. Binderte. Another comment on our plan for Government monetary control by another Congressman was "where would the bankers make any money if they could not lend their demand deposits or invest them in Government bonds?" Congressman Hargengrow, can you explain the potential profits to the banks under our plan, without their use of the depositors' demand deposits?

deposits?

Mr. Harrington. Well, in my judgment, this would be somewhat difficult to figure out and must remain a banker's own problem. We are not necessarily legislating a profit for the banker or for any other group, but in the interest of the people as a whole. We do, however, know this much: We know there are 61,392,000 accounts in the 15,000 banks in the United States. This figure, however, does not include some 1,100 banks outside of the Federal Deposit Insurance Corporation. We also know that in ordinary times over half of the bank accounts are demand-deposit accounts, and if the banks charged a dollar a month for keeping these accounts, which half of the bank accounts are demand-deposit accounts, and it the banks charged a dollar a month for keeping these accounts, which most of our bankers do, it would be very safe to estimate a profit of \$25,000 to each one of the banks on an average annually.

Mr PIERCE But isn't it also a fact, Congressman HARRINGTON,

Mr. Pierce. But isn't it also a fact, Congressman Harrington, that most of our banks now charge a fee on each individual check varying from 3 to 5 cents? Can you give us an estimate on about

what that would amount to?

Mr. HARRINGTON. Well, in this case also the result must be estimated. We do know, however, that in 1938 the checks that were cleared through the banks' clearing houses amounted to \$650,000,000,000. (This was just half as many dollars in checks as was cleared through the banks in 1929, meaning that we had approximately half as much money in circulation in 1938 as we had in But to get back to our problem again, I believe that it is 1929.) But to get back to our problem again, I believe that it is generally claimed that the average-size check is about \$7, but suppose we would call it \$10. Suppose the bankers only charged a penny a check. The income to the banks would be \$650,000,000 annually, or about \$43,000 to each bank. Add this \$43,000 to the \$25,000, and it would make a total of \$68,000 average income to each of the 15,000 banks per year on demand deposits alone. Of course, this may sound to the small banks in the rural community as big money, but to the large banks this would sound like pin money, but I say this figure is an average income. Now, of course, I do not claim that this is positive or definite, but it gives a general picture of the least that the banks would make if the above charges were made, which isn't a bad profit since it is on demand deposits alone

Mr. BINDERUP. Another comment suggests that we were wrong in our statement which we made last Tuesday morning, when we said that the banks would all go broke if the Government bonds should that the banks would all go broke if the Government bonds should fall 20 percent, and he added, "Don't you know, Mr. Binderup, that the banks can borrow the face value on all Government bonds from the Federal Reserve banks?" I would like to meet this argument myself and explain that while it is true at this time that the member banks can borrow 100 percent on their Government bonds at a rate of 1½ percent interest from the Federal Reserve banks, but this is only for 15 days.

Let no small commercial banker ever believe that the Federal Reserve Banking System will work different now than it did in 1920 and 1929 when the Federal Reserve bank let every small bank crash without consideration. And let no one think that the Federal Reserve banks will lend 100 percent to the small banker when the market price of Government bonds goes down to 80 percent of their face value. And let no small commercial banker ever believe that the Federal Reserve Banking System is a friend of his. Why this huge Frankenstein is just waiting to devour the balance of the smaller banks, just as he did in the twenties, when he ate up no less than 16,000 commercial banks. Just one more feast like this by this Wall Street Frankenstein and you will see another facely of the properties benefits a legal to the street of the second street of the s

like this by this Wall Street Frankenstein and you will see another flock of commercial banking skeletons, empty bank buildings rattling in every city, town, and hamlet over the Nation.

Mr. Pierce. But suppose, for argument's sake, it were true what the Congressman said, and that the member banks really could borrow the full amount on their bonds indefinitely. If prosperity should start back, everyone would be cashing their bonds through their banks and through the Federal Reserve banks. It would mean that the Federal Reserve banks would be called upon to virtually cash over \$37,000,000,000 worth of Government bonds, for with prosperity everyone would throw their bonds on the market with prosperity everyone would throw their bonds on the market to buy the much more profitable industrial bonds and commodities which would be going up by leaps and bounds. We would have an inflation that would make the inflation of the French assignats and the continentals and the German marks look microscopic.

Mr. Binderup. But don't you think the big bankers will let this happen, and don't you think they will lend 100 percent on bonds to the smaller banks? Mr. Eccles and the Federal Reserve bankers will just create another depression, and once more, for the twentyeighth time, the people will be sacrificed to save the big bankers. Yes; it is just as was remarked in our last congressional breakfast talk. It's damned if you do and damned if you don't under our ambiguous and corrupt money and banking system. How long will the people stand by in utter darkness and ignorance of this treacherous, damnable money and banking system that is destroying our people and our Nation? ing our people and our Nation?

Mr. Harrington. It looks to me as though the time has about arrived that Abraham Lincoln prophesied when he said: "The money power of the country wil endeavor to prolong its reign by working upon the prejudice of the people until all wealth is aggregated in a few hands and the Republic destroyed. I feel at this moment more anxiety for the safety of our country than ever before, even in the midst of war. God grant that my forebodings

may be groundless."

Mr. Pierce. But surely the welfare of the people is more to be considered than are these pirates of finance—Wall Street and the international bankers. And some day I believe public sentiment will be aroused and the people in their might will arise against this monster. I believe I read recently of a country over in Europe that found it necessary to put a Rothschild in jail. Well, I hope we will not have to go that far, but as for me, the welfare of the people is supreme to anything else.

Mr. BINDERUP. Another Congressman offered this correction: "You have forgotten, Mr. Binderup, that the depositors' accounts are now guaranteed by the Federal Deposit Insurance Corporation." Congressman PIERCE, will you explain this?

Mr. Pierce. Well, I have always been very much in favor of demand-deposit insurance. In fact, I campaigned for this during the Bryan campaign of 1908 and while Governor of Oregon I took an active part in promoting demand-deposit insurance. When I came to Congress and found it on the calendar I was really happy. Now, Mr. Binderup, you have made a greater study of just what our Federal deposit insurance is, and I would just

a little bit rather that you would explain this.

Mr. Binderup. Well, Congressman Pierce, I am sure we can all agree with you that demand-deposit insurance is most essential. We can never have a safe and sound money system until this part of the program is settled. The people must know that their deposits are safe in the banks, and after the 27 money panics, depressions, recessions, and collapses we have endured, it is no depressions, recessions, and collapses we have endured, it is no wonder they prefer a tin can, or a sock, or a safety-deposit box, or anything safer than the banks. There is no private institution, corporation, or combination of corporations that has the means for guaranteeing \$53,000,000,000 of the people's deposits. Only the Government can do that, and without cost to the banks or the Government, under our monetary plan, as earlier explained in our book, Uncle Sam's Hospital Chart, as well as in these congressional breakfast talks wherein the plan is given these congressional breakfast talks, wherein the plan is given with explanations. Our Federal deposit insurance is in my judgment not very substantial or sound, but let everyone be his own judge.

The surplus and capital stock of the Federal Deposit Insurance Corporation amounts today to \$420,000,000 (which constitutes their reserve fund), but the deposits amount to approximately \$53,000,000,000. However, the \$5,000 limitation for each individual depositor reduces the amount for which the Federal Deposit Insurance Corporation is liable, so actually their liabilities are \$43,000,000,000. In other words, each dollar insured is backed by less than 1 cent. How would you like to insure your house with an insurance company whose liabilities are 100 times greater than its assets? Well, that is exactly the kind of insurance you have on your demand deposits in your banks. Call it insurance if you like, but know the truth.

Mr. Pierce. I notice in a recent issue of the Congressional Record

Mr. Pierce. I notice in a recent issue of the Congressional Record an article purporting to have been written by Congressman Williams of Missouri, who is a member of the Banking and Currency Committee, wherein he says that the Governors of the Federal Reserve Board represent the people's interest and not the interests of the banks. Mr. Binderup, what is your opinion about this?

Mr. Binderup, what is your opinion about this?

Mr. Binderup, what is your opinion about this?

Mr. Binderup, in order to establish just who the Federal Reserve Board of Governors represents, suppose we ask them a few questions. First, "Are you in favor of the people issuing their own money?" They will answer "No." They have already said they are not in favor of this. Second, "Are you in favor of continuing the present money and banking system whereby the banks mint and unmint the people's money at their pleasure?" And they will reply, "Yes." They have already said they are. Third, "Are you in favor of 100-percent reserves back of demand deposits to you in favor of 100-percent reserves back of demand deposits to protect the people's savings?" And they will say, "No." They have already said they were not in favor of this. Fourth, "Are you in

favor of continuing under the present plan with a money panic and a depression once every 6 years?" And they will say, "Yes." They have already said so. They said it just couldn't be helped. Mr. HARRINGTON. And isn't it a fact that whenever there is a threatened money panic, the Board of Governors call in all the big bankers for consultation and never call the people nor the people's Congress, nor the Committees on Banking in the House people's Congress, nor the Committees on Banking in the House

or Senate?

Mr. Pierce. Well, that, it seems to me, is pretty good evidence as to who the Federal Reserve Board represents. And isn't it also a fact that the salaries of the Federal Reserve Board are paid by the bankers?

Mr. BINDERUP. Most people do not know this, but it is true, they are.

Submerged Ocean Lands

EXTENSION OF REMARKS OF

HON. MORRIS SHEPPARD

OF TEXAS

IN THE SENATE OF THE UNITED STATES Friday, May 19, 1939

STATEMENT BY HON. MORRIS SHEPPARD, OF TEXAS, BEFORE THE COMMITTEE ON PUBLIC LANDS AND SURVEYS, MARCH

Mr. SHEPPARD. Mr. President, I ask unanimous consent to have printed in the Appendix a statement made by me on March 27, 1939, before the Committee on Public Lands and Surveys on the question of submerged ocean lands.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Senator Sheppard. The resolutions before the committee set up a claim on the part of the Government of the United States to the ownership of the petroleum deposits underlying submerged lands adjacent to and along the coast of the State of California below low-water mark and under the so-called territorial waters of the United States of America

It provides further that neither "this joint resolution nor anything It provides further that neither "this joint resolution nor anything herein contained, nor any inference or deduction which may be drawn herefrom or from any part hereof, shall be construed as releasing, waiving, abandoning, disclaiming, or affecting in any way whatsoever any right, title, claim, or interest which the United States of America has, or would otherwise have, to other petroleum deposits and submerged lands or the right to set aside other petroleum deposits and submerged lands elswhere as naval petroleum reserves or for other purposes." for other purposes.

The resolutions thus challenge the rights of all the other coastal States, as well as California, to the petroleum deposits in the submerged lands adjoining their coasts below low-water mark and under their adjoining sea waters.

I shall endeavor to show that these resolutions overthrow a basic

I shall endeavor to show that these resolutions overthrow a basic principle of the American form of government.

At the time the Original Thirteen Colonies secured their independence from Great Britain they became separate and independent sovereignties, their territorial jurisdiction extending into the open sea adjoining their respective coasts as far as it had extended from such coasts under the English Crown.

Regarding Great Britain, the Territorial Waters Jurisdiction Act, passed by Parliament in 1878, established the extent of the terri-torial maritime belt of Great Britain as 3 miles seaward, or 1 marine league seaward, from the low-water mark of the coast (Oppen-

rine league seaward, from the low-water mark of the coast (Oppenheim's International Law, McNair, vol. 1, Peace 397).

Regarding nations in general, Oppenheim, a well-recognized authority on international law, says:

"If the municipal law of a State does not by a statute extend its jurisdiction over its maritime belt, its courts ought to presume that, since by the law of nations the jurisdiction of a State does extend over its maritime belt, their sovereign has tacitly consented to that wider range of its jurisdiction (Oppenheim's International Law McNair, vol. 1, Peace, 35)."

Law, McNair, vol. 1, Peace, 35)."

In the instrument by which the new sovereign American States created the present Government of the United States of America and defined its powers—that is, the Federal Constitution—it is stated in amendment 10 as follows:

stated in amendment 10 as follows:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

The Constitution will be searched in vain for any language showing a delegation to the Federal Government of the ownership of the submerged lands under the ocean waters of the States or the minerals in and under such lands, or the power of the Federal Government to acquire such lands or minerals without compensation. This the present resolution proposes to do. The powers and Government to acquire such lands or minerals without compensa-tion. This the present resolution proposes to do. The powers and rights of the States in this matter have been defined and estab-lished by a long line of decisions of the Supreme Court of the United States, and a few of these decisions are presented herewith. In Martin v. Waddell (11 L. Ed. 997, 16 Peters, 367), Mr. Chief Justice Taney said:

"For when the Revolution took place the people of each State became themselves sovereign, and in that character hold the absolute right to all their navigable waters and the soils under them for their own common use, subject only to the rights since surrendered by the Constitution to the General Government.

rendered by the Constitution to the General Government.

After discussing the history of the proprietors of New Jersey (the State involved in this case), Mr. Justice Taney said further:

"When the people of New Jersey took possession of the reins of government and took into their own hands the powers of sovereignty, the prerogatives and regalities which before belonged to the Crown or the Parliament became immediately and rightfully vested in the State."

vested in the State."

The jurisdiction of the British Crown in this respect extended from the shore for a distance of 3 miles seaward.

In the case of the *United States* v. *Mission Rock Co.* (189 U. S. 391) it was held that "the State of California upon its admission into 391) it was held that "the State of California upon its admission into the Union acquired absolute property in, and dominion and sovereignty over, all soils under the tidewaters within her limits, with the consequent right to dispose of the title to any part of said soils in such manner as she might deem proper, subject to the paramount right of navigation over the waters, so far as such navigation might be required for the necessities of commerce with foreign nations or among the several States, the regulation of which is vested in the General Government."

Other Federal rights or easements, such as national defense and

Other Federal rights or easements, such as national defense and commerce, belong to the United States Government, but, of course, do not include title in said Government to the lands under

the territorial waters of the States.

In the Mission Rock case Mr. Justice McKenna, delivering the opinion of the Court and referring, among other cases, the Weber v. Commissioners (18 Wall.), quoted from the latter as follows:

"Although the title to the soil under the tidewaters of the bay

"Although the title to the soil under the tidewaters of the bay was acquired by the United States by cession from Mexico, equally with the title to the upland, they held it only in trust for the future State. Upon the admission of California into the Union upon equal footing with the original States, absolute property and dominion and sovereignty over, all soils under the tidewaters within her limits passed to the State, with the consequent right to dispose of the title to any part of said soils in such manner as she might deem proper, subject only to the paramount right of navigation over the waters, so far as such navigation might be as she hight deem proper, subject only to the paramount right of navigation over the waters, so far as such navigation might be required by the necessities of commerce with foreign nations or among the several States, the regulation of which was vested in the General Government."

among the several States, the regulation of which was vested in the General Government."

In the same case, Mr. Justice McKenna, referring to the case of Shively against Bowlby, quoted Mr. Justice Gray, who rendered the opinion of the Court in the Shively case as follows:

"Each State has dealt with the lands under the tidewaters within its borders according to its own views of justice and policy, reserving its own control over such lands, or granting rights therein to individuals or corporations, whether owners of the adjoining upland or not, as it considered for the best interests of the public.

"This right," said Mr. Justice McKenna in the Mission Rock Co. case, "is an attribute of the sovereignty of the State, and it follows that in the exercise of the right (quoting Mr. Justice Gray), the State may dispose of its tidelands free from any easement of the upland proprietor."

In Shively v. Bowlby (152 U. S. 1), Mr. Justice Gray, delivering the opinion of the Court, said:

"By common law both the title and the dominion of the sea, and of the rivers and arms of the sea, where the tide ebbs and flows, and of all the lands below high-water mark, within the jurisdiction of the Crown of England, are in the King. Such waters and the lands which they cover either at all times, or at least when the tide is in, are incapable of ordinary and private occupa-

tion, cultivation, and improvement. Their natural and private uses are public in nature, for highways of navigation and com-merce, domestic and foreign, and for the purpose of fishing by all the King's subjects. Therefore the title * * * in such lands merce, domestic and foreign, and for the purpose of fishing by all the King's subjects. Therefore the title * * * in such lands * * * belongs to the King * * * and the dominion thereof * * is vested in him as representative of the Nation and for the public benefit. * * * The various charters granted by different monarchs of the Stuart dynasty for large tracts of territory on the Atlantic coast conveyed to the grantees * * * the property and the dominion of lands under tidewaters. And upon the American Revolution all the rights of the Crown and of Parliament, vested in the several States subject to the rights surrenger. ment vested in the several States, subject to the rights surrendered to the National Government by the Constitution of the United States."

In Hardin v. Jordan (140 U. S. 331), Mr. Justice Bradley, delivering the opinion of the Court, said:
"Such title to the shorelands under water is regarded as incidental to the sovereignty of the State * * * and cannot be retained or granted out to individuals by the United States. Such title being in the State the lands are subject to State regulation and being in the State the lands are subject to State regulation and control, under the condition, however, of not interfering with regulations which may be made by Congress with regard to public navigation and commerce. The State may even dispose of the usufruct of such lands, as is frequently done by leasing oyster beds in them, and granting fisheries in particular localities; also, by the reclamation of submerged flats, and the erection of wharves and piers, etc.; * * State control and ownership therein being supreme, subject only to the paramount authority of Congress in making regulations of commerce. * * The right of the State to regulate and control the shores of tidewaters and the land under them is the same as that which is experised by the

the State to regulate and control the shores of tidewaters and the land under them is the same as that which is exercised by the Crown in England. * * * it depends on the law of each State to what waters and to what extent this prerogative of the State over the lands under water shall be exercised."

Again, in Shively against Bowlby, Mr. Justice Gray said:
"The Congress of the United States, in disposing of the public lands, has constantly acted upon the theory that those lands, whether in the interior or on the coast, above high-water mark, may be taken up by actual occupants in order to encourage the settlement of the country; but that the payigable waters and the settlement of the country; but that the navigable waters and the soils under them, whether within or above the ebb and flow of the tide, shall be and remain public highways; and, being chiefly valuable for the public purposes of commerce, navigation, and fishery, and for the improvements necessary to secure and promote those purposes shall not be granted away during the period of Territorial government; but * * * shall be held by the United States in trust for the future States, and shall vest in the several

States in trust for the future States, and shall vest in the several States when organized and admitted into the Union; in short, shall not be disposed of piecemeal to individuals as private property, but shall be held as a whole for the purpose of being ultimately administered and dealt with for the public benefit of the State, after it shall have become a completely organized community."

Further, Mr. Justice Gray, quoting with approval from the Supreme Court of Oregon in this case, said:

"From all this it appears that when the State of Oregon was admitted into the Union, the tidelands became its property and subject to its jurisdiction and disposal; that in the absence of legislation or usage, the common-law rule would govern the rights of the upland proprietor, and by that law the title to them is in the State; that the State has the right to dispose of them in such manner as she might deem proper, as is frequently done in various manner as she might deem proper, as is frequently done in various ways, and whereby sometimes large areas are reclaimed and occupied by cities, and are put to public uses, State control and owner-

pied by cities, and are put to public uses, State control and ownership being therein supreme, subject only to the paramount right of navigation and commerce. The whole question is for the State to determine for itself; it can say to what extent it will preserve its rights of ownership in them or confer them on others.

"Our State has done that by the legislation already referred to; and our courts have declared its absolute property in and dominion over the tidelands, and its right to dispose of its title in such manner as it might deem best, unaffected by any 'legal obligation to recognize the rights of either the riparian owners, or those who had occupied such tidelands,' other than it chose to resign to them, whitest only to the paramount right, of payigation and uses of subject only to the paramount right of navigation and uses

commerce.

Again, in Shirley v. Bowlby, Mr. Justice Gray, summing up the great mass of authorities which had been cited, said:
"At common law, the title and the dominion in lands flowed by the tide were in the King for the benefit of the nation. Upon the settlement of the Colonies, like rights passed to the grantees in the royal charters, in trust for the communities to be established. Upon the American Revolution, these rights, charged with a like trust, were vested in the original States within their respective borders, subject to the rights surrendered by the Constitution to the United

States.

"Upon the acquisition of a Territory by the United States, * * * the same title and dominion passed to the United States, for the benefit of the whole people, and in trust for the several States to be ultimately created out of the Territory.

"The new States admitted into the Union since the adoption of the Constitution have the same rights as the original States in the tidewaters, and in the lands under them, within their respective jurisdiction. The title and rights of riparian or littoral proprietors in the soil below high-water mark, therefore, are governed by the laws of the several States, subject to the rights granted to the United States by the Constitution.

"The United States, while they hold the country as a Territory, having all the powers both of national and of municipal government, may grant, for appropriate purposes, titles, or rights in the soil below high-water mark of tidewaters. But they have never done so by general laws; and, unless in some case of international duty or public exigency, have acted upon the policy, as most in accordance with the interest of the people and with the object for which the Territories were acquired, of leaving the administration and disposition of the sovereign rights in navigable waters, and in the soil under them, to the control of the States, respectively, when organized and admitted into the Union.

"Grants by Congress of portions of the public lands within a Territory to settlers thereon, though bordering on or bounded by navigable waters, convey, of their own force, no title and dominion of the future State when created; but leave the question of the use of the shores by the owners of uplands to the sovereign control of each State, subject only to the rights vested by the Constitution in the United States."

Many more cases could be cited in support of this thoroughly extelliged destribes

established doctrine.

Many more cases could be cited in support of this thoroughly established doctrine.

Not only does this resolution call for the violation under the Constitution, of the sovereignty, and for the confiscation of property, of the State of California, but it involves possible similar action with respect to the submerged ocean lands of all the other coastal States. It clouds titles to hundreds of millions of dollars' worth of petroleum properties already sold by certain States to private owners and, in the case of the State of Texas, to submerged lands the proceeds from which already have been dedicated to the use of the public schools of the State. Texas possesses petroleum properties under its submerged lands equal at least in value to those of all the other coastal States combined. In addition, the resolution through its challenge to ownership by the States of their submerged lands under their adjoining ocean waters, clouds titles by which these States have conveyed such submerged lands for the erection of wharves, docks, warehouses, and other facilities of commerce.

Turning now to the special example of the State of Texas, let it be said that upon admission to the Union, Texas, together with such other coastal States as were not among the Original Colonies succeeded to the rights of the Original Thirteen Colonies in respect to its adjacent ocean waters and submerged lands thereared.

Colonies succeeded to the rights of the Original Thirteen Colonies in respect to its adjacent ocean waters and submerged lands thereunder. It also succeeded in this regard to all the rights which it already had possessed as a republic. These rights were further confirmed and safeguarded by the resolution of the Congress of the United States by which Texas was admitted into the Union. After winning its independence from Mexico, the Republic of Texas defined its sea boundary as "beginning at the mouth of the Sabine River and running west along the Gulf of Mexico three leagues (that is, 10.56 miles) from land to the mouth of the Rio Grande." (Gammel's Laws 1193, vol. 1; Sales' Early Laws of Texas, art. 257.)

During the existence of the Republic of Texas the United

During the existence of the Republic of Texas the United States and numerous other nations recognized the independence of Texas and its membership in the family of nations with its

sea boundary as stated above.

The resolution by Congress admitting Texas to the Union provided among other things that Texas "shall also retain all the vacant and unappropriated lands lying within its limits to be applied to the payments of the debts and liabilities of the said Republic, and the residue of said lands, after discharging said debts and liabilities, to be disposed of as said State may direct."

Thus the State of Texas retained jurisdiction over the sub-merged lands lying under its sea or Gulf waters for a distance of about 10 miles from its eastern shore, together with all its other lands within its boundaries as defined by the Republic of Texas lands within its boundaries as defined by the Republic of Texas and as recognized by the United States, a jurisdiction which it still retains today. It seems especially preposterous that the Congress should consider with any degree of favor at this late day any proposal questioning the right of Texas to its submerged lands and the minerals inseparably a part thereof; and this is said without modifying in any way what has been said herein in defense of the rights of California and the other coastal States to their submerged lands and petroleum holdings thereunder. Upon these considerations, we believe that the resolution should not be seriously entertained by the committee, and we respectfully ask that the committee render an adverse report thereon. The Charman. Senator Sheppard, may I make this inquiry of you, perhaps based on my own ignorance as I do not happen to be in a State affected by tidal waters: In the decisions which you read there was reference to tidal lands. Is there a distinction between tidal lands and lands beyond low-water mark?

between tidal lands and lands beyond low-water mark?

Senator SHEPPARD. Yes.

The Chairman. Am I correct in assuming that what you speak as "tidal lands" are those which are bare at low tide? Senator Sheppard. Yes. of as

The CHAIRMAN. There may be a different rule as to that mat-

Senator Sheppard. Tidal lands are lands periodically exposed by the tides. Submerged lands are lands which the territorial waters do not reveal because they lie between low-water mark of the tide and the outward extent of what is known as territorial waters tributary to a State.

The Chareman. As I understand it Texas in her declaration asserted a 10-mile jurisdiction, roughly speaking.

Senator Sheppard. Yes; specifically defined it as 10 miles plus. The Charman. Let me ask right there: Could Texas just as well have asserted jurisdiction for a distance of 20 miles or 100 miles?

Senator Sheppard. Texas was a republic before entering the Union and her maritime jurisdiction may well have been that of the antecedent countries of Mexico and Spain.

the antecedent countries of Mexico and Spain.

The Charrman. Is there any basis other than the assertion?
Senator Sheppard. Yes; to the extent I have indicated and probably in other respects as well.

The Charrman. For instance, we had a 3-mile limit, being the distance that an ordinary cannon could then shoot.

Senator Sheppard. Yes. Great Britain confirmed in 1878 by the statute I have referred to the maritime jurisdiction she claimed and to which we succeeded. The 10-mile jurisdiction claimed by Texas rested on another foundation—that is, the sea boundary claimed by Mexico and Spain. Mexico and Spain.

Mexico and Spain.

The CHARMAN. Did not the United States make some claim beyond the 3-mile limit as to enforcement of prohibition?

Senator Sheppard. Yes. That was a matter of treaty between the United States and other countries in connection with rum runners coming within, I believe, a 10-mile limit or a 12-mile limit. So far as they were concerned, when they reached a 10-mile or a 12-mile distance from the shores of the United States they were in the territory of the United States so far as enforcement of the national prohibition law was concerned.

The CHARMAN. But do I understand you to draw the distinction that the United States would have control over navigable waters as a highway but not of lands underlying them?

a highway but not of lands underlying them?

Senator Sheppard. That is the point exactly. I thank you for this opportunity of appearing before you.

Address to Maryland Congressional Delegation

EXTENSION OF REMARKS

HON. GEORGE L. RADCLIFFE OF MARYLAND

IN THE SENATE OF THE UNITED STATES Friday, May 19, 1939

ADDRESS BY DR. ARTHUR O. LOVEJOY

Mr. RADCLIFFE. Mr. President, I ask to have printed in the Appendix of the RECORD an address delivered by Prof. Arthur O. Lovejoy on May 9 at a hearing before the Maryland delegation in Congress.

Dr. Lovejoy is professor of philosophy at Johns Hopkins University, and is regarded as one of the outstanding men in his profession.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Gentlemen, speaking on behalf of 33 organizations and many individual citizens of Maryland, I beg to lay before you three propositions. The first is simply a summary statement of fact as to what is going on in the world outside of this continent; the others relate to the questions whether this fact is of any concern to the United States; and if so what should be done about it United States; and if so, what should be done about it.

First, A formidable coalition of autocratic governments is now plainly engaged in a determined, untiring, astute endeavor to dominate the greater part of Europe and vast regions of Asia, along with much of Africa, and to impose, by force or threats of force, upon other states in those continents the system which these governments represent. What that system is everyone knows. Its aim is the suppression of all the liberties for which western mankind has struggled for more than 3 centuries. Its methods are: The has struggled for more than 3 centuries. Its methods are: The extinction of representative government; the denial of religious and political freedom, of liberty of opinion, of speech, and of the press; the rejection of the allegedly out-dated notion that a human being as such, or a weaker people, however civilized, has any rights which a dictator is bound to respect; the consequent ruthless persecution of all individuals or groups to whom the autocrats or oligarchies in power are for any reason inimical; the sedulous cultivation of hatred between men of differing beliefs or descent; and the repudiation of the very idea of the establishment of an international order based upon the equality of nations, the rule of law, the peaceful adjudication of differences, and respect for the obligation of treaties. If these governments succeed in what they are seeking to accom-plish, a great part of what we call the civilized world will be ruled,

plish, a great part of what we call the civilized world will be ruled, directly or indirectly, by three or four men, or irresponsible coteries of men, exercising their control chiefly through the method of terrorism aided by ubiquitous espionage; and these rulers will be men who are implacably hostile to democratic ideas and institutions wherever they exist—since their own claims to power rest upon the thesis that those ideas are false and those institutions a failure.

a failure.

That, gentlemen, is the situation which now faces us. ond proposition is that the traditions, the principles, and the interests of the American people demand that our foreign policy shall not be such as to give present encouragement to the dictators in their designs, or to make easier and more probable their success in the event of armed conflict. This is a proposition which, surely, needs little argument; and upon it a large majority of our citizens are already agreed, if Mr. Gallup's polls are any evidence. There have, it is true, appeared before congressional committees some distinguished persons who seem to view with practical equanimity the possibility of the indefinite extension, through violence, of the system I have outlined—and even the complicity of the United States in its extension.

Of this pitiful combination of moral indifferentism with political short-sightedness most of our people are incapable. They are averse to war, they are equally averse to aiding the enemies of our political ideals and of international law and order to attain a dominant position in this small planet, which almost daily grows practically smaller; and even upon the narrowest calculation of self-interest smaller; and even upon the narrowest calculation of self-interest they see that as we in this hemisphere are now secure against attack, we should seek to remain secure—which we should have no assurance of being if the dictatorial powers were once masters of the other continents and of the seas. Already their intrigues are at work in Argentina, in Brazil, and in other American countries. Shall we help them to supremacy in Europe and Asia in the naive hope that their ambitions will be diminished by success and their machinations amongst and against our American neighbors will cease?

cease?

Our third proposition is that the present Neutrality Act already tends to encourage the totalitarian powers in their designs, and would, in the event of war, make easier and more probable their victory. Nominally providing for equal treatment of all belligerents, it would in practice assist the aggressor. For governments do not start upon aggression until they think they are fully equipped for it; but the victims of aggression are less likely to be adequately prepared to resist it. The principal effect of the present law would be to deny to law-abiding and peace-desiring nations the opportunity to purchase in the United States means of defending their liberties, independence, and territorial integrity; and to deny them this opportunity—upon which, in some cases, the issue of the struggle may depend—is to increase the possibility of the eventual triumph of the enemies of human freedom and to promote the success of the method of the hold-up man in international affairs. It is much as if, in a frontier community infested with well-armed bandits, and without a police force, peaceful citizens were debarred from pro-

as if, in a frontier community infested with well-armed bandits, and without a police force, peaceful citizens were debarred from procuring weapons for self-defense.

Holding these propositions to be true, we ask the support of the Maryland Members of both Houses of Congress for the essential provisions of the amendment to the Neutrality Act introduced in the Senate by Mr. Thomas and in the House of Representatives by Mr. Geyer. The provisions to which we refer are those which declare that when the Executive and the Congress jointly find that any State is engaged in a war of aggression in violation of any treaty to which the United States is a party no munitions of war and no any State is engaged in a war of aggression in violation of any treaty to which the United States is a party no munitions of war and no economic or financial resources shall be available to the aggressor from the United States; and that, on the other hand, no impediment shall be placed upon our trade with nations resisting such aggression which would tend to prevent them from supplementing their means of self-defense from American sources. We urge no military participation in wars overseas. But we perceive that in our legislation with respect to foreign commerce in time of war, real, as distinct from nominal, neutrality is intrinsically impossible. Whether you wish it to be so or not, and whatever course you choose, that legislation will in its actual effect be more favorable to one side or to the other. It is a condition, and not a theory, that confronts us. We ask you, then, in this most critical and ominous juncture in modern history that the action of the Congress on this matter shall not be such that it will contribute to the triumph of international lawlessness and violence and to the defeat of those political ideals, and those hopes of a freer, more secure, and more just ordering of human life for which this Republic, despite all its shortcomings, has always stood.

Mother's Day Address

EXTENSION OF REMARKS

HON. HENRY F. ASHURST

OF ARIZONA

IN THE SENATE OF THE UNITED STATES Friday, May 19, 1939

ADDRESS BY HON. MATTHEW M. NEELY, OF WEST VIRGINIA, IN THE UNITED STATES SENATE, MAY 12, 1928

Mr. ASHURST. Mr. President, in 1928, the Senator from West Virginia [Mr. NEELY] delivered a Mother's Day address in the United States Senate, which address was later broadcast over a Nation-wide radio network. On May 17, this year, Senator Neely delivered the substance of this address at the Mayflower Hotel, under the auspices of the Lions Club of Washington. This Mother's Day address by Senator NEELY, for tenderness of sentiment, for beauty, and majesty of expression, has never been excelled. In order that it may be available to the public, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, for more than 19 centuries mankind has had three unfailing sources of inspiration to heroic efforts, great accomplishments, and sublime achievements. For more than nine-teen hundred years the three words that represent these ever-flowing fountains of inspiration have charmed the ears, brightened the hopes, and thrilled the hearts of all the children of men. They have related the register that the propert excellent. the nopes, and thrilled the hearts of all the children of men. They have incited the genius that has produced the most exquisite pictures ever painted, the most beautiful poems ever written, the most melodious songs ever sung—songs, poems, and pictures that have given us sunshine for our shadows, joy for our sorrows, smiles for our tears, and intimated to us the endless bliss of immortality in that "realm where the rainbow never fades," where no one ever grows old, where friends never part and loved ones pear never die. ones never, never die.

These three mighty, magic, and inspiring words are "Jesus," "Home," and "Mother."

The first of them inspired Charles Wesley to write:

"Jesus, lover of my soul. Let me to Thy bosom fly; While the nearer waters roll, While the tempest still is high.

"All my trust on Thee is stayed;
All my help from Thee I bring;
Cover my defenseless head
With the shadow of Thy wing.

"Hide me, O my Saviour, hide, Till the storm of life is past; Safe into the haven guide, O receive my soul at last."

What unspeakable consolation born of boundless faith in the everlasting Father's imperishable love for His erring children is revealed in this beautiful hymn. Its music, "like a sea of glory,

has spread from pole to pole."

The second of our magic words prompted John Howard Payne to compose that deathless song that has been sung and played around the world. Millions of weary wanderers on foreign strands have been transported upon the wings of imagination back to the romantic scenes of their childhood, to the picturesque paths which their infancy knew, to the happy days of the long ago by that soothing symphony of sublime sentiment:

"'Mid pleasures and palaces
Though we may roam Be it ever so humble There's no place like home; A charm from the skies Seems to hallow us there, Which, seek through the world, Is ne'er met with elsewhere.

"Home, home, Sweet, sweet home, Be it ever so humble, There's no place like home."

And the last of this tranquilizing trinity of wondrous words, with the stirring force of the celestial muse of Isaiah, impelled Elizabeth Akers Allen to write the following pathetic, appealing, and rapturous poem that is destined to live until the everlasting hills, "the vales stretching in pensive quietness between," and "old oceans gray and melancholy waste," shall be no more:

"Backward, turn backward, O Time, in your flight, Make me a child again just for tonight! Mother, come back from the echoless shore, Take me again to your heart, as of yore; Kiss from my forehead the furrows of care, Smooth the few silver threads out of my hair; Over my slumber your loving watch keep, Rock me to sleep, Mother, rock me to sleep.

"Backward, flow backward, O tide of the years! Backward, flow backward, O tide of the years I am so weary of toil and of tears—
Toil without recompense, tears all in vain, Take them and give me my childhood again! I have grown weary of dust and decay, Weary of flinging my soul-wealth away; Weary of sowing for others to reap; Rock me to sleep, Mother, rock me to sleep.

"Mother, dear mother, the years have been long Since I last hushed to your lullaby song. Sing then, and unto my soul it shall seem Manhood's years have been only a dream. Clasped to your breast in a loving embrace, With your light lashes just sweeping my face, Never hereafter to wake or to weep—Rock me to sleep, Mother, rock me to sleep."

Kings and potentates and parliaments have proclaimed holi-days, thanksgiving days, and emancipation days for observance by the people of various kingdoms and countries and states. But Miss Anna M. Jarvis, a distinguished woman of West Virginia, has established Mothers' Day in the love, in the devotion, and in the

throbbing heart of the humanity of all the world.

Today we venerate the sacred name and memory of mother. We laud the virtue, extol the spirit of self-sacrifice, and eulogize the loving kindness of every mother living; and in imagination, with bowed heads, grateful hearts, and generous hands lay new wreaths of the freshest, the fairest, and the most fragrant flowers upon the of the freshest, the larest, and the most fragrant howers upon the graves of all the mothers who have gone from the fitful land of the living into the silent land of the dead. In this hour of sober and serious reflection we realize that everyone who treads the globe owes his birth to the unspeakable agony of a mother. From mother's breast the baby first was fed. In mother's arms the baby first was lulled to sleep. Mother, in the twilight hour of baby's existence, breathed the fervent prayer:

"That He who stills the raven's clamorous nest,
And decks the lily fair in flowery pride,
Would, in the way His wisdom sees the best,
For her darling child provide; but chiefly
In her loved one's heart, with grace divine preside."

Then, as the days grew into the months and the months lengthened into the years, mother's life became a continuous round of solicitude, service, and sacrifice for her child.

Mother's hands made the first dress that baby ever wore.

Mother's deft fingers made playthings for the little one that filled his eyes with wonder and his heart with joy.

A splinter in baby's finger, a briar in baby's foot, or a bruise on baby's toe became an affliction of such momentous consequence that only mother could heal it; only mother could banish its ache; only mother could exile its pain: only mother could smile away the

only mother could heal it; only mother could banish its ache; only mother could exile its pain; only mother could smile away the tears it caused to flow down baby's cheeks.

And a little later mother, like an inexhaustible encyclopedia of universal knowledge, informed her baby about the birds and the beasts and the flowers and the trees. She discussed with him the cause of day and night; of winter's storm and summer's calm; the mysteries of the earth and sea and sky. She explained as best she could the marvels of the sun and moon

and stars and the grandeur of the far-off Milky Way.

And the little one at night upon his knees, at mother's side, with mother's hand upon his head, learned to say in the lisping

accents of childhood:

"Now I lay me down to sleep,
I pray the Lord my soul to keep,
If I should die before I wake,
I pray the Lord my soul to take,
And this I ask for Jesus' sake.

Thus from the day of the birth of her babe, "toiling, sorrowing, rejoicing, onward through life mother goes," generously giving the best of her thought and energy and effort and life to make of her child a successful, useful, and righteous woman or man.

But until-

'The stars are old, And the sun grows cold, And the leaves of the judgment book unfold—"

no one will ever know the full measure of service the mothers of earth have constantly rendered their children. The following touching story illustrates the fact that the average

mother is ever ready to sacrifice as sublimely for her children as the mother pelican is said to sacrifice for her young by feeding them the lifeblood from her breast:

them the lifeblood from her breast:

"A poverty-stricken Italian woman was by the death of her husband compelled to work hard in a 'sweatshop' to support her three little children. A humane organization learned that this unfortunate woman was in the last stage of consumption and endeavored to take her from her task. But she resisted and continued to work until she died of a hemorrhage. During this martyr's last moments someone inquired of her why she had worked so hard and so long. And she gasped, 'I had to work to get the grub for the kids.'"

Greater love than this has no woman shown. She laid down her life for her children.

Just such love as this poor, dving Italian woman had for her

Just such love as this poor, dying Italian woman had for her

children every other mother has for her own.

In token of our appreciation of the great boon of maternal devotion which we all enjoy, or have enjoyed in the days gone by, let us habitually exalt the name, commemorate the memory, and sing the praises of our mothers, and let us devoutly beseech our Heavenly Father to love them and keep them, and shower His richest blessings upon them forever and forever.

'O mother, thou wert ever one with nature, All things fair spoke to my soul of thee;
The azure depths of air,
Sunrise and starbeam, and the moonlight rare,
Splendors of summer, winter's frost and snow,
Autumn's rich glow, bird, river, flower, and tree.

"Mother, thou wert in love's first whisper, And the slow thrill of its dying kiss;

In the strong ebb and flow of the resistless tides of joy and woe; In life's supremest hour thou hadst a share, Its stress of prayer, its rapturous trance of bliss.

"Mother, leave me not now when the long shadows fall athwart the

Hold thou my soul in thrall till it shall answer to a mightier call, Remain thou with me till the holy night puts out the light, And kindles all the stars."

Annual Convention of the Iowa Chapter of the National Association of Postmasters

EXTENSION OF REMARKS

HON. CLYDE L. HERRING

OF IOWA

IN THE SENATE OF THE UNITED STATES Friday, May 19, 1939

ADDRESS BY HON. JAMES A. FARLEY AT DES MOINES, IOWA, MAY 13, 1939

Mr. HERRING. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Hon. James A. Farley, Postmaster General of the United States, at the annual convention of the Iowa Chapter of the National Association of Postmasters, held at Des Moines, Iowa, May

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am delighted to be back again in the Hawkeye State; a State identified throughout the Nation by its culture and its agriculture. Iowa excels in many things, but I dare say that few of you realize the important place it holds in the Postal Service, particularly its rank insofar as rural delivery is concerned. It is a fact that Iowa is among the first four States of the Union in the number of rural routes established and in mileage traveled by rural carriers. Ordinarily when we talk about the Post Office Department we naturally turn to those features relating to the handling of mail matter, for after all the post offices were established and post routes inaugurated with the sole idea of collecting, distributing, and delivering letters, papers, and parcels. The handling of this part of the business is quite a task for the postmasters and postal employees, as well as for the Department itself. However, on acpart of the business is quite a task for the postmasters and postal employees, as well as for the Department itself. However, on account of its intimate relation with business and with every man, woman, and child in America, the service has been selected by the Congress as the governmental agency to perform many other functions. To illustrate:

On June 30, 1938, our postal-savings bank had on hand more than \$1,200,000,000 to the credit of depositors. We had more than 8,000 saving depositories in operation and were serving more than 2,700,000 depositors. During the fiscal year ended June 30, 1938.

2.700,000 depositors. During the fiscal year ended June 30, 1933, the sales of United States saving bonds in post offices amounted to more than \$416,000,000, an average of more than \$34,000,000 per month. Domestic money orders in the amount of \$2,146,000,000 were issued during the last fiscal year, with payments slightly

exceeding that amount.

The postmasters also issued more than \$33,000,000 in international money orders, with slightly in excess of half that amount paid. Other features of our strictly business and banking operations could be enumerated, but these are sufficient to indicate the importance of this Department in the daily routine of industry and correspond to the control of dustry and commerce.

The postmasters of America are to be commended on the manner in which they carry on not only the mail service but the financial operations of our post offices. While it is true that the Department, particularly under this administration, has improved its accounting methods, enabling it to have better control and up-to-date information on the service, yet the accounts in the individual post offices are the postmasters' personal responsibility, and the promptness with which you have performed this most important function is a credit to all of you.

Postmasters have also responded in an enthusiastic manner to

Postmasters have also responded in an enthusiastic manner to every appeal that has been made to them by the Department. You have given freely of your time, and in some instances have been out of pocket personally in carrying on campaigns for greater use of postal facilities and in conducting other governmental activities which were nonpostal.

Your work in connection with Air Mail Week will be of lasting benefit to the Department. This campaign was carried on almost a year ago and we continue to notice the effect of increased airmail poundage. A great deal has been done to publicize this feature of the service, but there is much more to be done. There are still many people who do not fully understand the very fast schedules in effect throughout the country in our air-mail system.

Similarly, there are many businessmen who are not fully aware of the other advantages offered.

of the other advantages offered.

Last year the Department inaugurated a program of activity publicizing the postal services, and it has proven beyond doubt to be not only an effective method for increasing the use of postal facilities but has created good will. During the month of September we stressed the use of first-class mail, followed by National Letter Writing Week. These activities produced results beyond our expectations. In November there was inaugurated a vigorous campaign for the greater use of parcel post. Reports from all parts of the country have disclosed that in many instances firms who were interested as the result of the campaign and availed themselves of the service offered have had a substantial increase in business. increase in business.

All around us there are signs of better business conditions and we should do our part in helping this condition along. I have no idea that we should enter into active competition with private business. In fact, I am unalterably opposed to that procedure. Everything we do should be calculated to assist and encourage

private enterprise.

We have a service with so many facilities that are not clearly understood by many businessmen and many private citizens that it seems to me to be our duty to make known these things and their advantages to those who might profit by their use. In this connection I want to urge postmasters and postal employees to bear in mind always that in conducting campaigns for increasing the use of postal facilities it is their duty to point out to the businessmen and women in their communities not one, but all, of the services available, and always be sure to bring to their attention the most economical—that is, the service that can be provided to meet their needs at the cheapest available rate. Business organizations and business people generally know from experience the unsatisfactory results that come from attempting to sell a customer something he does not want or does not need, and you will make a most unfavorable impression if you try that.

To sum up this situation, I feel I should admonish postmasters that in their efforts to publicize the service they should not place themselves in the position of actually soliciting business, and certainly they must confine their activities to the area included within their own local postal district. We have a service with so many facilities that are not clearly

their own local postal district.

Your first duty, of course, is to safeguard the interest of the public by properly managing the service under your control so as to insure the prompt and efficient handling of the existing postal business in your city. If you are courteous, industrious, and faithful in this, I am quite sure your activities along other lines will be properly.

will be proper.

Undoubtedly many of the postmasters will continue to serve for a long time to come. It may be that many of them feel that this country has progressed so rapidly that in our public services, transportation, and public utilities of all kinds, we have about reached the height of perfection. I make no claim as a prophet, but I am convinced from observation, and this, of course, is only my personal opinion, that we are only on the threshold of the real development of America. Within the past 30 years we have made greater strides in transportation, in the use of the telephone, telegraph, and radio than were made in all of the centuries preceding. It is an American trait to want to live better, to live faster, and get where we are going quicker than our fathers did. Our scientists and our engineers every year are developing something new to add to the comfort and convenience of our people. Many new things, such as television, are simply awaiting mass production to make them available for the everyday use of everyone.

The Postal Service will progress with the Nation's progress and we must be ready to meet those conditions as they develop. Just a few days ago we fixed the rate of postage for carrying mall to Europe by airplane, and the new trans-Atlantic air-mail service, which we are now inaugurating, will soon be operating on a regular schedule. The rate of postage for this service will be 30 cents for one-half ounce to any point in Europe. I dare say there is not a man or woman in this room who would have believed such a thing to be possible if someone had suggested it even 10 years ago.

We are living in a great age with many opportunities absed of us Undoubtedly many of the postmasters will continue to serve for

to be possible if someone had suggested it even 10 years ago. We are living in a great age with many opportunities ahead of us. We have much to be thankful for and a great deal to look forward

to in America.

As I have said before, business is good. We know that when as I have said before, business is good. We know that when postal receipts are breaking all previous records as they have been during the past 3 years, there is plenty of business activity in America. Some of our economic problems are difficult to solve, but that condition is world-wide. We in the United States are so much better off than the people in any other country in the world that it seems to me we should be very happy that here in this feet lead we may like our sum likes in sum to be some the said that here in this

that it seems to me we should be very happy that here in this fair land we may live our own lives in our own way.

The people in the Postal Service are particularly fortunate. They have regular employment, good working conditions, and good pay. That is as it should be, for the Postal Service must take the lead in setting labor standards, not only for other Government departments but for private business as well. I think all postmasters and all postal employees understand that the Roosevelt administration has maintained a most liberal attitude toward the Postal Service and postal people.

has maintained a most liberal attitude toward the Postal Service and postal people.

I am glad to have had the opportunity to do my part in adjusting working conditions, particularly in providing the shorter workweek, which made jobs for thousands of men who were on our substitute rolls, and in many cities provided new jobs for those who were listed on eligible registers awaiting appointments. It is a pleasure also to say to you that we have overcome, by increased efficiency on the part of our personnel, and by increased

business that has come to us, the additional cost of this shorter

workweek.
In 4 of the 5 full years that I have served as Postmaster General we have balanced our budget for that part of our services which we have rendered to the public for hire. Under this administration we have adopted sane, sensible business principles. We have improved the service to the public; we have improved the condition of the workers; and we have improved the fiscal condition of the Department. In saying "we" I do not mean to leave the improved that I arrespondituded the graduate of the responditude of the condition of the proposed of the condition of the services that I arresponditude the graduate the graduate of the services are the services as the services are the services and the services are the servi the Department. In saying "we" I do not mean to leave the impression that I personally claim the credit nor do I give the sole credit to the departmental staff in Washington. I do say that under our leadership and under the policies we have adopted in Washington, with the cooperation of postmasters and postal employees, we have revitalized a great public service. For that everyone connected with the Service has a right to be very proud indeed. I want all of the postmasters and employees in the State of Iowa, to know that I am deeply appreciative of the fine work they are doing:

know that I am deeply appreciative of the fine work they are doing; and I want to urge them to keep up their confidence, to be happy and cheerful in their work, and to prepare themselves for the bigger opportunities and greater responsibilities that the future holds for them.

Mother's Day Addresses

EXTENSION OF REMARKS

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, May 19, 1939

RADIO ADDRESS BY W. J. CAMERON AND ADDRESS BY HON. JAMES J. DAVIS, OF PENNSYLVANIA

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered on the Ford Sunday Evening Hour by Mr. W. J. Cameron, May 14, 1939, entitled "The Mother's Dream," together with a brief address of my own on the same subject delivered the same day to the Women of the Moose at Philadelphia.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

RADIO ADDRESS BY W. J. CAMERON, MAY 14, 1939

In honor of Mother's Day, students of the Edison Institute and the Greenfield Village schools are giving on this program tonight an extended version of the school-day morning exercises in Martha-Mary Chapel. Colonial in style, this chapel, with its old brick walls, its Christopher Wren spire, and its bell that was cast by Paul Revere's son, is known to all that visit Greenfield Village. The chapel's presence there may be taken to say that an instructed mind, trained initiating and indementary are not enough to be seen and a trained initiative, and judgment are not enough; to choose and serve the right, so far as it is given us to know the right, requires also an enlightened conscience. Early American philosophers said that to be is better than to do; at Greenfield Village it is held that to be and to do is better still.

Mother's Day began to be observed about 31 years ago, and was established by Presidential proclamation in 1914. Someone had discerned what seemed to be a lack of appreciation of their parents on the part of sons and daughters. The expansion of this country and a consequent separation of families were in part responsible for this, and in part the desire of parents to be as independent of their children as their children desired to be of them was responsible.

sible. But mostly the seeming indifference of the younger generation was just the slowness we all experience in getting our eyes open. In youth we accept our parents as we accept the trees, the clouds, and the sun; they are part of the world scene; they serve us. Often, long years after, when we have children of our own, and when perhaps the old loved faces have vanished, we begin to realize the detection, that shielded our inforce and endured the themselves. devotion that shielded our infancy and endured the thoughtless exuberance of our youth. Hence it is that the real celebrants of this day are those who, having reached maturity, look back and clearly see the things to which then their eyes were holden. That is the true Mother's Day, when soon or late there dawns on us the sense of what a mother was in our unknowing years. But it is competitive, rether bitter, representing our billiness and the sense of what a mother was in our unknowing years.

sense of what a mother was in our unknowing years. But it is sometimes rather bitter remembering our blindness, unless we know—and of it we may be quite sure—that mother understood this also and was content to wait the verdict of our later years. So today has been celebrated in a multitude of different ways and moods according to the insight we have attained. But what do mothers themselves think of this day? Certainly it was not they who put it in the calendar. There are many things for which they gladly would forego the set observance and its offerings. Indeed, would mothers place themselves in the center of the picture at all; would they not rather their children were there? All the pleasant would they not rather their children were there? All the pleasant

things that Mother's Day evokes—the sweets and flowers, the long-delayed letter, or the long-awaited visit—let not one of them be diminished; but what gift would she prefer had she the choice?

She would choose that her sons and daughters should be individuals, intelligent, honorable, and independent. Not tawdry copies of cheap and perishable fashion. If you talk what everyone is talking; if your opinions come of hearsay rather than of thought; if you chew what everyone is chewing, and sing what everyone is singing, and drink what everyone is drinking, and wear what everyone is wearing; if you read what everyone is reading and slang what singing, and drink what everyone is drinking, and wear what everyone is wearing; if you read what everyone is reading and slang what everyone is slanging—without having your own reasons for doing so—for lack of courage not to do so if you don't want to, then you hardly can be said to be an individual. You don't need a mind. You will just be moved along with 20,000,000 other robots, and in a few years you will be wondering what's wrong with the world. Be individual! Have a reason for what you do! Don't paint your mind with every intellectual cosmetic that appears, like those complexions that flare at us in different tints from week to week; give plexions that flare at us in different tints from week to week; give your own tastes and intelligence a chance. Without the better qualities a mother still will love you, but with them the pain of love

qualities a mother still will love you, but with them the pain of love will be lightened by a genuine pride.

And having made yourself what you were meant to be, a mother would choose as a way to honor her that you should begin to make the world what it was meant to be. There was a Teacher of whom your mother may have told you in childhood, a Teacher who once placed a child in the midst of his grown-up followers, as if to say, the world is to be judged by the child, and were anyone to make life impossible for the child, it were better for him that a mill-stone were hanged about his neck and he were drowned in the make life impossible for the child, it were better for him that a millstone were hanged about his neck and he were drowned in the
depth of the sea. A mother thinks very much the same way. To
her a fair path for the child—not a path that eases effort, but a
path where no enfranchised evil lurks—is of more importance than
all the pomp and glory of the world. She would ask as a gift on
Mother's Day a society made fit for the child, that we may have a
world fit for the man and woman. A world that is healthful, a sane
world, a world that knows the power of moral principle as the
strongest force that man can wield. A warless world, wise in the art
of living, where self-defeating selfishness is healed of its blindness.

This is the mother dream. And the dreams that mothers dream
come true. Their eyes have caught a glimpse of the Delectable
Mountains.

Mountains.

ADDRESS BY SENATOR JAMES J. DAVIS, MAY 14, 1939

No sentiment is more deeply felt than our reverence for motherhood. Our mothers hold a place in our hearts that no one else can fill. Mother's Day gives a natural opportunity for the expression of this sincere feeling. Anne Jarvis will always be remembered with respect and gratitude for the institution of this day. Fortunately this day has come to mean that we should bring honor and the tribute of praise increasingly to the mothers of America while we have them with us rather than wait until they are dead. I am glad to pay tribute to my own mother on this day.

when I think of mother my thought goes back to my boyhood days. I remember my mother as she was then. I remember the light of love on her face, the sweet music of her voice, the hard work in the home she did for all of us, and the uncomplaining fortitude which kept her faithful and true to the very end of her days. Nothing that I can say now will add to the beautiful way in which she lived. Nothing that I can do now will add to the sacred memory of those days. It is enough to know that the inspiration and the purity of that love-filled life has always been near to guide me. When I have known success it has been because I fulfilled my mother's purpose for my life; when I have known fallure and defeat it has been a lost contact with her ideals. ideals.

The qualities of life that we prize in the true mother are virtues wherever they are found in human life. The mother's thought for her children is the spirit of the pioneer. That spirit of provision, watchcare, forward-looking vision is essentially the quickening impulse of creation and genius. The mother has this gift for taking infant helplessness and turning it into masterful strength. The mother takes weakness and makes it strong. Like a pioneer the true mother explores the difficult unknown places of life and reaches out to discover something new and unique. Her children mark new frontiers in the realm of human love and

the mother spirit.

The mother spirit is represented in some of our noblest institutions of government. The Red Cross and many of the newer governmental agencies have been set up with the thought of sympathetic human provision to care for times of special human need. The purpose back of these organizations based in benevolence and The purpose back of these organizations based in benevolence and good will has the wholehearted support of all of us. And even when the provision made has been inadequate or one-sided, the guiding purpose of fundamental human sympathy has not been forgotten. Despite the mistakes of this distressing time in American life, all of us are glad we live in a land where mass starvation is not tolerated and where the liberty of good will still prevails. This is grand mother spirit of America.

Mothers have a natural inclination for the abundant life. Mothers are naturally generous. They want some extra cookies in the cooky jar, a second cut of pie, and surpluses all around. The mother does not expect these bounties to come without work. Nobody works any more than mothers. They know that if there are to be abundant resources for the family there must be abundant work by the family providers. This mother spirit of abundance is needed in America today. We have become afraid of our sur-

pluses and our fear has reduced us to poverty. We need the strong, brave spirit of motherhood that will encourage us to produce bountifully and make provision for all our human needs, not just a fraction of them. The mother spirit of America should be ashamed of the timidity, scarcity, want, waste, and loss of these days. The mother spirit has the far-away look. Mothers look to the future and make provision accordingly. The difficulties and perplexities of the present hour are not igno:ed, but they are not allowed to obscure the vision of better days to come. Mothers are always found enlisted under the banners of optimism, courage, and faith in the future. Only thus can they walk triumphantly through the valley of the shadow of death. The mothers of America set the standards of faith and ultimate victory for all of us. They have set in us forever the will to win.

us. They have set in us forever the will to win.

Every day I receive hundreds of letters urging that I do my utmost to keep America out of war. I have pledged to do my very best for the cause of peace. I do not know any self-respecting American citizen who wants America to fight on foreign soil. Most of the letters in behalf of peace come from mothers. They tell me of their cause of their distress less they he called to fight and die on foreign sons and their distress lest they be called to fight and die on foreign battlegrounds. I have yet to receive a letter from any mother saying that they are unwilling to have their sons defend our own shores and hearth fires. I am convinced that the mothers of America are a great moral force for peace, and if they could have their way in the world there would be no war.

the world there would be no war.

Mothers of America are on the march today, not to war, not to the carnage of battle, but to enlarged personal responsibility for the conditions of peace, production, and plenty that constitute our great American heritage. The enterprises begun by our forefathers are to be undertaken anew. We have hope that they shall have a better chance for fulfillment. The best tribute of praise we can give to the mothers of yesterday is to make more tolerable the living conditions of the mothers of today and the prospective mothers of tomorrow. This we hope to do, not by force of arms but through the will to peace and the blessings of a natural abundance.

Appropriations for Relief

EXTENSION OF REMARKS OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1939

Mr. MURRAY. Mr. Speaker, I ask leave at this time to incorporate in the RECORD information from Col. F. C. Harrington, Administrator of the Works Progress Administration, showing the total Federal funds used for direct and work relief from 1933 through December 31, 1938. Also information from the United States Department of Commerce. showing the assessed value of property subject to general property tax by States, and the estimated population of the States from the Census Bureau.

The matter referred to is as follows:

	Estimated population, July 1, 1937	Assessed val- uation of States	Total direct and work relief received by each State
Alabama	2, 895, 000	\$924, 790, 574	\$120, 298, 000
Arizona	412,000	359, 991, 270	42, 376, 000
Arkansas	2, 048, 000	427, 173, 085	102, 639, 000
California.	6, 154, 000	1 7, 249, 522, 232	489, 769, 000
Colorado	1, 071, 000	1, 103, 563, 605	110, 053, 000
Connecticut	1, 741, 000	2, 987, 739, 711	95, 432, 00
Delaware	261, 000	1 306, 691, 902	8, 578, 00
District of Columbia	627,000	1, 780, 268, 924	40, 000, 00
Florida	1, 670, 000	601, 953, 681	114, 800, 00
Georgia	3, 085, 000	1,060, 314, 247	122, 984, 00
Idaho	493, 000	381, 047, 373	37, 360, 00
Illinois	7, 878, 000	1 5, 153, 117, 918	703, 379, 00
Indiana	3, 474, 000	5, 066, 063, 791	249, 611, 00
Iowa	2, 552, 000	1 3, 242, 805, 954	95, 973, 00

Figures Show Farmer's Income Increases Under Roosevelt Administration and Fell During Period of Administrations of Three Republican Presidents—Harding, Coolidge, and Hoover

EXTENSION OF REMARKS

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Friday, May 19, 1939

Mr. COCHRAN. Mr. Speaker, the gentleman from Wisconsin [Mr. Murray] today made a speech in reference to the Wisconsin cheese interests, and during the course of his remarks he referred to the reciprocal treaties. In support of his argument he produced two charts. I did not have time to examine both charts but I noticed in one column of one chart he had figures relative to the percentage of national income enjoyed by the farmer.

It is my purpose to refer to the gentleman's speech, using his own figures and to make a few observations of my own. Be it remembered I use the figures on the chart of the

gentleman from Wisconsin [Mr. MURRAY].

Under the column, percentage of national income, it shows the percentage in 1932, the last year of the Hoover administration, 6.23. You see by the chart there was a drop year by year from 1920 when the percentage was 15.44, during which period the Republican Party was in control.

Here is what the gentleman's own figures show during the Roosevelt administration:

1932	6.23
1933	8.43
1934	9.04
1935	9.80
1936	9.77
1937	9.73

By the gentleman's own chart it is shown an increase of 2.20 in 1933, the first year of the administration of Mr. Roosevelt, over the last year of the Hoover administration. The gentleman from Washington [Mr. Leavy] calls my

The gentleman from Washington [Mr. Leavy] calls my attention to another matter, the official wheat closings on the Minneapolis and Winnipeg exchanges as of May 16. The official figures follow:

Minneapolis	
MayJuly September	77½ 78½ 78
Winnipeg	
May	63 % 64 % 66

This shows an average of about 13 cents on each quotation in favor of the American wheat grower.

LXXXIV-App-132

I have repeatedly stated on this floor that no matter what you do for the American farmer by legislation you are not going to cure his ills until you find a way to get to the farmer's pockets some reasonable part of the spread between what he receives for his products on the farm and what we pay to place the same products on our table. Get him 50 percent or even 25 or 15 percent of that spread and you will find agriculture prosperous and happy and when agriculture is prosperous and happy the great industries in the cities will be prosperous and happy for the farmer will then be able to buy what we manufacture in our factories.

Our Republican friends made a great deal of noise here the other day when the President ordered the Navy to buy Argentine canned corned beef. They are going to find they talked a little too fast. The truth of the matter is we do not have first-class corned beef in this country in sufficient quantities and of sufficient quality to meet Navy and Army specifications for canned corned beef. Why? It is, as I showed the other day, because our packers can make more money using the beef that was formerly used for canned corned beef in manufacturing hot dogs and hamburger. The hundreds of thousands of hot-dog and hamburger stands throughout the country pay a higher price for this beef, formerly used by the packers in making canned corned beef, than the packers can sell their canned corned beef for and, as a result, the packers, as usual, go after this money.

Not a farmer or stock raiser in the United States, nor a packer, was hurt in the least by the purchase of the Argentine canned corned beef, but on the contrary, the packers used their products to increase their income by using it for hot dogs and hamburger rather than making canned beef. If we tried to make the packers use this class of beef for canned corned beef, then you would hear the cry "Keep the Government out of our business."

Markets-The People's Price Forum

EXTENSION OF REMARKS

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Friday, May 19, 1939

ADDRESS BY HON. FRED L. CRAWFORD, OF MICHIGAN, BEFORE THE COMMODITY CLUB, OF NEW YORK, MAY 18, 1939

Mr. CRAWFORD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address delivered by me last night before the Commodity Club, of New York City, and broadcast over the network of the Mutual Broadcasting System:

In going up a lonely foot trail thousands of feet above sea level in a mountain Province of the Philippine Islands about 3 years ago, I passed a half-civilized Igorrote walking down the slope with a rooster under his arm. My companion was a man learned in the ways of the natives, and I asked him where the native was going. My friend replied, "He is on his way to market." This reply aroused my curiosity still more, and these questions passed through my mind: Where was the market? What kind of a deal would the native make? On what basis would he bargain, and for what, when he reached the market?

Before all these questions could be answered by my friend, we met other Igorrotes returning from market. I noticed some of them carrying bottled soda pop and chewing gum. I learned that they would walk miles and miles over foot trails, up and down the mountain sides, through rain and heat, for what? Merely to trade

mountain sides, through rain and heat, for what? Merely to trade a rooster for a package of gum and a bottle or two of pop.

These half-civilized natives knew nothing of the mechanism of markets, the system which brought chewing gum and pop to the little shop at the seaside and would take their fowls in exchange.

This incident gives you a primitive illustration of how markets function, providing the agency through which people all over the world exchange what they produce for something they want and can use.

Of course, the economist might insist that the Igorrote should have traded his rooster for a shirt or some other article classed

as a necessity, but the native preferred chewing gum and soda pop. He made his own free choice and it is just such transactions that keep the world going. The Igorrote by thus exchanging his rooster aided in giving employment to those who produced chewing gum and soda pop and who, by their wages, could buy the things they also wanted.

I doubt if I could give you a better illustration of the theme I have chosen for my talk to you tonight—"Markets: The People's Price Forum." Markets, indeed, belong to the people. The people possess them by inalienable right, for it is the people who produce, who consume, and who, whether we like it or not, will exercise their own judgment in buying and selling.

It was just from such simple beginnings as I have described that mankind over the centuries has built the mechanism that operates

It was just from such simple beginnings as I have described that mankind over the centuries has built the mechanism that operates today throughout the entire civilized world. This mechanism is the commodity market. It has required centuries of toil and study to bring about the degree of market perfection we have witnessed in recent generations. The machinery of the commodity markets today functions so continuously that too many of our people are inclined to assume that the problems involved in the exchange of goods never existed. Others, however, misconstrue those problems and hold that government, instead of tending to its own business in the field of a properly planned money system, must regulate, if not actually operate, the commodity markets.

Now, the industrial revolution has multiplied immeasurably the variety of goods and services which we today accept as mere com-

Now, the industrial revolution has multiplied immeasurably the variety of goods and services which we today accept as mere commonplaces. The list of necessities and luxuries has expanded by leaps and bounds. Thousands of new occupations have been created. Millions of workers throughout the world today do not use the things they produce in mines and mills and factories. They trade their production for money wages and in turn their wages for things they want. In order to do this they must have

a free market.

When you come right down to it, the market is merely the link between the producer and the consumer. It is the mechanism or instrument of exchange, and is just as important as the medium of exchange through which it functions. In spite of its far-flung ramifications, reaching out into every country on the globe, it is a delicate piece of machinery, and any attempt to control its operation or to divert it from its true purpose will prove just as destructive as tossing a monkey wrench into an intricate piece of

operating machinery.

In our specialized productive economy today, with its vast multi-tude of goods and services seeking a market, we have come to registering our opinion of value, of the desirability of consummating an exchange, through the price system.

Ing an exchange, through the price system.

Price is the vox populi of world economic life. It is the people's ballot box, perhaps the only true democracy in the world today. It will tolerate no despot, no autocrat. Price should tell the farmer whether he ought to produce more wheat or cotton or curtail his production. Price tells the consumer whether he can or should buy. It is automatic in its operation. It is the subconscious response of hundreds of millions of people from London to Shanghai, from New York to Singapore.

All of us, whether we be farmers, miners, manufacturers, merchants, or housewives, all have varying and even conflicting ideas of prices, as to whether they are too low or too high. All these groups are influenced by their own economic self-interest.

But when the final consummation is reached, these antagonisms should normally cancel out, so that the price system that weights

should normally cancel out, so that the price system that weights all these interests gives paramount place to the general welfare and represents the highest social and economic objective. It is the and represents the highest social and economic objective. It is the free-functioning price system that passes goods and services into the channels of trade so that goods may be freely consumed and labor may be fully employed. Nor has civilized man ever been able to attain these objectives except through such a system of free

enterprise.

Now, if what I have said appeals to your common sense, it probably is time to ask why we have governments trying to regulate prices and markets through the exercise of a central authority. Why has what we call "planned economy" stepped into the picture? I think the answer is perfectly clear, and I might say, also, that the intentions and objectives should not be harshly criticized. As I have pointed out, we have a multitude of conflicting interests in our economic life, and particularly when it comes to the question of price. Producers all want higher prices. Why shouldn't they? Higher prices mean more buying power, and for the manufacturer they usually mean larger profits. On the other hand, we have the ultimate consumer, and in between the producer and the final consumer we have the merchant, the middleman, the go-between, who wonders when he buys at a high price whether he can pass this increase on to his buyer. enterprise increase on to his buyer.

Then it is easy enough to see why Government takes a hand, particularly in a country where the laws, with regulations proceeding from these statutes, are made by elected representatives. To put it more bluntly, politics is injected into our economic life. Don't draw any hasty conclusions. There is no question that this legislation, these regulations dealing with prices and markets are actuated by the best of motives.

actuated by the best of motives.

However, in the search of solutions for troublesome problems of this character, we wind up finding that we are offered about 57 varieties of remedies. You are familiar with most of them, and they carry some appealing names. What could look more fair than cost of production for farm products?

But whose cost of production is "fair"? Aren't unit costs obviously dependent upon yield per acre? And do not fertility and the weather gods control yields? You can figure out the cost of culti-

vating an acre, but the exact unit cost of production will remain an unknown quantity. It may be true that costs as well as prices control production. But it is the marginal farm, and not the average farm, that functions in this capacity in a free market.

Then we have "parity price." This is an ideal, with its conclusions based on the return to the farmer compared with the price he pays for what he buys. This problem is so interwoven with tariff duties, industrial labor costs, and other elements that the complexities are utterly baffling to the most astute legislative mind. Attempts to bring about an equilibrium between agricultural and industrial prices have forced a resort to subsidies and processing taxes, arous-

prices have forced a resort to subsidies and processing taxes, arousing endless protests from consumers and taxpayers.

And don't overlook the pressure groups. No matter what program is advocated, one organization or another, claiming prodigious voting power, will demand some panacea or nostrum that

will receive sponsorship from the complacent legislator.

Government after government, including our own, has tried price fixing, regimentation of production, attempts at marketing control, promulgating quotas, and what not. Yet, in spite of all these strivings, the desired equilibrium between agricultural and industrial prices evades us like the pot of gold at the end of the

rainbow.

It hardly is necessary for me to go into detail about the classic example of price control and market regulation furnished by our neighbor republic, Brazil. What tragedy could have been more colossal? In the 10 years, or thereabouts, over which Brazil tried to control supply by the burning of her coffee, almost 66,000,000 bags have been destroyed. This is equivalent to two and a half years of world consumption, with some countries finding coffee too costly a luxury for general consumption. Yet it is estimated that if Brazil had sold these millions of bags at a price the world would have paid, she could have discharged her external debt.

Another will-o'-the-wisp chased by Government is "price stability." This concept also had behind it an appealing motive, Sometimes when markets fluctuate violently, we think we would like to be relieved from these disturbing movements up and down, We feel that it would be a great thing if stability could be ob-

like to be relieved from these disturbing movements up and down. We feel that it would be a great thing if stability could be obtained through Government decree.

We forget that prices change for two major reasons—first, because of the activity of the people who produce more or less or consume more or less; and, second, because money is not of constant purchasing power. We struggle with the problem of finding a way to eliminate this disturbing monetary influence; but that way is not the way of governmental pegging of prices or meddling with markets. When we get that kind of price stability we find that what we have attained is not a desirable equilibrium, but paralysis. The very hour we begin to fear the mechanics of the market, at that moment the blood stream of trade circulation begins to clog.

begins to clog.

Whatever methods may be considered in maintaining free, healthy markets on either the commodity or monetary side, let us weigh well the principle enunciated by our distinguished Under Secretary of State, Dr. Adolph Berle, Jr., when he addressed some suggestions to our temporary economic committee last summer, see follows:

"Regulation is always inherently dangerous. Finally there is always the certainty that * * * the regulations will be used for purposes which are either corrupt, political, or doctrinaire. Any of these three may produce violent and extremely unhealthy results."

Government intervention in markets and prices calls forth end-

Government intervention in markets and prices calls forth end-Government intervention in markets and prices calls forth endless regulations and restrictions. I have before me a copy of the Federal Register, the issue of May 2, 1939. In page after page it lists the regulations pertaining to the cotton marketing quotas for the current season. If you will look over this puzzling exhibit, you will wonder how the farmer can have the time to answer the questionnaire and conform to the regulations and still produce a cotton crop. Yet, no doubt, if we are to have supervision over markets and prices, we shall have attempts to control farm production and marketing—all of which will continue to prove utterly futile. utterly futile.

If and when legislators favorably act on measures giving a ning board the power to fix quotas, set prices, and fiddle with the market, these same legislators will later press the planning board to reduce quotas in order to increase prices or increase quotas to effect prices downward. For factual support to this statement, I cite recent developments in some of our control systems. No capital structure of proprietor, partnership, or privately owned cor-poration can survive the constant jiggling of quotas and prices operated in slide-rule fashion by an administrator or a planning Producers and sellers, consumers and purchasers are too

owners and operators of private property should not be compelled to go groping along in a maze of uncertainty, with a feeling that a planning board is lurking behind every rock and tree, ready, on and in response to impulse, however generated, to put prices up or down to their disadvantage.

or down to their disadvantage.

The ownership and operation of private property is our greatest institution. It is the very basis of our system of taxation. It is the financial source of Federal and State sovereignty. Its successful operation is the reason for our people enjoying the highest standard of living attained by any race on earth.

To maintain this institution of private property, we must have buyers who will buy, sellers who will sell, lenders who will lend. They must not be afraid.

There must be confidence. I go to my attorney and he tells me what is the law. When the Administrator or the Planning Board

is authorized by law to jiggle the price and the quotas, the law becomes inconsequential. What the people then want to know is what will the administration do? Not knowing what will be the

what will the administration do? Not knowing what will be the next impulse of the jiggler, the market becomes a mere gambling den. Finally the would-be buyer withdraws from the scene, the equation is broken, goods cease to move, and paralysis prevails.

Through the free market and its mechanisms the products of specialized labor and capital are given values of time and place which could not otherwise exist. Without such creation of values through unhampered trading industry finds itself subject to creeping paralysis and cannot fully employ all of our manpower and capital.

In case of war, when the life of the Nation is at stake, and freedom faces catastrophe, anyway, government probably is justified in
exercising a certain amount of control over prices and markets.
In normal times, when the free flow of goods into the channels of
trade is vital to the general welfare, such exercise of authority not
only is unnecessary and restrictive but scheduled for failure.

If you want to know why, here is my answer: Government planners who issue regulations and control decrees make the mistake
of believing they are dealing with things. They are not. They

of believing they are dealing with things. They are not. They are dealing with human beings, and those human beings are dealing with the stern realities of their existence and their environment. Those realities are planned, not by men but by infinite Nature herself in ways which, however mysterious, cannot be changed by majority mandates or by bureaucrats.

changed by majority mandates or by bureaucrats.

Market prices are not governed solely by the statistics of supply and demand. After all, what is supply and what is demand, except the reaction of the people themselves to the conditions of their existence? Human behaviorism is the deciding factor. The market belongs to the people. It is in the market place that they express their judgment on values. The market degenerates into a mere "Charlie McCarthy" when it gets into the hands of government. Its imperative requirement is freedom. Nowhere else is liberty more precious. The people will submit to conscription of their youth for war, to taxes amounting to confiscation, but they will take a final stand on their judgment of prices, for when they speak it is not as individuals, but as the people—all the people over the whole of our mechanized, monetary world of trade.

Shall Relief Be Returned to the States?

EXTENSION OF REMARKS

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Friday, May 19, 1939

ADDRESS BY HOWARD O. HUNTER, DEPUTY ADMINISTRATOR OF THE WORKS PROGRESS ADMINISTRATION

Mr. VOORHIS of California. Mr. Speaker, in order to bring before the House in fair manner all sides of the pressing question of the future of the Government work program, I am pleased to include in the RECORD the following speech by Mr. Howard O. Hunter, Deputy Administrator of the Works Progress Administration:

When we wash up the exaggerations of partisan attacks on the W. P. A. and discount fishing expeditions and witch huntnig, there remains a really major issue in this country on unemployment relief. This issue is, Who should administer and pay for relief for the unemployed, and how should such relief be given? It is a question of whether the present Federal work program for the unemployed should be continued, or whether the Federal Government should return to a system of grants-in-aid to States, with the States and local governments administering unemployment relief.

I have participated in every form of relief since 1929, from private charity—through Hooverism—up to the W. P. A.
Out of close experience with unemployment relief I have reached

some very definite personal convictions.

The first of these convictions is that unemployment today is a national problem and not a local one. There is no local community in America today which can do anything about unemployment. The complexity of our system of industrial enterprise is such that what happens in one part of the country may severely affect employment at a far-distant point. And unemployment never hits evenly in all localities.

The second conviction I have is that unemployment in private enterprise is no longer an emergency matter. The increased productivity of labor through mechanization of industry and agriculture and increased efficiency of management has made it possible for a vastly increased production of all kinds of goods, with a decreasing manpower. This means that private enterprise in this country cannot for many years to come absorb all of the unemployed, no matter what government does or does not do. Government spending and stopping the W. P. A. will only increase the number of unemployed.

And the fact that our business and industrial system cannot absorb all of our unemployed is not an indictment of the system. I would not advocate the abolition of any labor-saving device or any mechanical improvement. I would advocate an honest recognition of the fact that there is no way conceivable of reemploying all of the able-bodied unemployed, in any short period of time in private industry. And I would advocate a spirit of intelligent cooperation on the part of business in meeting this problem of

democracy.

And this leads up to my third conviction, that a program of public work for a considerable number of the unemployed is an essential factor in the continuation of a decent democratic government of the program of the program of the program of private ernment and in the preservation of our economic system of private

Now, this issue of Federal versus local administration of relief is by no means a new issue. Previous to 1933 there wasn't anything but local financing and administration of relief, and there was

precious little of it.

As for grants-in-aid to the States for relief, the present administration for 2½ years practiced that system. And it simply did not work well. It worked badly because of the wide variety of standards of relief and administration. In too many parts of the country there was no recognition given to the fact that these newly unemployed people, that had grown in numbers from a handful to millions, were a new kind of poor people. They were not the same old paupers who had been handled under the archaic poor laws in most of our States. They were able-bodied unemployed citizens—a cross-section of America.

The New Peal in 1925 heldin newtoned by the same content of the same content

The New Deal, in 1935, boldly ventured into a great democratic program of providing real work on useful public projects for these unemployed citizens. This program has been administered and largely financed by the Federal Government with, however, a great degree of decentralization and local authority on many important

degree of decentralization and local authority on many important fronts.

It is now being proposed that this system of a Federal program of work for the unemployed be abandoned and that the Federal Government go back to a discredited system of giving grants-in-aid to States and localities for relief.

I do not mean by this that the principle of Federal grants-in-aid to States is either discredited or unsound in other directions. For instance, the grant-in-aid system for public highways has worked well for many years. But the unemployed are not highways and you can't talk with engineering accuracy about the unemployment problem in any State or locality as you can about a highway. No grant-in-aid scheme can be made flexible enough, or be made to work fast enough, to take care of the relief of the unemployed.

I want to discuss this proposal on its merits. Of course, I know, and you know, that those people who propose a return of relief to the States are members of the group in opposition to this administration, and that they have themselves made this a political issue.

* * But let us examine their arguments. I know of no better exponent of these arguments than Senator TAFT, of Ohio, who is a spokesman for this plan, and who is recognized as one of the important leaders in proposing this change. Senator of the important leaders in proposing this change. Senator TAFT's noted and respected brother, Mr. Charles Taft, has also long been an advocate of the abandonment of the Federal work program by substituting a grant-in-aid system for direct relief, which he proposed 2 years ago as chairman of the National Community Chest Association.

The first argument is that local people know best who is in need of relief and can best determine who should get relief, and if there are to be any work projects, these local people also know what projects will be most beneficial.

there are to be any work projects, these local people also know what projects will be most beneficial.

As to this argument, I agree. And let it be said emphatically that in the operation of the present Federal work program through the W. P. A., no one except these same local people does determine who is in need and who should get W. P. A. jobs, and it is local public officials in these same local communities who initiate and sponsor work projects for the W. P. A. On these two essential points the Federal W. P. A. is and has been effectively decentralized. So, obviously, there is no point to this argument.

The second argument raised is the one of States' rights. I am not sure that I can get through my head what States' rights have to do with a great national problem like unemployment. But I assume from the arguments that it means that the States should determine standards of relief and standards of work, as well as administration. Now, experience has shown that when the States had control of the administration of Federal relief funds, there were 48 standards of relief. In fact there were thousands of standards, because in general the States passed the job on to the counties and townships. Relief under this system ranged from nothing to \$3 a month in many States, on up to about \$35 a month in a very few others. on up to about \$35 a month in a very few others.

Senator Taft says that work would be given to the unemployed under a grant-in-aid system and cites the fact that it was given before the Federal W. P. A. It is true that in a few places work was given—but how? No wage standards, work for grocery orders, and not real work at that, but largely "made work."

Since the Senator is a spokesman for this proposed change, let us use his own State of Ohio, as an example. In fact he uses it himself as an example, and says that even today the local government in his own town of Cincinnati provides a

work program for its own relief clients. Yes; and what kind of a work program is it? The report of Cincinnati's own public welfare department says that the work consists of projects for maintenance of normal city enterprise—which obviously decreases regular employment—and that the pay on these projects is 25 cents an hour. But wait a minute—the people do not even get the 25 cents. They actually get 12½ cents and the other 12½ cents is dished out in grocery orders and they work up to 6 days a month. Here we uncover an essential fact behind the proposal to abandon the Federal work program, which is that the opposition doesn't want a real work program, opposition doesn't want a real work program.

proposal to abandon the Federal work program, which is that the opposition doesn't want a real work program.

A third argument which is put up in favor of the State administration scheme is that administrative costs will be greatly reduced. On this point facts show the contrary. The administrative expense of relief under State administration never got below 10 percent of the total, and today the average administrative expense of State relief administrations is about 16 percent. Compared with this, the administrative expense of the W. P. A., which is limited by law to 5 percent, actually averages less than 3½ percent. The fourth argument—and I am sure that the proponents of this plan must have their tongues in their cheeks when they propose this one—is that if relief is returned to the States, it will thereby eliminate politics in relief. I just don't believe that any person who has the least realism about American politics will take this argument seriously. With a return of Federal relief to local administration, whatever politics there may be in it now will be multiplied by some 3,000 counties and 12,000 townships. Let us not forget that local politics got so bad under the Federal grants-inaid system that in six States, including the State of Ohio, the Federal Government had to completely take over relief administration on account of local political manipulation. account of local political manipulation.

The fifth argument, and this is the one the boys really go to town on, is that the total cost of relief will be much less if it is handed back to the States for administration. And on this argument I am in perfect agreement. And let me tell you why it will be cheaper. It will be cheaper simply because the work program will be abandoned and able-bodied American citizens who are unemployed will be put back on a dole or nothing. There is not any substantial way to decrease the cost of relief except by taking it directly out of the pockets of the unemployed.

In large and relatively rich States like New York and Illinois.

taking it directly out of the pockets of the unemployed.

In large and relatively rich States like New York and Illinois, under a direct-relief plan, the unemployed might get up to \$23 or \$30 a month per family on an average, whereas they get from \$55 to \$60 a month average per family on a Federal-work program. In most States, according to present State relief standards, they would only get from nothing to \$10 a month. These savings would be made at the expense of the health and decent living of the unemployed.

In the State of Ohio, however, they might not get anything at all if Federal grants-in-aid were dependent on any State contribution. I vividly remember the winter of 1937 and 1938 in the State of Ohio, when State relief broke down completely. The W. P. A. was able to give useful work to 260,000 heads of families in Ohio—which could not have been done under Senator Taft's plan. The great mayor of the great city of Cleveland, a Republican but non-partisan in relief, has stated that the system of Federal work relief for the unemployed had saved his city from disaster, and that if this was turned back to the States for administration it would be a deplorable backward step. a deplorable backward step.

Many of those, though not all, who propose a return of relief to the States do not come right out and say that they prefer a dole to work, but they imply this in every argument they raise. It is clear that many people who propose to abandon the W. P. A. for a system of grants-in-aid to States do not really want the unemployed to work at real wages on useful public projects. What they want is an idle labor pool, given a charity pittance. They do not like a program of work which enables these temporarily unemployed people to maintain their self-respect, bargaining power, and rights of citizenship. of citizenship.

We propose a continuance of work as against a dole, first, because it is the only decent American and democratic way to treat our citizens who are involuntarily unemployed; second, for the reason that it puts money into the hands of these people which is spent quickly in the normal channels of trade and continues to preserve our whole economic system; and, third, because the work these people do for the public is useful work and materially increases the retioned weelth.

And we believe from experience that this can only be done through the flexible resources and administration of the Federal Govern-ment, with local cooperation such as we have today.

There still is much work to be done for the public good in this There still is much work to be done for the public good in this country. We have hardly touched the work that needs to be done on conservation, public-health facilities, recreational facilities, housing, and hundreds of other public improvements. In my opinion, the W. P. A. has been the greatest single expression of democracy that we have ever known in this country. As long as our Government meets its responsibilities for its unemployed citizens in this constructive and democratic way rather than in the destructive way of dictator nations, then these millions of unemployed will continue to believe in democracy and will eagerly say to us: "Give us a chance and we will build you a real America." George Washington's Advice For These Times

EXTENSION OF REMARKS

HON. FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Friday, May 19, 1939

RADIO ADDRESS BY HON. FRANCIS H. CASE, OF SOUTH DAKOTA, FEBRUARY 23, 1939

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered recently over the radio:

address which I delivered recently over the radio:

Advice is cheap. My grandfather used to say that it was the one thing on which the price did not go up during the war. Probably no one wants advice, and indeed, one may observe the headlong rush to arms these days, and readily conclude that words are futile things and that any reference to the words of a man who lived before the days of the steam engine, electricity, and airplanes is utterly foolish.

The Senate of the United States, however, and the House of Representatives still think it worth while to set aside time on each 22nd of February to have the Farewell Address of George Washington read by one of their Members. This year it was read in the House by the Honorable Farrz Lanham, of Texas. When he finished, the House rose, as is its custom, and paid a rising tribute both to the message and its reading. I heard a Member from Michigan, seated behind me, say, "That was a great message."

I wish that all Americans would take time to read that message, Nothing, I am convinced, would do more to help America sensibly and effectively to meet the decisions before us.

Nothing, I am convinced, would do more to help America sensibly and effectively to meet the decisions before us.

The Farewell Address of George Washington was written out of the richness of a patriot's personal experience—the experience of a man who is justly acclaimed as the Father of his Country. Congressman Shanley, of Connecticut, one of the best students of history in the House, says, "No man had greater experiences with foreign governments, emissaries, duplicity, and propaganda than he."

WAR IS NOT INEVITABLE

Today there seems to be a fatalism in which war is taken for granted; a feeling that war will come and that we shall be entangled whether we wish it or not. Into that fatalism, I want to throw some of the words of Washington with as much emphasis as I can.

to throw some of the words of Washington with as much emphasis as I can.

I presume that I am speaking primarily to residents of cities on this intercity hook-up. The terrible thing about modern warfare is the way it destroys cities and wipes out civilian populations. New types of bombs dropped from the air destroy buildings and kill people by concussion without a fragment of steel ever hitting one of the victims. The bombers do not have to hit a target. They only need to come close. Such bombing will stop ships. There will be no more mass invasions of troops on land or sea—not where such explosives are used. These bombs will crush structures and wipe out people as a cyclone wrecks a building and flings timbers and people here and there. Hot, searing flashes of flame will consume city blocks as the giant Zeppelin, the Hindenburg, was consumed in one roar of flashing gas. America would probably survive a war, because defensive measures could stop an invasion, but centers of population will hardly escape tragic punishment. I mention these things because I want to bring home the importance of George Washington's words today, if we would avoid war.

Washington said, "Harmony, and a liberal intercourse with all nations, are recommended by policy, humanity, and interest * *; constantly keeping in view, that it is folly in one nation to look for disinterested favors in another; that it must pay with a portion of its independence for whatever it may accept of that character." "There can be no greater error," he said, "than to expect, or calculate upon real favors from nation to nation. It is an illusion which experience must cure, which a just pride ought to discard."

LEFT HOLDING THE SACK

We are getting that experience. When Woodrow Wilson sat in with the powers at Versailles, what price did they demand for his League of Nations dream? Support for the carving of Europe, Support for mandating islands. Support for transferring colonies, Support for reparations. Support for the terms of retribution and revenge which have made central Europe a spot of turmoil from that day to this.

In more recent times, an administration played with the idea of applying economic sanctions, of quarantining aggressor nations.

Before the idea was cold in the day's press, the expected allies discovered other fish in the Mediterranean that called for their attention and America was left holding the sack to catch the

venom of an antagonized foreign press

venom of an antagonized foreign press.

A few days ago, a morning paper, published in Washington, carried an article written by an ace foreign correspondent, telling how England could not afford to let Franco and his Italian allies get control of a certain island off the coast of Spain. Before that article could be read, because it was on an inside page, the front page carried a dispatch stating that an English boat had helped Franco to occupy the island.

EUROPE HAS HER OWN INTERESTS

I am not criticizing what England and Franco may do in these matters. They know their business and we do not. As Washington said, "Europe has a set of primary interests, which to us have no, or a very remote, relation. Hence, * * * it must be unwise in us to implicate ourselves in the ordinary vicissitudes of her politics, or the ordinary collisions of her friendships or enmities."

There are proper things for America to do in such times as these. We can properly put our own house in order. George Washington said, "As a very important source of strength and security, cherish public credit."

It is difficult to reconcile that advice with the philosophy of spending borrowed money to achieve national prosperity and se-

GOOD CREDIT IS GOOD DEFENSE

"One method of preserving the public credit", he said, "is to use it as sparingly as possible, avoiding occasions of expense by cultivating peace, but remembering also that timely disbursements to prepare for danger frequently prevent much greater disbursements to repel it; avoiding likewise the accumulation of debt, not only by shunning occasions of expense but by vigorous exertions in time of peace, to discharge the debts which unavoidable wars may have occasioned, not ungenerously throwing upon posterity the burdens which we ourselves ought to bear."

I have read the entire address carefully. I have been unable to

find in it anywhere any admonition to accumulate national deficits as a means to prosperity and security. I am unable to find in it anywhere a suggestion that we can borrow enough money to get out of debt. It is said that we should aim for \$80,000,000,000; we are headed toward \$80,000,000,000 all right, but it is an \$80,000,-

000,000 debt, not income.

000,000 debt, not income.

George Washington believed in preparedness—defensive preparedness, but neither entangling alliances, nor blusters of defiance. He said, "It is our true policy to steer clear of permanent alliance with any portion of the foreign world * * * taking care always to keep ourselves by suitable establishments, on a respectable defensive posture, we may safely trust to temporary alliances for extraordinary emergencies."

These are days of confused thinking. Our people see an open door demanded in China, a closed door demanded in South America, and they see some leaders demanding that we apply for the position of doorkeeper in Europe.

MIXING POLITICS AND TRADE

Washington had a clear thought for these times. "The great rule of conduct, for us," he said, "in regard to foreign nations, is, in extending our commercial relations, to have with them as little political connections as possible." In official printings of the Farewell Address, that word "political" is in italics. "In extending our commercial relations, have with them as little political connection as possible."

Today, as one witnesses the transfer of trade extension from the Department of Commerce to the policy halls of the State Department, one is forced to ask whether our commercial relations with foreign nations are divorced from political considerations; indeed, one must ask if our foreign commerce has not been made an instrument of foreign policy contrary to Washington's

advice?

Another passage seems particularly appropriate for our day.

"Against the insidious wiles of foreign influence—I conjure you to believe me, fellow citizens," Washington said—"against foreign influence the jealousy of a free people ought to be constantly awake, since history and experience prove that foreign influence is one of the most baneful foes of republican government. But that jealousy, to be useful, must be impartial, else it becomes the instrument of the very influence to be avoided, instead of a defense against it.

Evenssive partiality for one foreign nation and excessive dislike for Excessive partiality for one foreign nation and excessive dislike for another cause those whom they actuate to see danger only on one side and serve to veil and even second the arts of influence on the other. Real patriots, who may resist the intrigues of the favorite, are liable to become suspected and odious, while its tools and dupes usurp the applause and confidence of the people to surrender their interests."

NEUTRALITY MUST BE IMPARTIAL

Everyone who reads those words today can, if he wishes, supply illustrations from the day's news on the importance of that advice. Under the spell of a foreign hate, we are urged by some to maintain the free air of America by an intolerance of speech and assembly which of itself would deny the very freedom we boast. Under the spell of a foreign love some people would keep in America aliens who have forfeited every right of residence by knowingly violating recognized laws of the land.

We need today the freedom from foreign influence, the impartiality in foreign attitudes for which Washington pleaded.

We are living in troubled times, but I am sure that I speak the spirit of George Washington's Farewell Address when I urge you to help keep the mind of America clear, so that if we should ever be called upon to defend our frontiers those frontiers will be determined, not in the web of alien intrigue nor in the pawnshops of foreign politics but in the forum of free speech by a clear-thinking America.

Relief Expenditures

EXTENSION OF REMARKS

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1939

Mr. MURRAY. Mr. Speaker, I wish to ask leave at this time to extend my remarks in the RECORD and include therein a report that I received on May 9, 1939, from Col. F. C. Harrington, Administrator of the Works Progress Administration.

I am asking at this time to incorporate the figures I received, showing the total amount of moneys that have been expended by the Federal Emergency Relief Administration from 1933 to December 31, 1938, on C. W. A., W. P. A., and for direct relief.

The matter referred to is as follows:

State	Federalfunds used on Civil Works Ad- ministration program	Federal funds used on Works Progress Ad- ministration program, July 1935 through December 1938	Federal funds used on Federal Emergency Relief program through De- cember 1938
Alabama	\$16, 110, 000	\$59, 013, 000	\$45, 175, 000
Arizona	4, 786, 000	21, 009, 000	16, 581, 000
Arkansas	12, 220, 000	49, 586, 000	40, 833, 000
California	41, 469, 000	288, 580, 000	159, 720, 000
Colorado	7, 433, 000	63, 188, 000	39, 432, 000
Connecticut.	9, 884, 000	61, 385, 000	24, 163, 000
Delaware	580,000	5,777 000	2, 221, 000
Districtof Columbia	5, 604, 000	19, 073, 000	15, 323, 000
Florida	16, 838, 000	56, 198, 000	41, 764, 000
Georgia	14, 092, 000	62, 851, 000	46, 041, 000
Idaho	5, 440, 000	18, 343, 000	13, 577, 000
Illinois	57, 601, 000	411, 803, 000	233, 975, 000
Indiana	23, 056, 000	173, 311, 000	53, 244, 000

What Has Congress Done?

EXTENSION OF REMARKS

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1939

Mr. BURDICK. Mr. Speaker, this Congress has continued in session since January 3, and I believe no Congress was ever faced with more difficult problems to solve. Millions of unemployed—running close to 14,000,000; with farm-mortgage and city-mortgage foreclosures proceeding without interruption, and the occupants turned out into the public highways and streets; with our national debt approaching \$46,000,000,000; with an annual interest burden, public and private, of \$15,500,000,000; with taxes of all descriptions enmeshing businessmen to the point of bankruptcy, we can well say that we are faced with grave problems.

I do not allude to the so-called war scare, for, in my opinion, there has been nothing to justify that fear. We are in no danger of war from foreign quarters, and propaganda to the contrary is hand-made. We could get ourselves involved in any war if we wanted to, but we will get entangled in no foreign war if we pursue the course laid down by the Father of his Country, George Washington. If we are to be the errand boy for Great Britain and loan her more billions and place the lives of our young men and women at her service, we might well feel alarmed. Let England run her own business and let us run ours. We would not neighbor long with one who was always asking for something and never paying it back. I do not think this country ever has demanded an inch of British territory; they have nothing we want, and since we are willing to carry on international trade with Great Britain, we have a right to demand fair treatment or cease business. If England can defend her vast territory, well and good, but she has no moral right to ask us for assistance in view of her past record.

I might add this meager suggestion—that if England would spend less on flowers and water bottles for the King, and pay us some of that money on her debt to us, we might feel more like sympathizing with our mother country.

Has this Congress met the great responsibility resting upon it? What measures have we passed that will even tend to correct the glazing evils that exist all around us? I answer that this Congress, so far, has utterly failed to pass a single act that will in the slightest degree alleviate the conditions of the American people. I make that charge and will attempt to prove it.

The private money monopoly still controls the credit of the Government and regulates the value of all trade transactions and the price of commodities. No change in the money system is on the calendar for action by the administration. We still permit a private banking institution to issue our money and regulate the value thereof. The interest system is in full swing. Thirty-four cents of every dollar we spend goes to interest. Interest annually in the United States exceeds \$15,000,000,000, and the point has been reached where the people cannot bear this burden longer.

Our relief program has been a failure, largely because we have not understood what the problems are and will be in this country. The administration has been criticized for planning and executing much useless work and extravagance, and sometimes corruption has been indulged in by those handling the work. Could we expect anything else when our policy has been that relief is a temporary matter? Our slogan has been, "Put men to work at anything until our prosperity returns." Nothing was planned in advance. Our employment has been from day to day, at least not longer than a few months. Who can plan national employment in a few days or a few months? No one could avoid

extravagance under such a policy. This Congress should soon realize that Government employment is a permanent thing in the United States and plan accordingly. The problem is here now—it has been here since 1932—it will be here in 1942. I have repeatedly, at almost the expense of being called queer, called this matter to the attention of Congress, but the great majority of this body has not yet consented to treat the unemployment situation as a permanent thing.

What a different story about relief would have been written had Congress recognized in 1934 that the question of relief work was a permanent thing. Long-range programs could have been planned under the advice and direction of the United States Army engineers; every department of the Government could have contributed to a permanent work program, and the money thus expended would have added permanent wealth to the Nation. The conservation of water in the Great Plains area, the prevention of floods in other areas, the protection and development of our forests; and the conservation of our soil challenge the best-planned program of which our best minds are capable. Compare, therefore, expenditures under this planned objective with temporary work offered overnight by the Works Progress Administration. If much of the work under the W. P. A. was of little permanent value, it was not because of the failure of the W. P. A. machinery, but because Congress refused to recognize unemployment as a permanent thing in a field of effort entirely operated by private interests. We were in a haze then and we are in one now. Our ideas on the question of employment of the idle millions are as clear as mud. Just the moment Congress wakes up and admits that the unemployment situation is a matter of Government concern, we will begin to plan work that is not only desirable but essential to the welfare of the people of the United States.

Have we done anything to force money into circulation? We have not. Many Members of this Congress were elected on such a platform—the Townsend recovery program. This is especially true of many new Republicans. Where is the Townsend bill? Will it come out of the Committee on Ways and Means? I think it will. It will because of the political influence of the program itself. This bill forces money into circulation and keeps it there. It is not a measure to assist the aged alone, but to assist everyone who measures his brain and muscular energy by wages and payments in money to be spent for the things he needs, produced by someone else.

The Democrats have, as an administration, taken a stand against the Townsend bill. The Republicans have not, yet the percentage of Republicans against the measure is as great as the Democratic percentage. Many Republicans hope they will not have to vote on this bill. If the Democrats force the bill on the floor, the sheep will be separated from the goats. The people will know who is for them and who is against. The last election was not a swing back to reaction as much as it was a swing against the Democrats for failing to give this bill a chance. If the Democrats, therefore, force the bill out, the Republicans will be unmasked. Many will then vote for the bill which they privately pray now will not come up for a vote. It will be an interesting performance to watch the Republicans vote for a bill they do not believe in, but of which they are afraid. On this question the Republicans could walk away with the next election if they would come out in the open now and vote to put money back in circulation and keep it there. No chance can be taken, because what we have done has not improved our condition but made matters worse. What chance is there in trying something else-anything that might better our condition. I submit we cannot make matters worse.

Some day, within my lifetime, some President and some administration will be elected by the people of the United States that will take back to the Government itself the exclusive power to control our flow of money and regulate the value thereof. On this issue at the present time there is not the slightest difference between the two major parties. The Republican Party maintained the system for half

APPENDIX TO THE CONGRESSIONAL RECORD

a century and the Democrats have perpetuated it. Should the Republican Party be again entrusted with the administration, it is my judgment that the present system of private control of the people's money would be maintained. A careful canvass of the present Republican membership shows that the great majority of the Republicans want no change in the system except to strengthen it for the private operators of the Nation's money.

In this situation the people are quite helpless as none other than the historical parties seem to ever receive the support of the people. Finally one of the major parties will come out for the people on this issue or both parties will go down to defeat and oblivion. It only remains for the voters to suffer enough before they will throw the shackles of party regularity to the winds and stands up like free men and vote their convictions. I will predict that this uprising is not far distant.

Have we passed any remedial legislation for the farmers? We have not. The test of what we have done in the past 5 years can be determined by the present condition of the farmers. More foreclosures and more evictions-more unpaid taxes and debts. As fast as we force them out of their homes the more we have on relief and this Congress evidently prefers to feed the farmers that way than to let the farmers feed themselves. On this farm situation, it is exactly like the money question. Those who want to revise the law cannot agree. One group pulls one way and the others in the opposite direction. Because of this lack of unity of action nothing is done.

The farmers of the Nation have prayed for an investigation of the exchanges of the country that handle our crops and the market places. These farmers have proven to Congress that at one market alone, Chicago, every actual bushel of wheat delivered there is sold on the futures market 719 times. Those who sell these futures contracts receive oneeighth of 1 cent per bushel, and one-eighth cent times 719 equals about 90 cents. The operators of wind sales get 90 cents for every bushel delivered while the farmer gets half of that at his market place, with the price he received set by the grain gamblers. I have asked for this investigation with the moderate expense of \$10,000, but this Congress will not permit such an investigation. My resolution on this subject is locked up in the Committee on Rules and there it will remain, I presume, until this Congress adjourns.

We have done very little so far except to appropriate two and one-fourth billion dollars for our national defense, when there is no evidence at all that we are in danger of attack from any quarter of the globe. How will our action be received by the people if we do not act upon the supremely important matters of legislation?

How will the people receive our war program of spending billions while the millions are jobless?

The General Welfare Act (H. R. 5620)—Amended H. R. 11)

EXTENSION OF REMARKS

HON. JOE HENDRICKS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Friday, May 19, 1939

Mr. HENDRICKS. Mr. Speaker, I wish to call the attention of the Congress to the fact that I have received three petitions asking for early consideration of the amended H. R. 11. The first petition was presented by A. L. Junegan, Orange City, Fla., and contains 59 names. The second was presented by J. Joseph Goldenberg, Daytona Beach, Fla., and includes 29 names. The third was presented by Kenneth R. Hunter, Daytona Beach, Fla., and includes 59 names.

Great Lakes-St. Lawrence Seaway

EXTENSION OF REMARKS OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1939

ADDRESS BY HON. JOHN C. BEUKEMA, CHAIRMAN OF THE EXECUTIVE COMMITTEE OF THE NATIONAL SEAWAY COUN-CIL, BEFORE A JOINT MEETING OF THE HARBOR COMMISSION. KIWANIS CLUB, AND ROTARY CLUB OF MANISTEE, MICH., MAY 16, 1939

Mr. ENGEL. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and to include an address made on May 16, 1939, in my district, the Ninth Michigan Congressional District, at Manistee, Mich., upon the subject of waterway navigation. The address is as follows:

On Saturday and Sunday, May 13 and 14, 1939, the people of west Michigan welcomed at Muskegon the first vessel of Dutch registry making a continuous voyage from Rotterdam, Netherlands, to the Port of Muskegon. Although the vessel did not enter our harbor until 9:30 p. m. Saturday, it was instantly taken over by a shouting, cheering mob that kept almost continuous possession of it until sailing time Sunday at 3 p. m.—so much so that the master had to call for a squad of police to enable him to get on board his own ship Sunday afternoon prior to sailing. It is estimated that from 10,000 to 15,000 people visited the ship during the few brief hours it was in port. They came from communities as far as 100 miles away.

At Cleveland, Capt, Albert Helsingden tells me, he was accorded

At Cleveland, Capt. Albert Helsingden tells me, he was accorded similar reception.

What was the reason for this spontaneous and entirely unantici-

What was the reason for this spontaneous and entirely unanticipated public demonstration and welcome?

Merely the realization, Mr. Chairman, that Muskegon's long-cherished hope of becoming a world port was a reality.

Other ships flying foreign flags have been entering our lake ports, including Muskegon, for the past 4 or 5 years. Apparently they were regarded as venturesome pioneers. It took a newspaper announcement to the effect that a Dutch line with a fleet of four ships had been organized for the express purpose of giving service between British and Dutch ports and Great Lakes ports to dramatize the situation and to convince a skeptical public that

service between British and Dutch ports and Great Lakes ports to dramatize the situation and to convince a skeptical public that the ships would not only come, but were actually here.

The steady stream of people that visited the boat Sunday morning and early afternoon had only one theme of conversation—a way had been opened to the sea. The fact that the United States had not yet consummated an agreement with Canada for the construction of the St. Lawrence Waterway apparently did not enter their consciousness. The further fact that not one shovel full of earth has been dug or can be dug to modernize the present 14-foot channels between Ogdensburg, N. Y., and Montreal was a matter of perfect indifference to them. was a matter of perfect indifference to them.

SEEING IS BELIEVING

The ship itself, with its Dutch flag and its Dutch name, Prins Willem Van Oranje, and with the home port, Rotterdam, stenciled on the stern, was a vivid, living reality to them. It convinced them that a way had been opened. Muskegon was no longer a marooned, interior city. It had a life-giving contact with the sea. Out of that contact they firmly believe new commerce and industry will arise.

The incident is significant only because foes of the seaway are widely representing that there is no current interest in the Midwest in the St. Lawrence project. To my mind the reception acwest in the St. Lawrence project. To my mind the reception accorded this ship is a complete and effective reply, for no public celebration had been planned or arranged. In fact, the hour of the ship's arrival was unknown. A small committee of public officials and businessmen had been delegated to do the honors. But in spite of the fact that it was 9:30 p. m. Saturday when the ship arrived, the people of Muskegon and western Michigan took the matter of welcoming this vessel into their own hands and made a holiday of it.

Why does Muskegon and all Michigan, in fact, look forward to the opening of the St. Lawrence waterway?

We look to the sea, Mr. Chairman, for the same reason that men from time immemorial have looked to the sea. Our people know the lesson of history, that the great and powerful peoples of this globe and the rich and thriving municipalities have almost uniformly been those who had access to the sea and free use of its oceans.

They do not need the agony of a Poland, threatened with the loss of its seaport—Danzig—to dramatize this fact. And, furthermore, Mr. Chairman, they realize there are other barriers quite as destructive to the commerce and industry of a community as high tariff

barriers; such barriers, for instance, as excessive transportation costs to world markets and our own coastal markets. They ex-

pressed themselves accordingly.

The Midwest wants the seaway today as keenly as it did when

The Midwest wants the seaway today as keenly as it did when the project was first launched 20 years ago and 23 States petitioned Congress for action. It desires the seaway as keenly as it did 4 years ago when 50 lake-port mayors visited Washington and asked for approval of the 1934 treaty.

Midwesterners may not have been so vociferous in their demands in recent years, owing to the apparent inactivity, "for a hope long deferred maketh the heart sick." But the yearning is there. It will never be satisfied until the seaway is built.

There are 45,000,000 residents of the Midwest who eagerly look forward to the conclusion of negotiations with Canada that will give them access to the sea. To this one-third of our population completion of the St. Lawrence Waterway means more than any other project, public or private, now on the national horizon. It implies release from transportation handicaps which are definitely retarding the further growth and development of this vast section of the country, barring its farmers and manufacturers from foreign markets, and handicapping their trade with our own coastwise States.

coastwise States.

Pacific coast residents pay \$50 to \$100 more for their automobiles than they would if there was an all-water route from Detroit

to Los Angeles and San Francisco.

Tropical fruits processed in Florida, Texas, and California find a limited market in the Great Lakes basin, because excessive transportation costs make it impossible for the factory workers of transportation costs make it impossible for the factory workers of Cleveland, Detroit, Milwaukee, and Minneapolis to include them in their diet. Oregon lumber mills lie idle and badly needed housing in the Great Lakes basin languishes because of prohibitive freights on lumber and other raw materials. The tankers that sail from Houston, Tex., touch no Great Lakes ports—where gasoline consumption is relatively the heaviest—because of the rock barrier that exists in the International Rapids section of the St. Lawrence.

WHAT SEAWAY MEANS TO MICHIGAN

What does the seaway mean to Michigan? Let me give you what does the seaway mean to minigan? Let me give you six reasons why the people of our State desire it.

(1) It will bring the ocean 2,300 miles inland and give the United States a new northern coast line.

(2) It will convert Michigan's 1,624 miles of lake shore into

seacoast and make our principal ports accessible to 70 percent of the world's shipping.

(3) It will restore the economic parity between Michigan and Atlantic seaboard States that existed prior to the building of the Panama Canal. In other words, construction of the seaway is only a simple act of justice to Michigan and other Lake States whose competitive relationship with the Atlantic seaboard in respect to world markets and our own Pacific coast market was maladjusted by the building of the Panama Canal and the subsequent

increases in freight rates.

(4) The transportation savings achieved by water carriage will

enable Michigan industry and agriculture to broaden their markets.

(5) Opening of the seaway will bring to us industries now confined to the seaboard by reason of their dependence on foreign

(6) This industrial development will fill our idle plants, give work to our unemployed, and restore millions of dollars of urban real-estate values that have vanished since the 1929 crash.

real-estate values that have vanished since the 1929 crash.

A century and a quarter ago the territories west of the Alleghenies faced a similar problem. The fertile acres and infant cities of the Great Lakes Basin spelled opportunity to the adventurous souls dwelling on our Atlantic coastal plains. But the cost of transporting even the most meager household equipment and farm tools over the mountains was prohibitive. Hence, immigration was retarded until the Eric Canal was opened in 1825. Within the space of a very few years freights toppled from \$100 per ton to \$8 per ton. Hundreds of thousands of settlers followed the canal route to the Lakes. In rapid succession new States were added to the Union to create the modern Midwest.

Opening of the St. Lawrence will accomplish a similar resurgence of trade and industry. The benefits of this recovery will extend to every nook and corner of the Nation.

What the Baltic Sea and its several arms mean to the peoples of

What the Baltic Sea and its several arms mean to the peoples of north Europe, and what the Mediterranean means to Spain, France, north Europe, and what the Mediterranean means to Spain, France, Italy, and the Levant, that the St. Lawrence Seaway means to our North Central States. Closing of either the Baltic or Mediterranean would destroy the economic life of the peoples occupying their littorals. Any power attempting to bar world commerce from these seas would inevitably be involved in war. Yet millions of Americans who are tremendously agitated at the prospect of such a European cataclysm are supremely indifferent to the fact that a group of selfish domestic interests persist in blocking removal of the last rock harrier separating the Great Lakes Basin from the sea. the last rock barrier separating the Great Lakes Basin from the sea.

Is it possible that in any other country of the world a great water highway 2,300 miles in length—capable of being navigated every foot of the way with the exception of a short 48-mile stretch—by over 80 percent of the world's merchant ships, should be left unimproved on the specious plea that other transportation interests and ports would suffer?

Yet these selfish interests-shipping and import groups in our Atlantic seaboard cities, railroads, certain utilities, and organization of river contractors on the Mississippi, and certain ship operators on the Great Lakes-defiantly assert that the people of the Midwest shall not be accorded the elemental justice of permitting their products to enter world markets and our own coastal markets on a parity with those of other sections of the country. Taking advantage of the constitutional requirement that a treaty must have the approval of two-thirds of the United States Senate, present and voting, they defeated an agreement with Canada in 1934. To-day they are likewise employing every artifice and misrepresentation day they are likewise employing every artifice and misrepresentation to defeat a new agreement submitted that country last May by Secretary of State Cordell Hull.

There is an old story about a young lawyer who went to a renowned barrister for advice. "Judge," he asked, "what would you do in a certain case if the facts were against you."

"Simple, my boy," the judge replied, "I'd talk about the law."

"But what if the law were against you?"

"Then I'd talk about the facts."

"But what if both the law and facts were against you?"

"But what if both the law and facts were against you?"
"Then, my boy," the judge solemnly replied, "I'd holler like everything."

TACTICS OF SELFISH OPPOSITION

The latter is the method being employed by these opponents of The latter is the method being employed by these opponents of the seaway. Representing, as they do, many of the largest financial interests in the Nation, together with rich and populous ports, they are in a position to confuse the issue by flooding the country and Congress with propaganda and misrepresentation. These tactics, so familiar to us who fought the battle in 1934, are being repeated today. It is a little amusing to see sturdy politicos in New York and New Orleans beating their breasts and loudly protesting that the British Government shall never acquire sovereignty over the waters of Lake Michigan. As if the Representatives in

testing that the British Government shall never acquire sovereignty over the waters of Lake Michigan. As if the Representatives in Congress of Michigan and our neighbor State of Wisconsin are not fully competent to protect our interests in the matter!

The fact is that the United States is surrendering nothing in the way of sovereignty over Lake Michigan waters. The proposed treaty is perfectly clear in this respect, as was the former treaty of 1933. The point was adequately debated when the previous treaty was up for consideration in the United States Senate, and the Senate's best constitutional lawyers were in unanimous accord that our sovereignty over these waters was fully protected.

There is nothing, however, to match the persistence of a false-

There is nothing, however, to match the persistence of a false-hood, as a great philosopher has pointed out. Hence we hear this ridiculous claim once more reasserted by those who have not the slightest concern in the sovereignty issue but do have a selfish interest in not permitting Great Lakes commerce to reach the

sea without paying excessive tolls.

Enemies of the project would further have you believe that the seaway will not be used. They overlook the fact that even today smaller ocean-going vessels, capable of navigating the present 14-foot St. Lawrence canals, are making voyages on regular schedules into the upper lakes. One line, of Norwegian registry, which started with 3 ships in 1934, operated 17 ships in 1937. Belgian and Finnish tramps are today in the Lakes.

The new Dutch line, with four ships, inaugurated service this year. Last year 65 ships of foreign registry navigated the St. Lawrence and the Lakes. The history of world merchant marine shows that ships will go wherever cargo is offered, and there is sufficient water under their keels. Shoals of the Yangtze-kiang, the Amazon, and the River Plate have never been a barrier.

One of the most amazing port developments in this country is that of Houston, Tex. The miraculous growth of that city during the past 20 years is largely attributable to its artificial harbor. Houston is 50 miles inland, but the building of the Houston Ship Canal almost instantly attracted to it the commerce of the world and made it the Lone Star State's principal entrepot.

Manchester, England, had a similar renaissance following the building of the Manchester Ship Canal. The Manchester Chamber of Commerce Handbook makes the following statement on the benefits which that great improvement brought to the city of Manchester and Lancashire.

"Toward the close of the nineteenth century Manchester realized that direct maritime contact with the world was imperative if its industries were to prosper; a ship canal must be dug. Parliament was sued for close upon 3 years; the royal assent being given in August 1885.

August 1885.

"The great waterway, 35 miles long, took 6 years to make and was opened from end to end on the 1st of January 1894. The enterprise has brought its rewards; languishing industries revived, new ones gathered round the port, and Manchester, an inland city, is today one of the foremost ports in the Kingdom, with an annual trade valued at about 100,000,000 pounds.

"The development of industrial Lancashire during the last 30 tracks which has the ability with his carefully hims disparent."

years owes much to the ship canal which, by establishing direct maritime connections between Manchester and the principal ports of the world has not only assisted the growth of existing indus-tries but has directly encouraged the establishment of new ones."

Is it not reasonable to assume that the same benefits which accrued to Manchester by obtaining access to the sea will not accrue to Cleveland, Toledo, Detroit, Muskegon, Milwaukee, Chicago, Green Bay, Duluth, and many another lake port?

SEAWAY WILL NOT INJURE RAILROADS

The principal objection that has been leveled against the seaway, however, is that it will jeopardize the future of our rail-roads. If this assertion is correct the wisdom of opening the St. Lawrence may indeed be questioned by thoughtful men. But it rests on a series of assumptions, none of which can be justified. The first of these is that the seaway will take freight from the railroads; that is, it will reduce the aggregate amount of freight

railroads; that is, it will reduce the aggregate amount of freight haul of our eastern roads.

It is our considered opinion that the seaway will supply the railroads with far more new tonnage than it takes away. This has been the conclusion of every governmental agency which has studied the subject. These agencies include (1) two joint boards of engineers, representative of Canada and the United States, who made most painstaking studies and prepared detailed plans of the seaway; and (2) International Joint Commission and the Interdepartmental Board, which studied the subject in 1933.

Opening of a new northern coastline for the United States extending 2,300 miles inland to the head of navigation on the Great Lakes, together with the development of additional cheap hydroelectric power, will inevitably create a tremendous industrial

Great Lakes, together with the development of additional cheap hydroelectric power, will inevitably create a tremendous industrial expansion and revival of employment throughout this basin. New industries will spring up, many of them branch plants of industries now confined to the Atlantic seaboard by reason of their dependence on foreign raws. Lower transportation costs in reaching Midwest markets will stimulate the sale of the products of these industries. Fresh employment will be created, attracting new settlers. The construction of new plants, new homes, municipal facilities, et al., will create a tremendous volume of new traffic. It is a well-known fact that periods of railroad prosperity have always coincided with shifts of population and industry as new regions were developed and a wider market for the products of their industries created.

Ships are major originators of rail traffic. Rail lines and sea

products of their industries created.

Ships are major originators of rail traffic. Rail lines and sea lanes are complementary, not competitive. It is shortsighted, therefore, to assume that in opening the seaway the 23,000,000 tons per annum, which the United States engineers estimate will be carried on its waters, will be taken from the rails. On the contrary, it is more logical to assume that this is additional business. A large volume of this traffic will be in the form of raw materials for conversion, which the rails will ultimately move to interior markets. The processing of these materials will require the construction of plants, installation of equipment and machinery, housing development, et al., which, in turn, will produce other and additional rail tonnage, so that ultimately the rails will gain far more than they lose.

As Vice Chairman Paul Shoup, of the Southern Pacific Railroad, once so cogently pointed out in an address at San Francisco: "Two

As Vice Chairman Paul Shoup, of the Southern Pacific Railroad, once so cogently pointed out in an address at San Francisco: "Two hundred years ago the only known means of transportation along the Pacific coast was that of canoes. Yet I venture to say there is more money being made in the canoe business today than there was when canoes were the only means of transportation."

The printing industry is a striking illustration of what happens when you cheapen the cost of a product and the transportation thereof. Fifty years ago the printers of America feared the prospective dying out of their craft due to the invention of the linotype machine. Yet today printing costs are only a mere fraction of what they were in the eighties. Employment in the industry is tenfold what it was then and every businessman's desk is piled high each morning with a fresh batch of printed matter coming to him through the mails.

Lowering transportation costs via the seaway will not put the

Lowering transportation costs via the seaway will not put the railroads cut of business, it will create new business for them.

Possibly there will be temporary disturbances, but in the long run the probable effects are these:

(1) Water carriers will carry a higher percentage of foreign raws

thound, much of which would not have moved to interior points except for continuous water haul.

(2) Railroads will carry a higher percentage of the more lucrative traffic in fabricated products.

(3) The public will benefit from lower freight costs.

PRESENT ABILITY OF RAILROADS TO HANDLE ANY TONNAGE OFFERED

Recently a series of resolutions bearing on this question of loss of tonnage by the rails and the present ability of railroads to handle any tonnage that might be offered were adopted by a lake port chamber of commerce at the instance of its railroad members and over the protests of manufacturers and exporters. The reso-

lutions say in part:
"This project originally found enthusiastic support because of the complete inadequacy of the railroads in the years immediately subsequent to the World War in handling the Nation's tonnage and

subsequent to the World War in handling the Nation's tonnage and in the added fact that we were a heavy grain-exporting nation.

"Tremendous improvement of the rail transportation system, along with the development of other agencies of transport, have completely eliminated this most valid reason for the construction

of the seaway."

The resolutions allege that our rail transportation system broke The resolutions allege that our rail transportation system broke down under war demands. The statement is not disputed. Virtually everyone engaged in business during the war years and immediate postwar years recalls the congestion at our eastern ports—cars backed up from New York to Philadelphia, every yard full, with manufacturers east and west, north and south, clamoring for equipment to move their product, and chafing at delay in the delivery of raw materials. Every available piece of equipment on the Great Lakes and barge canal was requisitioned to ease the situation. situation.

The assumption is made, however, that this could not happen again. "Tremendous improvement" in rail transport facilities, together with the development of other agencies of transportation, "completely eliminates" the possibility of a recurrence of this situation and thus makes the seaway unnecessary, it is alleged.

Obviously the first question to be raised is. To what extent has our rail transportation system improved?" What additions have railroads made to their equipment, what miles of track have been added, and to what extent have operating efficiencies been instituted to guarantee the ability of our rail carriers to handle any and all traffic that may be offered in the event of another national emergency?
Railroads in the United States reached their peak mileage in

1916. Since then main-track railroad mileage has declined. Rail mileage operated in 1916 aggregated 259,705 miles and in 1936 251,542 miles—a decline of 8,163 miles. (United States Statistical

The great bulk of the freight moved by our railroads is in freight trains, the express movement being relatively negligible, from a tonnage standpoint. The question arises, therefore: To what extent have the railroads increased their freight-train equipment?

United States Statistical Abstract for 1937 (p. 374) gives the

following data:

Railway equipment in service

Year ending—	Freight-train cars			Locomotives	
	Total number	Aggregate capacity	Average capacity	Num- ber	Tractive effort
Dec. 31, 1916	2, 329, 475 2, 388, 424 2, 403, 967 2, 322, 267 1, 867, 381	Tons 94, 441, 000 98, 343, 000 105, 953, 000 106, 180, 000 88, 677, 000	Tons 40, 8 42, 4 45, 1 46, 6 48, 3	65, 595 68, 942 66, 816 60, 189 49, 541	Pounds 2, 066, 166, 000 2, 340, 761, 000 2, 611, 238, 600 2, 526, 940, 000 2, 206, 261, 000

These figures show a decline in the number of freight cars available to handle freight from 1916 to 1935 of 462.094 cars, or 20 percent. They also show a decline in aggregate capacity of these cars during this same period of 5,764,000 tons, or 6.1 percent. An increase in average capacity per car makes up the difference between the two percentages.

The figures further show a decline in the number of locomotives

The figures further show a decline in the number of locomotives available of from 65,595 to 49,541, or 16,054, equivalent to 24 percent. But the increased efficiency of the modern locomotive gives us an increase of approximately 10 percent in tractive effort.

Certainly there is nothing in these figures to encourage the belief that the conditions which existed in 1917 to 1920 would not be duplicated in the event of another national emergency. Accepting the United States Census estimate of an increase in population since 1920 of approximately 20 percent, is there any reason for assuming that our railroads are more adequately equipped today to handle the freight of the country in the event of a war than they were 20 years ago?

Further, there is no reason for assuming that railroad plant today is relatively more efficient than it was in 1917. The railroads' own showing, in their repeated appeals to Congress for financial relief, in which they recite conditions of deferred maintenance and inability to renew equipment, negatives any such a supposition.

supposition.

OTHER TRANSPORTATION FACILITIES DO NOT FILL CAPACITY

The resolutions further assume that "development of other means of transport," makes the completion of the seaway unnecessary. Let us inquire into the validity of this assumption. By "other means of transport" undoubtedly is meant the establishment of intercity trucking facilities, pipe lines, airways, and barge canals, or so-called inland waterways, as distinguished from the Great Lakes St. Lawrence, system

the Great Lakes-St. Lawrence system.

The President's committee, composed of representatives of rail presidents and rail brotherhood executives, submits the following "estimated percentage distribution of commercial freight ton-miles, 1926 and 1937":

	Percent o ton-miles	f freight handled
Service and the service of the servi	1926	1937
1. Steam railways 2. Intercity trucks 3. Great Lakes 4. Other inland waterways 5. Pipe lines 6. Electric railways 7. Airways	75. 4 3. 9 15. 2 1. 6 3. 7	64. 6 7. 7 36. 6 3. 0 8. 0
	100.0	100. 0

The report continues as follows:

"The proportion of freight business handled by steam railways declined between 1926 and 1937 from more than three-fourths of the total to less than two-thirds, a loss of more than 10 percentage points. On the other hand, the growth of pipe-line, inland-water-way, and motortruck traffic is apparent, their combined gains equal-ing more than 10 percentage points. "The following table shows, in amounts and percentages, the changes in freight ton-miles handled by the several agencies of transportation, 1937 compared with 1926:

Change in freight ton-miles handled, 1937 compared with 1926 [Decrease (-) or increase (+)]

	Amount	Percent
1. Steam railways. 2. Intercity trucks 3. Great Lakes. 4. Other inland waterways. 5. P pe lines. 6. Electric railways. 7. Airways.	-84, 628, 245, 000 +19, 850, 000, 000 +3, 206, 167, 000 +7, 340, 066, 000 +23, 093, 161, 000 -615, 262, 000 +2, 156, 000	-18.9 +84.4 +3.6 +76.9 +106.4 -46.9 +100.0
Total	-31, 751, 957, 000	-5.3

"If the Great Lakes be excluded from this comparison as being a

"If the Great Lakes be excluded from this comparison as being a natural waterway, the railway proportion of the total so adjusted changes from 75.4 percent to 88.9 percent in 1926, and from 64.6 percent to 77.4 percent in 1937. On this basis of calculation, the rail proportion of total freight traffic shows a decline of 11.5 percentage points between 1926 and 1937."

Accepting these findings, "other means of transport," have absorbed 11.5 percent of available traffic (excluding Great Lakes) since 1926, the railroad's peak year. This is approximately the same as the population gain since that date (11 percent). It must be remembered that a substantial part of this traffic, if handled by rail, would have to be moved in special equipment; viz, petroleum and petroleum products, etc.

Again there is no reason for assuming that the railroads have been so relieved by the development of these agencies as to assure

been so relieved by the development of these agencies as to assure their ability to handle the peak traffic of a national emergency.

IS RAIL TRANSPORTATION MOST ECONOMICAL?

Another question that arises is: Do the rails offer the most economical form of transportation? Corollary to this: If not, should not the country get the benefit of any cheaper form?

If it be true, as our economists would have us believe, that national prosperity depends on a constantly increasing production of goods available to the public at steadily lowering prices, then any economies that may be achieved in transportation costs are of vital concern to every American.

vital concern to every American.

In a previous period of our history, it was precisely such ecomies in the production and distribution of goods that made recovery from a serious depression possible, as James Truslow Adams, in his History of the United States, points out (vol. II, p. 194):

"By * * 1860, in spite of the panic of 1857, the number of wage earners in manufacturing had risen to 1,311,000 and the value of manufactured products to \$1,836,000,000. Such a huge development would not have been possible except for the purchasing power on the part of the people and such improved means of transportation as would permit of a circulation of goods at freight rates less prohibitive than those called for by the cld system.

* * * Canals, followed by railroads, provided the transportation. The opening of Erie Canal had caused an immediate drop in freight rates between Buffalo and New York from \$100 per ton of merchandise to less than \$8, making possible a heavy interchange of manufactured products of the East for farm produce of the West, and giving New York an incomparable advantage over every other and giving New York an incomparable advantage over every other Atlantic seaport. * * * * "Steamboats had also come to our great rivers, and as early as

"Steamboats had also come to our great rivers, and as early as 1830 Cincinnati and Pittsburgh factories were beginning to supply the Southwest with machinery, furniture, and other factory goods at less than had been the cost of such goods in New York or Philadelphia a decade earlier. One of the marked features of the period was this decreased cost with a consequent widening of markets, due both to machinery and an almost 90-percent reduction in transportation charges."

As a general principle water transportation costs in deep-draft vessels are approximately one-eighth the corresponding rail costs for a like distance. This is true of not only ocean freights, but equally true on the Great Lakes, where bulk cargo is carried on ships specially built for the trade at the lowest known rates of

transportation in the world.

To illustrate (data from 1936 annual report of Lake Carriers

Association):
Iron ore is carried from the head of Lake Superior to Ohio ports, a distance of 833 miles, at a cost of 70 cents per gross ton, or an average of \$0.00084 per gross ton-mile. Average revenue per ton-mile on the rails in 1936 was \$0.00974, or nearly eleven times the

water rate on iron ore.

Coal is carried from Ohio ports to the head of Lake Superior at 40 cents per net ton, or an average of \$0.00048 per ton-mile. This is one-twentieth the average revenue per ton-mile on the rails.

one-twentieth the average revenue per ton-mile on the rails.

Grain is carried from Duluth, Superior, to Buffalo, a distance of 986 miles, at varying rates, some running as low as 1½ cents per bushel of 60 pounds, or \$0.0291 per hundred pounds.

The rail rate on wheat from Miles City, Mont., to Duluth, a distance of 753 miles, is \$0.216; the water rate, Duluth to Liverpool, 3,946 miles, is \$0.1825. This includes elevation at Duluth, transshipment at Montreal, and insurance. Herewith comparative figure that the control of the ures per bushel on a shipment of wheat from Miles City, Mont., to Liverpool; also comparative mileages:

	Rate	Mileage
Rail rate to Duluth.	\$0. 216 , 01	753
Freight rate Duluth to Montreal.	. 0625	1, 337
Transshipment Ocean freight Insurance	. 01 . 095 . 005	2,609
	. 3985	4, 699

Summarizing these figures, it costs \$28.70 per train-mile to ship 100,000 pounds of wheat from Miles City, Mont., to Duluth by rail; but it costs only \$3.64 per boat-mile to ship the same 100,000 pounds from Montreal to Liverpool; and only \$4.67 per boat-mile from Duluth to Montreal.

The fact of the matter is that the railroads themselves are the

first to acknowledge the tremendous economy of water transportation on the Great Lakes. In their comparison of costs between the rails and inland waterways, spokesmen for the railroads invariably exclude the Great Lakes. In a recent address, R. V. Fletcher, vice president and general counsel of Association of American Railroads, made an exhaustive comparison between costs of operation on pland waterways and the rails (Institute of Ethermone). of operation on inland waterways and the rails (Institute of Public Affairs, University of Virginia, July 6, 1938). Concluding his comparison, he stated:

"No reference is made here to transportation on the Great Lakes or on the high seas. Those, of course, are natural water-ways, where no great sums must be expended, outside of harbor improvements, in making them navigable. They have always been used and obviously always will be used as important agencies of transportation."

COMPARATIVE TONNAGES HANDLED

Carrying our inquiry a bit further, we might ascertain the comparative service rendered by the railroads to the American shipper, as measured by the volume of freight handled.

United States Statistical Abstract for 1937 (p. 380) gives us the following record for consecutive 5-year periods.

Freight traffic, tonnage and revenue

	Tons revenue freight carried		Tons carried	Revenue ton-miles
Annual average	Originated	Total	1 mile	per mile of road
1916–20	1, 325, 772, 000 1, 231, 193, 000 1, 364, 607, 000 798, 205, 000	2, 378, 164, 000 2, 216, 318, 000 2, 481, 018, 000 1 437, 728, 000	390, 815, 000, 000 375, 468, 000, 000 430, 310, 000, 000 270, 192, 000, 000	1, 510, 297 1, 455, 688 1, 657, 292 1, 051, 083

The table further reveals that the average freight revenue per ton-mile increased from 0.875 cent for the 1916-20 period to 1.023 cents for the 1931-35 period. In 1916 it was 0.717 cent per ton-mile. In 1938, according to the report of the President's committee submitted December 23, 1938, it was 0.982 cent per ton-

mile, and in 1937, 0.938 cent.
Freight revenues per loaded car-mile were 16.3 cents in 1916, 27 cents in 1926, and 23.2 cents in 1935.

Revenue ton-miles in 1916, according to the President's committee report, aggregated 362,444,397,000, and in 1937, 360,620,-269,000, or approximately the same. Peak year was 1929, with 447,000,000,000 ton-miles. Low year was 1932, with 233,000,000,000

ton-miles.

The figures indicate: (1) That the railroads are carrying less freight than they did 20 years ago; (2) that they are charging a higher price by approximately 30 percent for what freight they do carry. Undoubtedly there are sound reasons for this, viz, increased cost of materials and supplies, increased wages, taxes, etc., but the fact remains, freight costs are materially higher.

The St. Lawrence seaway movement was born out of a demand for lower freight costs to world markets. This demand came principally from the farmers and manufacturers of the Midwest. Is there any reason for assuming that Midwest farmers and manufacturers accept with equanimity these higher freight costs, when lower freight costs could be made available to them? Certainly they are sympathetic to the plight of the railroads, but not to the extent of stifling all self-interest.

In conclusion may we point out that the farmer, too, has his problem. He ekes out an existence today only by the help of Government controls and subventions. The opening up of a new avenue of transportation, that will slice even a cent off his transportation costs to world markets, means more to him today than a saving of 11 cents per bushel in the days when the seaway movement was launched and wheat brought \$2.50 per bushel.

SHOULD THE FEDERAL GOVERNMENT GUARANTEE RAIL INVESTMENTS? The claim has been advanced that the diminution of rail traffic due to losses to other forms of transportation, the general busi-ness decline, and other causes entitle the rails to protection on existing traffic. Proponents of this idea point to the importance of the rails as taxpaying agencies; and the substantial investments made by insurance companies, endowed institutions, and investors in general in rail securities, et al., as reasons why the rails should be safeguarded from what is alleged to be destructive competition through other and cheaper forms of transpor-

tation.

We need only point out that if this principle is accepted, i. e., the principle of Government guaranty of investment in existing facilities against the competition of a new, more economical, and more efficient form of enterprise, progress ceases in America.

This is the principle on which China stagnated for 4,000 years, or until western civilization knocked at its doors. It is the precise opposite of the principle on which the country has been built and on which it has risen to its present greatness.

Acceptance of this principle would imply abandonment of all the hydroelectric projects on which the Government, as well as private industry, is presently engaged in the hope of giving people cheaper power. It would imply abandonment of our program for highway development and domestic aviation service. It would stifle invention and the development of new processes in industry. We call attention to the conclusions contained in the report of the interdepartmental board on the Great Lakes-St. Lawrence proj-

We call attention to the conclusions contained in the report of the interdepartmental board on the Great Lakes-St. Lawrence project by President Roosevelt, under date of January 23, 1934, and based on Interstate Commerce Commission data, which are still applicable. These conclusions are (p. 261):

"In connection with this board attempt to determine the opening of the Great Lakes-St. Lawrence seaway, there are certain general considerations of great importance.

"(1) The first is that the country's general welfare would not be served by permitting the existing investment in one form of transportation to stand in the way of investment in an alternative method proved more economical for certain purposes.

"(2) The second is corollary to the effect that expansion in transportation facilities to meet an assured increase in traffic should be along the lines of most economical investment and development. To permit the vested interest in the railroads to monopolize the entire increase at the expense of a large section of the country seeking a cheaper outlet to markets and inlet to products of other areas would certainly not be good national economics."

III. THE GRAIN MOVEMENT

III. THE GRAIN MOVEMENT

Another criticism frequently directed against the seaway is that although it may have originally been justified as an outlet for western grain, it is no longer needed today for this purpose since

western grain, it is no longer needed today for this purpose since we have lost our foreign markets.

It is assumed that the present low rate of export of American grain and grain products will be maintained indefinitely, that the American farmer has permanently lost his quondam foreign market, and that there is no prospect of recovery of these markets and a resumption of heavy bulk movement of grain to European ports.

We cannot accept these conclusions.

United States exports of wheat and wheat products have steadily declined since the war years. Our exports of wheat and flour in

declined since the war years. Our exports of wheat and flour in 1920 aggregated 369,313,000 bushels; in 1929, 153,245,000 bushels; and in 1936, 21,584,000 bushels. The loss of our foreign markets may be attributed to three primary factors:

(1) Reduced world consumption of wheat. Efforts of importing

(1) Reduced world consumption of wheat. Efforts of importing nations to become self-contained in respect to their food supplies. Principal importing countries reduced their imports in the 7 years 1929 to 1936 from 754,250,000 bushels to 465,991,000 bushels. Germany, Italy, China, Egypt, Czechoslovakia, Sweden, Cuba, and Spain—all substantial customers—virtually ceased, in many instances, importing wheat from any source.

(2) Disruption of world trade, economic distress in Europe and Asia, were and rumors of wars.

(3) Imposition of artificial barriers to trade. The Ottawa agree-

(3) Imposition of artificial barriers to trade. The Ottawa agreement of 1932, giving Canadian growers 6 cents per bushel preference, destroyed our largest single market—Great Britain.

ence, destroyed our largest single market—Great Britain.

To assume that barriers of this character are permanent and will never be removed is to fly in the face of history. Economic law is bound to assert itself over a span of years in spite of international politics. Since it will take several years to build the seaway, we feel that now is the logical time to anticipate the inevitable swing of the cycle. Opening up of a new all-water trade route into our great grain-growing section should be a helpful factor in removing trade barriers and stimulating purchases by overpopulated and highly urbanized countries who must continue to depend on other countries like ours for necessary food supplies. Opponents of the seaway point out that grain moves from the head of the Lakes to Atlantic ports at rates "not in excess of 6 cents per bushel." They fail to point out that grain has moved under charter from the head of the Lakes to north European ports at rates only a fraction higher than rates applying concurrently from Atlantic ports. Movement referred to is a continuous waterborne movement from port of origin at head of Lakes to United Kingdom and Baltic ports in the same bottom and without interchange at Montreal.

terchange at Montreal.

In 1936 Scandinavian tramps handled 24 such cargoes from Fort

william and Port Arthur, the total movement being 1,143,829 bushels of wheat. Steamer *Trolla* carried cargo of 1,856 net tons to Wasa, Gulf of Finland, at a rate of 14.1 cents per bushel. Rates to British and Scandinavian ports averaged 12.5 to 13 cents per

Comparative rates on Montreal transfer were:

Fort William to Montreal Transshipment	(average rate during season)	4.5
Ocean rate		10.0
Total		15 5

The impression has gone forth that reduction of world consumption of wheat and the loss of substantial foreign markets has virtually eliminated wheat movement through the St. Lawrence canals. This is not so. Total volume through these canals in 1936, as shown by the annual report of Lake Carriers Association, was 2,951,460 net tons (grain and grain products). through the canals that year aggregated 10,405. Vessel transits

In 1937 this commerce reached a new high. Total freight movement through the St. Lawrence canals that year aggregated 9,195,439 tons, which was 783,797 tons ahead of the previous high registered in 1928. Freight from Gulf ports, maritime provinces, American ports and European ports coming up from transfer at Montreal and other river points, was 364,287 tons, and the down-river freight to these ports was 96,663 tons. This tonnage was carried in 65 ships, 40 of them of Norwegian registry.

In 1936 the Ottawa Agreement of 1932, allowing a preference of for the Ottawa Agreement of 1932, anowing a preference of cents per bushel on Canadian wheat shipped to Great Britain, was modified so that wheat could be moved through United States ports and remain eligible for the preference—thus restoring the normal movement through Buffalo to our Atlantic seaboard. It is noteworthy that the St. Lawrence movement continued in volume despite this arrangement.

IV. COST OF PROJECT MISREPRESENTED

One of the most frequent misrepresentations is that in respect to the cost of the project. It is alleged, for instance, that the cost will run as high as \$500,000,000; that untold millions must be added to this sum to deepen harbors on the Great Lakes to equip them to handle oceangoing ships, and that no study has been made to ascertain these costs.

The facts of the matter are that the costs of the project have States engineers in collaboration with their Canadian conferees. It is not two hundred and fifty to five hundred million dollars, as alleged, but a net of \$183,000,000. A message from the President of the United States to Congress, under date of January 11, 1934, makes the following statement:

"The total United States share of the cost of completing this waterway to open the Great Lakes to ocean-going commerce under the treaty is estimated at \$272,453,000, including the development of 1,100,000 horsepower on the United States side of the international rapids. Of this it is proposed, under the terms of the joint resolution which has already passed the House of Representatives, that \$89,726,750 be assumed by the State of New York as representing the cost which may fairly be allocated to the power project. This would place the total net cost to the United States for the entire project, under the treaty, at \$182,726,250.

"The annual cost of the seaway to the United States, including interest at 4 percent, amortization of 50 years, operation and maintenance, is estimated by the Corps of Engineers at \$9,300,-000. This amounts to an annual cost of 7.4 cents per capita for the population of the United States and 23.2 cents per capita for the seaway area." for the seaway area.

The estimates of the United States engineers may be accepted as fact. They built and completed the Panama Canal well within the estimates for that project. In fact, their consistent record over a long span of years—a record that few, if any, private firms can duplicate—is that of building all projects under their supervision within the estimates.

As to the charge that no study has been made of the cost of deepening harbors, may we point out that United States engineers have made such a study. Their report recommends that 11 Great Lakes ports be ultimately improved to admit ocean-going vessels. The total cost of improving these ports to a minimum depth of 30 feet, in order to accommodate this traffic, according to the engineers it as \$500.000. neers, is \$9,500,000.

LAKE-CARRIERS TRAFFIC

The final argument of interests opposed to the seaway is that Lake carriers would lose a certain amount of traffic, particularly in grain, to foreign-fiag ships, and that such diversion "would completely upset what is considered one of the most balanced traffic movements in the world—that of down-bound grain and ore on the Great Lakes and up-bound coal."

In view of the fact that opponents allege the almost total extinc-In view of the fact that opponents alrege the almost total extinction of our export grain movement, the statement is somewhat contradictory. Certainly, if there is no export grain movement there could be no substantial diversion of same to foreign-flag ships, as is alleged. The fact of the matter is that the grain movement, although greatly reduced, is still substantial. It should be pointed out, however, that that portion of the American grain movement destined to our eastern seaboard, i. e., New England and Atlantic States, will not be disturbed.

Under our maritime acts water-borne commerce between two American ports is confined solely to ships of American registry and flying the American flag. Foreign ships cannot enter this trade. This represents the great bulk of the Great Lakes carriers' grain commerce. Canadian grain taking either Montreal or Buffalo transfer and shipped through the Fort William-Port Arthur gateway is largely handled in Canadian ships. In 1936, according to report of Lake Carriers Association (p. 13):

"Vessels of United States registry had only 51 of the 1,134 cargoes and only 141/3 million bushels of grain that moved from Canadian head of Lake Superior in 1936."

The same report shows the following tonnages handled by Great Lakes bulk carriers:

Iron ore, 44.822,023 gross tons, or	Net tons 50, 200, 666
Bituminous coal	44, 010, 585
Anthracite	688, 858
Grain	7, 433, 967
Limestone	12, 080, 672

114, 414, 748 Total -

Grain tonnage, therefore, is only 6.5 percent of total movement. We cannot agree, therefore, that construction of the seaway "would completely upset what is considered one of the most balanced traffic movements in the world—that of down-bound grain and ore of the Great Lakes and up-bound coal."

VI. CONCLUSIONS

Analysis of the resolutions, therefore, indicates the following:
(1) Objections advanced are expressive of the opinions of the rame selfish interests that have fought the St. Lawrence Seaway consistently since the inception of this great project. These interests are (1) certain railroads, (2) certain utilities, (3) shipping and import groups in our Atlantic seaboard cities, (4) an organization of river contractors on the Mississippi, and (5) certain ship operators on the Great Lakes.

operators on the Great Lakes.

Their arguments have been effectively disproved time after time by every governmental agency which has studied the subject during the past 20 years, including the United States Corps of Engineers, United States Department of Commerce, Interstate Commerce Commission, Federal Power Commission, United States Department of Agriculture, International Joint Commission, etc.

(2) These interests do not take into consideration that the area to be benefited by the seway has a population of over 45000000.

to be benefited by the seaway has a population of over 45,000,000, who cannot reach world markets today with their products because of excessive transportation costs, and who desire cheaper power costs. They do not take into consideration the fact that more than 40 percent of the Nation's industries are located in this area and eagerly look forward to the opportunity of engaging in foreign and eagerly look forward to the opportunity of engaging in foreign trade. They do not give consideration to the fact that a city like Detroit, although nearly 1,000 miles inland, is one of America's largest export points. They do not take into consideration the fact that each year sees an increasing number of small ships, capable of navigating the 14-foot-depth St. Lawrence canals entering the Lakes and building a new and profitable foreign commerce. They do not take into consideration the need of the seaway for national defense purposes. They do not take into consideration the needs of the American farmer.

(3) Finally, these interests refuse to recognize that a new northern coast line stretching one-third of the way into the interior of the continent can mean as much to the Midwest as the Gulf coast does to the South, and the two oceans do to our east and west coasts.

west coasts.

Nothing on the horizon, therefore, promises so much to restore American prosperity as the St. Lawrence seaway.

The Green Tree Manor Scandal—How Many More?

EXTENSION OF REMARKS

HON. JOHN M. ROBSION

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1939

Mr. ROBSION of Kentucky. Mr. Speaker and Members of the House, most of us know that the Courier-Journal and Louisville Times are the two outstanding daily Democratic newspapers of Kentucky. I know of no newspaper in the Nation that has so consistently and wholeheartedly supported the President and his administration since March 4, 1933, up to the present time, as have the Courier-Journal and Louisville Times.

LAND VALUE SOARS \$60,000 IN 24 HOURS

This headline appeared in the Courier-Journal on April 24, 1939. Excerpts from this article are as follows:

Green Tree Manor, the multi-unit apartment development on Frankfort Avenue, just outside city limits, was built on 25 acres of land whose value soared in 24 hours from about \$40,000 to

about \$100,000 on July 31, 1937.

This increment in value was revealed from courthouse records Thursday. It was revealed from Washington that the Federal Housing Administration (F. H. A.) accepted the land on which Green Tree Manor was built at a valuation of \$100,000, which, together with the value of the projected improvements, was made the basis of a \$1,000,000 loan by the New York Life Insurance Co. dated August 2, 1937.

Prior to this loan on July 31, 1937, deed books at the court-house showed that the Green Tree Manor site changed hands twice on the same day.

The property was sold by John C. and Elizabeth L. Fenley to the Walter Butler Building Co., a Delaware corporation. On the same date the Walter Butler Co. sold the property to

the Kentucky Development Corporation, another Delaware chartered outfit.

It further appears in this article that the Walter Butler Building Co. of Minneapolis, Minn., bought these 25 acres of land for \$39,685, on July 31, 1937. On the same day it transferred this property to the Kentucky Development Corporation for \$100,000. The Kentucky Development Corporation, while incorporated under the laws of Delaware, was an affiliate of the Walter Butler Construction Co. It was organized and controlled by the Butlers of Minneapolis, Minn. The Kentucky Development Corporation built the Green Tree Manor, the multiunit apartment, and then made claim to the Federal Housing Administration that the land and improvements had cost \$1,397,000, and executed a mortgage to the New York Life Insurance Co. for a loan of \$1,000,000, and requested the F. H. A to guarantee the loan on the alleged value of the property fixed at \$1,397,000.

LOUISVILLE REAL ESTATE BOARD PROTESTS VIGOROUSLY

This Courier-Journal article further states:

It was revealed that the Louisville Real Estate Board protested vigorously against the Green Tree Manor deal on December 21, 1937, in a letter sent to the White House, to both Kentucky Senators, and numerous other highly placed officials.

Members of the board said that nothing ever came of this protest except a letter from James Roosevelt, son and at that time

confidential secretary to the President, saying that he would call

confidential secretary to the President, saying that he would call the matter to the attention of his father.

In this formal complaint, the local real-estate board asserted that the total over-all value of the completed project could not possibly exceed \$752,285, including land, against the \$1,397,000 valuation accepted by F. H. A.

At that time the real-estate board called attention to the write-up in land valuation and asserted that the actual purchase price paid to the Fenleys was \$39,685.

The real-estate board also asserted in its letter that the Walter

The real-estate board also asserted in its letter that the Walter Butler Construction Co. was a St. Paul, Minn., concern, and that the Kentucky Development Corporation was organized and controlled by the Butlers.

This mortgage requires the payment of \$15,000 annually begin-

ning November 2, 1938, and continuing through May 2, 1962.

This arrangement would leave a final payment of \$643,750, due August 2, 1962, at which time the project would be nearly a quarter-century old.

ASSESSED AT \$16,950

The Louisville Times of April 14, 1939, states:

The ground on which the F. H. A. accepted the valuation of \$100,000 is assessed on city and county tax books at \$16,950.

As to a report that Kesselring-Netherton Co. received a \$10,000 fee, both Mr. Kesselring and W. J. Netherton, firm heads, declined discussion. "That was our own private business," said Mr. Kesselring.

It is claimed that this firm received a fee of \$10,000 or more in connection with furnishing some data. Mr. Kesselring said:

My connection with the transaction was simply to furnish the lending company with some data on industrial employment, which I obtained from the Board of Trade.

Of course, this \$10,000 fee or more, no doubt, was included in the write-up of the value of \$1,397,000, the valuation accepted by the F. H. A.

LET'S HAVE THE FACTS

The Courier-Journal on April 16, 1939, in an editorial under the caption "Let's have the facts," lays bare this fraud upon the taxpayers of the Nation in the following revealing and courageous language:

[From the Louisville Courier-Journal of April 16, 1939] LET'S HAVE THE FACTS

Such financial gyrations as those involved in the construction of the Green Tree Manor apartments are mysterious to the ordinary man, who knows that the F. H. A. would laugh at him should he propose any such deal as that engineered by a group of St. Paul builders. * * *

At this late date, little or nothing can be done about upsetting this particular applecart, but a searching investigation should be undertaken to ascertain how much Federal money has

been hazarded in enterprises of this nature.

In the Green Tree Manor transaction the F. H. A. guaranteed a loan for \$1,000,000, the principal of which was to be repaid in installments of only \$15,000 annually up to and including May 2, 1962. On August 2, 1962, a balance of some \$685,000 becomes due. This type of loan, incidentally, is no longer legally possible. All mortgages bearing F. H. A. guaranties must now be fully constituted in security and contractions. fully amortized in equal payments spread over a term not ex-

ceeding 26 years.

But the arrangement was possible in 1937, and it becomes a matter of importance, therefore, to know precisely what this development actually represented in dollars-and-cents investment.

The fact that the acreage upon which the apartments were constructed received in artificial "write-up" in value from about \$40,000 to about \$100,000 within a single day would seem to reflect

effrontery; but it was agreed to by the F. H. A.

The F. H. A. also agreed to an over-all valuation on the completed project of \$1,397,000, although the Louisville real estate board asserts it could have been constructed in its entirety for about \$750,000.

the real estate board's valuation is accurate, it is proper to ask what happened to the extra quarter million borrowed from the New York Life Insurance Co. And city assessor John Kesselring should not refuse to tell the public what, if anything, his company

received as a financing fee—and why.

This property will be 24 years old when the \$685,000, guaranteed with public funds, falls due. That, therefore, is the stake of every taxpayer in Green Tree Manor.

If the property was worth only \$750,000 in actual, hard cash to begin with, it is certainly conceivable that the Government—which is to say the people—will be holding the bag for \$685,000, 23 years from next August 2.

I wish to commend the Courier-Journal and the Louisville Times and their editors and managers in bringing to light the facts in connection with the Green Tree Manor development project. They have rendered a distinct public service. There have been other disclosures in other sections of the country involving write-up values in larger amounts than the Green Tree Manor. These disclosures should be a warning to the administration of the possibilities of graft and inefficiency in the handling of these billions of dollars by the F. H. A., and as pointed out by the Courier-Journal editorial-

A searching investigation should be undertaken to ascertain how much Federal money has been hazarded in enterprises of this nature.

FOUR BILLION DOLLARS INVOLVED

Under a bill recently passed by the House the F. H. A. is authorized to insure and guarantee up to \$4,000,000,000 mortgage loans in the F. H. A. building program, and to guarantee and insure 90 percent of the face value of the loans, to mature in 26 years. The present law limits the guaranty to 80 percent of the face value. In order to put a check on the write-up values in these insured loans there was adopted an amendment by our colleague Mr. Cochran, of Missouri. The Senate has amended the House bill and increased to \$5,000,-000,000 the amount that the F. H. A. may guarantee or insure, and the Senate has practically cut out the protection afforded by the Cochran amendment.

My purpose in bringing these facts concerning the Green Tree Manor project in Louisville, Ky., is to urge upon the House the importance of the Cochran amendment. We should not permit the House nor the conferees to take out

or emasculate this important amendment.

The Louisville Real Estate Board, made up of experienced, honorable, and capable men, assert that the Green Tree Manor project could have been completed in its entirety for \$750,000, and the "tops" would have been less than \$753,-Yet the Government has guaranteed and insured a mortgage on that property for \$1,000,000, under a claimed value of \$1,397,000. This is a write-up of \$644,000. Under the terms of the mortgage, guaranteed and insured by the Government, on August 2, 1962, there will still be owing on this property \$685,000. As pointed out in this editorial, if the property was only worth \$750,000 new, the taxpayers will be holding the bag for \$685,000 August 2, 1962. This write-up was a fraud on the taxpayers of the Nation. Other frauds have developed. As the Government guarantees 90 percent of the face value of the mortgages and, as the bill is now written, the mortgages are to be paid in 26 years, we can hardly believe that these properties 26 years from now will be worth 90 percent of their present value. At the very best, the Government is bound to lose hundreds of millions of dollars and perhaps a billion or more dollars under these I

guarantees of four billions as provided in the House bill, and five billions as provided in the Senate bill. It is quite clear that if we have many Green Tree Manor projects that the taxpayers are bound to be called upon to make good heavy losses.

F. H. A. DIRECTOR NOT CONSULTED

Judge Roscoe R. Dalton, the State director of the F. H. A. for Kentucky, according to an interview appearing in the Louisville Times, April 14, 1939, Judge Dalton was not consulted. He states:

He and his office had no part in the appraisal, construction, or inspection of the Green Tree Manor Apartments. The deal was handled out of Washington.

Judge Dalton is an able lawyer and a capable businessman. and a director of the F. H. A. in Kentucky. I wonder why he and his associates in Louisville were not consulted? Why should a matter of this importance be undertaken in his city without his suggestions or advice? I am very glad to know that Judge Dalton had no part in this disgraceful affair. Why did the Louisville Real Estate Board receive no response from the President and other high officials here in Washington when it denounced this proposition, and were warned that the value should not be more than \$752,285 at tops, as against a write-up value of \$1.397.000?

It has come to light that there were big write-ups of other projects in other sections of the United States. Congress should investigate the F. H. A. to learn to what extent this agency is obligating the United States Government and guaranteeing loans on a write-up value of nearly double the real value of the property. If we are going to have F. H. A. to benefit the people of our country we should see to it that the people get the benefits and not a lot of big companies and their affiliates.

The national debt is now more than \$40,000,000,000. There should be added to this the guaranties the Government has made of principal and interest of \$5,600,000,000 in bonds issued by various Federal agencies. These bonds have been issued and sold and the proceeds disbursed by this administration. These guaranties will no doubt cost the taxpayers of the Nation a billion or more dollars. Now we are giving F. H. A. the right to guarantee at least \$4,000,000,000 worth of mortgages at 90 percent of their face value and payable over a period of 26 years.

Two distinguished United States Senators stated on the floor of the Senate more than a year ago, that the obligations of the United States Government were at least \$45,-000,000.000. Since that time these obligations have been increased nearly \$5,000,000,000 more. One of these distinguished Senators stated that no one knew the liabilities of the Government. Congress has given the F. H. A. and other agencies the right to insure and guarantee these obligations, and time alone will disclose the losses on these obligations, such as the Green Tree Manor. Graft and fraud must be eliminated. The taxpayers are entitled to protec-The Cochran amendment should be adopted, and the F. H. A. and these other agencies that are handing out billions of dollars should be investigated.

Clinton M. Hester, Administrator, Civil Aeronautics Authority

EXTENSION OF REMARKS

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Friday, May 19, 1939

ARTICLE FROM NATIONAL AERONAUTICS FOR MAY 1939

Mr. COCHRAN. Mr. Speaker, in existence only about a year, the Civil Aeronautics Authority has already won the confidence of the trade as well as our citizens interested in aeronautics. To my mind this is due to the excellent personnel of the Authority. It was a source of great regret to me when Mr. Edward J. Noble resigned as Chairman, but the new Chairman, Hon. Robert H. Hinckley, and his associates, Hon. Harllee Branch, Hon. G. Grant Mason, Hon. Oswald Ryan, and the Administrator, Hon. Clinton M. Hester, have a background that makes it certain this most important Government agency will continue to win favor as it has in

It is no easy task to organize a new agency, especially when there are no precedents to follow. Past experience of the officials, in my opinion, was responsible for the Authority's

Without casting any reflection on his associates, I cannot help but feel the Administrator, Mr. Hester, was invaluable at the outset. This demonstrates the wisdom of appointing career men to important offices. Mr. Hester, a civil-service employee, has been with the Government for many years, and, no matter where assigned, he demonstrated exceptional ability, especially as an organizer and on Federal procedure.

Mr. Speaker, I have just had the pleasure of reading in the May issue of National Aeronautics a very interesting article concerning Mr. Hester, and under the permission granted by the House I include that article as part of my remarks. It

follows:

[From National Aeronautics for May 1939]

An Administrator Who Administrates—A Little Study of the Philosophy and Methods of Clinton M. Hester

It is quite usual to read in the newspapers that the Administrator of the Civil Aeronautics Authority is paying a visit to some city or another on our far-flung map. He may be in Omaha or San Francisco, Fort Worth or Seattle, Billings or Tulsa. The surprising thing is that, notwithstanding, those who visit Civil Aeronautics Authority headquarters in the Commerce Building in Washington nearly always find him at his desk. Hester's avid search for aviation knowledge, added to the heavy work of an uncharted administrative job, furnish much of interest in the study of this vigorous official. Evidently Hester has looked in the dictionary and has discovered that an administrator is one who directs, manages, and executes. Now that the Civil Aeronautics Authority has been in existence for about 9 months, it is probably interesting to explore a little the activities of the man who has been projected into a key position in American aeronautics. It is quite usual to read in the newspapers that the Adminnautics.

Perhaps Congress felt a sly touch of challenging humor when it enacted a law which to the ordinary layman appeared to create an authority with two if not three, rather distinct heads. A great an authority with two if not three, rather distinct heads. A great many people have tried to perceive the boundary line of the responsibility of each of the five members of the Authority and of the Administrator. Some openly predicted friction and all sorts of divergent opinions within the body. No doubt, there have been some, and from the first it appeared that it would be more or less an exploration in "trial and error" for a while. Certainly the good sense and give-and-take attitude, for the most part, of the nine men most directly concerned have prevented what could easily have become a serious state of affairs. part, of the nine men most directly concerned what could easily have become a serious state of affairs.

AVIATION ACCEPTS AUTHORITY

Aviation accepted the Authority with open arms. Of course, many have been vexed because of what appeared to them to be many have been vexed because of what appeared to them to be unnecessary delay in attacking and solving immediate problems. On the whole, aviation is pretty well satisfied. When a considerable number of the "big shots" in the Authority visited the National Air Races at Cleveland so soon after their appointment, those who met them were impressed, and in a few cases a triffe amused, with their college fraternity spirit of enthusiasm. They started off, apparently, by being "crazy about each other." If anything can be said to criticize their acts, a big offset is in their mutual respect and regard. Hester rarely makes a speech—and he makes many of them—without taking occasion to praise the Authority members. Authority members.

LEARNING THROUGH FLYING

He began by being honest with aviation and honest about imself. "Frankly," he said, "I know little of aviation's problems himself. "Frankly," he said, "I know little of aviation's problems in detail." Aviation liked that and all the more because he set himself on a program to gain knowledge. Since last August he has flown over all of our domestic air lines, a total of about 60,000 miles. He has visited the shops of more than one-half of the air lines, and has inspected one-third of the aircraft factories. He knows personally most of the leaders in the industry as well as many interested in private flying. What is equally important, he has met up with most of the C. A. A. field personnel. This flying he does pretty much at night, Sundays and holidays. After the Point Reyes accident in California, it was said that the condition of the Federal radio beam between Medford, Oreg., and Oakland, Calif., was a contributing factor to the accident. Out flew Hester to the scene of the accident, and in a sister ship to the one in the crash he rode in the cockpit from 12:15 midnight, between the two cities, and with earphones listened to the radio heam and could detect nothing wrong with it. Hester got the beam and could detect nothing wrong with it. Hester got the idea that a little first-hand information would be valuable since recommendations of the Air Safety Board are referred by the Authority to the Administrator for study and opinion.

When the crash came at Miles City, Mont., he was 500 miles away. He made a night trip to Miles City. This trip is a little story in itself. During the course of it, the motors quit, and he probably wished he were back in the Treasury Department. It developed, however, that one of the tanks had run out of gas and

developed, however, that one of the tanks had run out of gas and a little interval elapsed before fuel feeding was resumed. Anyhow, he got to Miles City at 3:45 a. m., went to the wreck and picked up another supply of information.

He left Washington at 1:35 a. m. on a Saturday morning to go to Fort Worth to the Southwest Aviation Conference. Bad weather detained him at Nashville for 6 hours. By the time he arrived at Fort Worth, his speech had been released to the papers and he spoke extemporaneously. Then he submitted himself for questions for an hour and a half, and maybe you think the boys didn't like that. Sunday he spent with Civil Aeronautics Authority regional supervisor and visited the Braniff shops at Dallas. He left by plane at 6:30 in the evening and, sitting up all night, arrived in Washington at 4 o'clock in the morning and was at his desk at 9.

His Sunday, all night, and holiday flying accounts for the fact

In Washington at 4 o'clock in the morning and was at his desk at y. His Sunday, all night, and holiday flying accounts for the fact that he doesn't neglect his duties at his Washington office—and that can't be charged against any members of the Authority. The Department of Commerce blotter, where those who observe unseemly hours of work are listed, indicates that they are usually there at their desks until 7:30 in the evening.

WIDE LEGAL EXPERIENCE

Clinton Hester is a lawyer with an A. B. from Washington University and an LL. B. from Georgetown. As a lawyer, he has had 20 years of experience with the Emergency Fleet Corporation, and as an attorney for the Department of the Interior, assistant counsel of the United States Shipping Board, counsel of the Office of Alien Property Custodian, Special Assistant to the Attorney General, and chief attorney for the Department of Justice and assistant general. chief attorney for the Department of Justice, and assistant general counsel for the Treasury Department.

Regardless of all of those critics of slow-moving Government processes, it is well to remember that an important counsel in any Federal division must learn that safe operations and fixing of policies have got to be based on facts, and that he learned during

The collection of facts is his guide and he can't go too far wrong on that basis. An advocate in court trials might probably, in the interests of his client, become skilled in matters that make for delay, but Hester isn't that sort of a practicing attorney. "Get the facts," he will say to one of the technical divisional chiefs. "Make your decision after you have a preponderance of evidence supporting your decision, and then you have nothing to fear."

ing your decision, and then you have nothing to fear."

Aviation likes Hester. He has made many friends, little and big, in the industry. There is nothing to indicate that such friendships have ever caused him to answer an unfair "yes," but rather they have been helpful in assisting him to answer a sometimes necessary "no." There used to be all too many complaints from aviation people that civil aeronautics was administered from Washington by men who did not know the problems at first hand. It cannot be charged that Clinton Hester is missing any opportunity to get out into the field and down to brass tacks. "Frankly, I know little of aviation" is no longer true of the Administrator. Administrator.

Administrator.

The amount of technical knowledge that he has picked up is surprising. He frequently takes part in the testing of blind landing systems. Only recently, he has made numerous landings by operation of such systems, both at Pittsburgh and Newark—all at night. Weather and navigation facilities are getting his attention. He does not proclaim himself a technician but in his own policy of learning the facts, he is getting the experience as well as the knowledge to evaluate facts that are found by experts in the Authority whose business it is to find them. He is very proud of his membership on the National Advisory Committee for Aeronautics, and takes a genuine interest in the work of the committee. interest in the work of the committee.

A SIZABLE TASK

Whether the Administrator has learned all of the functions vested in him or not, he has made a big start. Probably two-thirds of the 3,600 employees of the Authority fall directly under his jurisdiction, and two-thirds of the more than \$20,000,000 ap-propriated by Congress for the work of the Authority is spent to carry out his functions. He knows that it is his responsibility to encourage and foster the development of civil aeronautics and air commerce in the United States and abroad and to encourage the establishment of civil airways, landing areas, and other navigation

facilities—a sizable task in a great American activity which is showing so many promises of speedy development.

His physical vigor matches his keenness for knowledge. why he can fly 7,000 miles a month and still put in practically full time in one of Uncle Sam's nice offices. He has a concept of what has got to be done and plenty of vision for the future. He wants has got to be done and plenty of vision for the future. He wants his 12-year-old daughter sometime to be able to say that her father contributed something to the great advancement in American clayl corrections. can civil aeronautics which he is convinced will have taken place long before she becomes of age.

Recovery and Relief

EXTENSION OF REMARKS OF

HON. PEHR G. HOLMES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1939

Mr. HOLMES. Mr. Speaker, the administration in Washington and the Congress continues to talk about recovery and about putting the unemployed back to work. The country has been hearing a lot about it month after month, and year after year, for a long, long time, but recovery-of any substance and permanence—has not put in an appearance yet, and there are today, according to the best available estimates, no less than twelve to thirteen million persons who want work and need employment and who are without jobs except W. P. A. jobs.

The total number on the W. P. A. rolls during the 12 months' period commencing last July and ending this coming June, has averaged about 3,000,000. This is the figure stated by the President in his recent special message transmitting to Congress his request for \$1,750,000,000 for the

relief appropriation for the next 12 months.

Three millions on the relief rolls is the highest 12 months' average since the inception of direct Federal unemployment relief 6 years ago. To sustain these rolls during the 12 months ending June 30, Congress was required to appropriate \$2,250,000,000, which the Treasury in turn was required to borrow and add to the national debt in order to get the cash to meet the bills.

But the 3,000,000 on the W. P. A. rolls are not the only beneficiaries of Government bounty by any manner of means. There are other millions receiving aid, Federal and State, under the various features of the Social Security Act and other acts of Congress and Presidential Executive orders.

According to the Social Security Board the total number of men, women, and children who are monthly recipients of some measure of public assistance—whether it be work relief, or farm relief, or unemployment insurance, or pensions—is approximately 21,000,000, and that is almost one person out of every six throughout the Nation.

These figures show beyond dispute, that despite all the talk about "solving" the employment problem, it is as grave as ever-and as unsolved-and that insofar as it is measured by the financial load on the Treasury and on the taxpayers, it is getting heavier instead of lighter with no end in sight. In the light of this record and with our experience during the years of destruction the pretense that unemployment relief is just a temporary emergency matter, can no longer be maintained. There is no escape from the conclusion that it is a permanent state of affairs. Congress and the Federal Government ought to deal with it on that basis.

It is true that the President in his latest message to Congress on this subject speaks hopefully about reduction in the relief rolls and in the over-all cost of relief to the Federal Government during the coming year.

He asks now for approximately \$700,000,000 less in appropriations than the total which has been appropriated for relief this year. He forecasts an average of 2,000,000 on relief during the coming 12 months compared with 3,000,000 on relief now.

But the President qualifies his forecast and prospect of reduction with the same escape clause as in previous years. He writes-and I am quoting his exact words-"Barring unforeseen and unpredictable developments, we are justified in expecting an upward trend in the volume of unemployment between now and June 1940," and then adds that the \$1,750, 000,000 which he now asks of Congress for relief is "the amount that should be provided on the basis of that expectation."

That means that, so far as the President is concerned, the only hope of reducing the W. P. A. expenditures lies in pronounced improvement in business and a rise in private employment. Admitting that there is a possibility of expanding industry to such an extent as to reemploy a few million people, the President failed to give any encouragement or cooperation to accomplish this important task. He recommends no change whatever in the existing set-up of the W. P. A. He frowns upon all of the various proposals now before Congress designed to bring about savings or to increase the efficiency of the work-relief system, or for turning back to the States the administration of relief.

If Congress follows the course which the President urged then, I believe, we shall certainly have a repetition of the procedure and the experiences of the present year. We will be told next January that business has failed to make the expected improvement, that the expected reductions in relief rolls were not possible, that the relief funds, which Congress is to vote now, for the coming year, have been exhausted and that a deficiency appropriation is required.

Let me emphasize the fact that no Member of Congress, either Democrat or Republican, denies the responsibility of the Federal Government to extend aid to the needy and to the destitute, and to see to it that no person be without the necessities of life. No Member of Congress seeks to avoid that responsibility-heavy as is the cost upon the Government and upon the country. No responsible Member of Congress in either party proposes to entirely scrap the present system of work relief for the unemployed. But what Members of Congress are now seeking-all except those who are rubber stamps for the White House-is to devise ways and means for making the relief dollars go a lot further than they are now going, and for apportioning Federal relief funds more equitably between the various States, and, finally, for taking relief out of politics and taking the Communist

To this end it has been proposed to require the States to contribute some fixed percentage of the total cost of workrelief projects, and to require the allocation of relief funds upon some specific formula, and to decentralize the administration of relief, with some measure of State and local participation in and control over administration.

Time does not permit a discussion of the details of these various proposals, nor argument as to their expediency. My purpose in this radio talk tonight is simply to emphasize the fact that the question of unemployment relief is the most important and vital question now confronting the Congress; to emphasize the fact that the Republican Members of Congress are as sympathetic as their Democratic colleagues to the needs and necessities of the unemployed, and as disposed to be generous, but that the Republicans, unhampered by orders from the White House, are earnestly seeking ways and means for reducing the enormity of the financial drain upon the Public Treasury, for reducing the tremendous bureaucratic centralization of work-relief administration, and for devising a permanent system, that will

not build up a vast political machine of public employees, that will not destroy State and local governments, and that will not bankrupt the Federal Government.

Effects of Reciprocal-Trade Treaties on the Textile Industry

EXTENSION OF REMARKS

HON. HARRY SANDAGER

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES Friday, May 19, 1939

LETTER FROM SECRETARY-TREASURER OF ISLAND TEXTILE ASSOCIATION THE RHODE

Mr. SANDAGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

MAY 17, 1939.

Col. Millard D. Brown,

President, Continental Mills., Inc.,

Armat and Lena Streets, Philadelphia, Pa.

Dear Colonel Brown: We have been following with much interest your exposition, over a period of months, of the fallacies and injurious effects on the textile industry of the United States of the

reciprocal trade treaty program.

We note with indignation the reply, after months of silence, which the Honorable Cordell Hull, Secretary of State, has made to your various statements, in which he attempts to justify the program of which he is the father and for the effects of which he

program of which he is the father and for the effects of which he can be held largely responsible.

It is possible that in the performance of the duties of the high office he holds he cannot find time to get out in the world of manufacture and trade and observe for himself the current growth of foreign importations and their effect on our industry. Undoubtedly he relies on his assistants in the Department of State to furnish him with the information which he uses to bolster up his arguments. Be that as it may, the fact is that British imports are cuiting into American manufactured goods in rapidly mounting volume. If Mr. Hull wants proof, let him go into the stores in large centers such as New York and Philadelphia and observe the prominence which is being given to British textile products and the great range of patterns and fabrics now being displayed and sold in increasing quantities.

We have this morning, in fairness to Mr. Hull and to you, made

we have this morning, in fairness to Mr. Hull and to you, made a personal canvass of the mills in Rhode Island engaged in the manufacture of the two classes of wool goods most seriously affected, namely, high-grade men's wear worsteds and women's wear woolens. These mills, without equivocation or reserve, stated that their selling houses had informed them that the British import situation was serious and would become more so. One mill told us that on fine, lightweight tropicals, British mills are underselling them in the American market by about 7½ percent, or 15 cents per vard.

or 15 cents per yard.

It is certain that American textile manufacturers, particularly the woolen and worsted manufacturers of New England where the industry is of such vital importance, do not propose to be sacrificed without a struggle. We here in Rhode Island, paying the highest textile wages in the world, are far more interested in the welfare of our own employees and our own stockholders than we are in the welfare of the underpaid workers of Europe and Asia. Asia.

Asia.

We have confined our observations in this letter to the woolen and worsted branch of the industry, because that is the branch whose rights you are so ably championing. The same situation as regards imports exists in the manufacture of cotton goods, of narrow fabrics and webbing, and other textile products. We are informed that there are many other industries which are having the same trouble that we are and are, presumably, being told by the Secretary of State that their woes are all imaginary.

It is to be beyond that with the publicity which you and other

It is to be hoped that, with the publicity which you and other public-spirited manufacturers are giving to the practical effects these trade treaties are having on American industry, sconer or later the Congress of the United States will return to their own hands, where it undoubtedly belongs, the treaty-making power which they unfortunately relinquished.

Sincerely yours,

RHODE ISLAND TEXTILE ASSOCIATION, E. F. WALKER, Secretary-Treasurer.

Idle Capital

EXTENSION OF REMARKS

HON. ROBERT W. KEAN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Friday, May 19, 1939

EDITORIAL FROM THE NEWARK EVENING NEWS OF MAY 17,

Mr. KEAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Newark Evening News of May 17:

[From the Newark Evening News, of May 17, 1939] IDLE CAPITAL

President Roosevelt asks the Temporary National Economic Committee to answer the question of how to put idle capital to work. Idle men, money, and machines must be brought together, says the President, and it is the job of Government to "find and energetically adopt those specific measures" which will bring them together

energetically adopt those specific measures" which will bring them together.

There will be complete agreement with Mr. Roosevelt as to the urgency of the problem. There will also be some wonderment as to the question, when Mr. Roosevelt and his advisers ought to see all about them the answer. It lies in the confused foreign and domestic picture, in economic chaos, both at home and abroad in the Government's deficit financing, in the administration—Congress differences over taxes in some of the inherent characteristics of the New Deal itself.

For 6 years the administration has tried many devices that have

Congress differences over taxes in some of the inherent characteristics of the New Deal itself.

For 6 years the administration has tried many devices that have discouraged initiative and penalized success. Much was in a well-intentioned effort to correct unethical exploitation, but the administration has consistently refused to admit that it has made a mistake in any detail of its policy. Mr. Roosevelt could look into the mirror for the answer to his question.

Capital will not be sent out on errands of venture if the prospective rewards are too uncertain. That, in brief, is the reason why savings and bank reserves are piling up, why obsolete plants are not being replaced, why men are not being employed. The tax controversy is an immediate example. The President will not yield the principle of the undistributed-profits tax. Such yielding alone would not constitute tax relief, but it would be a sign to business that the administration was turning away, in at least one particular, from punitive measures.

Capital is skeptical, and not without reason, of Mr. Roosevelt's program and his methods of achieving it. From time to time there have been promises of cooperation, such as the Hopkins speech at Des Moines, but words have been lost in contrary actions that followed them. It is not the large capitalist alone who is reluctant to risk his savings; the little man is just as confused. In the circumstances it cannot be expected that money will come out of the

stances it cannot be expected that money will come out of the

The administration cannot ban'sh all the doubts and fears. Many of them lie beyond the control of any government, however willing and able it may be. But Mr. Roosevelt can help to bring an end to the denunciation and recriminations that have gone on throughout the period of "reform and recovery." If he will do so, some of the idle money will go to work again.

How to Reduce Government Spending

EXTENSION OF REMARKS

HON. JOHN G. ALEXANDER OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Friday, May 19, 1939

LETTER FROM WALTER H. WHEELER

Mr. ALEXANDER. Mr. Speaker, I am pleased to present to the Members of Congress and to the entire citizenry of this Nation a sound and constructive suggestion for real tax reduction without a sting or a flaw.

I hope the Members will carefully read the following letter from Walter H. Wheeler, an outstanding and successful designing and consulting engineer of Minneapolis, as well as his article entitled "How Engineering Can Reduce Govern-ment Expenditures."

I call attention especially to paragraphs 7, 10, and 17 of his article. Mr. Wheeler's letter and article follow:

MINNEAPOLIS, MINN., May 8, 1939.

Hon. John G. ALEXANDER,

Member of Congress, Washington, D. C.

My Dear Congressman: Your letter of may 3 is received, and, acting on your suggestion, I am enclosing herewith an article which,

acting on your suggestion, I am enclosing herewith an article which, it seems to me, will present my idea for cutting the cost of Government buildings, bridges, etc., in nontechnical language, which the average reader will readily understand.

I do not believe there is anything in the laws under which the Procurement Division, Veterans' Bureau, War and Navy Departments, and District of Columbia are operating which would preclude the adoption of the program outlined. If there is, perhaps the Congress would wish to amend the acts before it adjourns by a blanker action which would apply to any such work and make it blanket action which would apply to any such work and make it possible for the Government to follow a procedure such as I have outlined.

I am glad to note that you were formerly in the building management business. It gives you first-hand knowledge of these problems

I would like to point out to you that the Government spent approximately \$12 per square foot in the construction of the new Interior Building, whereas private office buildings of class A type cost private owners \$5 to \$6 per square foot. I also wish to point out that the space in Government buildings is usually arranged that the space in Government buildings is usually arranged to accommodate some preconceived exterior architectural treatment and is not laid out to get the maximum use of the floor space in the building. I fail to see any good reason why the Government should spend twice as much for office-building space as private owners spend.

rivate owners spend.

I did not mention these figures in my article because they are due to architectural design and lavishness rather than to engineering design. It appears in what I have said about the United States appraisers' stores building in Baltimore, where the private architects planned a building with 150,000 square feet of floor using my system and provided a structural design to carry four additional stories with the money which had been set up by the Treasury Department to construct a building with 100,000 square feet of Department to construct a building with 100,000 square feet of

I am enclosing a reprint from Architectural Record of December 1937 showing the Railway Exchange Building in Denver, Colo., built with my smooth-ceilings system. I call your attention to the cost of this building, which I have underlined in blue. This building was published by Architectural Record as one of the outstanding architectural designs of the year. The exterior is Indiana limestone and black granite. It is a thoroughly high-class office building in every respect, with the latest type of push-button control ing in every respect, with the latest type of push-button control elevators which alone cost \$50,000 for the three. When one compares this building at 38 cents per cubic foot with what you are getting for \$1 per cubic foot in Washington, it is difficult to be reconciled to this waste and extravagance.

Yours very truly,

WALTER H. WHEELER.

HOW ENGINEERING CAN REDUCE GOVERNMENT EXPENDITURES

One of the most perplexing problems and one of the most dangerous to the future welfare of the United States, is the continuing excess of expenditures over and above revenue receipts.

This is a problem of the National Government and it is likewise a problem of local and State governments more or less throughout

The demands of the people for appropriations for new public improvements and for the rebuilding of existing facilities continue unabated although the collections from taxes do not and have not justified these new expenditures.

In order to keep up the expenditures, the Federal, local, and State Governments have gone deeper and deeper into debt and as yet no reversal of this trend has been apparent.

Private business, when faced with such a situation, must either cut its expenses to bring them within the amount of its income, or increase its earnings. Private business has found that raising prices, except under unusual conditions, does not increase earnings, but is likely to have the opposite effect, namely, reduce sales and reduce earnings. Government is finding the same thing true of its tax program. The higher the tax the less earnings there are to tax. Raising prices and raising taxes are both discouraging factors to the free exchange of goods and to the expansion of business activities.

LXXXIV—App——133

It seems clear that the only way the Government is likely to make expenditures come within income is to reduce the expenditures. Expenditures can be reduced by the application of engineering economics to the design of public improvements such as buildings, bridges, etc., and yet have the improvements.

7. There is an erroneous idea in the minds of many people that the prices guited by contractors and material dealers on public works.

7. There is an erroneous idea in the minds of many people that the prices quoted by contractors and material dealers on public works, and the rates of wages paid to the workmen thereon, are all the factors which control the cost. It does not occur to the average person that the cost of a building or a bridge or a dam or other structure is controlled by the engineering design and by the plans and specifications. Particularly, it does not occur to them that a building, bridge, or dam equally as large, good, and efficient in all respects, can be designed which will cost substantially less without affecting the profits of the contractor, the prices of materials. affecting the profits of the contractor, the prices of materials, or the rates of wages. Nevertheless, such a result is often possible by the application of the "science of engineering economics" to the problem.

Under the present system our public works are planned by bureaus in which engineers, architects, and draftsmen are employed to draw up the plans and prepare the specifications for any given structure. Advice sometimes is secured from outside engineers and technical men, but as a rule the bureau or department does all the work itself.

For years the writer has advocated competition in the prepara-tion of plans and specifications for public improvements, and his plan as published in Engineering News-Record August 11, 1932, and publicly and privately advocated prior to that time, and since,

and publicly and privately advocated prior to that time, and since, is as follows:

10. When a public improvement is to cost more than a certain sum, say, \$500,000, and is to be planned by a public bureau, let the bureau make its plans and specifications, but let it also employ competent engineers and architects in private practice to prepare alternate plans and specifications to fulfill the same requirements. Let these alternate plans then be advertised for bids together with the bureau plans. If the bids on the alternate plans and specifications are substantially less than the bids on the bureau plans and specifications, let the contract be awarded on the alternate plans and specifications, let the contract be awarded on the alternate plans and specifications, let the contract be awarded on the alternate plans and specifications are not substantially less than the bids on the bureau plans and specifications, pay the private engineers and architects only their out-of-pocket cost for the preparation of said alternate plans and specifications.

A bid which showed a saving of more than 5 percent of the cost of that part of the work for which the alternate plans and specifications were prepared, would be a substantial saving, and the adoption of the alternate plans with such a saving would normally result in a net saving to the Government.

In carrying out such a procedure it would not be necessary or advisable to have more than one set of alternate plans and specifications prepared on any given project.

Governmental bureaus and political bodies do not seem to favor a program as outlined above. The main objection of the bureaus seems to be that it might injure their reputation in the minds of the public if a private professional man or group should prove that his plans are more efficient and less expensive than the bureaus.

the public if a private professional man or group should prove that his plans are more efficient and less expensive than the bureaus. This is not a sound argument against this plan, and there are many arguments in favor of the plan which the writer is proposing, some of which may be listed as follows:

 Reduction in cost of public improvements.
 Reduction in cost of operation and maintenance of public improvements.

a. Stimulation of Government employees and private parties engaged in the practice of engineering and architecture to accomplish the desired results at the lowest cost without sacrificing strength, durability, utility, or appearance.

Several instances of which the writer has personal knowledge will be mentioned to illustrate how the success of this plan has

been demonstrated.

A certain county proposed the construction of a large bridge and highway development. The estimates based on the cost of other comparable bridges ranged from \$3,000,000 to \$4,000,000. The county board employed the writer's firm to engineer the project. The whole project, including engineering, cost less than \$2,400,000.

\$2,400,000.

A certain county proposed to build a grade separation. The county's estimate based on designs of the State Highway Department and the county engineer was \$27,000. The writer was asked to review the plans and specifications and report to the board. He reported that by redesigning the bridge it could be built for about \$13,000. The original plans and specifications were revised. The county board then decided to have the writer prepare an alternate set of plans and specifications. Bids were taken on both plans and the job built on the writer's plans for about \$11,000.

When the United States Appraison's States Building was built.

When the United States Appraiser's Stores Building was built in Baltimore, the writer proposed to the Supervising Architect of the Treasury Department that a new system of floor construction invented by him and called the smooth-ceilings system be used for this building. The writer had previously submitted an alternate design with his system for the Kansas City Post Office, which showed an estimated saving on that job of about \$80,000. This alternate was rejected on the ground that its adoption might cause delay, although the contractor assured the Department there would be no delay. As it was originally explained to the writer, the Baltimore appraiser's building was to cost \$1,000,000 for land and building, and the building was to have about 100,000 square feet of floor. Private architects were employed to draw the plans and specifications. The writer was employed by the Treasury Department as their consulting engineer to design the structural part of the building, using his "smooth ceilings" system. The building as built has over 150,000 square feet of floor and is designed to carry four additional stories. The writer estimates the saving to the four additional stories. The writer estimates the saving to the Government by using his floor system in this building at more than \$40,000. An elaborate load test was made on the first floor of the building, and the stresses in the concrete and steel were measured with accurate instruments. This test showed the construction to be exceptionally strong and stiff and the unit stresses to be very much smaller than were allowed for in making the

design.

When the new Interior Building was built the writer prepared an alternate structural design for one of the bidders, who estimated he could save \$250,000 by using his "smooth ceilings" system in this building. However, the bid of another was low on the base design. The writer then offered his alternate design to the low bidder. This bidder made an oral offer to the Treasury Department to deduct \$95,000 from his bid if he should be allowed to use the alternate. The Treasury Department rejected the offer on the ground that its adoption might cause delay.

The board of education, city of Minneapolis, made a contract with the writer to prepare alternate structural designs for three school buildings in Minneapolis. Bids were recently opened on the first and smallest of the schools. The low bid on the writer's alternate design shows a saving of about 14 percent in the cost of the structural part of the building, and a further saving of about

the structural part of the building, and a further saving of about 33 percent each time the interior of the building is redecorated. All of the savings herein recounted were effected without in any

way depreciating the value of the structures, merely by applying

the science of engineering economics to the problems.

If a similar saving can be made on proposed Government proj-

If a similar saving can be made on proposed Government projects, it would amount to a substantial sum. For example, the writer has heard that the proposed new War Department Building is estimated to cost \$27,000,000. A saving on this building comparable with those recited would be around \$500,000.

As evidence of good faith the writer is willing at his own expense to review the preliminary designs for proposed Government buildings and bridges estimated to cost \$500,000 or more and make definite proposals for preparing alternate structural designs for those projects on which he believes a substantial saving can be made. projects on which he believes a substantial saving can be made. These proposals would be based on sharing the saving with the Government, the writer to receive a percentage of the saving as his compensation, but not more than 50 percent of the saving in any case.

The writer proposes further to guarantee that his designs will comply with the Government building code for buildings and good

engineering practice for bridges.

The writer further believes that if there are any present rules or regulations or provisions in appropriation acts which would prevent the various bureaus from adopting the procedure outlined, these should be repealed or amended at once so the Government can avail itself of this opportunity to reduce expenses.

New Deal Theories Collapse

EXTENSION OF REMARKS

HON, LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Friday, May 19, 1939

Mr. THILL. Mr. Speaker, today this country is in a serious depression with a staggering national debt of over \$40,000,-000,000.

During the last 51/2 years we have seen the Chief Executive take powers from a spineless Congress—powers greater than this Nation has ever delegated to anyone. But after spending these billions we are worse off than ever before.

We have been kept in this depression for many years, due chiefly to the unsound experiments of the New Deal. What were some of these experiments? The scarcity policy to raise prices, processing taxes, so-called reciprocal trade agreements, the N. R. A., the Triple A, and a host of other alphabetical nightmares.

I would be the last to say no good was accomplished by some of these New Deal policies; but there have been so many bad mistakes that business has the jitters, unemployment is rampant, and the morale of the American people is breaking.

Chief among the New Deal fallacies is their attempt to raise prices by producing less. The brain trusters, by stopping free competitive enterprise, abandon progress, and substitute eco-

nomic planning, regimentation, and control.

The farmer, under the Triple A, is told how much he should plant or produce. "Plow under your cotton, plow under your corn," say the horde of New Deal agents, "the Government will pay you." You are taxed to pay the farmer for destroying the necessities of life. The Government thus controls the activities of the individual, and he dare not oppose the plans drafted by those in power. This is monopoly. The same technique of control by state-owned monopolies is found in Russia.

When you restrict production free enterprise is suppressed, personal liberty is endangered, and progress is halted. The real danger of economic planning lies in that control of one activity soon leads to control of all economic life.

For example, the Coal Commission finds that raising the price of coal leads to a demand for an offsetting tax on fuel oil. Under the Triple A, the attempt to control the production of seven commodities led to the control of 13 major farm products. Control in the first instance was of acreage only, but now production and marketing are both controlled.

Now, what does all this mean to you? It means that you are no longer the judge of your own best interests; and

further, it means a lower standard of living.

Where there is Government control and domination individual initiative is destroyed. No longer would there be that aggressiveness of Americans which has given this country the highest standard of living in the history of the world.

When a factory shuts down there is a decrease in the production of goods and wages. When less corn is produced there is less corn to eat. When less cotton is grown there is less cotton to wear. The less we produce, the less we have. This affects all of us. If the standard of living is to be raised, then more, not less, must be produced.

The Government should encourage industry to produce as much as it can. New uses for our products should be found. If production decreases prices, so much the better, for as prices are lowered the consumer will be able to buy more with his dollar. This is the American way, which gives us greater production, lower costs and prices, and leads to higher standards of living and full employment.

But how can the New Deal theorists reconcile their policy of raising prices by producing less with their reciprocal-trade treaties, which permit products of cheap foreign labor to undersell American products made by American labor?

Foreign trade is helpful to the economy of this country. Make no mistake about that. We must import many commodities, such as tin, nickel, rubber, coffee, cocoa, and tea. In turn, this country produces such commodities as cotton, tobacco, automobiles, office equipment, electrical and industrial machinery, which are needed by others. We can and do produce more of these commodities than we consume. We should have foreign markets in which to sell these surplus

But this does not mean that we should reduce tariffs on our commodities to a point where foreign goods undersell similar American goods in our home markets.

By opening our doors to goods produced by cheap foreign labor, we take jobs and wages from our own citizens, we close factories, board up mines, and throw thousands of men on the streets looking for jobs.

A number of years ago Congress passed various immigration laws and exclusion acts because it was recognized that the influx of foreign labor, accustomed in its own country to low wages and long hours, would result in lowering wages, working and living standards of all American labor.

Is there any difference in disastrous effects between bringing cheap foreign labor over here to compete with our American labor and the bringing over of the products of cheap foreign labor, under so-called reciprocal trade treaties, to compete with the products of American labor?

At least, when foreign laborers came to America they became consumers. But when we import cheap foreign-made goods that foreign labor constitutes no consuming power in this country.

At least when one American worker takes the job of another and makes him idle the first worker helps to support him. But when we make American workers idle by importing cheap foreign-made products, the foreign workers do not help to support the idle American workers.

Let me quote a resolution unanimously adopted by the executive council of the American Federation of Labor, May

Resolved, That the executive council of the American Federation of Labor expresses its opposition to reciprocal-trade treaties which discriminate against American workers. We are opposed to reciprocal trade treaties' provisions which provide for importation of goods and merchandise which, because of low labor costs abroad, are sold at a lower price than the same goods and merchandise produced by workers in the United States, where wages and conditions of labor are established on a higher standard than those which prevail

John J. Mara, president of the Boot and Shoe Workers' Union, stated before the Committee on Reciprocity Information in Washington:

Not alone did these imports of Czechoslovakian shoes enter American markets, according to the United States Tariff Commission's findings, on a basis of some 59 percent less than cost of comparable American-made shoes, depriving American shoe workers of their job opportunities, but, in addition thereto, these shoes were delivered at prices so much below American costs of production that they forced down the wholesale price structure, preventing American shoe workers from obtaining wages which they were entitled to.

California, North Carolina, the New England States, the Southern States-all parts of the country have sent a flood of protests to Washington. Does the administration do anything? Absolutely nothing. As a result millions of Americans are forced out of employment. American farmers are deprived of a fair price for their products. Hundreds of thousands of American business houses suffer.

We must stop the influx of cheap foreign goods, which take jobs and wages from our own citizens. We must do away with those reciprocal-trade treaties, which close up our factories and seriously injure our own economic system, now bled white by the strain of these depression years. American agriculture and American industry are so weakened by the burdens they have carried during these years of New Deal experimentation that now every dollar's worth of foreign competition is 10 times more serious than would be the case in normal times.

Wars threaten the peace of the world; nations frantically struggle for world markets; dictators crush many portions of the earth. It behooves us to take care of our own citizens. We must see to it that they have jobs, that they have income, so that we can again become a prosperous and contented people.

Work In the Office of a Congressman

EXTENSION OF REMARKS

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Friday, May 19, 1939

ARTICLE BY DAVID LAWRENCE IN THE WASHINGTON EVENING **STAR FOR MAY 18, 1939**

Mr. PITTENGER. Mr. Speaker, an article by David Lawrence in the Evening Star for May 18 calls attention to the duties, responsibilities, and work performed by Members of Congress. This article has to do with the recent action by the House of Representatives in authorizing employment of an additional clerk. I am setting it forth in connection with my remarks here because it fairly and accurately states the situation.

Ever since Congress convened in January I have had three employees in my Washington office, and in addition have had work done in my Duluth office. Yesterday was a typical day so far as my routine is concerned. In the forenoon I attended a Senate committee hearing which has to do with legislation that would benefit northern Minnesota to the extent of \$100,000 or probably more. It was important that I attend this hearing. It is important that I keep on attending hearings until this legislation is passed. The House convened at 12 noon. Roll calls and consideration of pending legislation kept me on the floor of the House until 5 p. m.

While many departmental requests were attended to by the clerks in my office, there was still the matter of conferences over propositions that concerned the district and also the question of giving personal attention to correspondence in reference to pending legislative problems. That was not reached until the evening.

Official correspondence in the office of a Member of Congress has more than doubled in recent years. And as a Member of Congress said the other day, there is no 40-hour week nor an 8-hour day in a Congressman's office.

I mention these facts because a great many people do not realize the enormous amount of work that must be handled in a Representative's office.

Mr. Lawrence's article is as follows:

When Members of the House of Representatives, without a roll-call vote, decided this week to increase their appropriation for clerk hire by \$1,500 a year, a sort of feeling of conscious guilt was promptly attached to the action. As a matter of fact, the Members of Congress might well have been proud of what they did, and the country would be many millions of dollars better off if the Congressmen and Senators had more instead of less help.

The total appropriation increase amounts to about \$660,000 a year, and all it takes care of is the hiring of clerks to handle mail. The processes of democracy encourage rather than discourage letter writing. Telling a Congressman or a Senator what the constituent thinks is nowadays regarded as the great privilege of citizens of a

which the construction of a senator what the constitution thinks is nowadays regarded as the great privilege of citizens of a free country. But when the Member of Congress fails to answer such a letter or telegram he is supposed to be indifferent, discourteous, or rude, and not fit to represent his district or State. Yet the job of answering correspondence is tremendous and the

job of classifying the letters and giving digests to the Member of Congress so that he or she may know what the trend of opinion happens to be is not something which can be done by clerks who

also have to formulate and take care of the replies.

CHORES ARE INCREASED Not a few hours but most of the hours of a Congressman's office force are taken up with running down requests for information or contacting Government bureaus. The larger the bureaucracy gets, the more are the chores of the Congressman and Senator increased.

The staffs of the 531 men and women in the House and Senate are woefully inadequate, and all because of a peculiarly developed notion, bordering on the side of demagoguery, that a Member of Congress must never vote any money for himself or his office. Also, there have been some abuses in recent years where Members of Congress have had on their pay rolls their own relatives, who in some

cases did no work at all but drew a salary check.

Even conceding these abuses, which were the exception rather than the rule, the work of the Members of both Houses has increased enormously, and hence to measure the needs of a Member of Congress by what some small minority might do is unfair not only to the Senators and Representatives who are conscientious about it but to the vast body of citizens whose interests are adversely

Not long ago the suggestion was made by this correspondent that every Member of Congress should have attached to his office a person with training in economics, someone who could actually examine and furnish memoranda to the Senator or Representative so he would know something about the legislation he is asked to pass upon. The action just taken by the House goes only part way. It furnishes an extra clerk at \$1,500 but does not really solve the major problem of getting legislation properly analyzed.

BUSINESS USES RESEARCH

The American people pay \$10,000 a year to each Senator and Representative. The average executive in business getting any sum of that size has a competent and adequate office staff, with specialists in his line of business and someone who can manage the office in his absence. Members of Congress are supposed to be in attendance at the sessions of the House and Senate as well as their committees. They cannot possibly run their offices and be on the floor and at the committee meetings and do justice to any of

in attendance at the sessions of the House and Senate as well as their committees. They cannot possibly run their offices and be on the floor and at the committee meetings and do justice to any of these three responsibilities unless they have assistance.

Suppose every Member of Congress had an office assistant who was not required to handle the clerical details but could concentrate on studying legislation. Suppose also that it cost the Government about \$2,000,000 or thereabouts, or an average of about \$4,000 a year per office. The question then would be this, Would it be worth \$2,000,000 a year to get intelligent legislation passed on economic problems? Suppose the theory of taxation as it deters business

activity or as removal of taxes furnishes incentive to business were at the moment thoroughly understood in the office of every Member of Congress, would it not be logical to assume that out of such knowledge might come a real tax-revision bill buttressed by facts and experience? And if American business were encouraged by a genuine tax-revision plan so economic recovery would come, wouldn't American people get a thousand times more their money's worth out of the expenditure for competent economists to help Senators and Representatives?

Senators and Representatives?

Businessmen have plenty of research assistants, but the facts they turn up are regarded as suspect by politically minded Representatives and Senators. But if their own staffs turned up the same facts—for 2 and 2 make 4, whether it is in a Representative's office or in a corporation's research bureau—there might be a different story to tell about the vast amount of economic legislation which nowadays dominates the work of both Houses of

Congressional Investigation of the Philippines

EXTENSION OF REMARKS

HON. JOAQUIN M. ELIZALDE

RESIDENT COMMISSIONER OF THE PHILIPPINE ISLANDS IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1939

Mr. ELIZALDE. Mr. Speaker, I am sure that the Philippine Government would welcome a congressional investigation of any aspect of Philippine national life. In my opinion, however, there is no need or basis for any inquiry into alleged Japanese infiltration into the Philippines—even less from any of the angles suggested in the resolution introduced

The Philippines, naturally, carries on a normal trade with Japan, as with all its neighboring countries. These relations are a matter of public record, and there cannot be, of course, any discrimination for or against any foreign nation. I can state emphatically that there is no discrimination whatsoever in favor of Japan, since our only trade preferences are with the United States.

As far as our cultural inclinations are concerned, our entire national life is founded and maintained on American principles and democratic ideals which are so fundamentally instilled that they will be maintained. Any influences alien to democracy and free government do not thrive and are not encouraged in the Philippines.

The suggestion regarding Japanese immigration is inaccurate, because the proposed new immigration legislation aims precisely toward a nondiscriminatory policy, establishing an equitable quota basis for the entrance of foreigners

into the Philippines.

We would be very happy and even anxious to have a congressional study at first hand of Philippine conditions and Philippine-American trade relations at any practicable time. It is obvious that the Philippine Commonwealth is proceeding most successfully under President Quezon's able leadership, and that a progressive liberal administration is being maintained.

This will be surely confirmed by all United States administrative agencies directly concerned with Philippine affairs. We cannot but welcome any inquiries regarding specific or general conditions in the islands.

Pay the Farmer Cost of Production

EXTENSION OF REMARKS OF

HON. EDWIN C. JOHNSON OF COLORADO

IN THE SENATE OF THE UNITED STATES Monday, May 22 (legislative day of Friday, May 19), 1939

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD remarks by myself on the subject, "Pay the Farmer Cost of Production.'

There being no objection the remarks were ordered printed in the RECORD as follows:

A SENSIBLE BILL

Mr. JOHNSON of Colorado. Mr. President, 17 Senators have introduced in the United States Senate a bill which, if it be enacted into law, will give the American farmers cost of production upon that part of their crop domestically consumed and place all surpluses of all crops in the hands of the Government for disposal to the needy or to be bartered or traded to foreign countries requiring these surpluses. Whether we like it or not, the barter system of disposing of surplus goods is the modern method of international trade. Embargoes, high tariff walls, and an utter lack of international money since America has virtually cornered the world's gold and silver supply and buried it at Fort Knox and West Point have brought that primitive method of international trade back into being. Powerful nations are using the barter systems today because they must use it if they would have trade. America does not like it, but fire is often best fought with fire, and when we are in Rome it is well to do as do the Romans. This cost-ofproduction bill would place no burden upon the Federal Treasury whatever; it would add no taxes, processing or otherwise; but it would establish a fair price to the American consumer and producer and concentrate surplus supplies of farm products in the hands of the Government to be disposed of in an orderly way at home and abroad.

SOMETIME, WHY NOT NOW?

Some day we must come to this kind of an agricultural program, for the reason that it is economically sound, fair to the American consumer, and fair to the American producer, and because it will put the American Government in an advantageous position in dealing with the foreign buyer and the foreign producing competitor. The sooner we accept the inevitable, "take the bull by the horns," and solve the agricultural problem, the sooner will we restore prosperity in this country. There can be no permanent or just prosperity in America so long as the farmer is kept in virtual bankruptcy and economic despair. America cannot reasonably expect to return to an \$80,000,000,000 annual income until the income of the American farmer, who represents 30 percent of our population, is raised from its present low status of \$7,000,000,-000 to a fair income of at least \$15,000,000,000. This cost-ofproduction bill will accomplish that very thing, and it will boost the national income at least \$10,000,000,000 and pay into the Federal Treasury half a billion additional in taxes. Some thoughtless persons arch their eyebrows when it is proposed to give American farmers cost of production on the portion of their crop domestically consumed, as though that were a fantastic dream or a "crackpot" scheme impossible of realization.

SOMETHING FOR NOTHING

I have never been able to understand why that attitude should exist. Can any honest industry continue in business if it produces below cost? It cannot. Make no mistakefailure, bankruptcy, and receivership face every industry that flies in the face of such an imperishable economic law. When you and I go to a restaurant to enjoy a good meal, we would have the proprietor paid cost of production plus a profit upon his investment for all the good services which he provides for our comfort. Likewise we would want the men and women who cook the food and wait on the table to have a living wage and reasonable hours; yet we seem perfectly willing that the farmer who grew the good things set before us to eat should not be paid the costs of producing these vital necessities. We have the heart to dismiss the farmer with scant concern because his distress is not visible to us in our smug comfort and for the further reason that his is the only industry that is powerless to resist our unreasonable expectations of getting something for nothing.

FARM PROBLEM COMPLEX

American farmers have tried for years to build up farm organizations to deal collectively with the consumers of farm produce and secure for their families and themselves a living wage. While these organizations have performed a great service and accomplished a great good, especially along educational lines among their own membership, they have never become powerful enough to drive a bargain with the American consumer which would protect their own markets. Farmers have found after a careful study that they are not only engaged in a complicated industry, which is interstate in character, but they have discovered that they must deal with deeply involved international economies and social problems. American farm prices to American consumers are not determined in our country but are fixed in Liverpool, Rotterdam, Habana, Hong Kong, and the other hundreds of foreign markets scattered throughout the world. Too, transportation costs to the foreign ports on goods never shipped out of America but consumed here at home are often deducted from the domestic price at the direct expense of the American farmer.

TWO-PRICE SYSTEM

Many American manufacturers and industries operate under a two-price system; they sell at one price upon the domestic market and at an entirely different price upon the foreign market. Many of them maintain factories and assembling plants on foreign soil to give them the advantages of low foreign wages, free penetration through foreign tariff walls and elimination of transportation costs. The farmer has never had an opportunity to market under that kind of a system. He is tied to the soil and is compelled to absorb the extra costs of high American standards not only upon the goods which he sells in the foreign market but upon the goods he sells in the domestic market based upon the foreignmarket price less transportation from his farm to the foreign port. He produces his whole crop under the expensive highliving standards of America and sells his whole crop to America and the world upon the low foreign standards of the Tropics, Europe, and Asia. He buys upon the American market in which industry has tariff protection and where labor has both its own powerful organization to consummate advantageous collective bargainings and Government protection aginst exploitation. The living standards of foreign farmers are very low. In most countries they constitute a peasant class, work long hours for a meager existence, have few opportunities and only very limited privileges; yet the American farmer is expected to produce for the American consumer on that kind of a basis and at the same time live in the American way. If it be the purpose of the American Government to establish a class of peasants and farm peons in this country, the certain method will be to continue to compel the American farmer to compete with the peasantry abroad not only on the 10 percent of his goods which finds a market abroad but upon the other 90 percent that finds a market in his own country. How unfair this is.

THE WALLACE PLAN A FAILURE

The Secretary of Agriculture has tried to solve this acute problem by paying doles-which he chooses to call by the pretty names of conservation benefits and parity paymentsout of the Federal Treasury to the American farmer so that he might have a squint from afar at the abundant life. To be eligible to receive these doles, however, farmers must accept a glorified economy of scarcity and cooperate with the Secretary in a program of curtailed production. Surpluses are not disposed of under his plan, but loans are made upon them, and they are then piled up in show windows as a constant threat to the price structure until now farm commodity prices are down to almost the lowest points of history. A whole year's supply of cotton is mortgaged to the Government, a 6 months' supply of wheat will be carried over into the next year's crop and Government-owned storage corn is reaching dangerous proportions. Prospective purchasers of these staple commodities do not know what hour the floodgates will be lowered and these distressed, mortgaged crops thrown upon the open market, so they naturally hesitate to invest in them. This queer hybrid of partially controlled production that does not control, and mortgaged stored sur-pluses, "the ever normal granary," has placed the American farming industry in a most precarious situation. It has bankrupt the Federal Treasury, wrecked the American farmer, and made American traders the proverbial "fat boy" among the nations of the world.

POLITICAL REVOLUTION

In a speech a little over a year ago on the floor of the United States Senate I predicted that the present farm program when enacted into law would bring about a political revolution in the Farm Belt. I did not want that to happen, and I am grieved that it has happened, because I believe in the purposes and objectives of the Democratic Party with all my heart. A terrible mistake is being made, and the tragic pity is that it is being done by a courageous administration that really wants to help the farmer but apparently does not know how to do it. Wallace has started down the wrong track and seemingly is too proud to admit failure. He means all right, but good intentions do not pay off mortgages and bills and taxes. The American farmer is interested in his Government; he is very unhappy over the staggering national debt of \$45,000,000,000 owed by his country. He realizes that a program based on debt cannot last. He resents having borrowed money handed to him as a dole as though he were a common pauper. He does not seek charity; he wants to be paid for the hard work he is so willing to perform.

The payments that are made to him out of borrowed money from the Federal Treasury require him to submit to a regimentation and control that humiliates him, disheartens him, breaks his morale, and drives him into sullen resentment and submerged anger. He only submits to this humiliating experience out of desperation and helplessness. He never can be convinced that he should surrender all of his liberty and freedom. He lives on a farm primarily because he loves liberty. He is not an imbecile; he is not a boy in his teens or an ignoramus, and it does not set well with him to be treated as such. He wants an honest recompense for the hard work that he performs. He does not object to working from early morning until late at night, but he wants to be paid for that work as other citizens are paid for their labor. He is not asking for a single advantage or a special privilege of any kind, but he would welcome a decent deal.

THE COUNTRY'S PROBLEM

This is more than just a farm problem, however. American prosperity is involved. If the farmer be given a fair economic opportunity the whole country will prosper. Last year our farmers produced a splendid, well-balanced crop of all farm commodities. It was not exactly a bumper crop or a record-breaker, but it was one of the best crops and one of the best-balanced crops that has ever been grown. It was well distributed throughout the country; no major droughts or catastrophes affected it to any great extent or over any large area; the production was even and comparatively satisfactory over the entire country; and yet with that fine crop the United States Government has had to go out on the highways and byways and borrow hundreds of millions of dollars to pay doles of one kind or another to the farmers to keep their bodies and souls together.

If these doles had balanced the farmers' budget, it would not be so serious, but little progress in that direction has been made. What further proof does one require to be convinced of the utter fallacy of such a program? With these doles and Federal loans and farm-security and rehabilitation programs added to the farm income, that income still barely reaches 10 percent of the national income. Thirty percent of American citizens live on our farms; if they had their share of the American income, it would need to be nearly three times the present income. If farmers' present low incomes were doubled, you would witness a prosperity in this country that would astound you and you would witness 5,000,000 men and women now unemployed given jobs on 5,000,000 farms now needing their help but without funds to employ them.

WISCONSIN

Ten days ago I made a hurried automobile drive of nearly 700 miles through the beautiful State of Wisconsin, and while I knew that financial conditions on farms were terrible, yet I was not prepared for the shock which I received. I found there the best improved farms that I have ever seen, the finest livestock, the most intelligent and thrifty farmers,

and yet farmer after farmer had the same sad story to relate—"impending bankruptcy." One farm, outstanding in its appearance—a good house, splendid, well-kept barns and outbuildings, well-bred livestock and modern machinery in first-class condition—reported that they were going behind \$150 per month and would have to let the hired help go in a few days and muddle along the best they could without hope of meeting their expenses and fixed charges. I did not see a single farm that did not need a hired man or two if there were some means of paying for them.

ASK THE FARMER'S WIFE

When I go into an agricultural country to learn the true conditions on the farms I do not seek out the representatives of the United States Department of Agriculture, the county agents, or the farm experts from the agricultural colleges, nor do I talk to the farm organization leaders or to the farmer himself. I have learned, through long experience as an actual farmer and as a manager of a farmers' cooperative, that there is a source of real information available if one seeks the truth as to the condition of farm finances. I talk to the farmer's wife; she knows; she makes up the budget; she has in mind the total income and the total outgo. She is familiar with the deprivations, the debts, the unpaid bills, the tax obligations, the hopes and aspirations and ambitions for her children, and all of the other problems and tribulations which harass her soul, and she will speak the plain, unvarnished truth—as Vice President Garner calls it-"with the bark off." She will say whether or not the farm is a going concern, and she will testify whether or not the long hours of toil of the whole family are meeting halfway with desired results.

The farmer himself is often too proud to admit failure even though that failure has not been brought about by any lack of industry, effort, and judgment on his part. His wife, on the other hand, will tell you straight from the shoulder without mincing words or making excuses the exact situation which her little brood faces. If the Members of the Congress would go out into the farm territory and have a heart-to-heart talk with the farmers' wives, they would come back to Washington and tear the present farm program into small bits, throw it in the ash can, or stamp it into the earth, and adopt a program that would do the job if it took all summer and all fall and all winter. Thousands of farms every month in Wisconsin are being "knocked down under the hammer" with few takers because the farmers cannot meet their mortgages and debt obligations. What is true in Wisconsin must be true, perhaps more or less intensified, throughout the country; the better the farm and the better the equipment, seemingly, the greater the difficulty.

FARMERS GOOD SPENDERS

If the farmer were paid the cost of production upon what you and I eat and wear, he could meet his bills and expenses and not need loans, rehabilitation, and doles; he would not be a burden upon the Federal Treasury, but instead would contribute in a major way to the general prosperity of his country. He would be changed from an object of "sweet charity" to a sound economic status. He would directly and indirectly contribute to the Federal Treasury, instead of being a burden to it. The farmer has always been the greatest consumer of goods in our country, for 90 percent of his income goes into the capital structure of his business. There is never an end to the improvements that can be made upon the farm; if the farmer has money, he invests in paint, sanitary facilities, furnishings for his home, improvements in his outbuildings, repairs to his implements, and investments in better bred livestock. The farm population would spend twice their present income in improving their homes and farm units if given the opportunity.

PAGE MISTER RIPLEY

I do not know whether the Wallace farm program has been called to the attention of "Believe-it-or-not" Ripley, but I am sure that he would be interested in many of the unbelieveable inconsistencies to be found in it. Do you suppose Ripley would be startled to learn that Florida, with the finest soil and climatic conditions for growing cane, is not

permitted to grow sufficient sugar to supply the needs of Florida and is compelled to buy sugar for her own consumption from Cuba, although amply able to supply herself? Here is another for Ripley: Congress provides sizable parity payments to corn growers on 42,000,000 acres in Illinois. Iowa, and contiguous area, but denies parity payments to other corn growers upon 50,000,000 acres in 36 other States. Would Ripley or his fans believe that Congress would pass a law that was not general in its application; that would take borrowed money out of the Federal Treasury to arbitrarily pay the corn growers in 12 States and deny such payments to corn growers in 36 States? Canada is a foremost surplus wheat-producing country. Would Ripley or anyone else believe that the United States last year paid Canadian grain processors 30 cents a bushel subsidy and bonus to import our wheat into Canada to be returned at a price lower than the domestic price to Maine as a dairy feed? I am certain that even Ripley would not believe that North Dakota farmers under the regimentation that has been forced upon them are not permitted to grow sufficient ensilage to feed their own livestock. I could go on calling such inconsistencies and shocking disclosures to your attention for a long time, but I will burden you with only one more. On my recent Wisconsin trip I talked with a very bright young farmer who was a graduate of the University of Wisconsin, and who personally related this incredible story to me. He said that he was a scientific farmer and utilized crop rotation to conserve his soil. He planted one of his fields to alfalfa to restore nitrogen to the depleted soil. After he had done so, he was approached by a representative of the United States Department of Agriculture and told that he was entitled to pay from the Federal Government for planting that alfalfa.

He thought that he was being "kidded" for a time, but the representative finally convinced him that he was in dead earnest. He then declined payment since he was not looking for something for nothing from his Government and went home and told his wife about it. She was the practical sort and sent him back to get the money to use to pay his taxes since he would have to put up his share of taxes anyway.

NATIONAL DEFENSE

America is spending billions for a national defense that I most sincerely hope and honestly believe will never be needed, but history records the fact that no people have ever been conquered until they have been starved into submission; and so I conclude that a good, healthy, sound farm economy with a dependable long-range production is the finest kind of national defense. Armies today march on their bellies as they did of old. If America be made strong in agriculture, she will have the best defense.

COST-OF-PRODUCTION BILL THE ANSWER

No country can possibly make a satisfactory social progress or an advance in culture, art, and science without a sound, dependable agriculture, for that is the basis of all of these things. The cost-of-production bill, perfected and improved if need be, is the right approach to the farm problem and will therefore, some day, be adopted by the American people. May that great day come soon.

Religion and Democracy

EXTENSION OF REMARKS

HON. JAMES M. MEAD OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 22 (legislative day of Friday, May 19), 1939

ADDRESS BY HON. ELBERT D. THOMAS, OF UTAH, MAY 21, 1939

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD a speech delivered by the junior

Senator from Utah [Mr. Thomas] on the subject of Religion and Democracy at the forty-fourth annual national memorial services of the Jewish War Veterans of the United States in the Temple Emanu-El, New York City, on May 21, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Thus has the poet uttered the heartthrobs of all the mothers and fathers who, caught by baleful war, have given their sons to their country:

"Why has the harsh wind Carried away the blossoms With his savage breath And left untouched, uninjured, The leaves of the old worn-out tree?"

We are met to do honor to these worthy dead. This is, therefore, a meeting with the deepest religious significance. Religion in the final analysis is merely a knot or a bond between those of us who are here today and those who were here yesterday, with the responsibility resting upon those who are here today to see that those who will be here tomorrow will have those ideals preserved for them which the past handed down to us.

which the past handed down to us.

I am not a Jew, as you are, but I am of Israel; therefore there is a meeting in our veins of kindred bloods; but greater than that there is also in our hearts a meeting of kindred ideals because we both have that heritage, that hope, that faith, and that aspiration common to all those who are sons of Abraham and who have caught

common to all those who are sons of Abraham and who have caught his spirit. Thus while we honor the dead our thoughts reflect the problems of the living and our prayers are for those that come after. If I were to take a text today, it would be one of Aesop's fables: An eagle in flight was shot down. As he fell to the ground wounded, pierced with an arrow, he turned to see what was responsible for his undoing and found that the arrow which had pierced him had been guided in its flight by eagle feathers. He died with the sad reflection that within us all are the elements of our own destruction. our own destruction.

If there are within us all the elements of our own destruction, probably there are within us also the opposite—the elements of our own salvation. Can we'of Israel be critical of ourselves to the extent of analyzing that within us which may be made responsible for our destruction and turn it to our salvation?

As my theme is to be one of religion, may my approach to that theme be judged only as a deeply religious man makes his judg-

The foundation on which all the great religions of the west rests is revelation. Our forefathers took for granted the existence of God, called themselves His children, and accepted as absolute those principles which God had made known to them through their prophets. All religions of the West, whether they be Hebraic, Mohammedan, Greek, or Christian, are based upon the concept of Mohammedan, Greek, or Christian, are based upon the concept of revelation; revelation, too, from a God who is perfection. Therefore the history of Hebrew, Greek, Christian, and Mohammedan peoples is a history of a clash of absolutes and a contest of conflicting loyalties. That has meant strife, martyrdom, devotion to cause, death for principle, and war for the glory of God. Honest and unscrupulous leaders alike in politics, in war, and in the church have been able to call upon the people and to depend upon their support by an appeal to one of these loyalties; thus the very principle on which our faith rests has contained the elements which have brought our destruction. Sometimes race has been which have brought our destruction. Sometimes race has been emphasized, sometimes religion, sometimes cause, but the appeal, whether it has been for race, religion, or cause has been based upon the principle of right, and in that sign we have conquered or died. Such is the glory of our past. And in each of the nations of the West who took part in the late World War there is a tomb in which rests the glory of that nation, to an Unknown Soldier. In much the same way the Greeks on Mars Hill in Athens erected a monument to the unknown god after the vagaries of the known gods had been exposed, proving the survival of a faith in that which was good.

Let us turn to my text and use it as it reflects the ills of today. The faith which was the faith of ancient Israel gave birth to the world's most intense nationalism built upon purity of race, common acceptance of God, and the necessity of living and dying for Him. Thus the religion of Abraham, Isaac, and Jacob was perpetu-Alim. Thus the religion of Abraham, isaac, and Jacob was perpetuated. When the Kingdom of Saul, David, and Solomon justified its existence and demanded loyalty to it, it did so on the basis of respect for the law and the prophets. It is because of the honoring of race and common heritage on the part of others that the Jew today in those places in the world where he finds himself in the most miserable of positions is a victim of the idea of nationalism, which was his own creation. That is the irony of life, and that reflects the thought that within us all are the elements of our own destruction. of our own destruction.

Let us turn to the broader field and see what ills a logical consequence of the acceptance of the concept of revelation has brought to us. We need not go farther back than the last three or four centuries to make my point, for in the history of Europe in the last two or three centuries we have passed through serious justifications with treatment acceptances. tions with tragic consequences as a result of deductions drawn from the concept of revelation. There was a time when persecution was general throughout Europe, when it was actually thought pleasing to God to kill, to burn at the stake, to torture horribly an unbeliever or a heretic, and it was believed that such treatment was given for the glory of God. Persecution seemed to be a natural condition, and man accepted it as a necessary one. As time went on a new spirit took hold of man, a spirit, too, justified from religion, and persecution gave place to forbearance. Man ceased to say we must kill for the glory of God and allowed those with whom he disagreed to live, but insisted that they live alone. The persecutors ceased to kill but they remained aloof. Men's religious differences were condoned but never accepted.

Then, when the new spirit broke on the earth which gave us our America, toleration took hold of the minds and hearts of men. The notion that man might worship as he saw fit, that he was free to believe as he wished became our greatest universal principle, hence we wrote it into our Constitution. Today we stand for a freedom which two centuries ago we thought would offend God, and we assume that this freedom is pleasing to our God. In ment was given for the glory of God. Persecution seemed to be

God, and we assume that this freedom is pleasing to our God. In practically every church in America today God is thanked for this spirit, and those who pray thank God for the privilege of worshipping Him according to the dictates of their own conscience, and they thank Him also for giving them the spirit that they might pray that to all those in America shall be preserved the right to worship how where or what they may

pray that to all those in America shall be preserved the right to worship how, where, or what they may.

But toleration is not the ultimate. Just as forbearance is superior to persecution, and toleration is finer than forbearance, just so the next step which men must take is superior to all three, and that step is essential if America is to realize her destiny. To the devotees of each religion must come an appreciation of the worth which is in others. And when that day comes, then will the desire of nations be fulfilled, then will men see eye to eye, and then will religion actually lead the way to that world-wide purpose of making this earth definitely a kingdom of men where no man shall be king, where the sons of God may wish to dwell and live as those should who have chosen to be God's children.

The spark of this greater promised day has been struck in the

The spark of this greater promised day has been struck in the Palace of Religion at New York's great world's fair. When the committee was first appointed to work out the religious exhibit, it was brought to my attention that a great Catholic, a great Protestant, and a great Jew had been named to work out details. I made bold to write to the directors of the fair that they did not want to honor jointly these three great branches of religion but that their scheme must be broader than this, that the universal

which underlies all religion should be their theme and not just the hope or the aspiration of the three greatest branches.

In my wanderings over the earth, I had learned to know the worthiness of the thoughts of the lowly, I had come to honor the aspirations and spirit of some whom we might call heathen, and it was good to know from actual contact that "God, who at sundry times and in diverse manners speak in time past that the fathers." times and in divers manners spake in time past unto the fathers by the prophets, hath in these last days spoken unto us by His Son" (Hebrews 1: 1), that "Truth shall spring out of the earth; and righteousness shall look down from Heaven" (Psalm 85: 11) and that "it shall come to pass afterward, that I will pour out my spirit upon all flesh; and your sons and your daughters shall prophesy, your old men shall dream dreams, your young men shall see visions" (Joel 2: 28).

It was from these experiences that I learned to appreciate what I think has been the greatest lesson of my life, a lesson gained, thank goodness, when I was so young that it actually became a part of my life. At the Chicago World's Fair in 1893, my mother took me to the meetings of the great Congress of Religions, where I heard Kenza Hirai, whom I learned to know when I lived later in Japan. This great Japanese, representing the religions of Japan, ended his speech at the fair with one of the noblest of the Japanese Hokku poems. I quote:

"There are many roads
That lead to the top of the mountain,
But when once the summit is gained The same moon is seen."

That is the religion of the future. In the spirit of this little poem can come a religious peace that the world has not yet known. It is in the spirit of this little poem that the dignity of the individual man is discovered. This is of necessity the religious attitude of all who having varying faiths nevertheless live as neighbors in our great democracy. This is one blessing we thank those we honor today for preserving for us.

Religion and democracy meant much to those we honor. They mean much to us too. You may ask why. I shall attempt an

Just as religion makes possible a unity of the past and the future as they are reflected in the present, just so does democracy make possible a unity of purpose out of a diversity of circumstance and a multiplicity of loyalties in the present.

In understanding that, we have the key to that form of govern-ment which will free men. This is one of America's contributions to better living for man on earth. It is a simple key, and it takes to better living for man on earth. It is a simple key, and it takes but a moment to describe it. Philosophically, though, it is the mere recognition of the fact that man is complex in his nature and that he may have many loyalties without being disloyal to any one of them. Here is the essence of democracy. It is not ours, but it is the philosophy of the single-willed states that demands but a single loyalty. Leaders in single-willed states demand that the state shall have one's all—his mind, his soul, his future, and his past. Democracy makes no such demand on man as that. Democracy teaches that we can be loyal to our God without being disloyal to our State; we can be loyal to our family without being disloyal to our God; we can be loyal to our friends without being

sacrifice.

disloyal to our parents. Thus in developing many loyalties, American democracy has broken that element which would bring its destruction; and American democracy reflects the corollary of our text, for if in us all there is the element of our destruction, if we

take that element out we may bring about our salvation.

Next, as to race: America, too, has solved this problem, for she has built her rights of citizenship upon the basis of place of birth and not upon the basis of blood, and thus American democracy is preserved safe from racial conflict. How was this destructive element to man's well being overcome? We can thank the Cluttle Wor for this. For when America accorded the fourteenth destructive element to man's well being overcome? We can thank the Civil War for this. For when America accepted the fourteenth amendment and thereby bestowed a right upon the Negro who had been freed, this Nation incidentally granted a political blessing to all men who live in America regardless of race, for all men born in the United States or under its jurisdiction are citizens of the United States and of the State wherein they reside. The fourteenth amendment enunciates two mighty principles which have in them the elements of saving our democracy, when tides like the one which today is marching in the earth, based as it is upon a false theory of racial purity, might otherwise become part of us. We turn to the charter of our liberties and learn that our citizenship is first of all dual in its nature, therefore each citizen citizenship is first of all dual in its nature, therefore each citizen has a double loyalty. But, better still, we recognize the principle that all who are born within the confines of America shall enjoy America's blessings. Can we not see in contrast what backward steps some parts of the world are taking away from the progress of man's development of the majesty of the great freedoms of person, property, soul, and mind? Would to God all Americans person, property, soul, and mind? Would to God all Americans were thoughtful of these truths!

Those whom we honor today contributed much toward preserving

in us the ideals which are ours. This day should be given over not only to a sincere honoring of those who have gone on and that which each has done but also to a feeling in the hearts of all of us here that we shall preserve their contributions not only for our good and our well being but also to hand them on to those who come after us—purified, made finer by a greater appreciation of that which they have done. Such is our task. I have faith that the Americans of today will religiously respect that task and preserve for generations unborn these blessings of life, liberty, and the

pursuit of happiness.

We shall end with the little poem with which we began, and in repeating the poet's question pray that the generation may soon come which will never have to ask that question of its own time. War should be a thing of the past. That it may be is a prayer worthy of our heart's and our Nation's desire.

"Why has the harsh wind Why has the harsh which Carried away the blossoms With his savage breath And left untouched, uninjured The leaves of the old worn-out tree?"

Address by Comptroller of the Currency at North Carolina Bankers' Association

EXTENSION OF REMARKS

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES Monday, May 22 (legislative day of Friday, May 19), 1939

ADDRESS BY HON. PRESTON DELANO

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by Hon. Preston Delano, Comptroller of the Currency, at the Fortythird Annual Convention of the North Carolina Bankers' Association held at Pinehurst, N. C., May 10-12, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There are certain sections of our United States in which the raveler instinctively feels that civilization is older, has thrust its roots deeper, and holds with more than usual tenacity to those fundamental principles which are established only through experience. There are areas in New England in which this is very noticeable; it is found again in the cultural influence left by the noticeable; it is found again in the cultural influence left by the cavaliers in Maryland; and certainly the most casual visitor could not fail to sense it in the very air of these Carolinas. Such a visitor hardly needs to be told that Englishmen were on these shores in 1587; that Roanoke Island saw the first child born of English parentage on this continent; and from that early adventure under Sir Richard Grenville there has been built here our electrocards at the English tradition and fortified oldest society, stemmed from the English tradition and fortified with the blood of its pioneers.

It is interesting to see what this background has done for the State of North Carolina. We from the North cannot fail to be impressed. This State was one of the last of the Original Thirteen to ratify the Constitution, and with characteristic English stub-bornness refused to do so until that document included the Bill of Rights. Here the maxim of "Hold fast to the good" is given

practical illustration in a social and political sense.

Yet you can defend your liberalism. I understand that in the past 28 years you have reduced the hours of labor in industry from 66 hours per week in 1911 to 48 hours in 1939; and that after long discussion you were one of the first to abolish child labor. The significant thing is the caution of this State in approaching change and its disposition to hold the ground once gained. The financial world will always remember how the North Carolina banks rallied to the support of your former Governor, the Honorable O. Max Gardner, in those critical days of 1932 when State bonds everywhere were under fire and there was a question raised as to the soundness of your securities. Mr. Gardner said at that time, "Our most cherished possessions are the faith, credit, and character of North Carolina. May I say that we will protect and preserve the honor and credit of this State if it should require the conscription of the resources and reserves of 3,000,000 North Carolinians." This is adherence to fundamentals, and I am putting stress upon such fundamentals because I wish, by your leave, to discuss briefly this morning the great necessity of holding on to them in these troublous times. I can think of no more appropriate forum.

We live in a difficult age. I suppose the future historian, with the We live in a difficult age. I suppose the future historian, with the perspective which comes from looking back on the first half of the twentieth century, will be able to classify and understand the tremendous forces which today are at work in the world. This may well be one of the great transition periods of history. We are altogether too close to it to understand its significance or what may be its outcome. In such periods there is great danger that men will discard as outworn and outmoded those all-important rules of conduct which represent the true criterion of their progress, thus losing outposts painfully won and which should be held whatever the sacrifice.

sacrifice.

Banking is a civilized practice, and as bankers we are especially interested in the preservation of those intangibles which only civilization gives us. They are our fundamentals. Unless we preserve them we cannot exist. Banking, as we know it, is only as old as your state. By a curious coincidence, the year—1587—that Sir Richard Grenville landed his little colony on Roanoke Island also saw the establishment of the first commercial bank in the world, the Banca di Rialto in Venice. From that beginning there has resulted the steady spread of banking practice which has had so much to do with the progress and development of the world. Thet contrisuited the steady spread of banking practice which has had so much to do with the progress and development of the world. That contribution by the banks has only been possible because civilization as it matures gives increasing values to character, to honesty, to justice, and to the sancity of the pledged word. It is only because men develop more character and more honesty that they replace the phrase, "Caveat emptor" with the more civilized one, "The customer is always right."

In the last 25 years this civilizing process has struggled against great odds. The World War of 1914, as is the case whenever force replaces reason, was a serious attack upon it. The era of speculation culminating in the world-wide economic collapse of the early 30's was another grave unsettlement and there is now a devastating threat with which we are concerned, first, as citizens of an evershrinking world; and, second, as the bankers of that world. This threat is contained in the doctrine that there is no power but physical force, and that physical force is its own justification. This doctrine contends that you do not have to be fair, that you do not have trine contends that you do not have to be lain, that you do not have to be honest, that you do not have to keep your engagements, that all virtues are summed up in the phrase "be strong." It is essentially the doctrine into which man was originally born, and the extent to which he discards it is the measure of his progress. There is no escaping the fundamental nature of this issue.

But it is the narrower aspect of the matter which, of course, primarily concerns banks and banking. Banks cannot live in a world which does not keep its engagements. The effect of whole-sale repudiation and moratoria is to drive all capital into hiding and to dry up that initiative so essential to a free economy. Certain very fundamental principles are under attack when the head of a responsible state cooly repudiates the bonds of a conquest

of a responsible state cooly repudiates the bonds of a conquered province and carries off the gold reserve of its central bank, much as a highwayman casually takes possession of your purse.

One result of all this turmoil is a confusion of thought and of leas. The Comptroller's office is concerned these days because there have been allegations that its examiners, through their influence upon national banks, are responsible for an undue constriction of industrial credit. I do not think this is so. I think such charges and the corollary assertion that the banks are refusing legitimate credit to industry are the result of confusion of mind as to the true nature of the banking function. Of course, I cannot speak with nature of the banking function. Of course, I cannot speak with authority on the question whether all banks or even all national banks are taking full advantage of all their opportunities to make sound loans. In the Comptroller's office we deal officially with loans that are made, not with applications that are declined. But I have had occasion to analyze some complaints of refusal of credit, and I have found that the complainants generally didn't make any showing of eligibility for bank loans, but, instead, revealed their need or their desire for additional risk capital. They were asking, in fact, not credit, but investment in their businesses. Answering an inquiry addressed to me during a meeting of industrial leaders in Washington the other day, I took the liberty of pointing out to them that, in my judgment, so far as there is a dearth of funds available for business and industry today, it is a dearth of risk or venturesome money and not a dearth of bank credit. I say this with the qualification that there are naturally different kinds and temperaments of bankers, just as there are dif-ferent kinds of businessmen. Some, of course, will be more alert

than others to take full advantage of their opportunities to give service to their communities and to forward the interests of their banks within the limitations of sound banking.

We need not be astonished at this lack of venturesome capital. It is the legitimate result of these last 25 years of war, speculation, depression, and the world disorder created by the present threats of unrescenting force. And I suppose we should not be tion, depression, and the world disorder created by the present threats of unreasoning force. And I suppose we should not be astonished when there results an attempt to have banks enter that field in order that someone may take up the burden. But here is an outpost which should be held. The risk sector of our economy is not a proper place for the employment of deposit money. The providing of venturesome capital is a very necessary function but it is a job for the enterpreneur, not the banker. The office of the Comptroller of the Currency is opposed to such speculative use of banking funds. But lest we be misunderstood, it should be added that the office of the Comptroller of the Currency is deeply interested that every consideration be given to applications for credit to the end that no proposal be denied a hearing and no proper request be refused.

There is another matter under current discussion concerning which we of the Comptroller's office feel strongly. We approach it with some diffidence. It is not as important as those vital principles which have been briefly touched upon this morning,

principles which have been briefly touched upon this morning, but in a way it is important as a symbol of something fundamental in the organization of American banking. I refer to my own office of the Comptroller of the Currency and the proposal to abolish it, with transfer of its functions to other agencies of the Federal Government.

the Federal Government.

It is always difficult to be disinterested in such a situation. I doubt if I can be entirely so in this instance. However, my own connection with the office is so recent that I may with propriety discuss certain features of the proposal which seem to me significant. This office is the oldest supervising agency of the Federal Government. During its 76 years of existence it has evolved methods and practices which give it dignity and tradition. It has an efficient staff and a valuable esprit de corps. It would be difficult to transfer these very real assets to other agencies and the abolition of the office would accomplish no economy or simplification of administration to compensate for the loss. It seems clear to me that the extinction of the Comp economy or simplification of administration to compensate for the loss. It seems clear to me that the extinction of the Comp-troller's office would be a distinct blow to the prestige of the national banks and might even imperil the existence of our dual banking system. In my judgment it would be a backward step for this office and its staff not to be preserved in its present form.

In conclusion, may I turn the clock back for a few minutes to another era of crisis and of grave concern. The year is 1863, and this is the advice and counsel of the first Comptroller of the

this is the advice and counsel of the first Comptroller of the Currency to the bankers of his day:

"Let no loans be made that are not secured beyond a reasonable contingency. Do nothing to foster and encourage speculation. Give facilities only to legitimate and prudent transactions. Make your discounts on as short time as the business of your customers will permit, and insist upon the payment of all paper at maturity, no matter whether you need the money or not. Never renew a note or bill merely because you may not know where to place the money with equal advantage if the paper is paid. In no other way can you properly control your discount line, or make it at all times reliable.

"Distribute your loans rather than concentrate them in a few hands. Large loans to a single individual or firm, although sometimes proper and necessary, are generally injudicious, and frequently unsafe. Large borrowers are apt to control the bank; and when this is the relation between a bank and its customers, it is not difficult to decide which in the end will suffer. Every dollar that a bank loans above its capital and surplus it owes for,

dollar that a bank loans above its capital and surplus it owes for, and its managers are therefore under the strongest obligations to its creditors, as well as to its stockholders, to keep its discounts

constantly under its control.

constantly under its control.

"Treat your customers liberally, bearing in mind the fact that a bank prospers as its customers prosper, but never permit them to dictate your policy.

"If you doubt the propriety of discounting an offering, give the bank the benefit of the doubt and decline it; never make a discount if you doubt the propriety of doing it. If you have reason to distrust the integrity of a customer, close his account. Never deal with a rascal under the impression that you can prevent him from cheating you. The risk in such cases is greater than the profits the profits.

the profits.

"Pay your officers such salaries as will enable them to live comfortably and respectably without stealing; and require of them their entire services. If an officer lives beyond his income, dismiss him; even if his excess of expenditures can be explained consistently with his integrity, still dismiss him. Extravagance, if not a crime, very naturally leads to crime. A man cannot be a safe officer of a bank who spends more than he earns.

"Pursue a straightforward, upright, legitimate banking business. Never be tempted by the prospect of large returns to do anything but what may be properly done under the National Currency Act.

Splendid financiering is not legitimate banking, and splendid financiers in banking are generally either humbugs or rascals."

These are the principles of sound banking laid down in 1863 by the first Comptroller of the Currency, Mr. Hugh McCulloch, I commend them to your thoughtful consideration, for these are fundamentals, and in my judgment, they still hold.

Election of Thomas Jefferson

EXTENSION OF REMARKS

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES Monday, May 22 (legislative day of Friday, May 19), 1939

STATEMENT BY JOHN E. GALE

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the Congressional Record a historical statement, written by one of the leading lawyers of Vermont, concerning the part played by Vermont in the election of Thomas Jefferson.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

> [From the Rutland (Vt.) Herald of May 17, 1939] ONLY PROPER

To the EDITOR OF THE HERALD:

I note your pleasing message of congratulation to Vermonters in today's Herald. It is most fitting that the Jefferson Memorial should be of Vermont marble, and aside from the excellence of our products, recognition of Vermont's very material aid in the election of Thomas Jefferson should have been given due consideration in the placing of this important contract.

In 1800 there was no choice of President in the electoral college, and the election went to the House of Representatives, which, on the thirty-sixth ballot, elected Jefferson over Aaron Burr, with the the thirty-sixth ballot, elected Jefferson over Aaron Burr, with the help of Matthew Lyon, one of the two Vermont Members, who rendered most valiant service throughout the ordeal. Vermont was the only New England State to cast its vote for Jefferson, who was reelected in 1804, John Noyes, of Guilford, being one of the Vermont electors. But for the success of Jefferson, the purchase of the Louisiana Territory, of over a million square miles, might never have been consummated.

JOHN E. GALE.

GUILFORD, May 13.

President's Suggestions to Monopoly Committee

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, May 22 (legislative day of Friday, May 19), 1939

EDITORIAL FROM THE MILWAUKEE JOURNAL OF MAY 17, 1939

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Milwaukee Journal of the issue of May 17, 1939. The editorial is entitled "President Roosevelt Asks Why?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

> [From the Milwaukee Journal of May 17, 1939] PRESIDENT ROOSEVELT ASKS WHY?

"Improvement can only be made on a basis of clear analysis. Having made that analysis, I hope that your committee will then be able to indicate ways by which the machine may be made to function more efficiently."—President Roosevelt to Senator O'Mahoney, chairman of the Monopoly Committee.

Of all the statements Mr. Roosevelt has made, is any more sensational than this? After more than 6 years of drastic experiments—all kinds of experiments except experiments in economy—the President says there can be no recovery without "a basis of clear analysis."

With the end of his term coming up, with issues taking shape for 1940, President Roosevelt proposes to undertake that study which he himself says is preliminary to improvement. If, because for 1940, President Roosevelt proposes to undertake that study which he himself says is preliminary to improvement. If, because of emergency and the need of reassurance, this could not be done 6 years ago in 1933, it might have been begun 5 years ago, or 4 years ago, or even 3 years ago.

Instead, after 6 years of having his way in the fiscal and financial things he asked, the President says in his seventh year that "improvement can only be based" on a study of the financial machine.

If we could take this lightly, we might take a sort of humorous comfort in the revelation that Mr. Roosevelt is now one of us.

He, too, admits confusion and bewilderment.

But Mr. Roosevelt is not asking for a broad study of what has gone haywire with all the fine planning. He suggests a limit of inquiry by asking two questions: Is the trouble because our economy is "leaving an era of rapid expansion and entering an era of steadier growth?" Or "is it because of lag, leak, and friction in the operation of investment markets?"

Why not ask what we are doing differently from the are when

Why not ask what we are doing differently from the era when our financial machine worked and we went ahead? The depression came to us as to the rest of the world. But the rest of the world

came out of depression earlier.

When we plunged from the zenith of 1928-29 to the nadir of February 1933, there was need to reestablish confidence. But the reassurance was practically completed in the first 100 days of Mr. Roosevelt's first term. Since then confusion has increased, leading

at last to the anxiety and new depression of the last 2 years.

And now President Roosevelt wants to postpone measures of help and reassurance for another year. With his request for a study is revealed his wish to postpone tax reform. Then in 1940, an election year, what a chance to come out with better and bigger things and

campaign on a new New Deal!

"Tomorrow and tomorrow and tomorrow." Always there is something about to be done, something brilliant and new. At last we have reached a day when nothing else could give such reassurance to people wanting to get back to work as for Government to chart a course not made of dreams.

"Action forward"

"Action forward" was once Mr. Roosevelt's slogan. Now he wants postponement of known remedies for real evils. He's tinkered with every part of the machine from carburetor to differential. asks a committee to take a year finding out why the darn thing

doesn't run.

President Hoover, too, when he became flabbergasted because things didn't work for him, took refuge in "studies."

Relief Problem National Rather Than Local

EXTENSION OF REMARKS OF

HON. JED JOHNSON OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1939

RADIO ADDRESS BY HON. HOWARD O. HUNTER, DEPUTY ADMINISTRATOR, WORKS PROGRESS ADMINISTRATION

Mr. JOHNSON of Oklahoma. Mr. Speaker, under leave to extend my remarks in the RECORD, I am submitting a very informative address recently delivered over the radio by Hon. Howard O. Hunter, Deputy Administrator of the Works Progress Administration.

The address follows:

When we wash up the exaggerations of partisan attacks on the When we wash up the exaggerations of partisan attacks on the W. P. A., and discount fishing expeditions and witch hunting, there remains a really major issue in this country on unemployment relief. This issue is: Who should administer and pay for relief for the unemployed, and how should such relief be given? It is a question of whether the present Federal work program for the unem-ployed should be continued or whether the Federal Government should return to a system of grants-in-aid to States, with the States and local governments administering unemployment relief.

I have participated in every form of relief since 1929, from private charity—through Hooverism—up to the W. P. A.

Out of close experience with unemployment relief I have reached

some very definite personal convictions.

The first of these convictions is that unemployment today is a national problem and not a local one. There is no local community in America today which can do anything about unemployment. The complexity of our system of industrial enterprise such that what happens in one part of the country may severely affect employment at a far distant point. And unemployment never hits evenly in all localities.

The second conviction I have is that unemployment in private enterprise is no longer an emergency matter. The increased pro-

ductivity of labor through mechanization of industry and agriculture and increased efficiency of management, has made it posculture and increased elliciency of management, has made it possible for a vastly increased production of all kinds of goods, with a decreasing manpower. This means that private enterprise in this country cannot for many years to come absorb all of the unemployed, no matter what Government does or does not do. Stopping Government spending and stopping the W. P. A. will only increase the number of unemployed.

And the fact that our business and industrial system cannot absorb all of our unemployed is not an indictment of the system. I would not advocate the abolition of any labor-saving device or

I would not advocate the abolition of any labor-saving device or any mechanical improvement. I would advocate an honest recog-nition of the fact that there is no way conceivable of reemploying all of the able-bodied un imployed, in any short period of time in private industry. And I would advocate a spirit of intelligent cooperation on the part of business in meeting this problem of

democracy.

And this leads up to my third conviction, that a program of public work for a considerable number of the unemployed is an essential factor in the continuation of a decent democratic government and in the preservation of our economic system of private

Now this issue of Federal versus local administration of relief is by no means a new issue. Previous to 1933 there wasn't anything but local financing and administration of relief, and there was

but local financing and administration of relief, and there was precious little of it.

As for grants-in-aid to the States for relief, the present administration, for 2½ years, practiced that system. And it simply did not work well. It worked badly because of the wide variety of standards of relief and administration. In too many parts of the country there was no recognition given to the fact that these newly unemployed people, that had grown in numbers from a handful to millions, were a new kind of poor people. They were not the same old paupers who had been handled under the archaic poor laws in most of our States. They were able-hodied unemployed people and the proportion of the same of the paupers who had been handled under the archaic poor laws in most of our States. They were able-hodied unemployed people and the proportion of the proportio

not the same old paupers who had been handled under the archalc poor laws in most of our States. They were able-bodied unemployed citizens—a cross-section of America.

The New Deal, in 1935, boldly ventured into a great democratic program of providing real work on useful public projects for these unemployed citizens. This program has been administered and largely financed by the Federal Government, with, however, a great degree of decentralization and local authority on many important fronts.

fronts.

It is now being proposed that this system of a Federal program of work for the unemployed be abandoned, and that the Federal Government go back to a discredited system of giving grants-in-aid

to States and localities for relief.

I do not mean by this that the principle of Federal grants-in-aid to States is either discredited or unsound in other directions. For instance, the grant-in-aid system for public highways has worked well for many years. But the unemployed are not highways and you can't talk with engineering accuracy about the unemployment problem in any State or locality as you can about a highway. No grant-in-aid scheme can be made flexible enough, or be made to work fast enough, to take care of the relief of the unemployed.

Work last enough, to take care of the relief of the unemployed.

I want to discuss this proposal on its merits. Of course I know, and you know, that those people who propose a return of relief to the States are members of the group in opposition to this administration, and that they have themselves made this a political issue.

* * But, let us examine their arguments. I know of no better exponent of these arguments than Senator Taff, of Ohio, who is a spokesman for this plan, and who is recognized as one of the important leaders in proposing this change. Senator Taff's who is a spotestian for this plant, and who is a spotestian to the important leaders in proposing this change. Senator Taft's noted and respected brother, Mr. Charles Taft, has also long been an advocate of the abandonment of the Federal work program by substituting a grant-in-aid system for direct relief, which he proposed 2 years ago as chairman of the National Community Chest Association.

The first argument is that local people know best who is in need of relief and can best determine who should get relief; and if there are to be any work projects, these local people also know

if there are to be any work projects, these local people also know what projects will be most beneficial.

As to this argument, I agree. And let it be said emphatically that in the operation of the present Federal work program through the W. P. A., no one except these same local people does determine who is in need and who should get W. P. A. Jobs, and it is local public officials in these same local communities who initiate and sponsor work projects for the W. P. A. On these two essential points the Federal W. P. A. is and has been effectively decentralized. So, obviously, there is no point to this argument.

The second argument raised is the one of States' rights. I am not sure that I can get through my beed whet States rights have

not sure that I can get through my head what State's rights have to do with a great national problem like unemployment. But I assume from the arguments that it means that the States should determine standards of relief and standards of work, as well as administration. Now, experience has shown that when the States had control of the administration of Federal relief funds, there were 48 standards of relief. In fact there were thousands of standards, because, in general, the States passed the job on to the counties and townships. Relief under this system ranged from nothing to \$3 a month in many States, on up to about \$35 a month in

to \$3 a month in many states, on up to about \$55 a month in a very few others.

Senator TAFT says that work would be given to the unemployed under a grant-in-aid system and cites the fact that it was given before the Federal W. P. A. It is true that in a few places work was given—but how! No wage standards, work for grocery orders, and not real work at that, but largely "made work."

APPENDIX TO THE CO.

Since the Senator is a spokesman for this proposed change, let us use his own State of Ohio as an example. In fact, he uses it himself as an example and says that even today the local government in his own town of Cincinnati provides a work program for its own relief clients. Yes; and what kind of a work program is it? The report of Cincinnati's own public welfare department says that the work consists of projects for maintenance of normal city enterprise—which obviously decreases regular employment—and that the pay on these projects is 25 cents an hour. But wait a minute—the people do not even get the 25 cents. They actually get 12½ cents and the other 12½ cents is dished out in grocery orders and they work up to 6 days a month. Here we uncover an essential fact behind the proposal to abandon the Federal work program, which is that the opposition doesn't want a real work program, which is that the opposition doesn't want a real work program, which is that the opposition doesn't want a real work program, or life under State administrative costs will be greatly reduced. On this point facts show the contrary. The administrative expense of relief under State administrative expense of state relief administrations is about 16 percent. Compared with this, the administrative expense of the V. P. A., which is limited by law to 5 percent, actually averages less than 3½ percent.

The fourth argument—and I am sure that the proponents of this plan must have their tongues in their cheeks when they propose this one—is that if relief is returned to the States it will thereby eliminate politics in relief. I just don't believe that any person who has the least realism about American politics will take this argument seriously. With a return of Federal relief to local administration, whatever politics there may be in it now will be multiplied by some 3,000 counties and 12,000 townships. Let us not forget that local politics got so bad under the Federal grants-inaid system that in six States, including the Sta

most States, according to present State relief standards, they would only get from nothing to \$10 a month. These savings would be made at the expense of the health and decent living of the unem-

ployed.

In the State of Ohio, however, they might not get anything at all if Federal grants-in-aid were dependent on any State contribution. I vividly remember the winter of 1937 and 1938 in the State of Ohio, when State relief broke down completely. The W. P. A. was able to give useful work to 260,000 heads of families in Ohio—which could not have been done under Senator Tart's plan. The great mayor of the great city of Cleveland, a Republican but nonpartisan in relief, has stated that the system of Federal work relief for the unemployed had saved his city from disaster and that if this was turned back to the States for administration it would be a deplor-

able backward step.

Many of those, though not all, who propose a return of relief to the States do not come right out and say that they prefer a doing the states of the states do not come right out and say that they prefer a doing the states of the stat to the States do not come right out and say that they prefer a dole to work, but they imply this in every argument they raise. It is clear that many people who propose to abandon the W. P. A. for a system of grants-in-aid to States do not really want the unemployed to work at real wages on useful public projects. What they want is an idle labor pool, giving a charity pittance. They do not like a program of work which enables these temporarily unemployed people to maintain their self-respect, bargaining power, and rights of citigoschip.

of citizenship.

We propose a continuance of work as against a dole, first, because it is the only decent American and democratic way to treat our citizens who are involuntarily unemployed; second, for the reason that it puts money into the hands of these people which is spent quickly in the normal channels of trade and continues to preserve our whole economic system; and, third, because the work these people do for the public is useful work and materially increases the national wealth.

And we believe from experience that this can only be done

the national wealth.

And we believe from experience that this can only be done through the flexible resources and administration of the Federal Government, with local cooperation such as we have today.

There still is much work to be done for the public good in this country. We have hardly touched the work that needs to be done on conservation, public-health facilities, recreational facilities, housing, and hundreds of other public improvements. In my opinion, the W. P. A. has been the greatest single expression of democracy that we have ever known in this country. As long as our Government meets its responsibilities for its unemployed citizens in this constructive and democratic way rather than in the destructive way of dictator nations, then these millions of unemployed will continue to believe in democracy and will eagerly say to us, "Give us a chance and we will build you a real America."

Lake Erie-Ohio River Canal

EXTENSION OF REMARKS

HON. JOHN McDOWELL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 22, 1939

RESOLUTION OF COUNCIL OF THE BOROUGH OF PITCAIRN, ALLEGHENY COUNTY, PA.

Mr. McDOWELL. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following resolution:

Whereas the Government of the United States of America proposes to construct a canal joining Lake Erie and the Ohio River in the vicinity of the city of Pittsburgh, Pa.; and Whereas the construction of such a canal will be highly injurious to the local industries of the city of Pittsburgh: Now, therefore,

Resolved, That the Council of the Borough of Pitcairn send its formal protest against the construction of such a canal to the proper governmental agency

The foregoing resolution passed this the 12th day of May 1939. M. T. BRENDLENGER President of the Council.

Attest:

WM. M. HICKS, Borough Secretary.

This is to certify that the foregoing is a true copy of the resolu-tion passed by the Council of the Borough of Pitcairn, Allegheny County, Pa., at a regular meeting of the council held on May 12,

[SEAL]

WM. M. HICKS. Secretary of Pitcairn Borough.

Freight Rate Justice

EXTENSION OF REMARKS

HON. ROBERT RAMSPECK OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 22, 1939

ADDRESS BY HON. ROBERT RAMSPECK, OF GEORGIA, MAY 19, 1939

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the convention of the Southern Wholesalers' Association, Atlanta, Ga., May 19, 1939:

In the human body the blood in our veins is the life stream, the essential element, without which life stops. If this stream is clogged life ends. In our economic life transportation is the life stream. If it stops business comes to an end. Thus anything which interferes with this essential element in the economic system

tends to stop business.
In 1929, according to a study now being concluded by a well-In 1929, according to a study now being concluded by a well-known nonpartisan group, our people paid \$86,000,000,000 for finished goods. Of this huge amount \$9,000,000,000 was paid for the cost of transportation. We therefore see that in that year more than 10 percent of the cost of the things we bought was the cost of transportation. "Jones pays the freight."

We would not tolerate a tax system for our Nation that was not uniform. We would resist to the uttermost any such unfair method of levying taxes, and yet we have always been "taxed" for transportation without regard to uniformity and without regard to the cost of the services rendered.

The West and the South are "taxed" for transportation at a rate higher than that charged in the northeastern part of the country. This system is not just; it retards the development of the West and the South and it prevents those sections from enjoying a proper part of the general business of the Nation.

While much of what I will say today might likewise be applied to other forms of transportation, I will confine my discussion to the subject of railroad freight rates and their effect upon the economy

subject of railroad freight rates and their effect upon the economy

of the South and West.

The freight-rate structure of the country is divided into five zones or regions. The territory north of the Ohio and Potomac Rivers and east of the Mississippi, is known as eastern or official

West of the Mississippi we have three regions, the western trunk line, the southwestern, and the mountain Pacific. The States south of the Ohio and Potomac and east of the Mississippi

are designated as southern.

Using the eastern or official territory as the base, represented by the figure 100, the relative figures for the other regions are as follows: Southern, 139; western trunk line, 147; mountain Pacific, 171; and southwestern, 175. These figures show the differences in the levels of rates within those regions.

The rates from one region into another vary. They are not uniform, but generally speaking the rates from the southern region into official territory are approximately 20 percent higher than the rates within official territory.

This means that a southern shipper not only must pay for a longer haul to reach the congested centers of population in the North and East, but also must pay a higher rate per mile.

It is true that on some products we have low rates in the South and on some we have low rates from the South to the North. Generally speaking we find that these low rates are for the shipment of raw materials needed by the processing plants in the Using the eastern or official territory as the base, represented by

ment of raw materials needed by the processing plants in the North. The rates from South to North on finished goods are generally higher than the rates on similar products within the North and also higher than the rates from the North to the South

on finished goods.

The result of this system is to drain the South of its raw materials. It tends to prevent the development in the South of industries making finished goods, the market for which must be found in the large centers of population in the North and East.

If you want to get a true picture of this situation, put in language that a layman can understand, I suggest that you write to the United States Government Printing Office for a copy of House Document No. 264, Seventy-fifth Congress, entitled "The Inter-territorial Freight Rate Problem of the United States," prepared by J. Haden Alldredge.

Recently both Houses of Congress have been investigating this freight-rate question. In order that you may better understand the problem, I think it well to refer to some of the testimony

adduced at the hearings before the Congress.

Mr. C. E. Childe, a rate expert from Omaha, Nebr., in testifying on this subject, said:

"My personal opinion is that this subcommittee is attacking a key log in the economic jam that our country is in, which is holding back our national recovery and progress.

"I believe that constructive action by Congress on this matter of freight-rate discriminations would go a long way toward solving a great many of the specific problems that Congress and the country are attempting to deal with today

"I believe that the so-called railroad problem, including the prob-lem of the other transportation agencies, is intimately involved, and that elimination of freight-rate discriminations would do much, in fact, more than anything I know of, to put the trans-portation agencies back on their feet.

"I believe that business expansion would be promoted and encouraged, particularly in the South and West; and that the unemployment problem, the problem of wage inequalities, the farm problem, so-called, the matter of development of our national resources and national wealth, the \$80,000,000,000 income we are seeking for this Nation if you please, are all involved and interwoven in this subject of freight-rate inequalities.

"And, further, that the cost of living, the matter of living standards generally, and numerous social problems as well as economic problems, social problems arising out of congestion of our population in certain limited areas in the country, and the sparsity of population in vast portions of our country that need more people and more activity; problems of poverty and crime and education; all these matters, I think, Senators, are to an important extent tied up in this question of freight rate discriminations." criminations.

If time permitted I would like to quote many other statements from the testimony of Mr. Childe. Out of his many years of experience as counsel for those seeking rate adjustments, he painted a vivid picture of the results in hardship and retarded developments in the West and South resulting from discrimina-

tions in transportation charges.

The Interstate Commerce Commission was set up by the Congress in 1887 on account of the dissatisfaction of farmers and businessmen with the existing freight rates. Some progress has been made toward adjustment, but after 50 years of effort, the results are discouraging. The time has come for more positive action.

Many of the difficulties of the present situation arise because of the varying policies adopted by the railroads in the different sections in making rates. In the East the system is largely based upon mileage. It gives better rates to finished products within the territory than do the systems in other rate territories. It encourages through rates of a favorable nature on raw materials for the benefit of its processing plants.

As contrasted with this policy, the railroads of the West and South, in the earlier days, were little concerned with encouraging the establishment of industry. There was little industry in those

sections and the railroads undertook to take care of that in a few sections by specific rates.

The general policy of the western and southern roads was to keep rates as high as possible where competition did not compel reductions and to put them as low as possible where competition

The southern and western rates caused a very uneven develop-ment in those sections because the rates were uneven.

In the East the rates favored industry making finished goods while the rates of the West and South favored the production of raw materials, as contrasted with finished goods.

One of the strange facts as to freight rates is that the railroads do not base them upon the cost of the service rendered. This fact was brought out by counsel for the southeastern Governors in the recent case before the Interstate Commerce Commission. In that case representatives of the eastern railroads testified that no consideration was given to the cost of service in making rates. The witnesses testified that the roads got "all the traffic would bear." Such a system gives an advantage to ports and other points where competition exists and penalizes those points having no competitive

transportation facilities

This is the only business in the world, so far as I know, which undertakes to sell its product without regard to the cost.

It is interesting to see what the present rate structure does to the shipper. A few illustrations will be sufficient.

First, I will take shipments of first-class freight from southern to

eastern territory and compare that with shipments of similar freight within eastern territory.

From Atlanta to Chicago is 731 miles. The rate per hundred pounds on first class is 191 cents. From New York to Chicago is 890 miles and the rate is 152 cents. Although Atlanta is nearer

890 miles and the rate is 152 cents. Although Atlanta is nearer Chicago by 159 miles, its rate is 39 cents higher.

Another striking illustration is found in a comparison of the rates from New York and Atlanta to Louisville, Ky. The distance from Atlanta is 449 miles, and from New York it is 852 miles. The rate from Atlanta is 151 cents, and from New York it is 149 cents. Thus New York, although 403 miles farther from Louisville, enjoys a rate lower by 2 cents per hundred pounds.

There is certainly no justice in such a system.

Next I will compare rates within southern territory with rates from official territory to the South. From Smithville, Ga., to Nashville, Tenn., is 440 miles. It is exactly the same distance from Chicago to Nashville, yet the rate from Smithville is 148, while the rate from Chicago is 138, a discrimination against the South of 10 cents per hundred.

of 10 cents per hundred.

The discriminations against the Southwest are even worse. example, the distance from El Paso, Tex., to Springfield, Ill., is 1,236 miles. From Lewiston, Maine, to Springfield it is 1,216 miles. The rate from El Paso is 330 cents, and from Lewiston it is 173 cents per

hundred pounds. With a difference of only 20 miles in distance, Lewiston has an advantage of 157 cents per hundred pounds. From Amarillo, Tex., to Little Rock, Ark., is 627 miles. From Chicago to Little Rock is 621 miles, but the rate from Amarillo is 209 cents, while from Chicago it is only 177.

When you leave the class rates and take up the rates on specific goods you find the same unfair rates exist. For example, take

goods you find the same unfair rates exist. For example, take plumbers' goods. From Chattanooga to Columbus, Ohio, it is 452 miles. From Chicago to Pittsburgh it is 454 miles. The rate per hundred pounds from Chattanooga to Columbus is 54 cents, while the rate from Chicago to Pittsburgh is only 42 cents.

Take roofing material. The distance from Nashville to Chicago is 440 miles, while the distance from Pittsburgh to Chicago is 454 miles. The rate from Nashville is 35 cents, while the rate from Pittsburgh is only 27 cents.

Pittsburgh is only 27 cents.

These illustrations could be expanded into hundreds of similar cases, but I do not wish to weary you. I would, however, like to give a few examples of the part transportation costs play in the sales price of fruits and vegetables.

These figures are based upon sales prices on the markets of Philadelphia. Florida Bountiful Beans sold for 75 cents per bushel, of

which price 60 cents was railroad freight.

Alabama corn sold for 90 cents per crate, of which 75 cents was reight. Louisiana peppers sold for 75 cents per bushel and the freight was 37 cents. Georgia peaches sold for \$1.25 per bushel and the freight was 68 cents. The railroads in each instance received more than the farmers who produced the products.

Texas beets sold for 80 cents per half crate and the freight was 63 cents, the farmer actually losing 8 cents.

In a report prepared for the President the National Emergency Council said:

Council said:

* This difference in freight rates creates a man-made wall to replace the natural barrier long since overcome by modern rail-road engineering. Both actual and potential southern manufac-turers are hampered because attractive markets are restricted by the existence of a barrier that is now completely artificial. The southern producer, attempting to build up a large-scale production on the decreasing cost principle, finds his goods barred from the wider markets in the Nation's most populous area. In marketing his products over the wall he is forced to absorb the differences in freight charges.

"The artificial rate structure handicaps the South in its efforts to expand and diversify its industry. For example, under present conditions it is cheaper to concentrate and ship the South's zinc ore to the North, where it is made into metallic zinc, used to coat northern steel, and shipped back to the South for its "tin" roofs and other galvanized ironware, than it is to convert this zinc ore in the South without the economic less of cress bentling.

without the economic loss of cross hauling."

A group of outstanding citizens meeting in Atlanta in January of this year to study the report above referred to, said:

"The freight rate differentials imposed upon the South constitute a tariff against southern goods as discriminatory as the tariff against the goods of a foreign nation."

The South and West, as integral parts of the Nation, are justly entitled to fair treatment in regard to freight rates. We should and must have a national system of transportation charges, without discriminations against any section.

The result of this unfair system of freight charges has not only

The result of this unfair system of freight charges has not only damaged the West and the South but the railroad industry itself damaged the West and the South but the railroad industry itself is losing ground because its methods at arriving at charges to be made for freight are wrong. These methods are driving the business to other forms of transportation. Millions of workers have lost their jobs on the roads, and billions of tons of freight have been moved by other methods.

According to the report of the Committee of Six, appointed by the President to seek a solution of the problems facing the rail carriers, the railroads are today carrying less of the total traffic as compared with the year 1926.

Since that year the tonnage on the steam railways has declined approximately 19 percent, or more than 84,000,000,000 freight ton-miles. All other forms of transportation, except electric railways, have increased their tonnage.

In my opinion, the railroads must learn to carry more tonnage

In my opinion, the railroads must learn to carry more tonnage at a lower unit cost. They need and must have greater volume of business, and they can get it only by reducing the cost. This is the process followed by modern business.

Many believe that the ills of the roads arise from their control by financial interests in the East who dictate the policies without regard to the views of the operating officials whose lives have been given to service with the railroads.

I could cite many illustrations of loss of freight by the steam railroads because of high rates. Two will suffice. In Elberton, Ga., 2 truck lines hauled 13,000,000 pounds of stone in 2 years, because it was cheaper to use trucks than to pay the rates demanded by the railroads.

In Georgia we have a tire company operating a fabric plant which

In Georgia we have a tire company operating a fabric plant which

In Georgia we have a tire company operating a fabric plant which hauls its product to the tire plant in Ohio in its own trucks. On the return trip these trucks bring tires for distribution in the Southeast. Many similar illustrations could be given.

This system of discriminatory rates has caused a concentration of population, wealth, and industry in the favored sections of the Nation. It has promoted an uneven development of our country. New York City today has the greatest concentration of population to be found at any spot in the world. All of the large cities of our country are located on the Atlantic seaboard from Boston to Washcountry are located on the Atlantic seaboard from Boston to Washington and Baltimore, on the Great Lakes, or on the Pacific coast. While originally this may have been the result of water transportation, the railroads have favored these sections and have perpetuated this concentration of population. A similar concentration of wealth and business has followed.

tion of wealth and business has followed.

The North and East, being the favored rate territory, with approximately 21 percent of the area of the country, has 57 percent of the population. This section has 90 percent of the firms selling to retail druggists, 55 percent of the 75 leading life-insurance companies, 95 percent of the \$93,000,000,000 in life-insurance companies, 96 percent of the annual income of the 75 leading life-insurance companies, 97 percent of the excess income over disbursements of these same 75 companies, 69 percent of the insurance written in 1931, 79 percent of the \$15,000,000,000 in demand deposits in banks in 1933, 82 percent of the \$21,000,000,000 in time deposits in 1933, 84 percent of the individual income taxes for 1931, 83 percent of the individual income taxes for 1931, 83 percent of the individual income taxes for 1931, 83 percent of the individual incorporation income taxes in 1931, 85 percent of the individual incomes between \$40,000 and \$50,000, 83 percent of the colleges with endowments of \$2,000,000 and more, and 90 percent of the 200

endowments of \$2,000,000 and more, and 90 percent of the 200 largest nonbanking corporations.

Yet this section produced only 4 percent of the oil in 1932, 54 percent of the coal, and 9 percent of the lumber in the same year. It had only 38 percent of the 44 principal crops as to acreage and 36 percent of the value of the 64 leading crops in the same year. With less of the natural resources of the country, it has an overwhelming proportion of the income and earnings of the Nation, because of favorable factors which prevent the extension of processing in the West and South

ing in the West and South.

We of the West and South furnish the raw materials. owns many of them; it processes them and adds greatly to their value and resells them to us as finished goods. We thus pay tribute day by day to that section of the country.

In 1887, speaking to an eastern audience, the late Henry W.

Grady said:
"But agriculture alone—no matter how rich or varied its re-"But agriculture alone—no matter how rich or varied its resources—cannot establish or maintain a people's prosperity. No Commonwealth ever came to greatness by producing raw materials. Less can this be possible in the future than in the past. The Comstock lode is the richest spot on earth. And the miners, gasping for breath 1,500 feet below the earth's surface, get bare existence out of the splendor they dig from the earth. It goes to carry the commerce and uphold the industry of distant lands, of which the men who produce it get but dim report. Hardly more is the South profited when, stripping the harvest of her cottonfields, or striking her teeming hills, or leveling her superb forests, she sends the raw materials to augment the wealth and power of distant communities." tant communities."

The foresight of this great man is evident today. We have done for 50 years just exactly what he warned against. The result has been what he predicted.

The time has come for the South to wage another war. This time it must be a war of economics, a war of legislation, a war to strike from our peoples the shackles of discrimination. We demand our place as a part of the Nation, a free people, entitled to a just part of the business, the commerce, and the industry necessary to the life of a Nation of more than 130,000,000 people.

Believing that the time has come to fight, I have joined with the Representatives of 25 other States in a group movement to remove the freight-rate discriminations from our section and from the West. We are making progress. I believe that we will win this war. Justice and right are on our side. The welfare of the Nation demands a fair chance for the South and the West.

We seek this remedial legislation as a part of general legislation designed to rehabilitate the railroads. I expect to support any reasonable legislation offered for promoting the prosperity of the railroads, but I insist that they must play the game fairly. They must give fair and just rates to all sections.

I am interested in the welfare of the railroads for many reasons. They are necessary to our economic life, they furnish employment to many thousands of fine citizens in whom I am deeply interested, they spend vast sums in purchasing supplies and in paying taxes. We must solve their problems, but we must also demand of them justice for the South and the West.

They tell us that they are ready and willing at all times to join our shippers in efforts to get parity rates into the North if circumstances justify such action. They did join in the Governors rate case, but they did not testify that the rates proposed were "compensatory rates."

They do not tell you that when a parity rate into the North is put linto effect they ask for a division of the through rate which gives them a larger part thereof than they would be e

fight for justice in rates.

May I conclude this address by urging those here today to join hands and enter this fight? It means economic life or death for our section. It means the difference between poverty, unemployment, and debt and employment, development, and prosperity.

We have a great section. It is peopled by fine native sons and daughters of America. It today typifies more nearly the true spirit of America than any other section. It is rich in natural resources. An abundant Providence has favored it with a mild climate, with plentiful rainfall, and with many other advantages natural to the section. natural to the section.

natural to the section.

Our failure to keep step with the North in the development of these advantages is largely due to man-made restrictions. We must remove those restrictions. We too long have suffered under these disabilities without protest.

As Grady said, we cannot have prosperity by selling our natural resources to other sections. We do not even produce our own necessities in clothing, machinery, and in many food products. We must produce these and more for sale to other sections if we would enjoy our share of the national wealth and prosperity. enjoy our share of the national wealth and prosperity.

This is not a job for any one person, but a war in which everyone in the West and South should join hands, to the end that justice

and fair play may be our part in the national economy.

Trade Agreement With Argentina

EXTENSION OF REMARKS

HON. THOMAS A. FLAHERTY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, May 22, 1939

LETTERS FROM CARL F. WOODS AND WILL L. SMITH

Mr. FLAHERTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

CROSBY STEAM GAGE & VALVE Co., Boston, May 9, 1939.

on. Thomas A. Flaherty,

House Office Building, Washington, D. C.

DEAR SIR: There is enclosed herewith a letter from Will L. Smith, of Buenos Aires, which deserves your serious consideration. Mr. Smith is a man of the highest standing and reputation; he represents a number of large American interests as their sales representative in the Argentine. He has a first-hand knowledge of the situation, and his letter seems to me a particularly clear presenta-tion of the situation that is developing as regards American trade with South American countries.

I appreciate fully the complexity of this question from the standpoint of our own national economy, and I am sure you will be glad to have the views of an experienced and capable man, who is in a position to present fairly the situation as it exists today. I shall appreciate your consideration of this very important matter.

Yours very truly,

CAPL F WOODS President.

WILL L. SMITH, S. A., COMMERCIAL E INDUSTRIAL, Buenos Aires, April 20, 1939.

CROSBY STEAM GAGE & VALVE CO.,

30 Church Street, New York, N. Y.

GENTLEMEN: As you know, American interests in Argentina have been at a serious disadvantage for some time and recently have been faced with a crisis that has threatened the very existence of much business here. It is believed in Argentina that the only practical relations between the two countries would come from having a satisfactory trade expression.

feators trade agreement.

It has been suggested, therefore, that appeals be made to important companies to do everything possible at their end to create aproper understanding of the issues and prevent the irreparable harm that would result from failure. This action is suggested because of the growing opposition in the United States to the reciprocause of the growing opposition in the United States to the reciprocal trade-agreement program evidenced in the bills which have been introduced in Congress requiring Senate ratifications of all future agreements negotiated by the State Department, which would, of course, nullify the effectiveness of the act as a weapon for use against international competition.

The economic aspect of the trade agreement with Argentina is probably well known to you. Under the present import restrictions in this country, American markets are being lost and the Argentine branches and representations of American companies have been obliged to import from their European branch factories and from European companies.

European companies.

European companies.

The present aggressive policy of totalitarian countries must be met with firm and effective measures or the United States will suffer irreparable harm. Their methods are highly practical, as they offer to accept on barter large quantities of Argentine cereals and meat in exchange for manufactured articles, with the result that a large toll of United States trade has already been taken. The most effective check that could be administered would be a trade agreement between Argentina and the United States. It is, in fact, the only hope for successfully meeting the trade tactics of the totalitarians in Argentina and alleviating the serious condition of American trade.

of American trade.

The economic aspect, however, can be considered of secondary importance at the present time. The most important reason why negotiations must not fail is a far broader one. We refer to the salutary effect that such an agreement would have throughout all of Latin America. There is no question that it would be a vital feature in creating good will for the United States and would contribute materially to offsetting totalitarian political influence on this continent.

on this continent.

on this continent.

It is believed that if American companies were made well aware of those points of view, and if they will bring them to the attention of their Congressmen, Senators, newspaper publishers, chambers of commerce, trade organizations, and influential friends, there will be a general favorable attitude toward any reasonable agreement with Argentina. Such action on the part of large companies would help to curtail and lessen the effectiveness of any political opposition which might attempt to block negotiations of the trade treaty. The serious harm that would result from such an occurrence can hardly be overemphasized because of the importance of Argentina. The serious harm that would result from such an occurrence can hardly be overemphasized because of the importance of Argentina, politically and economically. The success here for American trade and commercial policy would, it is believed, have a far-reaching effect on American prestige in Latin America and serve as a check on opposing trade policies.

If this letter goes into your wastebasket, and all other American manufacturers take the same interest, American foreign trade will be seriously hurt.

be seriously hurt. Yours very truly,

WILL L. SMITH President.

Old Harbor Village Project

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1939

EDITORIAL FROM THE OLD HARBOR VILLAGE NEWS

Mr. McCORMACK. Mr. Speaker, one of the low-rent housing projects constructed by the Federal Government is the Old Harbor Village project, located in my district, which

has brought joy and happiness and a new outlook on life to over 1,000 families. About 1 year ago the Federal Government entered into a lease with the Boston Housing Authority, an agency of the city of Boston, as a result of which the local agency operates and manages the project, doing so in an able, efficient, and highly satisfactory manner.

There has developed and exists among the residents of this community which the construction of the project brought

about, a fine community spirit.

Recently a publication known as the Old Harbor Village News was started, and in its first issue appeared a powerful editorial, which I include as a part of my remarks:

> [From the Old Harbor Village News] GOOD CITIZENSHIP STARTS IN THE CRADLE

I wonder if the critics of public housing realize that the making

I wonder if the critics of public housing realize that the making of good citizens starts when he or she is very young.

Too many of our future generation, in this the richest and most democratic country in the world, are deprived of the beautiful things of childhood; namely, a home that can be called a home; surroundings that match the atmosphere of the home, such as parks, places to play indoors because of severe weather conditions, and neighborly love for one another. A child brought up in these surroundings automatically becomes accustomed to the right way of living. As time goes on, children who haven't the right start in life soon drift into bad company unless they have great will-power.

in life soon drift into bad company unless they have great winpower.

When boys and girls approach maturity they like to invite their
friends into their own homes for a social event or other entertaining affairs. If the home is shabby looking within, with no
modern convenience, and cold and dreary, the girl or boy will
hesitate to invite his or her friends to join them at their home.
The result is the child longs for companionship and seeks it outside of his or her home if necessary.

Too often these boys and girls are led along the wrong path
of life, due mainly because they were deprived of a place they could
really call home.

really call home.

of life, due mainly because they were deprived of a place they could really call home.

Some people think a home is any place they hang their hat. They are wrong. A home means more than that. A home is a place where, in the summer time, a member of the family can come in and not be greeted by an odor of back-alley fumes and dry suffocating air. Where the child in the cradle is not perspiring for the want of a little fresh air. Where parents are not fatigued from attending the little ones at night, doing everything they possibly can to ease the uncomfortable condition of the children so that they may get some relief from the heat. A home is a place where a member of the family can enter in the winter with a smile knowing that regardless of what the temperature is outside, he can go into any room in his house and be able to feel warm and comfortable. A home is a place where members of the family are not huddled around a stove trying to keep warm, where the members of the family have a smile for each other; where mothers and fathers have love to offer their children. That is the real meaning of home, such a place is Old Harbor Village.

The residents of Old Harbor Village take this opportunity to thank our humanitarian President, Franklin D. Roosevelt; our mayor, Maurice J. Tobin; our representatives, both national and State, and members of the Boston Housing Authority, who so unselfishly serve on this board without any remureration for providing the residents of Old Harbor Village a place called home.

National Resources Committee

EXTENSION OF REMARKS

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 22, 1939

LETTER FROM CONSTITUENT

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a friend and constituent of mine with regard to the work of the National Resources Committee:

> THE ALBANY HERALD. Albany, Ga., April 20, 1939.

Hon. E. E. Cox,

House Office Building, Washington, D. C.

MY DEAR JUDGE: Since talking with you several days ago I have been checking up on the National Resources Committee, and nowhere in its record do I find anything whatsoever to justify a suspicion that it desires to be handed a club and given a commission

to use it on State and local governments-or on anybody, or anything, anywhere.

thing, anywhere.

Let me repeat what I stated in the course of our conversation—that the National Resources Committee as it is now constituted has no power whatsoever. It cannot compel any agency, governmental or business or industrial or other, to do anything.

That is not the idea in planning. As you know, I am chairman of the Georgia State Planning Board, and am in touch with a number of other similar boards in the Southeast. Not one of them

number of other similar boards in the Southeast. Not one of them has power to compel obedience to orders or to comply with demands. As a matter of fact planning agencies do not work that way. They are fact-finding, coordinating, and advisory—always that and never more than that. They do not desire powers, for they are not administrative agencies. Their function is to plan, to study problems, gather and correlate information, submit reports to executive heads and legislative bodies, and prepare plans which may be adopted in whole or in part or rejected in their entirety.

The idea of a national or a State planning agency clothed with powers is fantastic. It is repugnant to the whole spirit of planning. I would not serve on a planning board or commission that was authorized to enforce its will—to "compel obedience." That may be zoning or in the nature of an exercise of police powers, but it certainly is not planning.

may be zoning or in the nature of an exercise of police powers, but it certainly is not planning.

Permit me to quote from an amendment to a Senate bill (S. 1265) introduced last February by Senator Hayden. I do not know what became of the amendment, and I am not considering its virtues or shortcomings, but it seems so clearly to proclaim the functions and lay down the limitations of planning that it is well worth reading. This is the extract referred to:

"The Board (National Resources Board) is authorized and directed (a) to investigate examine, study, analyze, assemble, and coordi-

"The Board (National Resources Board) is authorized and directed (a) to investigate, examine, study, analyze, assemble, and coordinate and at suitable intervals to review and revise basic information and materials appropriate to the formulation of plans or planning policies for the conservation, development, and utilization of the Nation's resources, and, on the basis thereof, such plans and planning policies; (b) to consult with all appropriate departments, bureaus, agencies, and instrumentalities of the United States, and Territories and possessions thereof, and of any State or political subdivision thereof, as well as with public or private planning or research organizations; (c) to advise with such departments, bureaus, agencies, instrumentalities, and public or private planning or research organizations, with respect to the conservation, development, and utilization of the Nation's resources, and to obtain from and furnish to them data and information relating to such matand furnish to them data and information relating to such matand furnish to them data and information relating to such matters; and (d) to prepare and submit studies, reports, and recommendations upon matters within its jurisdiction, upon its own initiative or whenever the President or the Congress may request such a study, report, or recommendation."

I am not championing the Hayden amendment or anything else. The point I make is that here is a clear statement of what planning seeks to accomplish, viz, find out what we have and where it is, then plan its intelligent conservation, its development, its use. There is not a word in the quoted statement about powers. For more than 5 years I have been in touch with the National Resources Committee and its predecessors National Planning Board, National Resources Board. Never by statement or intimation dur-

National Resources Board. Never by statement or intimation during that period have I heard hint of a program which could under any conceivable circumstances be other than "advisory only." I believe some such proposal was made several years ago in a bill—whether House or Senate I do not know—which someone prepared, but the National Resources Committee opposed it. It would have ruined planning. "Planning with power" would shake itself to pieces in short order.

pieces in short order.

Here in the Southeast we face many grave problems related to our resources—land, water, forests, health, education, agriculture, industrial development and, over and above all these and the rest, people. I have been studying these problems for years, and so have you. We have not been making impressive progress in dealing with them, but I make the confident assertion that planning offers the most hopeful approach to their eventual solution. Our weakness is due to our lack of information about what we have, where it is, why so much has been wasted, and how that waste can best be stopped; what penalties neglect and abuse now threaten, and what price our children and their children will pay if we fail to protect their heritage.

A national planning agency is indispensable to the States. I

what pite our children will play it we fail to protect their heritage.

A national planning agency is indispensable to the States. I make that statement without qualification, and out of my knowledge of the situation in at least six States. The present national agency (National Resources Committee) furnishes expert consultant service to State boards, and serves as a clearing house through which all the State boards, as well as regional planning groups, are kept in touch. It is a fountain of planning inspiration. When a State planning board faces a perplexing problem in planning, it asks the National Resources Committee for guidance—and gets it if the committee is able, within its available resources, to supply it. The National Resources Committee has made studies of very great value. A fair sample was last year's study of population problems. I am sure you remember that. It showed the whys and wherefores of a declining birth rate which forecasts a stationary population in the country by 1973, provided immigration restrictions remain as at present, and the birth rate does not increase. It was a typical planning study and one of dozens made by the National Resources Committee. I sent you several of the reports a few weeks ago.

reports a few weeks ago.

I am particularly anxious that you get a picture of planning as I have come to see it. We need intelligent planning in the

South as much or more than any other section needs it. tioned to you the forest resources study which our State planning boards have been making and in which the United States Forest Service has cooperated. It would have been impossible without the guidance and support of the National Resources Committee. I know, for the very good reason that the Georgia State Planning Board initiated the study, and I am intimately acquainted with

I hope I have not taxed your patience, but I have written a long letter, because this matter lies close to my heart. I can think of few better ways for spending a modest sum of Federal money than

is the better ways for spending a modest sum of Federal money than in support of planning.

If I can be of any service, please call me. The planning program now faces its greatest opportunity. It has won its place in government, Federal and State. To abandon it would be tragic. With cordial regards, I am,

Sincerely your friend,

H. T. McIntosh.

Charges Against Farm Tenant Purchase Program Refuted

EXTENSION OF REMARKS

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1939

LETTER FROM HON. HARRY L. BROWN AND THREE NEWS-PAPER ARTICLES

Mr. JOHNSON of Oklahoma. Mr. Speaker, during the debate in the House recently on the Department of Agriculture appropriation bill a member of the minority made quite a point of an article by Garet Garrett which appeared in the Saturday Evening Post, with regard to the first tenant purchase loan under the Bankhead-Jones Farm Tenant Act, which was made to Mr. Wiley L. Langley.

In order to present all of the facts in this case to the House, I offer for the RECORD a letter written to a Member of Congress by Hon. Harry L. Brown, Acting Secretary of Agriculture, under date of October 19, 1938, and also three newspaper stories regarding this loan and the progress Mr. Langley has made as the result of the assistance he has received, which are a very satisfactory refutation of the absurd charges made in this magazine article and echoed here on the floor.

The letter and the news stories follow:

This is in reply to your letter of September 9 relative to an article, "The Battle With Farm Tenancy," appearing in the Saturday Evening Post of September 10, 1938. The statement concerning the tenant purchase loan made to Wiley J. Langley does not give all the relevant facts and is inaccurate in several important

details. These inaccuracies can best be indicated by comparing passages from the article with the actual facts:

The first paragraph of the article says: "Seven miles from here Jasper, Ala.) by concrete and then half a mile up a dirt road lives a farmer named Wiley J. Langley, who received the first United States Treasury check that was written under the Bankhead-Jones Farm Tenant Act. That is the act that provides a fund of \$10,000,000 to be loaned to tenant farmers to enable them fund of \$10,000,000 to be loaned to tenant farmers to enable them to buy farms. There was some ceremony about it because it was the first check, and for the reason, besides, that the first deserving tenant farmer who could be found happened to live in Senator Bankhead's neighborhood, and Senator Bankhead wrote the law. The press associations sent out news stories on it; one of them said it was the opening of the Government's 'long-range battle against the evils of the share-cropper and tenancy systems in agriculture.'"

agriculture."

The implication is that Mr. Langley was hand-picked because he lived in Senator Bankhead's neighborhood. The fact is that it was a natural selection. Alabama has one of the most serious tenancy problems in the United States. It was first to complete its State organization under the Bankhead-Jones Act, 2 days ahead of Kansas and 5 days ahead of Georgia. Mr. Langley was recommended to the Farm Security Administration by a committee of Walker County farmers as capable, honest, and hardworking and likely to make a success of a murchase undertaking. His docket

Waker country latiners as capable, inclosed, and hardworking and likely to make a success of a purchase undertaking. His docket was the first to reach the regional office from the committee.

The article continues: "I went to see Langley. It was a beautiful Alabama day and he was sitting on his porch. He said he had been farming around there for more than 20 years. He had owned

two farms and was intending to buy this one when he rented it. He had raised a family of 12 children, 5 of them boys, all helpful, except that one had smashed up the family car a week before. He owned 4 mules, 3 cows, and all the tools he needed, and it was a good farm of 180 acres. You might know it was good because he had got 20 bales of cotton from 22 acres.

"Wiley J. Langley was born March 6, 1880. At the age of 17 he became a coal miner, which trade he followed until 1917. In 1918 he purchased a 35-acre farm which he owned for 10 years. In 1928, he purchased a 35-acre farm which he owned for 10 years. In 1924, with a large family to support and two sons coming of an age to help with the farm work, he disposed of his interest in the small farm and rented a 65-acre farm. Three years later (1931) he moved to another rented farm of 50 acres which he operated until 1934, at which time he moved to still another farm, with 62 acres in cultivation and 118 acres in woodland and pasture. He was renting the latter farm when he applied for a loan, and it was the more whereast with the more weare the Government to renting the latter farm when he applied for a loan, and it was the one purchased with the money loaned him by the Government to begin his second effort as owner-operator. Life as a cash crop tenant farmer had been an uphill struggle for Langley. He had livestock and equipment valued at \$785 which he mortgaged for \$1,082.12. Mortgage payments were past due. The Langleys also had \$367 worth of hay, corn, and cottonseed meal in the barn, \$30 worth of cottonseed on hand for the spring planting, about \$350 worth of household goods, and \$178 worth of food stored."

The article continues: "Then I asked him how it happened that he was the first to get in under the Farm Tenant Act. He didn't exactly know. He hadn't asked for it. He was down at the county agent's office inquiring about the cotton-loan program, having his 20 bales in it, and when they were through talking about it, the county agent asked him, he said, 'Langley, do you need any money?' At first he said he didn't, but then in another way maybe he did.

At first he said he didn't, but then in another way maybe he did. A farmer could always use a little money if he got it right. The county agent then asked him, he said, 'Langley, why don't you sign into the new farm-purchase plan?' They talked about it until he saw that if there was anything the matter with anybody's

until he saw that if there was anything the matter with anybody's head, it couldn't be his, because there wasn't a chance for him to lose, and he signed. A few days later the committee came to look him over. They said, all right, the Government would lend him \$3,000 to buy the farm. Then they said he might need some cash, because the county agent would want him to try some new ideas. For that they put down \$675.

Langley applied—as all other borrowers have—after being told of the opportunity offered him by the law. After the Langleys had been recommended for a loan by the local committee, Farm Security appraisal experts appraised the farm and its previous production record. They found the farm capable of producing a living for the family of 10 with enough over to keep up loan retirement and tax payments and ascertained that these costs of purchase and ownership would be less than was ordinarily paid for rent of the farm.

The next step was working out a farm-management plan by the

The next step was working out a farm-management plan by the Langleys with the assistance of farm-management experts of the Farm Security Administration. The first item to receive attention Farm Security Administration. The first item to receive was the debt encumbering farm equipment and livestock. Crediwas the debt encumbering farm settlement of the debt. Then a was the debt encumbering farm equipment and livestock. Creditors agreed to accept \$400 cash in settlement of the debt. Then a plan for operation of the farm for the ensuing year was mapped out. Cotton acreage would be reduced for 1938 to 16 acres, but there would be plenty of land for food enterprises. Livestock, as the most profitable utilization of feed and pasture acreages, was decided upon. The Langleys planned to acquire 2 brood sows for \$40 and two pigs for \$10. As one way of cutting down on living costs for the ensuing year, Mrs. Langley and her daughters planned to can a large supply of vegetables and fruits during the coming year. To do this a pressure cooker costing \$15 was needed.

Operating and living expenses for the coming year were calculated. These came to about \$775. The Langleys could not meet this from their own resources. They asked for a loan to buy fertilizer, seed, and small trees to set out an orchard and to have farm machinery repaired. The Rehabilitation Division of the Farm Security Administration agreed to make the loan, a total of \$211, for

Farm machinery repaired. The Remaintation Division to the Farm Security Administration agreed to make the loan, a total of \$211, for 1 year at 5-percent interest to meet these expenses. The Langleys also obtained a rehabilitation loan of \$465 to be retired over 5 years time at 5 percent—\$400 to refinance the outstanding debt at the reduced level, \$50 to buy sows and pigs, and \$15 to buy a pres-

sure cooker.

Thus the Langleys owe, under the rehabilitation loan program, \$304 to be paid at the end of the current crop year. In addition, they will owe installments on the longer-term loan of \$93 each harvest for 4 years thereafter—a total of \$676. These loans were made Vest for 4 years thereafter—a total of \$676. These loans were made by the rehabilitation supervisor of the county to help the Langleys get in a position to make a go of the new venture; they were not suggested or approved by the tenant purchase committee.

The article continues: "After this they looked at the house. Did

The article continues: "After this they looked at the house. Did he want to do anything to it? He said, hell, yes, now that he was going to buy the farm he wanted a new house on it. They put down \$800 for that. The total, then, was \$4.475, which, if he lived to be 92, he could pay off in 40 annual installments of \$164 each."

It is stipulated in the Farm Tenant Act that loans shall be made to is supulated in the Farm Tenant Act that loans shall be made to cover the cost of the farm and necessary improvements. Measures needed to safeguard the soil against impoverishment and erosion, to safeguard the health of the family, and to put the farm on a sound basis for operation are deemed "necessary improvements" under the terms of the act.

The farm purchased by the Langleys was found to need some fencing. Accordingly the loan was made to include \$50 for purchase of materials and the fences were put up by the Langleys. The house was not in condition to safeguard the health of the family. It was not screened, the roof leaked, the foundations were rotted. It was not a very safe basis for 40 years of home making. (A picture of the house is enclosed.) A total of \$725 was set aside to repair the house and \$25 was set aside to repair the well and protect it from pollution. This total of \$800 was included in the 40-year loan, on

pollution. This total of \$800 was included in the 40-year loan, on which repayment will amount to \$164.39 annually.

The article continues: "I went then to the Jasper courthouse, where all the Department of Agriculture people are, found the local administrator of the Farm Tenant Act, and said to him, 'How did you happen to pick Langley?'

"He said, 'What's the matter with him?'

"I said, 'I don't see anything the matter with him. As farmers go around here, he looks all right. I'm asking how you came to select him?' select him?

"He said, 'I don't see your point.'
"I said, 'Next to Langley is a man trying to make a living on 12 "He said, 'I don't see your point.'
"I said, 'Next to Langley is a man trying to make a living on 12 rented acres with 1 sick mule. I left them both up there in the shade, one of them lying on his back, wondering how it was that the Government going up that dirt road looking for people in trouble, passed right by him and stopped at Langley's place. Next to Langley, on the other side, on 60 acres of rented land, is a young farmer with a young wife and a new baby in her arms, and they may be still standing in the doorway where I left them, wondering why the Government put its chicken in Langley's pot."

"He said, 'You can't do anything for anybody without hurting somebody's feelings. Come in here and I'll show you.' He got out a folder containing hundreds of applications and began turning them over. 'Now, you see, here's a man made application who's got 1 mule and 1 old plow and owes \$60. We can't start with him. Here's a man with 2 good good mules, he says, but he owes \$226.19. He's just the same as got nothing. You can't start with a man like that, who's been farming all his life and's got nothing to show for it."

"I said, 'I see that. You've got to take a man who has something to start with and a record of success, like Langley, or else it won't work."

"He said, 'Now you've got it. So what is it you want to know?"

"He said, 'Now you've got it. So what is it you want to know?'
"I said, 'I want to know how the successful tenant farmer comes
to be a concern of the National Government. How does helping
the successful tenant farmer tend to meet the evil of farm ten-

"He said, 'We get the law. We don't write it. Anyhow, you've come to the wrong place. The people across the hall take care of the kind of farmer you mean. That's farm relief."

of the kind of farmer you mean. That's farm relief."

The tenant-purchase loan program is not designed to rescue victims of extreme farm poverty. It is the function of another program administered by the Farm Security Administration—the rehabilitation loan program—to help farm families on or near relief rolls win their way back to self-support and to a position where they may be eligible for a purchase loan in the future. In many instances "graduates" of the rehabilitation program are being selected by the county committees of local farmers to receive tenant-purchase loans. The function of the tenant-purchase program is to aid farm tenants of proven ability and experience, who gram is to aid farm tenants of proven ability and experience, who are unable to obtain a loan for purchase of an adequate farm, to borrow money on liberal terms and to apply the money which formerly went for rent toward home ownership. The program was conceived in the belief that an owner-operator has more incentive

conceived in the belief that an owner-operator has more incentive to be a good citizen and farmer than the tenant has.

That Congress intended the purchase loans to go to more responsible tenants is shown by the language of the act, which says that preference shall be given "to persons who are able to make an initial down payment, or who are owners of livestock and farm implements necessary successfully to carry on farming operations."

We are gratified by your interest in this phase of the Department's program. If further information is desired, we shall be glad to supply it; or Mr. Langley undoubtedly would be glad to answer your questions direct. His post-office address is Manchester, Ala.

Sincerely.

Sincerely,

HARRY L. BROWN, Acting Secretary.

[From the Baltimore (Md.) Evening Sun of March 23, 1939]

How It Turned Out - Former Farm Tenant Makes Good as Owner-First Sharecropper to Get Land Under F. S. A. Plan MEETS PAYMENTS, BUILDS HOUSE, AND SHOWS PROFIT ON CROPS

JASPER, ALA., March 23 .- The first tenant farmer in the country to become a landowner under the Bankhead-Jones Act, designed as

a remedy for the evils of sharecropping, made good on his first-year operation of the 180-acre tract he formerly rented.

Wiley J. Langley, 59, ruddy-faced father of 12, has "made good," both in his own mind and in those of his neighbors, to say nothing of the books of the Farm Security Administration, which handles the farm-tenant measure's funds.

OWN STATUS IMPROVES

With considerable fanfare, Langley was given a check for \$3,800 as the climax of ceremonies February 12, 1938, as speakers halled the step as the "beginning of a new epoch for the tenant farmer." Whether the F. S. A. plan offers a permanent solution to the farm-tenant problem, Langley is not prepared to say, but he has figures to show an improvement in his own status.

"It was pretty hard this first year." Langley said, "but I made a go of it all right, and I'll do better this year."

HOUSE COST \$1.300

Interest and retirement payment on the F. S. A. loan, which will be paid off in 40 years, amounts to \$164.72, as compared with the \$150 rent paid in former years, but he has a six-room home, built principally by himself and his sons, and far better equipment.

The well-kept home was built from materials purchased with a part of the loan. Necessary skilled labor for finishing brought its cost to \$1.300

cost to \$1,300.

SEVEN HUNDRED AND TWENTY BUSHELS OF CORN

His farm is 6 miles from Jasper, home of Senator John H. Bank-HEAD, who sponsored the farm-tenant act.

F. S. A. figures show Langley produced an average of 495 pounds of lint cotton per acre on the 11 acres allotted him, and realized \$548.26 from sale of the cotton and cottonseed.

In addition he harvested an estimated 720 bushels of corn, of which he expects to sell at least 100 bushels during the spring months, when corn prices in Alabama usually rise above 80 cents a bushels.

INCREASING CORN ACREAGE

The first \$164 payment has been made, and the next will not be due until fall, when a new cotton crop will have been sold.

By increasing his corn crop by 10 acres, Langley hopes to have 250 bushels to sell from his second year's efforts. An increase in his cotton-acreage allotment will give him 2 additional acres for that crop, and he plans to sell livestock for more than \$100.

His "net worth," as figured by the F. S. A., increased \$602.73 during 1938, principally because of his increase in livestock and his increased store of foodstuffs.

increased store of foodstuffs.

[From the New Orleans Item of January 24, 1939]

F. S. A.'s First Purchase Loan Farmer Ends Year Ahead of United States Schedule—Increased His Net Worth by \$602

JASPER, ALA., January 24.—Wiley J. Langley, Alabama farmer who a year ago became first in the Nation to get a purchase loan from the Farm Security Administration, reported he had bettered the program outlined for him by the Government.

The gaunt, graying 59-year-old father of 12 ran work-scarred fingers over columns of figures and found he had done all the Federal Government had asked—and more.

BORROWED \$3,800

For years the Langley family had struggled against all the unfavorable odds facing the South's poverty-ridden tenant farmers. The Bankhead-Jones Farm Tenant Act was passed by Congress. The Bankhead-Jones Farm Tenant Act was passed by Congress. It provided \$10,000,000 to help a limited number of tenant farmers, sharecroppers, and farm laborers get a new start. Langley obtained a loan of \$3,800—first under the act in the country. He used \$2,500 to purchase the 180-acre farm that he had rented previously. He built a new house, using timber off the farm, and bought seed, fertilizer, and other necessities.

Agents of the F. S. A. outlined a program for the Langleys. How well they succeeded is shown by this:

Scheduled to get 905 gallons of milk from their cows, they got 1,500 gallons; instead of 7 hogs and 1 beef, they raised 15 hogs and a beef; 57 gallons of sirup instead of 45 allotted; 60 bushels of potatoes instead of 54; and 45 hens instead of 50.

EIGHT HUNDRED BUSHELS OF CORN

They raised 3 acres of wheat, 800 bushels of corn, and 2 acres of truck crops and vegetables for home consumption. They were due to can 450 quarts of vegetables and 315 quarts of fruit, but canned only 500 quarts of both—principally because their new house was not finished until August, and Mrs. Langley had no place to do the canning.

"But we'll do better this year," Mrs. Langley promised.
"I bought my wife a new hat," Langley said proudly, "and I'm givin' my children all the learnin' they can stand. All of us intend to show what we can do, since the Government gave us a

"Every day I give thanks," he added, "that I can crawl out of bed and see the sun rise over my own land."

NET WORTH UP \$602

When Langley received the loan last year, the family's net worth was fixed at \$1,395.80. It now is \$1,998.53, an increase of \$602.73. A year ago the family was in debt \$1,082, and the chattel property was mortgaged. The annual rent was due, the house needed repairs, and Mrs. Langley struggled with an old wood stove. Langley now has paid the \$165 due on his loan, and expects to repay the \$3,800 and interest long before the 40 years allowed him. F. S. A. agents last year secured reduction of Langley's debts to \$400, and this was paid from the Government loan. The Langleys, in addition to having paid all obligations due, have a new home lighted by electricity, food for the family and livestock, and no fear of being evicted, as they constantly had under the hit-and-miss tenant system. miss tenant system.

TYPICAL TENANT FARMER BEGINS NEW LIFE WITH FIRST UNITED STATES LOAN—"IT'S GREAT TO SEE SUN RISING ON YOUR OWN LAND," SAYS WILEY L. LANGLEY, WHOSE INCOME MAY BE TREBLED

(By Thomas A. Dozier)

JASPER, ALA., March 14.—Seeing the sun come up over his own property is a new thrill for Wiley J. Langley, tenant farmer.

LXXXIV-App-134

Langley, recipient of the Nation's first farm-tenant loan-purchase check—for \$3,800—was, before February 12, a typical southern "squatter."

He was faced with the typical tenant farmer's problems. He owed \$300 to a Jasper bank and \$700 to a supply house where he had purchased seed, fertilizer, and other agricultural necessi-

He had little chance of paying off this indebtedness. His chattels, including the family's four mules, were mortgaged to the

bank. His rent was due.

His total income for the past year amounted to a little more than \$600, which left him more than \$500 "in the red."

PAID \$150 RENT

Additionally, Langley faced the ever-present possibility of being ordered off the 180-acre farm tract for which he paid \$150 per year at any time the owner found a more profitable tenant or decided to sell.

He was forced to raise cotton and cotton alone, for banks and supply houses usually will not lend money and supplies on any crop in the South except cotton.

crop in the South except cotton.

Thus he had neither money nor inspiration for a diversified farm program. He was gradually wearing out the land with repeated

Mrs. Langley, a pleasant-mannered mother of 12, struggled to feed hungry mouths with dilapidated equipment.

Today Langley's outlook is different.

His debts have been adjusted to \$400 and paid off under a Farm Security Administration loan. The \$3,800 check enabled him to purchase the 180-acres farm, as well as seed and fertilizers for next

GETS BROOD SOWS

augment his income.

Contrasted with the \$600 which he eked from the cotton-weary soil of his farm last year, Langley may expect under a Government-mapped crop-diversification program a gross income of \$1,582 during 1938.

No longer does he have to exclude all other crops to make way for "King Cotton." The Government is showing him how to plant soil-building crops and also how to market valuable timber which grows on his land.

Of his estimated \$1,582 income, Langley will pay \$164 as the first of 40 yearly payments to the Government on the purchase loan and \$93 for 5 years on the debt-adjustment loan.

TO BUILD NEW HOME

With his new-found prosperity Langley plans no extravagance. He will build a new home for his wife and their six children who are at home. The house will have a new cook stove and will be supplied with electric energy from a nearby power line.

Foreign Trade Week

EXTENSION OF REMARKS

HON. ROBERT L. DOUGHTON

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Monday, May 22, 1939

RADIO ADDRESS BY HON. CORDELL HULL, MAY 21, 1939

Mr. DOUGHTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following message of the President of the United States, read by Secretary Hull, and radio address of Hon. Cordell Hull, Secretary of State, in connection with the celebration of Foreign Trade Week, May 21. 1939:

It gives me great pleasure to read the following message which I have received from the President with reference to the celebration of Foreign Trade Week:

of Foreign Trade Week:

"Tomorrow, May 22, we are celebrating the opening of Foreign Trade Week, and also National Maritime Day. For us this is an affirmation of purpose and of faith. These celebrations have to do with works of peace: the beneficial exchange of goods; traffic of merchant ships on many seas; the friendly development of commerce. Pacific intercourse is still the ideal of most of the world. It is the dominant purpose of the foreign policy of the United States. Our hope and aims are that peaceful interchange shall again become the normal state of affairs.

"In carrying out this intention we have a right to expect breadth of vision from all groups in our own country. Increased foreign trade yields large dividends in terms of economic well-being and friendly relations with other nations; but to secure it there must be fair exchange. We must take as well as give; import as well as

fair exchange. We must take as well as give; import as well as export. We shall profit by doing so.

"For nearly 5 years now we have been engaged in a vigorous effort to expand our foreign trade by means of reciprocal-trade agreements, based upon the principle of equality of treatment, for the reduction of excessive trade barriers. This effort has been gratifyingly successful, despite many obstacles. Almost 60 percent of our total foreign trade is now carried on with countries with which we have concluded agreements. By continued vigorous effort we can make of this essential part of our general program for economic recovery in the United States an even more effective means of promoting the general welfare. moting the general welfare.

"To you who are engaged in foreign commerce, I extend cordial

greetings.

"FRANKLIN D. ROOSEVELT."

I am happy to have the opportunity again to participate in the Nation-wide observance of Foreign Trade Week. During the past year there has been, I am convinced, a growth in appreciation among our people of the importance of foreign commerce to the

economic life of our country and increased public support for the trade-agreements program upon which we embarked in 1934. Our efforts over the 5-year period 1934-39 have resulted in the negotiation of 21 trade agreements. These agreements enlarge and safeguard trade with countries with which we conduct approximately 60 percent of our total foreign commerce. Without of course impulsing that the agreements are the sole cause it is

and safeguard trade with countries with which we conduct approximately 60 percent of our total foreign commerce. Without, of course, implying that the agreements are the sole cause, it is gratifying to report that in the 2-year period 1937-38 our average exports to the countries with which we have trade agreements were 61 percent greater in value than in the pre-agreement period, 1934-35, while exports to all other countries increased by an average of about 38 percent.

During the last 12 months we have signed important new agreements with the United Kingdom, Canada, and Turkey. The United Kingdom agreement, which became effective on January 1, 1939, covers not only trade with that country but also with Newfoundland and the British colonies. Agriculture, labor, and industry should secure much benefit from these new agreements. The United Kingdom agreement is particularly significant from the standpoint of agriculture, as that country has been our most important market for farm products. The improved treatment secured for our trade in the form of duty reductions, duty removals, bindings of duties or preferential margins against increase, and more favorable quotas will help American producers of wheat, corn and pork, fruits, rice, tobacco, cotton, and numerous other farm commodities—products making up approximately 92 percent of our total agricultural exports to the United Kingdom and accounting on the average in recent years for about \$250,000,000 worth of our export trade with that country. New trade opportunities are likewise secured in this agreement for a wide range of industrial exports to the United Kingdom, the value of which in 1936 was \$80,000 000.

The span of agreements which now forms the basis of our trade in 1936 was \$80,000 000.

The span of agreements which now forms the basis of our trade

with so much of the world signifies that a large number of com-mercial nations, including many of the most important ones, are actively cooperating with the United States in a policy of trade

liberalization.

Trade under these agreements operates in the sphere of private initiative, free from regimentation. It is conducted on a basis of equality—the basis which contributes most to a healthy expansion of commerce. Our accumulated experience confirms and strength or commerce. Our accumulated experience commiss and strenger-ens our faith in this type of commercial agreement, promoting as it does mutually beneficial interchange. Such agreements are in marked contrast to discriminatory trade arrangements depending upon the will of centralized authority, involving the strictest control of exchange operations, and of practically every phase of normal business relationships.

Looking into the future we can, under anything like normal conditions, anticipate a satisfactory upward response in our foreign commerce, which, as compared with 2.9 billions of dollars in 1932, commerce, which, as compared with 2.9 billions of dollars in 1932, reached 6.4 billions in 1937, but receded to 5.1 billions in 1938. Demand on the part of the outside world for American farm and factory products is great and to a large extent unsatisfied because of artificial barriers which are gradually being scaled down by means of reciprocal-trade agreements. In this connection, however, I wish to emphasize again that over a substantial period of time the goods and services which others buy from us must be paid for by the goods and services we buy from them. Trade cannot be

A sustained and thriving commerce with the rest of the world is necessary for the preservation of sound domestic prosperity and our cherished liberties. There are those who deny this. Some would have us abandon the difficult task of sustaining this commerce. Others would have us shirk the responsibilities that arise from the fact that we live in the world and not out of it. There are also those who, in complete disregard of the cost to their fellow citizens, and in the long run even to themselves, would have us entirely

and in the long run even to themselves, would have us entirely shut out imports of particular products in order to obtain a complete monopoly of the domestic market.

This country could, of course, live entirely by itself if the need were dire enough. We could feed, clothe, and house ourselves, and carry on many of our ordinary occupations, but the disadvantages would be tremendous and the dislocations extreme. Let us consider briefly some of the inevitable results of such a policy.

First, we should have to accept a definite decline in the production of goods and services available for the well-being and comfort of our people. Instead of attaining that improved standard of life of which we are all hopeful, we would would have to reconcile ourselves to a general lowering of the standard.

Further, we should have to adapt to new economic activities those whose work or income arises from our interchange with other

countries. We have already upon our hands a serious problem of many farmers driven by changed conditions from the land or eking out a bare existence from the soil. We should have to cope with the situation created by additional jobless farmers the produce of whose farms is now exported. Numerous workers in industrial plants throughout our industrial cities, large and small, would find their jobs gone. Our ports and shipping would languish. The general economic distress would involve heavier taxes, greater social unrest, new burdens on the Government. Those who are most vociferous in their advocacy of narrow nationalism would probably be among the last to accept with good grace the severe measures of governmental regimentation to which such a policy would lead. policy would lead.

The full effects of our economic isolation would have swift and disastrous results not only for curselves but also for the rest of the world. The struggle everywhere for sustaining life would become more intense. And inevitably the loss of hope for economic improvement by the peoples of other countries would create the desperation which induces men to follow reckless leadership down the

This is our economic stake in the world and the world's economic stake in us. This is the economic reason why the policies of other stake in us. It is these countries concern us and our policies concern them. It is these facts that make hollow the repeated declamations that what happens abroad is of no concern to us and need not be taken into

pens abroad is of no concern to us and need not be taken into account in deciding our own course.

The commercial as well as political policies of other countries are of importance to all of us, affecting, as they do, the whole of our economic life. They determine whether trade can be carried on with reasonable assurance of continuity and freedom from arbitrary hindrances. They affect the decisions governing the active investment and use of our resources. They determine whether there shall be a paralysis of effort for fear all will be lost in case of war. They determine whether our commerce shall be primarily in materials and weapons for human destruction or in the things which people need for peaceful consumption.

and weapons for human destruction or in the things which people need for peaceful consumption.

These considerations dictate to us an active policy both in behalf of a growing commerce and in behalf of tranquil and orderly political principles in international relationship. We need for our own prosperity and security a world in which nations can achieve a full utilization of their economic capabilities in producing for exchange with each other. We need a world in which mobilized mankind ceases to be keyed by exhortation to the pitch of reckless action, in which arbitrary force is abandoned as the basis of international conduct, in which the practice of genuine friendship among nations is again restored.

For months now—for years in fact—a desperate disquiet has

For months now—for years in fact—a desperate disquiet has entered into the affairs of nations. Each and every country, according to its own place and danger, has become involved in the creation of competitive armaments. This march toward mutual destruction—for that is what it is—has already gone far. Whereas in more normal times the pride of rulers lay in the freedom and serenity of their people, their moral and spiritual progress, in the learning of their scholars, and in the gifts of their artists today it is concentrated upon the number of their their artists, today it is concentrated upon the number of their

their artists, today it is concentrated the stanks or bombing planes.

This must end. The universal desire of all peoples, when they surmount their fears and apprehensions, is, I am convinced, to live at peace with their fellow men. By peace I mean the peace of understanding and not mere yielding to superior force. Therefore, there must be a return to the determination not to resort fore, there must be a return to the determination not to resort to war as a means of settling grievances. There must be an end to the attempt to substitute for fair discussion the threat of stronger to the attempt to substitute for fair discussion the threat of stronger arms. There must be an agreement that will limit and ultimately lessen the creation of armaments. And with these developments there must come trade and economic arrangements between nations that will redound to the great material benefit of all. These arrangements, once the atmosphere of mutual recrimination and distrust can be dispelled, would go far in increasing the world's real wealth and in bringing about its full enjoyment by the people of all nettons. of all nations.

This is the broad course for which we are working. It is the course which, in plain duty both to ourselves and to our position in the world, we are bound to follow.

Japanese Terrorism in China

EXTENSION OF REMARKS

HON. ED. V. IZAC

OF CALIFORNIA IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1939

LETTER FROM REV. C. M. BARNES, OF SAN DIEGO, CALIF., RELATIVE TO THE TREATMENT OF CHINESE CIVILIAN MEN, WOMEN, AND CHILDREN BY THE JAPANESE INVADERS

Mr. IZAC. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include excerpts of a letter I received recently from my good friend, the Reverend C. M. Barnes, of my home city of San Diego.

The excerpts are as follows:

In the light of known facts we must face the responsibility of assisting Japan in her hellish war upon China, by furnishing her with war material. Large quantities of scrap iron has been loadedhere in San Diego for Japan from which she has fashioned shells with which to kill civilian Chinese, and, who knows but that the shells which were used in the bombing of the Panay were not made from the scrap iron loaded here? And it is more than probable that the gasoline used to power the airplanes which dropped these shells, not only upon the Panay, but also upon the Standard Oil boats, was furnished by the Standard Oil Co. and was shipped from Pacific ports. from Pacific ports.

There is lying before me a recent letter from a well-known missionary (because of the fact that he resides in the Japanese-controlled portion of China we are withholding his name), who presents the subject in a concrete form so much more forcefully than I could do it that I am inserting the following extract:

"On the lake near our home 18 boatloads of fleeing Chinese

On the lake near our nome 18 locations of fleeing Chinese refugees, escaping the war zone, were being slowly pulled across the lake by one puffing tugboat. Here were thousands of civilians, mostly women and children. All of these boats were in a string, and not even a rifle among the lot—what a sight to rejoice the heart of the fighters who maintain the might of Japan in the air, as they surveyed the scene through their binoculars. Swooping down suddenly from the skies with powerful American planes. ing down suddenly from the skies with powerful American planes, five machines swept the boats with machine guns, and then in the very midst of the little fleet dropped two powerful bombs. In the very midst of the little fleet dropped two powerful bombs. In a second the peaceful scene was transformed into a shricking pandemonium as wounded men and women writhed on the bloodstained decks or fell overboard in their terror. Our quiet lake became a crimson bloodstained sea. Then back came the airplanes and again machine-gunned the terrified mass of helpless people. They dropped two more bombs and sailed away through the blue sky to report to the army headquarters another successful routine bombing, and incidentally to record the high efficiency. the blue sky to report to the army headquarters another successful routine bombing, and incidentally to record the high efficiency of their American-made equipment.

"This incident and many, many thousand more like it were never reported in American newspapers. This vast slaughter of civilians still continues, as I write this letter, after a year and a half of civilenian borrow is not seen never the proposed.

half of sickening horror, is not even news. It is merely reported in Japan as another victory and assures American business of further sales of gasoline and other war supplies to Japan."

The Menace of Communism

EXTENSION OF REMARKS

HON. GEORGE P. DARROW

OF PENNSYLVANIA IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1939

ADDRESS BY HON. JOHN O'CONNOR, MAY 18, 1939

Mr. DARROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by former Representative John O'Connor, former chairman of the Rules Committee, before the Philadelphia Patriotic Luncheon Club on May 18, 1939:

Mr. Toastmaster, ladies and gentlemen, any group of patriotic citizens in these days is interesting, provided their interest takes them beyond the mere waving of flags and the singing of the national anthem.

Samuel Johnson said that "Patriotism is the last refuge of a scoundrel." I cannot attest to that, but I can bear witness after Samuel Johnson said that "Patriotism is the last refuge of a scoundrel." I cannot attest to that, but I can bear witness, after a generation of experience in public office, that patriotism is the chief implement in the well-filled bag of tricks of the demagog. He often uses it as a screen to hide his own shortcomings and often as a bait to lure the unthinking voter. It probably always will be that way, but taking stock, every now and then, may help to dispel this persistent deception.

In my opinion, in any discussion of our present patriotic duty or

In my opinion, in any discussion of our present patriotic duty or concern there are two branches, our domestic condition and the foreign situation as it might involve us in another war. Both are closely related—in fact, present conditions as to both seem to have the same background and spring from the same cesspools.

As to our domestic situation, our people have apparently not yet awakened to what has been going on in this country in recent years in respect to the infiltration of ideologies of foreign incubation. Here we call it the "New Deal" and a "social program." In Russia it is "fascism." In the last analysis, they are all sprung from the socialism preached by Karl Marx.

Every one of these new "schemes" of government, copied to a great

Every one of these new "schemes" of government, copied to a great extent in South America, involve the destruction of the existing

institutions of government, a dispensation with any legislative body, the supremacy and paternity of the state, and the leveling of the individual personally, socially, politically, economically, and religiously. He or she becomes an instrument of the state, with no right to individual thought or initiative, solely dependent on the state, feeding at the public trough, and reglmented and herded in the totalitarian scheme. Not pleasant words these, but a look behind the smoke screen of demagogic pretense will justify their expression.

I trust no one will think anything I say here today is "sour grapes" because of any "purge." The views I now express have been publicly uttered by me on several occasions in at least the last 2 years, bringing me the compliment of being placed "No. 1" on the "blacklist" adopted at the national convention of the Communist Party last year at Madison Square Garden. I am tempted to have that compliment inscribed on my tombstone as an epitaph. It naturally followed my radio speeches over Nation-wide hook-ups and my remarks on the floor of the House of Representatives attempting to call to the attention of the country the "menace of communism." I tried to call attention to the fact that countless Communists held high pertitions in our Faderal administration and were undermining. I tried to call attention to the fact that countless Communists held high positions in our Federal administration and were undermining our form of government under guidance from Moscow. For instance, the National Labor Relations Board is still swarming with Communists. The present member of the Cabinet, the Secretary of Commerce, Mr. Hopkins, who directed the W. P. A. for years, was a registered Socialist in New York City. Under him the W. P. A. was and still is controlled by the Workers' Alliance, which is itself under the domination of the Communists. Likewise the Communist-controlled C. I. O., under the leadership of John L. Lewis, is one of the most powerful influences in the Government, and may continue to be, unless something is done about it and soon. Mr. Browder adbe, unless something is done about it and soon. Mr. Browder advises his Communists to join with C. I. O. and the American Labor Party behind the New Deal—"Birds of a Feather." Just because John L. Lewis contributed over a half a million dollars in the last campaign does not alone account for his sitting on the right side of

the throne. His power is due to the fact that his views as to what should be done to "make over" the United States coincide with the theories of many officials presently in high office.

It all seems so easy to them to sit at a fireside and, through the curling smoke, evolve, overnight, a plan and program to entirely solve the economic, social, and political problems which we have accumulated in this country over a period of 150 years of democracy. To all of them, "democracy" is a failure, although we well know that we progressed mighty well under it for a century and a half before their advent on the scene—much to the surprise and envy of the rest of the world.

and envy of the rest of the world.

Many of the "noble experiments" of the past few years were copied from the "Five Year Plan" of Russia—and more may come within the inevitable next year and a half.

It was at first surprising to me that the Communists were supporting many of the movements devised at the fireside. For a time it was puzzling that they, the Communists, were the chief supporters of the three outstanding moves toward "fascism," because, of course, they do not believe in fascism or a dictatorship. I refer to the leadership of the Communists behind the "Supreme Courtpacking bill," the "Reorganization bill of 1938," and the "Purge" of that year.

The first, the Court-packing bill, would make the support of the court-packing bill, would make the support of the first, the Court-packing bill, would make the support of the first.

The first, the Court-packing bill, would make our courts subservient to the Executive. The second, the reorganization bill, would have placed dictatorial power in his hands and make the legislative branch of our Government all the more impotent. The third, the attempted "purge," would, if successful, have accomplished the first move of a dictator to abolish or render powerless the representative branch, or at least reduce it from a "rubber-stamp" status to that of practical subordination.

The Communists took to the front in support of all these moves, ably supported by some of their allied newspapers, one in this town, Philadelphia, with a half-brother in New York. The Communists were not really for these bills, not in their anarchistic and atheistic hearts. They were dead against fascism or a dictatorship, but they knew that if democracy were destroyed in this country, fascism would not long survive—not here. It would collapse, but, on the down swing, and in the chaos, which would inevitably follow, communism would come into its own. Democracy could not be revived. The Trojan Horse would stand on the White House grounds.

This is still the plan of the Communists. They do not even mind if, at the present moment, we have in fact a dictatorship. They welcome it as a minor operation until they wield the knife They welcome it as a minor operation until they wield the knife in the major operation. They applaud, with a snicker, when they hear repeated protestations that there is no dictatorship or any desire on anyone's part to play the role of a dictator, because they can see the tongue in the cheek, and it all falls in line with their plan of snooping down on the near corpse. Unfortunately, the people of America and business in our country have not awakened to this deep-laid plot from Moscow, aided and abetted by many in high places in the Government.

To the Compunist any means will justify the end even though

To the Communist any means will justify the end, even though it may mean a temporary set-back in their march to the goal of a communistic state. Only the other night Mr. Earl Browder, speaking to 18,000 Communists, just young folks, in Madison Square Garden, adjured them, for one hour and a half, to support President Roosevelt for a third time. They have adopted a plan of patient waiting for their "Tag"—a few years means nothing to them, if they can envision the collapse of our form of government and their coming into their own.

Our people have always been a patient people, slow to be aroused, postponing drastic action, until often great damage had

been done. But I do not despair that they still have in them the real patriotic enthusiasm of their forefathers to gather at another Lexington and defend their established institutions.

In the meantime, however, every ballot box is another bridge at Lexington. It is there that this tidal menace can be stopped be-Lexington. It is there that this tidal menace can be stopped before, maybe, it be too late. Irrespective of former party labels, and despite the fetish of political grouping, the decent people in our country can say "no farther shall you go" to all those aspiring to public office who entertain, to the slightest degree, theories and ideologies contrary to those which have been the keystones of America and have made her great—a land of the free.

There is no freedom under fascism or communism, nor under totalitarianism or even governmental "parentalism." Which is the worse I cannot say at the moment, because I have never been able to make up my mind, if relegated to a choice, whether I would prefer to live under fascism or communism. Offhand I think I might choose the former and take a chance at "liquidation." But America should stand for neither. Better that we return to monarchy, from which we freed ourselves.

A tyrannical king is preferable to a "benevolent" dictator.

Again I say, "Awake America to its greatest domestic menace—communism."

Now let us look at the foreign situation and the threat of our

Now let us look at the foreign situation and the threat of our

involvement in foreign war again.

Everybody returning from Europe issues a statement to the press, that they see no possibility of war in Europe. How is it we hear so much talk of war in our own land? Who is talking about this war? With, and between or among, whom is it to be fought, and when and where?

Someone has said that the only place war is being talked about is 1600 Pennsylvania Avenue, Washington, D. C. If that be correct, that source certainly does not express the views of the American people nor the attitude of the American Congress which still has, under the Constitution, at least, the last say as to whether or not

we go to war.

I have the honor of being a vice president of the National Committee to Keep Us Out of Foreign Wars. That committee is composed of about 50 present and former Members of Congress and is headed by the Honorable Hamilton Fish, of New York, a Representative in Congress, who is second to none in his knowledge of foreign affairs and our relations to them.

Naturally the Communists and others would like to embroil us in a war on the side of their mother, Russia, to vent their spleen against certain countries of Europe which repelled their invasions, even at the expense of temporarily establishing a Fascist form of

government.

Of course no red-blooded American sympathizes with the persecution and pogroms that have been going on in certain countries in Europe. We all abhor them and hope for the worst for those responsible for them.

Justice, though often slow, will ultimately triumph, and cruel

wrongs will be righted.

To involve us again in a foreign war, whether or not it be deliberately planned to distract attention from domestic problems, certainly is not on the agenda of the American people, except for the Communists and their collaborators in high places.

Of course no Communist is ever going to war in defense of our United States. I was going to say that no Communist was ever going to war. They are inherently all pacifists, unless it be the throwing of a bomb at the Capitol in Washington. But I am not sure that their enthusiasm for their cause and the destruction of our existing form of democratic government would deter tion of our existing form of democratic government would deter them from enlisting in a war on the side taken by their Russia under Stalin. Watch that.

Their mouthpiece, the Daily Worker, a newspaper in New York, avowedly the organ of the Government at Moscow, is even taking sides in the fabricated present issue between certain countries in Europe and the two alleged democracies. Imagine the Communists fighting for dear old England and France, except it be consonant with their deep-laid plan to hide within the Trojan Horse, until

their day shall come.

To the Communist our established American form of govern-To the Communist our established American form of govern-ment is just as repulsive as the different forms of government in Great Britain and France. They hate them all, but they hate democracy most—even far and above their hate for fascism. That is why they are willing to tolerate fascism for a while if they can

destroy democracy.

A dictator can plunge a country into war, despite the exclusive jurisdiction of the legislative branch of the government, if he at first makes that branch impotent or can appeal to the people to override their own Congress. That, dear people, is a real present danger. The first build-up is the reiterated plea of standing united behind certain "democracies" which might be threatened. Add to that the urge to act as the mediator of all international disputes and you have a real danger, not to be minimized in the accustomed American way of sitting back until after "the horse is stolen."

Now is the time to stand by, watch every move, protest every action considered un-American, use the right of petition, not yet taken away from us, but slightly damaged, along with free speech and a free press—insist on preserving our institutions and our democratic form of government—maintain our United States as a Republic.

The panacea you ask. Humbly, I give it to you.

To solve our domestic problems and our relations with foreign affairs, as the same might involve us in foreign wars, I say to you, first stamp out in our own land America's greatest menace communism.

Our Foreign Policy

EXTENSION OF REMARKS

HON. GEORGE S. WILLIAMS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES Monday, May 22, 1939

RESOLUTION OF THE GRAND LODGE, WILMINGTON, DEL., ORDER OF THE SONS OF ITALY AND AMERICA

Mr. WILLIAMS of Delaware. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Grand Lodge, Wilmington, Del., Order of the Sons of Italy and America:

The most momentous question confronting the people of the

United States is the policy which should be adopted by our country in the event of a European war.

Great pressure is being brought to bear upon the Congress and creat pressure is being brought to bear upon the Congress and the people of the United States to commit the country in the event of such a war to a policy of lending material support to England and France to the exclusion of Germany and Italy. In fact, none of our possessions or national interests are involved in this European struggle.

The quarrel among these foreign nations is admittedly not one of ideologies. It is exclusively a contest to gain or retain economic educators.

economic advantages.

Our country has always been on friendly terms with Italy. Italy asserts no claim against the United States.

Italy's primary and most pressing problem has been and still is to provide a decent standard of living and a reasonable degree of economic security for its 43,000,000 people crowded on land scarcely larger than our State of Nevada, wanting in essential raw materials and yielding an insufficient food supply. The United States has never denied or interfered with the right of any nation to attempt to improve its condition as long as our possessions or to attempt to improve its condition as long as our possessions or national interests are not threatened. The traditional policy of the United States toward other nations,

The traditional policy of the United States toward other nations, whatever their form of government, was clearly laid down by George Washington in his imperishable Farewell Address:

"Europe has a set of primary interests which to us have none, or a very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns. Hence, therefore, it must be unwise in us to implicate ourselves by artificial ties in the ordinary vicissitudes of her politics, or the ordinary combinations of her friendships or enmities.

"Observe good faith and justice toward all nations; cultivate peace and harmony with all.

"In the execution of such a plan nothing is more essential than that permanent, inveterate antipathies against particular nations and passionate attachments for others should be excluded, and that in place of them just and amicable feelings toward all should be cultivated.

"Sympathy for the favorite nation, facilitating the illusion of an imaginary common interest in cases where no real common interest exists, and infusing into one the enmittees of the other, betrays the former into a participation in the quarrels and wars of the latter without adequate inducement or justification.

"Even our commercial policy should hold an equal and impartial

hand; neither seeking nor granting exclusive favors or preferences."

The President of the United States, in violation of this traditional policy, has made declarations tending to make England and France "favorite nations," and tending to lead the United States to participate in their quarrels and possible wars without adequate interference. justification.

While some of the methods employed by some European governments in furtherance of their ends, such as acts of persecution of racial and political minorities, are repugnant to the American conscience, nevertheless they do not justify the United States in taking a course leading to participation in the quarrels and wars of Euro-

A war involving the four major European powers would be de-A war involving the four major European powers would be destructive of western civilization, leave Europe in a state of chaos, bring ruin to all people living in that continent, and thus open the path to the advance of communism. Participation by the United States in such a war would seriously imperil our own security and the permanence of our democratic institutions.

A policy of interference by the United States on the side of either of the opposing groups of European nations is not conductve to world peace or harmony at home. A policy whereby the United

States could cooperate impartially with the major European nations to bring about a just settlement of all their major differences would be a policy more likely to lead to a lasting peace.

Be it resolved by the Grand Council of the Grand Lodge of Delaware, Order of Sons of Italy in America, in meeting assembled in Wilmington, Del., on April 29, 1939:

(1) That the Congress be petitioned to adopt a joint resolution manifesting a spirit of friendship toward all nations and expressing the desire of the United States to cooperate impartially toward a lasting world peace.

(2) That the Congress be petitioned to request the President of

lasting world peace.

(2) That the Congress be petitioned to request the President of the United States to invite England, France, Germany, and Italy to participate in a conference having for its object the settlement of all major disputes existing among them, with the United States acting as impartial mediator.

(3) That the Congress be petitioned to reenact the present neutrality law without change.

(4) That the Congress be petitioned to investigate the nature, sources, and extent of foreign influence and foreign propaganda in the United States calculated to arouse our hatred and suspicion of other nations and to involve us in European quarrels and wars.

(5) That the Congress be petitioned to provide the United States

Resolved, That copies hereof be sent to our Senators and Repre-

sentatives in Congress.

Texas Investment Bankers' Association Backs

EXTENSION OF REMARKS

HON. W. R. POAGE

OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES Monday, May 22, 1939

ARTICLES APPEARING IN MONTHLY BULLETIN PUBLISHED BY THE INVESTMENT BANKERS' ASSOCIATION OF AMERICA, TEXAS GROUP

Mr. POAGE. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following articles from the Monthly Bulletin of the Investment Bankers' Association of America, Texas group, pertaining to the public works program:

THE P. W. A .- A RECORD OF ACCOMPLISHMENT AND A SOUND PLAN FOR ITS CONTINUANCE

The present enabling act under which the P. W. A. operates became effective on June 21, 1938, and provided for an appropriation of \$965,000,000, of which \$750,000,000 were non-Federal projects. On this date the Public Works Administration had a reservoir of some 2,000 approved projects in its files and a trained technical and administrative staff of employees who had been with the P. W. A. for nearly 5 years and had supervised the construction of more than 30,000 projects. By January 1, 1939, the P. W. A. dead-line date for beginning construction, there were 6,163 non-Federal projects and 1,884 Federal projects under construction, having a total estimated cost of more than \$1,500,000,000. From the effective date of the act to September 30, 1938, the P. W. A. received nearly 12,800 new applications for Federal assistance in the way of loans and grants, reflecting the intense interest of communities throughout the country in this program. No applications for new projects were received after September 30, 1938, and construction on present projects was required to be substantially completed by June 30, 1940.

Included in the large number of projects being erected under the 1938 P. W. A. program are the non-Federal projects divided as to type as follows:

to type as follows:

Types of non-Federal projects	Number of proj- ects	Total allot- ments	Total esti- mated cost
Streets and highways Sewers, waterworks, power, and other	598	\$108, 409, 689	\$238, 705, 516
facilities	1,436	142, 167, 044	289, 762, 218
Educational buildings	2,808	220, 907, 508	469, 195, 114
Other buildingsFlood control, water power, and reclama-	945	119, 102, 260	242, 833, 273
tion	29 21	11, 929, 305	14, 185, 683
Water-navigation aids	21	5, 946, 829	11, 937, 404
etc.)	197	67, 918, 288	145, 401, 138
Miscellaneous	212	16, 844, 362	26, 560, 438

At the January 1, 1939, deadline, however, there were still pending 5,807 applications, providing for a total construction cost of \$1,775,510,286. Of these, 289 were applications from Texas providing for a total construction cost of \$134,106,856.

In view of the substantial interest still retained by these several thousand municipalities the Honorable Joe Starnes, Representative from Alabama, introduced in the House of Representatives ability for the Respectatives.

sentative from Alabama, introduced in the House of Representatives a bill known as House Joint Resolution 4576, to provide for a new program of non-Federal public works, and to make available an appropriation of \$500,000,000 for loans and grants. The bill further provides for the continuance of the Public Works Administration as a permanent agency of the Government, retaining a small staff of trained and experienced experts and others which could quickly be expanded when the need arises for an intensive program of public works. Mr. Starnes' synopsis of the bill by sections is as follows:

Section 1: \$500,000,000 is appropriated by the Administrator, Public Works Administration, with the approval of the President:

(a) For loans and grants to States, Territories, possessions, political subdivisions, and other public agencies.

(b) For loans and grants to public agencies and nonprofit corporations for projects for the construction of hospitals, sewage treatment and disposal plants, and for elimination of stream pollution; and

pollution; and

pollution; and

(c) For grants to public agencies for the preparation of plans and specifications for projects.

Allotments may be made only for projects that can be commenced by April 30, 1940, and substantially completed by December 31, 1941.

Section 2: On and after July 1, 1939, the Federal Emergency Administration of Public Works is to be known as the Public Works

Administration

Administration.

Section 3: All limitations on the life of the Public Works Administration are repealed, and the Administration is authorized to continue to perform its present functions.

Section 4: The Administration is given the following specific powers, but only within the limits of available appropriations:

(a) To construct or finance Federal projects, although no part of the appropriation made by this bill is made available for this

(b) To make loans or grants to public agencies or nonprofit cor-porations for projects for the construction of hospitals, sewage treatment or disposal plants, or for the elimination of stream pollution.

(c) To make loans or grants to public agencies for the construc-

reachent or disposal plants, or for the elimination of stream pollution.

(c) To make loans or grants to public agencies for the construction of other projects of such public agencies, the grant in any case being limited to 45 percent of the cost of the project.

(d) To acquire property by exercise of the power of eminent domain, and to construct and lease to public agencies projects eligible for allotment under subsection (b) or subsection (c): Provided, That the nonrecoverable portion of the cost of such project may not exceed 45 percent of such cost.

(e) To make grants to public agencies for the preparation of plans and specifications for projects pursuant to standards prescribed by the Administrator; such grants being limited to 3 percent of the estimated cost of such projects, and to an aggregate of \$10,000,000 in any fiscal year.

(f) To receive and consider applications.

(g) To purchase refunding bonds as an incident to financing a non-Federal project.

(h) To exchange obligations purchased by the Administration for other obligations of public agencies.

(i) To sell obligations purchased by the Administration for other obligations purchased by the Administration, and to use the proceeds in making further loans.

(j) To provide funds for temporary operation of projects which it has financed when necessary for the protection of securities which it has acquired.

Section 5: Provision is made for a regular staff to be appointed (with certain exceptions) subject to the Classification Act of 1923, as amended, the maximum annual compensation of such staff to be \$2,000,000. The appointment of additional employees is authorized when necessary to carry out public-works programs for which appropriations are made by Congress. Provision is made for administrative expenses, in addition to the amount appropriated by the Public Works Administration Appropriation Act of 1938 and the Independent Offices Appropriation Act of 1940, in an amount sufficient to carry out the program of public works authorized by the bill. cient to carry out the program of public works authorized by the bill.

Section 6: Conflicting provisions of existing acts are repealed, and the commencement and completion dates established by the bill are made applicable to any further allotments from funds previ-

ously appropriated.

Section 7: The act is to be cited as the "Public Works Administration Act of 1939."

A companion bill identical in every respect with this one (H. R. 4576) has been introduced into the Senate by Senator James Mead,

of New York (S. 2063).

The most important change in the new bill is the repeal of existing limitations on the life of the Public Works Administration and the retention of a nucleus organization, strictly limited as to size and expense.

The Starnes bill and its companion, the Mead bill, are the only measures now before Congress which carry an appropriation for the continuance of a P. W. A. program without changing the conditions under which the agency would operate. This bill (H. R.

4576) is pending at the present time before the Appropriations Committee in the House and before the Special Committee on Unemployment and Relief in the Senate, and it has the approval of the Public Works Administration and others who favor a carefully developed program of public works.

P. W. A. AND INVESTMENT BANKING

Attention is called to the article on the front page of this bulle-tin describing the possible future application of the Public Works

Administration.

On January 18, 1939, there were still pending P. W. A. applications providing for a total estimated construction cost of over one and three-fourths billion dollars. Of this amount approximately three-fourths billion dollars was requested in the form of grants, and the balance of approximately one billion dollars was to be raised either by loans to the municipalities by the P. W. A., by sale of new bond issues by the municipalities, or by actual cash participation of municipalities.

As regards our own State, the pending P. W. A. applications for

Texas were as follows:

Number of projects_____ Loans \$33, 209, 175
Grants 59, 386, 383

Total P. W. A. funds_____ 92, 595, 558 134, 106, 856 Estimated cost_

The difference between the above estimated construction cost and P. W. A. grants represents a difference of approximately \$75,000,000 that would have to be furnished by the municipalities in the event of a new P. W. A. appropriation, and in case all the above applications were allotted.

This \$75,000,000 would have to be furnished by Texas municipalities either through sales of new bond issues or by use of cash on hand. Even though loans totaling \$33,209,175 of this potential \$75,000,000 have been requested of the P. W. A. by these Texas municipalities, the entire amount would still actually be available for purchase by investment dealers having an interest in these new bond issues

General obligation bonds will account for a considerable part of the total and under present market conditions should find a ready market, except in the case of extremely small towns. Revenue bonds, accounting for the balance, will find a less ready market immediately following their issuance except in the case of large cities; but this type of security will constitute the greater part of the \$33,209,175 loans requested of P. W. A. As it has been the custom for the Reconstruction Finance Corporation to eventually purchase and take over the loan supervision of bonds purchased by the P. W. A., any P. W. A. construction program in the future will probably cause the R. F. C. to offer for public sale a large amount of the securities they now hold.

Many of these loans have been outstanding for several years and have records of earnings available which should entitle them to consideration as seasoned investments.

While it is not the policy of this column to either support or General obligation bonds will account for a considerable part of

While it is not the policy of this column to either support or condemn New Deal activities as a whole, it seems apparent that investment bankers should commend the P. W. A. for its highly constructive and efficient work and recommend to their Congressional representatives the continuation of the P. W. A. under its present set-up as provided for in the Starnes bill, H. R. 4576.

Farm Power-Alcohol

EXTENSION OF REMARKS

HON, KARL STEFAN

OF NEBRASKA IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1939

ARTICLE FROM THE COOPERATIVE CONSUMER

Mr. STEFAN. Mr. Speaker, under leave to extend my remarks in the RECORD. I include the following article from the Cooperative Consumer, of North Kansas City, Mo., April 10, 1939:

[From the Cooperative Consumer, North Kansas City, Mo., April 10, 1939]

ALKY-GAS AND THE F. S. C. C.

This is a "believe it or not" story about two doctorsexpert in chemistry, the other a leader in the field of agricultural economics. If it isn't authentic, either gentleman has the right to set us right promptly.

The story begins with the charge of Dr. Leo M. Christensen that the Federal Government has refused to sell corn and wheat to domestic power-alcohol distillers at a price 1 or 2 cents above that

at which these grains are being dumped abroad. This charge by the former professor of chemistry at Iowa State College, and more recently the chief chemist of the Atchison, Kans., Agrol Co., appeared in a Des Moines, Iowa, newspaper March 29.

Why did the Federal Surplus Commodities Corporation turn down the proposal of Atchison Agrol Co. to buy some of its surplus grain? The story goes back again to Iowa State College, to the days when A. G. Black was a member of the faculty there—on the staff of the economics department. Black, now an important official in the Federal Department of Agriculture, could never see eye-to-eye with Christensen, then of the chemistry department of the college, on the subject of power alcohol. The matter was highly controversial then, as now, and the controversy between the two, it is said, frequently produced more heat than light.

Then Christensen cast his lot with the power-alcohol industry, while Black was called to Washington, D. C., to serve in the Federal Department of Agriculture. Black, according to the story, still cannot see the merits of alcohol gas. Moreover, he is in position now, it is said, to say "yes" or "no" in the sale of F. S. C. C. grain. And, so far as selling any of that grain to domestic power-alcohol distillers, his answer, according to our advices, has been a flat "no."

Personal reasons may not have entered in at all. F. S. C. C. may have turned down the Agrel peacle scient as a selling and the control of the story the agree of the second of the story the agree of the second of the supplementation of the second of the second of the supplementation of the same and the second of the secon

distillers, his answer, according to our advices, has been a flat "no." Personal reasons may not have entered in at all. F. S. C. C. may have turned down the Agrol people solely on sound economic facts alone. But there's a lot of interest among farmers and professional people here in the Middle West on the subject of utilizing surplus farm products in the manufacture of alcohol for industrial purposes. The Federal Department of Agriculture, therefore, should explain its stand on this matter publicly. If there must be subsidy in the sale of surplus grain, why not, indeed, subsidize power-alcohol interests here rather than those overseas? These matters are of interest to the whole country, not merely to the Department of Agriculture alone. They should be given a public airing.

Declaration of Dependence on God

EXTENSION OF REMARKS

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Monday, May 22, 1939

RESOLUTION OF THE SECOND CONTINENTAL CONGRESS

Mr. COCHRAN. Mr. Speaker, Rev. D. D. Lane, C. M., of St. Louis, Mo., is a student of the early history of our country. In his research work, which has extended over a period of many years, Father Lane has brought to light numerous overlooked chapters of history, but his outstanding discovery, in which he takes great pride, is a resolution adopted by the original 12 colonies. Father Lane refers to this reso-lution as a "declaration of dependence on God," a prelude to the Declaration of Independence.

I was interested in receiving a copy of the resolution, as I am sure others will be, and for that reason I include it as part of my remarks:

DECLARATION OF DEPENDENCE ON GOD

(A prelude to the Declaration of Independence made in the Second Continental Congress, June 12, 1775)

On June 7 the Congress appointed a committee of three, namely, Mr. William Hooper, of North Carolina; Mr. John Adams, of Massachusetts; and Mr. Robert T. Payne, of Massachusetts, to bring in a resolution for a day of fasting, humiliation, and prayer, which resolution follows:

"As the Great Governor of the world by His supreme and universal providence not only conducts the course of nature with unerring wisdom and rectitude but frequently influences the minds of men to serve the wise and gracious purposes of His providential government; and being at all times our indispensable duty departs to exhausticate the providence with departs of the control of

providential government; and being at all times our indispensable duty devoutly to acknowledge His superintending providence, especially in times of impending danger and public calamity, to reverence and adore His immutable justice, as well as to implore His merciful interposition for our deliverance; therefore:

This Congress, considering the present critical, alarming, and calamitous state of these Colonies, do earnestly recommend that Thursday, the 20th day of July next, be observed by the inhabitants of all the English colonies on this continent as a day of public humiliation, fasting, and prayer; that we may with united hearts and voices, unfeignedly confess and deplore our many sins and offer the colonies of the all-wise Omniprotent and merciful up our joint supplication to the all-wise Omnipotent and merciful Disposer of all events, humbly beseeching Him to forgive our iniquities, to remove our present calamities, to avert these desolating judgments with which we are threatened, and to bless our rightful sovereign, King George III, and inspire him with wisdom to discern and pursue the true interest of all his subjects; that a speedy end

may be put to the civil discord between Great Britain and the American Colonies, without further effusion of blood; and that the British Nation may be influenced to regard the things that belong to her peace before they are hid from her eyes; that these Colonies may be ever under the care and protection of a kind Providence, and be prospered in all their interest; that the Divine blessing may descend and rest upon all our civil rules and upon the representatives of the people in their several assemblies and conventions; that they may be directed to wise and effectual measures for preserving the Union, and securing the just rights and privileges of the Colonies; that virtue and true religion may revive and flourish throughout our land; and that America may soon behold a gracious of the Colonies; that virtue and true religion may revive and flourish throughout our land; and that America may soon behold a gracious interposition of Heaven for the redress of her many grievances, the restoration of her invaded rights, a reconciliation with the parent state on terms constitutional and honorable to both; and that her civil and religious privileges may be secured to the latest posterity. "And it is recommended to Christians of all denominations to assemble for public worship and to abstain from servile labor and recreation on said day.
"Ordered That a copy of the above he signed by the President."

"Ordered, That a copy of the above be signed by the President, and attested by the Secretary, and published in the newspapers and in hand bills."

(The above resolution is taken from vol. 2, p. 1844, American Archives, by Peter Force, being the minutes of the Continental Congress, held in Philadelphia, September 5, 1774, continued and assembled for a second session May 1775.)

WASHINGTON NOMINATED

The nomination of Washington 3 days after, June 15, 1775, to be commander in chief of the forces raised and to be raised seems like the answer of God to the prayer and confidence expressed in the above Declaration of Dependence, June 12, 1775.

Rev. D. D. LANE, C. M., St. Louis, Mo.

A Tribute to Motherhood

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1939

ARTICLE BY H. S. ROBERTS

Mr. GUYER of Kansas. Mr. Speaker, under leave to extend my remarks in the Record, I include the following tribute to motherhood, by H. S. Roberts, of Kansas City,

A TRIBUTE TO MOTHERHOOD

The word "mother" is universal in all languages because it is the language of the heart. It is understood alike by the Greek and the barbarian, the learned and the unlearned, the wise and the unwise, the prince and the pauper. The confusion of tongues at the Tower of Babel did not destroy that one word because it is eternal and forever.

is eternal and forever.

It is universal because it brings out the best that is in us, stimulates man to greater heights, and inspires him to finer things. It develops the finest sentiments in human nature and softens the heart of the monarch. Motherhood recognizes no distinction, acknowledges no class, and bows before no power save God.

Motherhood knows no barriers, it swims seas, scans prison walls, and traverses great distances. To her a son may never sink so low but he might rise and be again a man. To her he can never do wrong and should he achieve more than his share of success, "he is still my baby." She goes "through the valley of the shadow" for her own; she smiles through her tears when they are in trouble, and she will sacrifice beyond endurance and never complain. These and more is why the word "mother" is universal and in all languages. complain. These and and in all languages.

It is said that an angel was sent from Heaven to return with It is said that an angel was sent from Heaven to return with the three most beautiful things of earth; as he went along his mission he saw a beautiful rose; that thought he, he would take back, then he saw a baby's smile and that, too, must be taken along. He looked and looked when finally he saw the sacrifice a mother's love was making for her own and that, thought he, was the third. He started back to Heaven and when he returned he found the baby's smile was gone, the rose had withered away, nothing remained but the mother's love.

H. S. ROBERTS.

Reciprocal-Trade Agreement With Great Britain

EXTENSION OF REMARKS

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, May 22, 1939

ARTICLE FROM NATIONAL GRANGE MONTHLY

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Fred Brenckman, which was published in the National Grange Monthly for May 1939:

[From the National Grange Monthly of May 1939]

SHALL THE AMERICAN PEOPLE BE CLOTHED IN EUROPEAN RAGS?— WORKINGS OF NEW BRITISH TRADE PACT POINT THAT WAY—UNITED STATES FACES A GRAVE SITUATION

(By Fred Brenckman)

How the American wool grower is being deprived in an important degree of the home market, and how the American people may expect in the near future to be clothed in large measure in the old rags of Europe, is shown by the workings of the reciprocal-trade agreement we made with Great Britain.

In February 1938, when the British trade agreement was pending, the office with support the Committee on Reciprocal trades.

one of the witnesses who appeared before the Committee on Reci-procity Information was a gentleman from Philadelphia, representprocity Information was a gentleman from Philadelphia, representing rag and waste dealers who supply byproducts and other substitutes for use in the manufacture of woolen goods and materials. He informed the committee in very earnest tones that the demand of the woolen industry for waste materials and rags was increasing to such an extent that the industry was sorely in need of a cheaper source of foreign supply. He stated that the domestic supply was inadequate, and he, therefore, urged that the then existing duties on wastes and rags be reduced.

COMMITTEE WAS DEEPLY IMPRESSED

The Committee on Reciprocity Information was apparently deeply impressed with the gentleman's plea, because when this trade treaty was finally promulgated the duties on wool wastes and rags were reduced variously from 40 to 50 percent. The result of this reduction in tariff duties is undoubtedly a matter of great satisfaction to European scavengers and rag dealers, and to those American woolen manufacturers who use these raw materials as substitutes for virgin wool.

woolen manufacturers who use these raw materials as substitutes for virgin wool.

Figures issued by the United States Department of Commerce show that during January and February of 1939, the first 2 months during which the treaty has been in effect, imports of wool wastes and of rags have increased variously from 227 to 2,008 percent over the same months of the preceding year. The American consuming public now has an opportunity of wearing clothes containing large percentages of European rags which may, or may not, be superior to domestic rags, but which certainly further reduce the legitimate market of the American farmer and wool grower.

During January and February of 1938, under the then existing tariff rates, which were carefully computed to afford necessary protection to the American public against low-cost foreign wool wastes and rags, there were imported into this country 162,632 pounds of wool wastes, valued at \$72,668. During the same months of 1939, under the reduced tariff rates adopted on the theory that foreign producers should have an opportunity to sell their materials in the American market, there were imported into this country 854,540 pounds of wool wastes, valued at \$280,170. In other words, the increases in imports for the first 2 months of 1939 were 425 percent in quantity, and 285 percent in dollar value.

PHENOMENAL RAG IMPORTS

PHENOMENAL RAG IMPORTS

It is the importation of rags, however, which shows the most phenomenal increase. These rags represent, in the main, materials from worn clothing and other wool products discarded by the European public and collected by European ragmen, to be sold to American rag dealers, who make them into reclaimed wool or shoddy for manufacture into fabrics which the American public will wear as new clothes.

new clothes.

In January and February of 1938, under a tariff duty of 18 cents per pound, there were shipped into this country 132,554 pounds of rags, valued at \$54,957. During the same months of 1939, under the reduced tariff duty of 9 cents per pound, there were imported into this country 1,824,040 pounds of rags, valued at \$506,907. In other words, the quantity of rags for the first 2 months of 1939 was 1,276 percent greater in quantity and 880 percent greater in dollars than for the similar period in 1938.

But the tremendous increase in imports of wool wastes and rags does not tell the entire story of the effect of the British trade treaty so far as the wool grower, the wool manufacturer, and the American public are concerned.

public are concerned.

The treaty also made reductions of 40 percent and more in the duties on certain weights and types of woolen fabrics. It is interesting to note what the effect of this tariff reduction has been during the first 2 months that the treaty has been in effect. For

¹Union of Twelve Original Colonies, 1774.

Note.—Georgia not represented until July 20, 1775 (the day of prayer); her first Delegate arrived at Congress with credentials from said colony September 13, 1775.—D. D. L.

instance, in January and February of 1938 there were imported into this country some 40,000 square yards of worsteds under 4 ounces per yard, with a value of \$20,212. In January and February 1939 this quantity was increased to 108,959 square yards, valued at \$39,339. In other words, the imported yardage increased 168 percent and the dollar value increased 94 percent.

cent and the dollar value increased 94 percent.

In worsteds weighing over 4 ounces per yard there were imported into the United States during January and February of 1938, 352,467 yards, valued at \$329,706. In January and February of 1939 these imports increased to 774,584 yards, valued at \$544,862, an increase of 119 percent in yardage and 65 percent in value.

Woolen materials also showed a decided increase from approximately 1,000,000 yards, with a value of \$941,000, during January and February of 1938, to 1,799,493 yards, valued at \$1,372,222, during January and February of 1939. This is an increase of 119 percent in yardage and 77 percent in dollar value.

MARKET FOR WOOL CHETALED

MARKET FOR WOOL CURTAILED

Figures and percentages are notoriously dry and uninteresting reading, but these figures and percentages represent reduced opportunities and incomes for farmers and workers in every part of the United States. The wool wastes and rags imported from the United Kingdom are a further replacement for new fleece wool raised by the American farmer.

The millions of yards of woolens manufactured abroad and imported into this country under reduced tariffs, which are a direct blow at our standard of living, take away from the American wool growers the only market that they have, which is the American wool manufacturers.

They deprive the American woolen mills of their only market, the American market, and they deprive thousands of where of their livelihood. From the standpoint of the internationalist the increased flow of rags and manufactured wool products into this country may make for a better balanced world economy. But this balance must be obtained at the expense of the American citizen, who is the sale passen paying for it. who is the sole person paying for it.

These increased imports make one fact certain: It makes abso-

lutely necessary the enactment of the Schwartz-Martin wool labeling bill, now pending before Congress, which requires that woolen manufacturers label their products with an honest statement of

fiber content.

Its provisions are fully adequate to enforce this requirement on foreign manufacturers. The tremendous increase in the importation of rags signifies not only that our domestic supply of the raw materials from which reclaimed wool and shoddy are made is inadequate, but that the demand for foreign supplies of rags is increasing steadily. Every pound of rags and wastes used in so-called woolen products means the loss to the American farmer and wool grower of from 2 to 3 pounds of virgin wool.

If the American woolen manufacturer is going to Europe for his rags he should at least be obliged to tell the consuming public buying woolen products that the materials contain shoddy made from these rags and not new fleece wool.

The foreign manufacturer should, in return for the low and in-

The foreign manufacturer should, in return for the low and in-adequate tariff duties he pays, be obligated to guarantee to the American public that his products are made of honest raw materials and not of substitutes and adulterants.

GRANGE SUPPORTS THE LABELING BILL

The National Grange has been a pioneer in legislation of the character represented by the Schwartz-Martin bill. It believes that this bill should be enacted into law, just as it believed in, and fought for, the enactment of the Pure Food and Drugs Act

more than a generation ago.

It is difficult to see how any Member of Congress who believes in fair and honest dealing, and who is in favor of the sound principle that we should legislate in the interest of the greatest good for the greatest number can oppose the energiment of the Schwarze. for the greatest number, can oppose the enactment of the Schwartz-Martin bill, which simply requires that the woolen manufacturer shall tell the consuming public the truth regarding the quality and kind of fiber which he uses in products sold as wool.

In contemplating the tremendous volume of rags now pouring into this country under the reciprocal-trade agreement with Great Britain, one cannot help wondering whether the British people themselves have so many rags to dispose of, or whether the ragmen of that country are scouring the whole of Europe in their patriotic zeal to supply American manufacturers of so-called woolen goods with rags for the use of the people of the United

Praise the Bridge That Carries You Over

EXTENSION OF REMARKS

OF VIRGINIA IN THE HOUSE OF REPRESENTATIVES Monday, May 22, 1939

ADDRESS BY A. WILLIS ROBERTSON AT THE DEDICATION OF THE NEW HICHWAY BRIDGE OVER THE SHENANDOAH RIVER AT ELKTON, VA., ON MAY 20, 1939

Mr. DARDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech recently delivered by my colleague from Virginia, Hon. A. WILLIS ROBERTSON:

Mr. Chairman, ladies, and gentlemen, it was a pleasure to accept the gracious invitation of Elkton friends to join with them today in the dedication of this splendid new highway bridge over the Shen-

the dedication of this splendid new highway bridge over the Shenandoah River, a bridge to be a link in the great transcontinental
highway from the Chesapeake Bay on the south to the Great Lakes
on the north, appropriately designated as the Blue and Gray Trail.

The little wooden bridge that spanned the river at this point in
1862 figured prominently in Jackson's valley campaign when we
were experiencing in all of its fury and bitterness fulfillment of
Webster's prophecy of "a land torn by civil strife and drenched,
perhaps, in fraternal blood." After years of sectional bitterness,
growing out of that struggle, we had once more in 1917 a gloriously
united country; a country in which all could unite in saying:

"Here's to the boys of the windswent North!

"Here's to the boys of the windswept North! When they meet on the fields of France, May the spirit of Grant be with them all As the sons of the North advance.

"Here's to the boys of the sunny South!
When they meet on the fields of France. May the spirit of Lee be with them all As the sons of the South advance.

"Here's to the Blue and the Gray as one! When they meet on the fields of France, May the spirit of God be with them all As the sons of the flag advance.'

In the economic war we are now fighting there is as great a need for national unity as there was during the period of the World War, and we could not do better than to dedicate today this bridge to a closer social, political, and economic union between the North and the South.

the South.

I am particularly happy to join with you in dedicating a bridge at a point on the Shenandoah River which was first crossed by a white man in 1716—Governor Spotswood and his Knights of the Golden Horseshoe. The account of that memorable trip has ever been for me a fascinating page in Virginia's colonial history, and more especially because in the Governor's exploring party, according to Caruther's account, was one of my ancestors, Dudley Diggs, as well as William Byrd, ancestor of our distinguished junior Senator. This intrepid band set out in August 1716 from Germana, on the banks of the Rapidan, the home of Governor Spotswood, which during my boyhood was owned by my grandather. After a journey the banks of the Rapidan, the home of Governor Spotswood, which during my boyhood was owned by my grandather. After a journey of 3 weeks the Governor and his party reached the top of the Blue Ridge Mountains at a point now called Swift Run Gap, from whence they viewed for the first time the panorama of this glorious valley. So enthused were they over the discovery of such a rich and fertile area Governor Spotswood, as reported by one historian, proposed a series of toasts in honor of the King and members of the result femily. the royal family.

From the supply of champagne, burgundy, two casks of Virginia wine, read and white, Irish whisky, brandy, stout, cherry punch, and cider, with which this party had provided itself against the hazards of snake bite and other untoward incidents, a toast to the King's health was drunk in champagne and the soldiers fired a

King's health was drunk in champagne and the soldiers fired a volley; the health of the princesses in burgundy, with another volley; that of the rest of the royal family in claret, with other volleys. The record is silent as to who was toasted in cherry punch or cider, but enough is said to convince even the most casual reader that they duly praised the bridge that carried them course I do not have today either champagne or burgundy in which to toast the king of road builders, but if the same purpose can be served by a glass of clear and sparkling mountain water, I propose a toast to Henry G. Shirley, the best highway engineer in the United States, a man of vision, a man of skill, a man of indomitable courage, who in the brief space of some 17 years has lifted Virginia out of the mud, has spanned her flowing streams, has built for the Old Dominion a State highway system the equal of that of any other State of the Union and has accomplished those results on a pay-as-you-go basis. But be it remembered that chief credit for pay-as-you-go basis. But be it remembered that chief credit for Virginia's sound fiscal policies is due to Senator Harry F. Byrd. After firing a volley in honor of Mr. Shirley I would propose a

toast in honor of Wade Massie, who has been with him start in this great undertaking, and to each and every other member of the State highway commission who has contributed his share ber of the State highway commission who has contributed his share to this splendid achievement. Under a bill passed in 1916 a commission was appointed, of which I had the honor of being a member, to lay out a State highway system. That was the first year of Federal aid to State highway system. That was the first year of Federal aid to State highways, the aid being limited to roads designated as a part of a State highway system. No constitutional authority as yet has been found for some of the appropriations made by the Congress during the past 6 years, but the authority for appropriations for public roads rests upon the constitutional grant to the Congress to establish post offices and post roads, as well as the additional grant to provide for the national defense. The report of that commission was submitted to and adopted by the general assembly in 1918, setting up a State highway system of 4.000 miles. When Mr. Shirley assumed office on July 1, 1922, we had in our State highway system 4,100 miles of road, at least three-fourths of which was not hard surfaced and only 1,900 miles of which were being maintained. At that time many streams were crossed by ferry if, indeed, they could be crossed at all, and many of the bridges were one-way bridges, unsafe for a load in excess of 5 tons. of 5 tons.

For the fiscal year ending September 30, 1923, the total money available for all highway purposes was only \$9,000,000, which in-

cluded \$700,000 to go to the counties as State aid and \$1,690,000 under the provisions of an act sponsored by me in 1920 and later called the Robertson Act, allowing the State to borrow from the counties money on certificates of indebtedness for road building. It is of interest to me that the most outstanding project building. The Robertson Act, was the heaptiful bridge agrees the Ranga-

It is of interest to me that the most cutstanding project built under the Robertson Act was the beautiful bridge across the Rappahannock River at Tappahannock, named for my good friend and Senate colleague, the Honorable Town Downing.

In that day the "little red schoolhouse" was the rule and not the exception, and only the faithful few attended the rural church in the winter months. How well I remember as a boy of only 10 attending a country church in winter to hear a missionary lately returned from Africa. Naturally I envisioned his escape from lions and the other mighty beasts of the forest, only to hear him open his remarks with the statement that he had encountered more danger in traveling 12 miles to reach the church than he had danger in traveling 12 miles to reach the church than he had

experienced in 5 years in Africa.

Now we have in our State highway primary system 9,432 miles, of which 8,067 are hard-surfaced, including 105 miles of four-lane road and bridges and 331 miles of three-lane road and bridges. In the secondary system, likewise under the State highway department, are 36,356 miles, of which 4,535 are hard-surfaced. In the primary system there are 1,789 bridges over 20 feet in length, many of which are splendid examples of the bridge builders' art, and in the secondary system 4,111 over 20 feet in length. For the current fiscal year funds available for road work in Virginia are estimated nscal year funds available for road work in Viginia are estimated at approximately \$26,000,000. Good roads, churches, and schools are the blessed trinity of an era dedicated to social and economic advancement. The modern and efficient consolidated school followed and did not precede our State road-building program. Not all have agreed with Mr. Shirley's policy of pressing forward to the goal of a highway system that gave precedent to the main arteries of travel and designed to move an ever-increasing volume of commercial as well as tourist traffic in a safe and direct manner, but I dare say there are but few in Virginia today who would not gladly unite with us in saying of Mr. Shirley: "Praise the bridge that carries you over."

Contrary to general impression, the visit of Governor Spotswood to this section of Virginia was not made for the purpose of settling and developing the Shenandoah Valley, but rather for the purpose of investigating the feasibility of the construction of a series of forts through western Virginia, which then extended to the Great Lakes and the Mississippi, for protection of the British colonies from the French and Indians. Had Governor Spotswood erected a bridge at this spot across the Shenandoah River in 1816, it would have been for military purposes. Or else, after he became the Virginia head of a private company holding a lease to operate post offices in Virginia, it might have been for postal purposes.

In my study of the early history of bridges, I find that they were in my study of the early history of bridges, I find that they were built primarily for the purposes of war instead of for the more constructive purposes of peace. Every schoolboy is familiar with the remarkable feat of Xerxes in throwing a pontoon bridge over a mile long across the Hellesport in order that his invading army might reach Greece. Every schoolboy has thrilled to Macaulay's account of Horatius holding the far end of Pons Sublicius while the consuls of Rome hewed down the beams of the bridge to stave off attack:

off attack:

"Then out spake brave Horatius, The captain of the gate:
"To every man upon this earth Death cometh soon or late; And how can man die better Than facing fearful odds For the ashes of his fathers And the temples of his gods?""

From the days of the cave man who found a tree fallen across the stream and used it as a bridge until the decline and fall of the Roman Empire, bridges were built primarily for the use of invading Roman Empire, bridges were built primarily for the use of invading armies. Commerce moved on the broad bosom of stately rivers; highways and bridges were built for the iron heel of war or for the better administration of a conquered area. In the days of the "glory that was Rome," the area being administered by that one city was approximately that of the United States, with a total population of about 130,000,000. The Romans not only were great law-givers but were great builders of highways and bridges, some of which still stand as enduring monuments to Roman skill, and the provision of Roman law that if a highway engineer did a poor lob provision of Roman law that if a highway engineer did a poor job he lost his head as well as his job.

But prior to the fall of the Roman Empire there had been born

in Bethlehem of Judea a Bridge Builder of a new and different type—One who sought to teach us how to bridge the chasm of ignorance and superstition, to bridge selfishness, cruelty, and the inhumanity of man to man, to bridge bloodstained battlefields to

the land of perpetual peace.

Our colonial ancestors knew how to build the bridges of life. Thomas Jefferson was probably the most versatile man Virginia has Thomas Jefferson was probably the most versatile man Virginia has ever produced, and unquestionably our greatest philosopher. To me it has always been a significant fact that Jefferson, truly great in many fields of accomplishment, asked to be remembered by posterity for just three bridges that he built—the bridge from servitude to the freedom of the body, the Declaration of Independence; the bridge from the darkness of a benighted intellect to the broad noonday of a clear and radiant mind, the University of Virginia, capstone to a great public educational system; and the bridge from the tyranny over man's soul to freedom of heart and conscience, the statute for religious liberty in Virginia. And what a bridge to the "land of the free and the home of the brave" did those patriots construct at Philadelphia—the Constitution of the United States

I sometimes fear that since the close of the World War our bridge building has been too much of the steel and stone variety. I will admit that we can truthfully say:

"They have builded magnificent bridges Where the Nation's highways go;

O'er perilous mountain ridges And where great rivers flow. Wherever a link was needed between the new and the known, They have left their marks of progress, in iron and steel and stone.

There was never a land too distant. Nor ever a way too wide. But some man's mind, insistent,

Reached out to the other side.

They cleared the way, those heroes, for the march of future years.

The march was civilization—and they were its pioneers."

But those same pioneers, trained in the Calvinistic doctrine, "Without the shedding of blood, there is no remission," built each for himself the bridge of hard work and self-sacrifice to the far shore of economic security. He did not expect, nor did he ask, the Government to build for him a personal bridge to the more abundant life. Those pioneers did not dedicate their glorious hymn, "Come Thou fount of every blessing, tune my heart to sing Thy praise," to the dispensers of Federal bounties.

"Come Thou fount of every blessing, tune my heart to sing Thy praise," to the dispensers of Federal bounties.

During the past 6 years the Congress has been busily engaged in the building of economic bridges. With the best of intentions we have fabricated various and sundry laws designed to improve the economic condition of selected groups. But we should frankly admit that if the practical effect of bridges of that type is to shift the hardships of life from the backs of one group to those of another the essential quality of such bridges is changed in degree but not in kind from the bridges of the Roman emperors used by their armies to bring slaves to the Palatine hills and tribute to the Roman coffers. Some of the old Roman senators living in palatial homes on the outskirts of Rome had as many as 20,000 slaves. The struggle to gain power and influence for the purpose of shifting the hardships of labor to the backs of others is as old as the human race. No law that Congress can pass can change or repeal the law laid down to Adam and Eve when driven from the Garden of Eden: "In the sweat of thy face shalt thou eat bread, till thou return unto the ground." If we eat, someone must labor. If we accumulate wealth, someone must work. There is no bridge back to the Garden of Eden and no substitute for labor in the creation of wealth and a higher standard of living. Yet the Congress at this moment is confronted with the demand that we extract by means of a 2-percent Federal sales tax, from those who are laboring and producing, the aggregate of twelve or thirteen billion dollars per year in addition to present Federal sales taxes that produce a billion dollars annually and the sales taxes of some 27 States. This twelve or thirteen billion dollars of additional tax money is to be distributed to those of our population who are 60 years of age or more, on the condition that they thereafter cease from gainful employment, and on the theory that the redistribution of wealth is one and the same with the creation of health. Tax

is one and the same with the creation of wealth. Tax experts estimate that already government is imposing on the workingman concealed taxes that consume 15 percent of his cash income.

As I have previously indicated, the years immediately following the World War were devoted to the building of prosperity bridges—a grossly materialistic age. Then came the big depression, since which time our thoughts have been centered on recovery, but largely recovery of material things. Little attention has been paid to recovery of moral fiber, to the recovery of independence and self-reliance, to recovery of the spirit of the pioneers—the spirit of those who discovered this valley in 1716—the spirit of the Scotch-Irish and Pennsylvania Germans who shortly thereafter came down to settle and develop it. The national deficit in those qualities of heart should give us as great concern as the deficits in our national Budget.

Budget.

And certainly all of us should be concerned over our inability to build a bridge of peace. The Prince of Peace gave us the plans and specifications nearly 2,000 years ago, but no nation has ever been able to build a bridge that will carry us over to the land where perpetual peace hath spread her white wings. We fought against autocracy with the vain hope that it would be a war to end wars. We framed the League of Nations and the Kellogg Pact, but we can't praise those bridges, because they did not carry us over. We are not only still paying for the World War that was fought, but, as Secretary Hull recently said, "The world is now engaged in paying for a war that has not been fought." Until the threat of that impending struggle has been lifted from our minds and hearts we will continue to have billion dollar defense bills, we will continue impending struggle has been lifted from our minds and hearts we will continue to have billion dollar defense bills, we will continue to have subsidies for agriculture in lieu of free and open foreign markets for surplus production, we will continue to have relief jobs of Government-made work, we will continue to have group struggles to shift the hardships of life from one group of shoulders to those of another. Some think that Clarence K. Streit in his recent book, Union Now, has found the solution to that pressing problem, namely, the union of the democracies of the world. Speaking of that book, the Marquis of Lothian, who will shortly succeed Sir Ronald Lindsay as the British Ambassador to this country, recently said:

"The cause of war is national sovereignty, because sovereignty condemns mankind to live under conditions of anarchy. There are other factors making for war, no doubt, such as fear or greed or

pride or racialism. But it is anarchy which inflames all these evils to gigantic proportions and makes it practically inevitable that sooner or later they produce war, as they have continuously done since the decline of the last world system of law—the Roman Empire. * * * The only remedy for war is unity, which means Empire. * * * The only remedy for war is unity, which means the ending of sovereignty either by force from without, as Fascists or Communists propose (and such peace at best could be only temporary), or by the voluntary pooling of national sovereignty in some form of democratic federal union. Every compromise which leaves national sovereignty intact—and they have all been tried: League, isolation, disarmament, neutrality, outlawry of war—will fail, as they failed in the United States from 1781 to 1789, because they do not cut to the root of the cause of war—the division of mankind into entirely selfish and self-regarding units which will submit themselves to no common constitution or law."

mankind into entirely selfish and self-regarding units which will submit themselves to no common constitution or law."

We have in the United States, and have had for many years, a standard of living higher than that of any other country in the world. The people of the United States have been led to believe that we can always have a standard of living higher than that of any other country of the world, but I am not so sure this theory is sound. Certainly it is not sound if any considerable percentage of the population is looking to the Government to provide it. "Go West" was Horace Greeley's advice to the young men of his day; but we have already gone west, and no longer is there free land for either the migrant farm laboure or the city worker out of a job.

either the migrant farm laborer or the city worker out of a job.

The development of rich coal fields, the discovery of rich oil wells, brought in new wealth, but in the future we cannot safely wells, brought in new wealth, but in the future we cannot salely depend upon tapping new and hitherto undeveloped natural resources. Farm chemistry may discover new wealth in cornstalks and other farm products now wasted, or means for the profitable manufacture of textiles from soybeans or other vegetable crops, but that is speculative. We can now sit by our own fireside and hear the message of Hitler to the German people at the time it is delivered. And by the same token we can reed the economic effect hear the message of Hitler to the German people at the time it is delivered. And by the same token we can read the economic effect of what he proposes to do on the ticker tape in every broker's office. In a word, the whole world is now one economic unit. All the rest of the world is making sacrifices and it is not clear to me how we can avoid making sacrifices. Under the leadership of Napoleon the people of France made sacrifices for the dream of Napoleon to bring peace to Europe through the domination of all European countries by the French armies. But Waterloo proved the fallacy of a peace based upon the sword. And if Mr. Hitler seeks to bring peace to Germany in the same manner he likewise will meet his Waterloo. Yet the fact remains that without peace there can be no satisfactory standard of living either here or abroad and to achieve peace sacrifices of some type must be made.

When we find a way to build the bridge of peace that will carry us over we will have lifted the shadows from the road ahead and can say in the dying words of our great Stonewall Jackson: "Let us cross over the river and rest in the shade of the trees."

The Postal Service

EXTENSION OF REMARKS

HON. MILTON A. ROMJUE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1939

ADDRESS BY HON. JAMES A. FARLEY, MAY 12, 1939

Mr. ROMJUE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley, Postmaster General of the United States, at the State convention of the Missouri Chapter of the National Association of Postmasters, St. Louis, Mo., May 12, 1939:

It is a privilege to meet here in St. Louis today with the Missouri chapter of the National Association of Postmasters, and it is always a pleasure to visit with your genial host, Rufus Jackson, the postmaster of this great city. You are to be congratulated on the fine attendance at this convention, and I want to thank you for coming.

We are most fortunate in having an opportunity to share in the management and in the operation of the United States Postal Service, and I know that each and everyone of us has a justifiable of the transfer pride in our accomplishments. Few people realize the tremendous influence exerted by the Postal Service in the progress of business, transportation, and in the daily lives of our citizens.

ness, transportation, and in the daily lives of our citizens. The report of the Comptroller General of the United States shows that during the last fiscal year the transactions of the Postal Service resulted in a total turn-over of cash handled in post offices of more than \$8,000,000,000. This amount is one-third more than all of the money in circulation in the United States, and exceeds the total appropriations made by Congress for the maintenance of the whole Federal establishment, includ-

ing the emergency agencies. It amounts to more than \$62 for every man, woman, and child in America.

The ordinary postal revenues derived from the collection of postage broke all records last year, and the revenues received thus far in this fiscal year indicate further increases, which means that for the third successive year the postal revenues have shown steady gains, exceeding the revenues of any previous year in history.

I think it would be of interest to you to know that during the fiscal years of 1927 and 1928 the increase in previous years.

fiscal years of 1937 and 1938 the increase in postal revenues came largely from the smaller cities and towns, and during that period postal business lagged somewhat in the great industrial centers—while during the current fiscal year of 1939 increases have been shown in the large cities and we are still maintaining increased business in the smaller communities. Therefore, I can say to you that these here have been shown in the smaller communities. that there has been no business recession insofar as the postal service is concerned, and our revenues are ordinarily accepted as an accurate barometer of business conditions.

an accurate barometer of business conditions.

The mail volume is increasing daily, weekly, and monthly when compared to the same periods of last year. We have kept pace with this increased volume by adding more employees. We now have on our rolls and at work in the post offices more people than have ever been employed at any time in the history of the Service. Working conditions are better. The average salary of postal employees in the field service is greater than the average salary in other Government establishments, and certainly higher than the average income of employees in private industry. This indicates a steady gain in business, confidence on the part of the people, and shows that the patrons are taking advantage to a greater extent than ever before of the wonderful facilities of the United States Postal Service.

I am proud, indeed, to be able to make this report to you, and

I am proud, indeed, to be able to make this report to you, and I know that you, as public officials and as citizens, are pleased to note and accept this report as evidence of the fact that the to note and accept this report as evidence of the fact that the United States of America is keeping up its march of progress; that its people are increasing business activities; that they believe in their Government; that they are living up to the good-neighbor policy—for you and I know that when postal receipts are increasing in the smaller cities and towns a good part of that revenue comes from the ordinary social correspondence carried on between families and friends. When that condition exists everybody knows that we are getting along all right in America.

I make no claim for personal credit for the accomplishments of this fine establishment. While the Service has been generally improved during my administration as Postmaster General, frankness and honesty require that I give to you, the postmasters, to my most efficient staff in the Department, and to all of the postal employees the credit for such improvements. You know, and I know, that the Postal Service has been the most respected of all Government agencies for many, many years. Before we were born, postal

that the Postal Service has been the most respected of all Government agencies for many, many years. Before we were born, postal officials and employees, hundreds of thousands of them, had given the best years of their lives and their best efforts to the development of this magnificent communication system. All praise to my predecessors and your predecessors, and to the loyal army of workers that has given such a fine example of courage, fidelity, and efficiency. We make but one claim: That we have accepted our positions as a public trust. We have but one objective: That in the administration of this public trust we shall at all times safeguard the public interest and pass on to our successors an improved service in keeping with the progress of the Nation.

Our greatest asset is goodwill. In private business goodwill is recorded as a capital asset. In a public establishment such as ours we have no reason to reduce this asset to a dollar-and-cents value. We do know, however, that unless we do everything possible to develop goodwill we are not satisfying our patrons and we will not attain our objective.

not attain our objective.

I am happy to say to you that careful observance of postmasters and postal employees convinces me that we are reaping the benefit of our many campaigns to encourage courteous and efficient postal service. I hear many expressions and receive many letters commending postal people on their tact and courtesy. I want to thank all postmasters for this accomplishment and to urge that you continue your efforts along this line. Eternal vigilance is required if we are to meet our obligation to our patrons. We in the Department are convinced that the need for politeness is more pronounced in the post office than in most other public services. It is an important part of what we term "efficiency." We operate a monopoly, at least in the transmission of letters, therefore a patron has no choice but to deal with us; consequently, it is fundamental that we exercise great care in dealing with our customers who are in reality our employers.

Obviously, the patron is not always right, but we gain nothing in attempting to prove to him that he is wrong. Conversely, we of our many campaigns to encourage courteous and efficient postal

in attempting to prove to him that he is wrong. Conversely, we are not always right. While it is true that relatively few mistakes occur in the handling of the billions of pieces of mail annually, yet it is human to err, and our employees on rare occasions missend mail or delay the transmission of mail matter. When such a thing occurs be frank about it. Admit the fault and take prompt steps to prevent a recurrence. Apologize for the mistake and you will make a friend for the Postal Service and add to the goodwill

will make a friend for the Postal Service and add to the goodwill so valuable to the Department.

You, as postmasters, should constantly strive to secure the cooperation and goodwill of the employees of your office. Make each and every person in your establishment feel that the part he plays in the Service is an important part. Be firm when necessary and always point out the mistakes made by your subordinates. Let them feel that they have an individual responsibility to the public and encourage them to assume responsibility.

Never reprimand an employee in the presence of others. To do so injures his self-respect, causes him to resent the criticism, and defeats any good that might come from it. When irregularities occur, call the offender aside privately and administer the rebuke in a gentlemanly way. Authority should never assume the privilege of transgressing the laws of common courtesy of man to man.

lege of transgressing the laws of common courtesy of man to man. Be sure that your supervisors are properly trained, and regardless of the circumstances do not permit humiliating incidents to occur in maintaining discipline in your office.

It is your duty as postmasters to see that all employees are trained for their work. The importance of this phase of your jobs cannot be overemphasized. Adequate and understandable intructions should be furnished to all newly appointed employees, and these instructions may be repeated occasionally, for even those who are presumed to thoroughly understand their work are often helped by having their minds refreshed on some important points. I am sure that the average postal employee wants to learn more and more about this business, and if proper instructions are given in an enlightened manner, it will do much in quickening the purpose and energy of our personnel. energy of our personnel.

energy of our personnel.

There are several ways of instructing the employee, depending upon the size of the organization. It can be accomplished either singly or in groups. Regardless of the method that is followed, be sure that each and every individual under your supervision is trained for the task assigned to him, and be doubly sure that those assigned to window work where they contact the public have a complete knowledge of the details of the positions they occupy. Inaccurate information given to patrons is most annoying and causes complaints that are very difficult to answer. Admonish all those who are in a position to deal directly with the patrons to be courteous at all times, to give information only when they are sure the answer is correct, and to say "thank you" pleasantly at the conclusion of each transaction. Give your personal attention to this matter and you will accomplish more than you realize.

this matter and you will accomplish more than you realize.

It is also important to recognize good work. When some member of your staff has performed a task in a most efficient manner, or has done something to cause favorable comment on the part of a patron, let him know you are pleased with his work. It does not take long to pat him on the back and commend him for his inter-To do so encourages him to continue in his

est in the service. To efforts along that line.

I feel very strongly on this matter of tact and courtesy in our dealings with the patrons and employees, and shall appreciate your

continued cooperation.

You may be assured that the Department will cooperate with you if you will but seek its help when you are in need of assistance in solving any of your problems. The administrative agencies of the Department are organized and maintained for that purpose. The several bureaus under my general direction formulate policies and issue rules and regulations which are calculated to insure adequate and efficient service for the people and also to pract your interest.

and efficient service for the people, and also to protect your interest and the interest of the employees. We in the Department have no direct contact with our customers We in the Department have no direct contact with our customers but must of necessity leave that most important function to you and your staff in the local post offices, so that in the final analysis, no matter how high our purpose may be, unless we can secure your enthusiastic support we cannot be successful. For that reason I attend meetings of this kind whenever possible, and I encourage the administrative officials in the Department to do likewise—for I am convinced that these conventions offer us our best opportunity to engender good will and good feeling between the headquarters staff and the personnel in the field service. There are others here with me from the Department and a number of post-office inspectors are present, all of them available for counsel and advice concerning your service problems.

tors are present, all of them available for counsel and advice concerning your service problems.

I regret that other engagements which are principally my scheduled appearance at other State conventions prevent my remaining with you for a longer period, and I trust that I shall have an opportunity to meet with you again. Before concluding, I want to extend to you the warmest regards and best wishes of President Roosevelt, and to again assure you of my sincere appreciation for the fine work you are doing.

The National Labor Relations Board Should Be Amended

EXTENSION OF REMARKS

HON. WILLIAM M. COLMER OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1939

ADDRESS BY HON. WILLIAM GREEN, PRESIDENT, AMERICAN FEDERATION OF LABOR

Mr. COLMER. Mr. Speaker, on last evening the Honorable William Green, the able and sound president of the American Federation of Labor, delivered over the Columbia Broadcasting System network a very able and timely address on the subject of amending the National Labor Relations Act. While I am not sufficiently advised in the premises to comment with full approval on all of Mr. Green's statements, I have an abiding and substantial faith in this great American labor leader and patriot. Moreover I entertain a profound respect for the great labor body which he heads. The American Federation of Labor has always demonstrated that it is the real friend of labor. And it is the American Federation of Labor that is today responsible for the exalted position of the American laboring man.

Mr. Speaker, for fear that many of my colleagues in both branches of the Congress may not have heard this speech, I have sought this method of calling it to their attention and to the attention of the country generally. I commend it to the careful and sympathetic consideration of the Congress

and the country.

The speech follows:

The American Federation of Labor is now leading a struggle which is of direct and vital importance to every citizen of the United States.

We have asked Congress to make certain changes in the National Labor Relations Act and we are rallying all our forces in support of these amendments because we are convinced that their adoption will correct present injustices, stabilize labor relations in interstate industry, and help bring about national recovery.

As a democratic American institution, the American Federation of Labor always has been responsive to public opinion. We have done our utmost to merit public support of our policies. We believe we have abundant evidence today that the American public overwhelmingly supports the American Federation of Labor in its efforts to guarantee fair play in the administration of the National Labor Relations Act.

That is all we ask—fair play. That is all the National Labor Relations Act ever was intended to accomplish—fair play. That is what the National Labor Relations Board has disgracefully failed

what the National Labor Relations Board has disgracefully failed to live up to in administering the act—the principle of fair play. The American public was sounded out on the subject of the National Labor Relations Board several months ago by the National Institute of Public Opinion. In a poll of persons from all walks of life, this nationally accredited organization found that 92 percent felt the National Labor Relations Board was biased against the American Federation of Labor and in favor of the C. I. O.

Why does this feeling exist? And why did the delegates to the last American Federation of Labor convention, sharing this conviction, demand unanimously that the National Labor Relations Act be amended to as to guarantee fair play?

Act be amended so as to guarantee fair play?

The answer is found in the record of the Board. It shows that the National Labor Relations Act has been tragically malad-

Remember that the American Federation of Labor was the original sponsor of the National Labor Relations Act. We nurtured it and fought for it and succeeded in getting it enacted. We believed then in its principles and we are just as wholeheartedly committed to them now. All the law set out to do was to establish mitted to them now. All the law set out to do was to establish a basis of fair play in industrial relations between employers and their workers. It was expected that fair play would create good will, that peaceful negotiations would be substituted for costly strikes, and that the free flow of interstate commerce would no longer be seriously interrupted by labor troubles.

It hasn't worked out that way and the responsibility lies squarely with the Labor Board. Let me tell you the story.

The National Labor Relations Act became the law of the land in July 1935. The following October a minority group in the American Federation of Labor, defeated by a two-thirds vote on a question of policy at the federation's convention, refused to abide by democratic majority rule and revolted. Thus the C.I.O. was formed. It proceeded to institute a systematic campaign to

abide by democratic majority rule and revolted. Thus the C.I.O. was formed. It proceeded to institute a systematic campaign to disrupt and destroy the American Federation of Labor.

Then, lo, and behold! We suddenly found the National Labor Relations Board actively siding with the C.I.O. One member of the Board even stated in an official opinion that he favored the type of union organization fostered by the C.I.O. Later he won over another member of the Board to his viewpoint. In case after case, thereafter, the Labor Board in its decisions sought to destroy A. F. of L. unions which had been in existence for many years and force their members to be represented by the C.I.O. destroy A. F. of L. unions which had been in existence for many years and force their members to be represented by the C. I. O. All this in face of the fact that Senator Wagner, of New York, author of the law, had publicly stated on the floor of the Senate when the bill was under consideration that "there is nothing in the pending bill which places the stamp of Government favor on any particular type of union.

But the Board did not stop there. It went further. The next this are known it was transfer and provided the state of the st

But the Board did not stop there. It went further. The next thing we knew it was issuing administrative orders, in direct conflict with the law, setting aside legally valid contracts between bona fide American Federation of Labor unions and employers. In each case the C. I. O. benefited by the Board's action. Of course, we could not stand for that. We went to court. And in the Consolidated Edison case the Supreme Court of the United States reversed the Board and criticized it for "extravagant and unwarranted" assumptions. The Court said:

ranted" assumptions. The Court said:

"Further, the act gives no express authority to the Board to invalidate contracts with independent labor organizations."

This decision should have stopped the Board in its tracks. But it hasn't, Apparently the Board refuses to recognize the highest court's ruling as a check on its assumed authority but attributes it merely to procedural errors in the case.

This isn't all. Our complaints expires the Board and its staff.

This isn't all. Our complaints against the Board and its staff go even deeper. For instance, when one of our unions asks the Board to hold an employee election promptly and the C. I. O. asks for delay, the election almost always is delayed. When the position is reversed and we ask for delay, the Board acts with incredible speed. Time and again the Board has set new precedents and ostablished new rules to unser our case and established new rules to unser our case and the has incredible speed. Time and again the Board has set new precedents and established new rules to upset our cases and then has gone ahead and reversed its own rules and precedents on the films:est excuse whenever such a course would suit the purposes of the C. I. O.

It has reached the point now where our people, representing the American Federation of Labor and its 5,000,000 members, feel that they are entering a hostile camp when they appear before the Board. It is not just our imagination. We know we are viewed with enmity by the Board and its staff. We know that from certain members of the Board itself down through the roster of its employees there runs a common bond of sympathy with the C. I. O.

This holds true especially among those whose political and economic beliefs lean to the left. The extremists on the pay roll of the Labor Board and on the pay roll of the C. I. O. have undoubtedly formed a "united front." It is a "united front" of ideas. By sharing a destructive philosophy and letting it influence official judgment they have managed to accomplish as much damage to the American worker as though they had actually set down to-gether and entered a conspiracy to reshape the American labor movement.

This is strong language. But the facts justify it.

The present situation is so serious that the American Federation of Labor believes it must be remedied at once. We have asked Congress to do so by abolishing the present Board and establishing a new Federal Labor Board of five members. Only in this way can the Nation obtain the necessary house cleaning of puresulvible has wandered for affeld from its original functions.

a bureau which has wandered far afield from its original functions.

We should not stop there. We hope and trust that a new
Board will not duplicate the mistakes of the present one. But

Board will not duplicate the mistakes of the present one. But we must make certain that the wide discretionary powers vested in the Board will not be abused in the future. Therefore, in order to assure fair play, we have asked Congress to write into the law the rules of the game, rules that will apply to all and guarantee every party equal justice under the law.

First, we ask that in any plant where a craft or a group of skilled workers exists these workers be given the right to decide for themselves by their vote whether they wish to be represented in collective bargaining as a separate unit or whether they wish to be merged with all the other workers into a single unit. This is democracy. It is self-determination. Many skilled workers wish to be represented separately and have been so represented by their craft unions for many years because they believe they can comcraft unions for many years because they believe they can command higher wages for their skill by this method. Certainly they should have this right. It has never been denied to them before. Certainly they should not be deprived of it by a governmental agency operating under a law which was adopted to make labor

Secondly, we urge that the Board's authority to set aside legal contracts between bona fide labor unions and employers be clearly defined and limited. This amendment follows the decision of the Supreme Court in the Consolidated Edison case. We want the principles laid down in that decision written into the law so that the Board will know just what it can do and what it cannot do in the future, and there will be no further room left for misunderstandings.

Thirdly, we have introduced a series of procedural amendments, most of which are too technical and legalistic in their nature to explain in any detail here. Their purpose is to avoid unnecessary delays in handling of cases by the Board, to restrict arbitrary exercise of discretionary powers, and to permit court review of rulings on which the Board now says its own word is final.

In conclusion I want to emphasize that for more than half a century the American Federation of Labor has protected the interests of American workers to the fullest degree and has raised their working and living standards to the highest in the world. It is entirely in the interests of American workers that the American Federation of Labor is now seeking to strengthen and perfect the National Labor Relations Act. Any amendments sponsored by employer groups which have for their purpose the destruction of the basic principles of the Labor Act will find their sternest foe in the American Federation of Labor.

Now, let us see just who these people are who protest so vehemently that the National Labor Relations Act is sacred and that not even one of its precious semicolons must be disturbed. First in the line-up we find the Labor Board itself, a group of bureaum the line-up we find the Labor Board itself, a group of bureaucrats bitterly opposed to surrendering any part of their power.
Second in line stands the C. I. O., frantically trying at any cost to
keep intact the favored treatment it now enjoys from the Labor
Board. And, finally, we find lurking in the rear, but beating the
drum even louder than the rest, the Communist Party.

The American public will judge these warriors in a common
cause by their motives and by the company they keep.

Moscow-Led Communism Endorses the New Deal

EXTENSION OF REMARKS OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 22, 1939

EDITORIAL FROM THE NEW YORK JOURNAL AND AMERICAN OF MAY 16, 1939

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Journal and American of May 16, 1939:

[From the New York Journal and American of May 16, 1939] MOSCOW-LED COMMUNISM ENDORSES THE NEW DEAL

That the New Deal is regarded by leading Communists as part and parcel of their ideology, or at least as a fellow traveler in communism, is at last revealed beyond the shadow of a doubt by the speech made by Earl Browder, general secretary of the Communist Party of America, at the mass meeting of the Young Communist League in Madison Square Garden on last Wednesday

Browder not only announced Communist support for a third term for President Roosevelt but he boldly said:

"It [the Communist Party] must therefore look for a victory of the New Deal wing in the Democratic convention, or, failing that, face the alternative of breaking up, dispersal and defeat without a fight, or the launching of a new party of its own.

"Between a Garner-Glass-Wheeler Democratic Party and a Hoover-Dewey-Test Penyllicen Party it has no choice.

"Between a Garner-Glass-Wheeler Democratic Party and a Hoover-Dewey-Taft Republican Party it has no choice.

"The radical one-third of the voters find it necessary, therefore, to wish for and work for victory of the Roosevelt wing in the Democratic convention. But, having as yet no guaranty of such a victory, it must prepare for alternative action in case of defeat at the hands of the Garner-Glass forces."

In other words, he says that the Communist Party faces annihilation if it does not capture the New Deal physically, as it has already done politically. And he names as his "leader" President

Roosevelt.

If, further, according to Browder, un-American "radical," and red elements of the country cannot capture the New Deal entirely, they must then organize a party of their own—which means, in plain language, a revolutionary "popular front," which was the cause of the civil war in Spain and the collapse of France into a socialistic dictatorship.

Then, to the cheering of his red audience, Browder unveiled the purposes not only of the Communists but the close affinity between them and the New Deal when he said:

"The progressive and democratic majority is a coalition between the Democratic Party and the independent radical one-third of the electorate. President Roosevelt has embodied that coalition and

electorate. President Roosevelt has embodied that coalition and by his leadership has consolidated and strengthened it.

"If the coalition is to continue through the 1940 election to victory, it can only be under the same type of leadership and policy." This must be humiliating reading for all American Americans. It must be ignominious for all those millions of Americans who supported President Roosevelt and his New Deal policies in 1933 to find those policies now part and parcel of the Moscow project for revolution and ruin directed right on our own soil!

The communistic spirit of the New Deal was decisively repudiated by the people at the polls last November. But only too well have the acts and speeches of the spokesmen for the administration justified the claims of Browder that the New Deal is the hope of all the radical and subversive elements in America.

Any further compromise with the foes of our traditions means that Europe and her crackpot theories are on the march here.

that Europe and her crackpot theories are on the march here.
And that will be national suicide.

Memo on Newspapers

EXTENSION OF REMARKS

HON. CHARLES A. HALLECK OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Monday, May 22, 1939

ARTICLE BY RAYMOND CLAPPER

Mr. HALLECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by

Raymond Clapper, which was published in the Washington | Daily News of May 20, 1939:

> [From the Washington Daily News of May 20, 1939] MEMO ON NEWSPAPERS

(By Raymond Clapper)

(By Raymond Clapper)

Personal memo on the newspaper business:

The chief reason that demagogs thrive is that the newspapers—
and the radio—pretend to take them seriously. Not editorially,
perhaps, but in the news columns, which is what really counts.

If you asked newspapermen here or elsewhere what they really
thought of this latest blast out of the Dies investigating committee,
I suspect that most of them would say it was 90 percent hogwash,
played up out of all proportion to its real importance. Any skilled
newspaperman, knowing nothing about the story, could read it in
the newspapers and be certain that it was flimsy "headline" stuff.

The offense of the newspapers is that making a fetish of "objectivity" they present this kind of dubious material exactly as if they
actually took it seriously. I find in the latest editions of Washington newspapers several columns played in the lead position, with
headlines giving it additional importance, the latest blast out of
the Dies committee describing an "anti-Jew crusade."

High up in the accounts in headlines or in black-face type is the
word that John D. M. Hamilton, chairman of the Republican National Committee, is to be called before the Dies committee because,
according to a witness, he "gave the names of Republican committeemen to participants in the (anti-Semitic) campaign."

Every newspaperman in Washington knows that anybody, by
writing to the Republican National Committee, can obtain a printed
list of the committee members. He can get the Democratle names

writing to the Republican National Committee, can obtain a printed list of the committee members. He can get the Democratic names by writing to Jim Farley. There is no secret about that. The lists are printed in the World Almanac, as John Hamilton pointed out when, for later editions, he had an opportunity to set the matter in its proper perspective.

But the news accounts kick off with the plain, flat, unexplained statement of a witness that Mr. Hamilton sent a committee list to the anti-Semitic agitators, leaving the inference to be drawn by the average reader that in some way Mr. Hamilton was mixed up in the activity. It was Mr. Hamilton who spoke out last fall against the Jew-baiting senatorial primary campaign in Kansas of Rev. Gerald Winrod, a Republican.

When some of us months ago said the Dies testimony "exposing" red activity was trivial, unverified stuff blown up with hot air, we were regarded suspiciously as secret radical sympathizers. I hope that it is permissible to similarly point out the weaknesses in the present smearing treatment of John Hamilton without being regarded as a secret sympathizer with the Republican National Committee. Committee.

Those outside the newspaper business complain that the press "distorts" the news, meaning that it is twisted and given an editorial slant. That is not the trouble.

Newspapers have made a fetish of "factual objectivity" and have carried it to such extremes that, as is seen in this instance, a "dead pan" straightaway statement, all literally correct, leaves a "dead pan" straightaway statement, all literally correct, leaves a completely erroneous impression with the reader. And if the reader is left with an incorrect impression, the reporting, no matter how "factual" it may be in the literal sense, is misleading. Is such misleading of the reader to be justified on the ground that "Dies said it and therefore it is news"? To say that Mr. Hamiton, according to a witness, gave the names of Republican committeemen to participants in the anti-Semitic campaign leaves the impression that this was something unusual, a special favor to the course when as every Weshington newspaperment knows it was group, when, as every Washington newspaperman knows, it was nothing of the kind. Is it good journalism to let that insinuation go through unexplained to trusting readers under the excuse of being "objective"?

Deing "objective"?

It is this kind of "objectivity" that builds up demagogues. Newspapers don't do it intentionally. The cry that they deliberately "distort" news is itself a gross distortion. The distortion comes about, in such instances as this one, through a technical, literal accuracy which unconsciously leaves a distorted impression on the reader. The trouble arises because a demagogue hands a half truth to the reporter, who thereupon, trying to be accurate, relays the half truth to the reader in exactly the same literal manner that he would relay a whole truth.

Massing of the Colors, National Cathedral, Washington, D. C., May 21, 1939

EXTENSION OF REMARKS

HON. LAWRENCE LEWIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Monday, May 22, 1939

ADDRESS BY HON. WILLIAM B. BANKHEAD, SPEAKER OF THE HOUSE OF REPRESENTATIVES

Mr. LEWIS of Colorado. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Hon. WILLIAM B. BANKHEAD, Speaker of the House of Representatives, at the massing of the colors, National Cathedral, Washington, D. C., on May 21, 1939:

There greets the eye of beholders today in the amphitheater of Washington Cathedral a spectacle strangely inspiring and comforting to our minds and hearts. Within the shadows of this great edifice, erected to the everlasting glory of God, are presented the massed colors of our armed forces and allied church and civic organizations of the National Capital. We have come to pay tribute to all those who have fallen for our Republic.

By the very nature of the ceremonial it is an hour for exalted memories, as well as an opportunity for intensive rededication. It is above all things else an occasion that justifies an appraisal of the significance of these banners and standards, so proudly held aloft before the eyes of men.

before the eyes of men.

In commercial value they are things of little moment, but as symbols of the heart and soul and patriotic consecration of the people of a very great nation they are of immeasurable value. To the pawnbroker the simple golden band of a wedding ring that joined together man and wife for a half century of devoted companionship is a mere bauble; to them it is a thing beyond all price. The modest crucifix of a believer would make small appeal to the avarice of an auctioneer, but to one who knows that there are hidden things of an everlasting faith of greater value than the treasures of the Pharachs, he holds to his little cross long after he has relinquished earthly ambitions and the thirst for temporal power.

And so it is with the symbolism of these gallant colors—in them-

After such premise, let us for a moment interpret that significance, everything.

After such premise, let us for a moment interpret that significance in terms of American citizenship. These colors are not only vividly contemporaneous, but also bear the imprint of heroic, dignified, and sacrificial reminiscence. They recall to mind far off, but please God, unforgotten things.

God, unforgotten things.

The spirit of Patrick Henry, whose impassioned eloquence kindled in colonial hearts an irrepressible passion for liberty, may well be our guest today. The intellect of that giant political philosopher, Thomas Jefferson, author of the Declaration of Independence, can find its counterpart in the meditations of this multitude of citizens, as devoted as he to the proposition, "that all men are created equal; that they are endowed by their Creator with certain unaltenable rights; that among these are life, liberty, and the pursuit of happiness."

Out of the mist of far-off years stands in retropped the color.

out of happiness."

Out of the mist of far-off years stands in retrospect the noble figure of George Washington, to the people of the United States as immortal as the firmament. Marshaled under these ensigns through the last 150 years have served and labored in war and in peace a vast parade of other great leaders, of great thinkers, of great actors in the drama of government, and going along with them, unnumbered millions of privates in the ranks of armies and of industry, without whose loyalty and courage it would have been impossible to carve out in history so collossal an epic of human freedom.

impossible to carve out in history so collossal an epic of human freedom.

Without undertaking to catalog the long list of illustrious participants in this imagined cavalcade of immortality, the impulse cannot be restrained of paying tribute to my one-time chieftain, that superb idealist, as well as practical statesman, whose "apathetic and unconscious form" lies in sequestered dignity amid the silences of this cathedral—Woodrow Wilson, once our Commander in Chief. What do these colors stand for in the contemplation of our Nation? What is our Nation? Where lies its strength? What is the justification for that patriotic loyalty we are today convened to magnify?

Here in the National Capital are the places where the functions of government are represented. On Capitol Hill the Congress and the Supreme Court, and in the White House the Chief Executive, sit for the performance of their constitutional prerogatives, and nearby are the headquarters of other agencies of government. But it must always be remembered that the power and majesty and recourses of this Nation are ledged out vender in the heat and it must always be remembered that the power and majesty and resources of this Nation are lodged out yonder in the hearts and the homes of our people. Do not forget the preamble to the Constitution. For the very first vibrant and all-compassing phrase in our fundamental law the founders chose these words: "We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

The first duty, therefore, of all executives and all legislators is

The first duty, therefore, of all executives and all legislators is to remember the source of their temporary power and to preserve to the masses of the people the largest possible measure of freedom, security, and prosperity. By no other course can we expect the people to respect and venerate and fight for the stability of our institutions. There is no surer method of alienating the affections of men for these colors than by making them the symbols of oppression and discrimination.

Fortunately, during our many changes of administration under our party system there have been no flagrant departures from these objectives on the part of those in power. Thereby have the people continued to cleave to the high traditions of our democratic institution with "an affection which hopes and endures and is patient."

We are now confronted with domestic and international prob-lems that place severe pressure upon our stamina and course of action. The entire world seems to be shaken and disturbed and uneasy because of the frenzy caused by the fear of another world war. There is grave apprehension among many of our own people that in the event of such a cataclysm we may be drawn into its

vortex. I do not share in that apprehension as an inevitable

result.

It is my humble opinion that an overwhelming majority of the

It is my humble opinion that an overwhelming majority of the American people at this hour feel that our national policy in this tense situation should be upon these broad bases:

(1) We should take every reasonable precaution to place our armed forces upon the highest plane of efficiency to meet any attack from any quarter upon the continental United States or any part of the Western Hemisphere.

(2) We should continue to use every moral persuasion at our command to preserve the peace of the world without provocative implications of any kind upon our part.

(3) We should reassure the American people that there is no disposition or intention upon the part of this Government to engage in any act of aggression beyond our own territory or to use

gage in any act of aggression beyond our own territory or to use our armed forces to fight upon European or Asiatic soil.

There is one other source of anxiety in the minds of our patriotic citizens that is worthy of consideration on this occasion. We are supposed to be a homogeneous people. We are supposed to give loyalty and reverence to our democratic institutions. These massed colors give mute evidence of the tenacity and solidarity with which those who love the Republic have clung to the guaran-

ties of our Constitution, and especially the Bill of Rights and our system of representative government.

Nevertheless, there is abundant evidence that we have sinister Nevertheless, there is abundant evidence that we have sinister and mischievous forces and influences within our borders seeking with covert and sinister cunning to inject into the veins of our present political system the malignant virus of alien and destructive doctrines and to incite rabid racial and religious hatreds. There is no place anywhere upon our soil to harbor such activities or to condone their malevolence. It may be well to remind these subversive agents, regardless of either their origin or sponsors, that the benevolence of our guaranties of freedom of speech and assembly has very definite limitations.

I am happy to report that the Congress is diligently diagnosing the diseased tissue in our body nelltie and in due course will enact

I am happy to report that the Congress is diligently diagnosing the diseased tissue in our body politic and in due course will enact adequate remedies for its extirpation. It should not be interpreted that such suggestions are grounded upon any narrow prejudice against any race or creed or country or fostered by any scruple of bigotry or intolerance. If there ever was a country that has from its foundation been generous in its hospitality to the needy or persecuted from all nations, surely that has been the record of the United States of America. Nor are we unmindful of the vast contribution that has been made to the growth and culture and de-United States of America. Nor are we unmindful of the vast contribution that has been made to the growth and culture and development of this land by immigrants from other lands, including all of our ancestors. All that we now ask is that the present residents of our country, by birth or adoption, shall be loyal to our flag and our system of government; and if not willing to do that, then they must be prepared to take the inevitable consequences of their sedition their sedition.

But let us please for a moment recur to the spirit of this cere

But let us please for a moment recur to the spirit of this ceremonial. It is a blessed thing that occasional opportunities are afforded us to take surcease of the exacting rigor and routine of our busy lives and to feel the thrill and exaltation of nobler things. This would indeed prove to be a rather desolate and disappointing old world, were it not for occasional incursions of sentiment into the hearts and lives of men. There must be added to our material necessities some saving grace of gratitude, of spiritual contemplation, of tender reverie. All normal minds occasionally revolt at and resent the imperious demands of schedules and engagements and yearn for the unbridled liberty of contemplation. Let us embrace this hour and this environment as a medium of such enjoyment.

medium of such enjoyment.

The flags and ensigns out there remind us of the noble and glorious traditions of our country. They remind us of Lexington and Concord and Bunker Hill and Kings Mountain. They waved at Buena Vista and Chapultepec. Chickamauga and Chancellorsville Buena Vista and Chapultepec. Chickamauga and Chancellorsville and Gettysburg saw them ensanguined but glorified with fratricidal blood. Dewey and Sampson saw them triumphant at Manila and Santiago. Our Army upheld their noblest prestige at Belleau Wood, Chateau Thierry, and the Argonne. They are the tokens of a constitutional democracy giving every assurance for the protection of the personal liberties of the humblest citizen. They stand guardian over the security of a vast domain of incredible wealth. They typify a century and a half of magnificent history. They are the protectors of our firesides and altars. Surely this day with all these inducements to reconsecration we may be justified in catching something of the spirit of Richlieu's apostrophe to patrictism these inducements to reconsecration we may be justified in catching something of the spirit of Richlieu's apostrophe to patriotism and applying it to our own beloved country when he said: "All things for France! Lo! my eternal maxim. The vital axle of the restless wheels which bear me on. Beyond the map of France my heart can travel not, but fills that limit to its farthest verge." Let us be steadfast in the faith of our fathers. "Remove not the ancient landmark which thy fathers have set."

I shall trespass long enough upon your indulgence to offer another thought for your consideration.

Reference has been made to the possibility of another impending world war. The souls of men and women everywhere are affrighted at the mere thought of such an unimaginable tragedy. They can well foresee the diabolical ferocity and savagery of such a conflict. New instrumentalities of destruction make certain that great centers of population would reek as shambles of desolation. The very foundations of civilization might become as whited sepulchers. Frenzied negotiations are in progress day and night. Threats

Frenzied negotiations are in progress day and night. Threats and counterthreats issue from the chancelleries of Europe. The issue of peace or war trembles in the balance. It is inconceivable upon any rational assumption that the people of the nations involved desire to be immersed in the withering sacrifices of such a struggle. Is there no solvent at hand to avert this imminent catastrophe? If there is, I make bold to assert that it will be found in the immeasurable depth and reach and compass of applied religion. Many of us are yet old-fashioned enough, indeed credulous enough, to yet believe that the only supreme power on this earth is that of a universally aroused sentiment of moral and outsitud representability.

spiritual responsibility to ourselves and all men, centered in the omnipotent power of prayer.

There is yet time to invoke the humanity of the episode in Gethsemane on the night of the great betrayal. "And, behold, one of them which were with Jesus, stretched out his hand, and drew his sword, and struck a servant of the high priest and smote off his ear. Then said Jesus unto him, 'Put up again thy sword into its place; for all they that take the sword shall perish with the sword."

Napoleon forgot that admonition and saw his glories crumble Napoleon forgot that admonition and saw his glories crumble and decay in the somber isolation of St. Helena. Julius Caesar ignored it, and fell thrust through with steel at the foot of Pompey's statue. There are other ambitious men who still have the chance to profit by their example.

The citizens of our country refuse to embrace the doctrine of despair. Up then with the colors of freedom, the colors of morality and humanity, the colors of faith and religion. May you not ever be lowered in surrender to any of the forces of evil.

Fifty Years of Crime in America

EXTENSION OF REMARKS

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, May 22, 1939

ADDRESS OF J. EDGAR HOOVER, DIRECTOR, FEDERAL BUREAU OF INVESTIGATION, AT NASHVILLE, TENN.

Mr. O'BRIEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by J. Edgar Hoover, Director, Federal Bureau of Investigation, United States Department of Justice, before the National Fifty Years in Business Club, Nashville, Tenn., May 20, 1939:

It is a distinct pleasure to meet with the members of the Na-tional Fifty Years in Business Club. I realize that it is my privitional Fifty Years in Business Club. I realize that it is my privi-lege, in addressing you, to speak to an invisible audience of thou-sands of persons, for you have established yourselves as a very important part of our social order. The sphere of your influence projects itself into every community in the land and the serious-ness of your purpose is attested by your desire to devote a portion of your time to the consideration of the suppression of crime. The keynote of your discussions has been centered around the general theme of the changes during the past 50 years. Undoubt-edly your successors 50 years from now will also devote much of their time and discussions to the changing modes. The world is never static or stagnant—it is molten and fluid, ever seeking new molds, ever receptive to new ideas. But the swift changes that

molds, ever receptive to new ideas. But the swift changes that constantly threaten us also summon us. Our greatest changes invariably present our finest opportunities. Even though we are rooted to the past, we must not forget that we belong to the future. It beckons with its manifold opportunities for those who wish to

make themselves of service to mankind.

The eyes of the world are focused upon America. She must look to you experienced men of the business world in facing her problems. She must seek assistance in the solution of these problems from all of us who cherish a heartfelt reverence for her past and whose hearts burn with an inexpressible thrill for her future. The record of 50 years of crime in America should cause us to bow our heads in shame. America today is seriously threatened by lawlessness and the very security, happiness, and welfare of our people are menaced.

people are menaced.

Crime, indeed, has kept pace with modern developments. Great progress has been made in crime detection and apprehension, but little has been done to strike at the sources of crime. While our population has doubled, crime has multiplied itself. No single industry or business, 50 or even 100 years old, is comparable in magnitude with the illegal activities of criminals. Their tentacles have found their way into every legitimate business and industry in the land. Even the almost impregnable forces of government. in the land. Even the almost impregnable forces of government have not been immune.

Lawlessness at times has corrupted legislative halls; it has pol-Lawlessness at times has corrupted legislative halls; it has polluted segments of the judiciary; it has contaminated public office; it has even demoralized certain of our law-enforcing agencies. Its subversive forces are gradually undermining the cornerstone of American democracy. Constantly it gnaws at the vitals of our social order. The business interests of the Nation have suffered tremendous damages from the plague of predatory activities. Certainly business can never reach the zenith of prosperity until widespread lawlessness is curbed. And it can be.

I need make only passing reference to the extent of present-day lawlessness. Our annual crime bill is \$15,000,000,000, or about \$120 for every man, woman, and child. This represents 400 percent more than we annually spend for education; it equals our annual food bill; and exceeds the amount annually paid in Federal, State, and municipal taxes. Our homes and our lives are threatened by an army of lawlessness numbering over 4,750,000 individuals.

Every 22 seconds a serious crime is committed in our supposedly every 22 seconds a serious crime is committed in our supposedly civilized land; every day, from dawn to dawn, 33 of our citizens are murdered. Last year nearly 1,500,000 serious crimes—such as murder, manslaughter, rape, robbery, burglary, and aggravated assault; and 13,000,000 lesser crimes, such as frauds, forgeries, embezzlements, vice, and other assaults—were committed. To be even more realistic, this means that one offense occurred for every nine persons in America last year. It is most disturbing to realize that crime in some form or other will visit at least one out of every four homes this year unless drastic steps are taken to stay the onslaught of our forces of lawlessness. There are in America today over three and one-half times more criminals than there are students in our colleges and universities; for every school teacher in America there are nearly four and one-half criminals.

are nearly four and one-nair criminals.

In your meetings you will discuss such matters as tariffs, commercial and industrial policies, fiscal and monetary matters, the development of foreign markets and subsidies, business efficiency and foreign affairs, together with scores of other problems. But you must realize that unless the men, women, and children of America are safe and secure in their homes and business establishments, unless the lives of those engaged in industry can be protected, and unless whole industries themselves can be freed from desperate, filthy racketeering, all these other questions become of secondary and perhaps minor importance. Like a pestilence, law-lessness stalks through the land—more deadly than the bubonic plagues of old. Men of greed, like syndicated leeches, are sucking the lifeblood of the Nation. They fear only a force greater than

theirs.

Truly, 50 years of crime in America has culminated into a positive threat to our social order. Whether we like it or not, we have been brought face to face with a crisis. Our future will not be determined by what we do 50 years or even 10 years from now, It will be determined by the manner in which we cooperate to solve the problem of lawlessness now. Our task is to summon the noblest action in order to safeguard our Nation. This crisis calls for strong character and honesty in every phase of endeavor. It demands that those forces which assail our liberties be exterminated with relentless justice. There can be no compromise between

righteousness and venality.
Corruption begets corruption. One of the worst degenerative forces in American life during the past 50 years has been corruption in public office. Corrupt politicians make venal politics, and right-thinking citizens know there is but one answer and one remedy. Corruption must be eradicated. Dirt accumulates un-disturbed when people grow accustomed to it and no longer feel ashamed. Venal machines of corruption attain their power beashamed. Venal machines of corruption attain their power because of a lackadaisical attitude on the part of our citizens, which is far too prevalent. Few communities in the land are free from contamination of the syndicated leeches who masquerade behind the flattering term "politician." The term "politician" when used correctly refers to one skilled in the science of government. No title is more honorable. Yet it has been prostituted and corrupted by sinister forces that literally steal the birthrights of freeborn American citizens. To be specific, I shall refer to a situation which indeed is not an isolated instance.

A few years ago on election day in a great American city the

A few years ago on election day in a great American city the armed fury of entrenched interests ran wild. The polls, instead of becoming a place where citizens could exercise their inalienable rights, became the gory scene of multiple crimes. Then came rights, became the gory scene of multiple crimes. Then another election. This time a brave and courageous Federal summoned a grand jury. He charged them with the words: "A corrupt vote is akin to a gun pointing at the very heart of America. If we would preserve America, we must preserve the purity of the ballot box, and we must do that if our prisons and our jails are crowded to suffocation with those who would destroy the Government." The to suffocation with those who would destroy the Government." The grand jury and the United States attorney started to work, and so did the men of the Federal Bureau of Investigation. That was in December of 1936. The revelations were startling. The investigation resulted in the conviction of nearly 300 persons in Federal court for violation of the election laws. In the first precinct investigated it was found that after the election officials had done their work not a single vote was cast for the defeated candidate. But scientific examination revealed that scores of ballots had been illegally altered.

At 5:30 p.m. on election day a gang of thugs appeared at one polling place and told one of the judges "to get." Another judge was told by a city official that if she persisted in counting the ballots she told by a city olicial that it she persisted in counting the ballots she would be taken for a "one-way ride." In another precinct it was disclosed that the ballots were taken behind the pulpit of a church, where erasures and alterations were made in the interests of the machine. In still another precinct one of the election judges was a 29-year-old woman who had previously been arrested seven times for forgery, disorderly conduct, and parole violation. She had twice been convicted and paroled.

This machine offered its support to all of the defendants who were indicted and assisted them by furnishing bond. Of course, the leaders would be expected to say, as they did, that they put

up the money for the bonds solely out of sympathy for the defendants in their hour of distress. They could see nothing wrong with this. In the trials involving these election frauds on various occathis. In the trials involving these election frauds on various occasions defense counsel openly admitted that their clients had violated State laws. One of the fearless Federal judges was prompted to say: "Those who are elected to protect the people from oppression and prosecute violations have not acted. Not a word has been said in protest. There has been no move to prosecute. They have done nothing. There have been * * * wholesale violations of State laws, and yet not a move has been made." The grand jury continued its work. The United States attorney worked. The Federal courts and the special agents of the Federal Bureau of Investigation worked. Gradually citizens began to regain confidence, as righteousness registered triumph after triumph. Facts were as righteousness registered triumph after triumph. Facts were marshaled, and again the Federal Government acted. The Attorney General of the United States, Hon. Frank Murphy, a man whose ney General of the United States, Hon. Frank Murphy, a man whose passion for honesty in public office is proverbial, stepped in—indictments were returned. Today the throne of the leader of this machine is toppling. And the Attorney General's challenge to public officials has echoed throughout the entire United States: "You hold your offices for one purpose alone," he said, "and that is to serve faithfully the people who are the source of your power. You cannot be beholden to any special leaders if you are to do an honest teh."

Meeting the menace of lawlessness is not a hopeless task if citizens everywhere arise to their responsibility. The forces of decency have weapons enough if men can be found with the courage and honor to use them. Despite the widespread extent of crime, we have made progress. The men of the F. B. I. have been coping with similar situations for years, and today 96 of every 100 criminals charged with the commission of a Federal offense investigated by the F. B. I., when taken into court, are convicted. During the most 5 years over 21 000 desperate criminals have been taken into past 5 years over 21,000 desperate criminals have been taken into custody and convicted in cases investigated by the F. B. I. I am happy to say that each of these criminals had his day in court in the orderly manner prescribed by the Constitution. Each had the the orderly manner prescribed by the Constitution. Each had the right of counsel, with the exception of the 16 criminals who, rather than surrender, sought to resist arrest. Facing the guns of gangland, the special agents of the F. B. I. had no alternative. They had to meet force with force.

And my heart becomes heavy when I think of the eight heroic agents who sacrificed their lives in line of duty by giving these enemies of society the benefit of the doubt and another chance to surrender, or who were shot in the back. Yet there is a small minority who apparently value the life of the criminal more than that of an officer of the law or innocent victim, who raise their voices in protest every time it becomes necessary for a special agent to resort to the use of firearms in self-defense.

agent to resort to the use of firearms in self-defense.

Kidnaping, that great despair to public confidence, has practically been conquered on every front in the Nation. One hundred and fifty-four times word has come to us since 1932 that a body has been snatched—152 times the cases have been completely solved and the kidnapers removed from society. They will kidnap and kill no more. In meeting the menace of kidnaping we have had to contend with crooked lawyers, renegades in public office, hide-out owners, money changers, undercover doctors, and others who aid crime by assisting its minions. I acknowledge with gratitude the public support which we of the F. B. I. have received. Truly, it has been a heartening factor. Each case that was solved has made our citizens feel a little more secure. The two unsolved cases will never be closed until the wrongdoers are brought to justice. They remain a challenge to law and order brought to justice. They remain a challenge to law and order and the men of the F. B. I. accept that challenge.

I have already mentioned that we have made greater progress in detection and apprehension of criminals than in the prevention of crime. I would go further and state that law enforcement has of crime. I would go further and state that law enforcement has made as much progress in the past few years as any other phase of public service. Law enforcement has been placed on a business-like, professional basis. The principles of modern industry and business efficiency and administration which you men of commerce have developed have been applied to this phase of government. And certainly we must all admit that successful law enforcement is a most important governmental function.

Reporting for the organization which I have been so proud to head during the past 15 years, I can definitely state it has not been a financial liability to the taxpayers of the Nation. Discounting for the moment the value of its services which cannot be estimated in monetary terms, in cold dollars and cents it has cost the taxpayers \$24,000,000 to maintain the Federal Bureau of Investigation during the past 5 years, and during that period we have returned or saved the taxpayers \$182,000,000—a dividend of over \$7 for every dollar which has been invested in its cost of opera-tion. This is apart from the security of person and property caused by the prompt detection, arrest, and conviction of thousands of predatory criminals.

Fifty years ago a peace officer, I am told, when he took his oath Fifty years ago a peace officer, I am told, when he took his oath of office, often was given a gun, a billy, and badge with the admonition, "Walk your beat and do nothing and do it well if you wish to succeed." Today that picture has changed, for law enforcement has truly achieved a professional status. Four years ago this summer we inaugurated the F. B. I. National Police Academy, which has already graduated 334 qualified police instructors from every State in the Union, Puerto Rico, the Canal Zone, Scotland Yard, the Royal Canadian Mounted Police, and the Quebec Provincial Police. The majority of these men are now operating police training schools, which accounts, in part at least, for the definite improvement of law enforcement. I look to the day when every police department in the land will have its own training school. As this type of training increases from year to year we may confidently hope that the same effective warfare on crime which our Bureau has been waging will be more and more reenforced by the enlightened cooperation of local agencies.

Crimes which 50 years ago would have baffled even the fictional Sherlock Holmes are being solved today through routine investigation. Consider the case which recently occurred in a Pennsylvania community. In perpetrating a burglary, a telephone wire had been cut to prevent the spreading of an alarm. Later the finger of suspicion pointed toward one Parris Compton. He was arrested. In his pocket was found a jackknife. An alert, well-trained police officer sent the knife to the F. B. I. laboratory for scientific examination. To the naked eye only a single fiber was visible which had lodged on the blade of the knife. White-garbed scientists studied this single fiber under a high-powered miscroscope. It was identical with the tipu fibers weren into the invalidation of the several tical with the tiny fibers woven into the insulation of the severed telephone wire, proving that the knife was used to cut the wire. The defendant was found guilty on evidence that stood bare and The detendant was found guilty on evidence that stood bare and undeniable, pointing to his crime. And this is but one of the 6,000 routine cases annually handled in the F. B. I. crime laboratory with its vast facilities available to all law-enforcement agencies without charge. Fifty years ago this violation would have gone unsolved had not a confession been extorted from a suspect. Here justice was vindicated. Not only is the pen mightler than the sword, the test tube is more effective than the rubber hose. And this goes on day after day.

But mere detection, apprehension, and conviction are not sufficient. The criminal must be either reformed and rehabilitated or forever ostracized from society. This is the least that the public welfare demands. And sooner or later most of them come out of prison. Last year prison doors opened four times every hour, day and night. A convicted criminal was released on condition that he abide by certain terms—one of which most certainly was that he would forever lead a law-abiding life. And this situation has been going on year after year. Ofttimes the release was obtained by fraud, ofttimes the prisoner was released under almost no supervision. It was not a rare occasion that the person would be released because of pressure brought to bear upon public officials.

The sound, humanitarian principles of parole have been prosti-The sound, numanitarian principles of parole have been prostituted by ill-informed sentimentalists. Increasingly this phase of criminal justice has been brought under public scrutiny. There is nothing new about parole. Twenty States had parole laws at the turn of the century. Only 3 out of the 48 States do not have parole laws today. Nevertheless, in addition to the Federal parole system, only a few States have parole systems that work—that are worthy of the name of parole. Here is a problem that definitely needs the influence of sound business efficiency and administration. It is a problem which has attracted the attention of Attorney General Murphy and has caused him to exclaim, "In the past not only have we failed to get the most out of parole, but from the beginning it has been a source of scandal."

The President of the United States, himself a long-time friend of parole, has recently said, "More than one-half of the persons in prison today have had to be locked up at least once before for a violation of the law. We have bungled in the manner and the method of their release."

With the warnings of these two great students of government before us, it is time that we approached the parole problem with a little more common sense. It is time that sound, practical, busi-nesslike methods supersede the whims of the gushing, well-wishing, mawkish sentimentalist. I believe that the public interest demands that the same principles be applied to the parole problem that have been applied to the detection and apprehension of criminals. guiding principle, the basic requirement, the sole consideration in judging each and every individual case in which parole may be administered should be the protection of the public. If sentimen-

administered should be the protection of the public. If sentimentality and emotionalism must intervene where only law and justice have their parts to play, let them step in to give such sustaining comfort as they may to menaced society.

We face the supreme task of self-preservation in conquering the ravaging desperado who lives by the laws which he chooses to obey. Either decency must prevail or we shall increasingly find ourselves bogged down in vice, corruption, and crime. These three are inseparable. Find one and you will soon find the others. The anti-date for lawlessness is decency and the development of character. dote for lawlessness is decency and the development of character. The underworld would not exist except for conditions in the upperworld. Yet social problems cannot be differentiated from moral problems. They are inseparable. Crime cannot be divorced from our social order; it is the product of our times. It can and must be brought to an irreducible minimum if civilization is to survive.

brought to an irreducible minimum if civilization is to survive.

The problem of youthful delinquency hovers over practically every home in America. It is appalling to note that last year 12 percent of our murderers, 28 percent of our robbers, 24 percent of our rapists, and 52 percent of our automobile thieves were under 21 years of age. Unfortunately, the responsibility for youthful law infraction today rests more upon the shoulders of the adult than it does upon that of youth. It exists largely because of a lack of discipline. Thirty million homes hold the solution. If the younger generation is properly trained and the proper examples set before it, the safety of tomorrow is assured. It is time for America to resurrect that standard of parental discipline and guidance which did so much to create law-abiding, successful, and forward-looking

citizens in the past. Criminals develop in our homes through errors of commission or omission. Shirking responsibility seems to be one of the signs of the times. Though we live in a modern era, nothing is more important than that we insure for the future. The course is from the high chair. It is up to the parents to see that the end isn't the electric chair. The American home holds the ultimate solution to our crime problem.

American Democracy as never before looms over the world's horizon as a beacon light of justice to all peoples. The very cornerstone of our social order is based upon the respect for the

cornerstone of our social order is based upon the respect for the rights of others and an adherence to the expressed will of the majority. We often say with pride that we live in a modern age. But every generation thought the same. Only one thing is truly modern—the traditional virtues of our heritage. Even they have been assailed by fly-by-night schemes and theories. Since the dawn of time adherence to certain rules of conduct has been fundamental. Laws of morality cannot be violated with impunity and neither can the laws of nature or of man.

Violation of the fundamental principles of sanitation and hygiene ultimately means incarceration by ostracism by reason of ill health. Violation of the laws of morality, if not forfeiting health, will surely mar character and decency. Excepting nature's catastrophes, the great disasters of the past 50 years have all sprung from a failure to adhere to lawful authority. The World War was precipitated by a murder and economic gangsterism. The economic crash of 1929 followed a violation of basic economic laws.

laws.

The greatest threat confronting the people of this Nation today is not hunger, communism, or the fear of foreign invasion. These are but the consequences of lawlessness. They are the antithesis of adherence to the laws of nature and society. Hunger could not exist but through violation of economic laws and fundamental principles of social justice. Communism has as its basic principle the overthrow of the laws of our democratic social order, and it is rooted in the slimy wastes of lawlessness. In times like these we must of course be prepared against foreign invasion, but at the same time we must not forget that the basic cause leading to the decline of all civilizations in the past has been debauchery of law and order. Let us abide by the truism of the ages and place of law and order. Let us abide by the truism of the ages and place first things first. The major task of society today is to insure that law and order shall reign supreme.

law and order shall reign supreme.

The pages of history are punctuated by the rise and fall of dictators. They are of three types. In the first instance, there are those who further their own selfish purposes and greed by operating behind a smoke screen of pseudo benevolence. Then there are the dictators of the gangster racketeering type, who rule by might and even create ideologies to serve their own purposes and instifut their own misdeeds. No civilization has long survived under justify their own misdeeds. No civilization has long survived under the hobnailed, crushing heel of might. Even our own people have not been wholly free of gangster racketeering dictators. In many communities we have seen the disastrous consequences of their unholy rule. We descrate the blood of the founding fathers which was shed for liberty and freedom every additional day that the racketeering gangster is permitted to exist. And, what is more, we invite our own destruction in not destroying him.

The third type of dictator is the very antithesis of those which

The third type of dictator is the very antithesis of those which I have mentioned. It is the dictatorship of the people, for the people, and by the people. In the United States we call it democracy—the dictatorship of the collective conscience of our people. We could just as well call it justice, for America stands for that. And when justice is not real—is not honest—is not the same for all peoples—then democracy does not exist in its purest form.

The true motivating spirit of our civilization must ever be justice. Anarchy is liberty without law. Liberty and law again define American democracy. To the youth of the land our responsibility is great. Youth must be inspired by the patriotic ideals which have dominated the designers and the builders of our Nation. It must be protected against the insidious propaganda emanating from those who would inject into our national blood stream the vicious, seditious, truly alien spirit of totalitarian dogmas and doctrines, such as "You must fight against the teachings which tell you to be a patriot in your country." The poison gas of misrepresentation and falsehood is used by them in enormous quantities. Neither communism nor fascism has a place in our social order. A concerted attack upon these twin vicious growths of an alien soil and an alien spirit is no less heroic than that waged by our Minute Men at Concord. American cannot exist half American and half alien. I think we are all agreed that we do not want the doctrines of foreign extremists to spread disaffection in the United States. of foreign extremists to spread disaffection in the United States. We are proud of our American form of government. If we want to improve on it, we will do it in our own way and in our own time. It is strictly an American affair, and the quicker the rest of the world learns this the better.

We need have no fears so long as justice reigns and civic right-eousness survives. Justice insures the integrity of a nation. Juseousness survives. Justice insures the integrity of a nation. Justice is character in action; it is honesty in endeavor; it is conscience without a blemish; it is the answer to 50 years of crime and the future of America. The minds and hearts of our citizens must be enlisted in the battle to make our Nation law abiding and law respecting. Obedience to the law means liberty. This is a crusade for America—true Americanism must prevail. May we dedicate every fiber of energy we possess toward this goal. Reciprocal-Trade Agreements

EXTENSION OF REMARKS

HON. ANDREW C. SCHIFFLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Friday, May 19, 1939

ARTICLE BY PROF. G. W. DYER

Mr. SCHIFFLER. Mr. Speaker, I feel very deeply about the tariff question and the policy of negotiating reciprocaltrade agreements. Almost daily I am receiving messages from my constituents complaining about the effect of this policy upon their individual employment and business life. Yesterday I received from the United States Stamping Co. at Moundsville, W. Va., a letter in which the writer stated that their loss in business in Puerto Rico alone, due to imports coming in from Japan, Czechoslovakia, and Germany during the past 4 years has decreased from \$50,000 per annum to a low in 1938 of \$8.600.

On the same day I received information that due to the reduced rates and advantages given to zinc imports the United States Zinc Smelting Corporation, in order to continue operations, were compelled to make a 10-percent reduction in salaries and wages of all officers and employees.

These and other reports reaching me, I believe entirely unprejudiced and predicated upon actual facts, convinces me of the vital importance of abandoning our reciprocal-trade policy and of establishing protective tariffs for our industries, agriculture, and workers.

I sincerely hope that those in charge of the negotiations of these treaties will promptly recognize the disastrous effects of such and abandon them notwithstanding the appropriation made this day in the face of my opposition and of the opposition of many of my colleagues.

I include herein an article written by Prof. G. W. Dyer, of Vanderbilt University, which appeared in the April issue of The Protectionist, entitled "Destroying Foreign Trade," which I believe throws much light upon the foreign-trade situation.

The article is as follows:

[From The Protectionist of April 1939]
DESTROYING FOREIGN TRADE

(By Prof. G. W. Dyer, Vanderbilt University)

The news from South America as bearing upon our trade with our southern neighbors is considerably more pessimistic than the published reports of the Lima Conference indicated. The administration is much disturbed over the fact that Germany and Italy are really getting the business in South America over American competitors. This fact in all probability is a big factor in leading the administration to form an alliance against Germany and Italy. It is well that the administration is disturbed over our loss of business in South America. But it is puerile to pick a fuss with these nations because they are underselling us on the open markets.

It is well that the administration is disturbed over our loss of business in South America. But it is puerile to pick a fuss with these nations because they are underselling us on the open markets. Business is not controlled by political emissaries nor by goodneighbor gestures. Business at home and abroad is controlled by costs of production and market prices. The markets of the world are open to the public, and business leaders are thoroughly familiar with these markets. The idea that the Government may gain new business for this country by sentimental political speeches, spectacular South American conferences, and by sending out political salesmen to find new markets for American goods is based on either deplorable ignorance of business conditions or on collitical elemeters.

If the South American people are buying goods from Germany rather than from this country it is because the cost of production in Germany is such that the Germans can undersell us on these markets. There is in this condition no ground or excuse for ill-will against the Germans. The Germans have the undisputed right to control their costs of production and to sell their goods wherever they can find a market for them. If they have kept their costs down while we have run ours up through wild spending and unprecedented wastes of the taxpayers' money we should congratulate them, and condemn our own folly. To rail against them because they are underselling us on the open competitive market is childish.

LXXXIV—App——135

The all-important question for the administration to consider in this situation is not the German form of government, but the factors forcing high costs upon business in this country—the extravagant, wasteful, and radical policies of the administration. The condition in South America is only one of the disastrous results to American business from the "quack" policy of "spending ourselves out of the depression." It is the unbearable increase in costs of production put on American business by this administration, and not any form of government that is driving American business out of the world markets. * *

business out of the world markets. * * * When the Government takes approximately one-third of the value of the finished products in direct and indirect taxes, a cost burden is put on the other two-thirds that will drive business out of the foreign markets and cripple it seriously on the home

markets.

Aid to Dependent Children-A National Investment

EXTENSION OF REMARKS

OF

HON. CAROLINE O'DAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1939

Mrs. O'DAY. Mr. Speaker, during the last few years, and specifically during the last few months, much has been said in hearings before Congress and in the press throughout this country of the increase in the number of old people in our population. Surprisingly little has been said about the parallel decrease in the number of children, although in planning for the future it is essential to consider those who will carry the future's burdens. Conservation of youth, important under any circumstances, is particularly urgent today.

In 1920, for every 100 persons between 20 and 60, there were 90 persons under 20, and only 13 over 60. In 1935, for every 100 between 20 and 60, there were only 68 young people, and the number of those past 60 had increased to 17. By 1975 the number of young people will have dropped to 48, and the number of the aged will have risen to 34. The proportionate falling off in youth is half again as large as the increase in old age.

The implication of these figures is startling and calls for no further comment. The protection of every child is an issue of national self-preservation—more important for those of us who are already past youth and for the Nation than for the children themselves.

In past years it was our American boast that every child was a possible president of the United States. The typical American attitude was expressed in pride in our children and an effort to bring to all of them the opportunities that public schools, public health, and the security high income of individual families afforded them. But in recent years, in the stress of unprecedented problems, it almost seems that the forgotten man in this country is not a man but a child.

In the Social Security Act the Federal Government has already recognized this problem and our obligation to meet it. However, the present Federal contribution for aid to children is figured on a much more limited basis than for either oldage assistance or aid to the blind. In the first place, Federal grants-in-aid for dependent children cover only one-third of the States' expenditures, whereas for the other two programs they are matched dollar for dollar. In the second place, the maximum monthly payment to which the Federal Government will contribute is \$18 for the first child and \$12 for each additional child in the same family, whereas the maximum for the aged and the blind is \$30 for an individual. Taking these two limitations together, the net result is that the top limit for Federal contribution is set at \$6 for a needy child and \$15 for a needy adult. If there are two children in the family, the Federal Government will contribute \$10, whereas for two old people in the same family, if the State so provides, it may be \$30, or three times as much Federal money as would be available for two children.

This is without consideration for the fact that where there are dependent children there must always be a mother or

some other relative. Many States, according to their financial capacities, are granting more adequate allowances, but make up the difference from State and local funds. Thus the more financially able States supplement the program from their funds, but the children of less able States are penalized.

During the fiscal year 1937-38 more than four times as much money from combined Federal, State, and local funds was paid out for old-age assistance as for aid to dependent children-\$175,000,000 in Federal funds for old-age assistance as compared with \$22,000,000 for aid to dependent children.

Though other factors may have played some part in this situation, there can be no doubt that a major reason for the lag in aid to dependent children is the unfavorable differential in the social-security law. The Social Security Board in its report to the President and to the Congress proposes that this differential be removed and that aid for children be put on the same matching basis and monthly maximum as the other two programs. In addition the Board suggests that the age limit be raised from 16 to 18 when the child is regularly attending school.

I believe these recommendations deserve unqualified support. They are the least we can do in fairness to the States and in fairness to the children who are eligible for this aid. Adequate Federal participation in aid to dependent children is more than a question of equity or common human kindness. It is a question of national self-preservation. Speakers, in behalf of children, usually stress the tragedy of childish misery. We are a warm-hearted Nation. We want children to be happy. I could use that argument in behalf of these measures. I could tell of homes kept together and of children assured of a mother's care because of the money provided. I could tell of other families where this help has not been given and where fear and actual want are taking their toll of the health and courage of the children.

But I know that you, as well as I, are aware of the humanitarian aspects of this problem, and perhaps, for this very reason, we may overlook the practical aspect. To fail to meet this problem is to countenance progressively increasing waste of the Nation's human assets. That is why security of children seems to me one of the most vital issues in our whole social-security program.

Aid to dependent children is an investment in health. It has been found that children in families on relief lose onethird more time from school because of sickness than those in families with a minimum of security. Sick children, if they survive, often grow into ailing or invalid adults. The provision of healthful home care should go far toward saving needless waste of child life and toward reducing the cost of future illness and dependency.

It is an investment in independence. Destitution, like ill health, can become a lifelong affliction. Security in the formative early years increases the probability that children will grow up prepared to take care of themselves when they have reached maturity. Aid to dependent children helps to foster an attitude of self-respect, rather than supine acceptance of dependency. It will reduce the burdens of public relief and assistance that the Federal, State, and local governments will otherwise be called upon to bear in coming years.

It is an investment in good citizenship. The relationship between juvenile delinquency and broken homes is only one part of the larger problem of poverty and crime-but a very strategic part. Aid to dependent children in a sensible, practical way, gives to millions of young people a foundation on which to build for themselves a constructive relationship

There is no better way of caring for children than in their own homes. On every count it is better economy now and it is a better investment for the future. This investment in the homes and the health, in the self-confidence and the self-respect of dependent children has a dollars and cents value. And it has a value in the less tangible but no less real wealth which accrues to the Nation from the quality and character of its citizens.

Adoption of the amendments to the Social Security Act will permit the Federal Government to assume its full, its just, and necessary share in this great and constructive investment for the Nation's future. If we are to maintain our cherished position as the land of youth and promise, we must take this action now.

New Deal Enemies, the Bankers, Finance Spending Spree of Pied Pipers

EXTENSION OF REMARKS

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, May 22, 1939

ARTICLE BY ROGER W. BABSON

Mr. SHAFER of Michigan. Mr. Speaker, this being National Debt Week in the United States, I believe it is pertinent that an article by Roger W. Babson, appearing in the morning newspapers of the Nation, should be reprinted in the CONGRESSIONAL RECORD. I therefore ask unanimous consent to extend my remarks and to include this appropriate article concerning the financing of Government spending. The article follows:

(By Roger W. Babson)

One of the toughest jobs in the financial world today is the protection of money and property. The yield on money is lower than ever and the risks and taxes greater than ever. Consequently bankers and investors are scared to death. They do not know what to do. They feel that whatever move they make will be wrong. They have never been so hard pressed before—not even in the abyss of the depression. The only securities which now meet with favor here on Wall Street are Government bonds. Capital has been retreating into these issues for the past 5 years. Because the 5-year treating into these issues for the past 5 years. Because the 5-year notes are tax free they meet with an artificial demand. From one end of the earth to the other United States Government bonds are considered the strongest investments that can be bought. A number of factors have boosted these bonds to the highest price level in history, so that certain issues yield less than 1 percent.

WHY "GOVERNMENTS" ARE FAVORED

These Government bonds are particularly favored by managers of These Government bonds are particularly favored by managers of institutional and trust funds. Such people believe their primary job is to maintain the principal of the funds committed to their care. Income is a secondary consideration with them. Whereas 10 years ago a conservative investment fund might yield 5 percent, today it yields 2 or 3 percent. Bankers prefer United States "Governments" because they are exchangeable into dollar bills at any time. A bank's only obligation is to pay depositors "dollars," regardless of what the purchasing power of these dollars will be. Trustees, too, are buying "Governments," because they feel the price of these bonds will hold up.

I seriously question the action of both trustees and bankers on two grounds. First, I believe that interest rates will eventually

two grounds. First, I believe that interest rates will eventually advance. Either a business boom or a war would increase money rates and shove down the high price of "Governments." Even if the price did hold up, the purchasing power of their income and principal would decline. Buying Government bonds, therefore, may be as risky business today as was the buying of common stocks in 1928—except for those who want ready funds with which to meet death taxes.

REGISTRATION

The second reason why I question the purchase of Government bonds is the financial status of the United States Government. If these bonds had to be registered with the Securities Exchange If these bonds had to be registered with the Securities Exchange Commission in the same way that private bonds must be, I doubt if many could be marketed. Such registration statement would have to show that the United States Government has not even earned operating expenses for 10 years. What corporation could get bankers to pay a premium for its 2-percent bonds if it had only earned half of its operating expenses for 8 consecutive years?

Yet good corporation bonds can be bought to yield 4 percent. These are obligations of well-run companies manufacturing or merchandising useful products. Ultimately, the future of Government bonds depends upon the making of money by these private companies. Interest on Government bonds is paid out of taxes. Corporation income taxes are the most lucrative form of taxes. These are not collected until the interest on corporation bonds is

These are not collected until the interest on corporation bonds is paid. Hence, no corporation profits, no taxes. Therefore, from a security standpoint, these corporation bonds should be excellent.

REPUDIATION OR INFLATION

Bankers and trustees must realize that Federal debt can be reduced only in two ways: (1) By outright repudiation, which means simply canceling the debt; or (2) inflation, which has the same effect in a round-about way. Because they are buying Government bonds, however, these bankers and trustees feel that when repudiation or inflation ultimately comes the public will not blame them.

Despite their hatred of the administration's financial policies and I suppose no group hates the New Deal more—these bankers and trustees do not have the guts to refuse to buy Government tell us, "You can't definitely say that we will have inflation or repudiation, Mr. Babson. It is not yet clear that we will." Well, perhaps not. It is not yet clear that we will." Well, perhaps not. It is not yet clear that Christmas is coming again, either. I ask these men, "How can current public debts ever be paid off?"

paid off?"

Some answer, "They do not have to be paid off so long as they do not get any bigger." My retort is that public debt will continue to multiply unless public spending is slashed or taxes boosted. Can Federal spending, for instance, ever be reduced 50 percent? Anyone who thinks it can be cut should just review the history of the present session of Congress. It was widely advertised as an economy session. A week ago the Senate passed the largest farm appropriation bill in history by a vote of 61 to 14! Taxes can be increased easier than spending can be reduced. However, if taxes are pushed much higher I fear a national sit-down strike of taxpayers! taxpavers!

Meanwhile the lazy public goes on voting for the Pied Pipers who got us into this jam. If the spending fund of these public vultures could be cut off by those who still control the country's capital markets we would take our first step on the long come-back trail. Our bankers and trustees are not only jeopardizing the interest of their own depositors and beneficiaries but they are putting the price on Government bonds. The smaller income control to the price of their own depositors and beneficiaries but they are putting an artificially high price on Government bonds. The smaller investor, less well-informed, buys "Governments" because he thinks their high price means a stability and safety. Yes, every time I visit New York City I feel a great need for bankers and trustees with character and courage!

American Retail Federation

EXTENSION OF REMARKS

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES Tuesday, May 23 (legislative day of Friday, May 19), 1939

ADDRESSES BY THE PRESIDENT AND SECRETARY HOPKINS

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD the addresses delivered last night by the President of the United States and Secretary of Commerce Hopkins before the American Retail Federation.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY PRESIDENT ROOSEVELT

I am happy to speak at this forum of the American Retail Federation. I feel a kinship between your business and mine. The backbone of the customers we are both trying to satisfy is the same—in your case the many small customers whose steady demand

same—in your case the many small customers whose steady demand for the necessities and a few luxuries of life make up your volume; in my case millions of average American families whose standard of living is the practical measure of the success of our democracy. For you who are in the honorable business of storekeeping, the flow of consumer purchasing power determines the difference between red and black on your account books, and for the Nation the difference between unemployment and prosperity.

That is why I want to devote this opportunity to a discussion of Government fiscal policy in relation to consumer purchasing power. Some highbrow columnists and some high-geared economists say that you and I think too much about consumers' nurchasing nower.

that you and I think too much about consumers' purchasing power and look at our economic problems from the wrong end. They say that we should glue all of our attention on the heavy industries and should do everything and anything just to get these industries to work and to get private investors to put up the money to build new buildings and new machines without regard to the average consumers' need or his ability to use these buildings or machines.

By and large, you will find that these experts are the same as those who in 1929 told us that conditions were sound and that we had found the way to end poverty when we were building luxurious office buildings, hotels, and apartment houses which consumers did not need and had not the purchasing power to pay for.

THEORIES STILL WRONG, HE SAYS

Today, in 1939, they tell you that conditions are not sound because we are trying to build the sort of houses and other things which our people really need and because we are trying to make sure that our people have the purchasing power to pay for these things. They were unrealistic and theoretical when they were prophesying

their new era in 1929—they are just as unrealistic and theoretical and wrong—when they are prophesying national bankruptcy in 1939. To translate this into terms of the retail trade the shelves of heavy industries in 1929 were seriously overstocked. You know what happens to storekeepers if they buy twice as much as the public can buy from them.

In the last analysis, therefore, consumer buying power is the milk in the coconut of all business.

Whether you are a big department store or do business in a small way on the main street of a small town, your sales are dependent on how much money the average family in the community earns. That is a homely way of putting it, but it is an munity earns. eternal truth.

eternal truth.

That is one reason why I have talked about the one-third of our population that is ill-clad, ill-housed, ill-fed. That third—40,000,-000 people—can buy very little at the stores. Therefore, their local stores can order very little at the factories. Some of my friends laugh at me when I stress this, laugh at efforts to establish minimum wages! But the little and the big storekeeper understand and know they will sell more goods if their customers have more money. I want, and I think I have your help, to build up the nurchasing power of the average of your customers. purchasing power of the average of your customers.

SAYS "GAMBLING" IS ADVOCATED

How shall we produce more customers with more money?
One school of thought is what I call the school of the gamblers.
You find some of them in every community, as well as in Wall
Street, and some of them, the political variety, even in the halls
of Congress and State legislatures.

That school is eager to gamble the safety of the Nation and of our system of private enterprise on nothing more than their personal hunch that if Government will just keep its hands off the economic system customers will just happen. I use the word "gamble" because there is no modern experience to support their

theory.

In fact, modern experience denies their theory. Between 1925 In fact, modern experience denies their theory. Between 1925 and 1933 Government abandoned practically all concern for business and put into effect a tax system such as old dealers dream about. Customer and the buying power of customers were left just to happen. You know how many and how much happened. These people who are playing the "it may happen" hunch today are actually the wildest-eyed radicals in our midst because, despite proved failures, they want to gamble on their own hunch once more. In the other school of thought we are conservative New Dealers. We are the conservatives because we simply cannot bring ourselves to take radical chances with other neonle's property and other

to take radical chances with other people's property and other people's lives.

Now, the owner of a private business may have the legal right to take a long chance that may make or break his personal fortune. If he alone goes out of business, the economic system is not endangered.

But the people who run the three branches of our Government do not have the moral right to gamble with the well-being of 120,000,000 Americans. If millions of citizens starve, it is no answer to the starving to say that in the sweet by and by business, left to itself, will give them a job.

ASSAILS CRITICS OF FEDERAL DERT

Partisans are going around the country scaring parents who are not starving by telling them of an increased national debt which their grandchildren will have to pay. Certainly that is not as alarming as telling parents who are already starving that an untrammeled business set-up will provide their grandchildren with food in 1989. Yet that is what the radical gamblers of business and politics might have to say if they put their theories into practice ext year.

Not one of you who are good Americans and practical Americans believe that we could repeat the catastrophe of those years immediately preceding and following 1929 and emerge from it with our economic and social system unchanged. No businessman, big our economic and social system unchanged. No businessman, big or little, can fairly or patriotically ask his Government to take a course of action that runs that risk.

That is why our school of thought—the conservative school—holds the view that an intelligent nation should rest its faith in

holds the view that an intelligent nation should rest its faith in arithmetic rather than in a hunch.

Today, in order to provide customers for business, your Government uses Government capital to provide jobs, to prevent farm prices from collapsing, and to build up purchasing power when private capital fails to do it. For example, out of every dollar spent by the Federal Government to provide jobs, more than 50 cents passes over the counters of the retail merchants of America.

We also use what we call social legislation—such as legislation to encourage better pay for low-paid labor and thereby provide more and better customers for you; such as legislation to protect investors, so that they may continue to be your customers without losing their savings in worthless stocks and bonds.

I wonder if you have any conception of the number of businessmen and bankers and economists whom I talk with briefly or at length in any given month of the year. I wonder if you have any conception of the variety of suggestions and panaceas they offer me. I wonder if you know the very large percentage of them who honestly and very naturally think of national problems solely in

terms of their own business. I wonder if you will be surprised if I tell you that most of them leave my office saying to me, "Why, Mr. President, I did not know about that. You have given me a new perspective. I never thought of the problem in that way

A CONVERSATION ON THE BUDGET

I sit in my office with a businessman who thinks the surest way to produce customers is to balance the Federal Budget at once.

I say to him, "How?"

Sometimes he says, "How should I know? That is your job.
Cut the Budget straight through 10 percent or 20 percent."

Then I take from my desk drawer a fat book and it is apparent at once that he has never seen or read the Budget of the Government of the United States.

ment of the United States.

He tries to change the subject, but I hold him to it. I say: "This Budget is not all of one piece; it is an aggregate of hundreds of items. Either we will have to cut every item 10 percent or 20 percent or, if we do not do this, cut some items very much more than 10 percent or 20 percent."

I point out the one and a half billion dollars for the Army and Navy. He pounds the desk and says: "Don't cut that item—not in these days."

I show him the item of a billion dollars for interest on the

I show him the item of a billion dollars for interest on the public debt. He owns some Government bonds and rejects any cut in his interest.

I show him the billion-dollar item for war and civil-service pensions. He says: "No; no cut there."

I mention the billion dollars for running the permanent func-I mention the billion dollars for running the permanent functions of the regular Government departments—they cost less today than under my predecessor. He readily agrees that the postman and the G-man and the Forest Service cannot be curtailed. The only people he would sever from the pay rolls are the tax collectors. That gets us down to a few other big items—totaling over \$4,000,000,000 to take care of four things—payments to agriculture, Federal public works (including P. W. A., reclamation, and flood control), work relief for the unemployed (including C. C. C.), and assistance for our old people.

assistance for our old people.

My visitor agrees with me that we are going through a transitional period seeking the best way to maintain decent prices for the farm population of America, trying to make them better customers of businessmen—and that even if we have not yet found the permanent solution we have got away permanently from 5-cent cotton and 10-cent corn and 30-cent wheat.

SOME INCONSISTENCIES NOTED BY HIM

I come to the public works item. He suggests that that can be cut 50 percent. I happen to know that his community is working tooth and nail to get a grant for a much needed new high school, or that his county suffered severe property losses from recent floods. I suggest that we will start economy right there and not give the grants, defer building the levee or the flood-control dam for 20 or 30 years for 20 or 30 years.

In every case I find what I suspected. His local chamber of In every case I find what I suspected. His local chamber of commerce, his local newspapers are yelling their heads off to have those projects built with Federal assistance. And I say to him—"Consistency, thy name is geography. You believe with the United States Chamber of Commerce that Federal spending on public works should cease, except in your own home town."

The item of funds for work relief; there my visitor-customer makes a last stand. He wants that out and out hard.

makes a last stand. He wants that cut, and cut hard.

We agree that there are between three and four million American workers, who, with their families, need work or money to keep alive. I drive him to the inevitable admission that the only alternative is to put them on a dole.

That is where I make a stand.

I tell my visitors that never so long as I am President of the United States will I condemn millions of men and women to the dry rot of idleness on a dole; never condemn the business enterprises of the United States to the loss of millions of dollars worth of customer purchasing power; never take the terrific risk of what would happen to the social system of American democracy if we foisted on it an occasional basket of groceries instead of the change to work of the chance to work.

DEFENDS THE WORK POLICY

I well know the difficulties and the cost of a work policy.

I do not need to be told that 5 percent of the projects are of questionable value—I know it. Or that 5 percent of the people on relief projects ought not to be on the rolls—I know that, too. But when you think of nearly 3,000,000 men and women scattered over all the 48 States and all of the 3,100 counties in America, I am proud of the fact that 95 percent of the projects are good and that 95 percent of the people are properly on the rolls. And I know that the American people cannot be fooled into believing that the few exceptions actually constitute the general practice. practice.

My friend across the desk murmurs something about old-age pensions. He is a bit half-hearted about this and he finally admits not only the need for dignified support of old age, given and accepted as a new American right, but he realizes that over a period of years this support will have to be extended rather than reduced. You and I and all Americans agree that we must work out this problem for our old nearly.

out this problem for our old people.

And so my visitor leaves convinced, in 9 cases out of 10, that balancing the Budget today, or even next year, is a pretty difficult if not an impossible job.

TELLS HIS STAND ON TAXES

A few words about Federal taxes:

They fall into three principal categoriesconsumer taxes. like the taxes on cigarettes and gasoline and liquor; personal taxes, like the personal income taxes and the inheritance taxes; and, finally, taxes \$6,000,000,000. corporations. on Together they yield nearly

For good, sound business reasons two things seem clear to me.

For good, sound business reasons two things seem clear to me. First, especially in view of the unbalanced Budget, we ought not to raise less money from taxation than we are doing now.

Second, it would be bad for business to shift any further burden to consumer taxes. The proportion of consumer taxes to the total is plenty high enough as it is. Remember, as businessmen and as retailers, that any further taxes on consumer, like a sales tax, means that the consumer can buy fewer goods at your store.

Therefore, I want to leave the proportion between these three groups of taxes just where it is now.

That means that if we reduce so-called deterrent taxes on business corporations, we must find substitute taxes to lay on business corporations. That language is as plain as an old shoe. Let me give you an example of what I call making a mountain out of a mole hill. There is a hullabaloo for the repeal of the undistributed earnings tax. You would think that this was the principal deterrent to business today. Yet it is a simple fact that out of \$1,100,000,000 paid to the Federal Government by corporations, less than \$20,000,000 comes to the Government from the undistributed earnings tax—less than 2 percent of the total.

LAYS DOWN TWO CONDITIONS

LAYS DOWN TWO CONDITIONS

Let me proceed. I am wholly willing to have this \$20,000,000 tax, less than 2 percent of the total, wholly repealed on two simple conditions, which are based on principle.

The first is that this \$20,000,000 shall be raised by some other

form of tax against corporations and not raised by some other groups of taxpayers—and that it shall be raised in such a way that it will be paid by the 28,000 bigger corporations, earning more than \$25,000 a year, and not by the 175,000 little corporations earning less than that sum.

second condition is that in the repeal of this tax we shall not return to the old tax evasion loophole by which a small group of very rich people were able to leave their profits in closely held corporations, thus avoiding the full rates of the higher brackets on their personal incomes. Patriotic people will not want to go on their personal incomes. Paback to that pernicious habit.

I have talked with you at some length about the radicals who have the hunch that we ought to go back to the conditions of 1929; about performing a major operation by amputating present

functions of government; and about the efforts of some who would reduce corporation taxes and add to consumer taxes.

But I would not have you believe that the conservative attitude of this administration plans as any permanent part of our American system an indefinite continuation of excess of outgo over cash receipts.

This week is dedicated by the exponents of the administration

This week is dedicated by the opponents of the administration to merchandising horror about the national debt. We are having a national debt week like a national clean-up and paint-up week.

HE TALKS ABOUT THE DEBT

Let us talk about the debt in businessmen's terms. In the first place, a nation's debt, like the deposit liability of a bank, must be considered in relation to its assets.

A large part of the Government debt is assets.

A large part of the Government debt is offset by debts owed to the Government—loans of many kinds made on a business basis by the R. F. C. and the Farm Credit Administration, for instance, and now being repaid on schedule. These assets are just as sound as the loans made by the bankers of the country.

Another portion of the debt is invested in Federally owned endeaverse. Like Paulder, Dom which will not out a principal and

Another portion of the debt is invested in Federally owned enterprises, like Boulder Dam, which will pay out, principal and interest, over a period of years.

A third part of the debt has been invested in works like flood-control dams and levees, to save us from heavy future losses. They will pay for themselves in a very few years by eliminating annual property damage which each year has run into hundreds of millions—pay by the saving of taxable values which otherwise would have floated off downstream.

The next thing to remember about the debt is that government.

The next thing to remember about the debt is that government, like businessmen, is investing in order to create a higher volume income, and, therefore, a bigger net yield for government. National income will be greater tomorrow than it is today because Government has had the courage to borrow idle capital and put idle labor to work idle labor to work.

The year before I took office our national income was thirty-nine billions. In 1937 it got up to sixty-nine billions. In 1938 it went back to sixty-two billions. Today it is running at the rate of sixty-five billions. At eighty billions, the income from present taxes will be sufficient to meet expenditures on the present scale and actually to reduce our relief appropriations.

SAYS NO SURPLUS STOCKS EXIST

Today, with no danger of surplus of goods overhanging the market—just because we have tried to keep consumer purchasing power up to production—the Nation is in an excellent position to move forward into a period of greater production and greater

employment.

And, when this week you see all the crocodile tears about the burden of our grandchildren to pay the Government debt, remem-

ber this:

Our national debt, after all, is an internal debt owed not only by the Nation but to the Nation. If our children have to pay interest on it, they will pay that interest to themselves. A reason-able internal debt will not impoverish our children.

But if we do not allow a democratic government to do the things which need to be done and hand down to our children a deteriorated nation, their legacy will be not a legacy of abundance or even a legacy of poverty amidst poverty.

Don't you green that the halfest our children as the state of the state o

amidst poverty.

Don't you agree that it is better to work unitedly to balance national income and national outgo at a level where government can do the things that have to be done to preserve our people and our resources, than to play the speculative hunch and withdraw government from lending and investment, from conserving property and from providing work for our capital and our people, in the hope that in some mysterious way a miracle will occur—a miracle which our only experience under modern conditions has proved impossible?

I keep saving "do not lose sight of the forest because of the

I keep saying "do not lose sight of the forest because of the trees." Let us always distinguish principles and objectives from details and mechanics. You cannot expect this administration to alter the principles and objectives for which we have struggled the

last 6 years.

But if you approve of the purposes that lie behind our policies, but believe our operating method can be improved, then your help and counsel are welcome—doubly welcome in this administration. That relates to the details of taxation, details of relief, the details of every administrative branch of the Government.

CITES ROLE THAT PEACE MAY PLAY

If I have spoken to you seriously tonight, it is because I believe that you, too, are thinking of the well-being of every man, woman, and child in our country—that you go along with me in every effort that I can make for the preservation of world peace and for the preservation of domestic peace—not merely an armed peace which foregoes war for the moment, but a peace that comes from a knowledge, both abroad and at home, that there will be no further acts of aggression on the part of nations, on the part of groups, or on the part of individuals. You think, rightly, of profits in your own business—so does every other American—so do I. But we are not ruled by the thought of profits alone. More and more we seek the making of profits by processes that will not destroy our fellow men who are our neighbors.

That is one of the functions of your Government. It seeks

men who are our neighbors.

That is one of the functions of your Government. It seeks your cooperation in the extension of that ideal. It is open to your advice and your help—because it believes that its fundamental ideals and yours are the same.

That is why I came to you, not in the spirit of criticism, not with a big stick, but with a simple plea for your assistance as American citizens in working out our common problems with good will and with the maintenance of the ideals of peace.

ADDRESS BY SECRETARY HOPKINS

It is with pleasure that I come before the American Retail Fedration. Yours is a comparatively young organization, but I be-lieve your forum is evidence of the increasingly important role

you will play in the field of retail distribution.

you will play in the field of retail distribution.

It is your undertaking to be truly representative of the Nation's retailers. This is a task of great importance and is a responsibility which I am sure will not be taken lightly. Many of our producing groups, because of their small numbers and compactness, have long been organized to represent themselves and their interests with great effectiveness. They have impressed their problems and needs upon the Government and citizens in general. It is easy to understand why the retailers of the country, because of their number and geographical scatter, have taken so much time to develop and express their point of view to any comparable degree. This forum will also serve another valuable purpose. It will reestablish in the public mind a picture of the vast scope of American retailing and the vital role it plays in our economic life. Because the store on the corner or down the block is so much a part of the daily routine, the average person seldom gives a thought to

of the daily routine, the average person seldom gives a thought to this complex and important business. He probably doesn't realize that there is one retail store for every

20 families in the country.

He probably doesn't realize that they provide work for a million and a half storekeepers and 4,000,000 employees.

He may not realize that they carry an annual pay roll of \$4,000,-000,000, or 10 percent of all wages and salaries paid in the Nation. He probably doesn't realize that in 1938 more than \$35,000,000,000 worth of goods was distributed through retail channels.

SERVES DOUBLE FUNCTION

This far-flung network of retailers serves a double function. First, it distributes the products of the farmer, the manufacturer, the miner, and the importer to the ultimate consumer. And, secondly, it is a sensitive agency which appraises the desires and needs of the consumer and relays these back to the producer.

When we study historical trends we find that the role of distribution is becoming of increasing relative importance in economic life. This country is blessed with the means of abundance, but we have failed to utilize fully these means for the common good. Although it is the responsibility of other segments of our business life as well, this challenge of effectively distributing what we are capable of producing is perhaps yours in a larger measure than that of any other single group.

The individual consumer wants more goods, but many of them The individual consumer wants more goods, but many of them also want more services in obtaining them. Among these services are increased diversity of product, installment and credit facilities, delivery, quick adaptation to changing demands, more attractive presentation, and other auxiliary services which make the retailer's performance more involved and more important. By providing these services you both enhance the market value of your efforts and help bring about distribution of the products of industry in a manner necessary to meet the expressed desires of some people. Paradoxically, furnishing these added services poses the problem of satisfying consumers who have neither the desire nor the money to pay for these extra services which many of us demand. Perhaps I should add that some of these services are of dubious social value, but are the natural results of competitive selling efforts. Thus the

but are the natural results of competitive selling efforts. Thus the multiplicity of brands and the snowballing processes of competitive advertising may add to the costs of distribution without giving corresponding benefits to the consumer.

WOULD ENLARGE AID TO CONSUMERS

While there are several agencies in the Federal Government engaged in activities for the benefit of consumers, I have always felt that the Government's whole program has never adequately pro-tected and promoted their interests. I am convinced the Department of Commerce should play an appropriate role in such a pro-gram. The development for consumers of standards and grades of certain products and the conducting of research in business practices directly affecting consumer interests are within the scope

of the Department's purposes.

In recent years consumer organizations have been growing, and through them the consumer has been able to express himself more articulately. You, as retailers, should welcome these expressions. Consumers should not only receive but are entitled to a place at the conference table with retailers, wholesalers, and manufacturers. If the Department of Commerce in cooperation with the Department of Agriculture, the Department of Labor, and other agencies can help satisfy consumer needs, we will have served a agencies can help satisfy consumer needs, we will have served a

useful purpose

Recently the Department of Commerce has moved into new fields of aids to business. I want to discuss with you what the Department is now doing as well as plans which I have in mind for the future. For this occasion, however, I shall confine my remarks to the Department's work on the domestic front relating to business

Particularly would I direct your attention to the Bureau of the Census and the Bureau of Foreign and Domestic Commerce. They collect, analyze, and disseminate information to help American businessmen in studying problems, local, national, or international

The development of analytical studies and the distribution of many types of economic information in concise and useful form through publications and conferences have long been the responsibility of these Bureaus.

SURVEYS AID BUSINESS

The Department's surveys are manifold. They include comprehensive population and industrial censuses at regular intervals. A current retail sales-reporting program provides monthly statistics on sales of retail stores, by trade and type of store, and now covers 28 States. Our objective is to expand this service to blanket all 48 States. An annual survey of retail credit, of collections and bad-debt losses, which, incidentally, is made in cooperation with the National Retail Credit Association, is part of

eration with the National Retail Credit Association, is part of the program.

The Department compiles national-income figures on annual and monthly bases. To make these income figures even more valuable to businessmen, we have just compiled and published them on a State by State basis. Many special reports on such practical problems as store arrangement and store modernization have been widely distributed.

Business has found all of these functions to be of practical value and has made wide use of the Department's services. However, I am impressed with the need for supplementing these endeavors on many fronts. Not only must we expand the work in existing fields but we must constantly explore new areas which challenge our progress and which offer opportunities of fruitful results.

Some weeks ago I publicly expressed the hope that Congress will approve a pending bill which would promote business through establishment of State business research stations, working with the Department of Commerce. This proposal was sponsored only after

Department of Commerce. This proposal was sponsored only after discussion and study by a committee representing the Conference of State University Schools of Business and Department of Commerce officials. As the bill states, the purpose of the legislation is—and I quote: "To improve the general economic welfare of the counand I quote: To improve the general economic wehare of the country by establishing, extending, and coordinating business research and to furnish aid and assistance to small business by providing facilities for research into their problems similar to the research facilities now available in large business enterprises."

BUSINESS LOOKS FOR INFORMATION

The individual businessman is called upon constantly to make decisions vital to successful operation. While many of these problems are identical in character from one area to another, others are local in nature. Many do not lend themselves to general study on a national scale. Under this program, projects can be undertaken of immediate and direct aid to business communities in the several States.

Our large business enterprises are becoming more and more aware of the increased need for information and understanding

of market opportunities, price policies, inventory practices, credit facilities, accounting techniques, advertising media, consumer preferences and other factors essential to profitable operations. This increased cognizance is evidenced by the growth of economic research units in large corporations. The limited resources of small businesses necessarily prevent them from undertaking similar studies though their needs are equally essential.

The present activities of the Department of Commerce are largely focused upon the collection and distribution to business, men of information either in statistical form or in descriptive terms concerning actual business operations. It is a service agency for business—and this is a significant function. However, the

terms concerning actual business operations. It is a service agency for business—and this is a significant function. However, the Department greatly needs to deal with national and business problems on a policy level—not so much in terms of individual businessmen as in terms of broad economic factors. To move specifically into this area, I propose to strengthen our work by creating within the present framework of the Department of Commerce a Division of Industrial Economics. This will involve consolidating several of the existing units in the Bureau of Foreign and Domestic Commerce, and the addition of some persons to our staff of unquestioned competence in this field. staff of unquestioned competence in this field.

RESPONSIBILITY OF SECRETARY

The Secretary of Commerce has a very real responsibility to the rest of the Government and to the business community. He must concern himself with the broad problems of public policy which involve determining what the Government should do to assist the economic system in preserving its health, and with those specific problems which arise in individual trade and industry situations.

These are not abstract problems. For example, a bill is presented to Congress and the appropriate committee asks us to express our best judgment of its necessity and probable consequences. This bill may affect the welfare of an entire industry, its management, its members, its investors, its suppliers, and its customers. An administrative agency may be considering some action of grave import.

members, its investors, its suppliers, and its customers. An administrative agency may be considering some action of grave import. An industry may be considering the adoption of policies affecting the public interest, and wish for advice from the Government.

It is obvious that even with the best will in the world and the full use of my time and energy, I cannot as an individual deal wisely with all these matters. I must necessarily lean heavily upon the resources and ability of men in the Department of Commerce who can bring to bear expert knowledge and long familiarity with the problems.

problems

problems.

To this end, this new division will strengthen the effectiveness of the Department of Commerce at two particular points. In the first place, it will concentrate its efforts on understanding and evaluating the economic state of the Nation. At the present time the Department is active in gathering information. It publishes the most comprehensive record of current business statistics produced anywhere in the world. It makes estimates of national income which are accepted as authoritative. However, we must do more than assemble information. The real job is to put these facts to work. At present, we are collecting pieces of a picture puzzle. But separate pieces mean nothing. We must concentrate on trying to put those pieces together. The Department of Commerce must be able to present the picture, not the puzzle.

MUST HAVE BASIS FOR DECISIONS

Decisions involving private policy and public policy, in the ab-Decisions involving private policy and public policy, in the absence of facts objectively interpreted, must rest on guesses concerning the direction and significance of our economic developments and trends. Unquestionably it is one of the fundamental tasks of the Commerce Department to provide as solid a basis as possible for these decisions. The problems are here. Decisions cannot be avoided. When there is a large area left for guesswork, it is inevitable that mistakes will be made, and misunderstandings and controversies will be most difficult of solution. Only by means of a continuous and elaborate study of the present can intelligence be substituted for guesswork in both public and private decisions.

The second area which must be thoroughly cultivated relates to

The second area which must be thoroughly cultivated relates to the problems of specific industries and trades. Certain problems emerge as general problems for the whole economy, others take the form of difficulties in specific industry situations. Some industries have laid their problems before the Government seeking help. Some industries are so important to the public welfare that the Government cannot shirk its responsibility by leaving them to struggle with their problems alone. Some industries have been forced by circumstances to adopt policies contrary to the public welfare.

In all these cases it is important that the Government be able In all these cases it is important that the Government be able to analyze the situation expertly and sympathetically. In certain circumstances it may be possible for the department to work jointly with the industry, exploring the situation thoroughly and seeking a constructive solution to the problem. There is a best solution for every problem. I believe that the Department of Commerce has a major contribution to make in finding those solutions, and shall proceed with such a program.

My aim is to administer the Department of Commerce in such a way as to make the greatest possible contribution to the effective working of our economic system—to the task of raising our national income.

REJECTS NARROW MEANING OF ACT

While I am mindful of the legal responsibility of the Department of Commerce to promote trade and industry, I have never assumed that Congress intended the enabling act to be interpreted in a narrow and restricted manner. I believe it is our responsibility to promote trade and industry not just for the benefit of one group in

our society, but, rather, for the common good. Business in its broader sense comprises not only owners and managers of enterprises, but the worker and consumer as well. Each is a vital link in a chain which makes up our whole economic structure.

Unless all these groups are in a healthy economic state, there can be no genuine prosperity. If profits are essential to business, as I believe they are, then most assuredly decent wages are equally essential to the worker, adequate farm prices equally essential to the farmer and a standard of living consistent with our conscitution.

essential to the worker, adequate farm prices equally essential to the farmer, and a standard of living consistent with our capacity to produce equally essential to the consumer.

Our economic machine has come a long way since 1932, when it produced a national income of only \$40,000,000,000. At present it is operating at a national income rate of more than \$65,000,000,000. While this \$25,000,000,000 gain measures substantial progress, we are still aiming for those higher levels that can be ours. Prices are lower than in 1929, when we had an \$81,000,000,000 income. But even at 1929 prices we are still several billion dollars below that level and our population has increased by some 9,000,000 persons.

HOLDS NATIONAL INCOME TOO LOW

Satisfying the wants and needs of our people makes it imperative that the national income be raised substantially by production of more goods and services. At the same time increased income and purchasing power must be directed toward those now unable to buy the food, clothing, and shelter they need.

After all, one out of every four families now receives an annual income below \$750—or \$15 per week. More than half of our families receive less than \$1,250 income per year—or \$25 per week. These figures makes obvious an abundant potential demand for more goods and services.

for more goods and services.

You retailers, familiar with buying habits, know what would happen if we could lift the \$15-per-week families into the \$25-per-week income group. There would follow a substantial increase in the purchase of goods and services by these people. These families would spend 22 percent more for food, 38 percent more for house-hold operation, 88 percent more for medical care, and 102 percent

hold operation, 88 percent more for medical care, and 102 percent more for clothing.

Not only would this increased income spell a more comfortable and dignified life for these families, but it would be reflected in higher profits for you. This administration recognizes and always has recognized the necessity of fair business profits as an essential basis for increasing employment and private investment.

It has opposed and will continue to oppose only those business profits made:

First, by misrepresentation of this to the property of the profits and the property of the profits and the property of the profits and the profits and

First, by misrepresentation of things that are sold, whether articles of consumption or securities;
Second, by exploitation of labor, whether in wages, hours, or conditions of work;

Third, by wanton destruction of natural resources, whether soil, minerals, or forests; or Fourth, by abuse of monopoly position, whether acquired by franchise or through trade-practice agreements.

URGES BUILDING SOUNDER STRUCTURE

Profits so made are subversive to private capitalism. looking businessmen must support Government in eliminating them so that we can build a sounder and stronger business structure.

This administration met a pressing challenge by developing the most fundamental economic and social reforms in the history of the Nation. With the underlying principles of these basic reforms there can be no compromise. To suggest that the laws which gave life to these principles can be improved is in no sense a valid

life to these principles can be improved is in no sense a valid argument against the merit and need of these reforms themselves. In the process of improving such measures as the Social Security Act, the corporate tax laws, farm legislation, and others, we must make certain, however, that the net result of our efforts will, on the one hand, tend to increase employment and production, and, on the other, enhance the opportunity of our humblest citizens to share in the decent way of life. I believe these two objectives are in no sense contradictory.

Surely the risking of private money in new enterprises and productive processes does not require an environment in which the farmer and worker is impoverished. Use of Government funds—belonging to all the people—to improve the lot of the worker and the farmer while our economy moves upward into balance is but the modern method of protecting our private economy. In earlier years this was done through subsidies, franchises, and grants of land.

Today it is done more directly through provision of jobs, benefits

Today it is done more directly through provision of jobs, benefits to farmers, loans to business, and assistance to the aged and the needy. We know that now there are more jobs, higher wages, greater profits, and better farm prices than prevailed during the period from 1929 to 1933. But we are not satisfied with this progress. We must push on to higher ground.

There may be those who fear the democratic process by which the people rule the Nation and choose agents to exercise executive functions in their behalf. I like it.

I like it because I enjoy the freedom of saying publicly or price.

I like it because I enjoy the freedom of saying publicly or pri-

I like it because I enjoy the freedom of saying publicly or privately anything I please.

I like it because I can go to whatever church I choose.

I like it because I enjoy reading the good things written about me, while, at the same time, recognizing the need for possessing the tolerant spirit which absorbs the barbs and blunt criticism found in the printed word.

With these rights treasured in the hearts of the American people, there is surely the genius, the imagination, the ability, and the determination to make our democracy work.

APPENDIX TO THE CONGRESSIONAL RECORD

Proposed Antialien Legislation

EXTENSION OF REMARKS

HON. SHERMAN MINTON OF INDIANA

IN THE SENATE OF THE UNITED STATES Tuesday, May 23 (legislative day of Friday, May 19), 1939

ADDRESS BY HON. JAMES E. MURRAY, OF MONTANA, MAY 14, 1939

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the Congressional Record an address delivered by the distinguished junior Senator from Montana [Mr. Murray] at the National Emergency Conference, Hotel Raleigh, Washington, D. C., May 14, 1939. This address constitutes a timely warning against the flood of antialien bills now pouring into the Congress and threatening the future peace and happiness of our people.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, you and I are gathered here to discuss what I conceive to be one of the gravest threats to the liberties of the American people that has faced us in the past hundred and forty years. It is a menace which must be met in a thoughtful forty years. It is a me and a forceful manner. and a forceful manner. I do not think we can afford for a single moment to underestimate its importance. The entire country should be roused by the danger which confronts it and threatens its future peace and happiness. If it is not—if the liberty-loving people of the Nation fail to recognize this impending danger and cause their full weight to be felt against this frenzied legislation. which would destroy our traditional rights and freedom—then I say we face an ominous future.

That is why I welcome and endorse this emergency conference,

which gives public recognition and calls public attention to the dangers that threaten American democracy.

It is always well to go back into American history and review the lessons that our fathers learned so that their travail may not have

been in vain for future generations.

In the year 1798 there was enacted in the United States a set of In the year 1798 there was enacted in the United States a set of four measures which have been referred to ever since as the alien and sedition laws. Even in those days when our country was in crying need of immigration—when we anxiously invited the oppressed and the poor of other lands, when we begged them to come to us to help develop the vast natural wealth of our land—even in those days the prophets of reaction, the politicians with an ax to grind for retrogression, linked together the alien problem and the so-called sedition question. They did this because they felt that one of the easiest harps to play upon was the ignorance of a mass of people; their resentment of the "foreigners" whose ways and language they did not understand and whom they consequently feared. That movement in our early history almost wrecked the Nation. Nation.

History is again repeating itself. We are discussing here today History is again repeating itself. We are discussing here today numerous pieces of legislation which were lately introduced in Congress. Most of them are called alien bills, and most of them present principles and ideas which are thoroughly alien and un-American. The alien and sedition laws of 1798 were also thoroughly alien and un-American. Like the measure which has already passed the House of Representatives, they provided for imprisonment without trial. The difference was that under the 1798 legislation a maximum of 3 years' imprisonment might be imposed; whereas the concentration-camp bill, recently passed in the House borrows from a later developed alien ideology and the House, borrows from a later developed alien ideology and

the House, borrows from a later developed alien ideology and permits indefinite imprisonment.

Measures which have been seriously introduced, and considered in Congress, forbid aliens to believe in Government reforms that are currently and widely advocated by Members of Congress; some of them—the child-labur amendment, for example—by an absolute majority of the people of the country. This is the first step toward regulation of the political thoughts and beliefs of citizens. The alien and sedition bills of 1798 took that second step, and made punishable by imprisonment "unlawful opposition" to the Government, and even criticism of the President, the Congress and other constituted Federal authority. Under its progress, and other constituted Federal authority. Under its pro-visions every newspaper that opposed the Government was har-assed through prosecution of its publishers, editors, or editorial

I am certain that the glorious history of our country and its am certain that the glorious history of our country and its development might have been far less glorious; that its great achievements in science, industry, and social progress might never have been made had not the people of the United States rebelled against those vicious laws. Despite the stifling of public opinion and criticism, the young and lusty American Nation rose up and overthrew the party whose administration had enacted these undermining laws. It struggled feebly for a few years after its defeat at the polls, and then, thank God, it died and has never

been heard from since.

It might be asked, who are these aliens about whom such a hullabaloo is raised? What is this terrible menace against which we are asked to forge such weapons as will automatically destroy ourselves as well? These aliens are today's replica of your father and my father, my mother and your mother. They are the you and me of yesterday before we or our ancestors became citizens.

and me of yesterday before we or our ancestors became citizens. The United States was settled by immigrants. We are a Nation of immigrants. Many came to these shores to improve their economic condition, but a larger number came to escape the religious and political persecution visited upon them by the despotic rulers of their native lands. The very first to follow the earliest explorers were refugees from England, men and women who sacrificed what worldly possessions they had and risked their lives in filmsy craft on a dangerous and uncharted ocean to reach a free land. Within a short while there came Irish victims of famine and oppression, French Huguenots, German democrats, Russians fleeing the mad tyranny of the Czars, and others from distant lands. These folk, among them some of the most advanced thinkers of their days, found a new life, a safe harbor, here. They expressed their appreciation of their new-found freehere. They expressed their appreciation of their new-found free-dom by adopting this new land as their own and by spending their strength and their lives in fostering its growth and preserva-tion. As a result, you find today in our civilization traces of the influence of nearly every race and every nation of the world. Beginning with the sober and industrious Dutch in Pennsyl-

Beginning with the sober and industrious Dutch in Pennsylvania, early in our history there came to our shores skilled agriculturalists from Northwestern Europe. Their descendants still till the ground selected and developed by their forebears. With our rapid industrial progress came the need for skilled and unskilled labor, also provided by the European countries. Today their children and their children's children tend the looms and pour the steel. Today, too, the children of these immigrants are, as in the past, contributing to the advancement of the arts and sciences. They are among our most respected citizens, occupying positions of honor and distinction in every State in the Union. America was not only discovered and settled by aliens; it was also developed by them. We owe our strength and our greatness to immigrants.

In my State of Montana, the only statue that graces the entrance

In my State of Montana, the only statue that graces the entrance to our capitol is the heroic bronze equestrian statue of Thomas Francis Meagher, an Irish immigrant deported from his native land,

Francis Meagher, an Irish immigrant deported from his native land, who lived to become one of the heroes of the Civil War and Montana's first Governor.

Today, as in the past 3 centuries, the old and unregenerate world still casts off its best sons and daughters. And still they look to us for a new home, and a new opportunity to serve mankind. Their contribution to the enrichment of life and pursuit of happiness is dependent on the liberty that they find here. In the past century and a quarter, 38,000,000 allens have landed on these shores. We are indeed a Nation of immigrants.

These immigrants hewed the forests, erected primitive homes from logs and mud, cleared and cullvated the fields. Year by year they pushed the frontier westward. Year by year, as this great young Nation expanded, these immigrants cut roads through the wilderness, dug the first canals, leveled the beds for the first railroads, manufactured and laid the first ties and rails, and constructed the first locomotives. They developed the great, inexhaustible mineral deposits of the West, and wrested from the ground the wealth which has made this the richest Nation on earth. earth.

But now certain people would have us believe that the alien today constitutes such a menace that no step is too extreme, no sacrifice too great, to stop it. There are three and a half million persons in the United States who are not citizens, according to the estimates of the Department of Labor. They have a lower crime ratio than any other group in the country. Literally millions of them have not become citizens for purely technical reasons, and my colleague the distinguished Senator from Massachusetts, Senator Walsh, only a few days ago introduced a bill which would make possible the naturalization of a quarter of a million aliens who served in the armed forces of the United States during the World War—aliens who offered to die for our democracy. Other measures have been introduced and, I hope, will be passed, which will remove technical obstacles to the naturalization of other large groups. This is constructive legislation on the alien problem. But now certain people would have us believe that the alien problem.

But this whole flood of bills that we are most particularly considering here at this emergency conference presents an entirely different ideology. Let us examine just a few of them. We see different ideology. Let us examine just a few of them. We see that their immediate object is to make the alien's life more difficult, to penalize him, to place restrictions on his life, his thought, his movement; to oppress and belittle him and make him feel his inferiority. The direct effect would be to separate the alien from the life of the community; to set him apart, to cast him out. The agitation which is so widespread and which has the passage of such legislation as its aim, is a brother to the agitation that brought Hitler into power in Germany. He picked on the Jews as a scapegoat. Here his imitators pick on the foreign-horn.

on the Jews as a scapegoat. Here his imitators pick on the foreign-born.

Take, for example, those measures which call for registration and fingerprinting of all aliens in the United States would oblige them under heavy penalty to carry on their persons at all times registration cards for identification. The Secretary of Labor, in a communication to the Senate Committee on Immigration, rightly points out that such a measure would tend to act as a deterrent

to naturalization of the noncitizen, by giving him the feeling that he is discriminated against by the Government.

But the Secretary of Labor points out also that such registration would be the first step to similar registration of the entire population, and that the whole idea is foreign to American principles and the traditional policies of individual freedom which have been established for our benefit by our forefathers and maintained throughout our national life by eternal vigilance until now.

Imagine a situation where three and a half million persons, for the most part indistinguishable in appearance from thirty or forty millions more occupying the same country, are obliged to carry identification cards at all times. There would be severe penalties attached to failure to have such cards available for police inspection. The police would have the duty of enforcing this law. I identification cards at all times. There would be severe penalties attached to fallure to have such cards available for police inspection. The police would have the duty of enforcing this law. I ask you, how would they enforce it? And I answer, they could not enforce it equitably, even were it a just law. Any attempt at enforcement of such a measure would bring untold violations of the liberties of citizens not required to carry such identification cards. Under an antilabor local or State administration, for example, we would see mass raids upon union headquarters in times of labor disputes and arrests of all there present—on the theory so often advanced that if labor strikes for its rights it is under the influence of allen agitators, and that consequently strikers should be required to produce identification cards as registered aliens or proof of citizenship. I doubt that more than 25 percent of our urban citizen population could readily produce proof of their citizenship. Certainly none carry such proof upon their persons.

The Secretary of Labor put it very mildly. Actually registration and fingerprinting of every person in the United States would be necessary to the administration of a law requiring this for aliens; and try to imagine, if you can, the confusion that would arise and continue until such time as the registration were absolutely complete, with police searching every nook and corner, keeping guard

plete, with police searching every nook and corner, keeping guard over traffic arteries, stopping every person, arresting and holding all

those not bearing cards.

And then, once the registration was complete, imagine what a splendid, Government-made blacklist labor-hating industrialists would then have.

Such measures have not only been introduced in the Congress. They are receiving serious consideration there and the agitation

for their passage grows every day.

The spectacle of such a domestic passport system introduced into this free country is one that should horrify every American. Unfortunately, too few of our people even know that such a plan is contemplated; nor do they know, I am quite sure, of other proposals which are receiving consideration and attention from the highly organized reactionary groups behind them—one of the most omnipresent lobbies in Washington.

A group of three bills were introduced in a single day in the House, all unknown to the general population, or even to more than a very small portion of those who would be affected by it. I will cite these bills because they illustrate the inevitable link between curtailment of the civil rights of aliens and a similar repression of the rights of citizens generally.

The first bill in this series provides, according to its title, for "the deportation of alien Fascists and Communists." But if you read past the title, you find something of a different picture. You find that the expression "Fascists and Communists" is defined, and in that definition I will venture to say, you could fit any trade-unionist at all active, and especially one who might venture better the receivable. onto the reservation of an antiunion employer to organize his plant. It is what is known as a shotgun definition, because it is so broad and so vague, capable of such broad interpretation, that no one really knows what it means; it simply scatters all over the lot

The second bill in the series has the same definitions. It applies them, however, to organizations instead of to aliens. It provides that any organization which might be hit by any one of the shotgun's scattered and unpredictable pellets, shall be registered and controlled as to its internal affairs by the Government. The main direction in which the shotgun is aimed, need I say, is the direction of lobor.

direction of labor.

The third bill uses the same definitions again. It provides that a citizen who might come under it shall not be permitted to work for the Government, directly or indirectly. If a Government employee is accused of being within the proscribed group, it is up to him to prove he is not, or be fired. The net effect of such a bill would be a case of jitters among Government employees thickness the contract of the con ployees which would turn everyone into a deaf mute in all matters where politics are concerned. And why should Government em-ployees be deprived of the right to think politically and inde-

pendently?

pendently?

Perhaps the answer will be found in an examination of still another measure, one of those that has already passed the House. It provides that any alien who believes in or belongs to an organization which advocates "any change in the American form of government" shall be deported. I referred to this bill earlier. This is the one that proscribes political thought by an alien on such measures as the various amendments which have been proposed to the Constitution. But the effect of this bill is not mentioned in its text at all. The effect of it would be to stiffe all political action by tradeunions, by organized religious groups, and other bodies which by their very nature cannot distinguish in membership between citizens and aliens. For, if they took formal action upon various proposals that are before the people of the country now, they would become "an organization which advocates" change in the American

form of government," and such of their members as were not citizens would be made deportable thereby.

The purpose of this bill is to stifle progressive political action by comparison.

organizations—it is for the most part progressive, not reactionary, ideas that involve "change." And it will only be the progressives in Government service who will be fired for political thought, too, if that bill becomes a law. Reactionaries propose and support it; reactionaries, if anyone, will pass it; and naturally reactionaries will administer it. That is the whole idea.

The pattern of this legislation now before Congress, purportedly to settle the "alien problem," is such that if even a small part of it were now to be enacted into law, this time next year you could not be here, representing organizations interested in the preserva-tion of American freedom. Two years from now, if the full pro-gram goes through, heaven knows what will be the conditions developed in this great American democracy. The possibility is that thousands will be in concentration camps. Turmoil and bitterness will fill the land.

The entire program of social reform which has been enacted in the past six and a half years is threatened by this apparent flank, but actually undercutting, attack. The root of all progress and of all improvement in the relations between man and man is liberty. This legislation cuts at those roots, deprives the body politic of its very life-blood.

If the people of America are to preserve their freedom in a world of expanding tyranny, they must be vigilant. They must look not only to the form, but to the spirit and to the effect of every measure that is presented to the legislatures of the States and of the Nation. Only an expanding liberty can live. Contraction of its boundaries means creeping death for our democratic institutions

I hope this emergency conference will mark the rebirth of a I hope this emergency conference will mark the rebirth of a new and vital interest in the so-called minor legislation in the Halls of Congress and the capitols of the several States; an interest which will erect watchtowers everywhere to rouse the people to the continuing battle against tyranny and oppression. Let us continue to stand solidly in support of our democratic institutions and never suffer that "light," which inspired millions of our forebears to cross the seas, to be dimmed or extinguished.

National Debt Week

EXTENSION OF REMARKS

HON. PRENTISS M. BROWN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES Tuesday, May 23 (legislative day of Friday, May 19), 1939

ARTICLE BY RAYMOND CLAPPER

Mr. BROWN. Mr. President, it is generally agreed that Mr. Raymond Clapper, of the Scripps-Howard newspapers, is one of the ablest and fairest columnists in the country. His editorial in today's issue of the Washington News is such a clear, forceful, and timely analysis of the need in the past for Government aid to employment that I ask its inclusion in the RECORD, so that it may have the widest circulation I can give it. It is entitled "National Debt Week," and exposes the fallacy of the criticism leveled at the administration's program by the Republican National Committee.

There being no objection, the editorial was ordered to be

printed in the RECORD, as follows:

[From the Washington Daily News of May 23, 1939]

NATIONAL DEBT WEEK

(By Raymond Clapper)

(By Raymond Clapper)

The Republican National Committee has designated this as National Debt Week. The fact that under Mr. Recosevelt the public debt rose from \$22,000,000,000 to \$40,000,000,000 is being branded as the crime of the century.

To illustrate the magnitude of this spending—which the Republicans would like to have you think injured the country rather than helped it—the Republican National Committee set up an attractive little exhibit in a downtown show window. This exhibit includes a miniature model of the Empire State Building. Besides the model is the explanation that had the money which the New Deal has spent been devoted to construction of Empire State Buildings, 940 such could have been built, one for practically every smaller city in the country.

That was a very happy illustration, not for the Republican National Committee but for the New Deal's case.

First, the Empire State Building was constructed by private initiative and therefore is supposed to have been a highly efficient undertaking, not like Government spending which is supposed to

undertaking, not like Government spending which is supposed to be wasteful and useless. Well, I'll let anyone check on the amount

of office space that has been empty through the years in that white elephant of private enterprise and set it against some of the badly needed school buildings, hospitals, bridges, roads, playgrounds; yes, and even the much belabored W. P. A. writers' projects which have produced a set of guide books that has just won the praise of a committee of book publishers for excellence of workmanship. I wouldn't try to stretch the point, but would merely suggest that, just as private spending is not always efficient, so Government spending is not always wasteful.

just as private spending is not always efficient, so Government spending is not always wasteful.

Second, the Empire State Building illustration is not a happy one for the reason that it was because private enterprise was unable to continue erecting Empire State Buildings that the Government continued spending for construction even though its tax revenues were falling and the money had to be borrowed. Henry Dennison, president of the Dennison Manufacturing Co. of Framingham, Mass., offered some revealing information on this subject to the O'Mahoney Temporary National Economic Committee.

mittee.

Using figures of the National Resources Committee, of which he is a member, Mr. Dennison said that, taking total public and private construction together, we are spending no more today than we did 18 years ago, in 1920. Total outlays for construction and maintenance, public and private, grew from about \$8,000,000,000 in 1920 to \$14,000,000,000 in 1927—and then collapsed to \$4,000,000,000 in 1933. It was then that the first Roosevelt public-

works program was begun.

The difference between 1920 and now is not in the total outlay, The difference between 1920 and now is not in the total outlay, but in who is doing the work. In the 1920's, Government construction (Federal and local) amounted to 20 to 25 percent of the total. Private industry was carrying three-fourths of the load. Now the Government is carrying 40 to 50 percent—about half of the total load. (Incidentally, in dollars, the 1938 Government outlay—Federal and local—was not quite as much as it was in 1930—before Roosevelt.) Public construction fell off in 1931–33, but thereafter recovered to the levels of the late twenties.

Mr. Dennison makes another point about Government construction spending. In the 1920's, States and cities carried the major share of the public construction on a steadily increasing scale.

The depression found them unable to bear the load and State

The depression found them unable to bear the load and State and municipal construction declined sharply. The Federal Government moved in and by 1936 had brought total public construction wolume back to the level of the late twenties. This construction work, financed by the Federal Government but handled largely by local governments, covered schools, water and sewage systems, public buildings, and concernation projects.

lic buildings, and conservation projects.

Perhaps it would have been better had private industry continued to erect Empire State buildings. But since that couldn't be, would it have been better if the Federal Government also had quit building and thus have escaped adding to its debt? Opinions differ violently, but, in spite of National Debt Week and that income-tax payment which is due next month, I think it was milk well spilt and not to be cried over too much.

The Problem of Palestine

EXTENSION OF REMARKS

HON. WALTER F. GEORGE OF GEORGIA

IN THE SENATE OF THE UNITED STATES Tuesday, May 23 (legislative day of Friday, May 19), 1939

EDITORIAL FROM THE ATLANTA CONSTITUTION OF MAY 20, 1939

Mr. GEORGE. Mr. President, I ask unanimous consent to have printed in the RECORD a brief editorial entitled "Whose Country?" dealing with the problem of Palestine, published in the Atlanta (Ga.) Constitution of May 20, 1939.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

> [From the Atlanta Constitution of May 20, 1939] WHOSE COUNTRY?

The problem of Palestine is rapidly becoming one of the most irritating among many world disturbances. The latest British pronouncement of policy certainly tends to aggravate, rather than settle, the question and reflects little credit upon the policy makers of the Empire.

Basically the issue seems to resolve itself into a question of what race, what people, have the greatest right to Palestine as a national home. The Jews, actuated by sentimental longing for their homeland and by practical reasons growing out of the Jewish refugee problem in Central Europe, can certainly make out a good case for themselves at the court of public opinion. From all reports the great mass of the Arab population do not constitute a difficulty. They are content either to live among the Jews or to sell their property, at good price, to Jewish newcomers. There is a third party concerned, however. That is the British themselves. It is difficult to advance any reason, other than empire politics and diplomacy, for their presence in Palestine. Save as police and keepers of the peace they have no practical excuse for control of the country, and recent history indicates they have not achieved sufficient success as pacifiers to give them any special rights.

The Jews who have gone to Palestine since 1919 have bought such land and other property as they have acquired from Arab owners. They have achieved marvels of development, agriculturally and industrially. They have built fine cities and are, apparently, in a fair way to make Palestine a worthy proof of Jewish ability to create and to live in a home nation of their own.

The British themselves, in official reports, have blamed the recurring outbreaks of racial violence upon scattered bands of Arab terrorists, backed by German and Italian agitators, and making a good thing out of banditry through forced contributions from

war, that she would protect the Jews in reestablishing Palestine as their homeland. The Jews themselves have demonstrated they can create this homeland without injustice to the Arabs there. The greater part of the Arab population is not dissatisfied. Yet, because of the terrorist activities of small groups of Arab disturbers, Britain indicates it will refute its solemn pledge to world Jewry and to more than 400,000 Jews who have invested their funds and their lives in Palestine because of their faith in the Balfour promise.

Perhaps the best solution of the Palestine problem would be an international police force for protection of both Jews and Arabs for whatever time is necessary for the issue to work itself out in the natural course of events.

Credit Needs of Business

EXTENSION OF REMARKS

HON. CHARLES O. ANDREWS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES Tuesday, May 23 (legislative day of Friday, May 19), 1939

ARTICLE BY DAVID LAWRENCE

Mr. ANDREWS. Mr. President, there appeared in the Washington Evening Star of May 20 an article by David Lawrence, in which he urges the consideration by the Congress of the credit needs of business, and points out the effectiveness of the bill sponsored by the Senator from New York [Mr. Mead]. This comment by Mr. Lawrence, whose knowledge of business and attitude on recent reform measures are well known, should prove most valuable to the legislators. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of May 20, 1939] MEAD BILL CALLED BOON TO BUSINESS-PLAN TO INSURE BANK LOANS WOULD OPEN CREDIT CHANNELS

(By David Lawrence)

A spurt to American business of unprecedented proportions might easily result from the passage of a bill introduced by Senator James Mean, of New York, which is understood to have administration backing. It is a revision of an earlier bill, introduced several months ago, relating to intermediate credit for small businesses, but the

new measure goes much further in opening up the channels of credit than any preceding proposal.

The businesses which would get the credit are those which can use any sum up to \$1,000,000 in credit, so that a goodly number would hardly come within the category of "small businesses," as the

would hardly come within the category of small businesses, as the term has been popularly used, though many really small businesses would, of course, wish to take advantage of the plan.

The proposal, in brief, contemplates an insurance of bank loans. Only those banks which are themselves insured under the Federal Deposit Insurance Corporation are to be eligible, which means banks which now have some form of Federal supervision.

ELIGIBLE FOR REDISCOUNT

The new legislation, if adopted by Congress, would permit a bank to insure any loan up to 90 percent of its possible loss. The loans are to be made eligible for rediscount at the Federal Reserve banks, so they could hardly become frozen assets or impair the standing of a bank because they could quickly be turned into

Periodic reports would be demanded of banks and corporations participating in the loans, and regulations would be made by the

Reconstruction Finance Corporation, which is to be the principal lending agency behind the loans. Interest rates are to be fixed at 4 percent and an additional 1 percent is to be charged as the insurance premium, but the R. F. C. would have the right to permit the banks under certain circumstances to increase or decrease interest rates. The legislation would, however, establish 4 percent as the base. The text of the important provision of the Mead bill, which doubtless will be incorporated with a similar measure introduced in the House by Representative ROBERT ALLEN of Pennsylvania, follows:

of Pennsylvania, follows:

"Subject to the provisions of this act, the Corporation (meaning the R. F. C.), upon application, is authorized to insure any bank against the whole or any part of the loss or losses, in respect of principal or interest, or both, which such bank may sustain in excess of an amount equal to 10 percent of the principal amount of any loan which such bank may make to any person for any business purpose, and for the purpose of this act the Corporation is authorized to determine what constitutes a business purpose. For such insurance the Corporation is authorized to determine what constitutes a business purpose.

PROVISION FOR PREMIUM

"For such insurance the corporation shall charge a premium of "For such insurance the corporation shall charge a premium of not less than one-fourth of 1 percent nor more than 1 percent per annum of the unpaid balance of such loans; provided, that the corporation in its discretion may charge a higher premium, or may refuse to grant insurance altogether on any loans of any bank which, in the judgment of the corporation, pursues a policy of insuring only the more doubtful of its loans eligible for insurance. "The corporation shall from time to time fix the premium rates

insuring only the more doubtful of its loans eligible for insurance. "The corporation shall from time to time fix the premium rates to be charged for the insurance of loans, which rates may be adjusted in accordance with appropriate classifications based, among other things, upon the nature of the loans and the character of the risks involved, and the premium rates for which the corporation undertakes to insure any particular loan shall not be increased during the life of such loan."

Companies with an insured indebtedness exceeding \$1,000,000 could not have any more loans of this type under the proposed law, though they could have bond issues or any other kind of credit they can get. The loans are to be made for a period not less than 1 year and not to exceed 10 years. If there is any service charge, fee, or commission connected with the loan, as sometimes happens in mortgage transactions, the fee cannot amount to more than one-fourth of 1 percent for the life of the loan.

B. F. C. GIVEN BROAD POWERS

R. F. C. GIVEN BROAD POWERS

Loans can be insured even if they are "subordinated to short-term indebtedness incurred in the ordinary course of business." There is also the following provision, which gives the R. F. C. broad powers:

broad powers:

"The Corporation shall have power to insert in the insurance contract covering any loan insured under this act such terms and conditions as it may deem necessary or appropriate to carry out the purposes of this act or to prevent the abuse of the credit facilities herein provided."

The theory back of the bill is that the insurance premiums on the vast number of good loans which are paid at maturity will more than offset the possible losses from those loans which go "sour" in the course of a few years. Even so, the loans will probably be the course of a few years. Even so, the loans will probably be based on assets, so that total losses might be the exception rather than the rule. Provision also is expected to be made for regular installment payments, so that a company whose current position indicates it might not be able to meet some kind of amortization

indicates it might not be able to meet some kind of amortization plan over a period of years would probably not find itself eligible for the granting of these credits.

In connection with the first provision quoted, the bill sets forth that "any person" eligible for a loan means "an individual, a corporation, a partnership, an association, a joint-stock company, a business trust, or an unincorporated organization."

Also, the word "loan" is defined as "any loan, extension of credit, or renewal thereof."

So the proposal is broad enough to open up the whole credit.

So the proposal is broad enough to open up the whole credit system and thus put to work through established channels of pri-vate banking the billions of dollars of idle deposits accumulated in the Nation's commercial banks. If passed, it certainly may prove a tremendous impetus to business and may answer the question of lack of "confidence" by putting a Government agency back of the risk taken by banks.

The Beet Sugar Industry

EXTENSION OF REMARKS

HON. EDWIN C. JOHNSON OF COLORADO

IN THE SENATE OF THE UNITED STATES Tuesday, May 23 (legislative day of Friday, May 19), 1939

LETTER FROM S. K. WARRICK, SCOTTSBLUFF, NEBR.

Mr. JOHNSON of Colorado. Mr. President, in the interest of having all the facts before Congress in our discussion

of the beet-sugar problem, I ask unanimous consent to print in the Appendix of the RECORD a letter and table from the pen of S. K. Warrick, a beet grower of Scottsbluff, Nebr.

There being no objection, the letter and table were ordered to be printed in the RECORD, as follows:

> UNITED STATES DEPARTMENT OF AGRICULTURE, AGRICULTURAL ADJUSTMENT ADMINISTRATION, Scottsbluff, Nebr., May 16, 1939.

Hon. EDWIN C. JOHNSON

Senate Offices, Washington, D. C.

Senate Offices, Washington, D. C.

Dear Mr. Johnson: I enclose you an editorial from the Scottsbluff Daily Star-Herald of Sunday morning, May 14.

I also enclose you the sugar-beet price record in the Nebraska
district of the Great Western Sugar Co., for the 4 years 1930 to
1933, inclusive, and for the 4 years 1934 to 1937, inclusive.

Payments on the 1938 sugar-beet crop will not be completed
until some time in October 1939.

You will note that the farmers received \$1.24 per ton more for
their sugar beets on an average in the last 4 years than they did
in the first 4 years listed. The first 4 years were under the Herbert
Hoover administration, and the second 4 years under the present
administration.

The Great Western Sugar Co. discontinued a guaranteed contract with the closing of the 1931 season, and adopted a sliding scale sugar contract in 1932. The sliding scale contract has continued, with some changes, to the present date.

Based on the above figures, there are other industries that prob-ably would like to be "hamstrung."

Yours very sincerely,

NEBRASKA AGRICULTURAL CONSERVATION COMMITTEE, S. K. WARRICK, Member.

Record of average sugar-beet payments in the Nebraska district of the Great Western Sugar Co. in the years stated below

Guaranteed contract:	Per ton
1930	\$7.00
1931	5.50
Sugar-scale contract:	
1932	4.51
1933	4.48
Average price per ton for the 4 years	5.37
Sugar-scale contract:	
1934	6.39
1935	7.21
1936	5.84
1937	7.02
Average price for ton for the 4 years	6.61

Government Spending and the National Debt

EXTENSION OF REMARKS

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES Tuesday, May 23 (legislative day of Friday, May 19), 1939

RADIO ADDRESS BY HON. SHERMAN MINTON, OF INDIANA, MAY 21, 1939

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Senator from Indiana [Mr. MINTON] on May 21, 1939, on the subject, Government Spending and the National Debt.

The address, made over a national radio hook-up, is most interesting and instructive. It contains facts and figures which all should know.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The justification for any program is the necessity for the program, and whether it achieves the objective. With this thought in mind, let us look at the Government expenditures that have led us to our highest debt level.

On March 4, 1933, the economic structure of this country was in a state of utter collapse. We had just had 12 years of Government under the Republican Party, ranging all the way from the plundering of the Harding administration to the piddling. The Democratic Party had no part in the destruction of the economic fabric of this country. We inherited that mess from the Republican Party.

When the Roosevelt administration came into power in 1933, 15,000,000 men walked the streets of the richest Nation on the

face of the earth, begging for a job. Homes were being foreclosed at the rate of 1,000 per day. Farmers couldn't sell their crops for enough to pay their taxes and the interest on their debts. Thousands of banks had closed under Hoover and the depositors couldn't sands of banks had closed under Hcover and the depositors couldn't get their own money. Industry was on the verge of universal bankruptcy. Indeed, the crisis was so acute that had it continued unattended a short time longer, we would doubtless have had riot, bloodshed, and possibly revolution. That was the condition of the country after 12 years of Republican rule, when business had a free hand to do as it pleased, and did, and everyone had confidence, and every other man you met in the street was a confidence man. So, to appreciate Roosevelt, you have to remember Hoover. And, as my distinguished opponent, Senator Vandenberg, speaks tonight, please remember he was a part of the Hoover administration, and the Republican Party was responsible for all of it.

Whatever my shortcomines are, or that of others who believe as

Whatever my shortcomings are, or that of others who believe as I do, in this administration, just remember they can't be half as a do, in this administration, just remember they can't be half as great as Senator Vandenberg's. He and his party have not only had a chance to cure the panic, but they were the responsible party in power when it came. Senator Vandenberg has the advantage of me and my New Deal friends, in that he had a chance to try all his fine ideas and prevent the panic, but he didn't do it. Furthermore, he had a chance to try them in order to alleviate the panic, and he did not do it.

panic, and he did not do it.

panic, and he did not do it.

Borrowing and spending is not an invention of the New Deal. By force of circumstances the New Deal was compelled to shift the location of spending. There must be borrowing and spending to have prosperity. Between 1921 and 1929 private business in this country increased in debt at the rate of about \$6,000,000,000 per year. It takes spending by someone to keep the wheels of industry turning. Obviously, private business could not do the job in 1933. It was paralyzed. Someone had to step in and incur the debts to keep up the spending, which in turn, would keep the wheels of industry turning.

Separaty Turning.

industry turning.

Senator Vandenberg, you tell us who else there was to assume the burden of spending. In my judgment, there was only one agency that could do the job, and that was the Federal Government. So the Federal Government stepped in and started the spending. But instead of spending \$6,000,000,000 of borrowed money each year, as private business had done for 8 years before, the Government expended on an average of about \$3,000,000,000 per year. By such spending, the Nation's income was increased about 70 percent. Eight million men went back to work, and the leading corporations of the country for the years 1936 to 1938, inclusive, had an over-all profit of 8.3 percent on their investment, after deducting operating expenses, depreciation, and taxes. Understand, this was an average return, and it included inefficiently managed enterprises, as well as those well managed. It included sick industries, such as railroad equipment, as well as the most prosperous lines of business. road equipment, as well as the most prosperous lines of business. Contrast this return with the years 1927-29, which was supposed to be the heydey of prosperity, and when the general average of American industry was not 8.3 percent but 6.5 percent.

As Mr. Vanderpoel, financial editor of the Chicago American,

said:

"Contrast these figures and then explain the cries of business persecution that have been made by business leaders throughout the country, that have been heard in the Halls of Congress. They have poisoned the minds of people who have not had access to the facts and have become bewildered by a barrage of propaganda, intended, not as a help to the solutions of pressing problems, but as deliberate poison for selfish reasons. * * * Never before, as far as records are available, have there been 3 successive years when the average profit of industry has been as high as the last 3 years, and yet never before have the complaints of industry been as great."

The first quarter of this year the greatest corporation in the land, General Motors, had the biggest profit it ever knew in its history. It was just 600 percent greater than the same quarter of last year, and in 1936, its profit was 1,624 times what it was in the last year of the Hoover administration.

Thus, we see that spending by the Federal Government was "Contrast these figures and then explain the cries of business

Thus, we see that spending by the Federal Government was made necessary in the first place, by reason of the collapse of private industry, and the loss by it of the ability to spend. Furthermore, spending has alleviated the suffering of humanity, saved the morale of the worker, and has given to business the best profits

it has enjoyed in years.

If we had not reduced our expenditures for recovery in 1937, our national income would have been such that by broadening the our national income would have been such that by blenator has been income-tax basis, as suggested by Senator La Follette, we could have balanced the Budget. But we were going to balance the Budget before we raised our income, and the result was, we did neither. Government spending will have to be continued until such time as business can, or will, take up the burden of employment.

employment.

It is true, this spending program has given us the highest national debt we have ever had, now about \$40,000,000,000. While our debt is high, we can best judge of its size by comparing it with the debt of some other country. Take Great Britain, about which we have heard so much favorable comment because she has balanced her budget, although she was unable to find the wherewithal to pay her debts to us. Our national debt is about 57 percent of our national income. The debt of Great Britain is 140 percent of its national income. If our national debt was as large in proportion to national income as that of Great Britain, our debt, instead of being \$40,000,000,000, would be ninety-eight billions. The interest charges on Great Britain's national debt are 4 per-

cent of its national income, while the interest charges on our national debt are about $1\frac{1}{2}$ percent of our national income. But it must be remembered that this administration hasn't spent

all of that \$40,000,000,000, as some of our opponents would have you believe. Let us break down this figure of \$40,000,000,000. May I remind you that sixteen billion of that \$40,000,000,000 of our national debt is a carry-over from the World War. In other words, we lack \$16,000,000,000 of paying for the World War, and that sixteen billions is included in the forty billions. Let us take sixteen billions from forty billions and we have twenty-four billions. Well, Mr. Hoover increased our national debt over \$4,000,000,000. Now, I don't suppose the New Deal will have to answer for Mr. Hoover, so we take off four billion for him, and that leaves twenty billion. In that twenty billion is over \$2,000,000,000 that we spent to pay off the bonus. The bonus wasn't an obligation of the New Deal, but it was a just obligation that ought to be

tion of the New Deal, but it was a just obligation that ought to be paid, and we paid it.

I will tell you when it should have been paid. It should have been paid right after the war, while the war profiteers had the money in their pockets to pay the bill. But Mr. Mellon wouldn't let them pay it. He reduced the war profiteers' income tax instead. So we take off two billions for the bonus, and that leaves eighteen billions. We have over \$2,000,000,000 in the stabilization fund, and we take that off, and we have left sixteen billions. Well, we have over \$3,000,000 000 in the Treasury unspent, so we take rund, and we take that off, and we have left sixteen billions. Well, we have over \$3,000,000 000 in the Treasury unspent, so we take that off, and we have thirteen billions. But we have good recoverable assets, the proceeds of which will return to the Treasury, represented by mortgages on the homes, farms, and business property of the country, easily worth \$4,000,000,000, and you take that off, and you have \$9,000,000,000 spent for recovery and relief in this country. Nine billions of dollars spent to save men, women, and children from starvation and the country from a possible revolution.

revolution.

revolution.

That is less than Congress appropriated in 1918 for 1 year of war. In 1918 Congress appropriated for war alone, \$12,000,000,000, and in the conduct of that war we spent over \$45,000,000,000. Doing what? Saving men, women, and children from starvation? Not at all. We were transporting overseas millions of the finest blood of the land to fight and die on foreign soil and destroying the wealth of the Nation by the billions of dollars.

I sav to you ladies and gentlemen that if this rich country of

I say to you, ladies and gentlemen, that if this rich country of ours could afford to spend \$45,000,000,000 killing the best blood of the land and destroying the Nation's wealth, why, in the name of Heaven, may we not spend a few billion dollars that men, women, and children might live for their country? Our justification for spending is that we were forced to spend, and by spending we saved the life of the Nation.

Whenever the calemity bowlers tell you the Nation is broke you.

Whenever the calamity howlers tell you the Nation is broke, you just remind them that in 1932 Uncle Sam's bonds were selling for

Just remind them that in 1932 Uncle Sam's bonds were selling for 82 and now they sell above 100, and draw the lowest rate of interest ever paid by this Government.

Not all of the businessmen of the country view with alarm the spending program as does my friend, Senator Vandenberg. A few days ago Mr. E. C. Love, president of the Oklahoma Bankers Association, speaking to the bankers, had this to say about the spending program.

program:

You bankers should explain to the public the economic necessity for Government spending. If it were stopped now to balance the Budget, business would stop, taxes would fall, and the Budget would not be balanced. It is all nonsense that the national debt should remain below some mythical level. Debt must expand if business is to expand, especially ours. I do not believe the people are willing to balance the Budget by reducing Government expenditures because we would have to pay the price of lower business activity. We should express our dissatisfaction with the present tendency in the National Government to decrease expendi-

So, ladies and gentlemen, we will stop spending and balance the Budget as soon as we can balance the budget of those millions of people that Senator Vandenberg's party stopped from eating in

The America I Want

EXTENSION OF REMARKS

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES Tuesday, May 23 (legislative day of Friday, May 19), 1939

ADDRESS BY HON. H. STYLES BRIDGES, OF NEW HAMPSHIRE, AND EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject The America I Want, delivered by the senior Senator from New Hampshire [Mr. Bridges] on the occasion of the rededication of the Wigwam, on the seventy-ninth anniversary of the nomination of Abraham Lincoln. This address was delivered on the site of the riginal Wigwam in Chicago, Ill., on May 18, 1939. In connection with that address I ask that an editorial on the subject of the address entitled "Prosperity and Peace," appearing in the Chicago Tribune of May 20, 1939, be printed in the RECORD.

There being no objection, the address and editorial were

ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. H. STYLES BRIDGES

Fellow Republicans, as you are all aware, there gathered on this site 79 years ago, the delegates, officers, and guests of a Republican national convention. It was the convention of a new political party, a party composed of Americans who believed that the principles of our form of government, our independence, and our philosophy of individual liberty could be best maintained by the preservation of the Union. This convention was destined to nominate a man who was to become President of the United States—one of the greatest Presidents of the United States—Abraham Lincoln. Abraham Lincoln.

Abraham Lincoln.

On that May morning 79 years ago, those Republicans who met here on this site, although they were aware of the importance of their actions on the future and welfare of our country, did not foresee that 80 years later Republicans would again meet and again be faced with making that same all-important choice. As I see it, the importance of this gathering tonight is not so much to review the history of the convention of 1860 and to pay tribute to Abraham Lincoln as it is to bring to the attention of the America of 1939 the importance of the convention and election of the coming year. For our country today is as much in need of leadership as it was in 1860. So I will take only a moment to give you a picture of what occurred on that day 79 years ago.

moment to give you a picture of what occurred on that day 79 years ago.

The "Wigwam," which was the name of the building in which the Republican convention in 1860 assembled, was a temporary structure standing here on the corner of Lake and Market Streets, near the fork of the Chicago River. The building is said to have held about 10,000 people; the actual floor of the convention, which was crowded, held only 400. The gallery, which was reserved for ladies and for gentlemen who accompanied ladies, held about 9,000 and it has been said that it, too, was crowded.

The hotels of Chicago were jam-packed with delegates, friends, guests, convention officials, and general hangers-on. It has been

guests, convention officials, and general hangers-on. It has been said that the rates charged by the Chicago hotels at that time were outrageous. Before the convention, some of the larger hotels had charged a dollar to a dollar and a half per day for rooms and three meals. A 75-cent Sunday dinner, as advertised by one of the great hostelries of the day, was a royal banquet. The Chicago hotels were charged with profiteering during the convention be-cause they raised their rates. Two dollars and a half per day was

cause they raised their rates. Two dollars and a half per day was charged for room and board.

The "Wigwam" here was decorated with flags, bunting, and pictures. The decorations were done by the Republican ladies of Chicago. The chairs used by the delegates and in the galleries had been donated by patriotic Chicagoans. A union religious service on the Sunday night preceding the convention was held to dedicate the occasion. The Chicago of 1860 had done its best

in a big way.

The first two days of the convention were given over to the adoption of a platform and miscellaneous business. for President of the United States was planned for the afternoon of the second day of the convention, which was May 18. that time arrived, however, it was found that the ballots had not been printed. This fact becoming known, a delegate whose name been printed. This fact becoming known, a delegate whose faint is not now known, but who perhaps changed history, moved that the convention adjourn until the morning of the 19th. It is history that had the balloting begun on the afternoon of the 18th, William H. Seward, instead of Abraham Lincoln, would have be-

come our Republican nominee.

On Friday, the 19th of May, the "Wigwam" was packed. The balloting began early, and on the third ballot Abraham Lincoln, of Illinois, had received 364 votes which was a majority and was therefore the Republican nominee for President in 1860. Those hours, although pack-filled with as much excitement and tumult as surrounds a present national convention, did not affect Abraham Lincoln. He had not attended the convention. The story is told that shortly before the convention, a friend of Abraham Lincoln told him that inasmuch as he was going to be a Presi-dential candidate, perhaps it would be better if he did not attend. Lincoln replied that he had been puzzled over the question of attendance and had not made up his mind whether he was too important to attend or not important enough to stay away.

After his nomination, his friends sought him out to inform him of the result. They found him playing handball. Such was the simpleness of Abraham Lincoln. We all know what followed—Lincoln's speech of acceptance, the campaign, the election and the inauguration of Abraham Lincoln in 1861. The stirring deeds of Abraham Lincoln, his character, his life, his influence on the history of our Nation, his Gettysburg speech, his second inaugural address, are all known to Americans and need not be gone into at this time.

at this time.

Frankly, when I was asked to address this gathering I was puzzled for a time as to the subject of my speech. For several days, I could not formulate an adequate framework for my address. Last week end I visited my home in Concord, N. H.

While there, Johnny, the youngest of my three boys, came into my bedroom early Sunday morning, choosing a time when he could talk to me alone. He said, "Daddy, I want you to do something for me.'

He said, "I want an allowance." His boyish language was such that at first I could not understand what he meant. Then, grasping the import of his request, I asked him why he wanted an allowance; I asked him if there was anything which his grandmother

ance; I asked him it there was anything which his grandhouse couldn't get for him.

He said, "Yes, daddy, grandma can get things for me, but this is different. I want an allowance to be paid me each Monday, so that I can have some money of my own to do with as I want. I want to save to buy things I want and need."

I said, "How much do you want?"

He said, "A nickel a week."

That request of the little how of 6 years of age was the answer to

That request of that little boy of 6 years of age was the answer to That request of that little boy of 6 years of age was the answer to my problem of what to say to this gathering of Republicans. I saw the intelligence of the request of that little boy who had not been faced yet with the serious conditions of existence in our modern world, who had not been faced with the problems of our society or of our everyday life. The one thing he did know was that he wanted economic independence. Oh, he didn't think of it in those terms, but he did think to himself, "Now, if I have a nickel each week I won't have to ask grandma for money. I won't have to tell anybody what I am going to do with it." In short, that little boy wanted his individual independence. I granted his request and then I pondered the future.

I thought of the country in which that little boy was living. I thought of its conditions at the present time. I wondered what its condition would be when he was a grown man. That led me to

condition would be when he was a grown man. That led me to wonder what the conditions of our country were at the time of Abraham Lincoln. What would be the future outlook of a little boy of 6 years at the time of the nomination of Abraham Lincoln? What did Abraham Lincoln want for America? Did he want any more or any less than the Americans of our own generation? There, my friends, was the subject of my address, "The America I Want."

Went."

Let us get back to the Republican convention of 1860 and look for a moment at one of the planks of the platform of the Republican Party. Plank number six reads as follows:

"That the people justly view with alarm the reckless extravagance which pervades every department of the Federal Government; that a return to rigid economy and accountability is indispensable to arrest the systematic plunder of the public Treasury by favored partisans; while the recent startling developments of frauds and corruptions at the Federal metropolis show ments of frauds and corruptions at the Federal metropolis show that an entire change of administration is imperatively demanded."

In my estimation, that plank may be taken for the most part and placed in the platform of the Republican Party for 1940.

and placed in the platform of the Republican Party for 1940. Economy, thrift, and the return to sanity on the part of our Federal Government is today the most necessary objective. It is an objective which the Republican Party must stand on four-square, because we can never have recovery without economy. We Republicans are all aware of, and I am sure that the American people in general are aware of the fate of economy in the hands of the present national administration. This is neither the time nor the place for destructive criticism. The biggest national debt in the history of our nation, over 11,000,000 of unemployed Americans walking the streets, oppressive taxation, broken promises, an economic philosophy of destruction rather than production, a foreign trade policy which robs the American farmer and the American manufacturer and the American worker of their markets and their jobs, speak for themselves. But what are we

and the American manufacturer and the American worker of their markets and their jobs, speak for themselves. But what are we going to do about it? That is what the country is interested in. Today the people of the United States are concerned with two important problems. They are peace and recovery. They look to the Republican Party to present to them in the coming year a program which will mean the maintenance of peace and the economic recovery of the Nation. I will discuss the latter first.

The America I want for you, for myself, for my children, and for our people, is a Nation which is free, individually free. I don't want to be regimented and I don't want to be controlled by any man or by any government. I want to be able to take my nickel which I get every week and do with it as I please. I believe that the American workers wish to take their pay checks and do with them as they please because economic independence means security and freedom for the individual as well as the Nation. In order to get that nickel, and in order to have it free from the strings of control, our people must be given jobs, they must be given work.

given work.

Now how can those jobs come about? They can come about by starting the wheels of industry, by encouraging the forces of production, and by giving the American farmer the American market. They tell us nowadays that there are no frontiers, that there are no new lands in which to settle. But that is not New lands and new territories are not the only frontiers. There are frontiers of science, of maintenance, of technology, of finance, and of human discovery and adventure. Some of our present industries can and should be profitably expanded. From time to industries can and should be profitably expanded. From time to time, new industries will come into being. Capital goods of every kind wear out, and must be repaired, replaced, supplemented, and modernized. New processes will be developed to replace the old. For these, new factories and new machines will be needed. Encouragement should be lent to the development of such things. The America I want will lend such encouragement. It will not curtail and regiment and trample industries, labor, and the termoral by a thousand one convertibles and laws.

farmer by a thousand and one regulations and laws. It will not

throttle expansion by unjust tax laws which are based upon so-called social reform and not upon the Government's need for finance. Such taxes as the capital-gains tax and the undistributed-profits tax, are illustrative of the bonds which hamper investment in the forces of American production. We must release those forces, we must encourage industry, because in that way only can our unemployed be given jobs.

The America I want for my sons does not include for them a life-time on Federal relief. I have made many criticisms of the various unemployment solution schemes of the Federal Government. I have criticized the W. P. A. and the P. W. A. and the other projects. I have criticized them for the waste and the political graft which is inherent in their administration. I have not criticized them because they served in an emergency to provide food and clothing and shelter for even unemployed and for our destitute.

because they served in an emergency to provide food and clothing and shelter for our unemployed and for our destitute.

I do not believe that these relief agencies should be considered permanent parts of our Government set-up. We believe as a party that American industry can provide jobs if given the opportunity and if given freedom from the forces of the present administration which are strangling, hampering, and crippling private initiative wherever possible. If there is a portion of our population which is to be permanently unemployed, it is our duty and our objective to see to it that that portion is as small as possible. When that portion is reduced to its smallest limit the administration of relief should be returned to the States and to the localities. Only by such portion is reduced to its smallest limit the administration of relief should be returned to the States and to the localities. Only by such a move can relief be curtailed to the benefit of those in actual need. Only by such a move can the vast expense of the present Federal bureaucracies be abolished. A Nation with a tenth of its population jobless is a sick Nation. It is a Nation in need of a doctor. And our party, my friends, must be that doctor. We alone have the remedy, the remedy that has not been tried, the remedy that cannot fail—jobs and work.

The America I want is a solvent America. It is not a country.

The America I want is a solvent America. It is not a country which places a debt and tax burden on a child at birth that will haunt him during his entire life. The America I want is one that does not rob the unborn. For 7 years the present administration has been engaged in a vast spending program, a program based upon nas been engaged in a vast spending program, a program based upon pump-priming, a program which entails pouring into the channels of industry and in governmental agencies hundreds of millions of dollars of the people's money. Certainly, such expenditures keep the patient alive. But they do not make him well. We have reached the end of the trail; one more injection of spending means only further financial chaos. The Republican Party is the only instrument through which the people can prevent national bankinstrument through which the people can prevent national bank-

ruptcy.

The America I want is one that has at the head of its gov The America I want is one that has at the head of its government an administration of integrity, an administration that keeps its promises and abides by its platforms. An administration that the people can count on when planning for the future. Such an administration does not change its plans and programs as often as a chameleon changes its color. The American people know that no sane, economic program can be expected from the administration of Franklin D. Roosevelt. Six years of promises, 6 years of appeasement on the one hand and crack downs on the other, 6 years of keeping the club of infiation in the closet 6 other, 6 years of keeping the club of inflation in the closet, 6 other, 6 years of keeping the club of inflation in the closet, 6 years of snooping and spying to determine just how much of a crook every solvent citizen has been, 6 years of crackpot schemes. These things are carved into the heart of every right-thinking citizen of this country. Why should industry, why should the American worker, why should the American farmer trust the present administration of our Government?

present administration of our Government?

The America I want is an America that will guarantee the worker the right to work. The Republican Party must guarantee such right. In 1940 we must offer a constructive plan of national economy which will mean positive recovery. We will encourage industry by removing the shackles. We will encourage labor by guaranteeing to the American worker the right to work the American way, unhampered and free. I do not mean by this that the Republican Party advocates a return of industrial license or labor exploitation. We as a party believe in labor unions. We believe in the right to strike. We believe in collective bargaining. But we also believe that every free American worker should have the right to work where he pleases, when he pleases, and for whom he pleases, without being coerced or intimidated.

he pleases, without being coerced or intimidated.

he pleases, without being coerced or intimidated.

The America I want is one in which the older people may be assured of security. While we approve of the theory of social security, the present act must be amended. It must be amended so that our citizens in their old age may be assured of independence. The present act must be amended so that it will be equal for all classes of workers. It must be amended so as to place it on a pay-as-you-go basis. The future of our citizens in their old age cannot be secured by robbing their pay envelopes during their working years of tax money to be used to pay the current running expenses of the most extravagant government in the world. That is what happens now under the guise of social security.

The America I want is one that will have a sound currency, a sound medium of exchange. If a citizen has a dollar in his pocket, he wants to know that it is worth a dollar, and that it has the purchasing power of a dollar. In order to more adequately protect the soundness of our money, we Republicans advocate the repeal of all laws which give the Chief Executive the right to tamper with the people's money. A good example of such a law is the Thomas infiation amendment, which permits the issuance of three billions of dollars of greenbacks, unsecured and representative of nothing more than a watering of our money.

The America I want is a nation that has a fundamental agricultural policy based upon the economy of plenty rather than scarcity. The American farmer does not wish to be a burden on our economic society and he need not be a burden. Given the American market, which is his by heritage, he need not have the Federal Treasury checks for killing his pigs and cows, or for plowing under his cotton or corn. He need not have checks for filling what is termed an ever-normal granary. He need not have checks for not growing anything while foreign products are dumped into this country and sold on our markets to the detriment of American-grown products.

The America I want is one that has a sound program of foreign trade. This means that our commercial intercourse with foreign countries shall be carried on in a sound manner. Such a program will mean adequate protection of the home market from cheap foreign goods, manufactured below American standards of labor by cheap coolie workers. A complete revision of the so-called reciprocal-trade agreements is vitally necessary, and we as a party advocate such revision. Such revision will return the American market to the American farmer and American business.

This country is not looking for plans. This country is not looking for a Utopia. All our people are looking for is security, jobs, individual freedom, and a hope for the future. The Republican Party does not and will not try to fool anyone into believing that the moon can be brought down and carved up for distribution if only the people vote right. We leave the extravagant promises to those who in the leat 6 years have never these who in the leat 6 years have proved these who in the leat 6 years have proved these who in the leat 6 years have proved these who in the leat 6 years have proved these wholes of the leat 6 years have proved the second of the leat 6 years have proved the second of the leat 6 years have proved the leat 6 years have been proved the second of the leat 6 years have been proved the second of the leat 6 years have been proved the second of the leat 6 years have been proved the second of the leat 6 years have been proved the second of the leat 6 years have been proved the second of the leat 6 years have 10 years have only the people vote right. We leave the extravagant promises to those who in the last 6 years have proved themselves unable to fulfill the very simplest of their contracts with our people. We do promise jobs, and we do promise work, and we do promise a return to sane, economic thinking. The American people will subscribe to our program because they demand economic security, individual freedom, and work more than anything else in the world.

The American L want is an American at peace. The American L want is an American to the same and the same

The America I want is an America at peace. The America I want may give my little boy his nickel, but it will be of no use to him or to the millions of others in our country if we are to engage in war. One of the most necessary programs for our party to adopt is a program of peace. I hope the Republican Party will adopt a program which will mean no entangling alliances, no commitments, and no agreements by which our country might become involved in a war. I believe we should maintain in this hemisphere a true democracy.

democracy.

If other nations of this world wish to live under a different form of government than ours, that is their business. But so far as America is concerned, let us have an adequate Army, Navy, and air force. Let us offer the hand of friendship to all nations but let us insist upon the sanctity of the Monroe Doctrine. Let us be ready to resist invasion or political or economic aggression in any part of North and South America. Let us mind our own business. The America I want will not send my boys to die to readjust the boundary lines of Africa, Asia, or central Europe. The America I want will permit him to live in peace and security, without fear of war

In February of 1937, Franklin D. Roosevelt said to his friends, "When I retire to private life on January 20, 1941, I do not want to leave the country in the condition Buchanan left it for Lincoln. I cannot, in the brief time given me to attack its deep and disturbing problems, solve those problems I hope at least to have moved

them well on the way to solution by my successor. It is absolutely essential that the solving process begin at once."

We Republicans and the rest of the country know what solving We Republicans and the rest of the country know what solving processes began at that time. These processes were the Supreme Court packing bill, the first reorganization bill, the appointment of Hugo L. Black to the Supreme Court, the undistributed-profits tax, and the capital-gains tax, the unworkable Farm Act, the encouragement of sit-down strikes, industrial strife by the National Labor Relations Board, pump priming, use of relief money in politics, and other processes too innumerable to list at this time. The recent most elegant piece of work undertaken to aid the American farmer has been the Executive demand that the American Navy use foreign beef. Need I say more?

American farmer has been the Executive demand that the American Navy use foreign beef. Need I say more?

Those are the processes which the New Deal has adopted to bring the country back on its feet. I say to you, fellow Republicans, that this country will be turned over by Franklin D. Roosevelt to his Republican successor in far from good shape in January 1941. We have a task on our hands. To complete that task we must adopt an understandable, concise, simple program based upon peace and recovery, and we must nominate at our convention next year a man with understanding and ability who will carry out that program, a man who will restore the morale of our people.

our people.

The America I want is the America in which the doors of opportunity remain open. The kind of America I want and the kind of America you want is the kind of America Abraham Lincoln wanted and the America Abraham Lincoln got for us. It is the America of security, of plenty, of thrift, of production, and of peace.

[From the Chicago Tribune of May 20, 1939] PROSPERITY AND PEACE

Senator Bridges, of New Hampshire, spoke with great effect at the meeting here in commemoration of Lincoln's first nomination to the Presidency.

The trend of Mr. Roosevelt's administration, as Mr. Bridges said,

is toward bankruptcy and war. The new dealers have failed to give the country the prosperity promised in 1932 and 1936. The

enormous expenditures have failed to stimulate industry and comenormous expenditures have failed to stimulate industry and commerce. Relief payments are higher than ever. Unemployment has been reduced little if at all. The conduct of foreign relations has been calculated to involve America in any European war which may develop. Against these policies and trends the Republican Party stands and it is the only instrument through which the will of the people for peace and solvency can be made effective. The Republican Party has a great opportunity to rescue the country from disaster. Mr. Bandes pointed to the opportunity and also to the responsibility which goes with it.

It was a telling speech by an able man. It forecast with great

It was a telling speech by an able man. It forecast with great clarity the principal issues upon which the national campaign of

1940 will be fought and won.

Population and Resources From a Business Viewpoint

EXTENSION OF REMARKS

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES Tuesday, May 23 (legislative day of Friday, May 19), 1939

ADDRESS BY E. B. MACNAUGHTON

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject of Population and Resources From a Business Viewpoint, by E. B. MacNaughton, president of the First National Bank of Portland, Oreg. This address was delivered at a meeting of the Seattle Chamber of Commerce on April 28, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am to speak on the subject of Population and Resources and Their Importance to Business. I presume I am here today because the Regional Planning Commission wants you to hear the testimony of a businessman who realizes that national and regional and State planning is something that is vital and practical and badly needed—in contrast with the impression and opinion which

and State planning is something that is vital and practical and badly needed—in contrast with the impression and opinion which I suspect is in the minds of too many business people, that planning has to do only with folks who are visionary, who incline to be dreamers, and who wear long hair. I am sure that I do not meet that specification, and yet I have a real and genuine interest in planning. It may come out of my background as an engineer. In our part of the country, we need to give more thought to the subject of planning. When our Oregon State Planning Board attempted to get a renewal of its appropriation from the last session of the legislature it failed. This failure manifestly was due to a misunderstanding of what planning means. Planning is not something that is connected with the Democratic Party, or with impractical idealists. It is as fundamental and as necesary today as a correct balance sheet and forecast in your own business. Twenty-five years ago, Professor Turner, of Harvard University, gave a baccalaureate address in this city to the graduating class of the University of Washington entitled "The Passing of the American Frontier." It was one of the most significant and prophetic addresses ever given. In that address Professor Turner showed that from the time the colonists first landed on the Atlantic coast we had a frontier "safety valve"—any of our people who became dissatisfied or were maladjusted, for one reason or another, could move out and find a new start in life.

I thought of that address when, in coming into your city this

I thought of that address when, in coming into your city this morning, I passed through a mile or more of flat land covered with shacks built with the remnants of packing boxes. I thought of the change since the time when I came to this western country. of the change since the time when I came to this western country. Young men who came with me soon were taking up timber claims. Others took up wheat land in the Palouse country. All soon found a start. These people in the shacks who have been dispossessed, mostly for causes beyond their control, are today faced with a real problem and a real crisis in their lives. That problem and that crisis is not theirs alone. It is yours and mine. What is to be done with respect to this movement of population and the changed conditions which confront the people that are involved? are involved?

are involved?

The planning board primarily is concerned with getting facts before the American people as to the changes which are affecting our human resources and our natural resources. On the subject of this change in population they have many vital figures and information as to trends with which you should be concerned. Fundamental changes are taking place in our population. It is not merely a matter of movement. The American people have always been mobile, moving, when the chances were bad, to another place, without much thought as to where they are going.

There is a flattening in the curve of population growth. I remember when I first came across a statement to this effect 8 years ago by the Metropolitan Life Insurance Co., that I looked upon it as a factor whose effects would be more or less remote. upon it as a factor whose effects would be more or less remote. But today, in our own city of Portland, we have upward of 200 empty schoolrooms. This condition is not peculiar to Portland; it is true of almost every American city. The reason is that the birth rate has been declining. The birth rate in Oregon, for instance, has dropped from 19.3 per thousand in the year 1921 to 13.2 per thousand in 1932. Stuart Chase tells us that there are something like a million empty desks in elementary schools in the United States today. This is in sharp contrast with the enrollment that was there 15 years ago. This change in population means that the young people are not coming on to build up the total. The percentage of older people is increasing—hence the Townsend plan, hence the pressure for old-age security and pensions. pensions.

This subject of population is of great importance to us here on the Pacific coast. As business people, we have drawn for our prosperity to a very great extent upon two sources of activity: First, from the development and improvement of real estate and First, from the development and improvement of real estate and all activity that centers around real estate and the building business; secondly, from the development of our forest products. Merchants in years past who were able to get a reasonably good location on a business street in any western city had a pretty good assurance that if they were well-behaved they would prosper simply because the community was growing. The traffic count past their stores was increasing, and they got their share of the money. They felt they were successful businessmen, and perhaps they were—they were by the test of that day. But today, we know that too often the small merchant is not able to prosper. One cause lies in the fact that the population curve is flattening, a change in the flow of population is taking place. The building business is affected. All business activities centering around the growing curve of population are finding problems which are difficult to cope with and for which it is hard to find any solution. The other great source of our prosperity has had to do with

The other great source of our prosperity has had to do with the development of our timber resources. In our State of Oregon the planning board has shown that about 60 cents of every manufacturing pay-roll dollar comes from forest products. The timber business, the logging business, and the sawmill business, as we who are in the banking field know, are becoming more and more

precarious risks as far as the advancement of credit is concerned. Competition of lumber substitutes has developed, but, also, the costs of doing business have increased, not only because of higher wages and other demands, but because of the difficulty of getting the raw material in locations where it can be easily and profitably worked. The areas of logged-off land are increasing. The stand of timber still the greatest natural resource of our area is becoming worked. The areas of logged-off land are increasing. The stand of timber, still the greatest natural resource of our area, is becoming depleted. You have in Washington, as we have in Oregon, areas where the crop has been taken from the land; business is extinct or stagnant as a result. I am sure that there must be some difficult problems to solve in your Grays Harbor area just as in areas on our Columbia River watershed. We have been, with this crop, as with other resources in our whole country, miners rather than developers.

as with other resources in our whole country, miners rather than developers.

The purpose of the planning councils among the States and of the National Resources Committee is to get the facts as to these conditions before business people in a way that will open their eyes and make them appreciate the necessity of the conservation of our natural resources. It was about 25 years ago that Secretary Ballenger so violently opposed Theodore Roosevelt as he first undertook a program of conservation of timber in the Pacific Northwest. Today we no longer become violently angry when people say that we should begin to conserve these resources. We are becoming conscious of the need of study and of the need of reliable information. Marcus Aurelius, emperor but primarily philosopher, a long time ago, said: "Nothing has such power to broaden the mind as the ability to investigate systematically and truly all that comes under your perspective in life." It was true then; it is true today.

We heard an address in Portland a week or two ago, by the forester appointed to our district. He dwelt upon the effects that have come to the Wisconsin and Michigan peninsula, as the result of the mining of the timber and the mineral resources of that area. Instead of cropping the timber the area was mined and exploited for quick profit. It was a revelation to all of those who heard his remarks. Close upon that address there came to my desk a bulletin just released by the Pacific Northwest Loggers Association entitled "Timber Cropping in the Douglas Fir Region." I commend this to the attention of all of you. It is one of the finest statements I have ever seen made by a business group. It gives courage and hope that perhaps this idea of planning and conservation of resources is taking hold upon our business people, and that they are now becoming concerned not with quick, fast profit, but with the possibility of maintaining an industry upon and that they are now becoming concerned not with quick, fast profit, but with the possibility of maintaining an industry upon a sound, self-sustaining basis. The report printed in this bulletin was made for the benefit of the Seventy-fifth Congress, before letin was made for the benefit of the Seventy-fifth Congress, before which legislation has been laid looking toward a better handling of the forest crop in the Pacific Northwest—something of tremendous importance to us all. Much of the information in this publication came from studies made by the National Resources Committee and the planning councils in the States involved. Business people should become genuinely and definitely interested, and become a part of this planning movement. They should give it intelligent and eager support in all ways, par-

ticularly when it comes time for legislative bodies to make appropriations for the support of this work. If we are to continue to enjoy the prosperity which we have had thus far in our wonderful area of the Pacific Northwest we must begin to learn how to use more intelligently the resources which are left for us and to keep them available for those who will come after us.

This flattening of the curve of population means much to all parts of the country, but it probably means less to us than to other sections. Figures have shown, and studies have confirmed, that the movement of population in our country is a good deal like the separation of the milk placed in the cream separator. When the action is started, the heavier particles are thrown out to the outer edge. So, there has been going on in our country for the last 25 years such a separation movement—the young people from the Mississippi Valley, and other people driven out of the Piains because of the dust storms, have moved out to the perimeter of the country. We have, and will continue to receive, new increments of population out of proportion to our own natural increase.

If these people are to come to us and just land upon us without

increase.

If these people are to come to us and just land upon us without any thought and without any planning as to how they are to be taken care of and how they may be located where they can have a reasonable degree of success, we will simply have trouble—more and more trouble. We will be faced with the same kind of problem that disturbs California, and particularly southern California. There they made the promise of an El Dorado, said, "Come out and live with us." The idea was that if people could be gotten on the streets real-estate values would be built and business made better. The look was always at the immediate, quick dollar. Today if you go to southern California and talk recklessly and boldly about advertising for population you will not receive a very kind look. Many down there have begun to realize the fallacy. To get population is one thing. How to handle people after you get them is another. Will they simply become public charges because of unemployment, with the consequent advances in our appropriations for the poor and indigent?

This is all part of a planning program, a reason why business should be giving its support to that movement.

Referring again to the necessity of our taking care of our resources that are still left with us in our timber business, in our fishing industries, and in our soils, I feel that we have a great work to do—a work which cannot be done in a helter-skelter way. Thought must be given to it. First of all, facts must be obtained—basic information as to the present conditions and the probabilities or trends one way or the other, must be brought together in reports. If these reports seem to be rather verbose, do not become superficially critical, as our legislators did at their last session in Oregon saying that the planning board had gone off in a great many words, with nothing to show for its effort. Don't take that attitude, because first of all information must be obtained, and it is not the function of the planning councils nor of the National Resources Committee

from the heavens, it seems as though the rank and file of people have been looking for someone to "pass a miracle," as was said in Green Pastures, and find the answers right away.

We have gone beyond that time in our country, as Mr. Turner, in his address, pointed out, when we can say to the people, "Move on." "Go west, young man." "Get a new start." "There are all kinds of things out there where a young man can get his start." The answer to that argument today is the people who are living in these little shacks in the edge of this city. They are looking for a start.

while I am a Republican, perhaps a black Republican, I have a great deal of sympathy for many of the things that this present administration is trying to do. When I see it try through the farm-security program and other means to relocate these people where they can have a fighting chance to regain and maintain their own independence, I have no quarrel, as some people have who say that this is throwing away our money. Our whole government and our whole civilization in this country have been built on the basis that we shall insure the needy person a reasonable, fair chance to earn his own living. We gave it when the free land was here; we gave it in many ways. Now, if we are going to maintain this democracy, I think we must still continue, with reasonable prudence, to make it possible for these people who have been divested of their chance again to be able to strike their roots in and become self-respecting members in our communities and in our States. That, too, is part of the work of the planning councils—not to make these chances but to get together information and facts, and to make it possible for legislators and administrators in government to prepare proper plans and devise adeistrators in government to prepare proper plans and devise adequate laws and to appropriate proper sums of money for successful work of this kind.

Now, as a banker, and as a man who has to see that two and two add up to four and not to five, and who generally has very little regard for those that are of the visionary type, I want to say that I am thoroughly in favor and strongly support these activities which head up in the work of these planning councils and of the National Resources Committee. We all should be there

with them.

It has been said that we are today living in a world that has passed away with the years, a world that perished to make us men. A world has passed away. We are never going to be able

to press back our civilization, our society, in this country, in this State, into the pattern of and in conformity with the gridiron that controlled things 10, 20, or 30 years ago. That world has ceased to exist so far as we are concerned. A new set of problems confronts us all, and if we are going to be realists we are going to forget that just because things bear the labels of Democrat, or of Republican, or of any other form of politics, they are no good. If you are a conservative, you have to be a conservative willing to move on. You are going to have to keep in step, if you are to be able to keep what you have today and be happy with it. New ideas are current all over the world. The radio flashes the message of what Hitler thinks today, what Stalin thinks tomorrow, what Chamberlain thinks the day after tomorrow, and what Roosevelt, our own President, thinks next week. You cannot control that, and you cannot shut your mind and say, "It is no good." Try and take the good out of whatever anybody has suggested and make it workable. That, fundamentally, is what this group of planners is trying to do—working with facts, putting them together in a way that will be intelligent and a way that will be easy to comprehend. They then endeavor, from those facts, to do certain programing, and if you have harbored in your mind the thought that these people are visionaries and impracticable folks and should be disregarded, banish the thought; for really if anybody is performing a service for us all today, it is these people who are giving so much time and energy to the study of the problems which perplex us.

Silver Acquired by the Treasury

EXTENSION OF REMARKS

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES Tuesday, May 23 (legislative day of Friday, May 19), 1939

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Congressional RECORD, a table compiled from a chart published in the Evening Star, Washington, D. C., on May 18, 1939. The table is entitled "Foreign and Domestic Silver Acquired by Treasury 1934-39, in Percent of Total Weight." It shows that in each year since the silver program began more than three-quarters of the silver acquired has been of foreign origin

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Foreign and domestic silver acquired by Treasury, 1934-39, in percent of total weight

Year	Foreign ¹	Domestic, newly mined	Total
1934	92. 9 92. 9 81. 7	7. 1 7. 1 18. 3	100 100 100
1937 1938 1939 ³	81. 7 77. 4 85. 2 84. 3	22. 6 14. 8 15. 7	100 100 100 100 100 100

 $^{^1}$ Includes stocks nationalized on Aug. 9, 1934, some of which was of domestic origin. 2 Year ended Mar. 31, 1939.

Source: The Evening Star, Washington, D. C., May 18, 1939.

Improvement of Business Under the New Deal

EXTENSION OF REMARKS

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 23, 1939

ARTICLE BY JAY FRANKLIN

Mr. GEYER of California. Mr. Speaker, we have heard a great deal-these days about the New Deal ruining business. The following article by Jay Franklin in the Washington Evening Star for May 22, 1939, will debunk these claims, with facts and figures. The article follows:

[From the Washington Evening Star of May 22, 1939]

WE, THE PEOPLE—BUSINESS RAGES ROOSEVELT IS RUINING IT, BUT FIGURES ARGUE DIFFERENTLY

(By Jay Franklin)

For some strange reason, the Tories rage and the Wall Streeters gnash their fangs whenever a New Dealer points out that they are making pots more money under Roosevelt than under Hoover. They became angry when I quoted the financial editor of the Chicago American, they became furious when I quoted the Associated Press, and they will probably excommunicate me for citing these figures from Dr. Eric Muehlberger. I do not guarantee them in detail, but I am convinced of their substantial accuracy.

The figures under comparison are for the first part of 1939 and The figures under comparison are for the first part of 1932 and the first part of 1932, using quarterly or weekly totals, as available. Remember, in early 1932 it was far from sure—politically—that President Hoover would not be reelected. Business had all the confidence the White House could pump into the market, taxes were conveniently low, there were no National Labor Relations Act, S. E. C., wage and hour law, or other forms of "regimentation" to act as a "deterrent" on business enterprise, and there were no serious foreign war scares. Here you have the picture of Mr. Hoover's "confident" business and Mr. Roosevelt's "discouraged" business: business:

Commodity	Under Hoover, 1932	Under Roosevelt, 1939
Stock prices (average)	\$81, 20	\$100, 61
Bond prices (average)	\$74. 29	\$85, 78
Monetary gold stock	\$4, 345, 000, 000	\$15, 801, 000, 000
Federal Reserve credit	\$1,859,000,000	\$2, 572, 000, 000
Currency circulation	\$5, 548, 000, 000	\$6, 915, 000, 000
Brokers' loans	\$379, 016, 662	\$547, 443, 175
New York rediscount ratepercent	3	1
Bank clearings (22 cities)	\$90, 859, 453, 000	\$96, 268, 786, 000

Since all these figures are, at best, approximations, the whole case for the New Deal's business policy can be summarized by saying that in the sixth year of Roosevelt business is about 50 percent better than in the third year of Hoover.

All right, you business babies who are howling that Roosevelt is ruining you, let's see you take a crack at this picture. And remember these Hoover figures are taken from the first part of 1932, when you had your man in the White House and the Government was taking its orders from you. The figures for 1939 are taken from a period when Roosevelt was acting for the country as a whole, and they say that you are much better off under the New Deal than under the old order. And still you squawk! Mr. Farley, an Engaging National Figure

EXTENSION OF REMARKS

HON. WESLEY E. DISNEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 23, 1939

EDITORIAL FROM THE TULSA (OKLA.) WORLD OF MAY 16,

Mr. DISNEY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Tulsa (Okla.) World of May 16, 1939:

> [From the Tulsa (Okla.) World of May 16, 1939] MR. FARLEY, AN ENGAGING NATIONAL FIGURE

Oklahoma extends a sincere and enthusiastic welcome to Post-Oklahoma extends a sincere and enthusiastic welcome to Post-master General James A. Farley. He is a foremost figure in the political and official life of the United States and he is a real power in each of many respects. His distinctions easily fall into three major phases. He is in the President's Cabinet and possibly its most distinguished member; he is chairman of the national Democratic organization and a politician of the first class; he is a Presidential possibility. Either of these items would entitle him to a genuine public welcome.

Jim Farley, as he is commonly known to millions, has grown mightly in stature since he first came to general notice. At first he was savagely attacked, and it was generally understood that that was one method of getting at Mr. Roosevelt. But the fierce political and personal attacks upon him have generally ceased and he is welcome everywhere. For instance, he was, when he started in national politics, a poor speaker. He did not appear much in public, but now he is really an orator and can hold his own in any company. As an administrator of the business which directly affects every person in the United States he is a guerrant of the starter of the start

public, but now he is really an orator and can hold his own in any company. As an administrator of the business which directly affects every person in the United States he is a success, and as national chairman he is noted for his straight Democratic politics and for his refusal to be anything other than a plain Democrat.

Mr. Farley has unquestionably built up one of the finest organizations ever known in the United States. He is very generally given credit for having formed a set-up which twice elected Mr. Roosevelt to the Presidency. In all the period in which he has been before the public, the chairman has appeared frankly as a partisan and he has not gone off after ideologies or expediencies. He sticks to his job and inspires loyalty everywhere. It is noteworthy that Mr. Farley is regarded as the incontestable Democrat of the President's Cabinet. He is not swayed by conservatism or liberalism or anything else except his duty as a political adviser and executive. His postal department is run as such and his party organization is run as such. It is not often that a man can make a big success of two such big undertakings.

The transformation of Mr. Farley from a local politician to a great national figure has been very interesting. At various times and in many places he has taken the gaff for the President or the national administration, but he hasn't backed up. He is different from any other Cabinet officer, and he has a vivid personality. For these reasons and because he is honored as a fine representative American, Tulsa and Oklahoma welcome him with acclaim and genuine feeling.

American Millers Association

EXTENSION OF REMARKS

HON, FOREST A. HARNESS OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 23, 1939

ADDRESS BY HON. FOREST A. HARNESS, OF INDIANA, MAY 16,

Mr. HARNESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the American Millers Association at Louisville, Ky., May 16, 1939:

Each of you businessmen and women comprising this convention of the American Millers' Association has undoubtedly followed the trends in national policy with the keenest personal and business interest. You have watched each new law and each new administrative act as expressions of policy, and as indicators which point these national trends.

Even if time permitted, therefore, it would not be nece

Even if time permitted, therefore, it would not be necessary to review each act and law in great detail. My purpose, rather, will be to summarize for you the general march of events in Washington; and to give you, if possible, a fresh interpretation of these events in terms of your own particular interests.

As millers you are most directly interested in the domestic and world production and consumption of grain; and in the mechanics of transporting, processing, and marketing cereals and cereal products. But there is one major interest which you have in commutit all businessmen—actually, in fact, which you share with every with all businessmen—actually, in fact, which you share with every serious person in the country, regardless of his walk in life. You are vitally interested in the general business situation. You know from direct experience that your business prospers when general business conditions are favorable; and that it cannot long escape the general ills which inevitably follow when serious dislocations there were part of the prelimed economy, out of helance.

the general ills which inevitably follow when serious dislocations throw any part of the national economy out of balance.

Your first interest may appear to lie with agriculture, as your source of supply: with the transportation agencies which serve you; or with the wholesalers and retailers who are your market outlets. But you know that these agencies are merely integral parts of the whole, and that they prosper or suffer with the component whole as surely as night follows day. For this reason I shall limit my remarks to a discussion of how the trend in national policy is affecting the American economy as a whole.

Since convening on January 3 the Seventy-sixth Congress has carried through to enactment 41 public laws and resolutions.

carried through to enactment 41 public laws and resolutions. Fifteen of them may be cited as of interest to the American businessman. Among the new laws, aside from the major appropriation acts, I list the following as important from your viewpoint:

Laws continuing the functions of the Reconstruction Finance Corporation, the Commodity Credit Corporation, and the Export-Import Bank until June 30, 1941; the public Salary Tax Act of

An amendment to the Agricultural Adjustment Act providing for a reapportionment of cotton acreage allotments not planted by farmers entitled thereto.

An amendment to section 12 of the Soil Conservation and Domestic Allotment Act authorizing advances for crop insurance; and an act approved April 5 extending the time for retiring of

cotton pool participation trust certificates to December 31, 1939.

The various appropriation bills are at different legislative stages.

You are familiar with the number and variety of these which cover

The various appropriation bills are at different legislative stages. You are familiar with the number and variety of these which cover the normal functions of government, including the Army and Navy. Aside from relief and deficiency appropriations, the independent offices bill is the only one approved to date.

Among the bills that have passed one House, I call your attention to the following: S. 69, increasing domestic sugar quotas under the Sugar Control Act of 1937; S. 572, providing for the acquisition of strategic war materials; S. 1272, amending the National Housing Act to redefine metropolitan areas wherein higher limits of building costs are allowable; S. 1302, to make the Commally Hot Oil Act permanent; S. 1514, designed to reduce cotton surpluses by offering farmers 3.000,000 bales of cotton at 5 cents per pound as payment in kind for crop reduction; S. 1796, amending the Tennessee Valley Authority Act to permit bond issues for the purchase of private utilities; and H. R. 3325, to continue the stabilization fund and the President's power to regulate the gold content of the dollar to June 30, 1941.

For your information, the general consensus of Washington opinion would prompt one to predict that only moderate amendments will be made to the National Labor Relations Act this session; that Congress will appropriate more money for farm subsidies than ever; that an export subsidy scheme for cotton will probably be enacted; and that some moderate changes will be made in the wage and hour law.

I realize that there are many more things looming on the national and international horizons that you would like to know

I realize that there are many more things looming on the national and international horizons that you would like to know about. Perhaps the most important of these questions right now is whether there will be a general European war; and if there is, whether the United States can steer clear of it. You would like to know when the Budget will be balanced. You are equally interested in finding out if there will be any fundamental changes in the New Deal agricultural program; in business-control schemes, and in the tax structure. You would like to know if there is anything to appeasement, or if it is all talk. You would like accurate information concerning the enactment of processing taxes. And I imagine you would like to know if there will be a marked business recovery in the early future.

These are only a few of the questions you would like to have answered. So would we all.

While time does not permit treating each question in detail, we can cover the most important items by concentrating our attention on three major topics; namely, on fiscal policy, on the agricultural policy, and on the Federal control and regulation of business.

I don't need to tell you that the Federal Government has been spending a lot of money. You are well aware that the public debt is now over \$40,000,000,000. Don't ask me how much money that is, because I don't know. I do know that the \$68,000,000,000 spent, and to be spent in the decade 1931 through 1940 is enough to have bought all the assets of all manufacturers and all mines and quarries in the country with \$6,000,000,000 left over for small

Even though the normal operating expenses have been growing at a terrifying rate in this decade, the greater part of this money has been spent to "prime the pump." Of course, you are all familiar with the pump-priming theory, which holds that the peaks and valleys of prosperity and depression can be leveled by Federal engineering. When the national economy slows down, and private spending runs low, the Government should borrow for the purpose of transfusing new blood into our economic system. This, it is argued will lead to a resumption of private spending mainly for consumer goods. The resultant activity in the consumer goods industries then will spread into capital goods as the increased demands call for enlarged plant facilities and improved equipment.

mands call for enlarged plant facilities and improved equipment. Thus a self-sustaining recovery can be generated, whereupon Government support can be withdrawn.

Pursuing this theory, the New Deal has pumped more than \$21,000,000,000 into our economic life stream in 6 years. The best answer I know for those who still contend that the spending program has worked, or that it can ever be made to work, is the fact gram has worked, or that it can ever be made to work, is the fact that eleven to twelve million men and women—practically the figure for unemployment 6 years ago—are still vainly seeking work. Even though its exponents have revised the theory somewhat, and dressed it with the impressive new title of "compensatory spending," they can hardly hope to delude either the people or themselves about the inherent weaknesses which 5 years of actual experience have revealed in the theory itself. There is, first of all, the difficulty of reducing expenditures; second, the diminishing effectiveness of such stimulants with continued use; third, the distrust created by large public deficits; fourth, the terrific administrative costs; and finally, the impossibility of devising administrative machinery sufficiently sensitive and flexible to coordinate such an artificial activity to the natural functions of our economic system. economic system.

The third point mentioned, that is, the distrust created by large public deficits, is of particular interest and significance to us here. Businessmen can hardly be expected to make future commitments when they don't know what the future holds for them. And it is impossible to carry on an expansion without first

them. And it is impossible to carry on an expansion without first making some assumption as to what lies ahead.

It is interesting in connection with any discussion of the spending programs to compare the last few years with the years after the war, from 1920 through 1929. Against the theory that Government deficits are essential to restore the national income is the record of the years following the war, when we cut Federal expenditures from \$18,500,000,000 to around \$3,000,000,000 annually, lowered taxes four times, and reduced the national debt from \$26,600,000,000 to \$16,000,000,000, and, save for the brief interruption in 1921, the national income was steadily rising from \$56,800,000,000 to \$70,500,000,000 to 1929 \$56,800,000,000 to \$79,500,000,000 in 1929.

This record was possible because this was a period of great business expansion. With faith in the future, businessmen and investors were eager to go ahead with new ventures, putting people to work and producing new wealth, confident that capital so risked would yield a profit. They were not only confident that enterprise would yield a profit but that they would be permitted to retain a fair share of their earnings. And remember that this was all true in spite of disturbed conditions abroad.

One of the most direct consequences of our present fiscal policy

One of the most direct consequences of our present fiscal policy is the effect of the burden of taxation upon production. The amount of taxes paid by the American people last year was the highest on record. Aggregate tax revenue collected by all governmental units in 1938 is estimated at \$13,700,000,000 by the National Industrial Conference Board. Taxes paid last year were 40 percent more than in 1929, whereas our national income was environmentally 25 percent less than in that boom year.

approximately 25 percent less than in that boom year.

Our tax bill is increasing much faster than our income. This is strikingly shown by the fact that per capita taxes—Federal, State, and local—in 1938 took 23 percent of per capita income as against strikingly shown by the fact that per capita taxes—rederal, state, and local—in 1938 took 23 percent of per capita income as against 12 percent in 1928. Furthermore, not all expenditures were covered by taxes. If the Government had paid all its bills in 1938, nearly 30 percent of all the income of all the people in the country would have been collected in the form of taxes. Such a levy would have imposed such a staggering burden that it would have compelled a drastic downward adjustment in our living standards.

The crushing burden of taxes upon business enterprise is revealed by data compiled by the Treasury Department. According to this source, the total taxes paid by all corporations in the country in 1936, the latest year for which reports on returns are available, were 53 percent of net income. During the decade the Government has collected from corporations not far from twice as much as have the stockholders. The railroads paid taxes of more than \$340,000,000 in 1938, while their deficits for the period is estimated at \$120.000,-000. To cite further instances, taxes were equal to one-third of net income of the electric light and power industry, and 43 percent of the earnings in the petroleum industry. Taxes paid by the steel industry in 1937 represented 42 percent of net earnings, according to compilations made by the American Iron and Steel Institute, and amounted to \$330 for every person employed in the steel industry, or the equivalent of a year's wages for 108,000 workers. You know only too well that taxes are among your most important costs of production. You likewise know, from bitter experience perhaps, that your profits decrease as costs increase. You share this economic truth with all businessmen. You also know that low profits and the continuing prospect of small profits are no incentive to expansion. In other words, you agree with the President that "taxes are paid in the sweat of every man who labors because they are a burden on production and can be paid only by production."

But this is not the only disturbing trend in Federal taxing policy. Not only has the New Deal imposed a constantly increasing tax burden, but for the first time since the days of Chief Justice John Marshall we have seen a serious and definite tendency to use taxing power as an instrument of policy. The administration has quite frankly applied such levies as the capital-gains and undividedsurplus taxes, not as revenue-producing measures, but as avowed devices to regulate business and to control the flow of wealth created by productive efforts.

Thus the power to tax has been invoked to restrict the right of the individual to conduct his business as common sense, experi-

ence, and sound business practice may dictate.

Just in this session the way has been opened to carry the policy a step further, with the passage of the Salary Tax Act. At first blush this seems to be a desirable measure. Its purpose is laudable, for surely a Government employee should carry the same tax burden, in accordance with his ability, as his neighbor in private enterprise. But the same instrument which has been applied to restrict and control the individual can now be applied just as successfully against the rights of the States.

Since Daniel Webster declared before the Supreme Court, with the approval of Chief Justice Marshall, that "the power to tax involves the power to destroy," we have carefully resisted the tendency to invoke the taxing power as a weapon. Now, however, the businessman is confronted with still another unpredictable factor as he plans ahead. Future taxes may not only be burden-

some-they may be weapons of coercion.

If our objective is freedom to produce greater and greater wealth, and in turn, to achieve a constantly improving standard of living, it is certain that we must undertake important reforms in our fiscal and taxing policies. Which brings us to the question of what to expect in the way of fiscal and taxing reforms. Of this I feel certain: We cannot expect these reforms under the present administration. There is no tendency on the part of the present administration. There is no tendency on the part of the "spenders" to alter their policies. In fact, if you have listened to the defenders of compensatory spending as they declare that the program has failed only because it has been too niggardly, you will understand that the slightest concession to economy is forced.

Of course, we need not delude ourselves about taxes as long as

expenditures remain at such high levels. I believe there is an honest desire these days at the Treasury to undertake tax reforms which, if they did not lessen the total load, would at least remove the harsher restrictions, I believe the New Deal also has been forced to concede the fundamental importance of the business machine in any appreciable recovery. Hence, in recent months, the willingness to discuss the abstract principle of "appeasement." I see little evidence, however, that the administration has either the capacity or the honest desire to actually undertake such action.

We need no further evidence of the unwillingness to reform fiscal and taxing policies than the fact that the President, the man who is responsible for existing policies, the man who is supposed to submit a balanced Budget to Congress, has thrown up his hands and now contends that it is a problem for Congress to solve.

The only way we'll ever get out of this fiscal mess is to face the

issue courageously. Throwing up our hands won't get it done. Neither is it very intelligent to believe that those who got us into the predicament can ever get us out of it. Balancing the Budget simply comes down to getting the courage to do one of two things, either reduce expenditures or raise taxes, or a little of each.

Now, the only way you can reduce important expenditures is to eliminate governmental functions. Do not be misled by the idea that elimination of waste alone will balance the Budget. Even though I object to the manner in which he said it, the President was right when he said on January 3 that wasteful expenditures comprise only

a small portion of the ultimate savings we must effect.

Let me make it clear that no opportunity to cut operating costs in normal functions should ever be neglected. Waste, incompetence, and inefficiency should no more be condoned in a Federal depart-ment than it is in your own business. Unfortunately, however, the average Federal administrative agency has never been confronted, as you constantly are, with the necessity of functioning efficiently or facing bankruptcy. The President unconsciously reflected the attitude which results from such freedom from the cold laws of economics when he lightly dismissed the possibility of effecting savings through improved departmental methods.

As a practical matter it is difficult to eliminate functions in

face of pressure exerted by organized groups. These groups constantly seek an infinite variety of aids and subsidies, which make it all the more important that we stimulate production and recovery by every means at our command.

I believe we are making some headway in developing an intelligent economy attitude in Congress. That may sound like wishful thinking, in view of results to date, but I do feel that there is a salutary influence at work which will make itself felt as time goes on.

So much for spending. When we come to discuss agricultural policy we confront a still more difficult task. This is true because

it is impossible to discover just what our national farm policy is. If you think we have a farm program, listen to Senator Connally,

If you think we have a farm program, listen to Senator Connally, of Texas:

"Cotton is like a sinking ship. When a ship at sea is sinking you do not wait to work out navigation problems and try to devise a long-range program. You just shout, 'Man the lifeboats!' Now we are trying to man the lifeboats for cotton."

Notice those words, "try to devise a long-range program," coming after 6 years of what have year after year been described as "long range" programs. These remarks by Senator Connally were made in the Senate just 6 days ago, May 10.

Thinking generally, the objective of whatever policy the New Deal supports at the moment is to increase farm living standards. To achieve this the administration has tried a number of programs, action programs, so-called, to raise commodity prices and grams, action programs, so-called, to raise commodity prices and farm income.

To say that these action programs are puzzling in their utter inconsistency is to put the case mildly. First, we start upon the assumption that the way to restore prosperity is to raise prices. It is beside the point to say that the assumption was entirely fallacious, and that 6 years of experience have thoroughly discredited it, for, following the assumption, the administration has tried for 6 years to jack up prices and purchasing power. You all know the devices the New Deal has used to peg the American economy But when artificial restrictions began to cut down production we started importing from abroad.

importing from abroad.

Since this didn't go far enough, we generally lowered our tariffs through the series of reciprocal-trade agreements. That the tariff policy and the domestic programs are diametrically opposite in effect makes no difference. Next, we peg the price of cotton above the world price, and wonder why our cotton exports are the lowest in 50 years. Then we decide that the best way out is to restrict cotton production just that much more. If this throws southern farm labor on relief, then we hike relief appropriations and further unbalance the Budget. Furthermore, if it forces the southern farmers into new types of farming which make them competitors. farmers into new types of farming which make them competitors of the agriculturists of our grain, corn, livestock, and dairy regions, then we stiffen the restrictions on the farmers in those sections.

then we stiffen the restrictions on the farmers in those sections. When we artificially raise the price of wheat, and farmers take advantage of better prices to increase production, we cannot understand why that should happen to us, although it has happened every time any country ever tried it. You know about our diversion program. Under this program we buy up huge stocks of surplus foodstuffs and turn them over to the relief authorities for distribution. In fact, you are especially interested in the "blue stamp" system of distribution about to go into effect as an experiment in six selected communities. This is reported to be receiving considerable support among food processors and merchants, because it permits the commodities to move through normal channels. To this extent it is to be commended as a distinct improvenels. To this extent it is to be commended as a distinct improve-ment. But before you allow its attractive features to win your enthusiasm, let me urge you to ask yourselves what the ultimate outcome may be when the Government goes further and further into marketing. You may find a clue within your own particular experience if you will recall that hard-wheat flour has been trans-ported considerable distances for distribution in soft-wheat territories, while soft-wheat flour has gone back into that territory from

which the hard-wheat flour was purchased.

If you think there is any consistency or meeting of minds in regard to agricultural policy, consider the following statements. Before the House agricultural appropriations hearings recently Secretary Wallace said: "With regard to the years immediately ahead, about half of the farm problem is to be found in the cities; and if the people in the cities do not produce more, and if there is not less the problem is a pound to be real trouble in agriculture."

unemployment, there is bound to be real trouble in agriculture; and there is not less and there is nothing you can do in agriculture that will cure that."

With that thought in mind, now listen to Harry Hopkins, in his first important speech as Secretary of Commerce: "There can be no solution of our problem of unemployment until the farmer regains his proper economic position."

After that evidence of utter confusion, you should scarcely have heer surprised at the final pay-off which came at the President's latest press conference, when he defended the purchase of Argentine beef by the Navy. Here, after 6 frantic years in which the New Deal has used every conceivable device to rig domestic prices, is the President, himself, repudiating the underlying philosophy of his corn administration. his own administration.

If the price of American beef is too high for our Navy, it is because the New Deal has thrown killing restrictions upon agribecause the New Deal has thrown killing restrictions upon agriculture, and loaded the food-processing industries with insuperable burdens of taxation and regulation. It is beside the point to say that the New Deal has been wrong for 6 years if the President is right now; or that the President is entirely wrong if there has ever been any sense to the New Deal philosophy. What is pertinent is the fact that, having hamstrung the American economy, Mr. Roosevelt not only blithely abandons it in its dilemma, but advertises to the world our inability to compete either in price or quality with a foreign product. While every other nation in the world vigorously merchandises its wares Mr. Roosevelt tells the world to buy the superior and less expensive beef of the Argentine.

What is also pertinent is the fact that the President with his usual fine disregard for the virtue of consistency has again reversed directions without warning or explanation.

reversed directions without warning or explanation.

If this is a true picture of New Deal intelligence, then we are indeed in a predicament. This evidence of confusion supports my belief that there simply is no such a thing today as an agricultural policy. After viewing the Washington scene the conclusion is ines-

capable that the New Deal is more interested in the machinery of a program than in results. In other words, the mere fact that prices in terms of the old gold dollar are lower than ever, that production is entirely out of balance, that surpluses are, in some instances, greater than ever, doesn't matter. What seems important is the machinery, even if it doesn't work.

As to the future, I feel sure of only one thing: This administration is unlikely to admit the imperfections in its programs. For this reason many hold that farm conditions will probably get worse before they improve. You are now watching the latest absurdity—the proposal for an export subsidy on cotton and other staples seems on the way despite the fact that it does further violence to the trade-agreement program, which bars any other country which chooses to apply the same device. All that can be said for it in this connection is that it is a new way to spend money.

In looking forward to constructive action we must keep in mind that many countries have committed economic suicide, given time, by following restriction to its bitter end. Progress in the end will come not from restrictions and vague efforts to redistribute the

ome not from restrictions and vague efforts to redistribute the wealth already created but from increased production.

This is true not only in agriculture, but in every phase of the American economy; but for 6 years the New Deal has denied it, to the serious detriment of the country.

Regulation of business for the public's benefit long antedates the Roosevelt administration. Previous to the New Deal, however, the object of regulation was to preserve a system of individual trading, a greater of free enterwise free government and regulation was to preserve a system of ince enterprise, free government, and free men. The present administration changed the purpose from regulation for improvement to control which restricts and eliminates independence of action. The major New Deal efforts to control business include the following legislation: National Industrial Recovery Administration, 1933; Securities Act, 1933; Tensesse Valley Authority Act. Securities and Freeneys 4, 1934; 1934. dustrial Recovery Administration, 1933; Securities Act, 1933; Ten-nessee Valley Authority Act; Securities and Exchange Act, 1934; Connally Oil Act, 1935; Guffey Coal Act, 1935; National Labor Relations Act; Public Utility Act; Rural Electrification Act; Bitu-minous Coal Act, 1937; Fair Labor Standards Act, 1938. The results of the programs initiated under these acts are varied, but in no case do we find an outstanding success. Here we could list a number of notable failures, but two examples serve our

purpose.

list a number of notable failures, but two examples serve our purpose.

The N. R. A. must be judged by what it actually accomplished rather than by its aims. During the 2 years N. R. A. was in effect this country lagged notably behind most every other world power in recovery. From May 1932 to May 1933, just before the law went into effect, industrial production increased 21 percent. In the 2 years, May 1933 to May 1935, industrial production increased only 10 percent, or 5 percent per year. However, from May 1935 to May 1936, following the demise of N. R. A., industrial recovery stood at 21.6 percent. Recovery before and after N. R. A. was four times greater than during the life of the act. The net result was that labor's position was unimproved, while all nonwage earners, including farmers, suffered under N. R. A.

The Bituminous Coal Act of 1937 is another glaring illustration of the difficulties involved. While this act was passed 2 years ago, I call your attention to the one startling fact that the Commission has still to determine a schedule of prices. The current impasse in the coal industry is evidence that this act and its Commission is of no value even to the industry for which it was created.

Two interesting sidelights are worth mentioning in this connection. This act is another example of the peculiar New Deal confusion of cause and effect. Working upon the theory that high prices cause prosperity, this act undertook to legislate prosperity for the bituminous-coal industry by rigging the price of soft coal. This entirely overlooked the fact that much of the distress in the coal industry has arisen from the growing competition of other fuels, as well as a steadily advancing efficiency in the uses of coal. To assume that you could restore an industry's dwindling market by facking up the price of its product, of course, violates a principle

To assume that you could restore an industry's dwindling market by jacking up the price of its product, of course, violates a principle which everyone of you learned in your first year of business experience. It would never occur to you that you could induce a consumer to eat more flour by raising the price you ask him for flour, or that you could regain a market from a competitor by pricing your product so that he would have a still greater advantage over

I spoke of the growing competition from other types of fuel as one of the factors in the coal industry's problem. Where is the consistency in government which proposes, on the one hand to aid our coal miners; but on the other hand is pursuing a program of water-power development which, if fully applied, will be the coal industry which the coal industry. take a tremendous slice out of the coal industry's market? What can a coal miner think of a program of power development which would replace an estimated 500,000 tons of coal production

annually?

annually?

If you will permit me to place my own interpretation upon these trends in national policy as they relate to Government control of business, and to estimate future trends, I can hold out little hope to you under this administration. Every act has been an act of defeat and despair in its fundamental philosophy, even though you must admit the ostensible nobility of purpose it expresses. It has been the act of an administration which will not recognize the possibility of the further development of the United States as a progressive, dynamic, economic community; but which stubbornly insists that we have reached ultimate capacity, and must accommodate ourselves under governmental supervision to established limits.

That America has even approached the ultimate economic growth; or that it cannot again prosper as a developing com-

growth; or that it cannot again prosper as a developing community except under strictest bureaucratic regulation, only a few of the most stubborn and pessimistic believe. But the defeatist philosophy rules at Washington, and will doubtless continue to rule at least during this administration.

Unfortunately, we are confronted with an international situation so tense and so serious that the solution of our domestic problems will be hampered by distractions from abroad. So grave is the international situation, in fact, that our entire thought and energy in the coming months may be necessary to the cause of international peace, and the problem of protecting American interests in case war abroad proves inevitable.

America's position in international affairs today is fully as serious

America's position in international affairs today is fully as serious as it was in the months before our entrance into the World War. But, unfortunately, our domestic situation is now infinitely worse than it was in the years before the Great War. Then we were prosperous, happy, comparatively untroubled people. We had practically no Federal debt, and we were in the national habit of living within our income.

within our income.

We cannot say that of America today. We are now saddled with a national debt in excess of \$40,000,000,000, despite the heaviest tax burden we have ever carried, and we have a Federal Government which cannot live within its income, despite this heavy tax burden. We have class consciousness, class struggle, and social unrest to a degree unknown since the Civil War. We have an agricultural system dislocated, disconcerted, and dissatisfied. And we have an industrial system so completely circumscribed by a Washington bureaucracy that it may no longer display the vigor and creative capacity of which it previously was capable.

If the World War could create the havor which followed it.

If the World War could create the havoc which followed it, If the World War could create the havoc which followed it, especially here in America, it is even more vitally important now that our foreign policy should be directed to keeping America out of another general world conflict. As a preliminary statement, let me say that I believe no man or group of men can mold American foreign policy satisfactorily into a neutrality measure which can be expected to interpret unpredictable conditions arising in the future. Let me say, also, that I believe in giving the President the greatest possible freedom in dealing with our international problems.

international problems.

But let me add here that I do not agree with many of the President's measures in recent months. As far back as his speech in Chicago suggesting the quarantine of aggressor nations, our President has directed attention to foreign affairs. Consistently since, he has picked other propitious moments to distract national attention from domestic failure to foreign problems. And he has invariably used his forays into international fields in an effort to trustify the New Deel demostic program. invariably used his forays into international fields in an effort to justify the New Deal domestic program. As late as his message to the opening of this Congress, he cited our domestic program as definite development of national defense. Here I sharply disagree with him. I decidedly do not agree that the New Deal has strengthened us in any instance for national defense. I believe that every one of our hazards is entirely internal, and that every one of them is almost solely the product of the New Deal.

Largely as a result of New Deal policy, our country cannot possibly withstand the demands of a protracted war. With a national debt already threatening to overwhelm us, our national credit simply will not withstand the extra burden of war. The last war cost us roughly \$50,000,000,000. If you add that figure to our present national debt, you reach a total which even the most optimistic new dealer has not suggested that we can carry safely. That assumes, of course, that another war would cost us no more than the last.

There are many eminent critics of the President who declare

There are many eminent critics of the President who declare There are many eminent critics of the President who declare that his forays into the field of current foreign policy are pure drum beating in an effort to protect his administration's past against attention at any cost. As completely opposed as I am to his administration, I do not subscribe to this view. As critical as I am of the many things he has done in the matter of foreign relations, I cannot believe that his motives are anything but streetly in American interest.

eign relations, I cannot believe that his motives are anything but sincerely in American interest.

But I do say this: That America simply cannot afford a war at this time. America simply cannot afford to deceive itself into believing that anything transcends the necessity for resolving its domestic problems. Above everything else, we must put our own house in order—and the more imminent the foreign danger, the more necessary it is that we do this without delay.

How to do this? Simply promulgate a program that is friendly to business. Not friendly to big business, nor to little business, as such, but to all honest business. A program which expresses the essential unity of interest in industry, labor, and agriculture. A program to foster free competition and encourage legitimate enterprise. A program denying that bureaucratic control can ever approach the efficiency of free economy, and emphasizing the confident belief that the present high standard of living is only the beginning of America's possibilities. A program avowing that finally the natural forces of free competition can provide more of the good things of life to the consumer at low price, increase emthe good things of life to the consumer at low price, increase employment, improve income, shorten hours, and expand markets for the products of the farm.

A program, in short, which honestly fosters an economy of plenty, not a defeatist economy of scarcity.

This way lies the solution of our unemployment problem, and productive work for the men and women who are now vainly

seeking work. This way is the way to greater markets for every American effort, both industrial and agricultural. This is the way which leads to greater production, greater wealth, and the constantly improving standard of living which is America's true destiny.

Tennessee-Tombigbee Inland Waterway

EXTENSION OF REMARKS

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1939

Mr. RANKIN. Mr. Speaker, on yesterday this House, under one of the heaviest barrages of misleading propaganda I have witnessed for many a day, voted out of the river and harbor bill the provision for the construction of the Tennessee-Tombigbee inland waterway, which is absolutely necessary to complete the great waterway system of this Nation, and which was shown by the Army engineers to be justified from every standpoint.

It now appears that some Members voted "yea" under a misapprehension, thinking that they were voting for the proposition, or to sustain the Committee on Rivers and Harbors, when in fact they were voting to strike the provision from the bill and against the committee's position. Five Members from Tennessee, whose people would be among the greatest beneficiaries of this great project, were misled into voting against if.

The bill now goes to the Senate, and I feel confident this provision will be restored; and by the time it returns to the House, I hope the fallacy of this propaganda will be sufficiently manifest to disabuse the minds of the Members who were misled into voting against it, and that those Members who erroneously voted to strike it out will have an opportunity to correct that mistake.

Railroad employees were deluded into writing or wiring their Congressmen to oppose this provision in face of the fact that the evidence before the Committee on Rivers and Harbors showed that, regardless of the railroad propaganda to the contrary, no railroad man had ever lost his job because of river and harbor development. On the other hand, these projects have stimulated traffic and increased the employment of railroad men.

I have been a friend of railroad labor ever since I have been a Member of this House, and it was painful indeed to me to see them thus made the tools of the predatory interests that have fought against their interests for the last quarter of a century. These very railroads are strangling the American people to death with exorbitant freight rates that are too high for any nation on earth to pay, and by so doing they are slowing down traffic and throwing their own men out of employment.

The railroads of this country are making a drive, not only to eliminate water competition but to drive trucks and busses from the highways, in order that they may continue to impose these exorbitant rates upon a helpless public, and in that way wring from the unprotected masses of the American people money with which to pay dividends on the \$10,000,000,000 to \$15,000,000,000 of water or inflated values in their capital structures and pay the enormous salaries of their executives.

They concentrated on this Tombigbee inland waterway in the face of the fact that it had been recommended by the Board of Army Engineers, after 5 years of the most thorough study and investigation, and approved by the President of the United States, as well as by the Committee on Rivers and Harbors, and also unanimously endorsed by the Rivers and Harbors Congress.

The Rivers and Harbors Congress is an independent body of able men who are devoting their time and their energies to building up our system of inland waterways. They put in 4 years examining this project, and approved it unanimously.

The special board of Army engineers, headed by four of the ablest engineers in the service, with the assistance of a large corps of the ablest young men in the service, investigated this project for 5 years, going into every phase and every feature of it.

After showing that it was economically sound, and would pay for itself within a short time, in addition to contributing immeasurably to our program of national defense; after pointing out the great saving in transportation distances, and the other immeasurable benefits it would bring to that great section of the country, covering the Tombigbee, the Tennessee, the Ohio, the Cumberland, the Mississippi, and the Missouri River Valleys, and all the territory that drains into them—after pointing out these benefits, this special board of Army engineers recommended:

That the United States undertake the construction of a waterway to connect the Tennessee and Tombigbee Rivers, by way of the East Fork of the Tombigbee River, Mackeys Creek, and Yellow Creek, so as to provide a channel of not less than 9 feet in depth and a minimum bottom width of 170 feet in river and canal sections and 115 feet in the divide cut, with locks 75 by 450 feet clear inside dimensions, substantially in accordance with the general plan presented in this report.

This report was carefully and thoroughly reviewed by the General Board of Army Engineers of the War Department here in Washington, who gave it their unqualified recommendation, as follows:

After full consideration of the report secured from the special board, the Board of Engineers for Rivers and Harbors recommends that the United States undertake the construction of a waterway to connect the Tennessee and Tombigbee Rivers, by way of the East Fork of the Tombigbee River, Mackeys Creek, and Yellow Creek, so as to provide a channel of not less than 9 feet in depth and a minimum bottom width of 170 feet in river and canal sections and 115 feet in the divide cut, with locks approximately 75 by 450 feet clear inside dimensions, substantially in accordance with the general plan presented in the report of the special board.

It then went to the President of the United States, who referred it to other branches of the service, and after receiving their favorable reports also, he gave it his approval in the following language:

I approve this survey report for a waterway connecting the Tombigbee and the Tennessee Rivers.

The Rivers and Harbors Committee of the House of Representatives held extensive hearings on it, and, as I said, voted to approve it by an overwhelming majority; and I believe if the House had understood it, it would have been approved by an overwhelming vote.

Of course we expect the Senate to put this provision back in the bill, and to have it ultimately sustained by the House. No river and harbor project that has ever been so thoroughly investigated, and then approved by the Board of Army Engineers, the President of the United States, and the Committee on Rivers and Harbors, and unanimously endorsed by the Rivers and Harbors Congress, has ever yet failed of ultimate development.

It will save the Nation enough money to pay for itself within a few years. It will give flood-control protection to 1,000,000 acres of land along the Tombigbee River on which crops are being damaged and other property destroyed almost every year.

It will shorten the water distance from the Tennessee River to any point on the Gulf of Mexico by 630 miles.

It will shorten the water distance from the Tennessee River to Mobile by almost 1,000 miles.

It will shorten the water distance from all points on the upper Tennessee as high as Knoxville, to the Gulf of Mexico, by 630 miles.

It will shorten the water distance from all points on the upper Tennessee above Pickwick Dam as high up as Knoxville, to Mobile by approximately 1,000 miles.

From the standpoint of Tennessee it will be one of the greatest developments of all time. With the exception of a small area along the Mississippi River, the entire State of Tennessee is practically bottled up. Within her confines and the confines of the other areas adjacent to the Tennessee River in northwestern Georgia, northern Alabama, and northeastern Mississippi there lies the greatest wealth of undeveloped raw materials to be found in the world,

In that area lies the world's reserve supply of timber, and especially hardwood timber, that is so badly needed at this time.

In that area lies the world's reserve supply of coal that is shut out from the markets of the world by the exorbitant transportation rates that now prevail.

In that area lies the world's reserve supply of iron ore—beds as rich as the ones that lie around Pittsburgh or Birmingham—which are now undeveloped because of a lack of a cheap method of transportation.

In that area lie hundreds of millions of tons of limestone, asphalt, bauxite, bentonite, ceramic clays, and many other materials that are now imported from foreign countries because of a lack of some method of cheap transportation to bear them to the proper destinations.

In that area lies one of the greatest agricultural sections of the South, which was known during the Civil War as "the granary of the Confederacy."

In that area lies the great dairying section of the South, as well as the chief cotton-producing area east of the Mississippi River.

But all these are bottled up, to a large extent, because of a lack of this outlet to the sea.

It is only 494 miles from Pickwick Lake on the Tennessee River to Mobile, down this Tombigbee Inland Waterway, whereas the present route around by Cairo, Ill., is 1,291 miles—a difference of 797 miles.

Besides, this project would afford a slack-water route for ascending traffic up the Tombigbee to the Tennessee River, and then a downstream route to the mouth of the Ohio at Cairo. It would be a much more desirable route for ascending traffic, and for that alone it is estimated that it would save a minimum of \$1,000,000 a year.

It would shorten the water distance from all points on the Ohio River up to Pittsburgh, Pa., and Youngstown, Ohio, to the Gulf of Mexico by more than 200 miles, and would shorten the water distance from any of those points to Mobile by 370 miles; and, as I said, it would furnish this slackwater route for their ascending traffic.

It would shorten the water distance from all points on the Mississippi River above the mouth of the Ohio on up to Chicago on the Illinois River and Minneapolis and St. Paul on the Mississippi River to the Gulf of Mexico by 108 miles; and would shorten the water distance from all those points to Mobile by 278 miles, and would furnish them a slackwater route for ascending traffic, all the way up the Tombigbee and into the Tennessee River, and a downstream route from Pickwick Dam to the mouth of the Ohio.

It is more than 900 miles from Cairo to the mouth of the Mississippi. Think what a marvelous advantage it would be to have a slack-water route from the Gulf all the way up to the Tennessee River, and then downstream all the way from Pickwick Dam to Cairo, instead of having to fight the terrific, and sometimes treacherous, current of the Mississippi River.

Not only that, but this great waterway is necessary from the standpoint of national defense. It would give us an additional inside passage, traversing the great areas from which we draw our war materials, that would be safe from attack from the sea.

It is known to everyone that our supply of nitrates in case of war will be at Muscle Shoals on the Tennessee River. In the event of war, this would not only give us an outlet for the coal, iron, lumber, grain, cotton, and other raw materials, as well as finished products for all that great section of the country, but it would give us ingress and egress to our great nitrate supply, by a route that would be protected from attack from sea, and that would be almost 1,000 miles nearer to the Gulf than it is now to follow the long tortuous route down the Tennessee River to the Ohio, down the Ohio to the Mississippi, and down the Mississippi to its mouth.

If and when a connection is made between the upper Ohio and the Great Lakes, this route would furnish an ideal inland passage from the Gulf of Mexico to the Great Lakes, and then around through the Great Lakes and down the Erie Canal to New York and the Atlantic seaboard.

This is one of the greatest propositions of its kind that has been proposed to Congress in a century, and is just as sure to be constructed as the night follows the day. No project of this kind that has ever been so universally approved from every angle by men who are capable of making a thorough investigation has ultimately failed of construction.

The Army engineers tell us that it is the outstanding project on this earth where water traffic can be transferred from one major watershed to another with so much ease, at so little expense, and with such great savings in distances and transportation costs.

The level of Pickwick Lake is 125 feet above the level of the Tombigbee River at its head of navigation, only about 25 miles away. There is a slight sand ridge to cut through that contains no rocky barriers or hard formation to obstruct the work. It would connect the two streams and furnish a source of water at the summit, which would be Pickwick Lake, that would eliminate all possible question of the success of the enterprise.

We are told that in prehistoric ages the Tennessee in all probability flowed down the Tombigbee Valley, but some great upheaval raised it up to its present level above the Tombigbee and turned its course to the north. Now, by cutting through this slight sand ridge and installing the locks and dams provided in this report of the Army engineers a new outlet to the sea would be furnished that would be of inestimable benefit not only to that section but to all the American people in the years to come.

In addition to that, it would give us flood relief on the Tombigbee and its tributaries and restore to us the water transportation which that country enjoyed for more than a hundred years.

If the Congress finally turns this project down, then it might as well kill all river and harbor legislation and all flood-control legislation and cease spending the hundreds of millions of dollars which it is now appropriating for national defense; for, taken from all three of these standpoints, this is the most feasible, the most reasonable, and the most necessary project that has yet been presented to the Congress of the United States.

The opposition has raised a great hue and cry about the expense. They "strain at a gnat and swallow a camel." They would kill this great project and then spend many times this amount on other things of less importance.

This work would be spread over a period of at least 8 years, and would employ about 6,000 men. If it is finally defeated, many of those men, if not all of them, are going on the W. P. A. or relief rolls. If they are permitted to engage in this work they will be producing something constructive, and will feel that they are not wasting their time or accepting a Government dole.

Besides, the Army now has large hydraulic dredges that can be put to work cutting through this slight sand ridge that separates the Tennessee River from that of the Tombigbee. These dredges are run by electricity, of which the Government now has an abundance at Pickwick Dam, Wilson Dam, and Wheeler Dam, in that immediate area. This would greatly reduce the cost of constructing this project.

In addition to that, it will furnish a market for the lumber, steel, cement, gravel, concrete, and electrical machinery necessary to construct and operate these locks; and instead of injuring railroad labor, it will put more railroad men to work hauling materials for this purpose.

If every Member of the House had understood exactly what he was voting on, and had not been misled by the vicious propaganda spread by the railroads, or inspired by partisan or sectional motives, this proposition would have had practically no opposition.

I repeat that this is one of the greatest projects of its kind on this earth that can be constructed at so little expense, and produce such far-reaching and beneficial consequences.

It is just as sure to be constructed, ultimately, as the night follows the day; and it should be constructed now.

'APPENDIX TO THE CONGRESSIONAL RECORD

In Defense of W. P. A.

EXTENSION OF REMARKS

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 23, 1939

EDITORIAL FROM THE BOSTON EVENING TRANSCRIPT

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Transcript of May 17, 1939:

[From the Boston Evening Transcript of May 17, 1939] IN DEFENSE OF W. P. A.

IN DEFENSE OF W. P. A.

The 210 members of the Harvard faculty, nearly half of them professors, who signed a petition of American teachers in defense of the Federal Art Projects, stand on firm ground. They single out the art projects because it is through them that the whole work relief program is being attacked currently. They see in the art projects the "clearest and most characteristic expression of the policy of the Government to give relief to the unemployed by giving work suitable to their experience and training." It is the logical point for a test of strength on the major issue of Federal relief.

Most thoughtful liberals, we believe, accept the broad theory of work relief. It is more costly in taxes than direct relief or the dole. It is more costly, too, than a nonrelief works program of comparable size would be. But it is demonstrably less costly than would be a relief and a works program handled separately. It is perhaps for this reason that opponents of the W. P. A. center their attack on the art projects. These projects produce "luxuries" which, the economy leaders aver, the Government cannot afford under any set-up. The less successful work of W. P. A. artists is held up to ridicule, and the public is asked if that is what it wants its money spent for. These tactics ignore the central point of the W. P. A. program. The ultimate saving in work relief is not in the taxes currently paid to support it, but in the maintenance of morale in our vast army of unemployed and in the salvaging of skills and antitudes which

to support it, but in the maintenance of morale in our vast army of unemployed and in the salvaging of skills and aptitudes which would otherwise have been lost during this long period of inactivity. Art becomes momentarily less important in periods of economic strain, but the artist does not. His future in a society of self-supporting men and women is just as important as that of a tradesman or mechanic—more important in many ways.

Business and the New Deal

EXTENSION OF REMARKS

HON, THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 23, 1939

ARTICLE FROM THE WASHINGTON STAR

Mr. THOMAS F. FORD. Mr. Speaker, those who understand the New Deal know that it believes not only in good business but in better business, and that the method of promoting business is to promote the general welfare of the American people through increased and widely distributed purchasing power.

That business is benefiting from New Deal spending and

other policies is proven from the record.

In the Washington Star of May 22, Jay Franklin cites figures from Dr. Eric Muehlberger, which, while not guaranteed in detail, are substantially accurate.

Here is the statement from the Star:

The figures under comparison are for the first part of 1939 and the first part of 1932, using quarterly or weekly totals, as available. Remember, in early 1932 it was far from sure—politically that President Hoover would not be reelected. Business had all the confidence the White House could pump into the market, taxes were conveniently low, there were no National Labor Relations Act, S. E. C., wage and hour law or other forms of "regimentation" to act as a "deterrent" on business enterprise, and there were no serious foreign war scares. Here you have the picture of Mr. Hoover's "confident" business and Mr. Roosevelt's "discouraged" business:

Commodity	Under Hoover, 1932	Under Roosevelt, 1939
Stock prices (average)	\$81, 20	\$100, 61
Bond prices (average)	\$74, 29	\$85, 78
Monetary gold stock	\$4, 345, 000, 000	\$15, 801, 000, 000
Monetary gold stock Federal Reserve credit	\$1,859,000,000	\$2, 572, 000, 000

Construction Factory employment	26	56
Factory employment	- 68	9
Factory pay rolls Carloadings	53	8
Carloadings	61	.66
Department store sales	- 70	85

Since all these figures are, at best, approximations, the whole case for the New Deal's business policy can be summarized by saying that in the sixth year of Roosevelt business is about 50 percent better than in the third year of Hoover.

Relief for Those in Need

EXTENSION OF REMARKS

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 23, 1939

LETTER FROM GOV. RAYMOND E. BALDWIN, OF CONNECTICUT

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter, copy of which I have received from Gov. Raymond E. Baldwin, of Connecticut, giving the Governor's views and suggestions in respect to relief and work relief in the light of actual experience in Connecticut:

HARTFORD, May 11, 1939.

Hon. EDWARD T. TAYLOR,

Hon. Edward T. Taylor,

Chairman, Subcommittee on the Works Progress Administration, Committee on Appropriations, House of Representatives, Washington, D. C.

My Dear Congressman: I regret that pressure of State business in these the closing days of our Connecticut General Assembly makes it impossible for me to accept your invitation to appear personally before your committee. I doubly appreciate, therefore, your so kind invitation to me to present my views on some of the problems confronting your committee and the Nation in this manner by a written statement.

Biuntly, the people of Connecticut, for whom I speak, and, I think, the people of other States, are losing patience with "relief"—not that "relief" has been inadequate—if by "adequacy" we understand the bare function of holding body and soul together—but because there is a growing feeling that, with all of it—with all the "relief" activities and expenditures of government—the fact re-

mains that we have gotten nowhere.

The man on "relief" is no better off economically today than he was when the necessity for providing "relief" originally arose.

Added to this fact, I strongly urge the committee to give con-

sideration to the following:

In the decade since 1929, 10 generations of American youth have arrived at maturity. In this period "relief" has become, for 10 generations of American children, an accepted norm of American life. In countless homes are children the span of whose memories does not go back to "good times"—to the time that the head of the bousshed or edder by the or setter had a good to the household, or older brother or sister, had a good job.

household, or older brother or sister, had a good job.

Add to these the young men and young women who, since 1929, have arrived at maturity or at working age—the thousands upon thousands of school graduates of the past 10 years—who do not know the meaning, save by hearsay, of steady employment.

These, remember—these boys and girls and their older brothers and sisters of today—are our men and women, our citizens, of tomorrow. And for many of them "tomorrow" already has arrived; the "future" is here—they do not want "relief"; they want jobs.

To my mind, it is vitally essential that we regard relief and any future activities of the Works Progress Administration or similar agencies from this standpoint:

lar agencies from this standpoint:

Is relief to be a permanent fixture of the American landscape?

If the answer is "no", then, in providing for relief for the Works

Progress Administration and other relief agencies a prompt and
thorough revision of some of the fundamental concepts involved

thorough revision of some of the fundamental concepts involved is an immediate necessity.

Our preoccupation has been with relief, with assisting the unfortunate man and woman who, through no fault of their own, have been unable to find employment. In the great emergency that confronted this Nation that was the primary requisite.

But today the emergency has passed. Today we have not an emergency but a condition.

I desire to relief out most foreither to relief.

I desire to point out most forcibly to your committee that this condition will persist if we persist in treating it as an emergency.

I do not wish to be misunderstood: I believe most thoroughly

I do not wish to be misunderstood: I believe most thoroughly in and am in heartiest accord with the principle that no man or woman, willing to work but unable to find employment, should go hungry or cold, inadequately clothed or housed, or in want of necessary medical attention. Relief should and must be continued until the present condition is rectified.

Shall we, however, bend all our effort to providing relief and do little or nothing toward rectifying the condition that makes relief processory?

relief necessary?

Here in Connecticut a slogan is gaining ground without advertising, passing from mouth to mouth, and I sincerely suggest to tising, passing from mouth to mouth, and I sincerely suggest to your committee that you give it serious consideration. It is—
"There is no substitute for a good job; a good job in private industry." Say what you will, do what you will—"relief," W. P. A., all the rest of it, there is no substitute for a good job. The people of this country—the "relief workers" themselves—are becoming more and more aware of it.

You face dissatisfaction with "relief," not because "relief" is inadequate, but because "relief" is no substitute for a good job.

The people of this country do not want to go on being "on

The people of this country do not want to go on being relief" forever.

It is my impression, gained from reading your letter, that your committee already is aware, to some extent, of the extent of this

committee already is aware, to some extent, of the extent of this feeling. I note you say:

"The subcommittee is anxious to obtain constructive suggestions with respect to the W. P. A. and the participation of the Federal Government in the problem of furnishing employment for the employable unemployed."

To the extent that the Federal Government may be of assistance to the States in helping them to solve the unemployment prob-

lem, I may say that I am entirely in accord with your objective. In this, however, we must revert to certain basic principles: Employment—reemployment—is the function of private industry and

It is, moreover, a highly individualized, highly localized prob-lem—individual not alone to every individual industry or clas-sification of business, but to each individual industrial plant and business office, and to each individual industrial plant and and business office in each individual, specific locality. We in Connecticut face a set of unemployment—reemployment—problems entirely separate, distinct, and apart from those faced by, even, our neighbor States of New York and Massachusetts. And they, in turn, face their peculiar problems—problems peculiar to them—in their specific localities, and unrelated to the problems facing other States.

There are, to be true, certain broad, general phases common to the Nation at large. The people, especially the business people, of this country view with alarm the increasing burden of government debt. The businessmen of this country regard with apprehension much of government's apparent attitude toward

With relation to the costs of "relief," again we revert, not to the amount of such costs, however staggering, but to the growing discontent—not that the money is being spent, but that for all its spending the man on relief is no better off economically than he was before. We spend the money and get nowhere.

The Federal Government could do much to stimulate reemployment by encouraging the revival of business and industrial confidence; by cooperating with business and industry, assisting them

dence; by cooperating with business and industry, assisting them in every way possible.

But this, I realize, is not the specific problem facing your committee. The point I desire to make, and which I hope will receive your careful thought, is this:

If, as your letter suggests, the Federal Government at last is prepared to view "relief" in its proper perspective—that is, as one-half of a problem, the other half of which is reemployment—then we must make the point that reemployment is a local problem.

And the point must be made that "relief" is—yes; and always has been, although we have departed from the principle—a purely local problem likewise.

local problem likewise.

I urge this upon you: Let us not make the same mistake with reference to our handling of the problem of reemployment that we have made, and are making, in the handling of "relief." Here in Connecticut we feel strongly on this subject. In 1933, when we had reached what we thought then was the bottom of the depression, the general assembly of this State appointed, by legislative act, an emergency relief commission. Under this commission was placed the administration of relief funds furnished by the State and the administration of all Federal funds which

mission was placed the administration of relief funds furnished by the State and the administration of all Federal funds which were to come into the State for relief purposes.

That commission was made up of men who had, in the game of life, been tried and found true. Political considerations were cast aside. The commission represented the political ambitions of no party and it had no political ambitions of its own. It put relief havened the relief political ambitions of political ambitions of the poli

beyond the pale of politics and kept it there.

As the 1936 election approached, for no apparent good reason, we abandoned all this. And, instead, there was set up a far different system—a centralized system of "relief" centralized in Washington. The people of the State of Connecticut, with their background of 300 years of self-government and of home rule centered in their towns, resent this usurpation of their own and of the State's authority. May I direct to your committee's attention the fact that the power to spend millions of the taxpayers' money, placed in the hands of any Executive, gives to that Executive a terrible weapon, if he chooses to use it, to compel the people to his will. The expenditure of vast sums for "relief" under the direction of one man, or any one group of men, is a political weapon of the first magnitude—and we have seen it become just that. As the 1936 election approached, for no apparent good reason, we abandoned all this. And, instead, there was set up a far

And the surrender of the people's power to spend their own money—to spend the money collected from them in taxes—is completely and entirely un-American. It was for exactly such a reason that the Original Thirteen Colonies, Connecticut among them, rebelled. The whole structure of American government is based upon the fundamental rule that the people's money belongs to the people, not to be spent by agents of the Crown or administrators from Washington, but to be spent as the people wish, by the people's own representatives at home.

We have seen costs mount under the present system. We have seen a huge governmental machine in Washington superimposed upon our own local forms of government—a Washington machine to do the work that we could do at home with our already existing

machinery not only as well, but better.

And with all of this, as I say, the man on relief today is no better off economically than he was when the necessity for providing relief originally arose.

I ask you to ponder the question, Are we now to make the same mistake twice?

And I believe this question carries with it a warning:

In dealing with relief we dealt with an emergency, and though the immediate emergency long since has ceased to exist we are continuing to deal with distressed and for the most part helpless people. We could do much as we chose—set up huge governmental machinery in Washington, remove the people's powers of home rule, ride roughshod over the traditions of the States, and even over economic theory.

But now—now that we are coming to a realization that relief is only one half of the problem and that the other half is reemploy-

ment-now we face an entirely different condition.

Business and industry are not helpless. You cannot set up a machine in Washington to reemploy people in business or in industry. You cannot ride roughshod over the economic theories we call business principles. You cannot persuade the smallest storekeeper in the smallest hamlet of Connecticut, or any other State, to employ one single person more if local conditions—purely local—that he faces, are such that he knows it will not be "good business" to do so.

The instant you put—as your committee has put—"relief"

The instant you put—as your committee has put—"relief" in its proper perspective to the other half of the picture, namely, reemployment, the whole, full folly of ever having taken relief out of the hands of the local authorities becomes apparent important. out of the hands of the local authorities becomes apparent immediately. Because now we see that we are going to have to tackle relief and reemployment together as one problem, and the only way we are going to get anywhere with reemployment is State by State, local community by local community, each individual factory and store and business office doing its part according—entirely according—to what local conditions may be. It is my sincere belief, and I offer this to your committee as my suggestion, that the Works Progress Administration, and all other agencies of "relief," can be geared, and should be geared, to industrial and business recovery. The Works Progress Administration, especially, could be turned into a vast reservoir of labor,

both skilled and unskilled, upon which business and industry

might draw as recovery progresses.

But first, relief must be put back on a sound basis upon which it will be able to meet, and to satisfy, local conditions.

Put relief where it belongs—back into the hands of the States. And, through the States, into the hands of the local communities where relief needs are really known—but, more than that, where remployment needs are known and can most effectively be developed.

where relief needs are really known—but, more than that, where reemployment needs are known and can most effectively be developed. By doing this you make every relief agency a reemployment agency, for our local authorities will not have a man on relief if they can find him employment. And you make the Works Progress Administration the reservoir from which, locally, men and women may be drawn back into private industry as local conditions permit. Then let the Federal Government, and the governments of the States, cooperate with industry and business. Government's job is to cooperate with industry and business. "There is no substitute for a good job—a good job in private industry," and Government's job is to do all in its power to bring about conditions that make such good jobs possible.

We in Connecticut want to see relief and the W. P. A. continued as long as there is necessity. Connecticut has been liberal in her contributions to the Federal Governmen—in fact, has been paying far more than she has received. We do not begrudge our contribu-

far more than she has received. We do not begrudge our contributions for the welfare of others perhaps less fortunate than we.

We look, however, for results, not merely for relief indefinitely prolonged but for the restoration of jobs. And to that end we are hopeful that emphasis now will be placed, not upon relief merely, but upon relief as a means to an end—to put our citizens, locally, back to work back to work.

Very truly yours,

RAYMOND E. BALDWIN, Governor,

Arts and the W. P. A.

EXTENSION OF REMARKS

HON, CLAUDE V. PARSONS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 23, 1939

LETTER FROM FLORENCE S. KERR, ASSISTANT AD TRATOR, WORKS PROGRESS ADMINISTRATION ASSISTANT ADMINIS-

Mr. PARSONS. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following article from the Washington Post of Sunday last by Florence S. Kerr:

ARTS AND THE W. P. A .- THE FEDERAL THEATER AND WRITERS PROJECTS WARMLY DEFENDED

To the EDITOR OF THE POST.

Sir: In an editorial on May 3 you made an attack upon the W. P. A. white-collar program, which I have the honor to head. I have wished many times that editors and other commentators, who do so much to shape public opinion, would make use of information available at all times in our office before pronouncing judgment upon our program. Were this done, I assure you that you would find it impossible to attack us for "almost criminal waste" and other unpleasant practices, since they do not exist except in the minds of those who have not sufficiently informed themselves as to the actual facts. W. P. A. is essentially a works management and production program and it is directed by engineers and technical and

actual facts. W. P. A. is essentially a works management and production program and it is directed by engineers and technical and professional men and women who know their business.

I hope you realize that ill-informed attacks such as this latest of yours cannot be answered adequately in a few words. Let me point out in this limited space, however, first, that over 90 percent of the total sum spent to date upon the Federal Theater program has been paid for wages; that this sum is not huge at all, as you imply, but has been at the rate of \$100 per man per month (and of this amount, wages account for \$94) to cover all costs, including those of production and supervision.

You refer ominously to "communistic activity" in the writers' projects. Would I had 10,000 words and your ear at my disposal to handle that subject fully. Dear Mr. Editor, there is no communistic activity in the writers' projects. In New York City, however, among so-called young intellectuals, there is, as everyone knows, a great deal of loud, irresponsible, and, in my opinion, rather pathetically silly talk about communism. One cannot help being impatient with it, but I feel that the boredom it instills in sensible people is its best antidote.

But I wish to point out to you that we are the servants of Congress in our administration of the W. P. A. program, that Congress has expressly and categorically forbidden us to make any inquiries as to the political affiliations of any of our employees, and that, therefore, we are powerless to ask who is a Communist and who is not. Further, we are forbidden, on pain of felony and a fine of \$1,000 or imprisonment, to apply any pressure whatever upon any political grounds to any employee in our organization.

I ask you, under these circumstances, what we are to do about a situation we are not even allowed to investigate. Your paper, as well as others, has carried attacks upon members of our staff because of the political affiliations of our workers. My dear sir, when Congress changes the laws under which we operate, we will proceed to operate differently. But not until then, no matter how

proceed to operate differently. But not until then, no matter now grievously our patience is tried.

Your editorial that it is essential for "more efficient functioning of the W. P. A." that its operations be confined to construction projects, so that the community will have something "permanent" to show for the outlay.

You, as a man of the pen, surely do not need to be reminded of the impermanence of things that are built of stone and steel, as compared with words. As far as permanence goes, an art treasure, a hit of verse or music will probably be here long after you and a bit of verse or music will probably be here long after you and this work program are forgotten.

Are you aware that 280,000 of these people employed on non-

are you aware that 280,000 of these people employed on non-construction projects are women responsible for the support of their families, and that they are now engaged in preparing hot school lunches for undernourished children, acting as housekeep-ing aides for the needy sick, teaching adult illiterates to read and write, assisting at clinics, confinements, and immunizations, and

write, assisting at clinics, confinements, and immunizations, and performing hundreds of other skilled and unskilled tasks which are just as "productive" and just as necessary to the Nation as the building of bridges and highways?

White-collar projects include an education program that provides instruction to over 1,500,000 people; public-health projects that furnish medical and sanitary services to 300,000 people in any given week; research, scientific, library, Braille, and many other services of the greatest importance to our people.

The lives of artists, we are told, are generally difficult. So perhaps the painters, actors, writers, and musicians, on our rolls have been sufficiently toughened already not to mind the constant attacks made upon them by people whose lives would be far less interesting without the pictures, plays, books, and music of those upon whom they heap ridicule. upon whom they heap ridicule.

FLORENCE S. KERR. Assistant Administrator, Works Progress Administration. WASHINGTON, May 8.

The Administration and Business

EXTENSION OF REMARKS

HON. MICHAEL J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 23, 1939

Mr. MICHAEL J. KENNEDY. Mr. Speaker, the most important address made by Abraham Lincoln was his Cooper Union speech. The hall in New York where he made it still stands, and it accommodates less than 2,000 people.

The whole speech was printed next day in Horace Greeley's newspaper, the New York Tribune. And there it reaches 5,000 more people, a tiny handful of modern standards.

Nobody, in those comparatively peaceful days, had to hear or read any political material unless he wished to. our newspapers carry politics to millions. Our radio networks reach millions on millions more. And these channels are used, day after day, by members of the administration who wish to spank business-and by businessmen who wish to tear the hide off the administration.

Seeing that neither the administration nor business could last 1 minute without each other's support, I mourn the long spectacle of their civil war. I mourn it, and I am bored by it. My feelings are shared not only by my constituents but by that considerable share of the public who hope for something new and interesting in the press and on the air.

I suggest that in the present foreign emergency and with the desirability of indicating to all foreign peoples that we are a strong and united nation, that both administration and business will be well-advised to stop talking so much and so very abusively against each other. If business, from top to bottom, wants to divorce the present administration it can do so legally next year.

Meanwhile, I am wondering if the average smart businessman would not seem smarter and a better American, if he found something else to attack beside his old bugbears, like Mr. Roosevelt and Mr. Ickes. Perhaps the shock of finding himself not denounced by businessmen some morning in his newspaper, some evening over his radio, might induce Mr. Roosevelt and Mr. Ickes to give a friendly smile to business

I appeal to both sides of the controversy to abandon their commiserations and endeavor to effect a truce. Such a truce would, I am sure, act as a badly needed stimulus to unemployment, and I sincerely hope might ultimately pave the way for a similar truce between the two factions of labor which now find themselves in such a chaotic state. It is my firm conviction that the record of the past few years which reveals business and the administration constantly at loggerheads has had an adverse effect upon labor, as attested by the approximate figure of 11,000,000 unemployed with which we are still faced, and the prevalence of strikes and other disorders. Therefore, the best antidote I can suggest at this time is an immediate truce between business and the administration, by which the unemployed of the country and of my district may benefit.

How Bank and Insurance Savings Help Finance Government Spending

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1939

STATEMENT OF WADSWORTH W. MOUNT, ASSISTANT DIRECTOR OF RESEARCH, THE MERCHANTS' ASSOCIATION OF TOR OF R

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Mr. Wadsworth W. Mount, assistant director of research of the Merchant's Association of New York:

You know a lot of people think that, when the Federal Government spends a few billion dollars more each year than it collects ment spends a few billion dollars more each year than it collects in taxes, this resulting Government debt will be paid for by future generations and not by them. However true it is that future generations will have to pay higher taxes because of the increased national debt we are creating, it is equally true that everyone alive today is paying for part of this expenditure right now. This is particularly true if you own a savings bank account or a life-insurance policy, where you now get only about one-half of the interest you used to receive from such investments before the Government started to finance large annual deficits by issuing billions of additional Government bonds.

For instance, supposing you had \$5,000 in the savings bank in 1930. At that time you would be getting about 4-percent interest on this, or \$200 per year. At that time the savings banks could safely lend this money of yours to private individuals or businesses at 5 or 6 percent. This allowed them to pay you the 4 percent, and still have enough to pay the expenses of running the bank. Today you can only get around 2-percent interest on a savings account.

on a savings account. Why is this; and

Why is this; and how do these Government deficits and the issuance of additional Government bonds bring about lower interest on savings accounts and life-insurance investments? The answer is comparatively simple.

When the Government wants to spend more money than it ets in taxes from the people directly, it prints Government

bonds for the difference.

Now, if you own a Government bond, or if the Government owns Government bond, it is just as easy for either of you to get

cash for it from a bank.

A banker knows that when the United States Government A canker knows that when the United States Government prints a Government bond it says in effect that the Government will tax the people of the United States to make it good. He knows, therefore, that Government bonds are the soundest security in the country, just so long as we do not issue too many of them and have inflation.

Now, if you take a \$1,000 Government bond to the bank, disregarding slight variations due to interest, you can deposit it and draw \$1,000 of checks against it. And likewise, if the Government takes \$1,000,000,000 worth of Government bonds to the banks of the country, the Government can draw checks to people for \$1,000,000,000.

The chief difference between the Government bond you took to the bank and the Government bonds the Government took to the bank is that you probably had to pay for your bond out of your earnings, while the Government merely prints as many

bonds as they need to cover the deficit created by spending more than taxes pay for.

You may think that it is a good idea for the Government to print bonds when it needs more money than it gets in taxes, and that it doesn't affect you but only affects the taxpayers in the future who will have to redeem these Government bonds in taxes

but it does affect you right now if you own a savings account or a life-insurance policy, for you are getting far less interest on your money today than you did a few years ago as a direct result of this vast amount of new Government spending and borrowing.

You are getting less interest because the great amounts of Government bonds that have been issued lately are being issued at very low rates of interest, and the interest rate on all Government bonds has been reduced until it now averages about 2½ percent. Under present conditions, there are comparatively so few other investments that are safe that these Government bonds make up the bulk of the investments which banks or insurance companies can safely make with the money you deposit with

companies can safely make with the money you deposit with them.

The banker's first duty is to protect the principal of the depositors to the best of his ability. For generations the savings bank has been the safest place for an individual to put his money. Consequently if the banker cannot find enough people or businesses to lend your money to at 6, or 5, or 4 percent, he has no other place to invest it but in Government bonds at approximately 3, or 2, or 1 percent.

Because business is so uncertain today that men do not know which way to turn to make money, and because huge Government spending is meaning higher and higher taxes all the time on any money they do make, there are fewer and fewer private individuals and businesses willing or able to borrow on a basis that makes it safe for the banker to lend them your money.

As a result of the new billions of Government bonds that have been issued, most of which are held by the banks and insurance companies, you now find that as the banks can only get around 3 percent on safe investments of your money, they can, therefore, only pay you about 2 percent for the use of your money and still cover the expenses of running the bank.

Consequently your \$5,000 savings account only brings you \$200 income per year now, rather than the \$200 per year you received in 1930 when the savings banks could invest your money safely at a high enough rate of interest to pay you 4 percent; and you, therefore, have to lower your standard of living accordingly. It means that it will take you longer to pay for your life insurance, as the annual dividends are reduced.

This means also that if, for instance, you were trying to put in the savings bank enough money to give you \$2,000 a year income

This means also that if, for instance, you were trying to put in the savings bank enough money to give you \$2,000 a year income you will now have to save \$100,000 where, when saving banks were able to invest your money safely and pay you 4 percent, you would only have had to save \$50,000 to get this same income.

only have had to save \$50,000 to get this same income.

Specifically, every holder of saving-bank accounts and life-insurance investments is right now paying toward the vast increase
in the Government debt by losing approximately one-half of the
interest income he would otherwise most likely be receiving from
his savings in savings banks and life insurance. The yield on his
personally saved "social security" has therefore been cut in half.

Everyone in the Nation has to pay one way or another for the
money our Government officials are instructed to spend. Some pay
taxes directly, but everyone pays indirectly for all Government
services. The Government has nothing to give to the people except
what it gets from the people.

what it gets from the people.

Public Spending

EXTENSION OF REMARKS

HON. LOUIS LUDLOW OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1939

RADIO ADDRESS BY HON. CLIFTON A. WOODRUM, OF VIRGINIA, MAY 22, 1939

Mr. LUDLOW. Mr. Speaker, by unanimous consent of the House, I present for publication in the Record the address of Hon. C. A. WOODRUM, of Virginia, made during the National Radio Forum arranged by the Washington Star and broadcast over a National Broadcasting Co. network Monday night, May 22, 1939. This address discusses major issues in a masterful and constructive way. It is as follows:

When the Democratic Party, of which I am a member, came into power in 1933 we had made some pretty definite and specific promises to the American people. Not only in our platform, upon which we were elected, but in the utterances and commitments of

our candidates. Many of those promises we have kept. Some of them need attention. We promised an aggressive attack upon the disjointed economic order, under which in a land of great plenty and great wealth there was so much idleness and want and despair. We promised to take cognizance of the individual sorrow and suffering of the unfortunate. We promised to set up certain social and economic reforms which would make more tolerable the lot of the American worker and the American farmer, the two groups that suffer so much in times of great depression. We likewise equally and emphatically promised business and industry that we would set our economic house in order.

We condemned in scathing tones the existing system of deficit financing and promised to balance the Federal Budget. We proclaimed in stentorian tones that the credit and financial integrity of the Nation must be protected and preserved. We laid down the proposition that it was fundamentally true that there could be no lasting or permanent prosperity and no economic solidarity unless the credit of the Nation was preserved. To the working man and to the farmer, who were the special objects of our concern in that time of stress, we promised to so coordinate our national economy that they would not have to live in fear and trembling from one day to the next, but that they would be able to so plan their lives that they would be secure in the thought that there would be a job for the worker and a market for the farmer's produce.

for the worker and a market for the farmer's produce.

In an effort to make good those pledges and promises we set about courageously to set our economic house in order. Many of us in and out of Congress remember the hectic days of 1933 when we considered the bill to "preserve the credit" of the United States, known as the economy bill. So much concerned were we then about the credit and the financial integrity of our Government that, under the impetus of a ringing challenge in a message from our President, we passed legislation which cut more than \$400,000,000 from the current expenses of the Government. We felt that the situation was so desperate that we reduced expenses all along the line, including all Federal salaries, and the compensation of the line, including all Federal salaries, and the compensation of veterans

I cite these facts merely to show that in the early days of our efforts we felt keenly and sincerely that much importance should be attached to balanced Federal financing.

Much water has gone over the dam since those days. In order to

meet emergency relief conditions it was necessary for the Federal Government to spend large sums of money and to put it into circu-lation quickly, and without that careful supervision and control that should ordinarily attend such undertakings. The public re-acted very quickly to public spending. It liked it. Pressure groups were immediately organized. Insistent campaigns were inaugurated for bigger and better and more public spending, and so the story goes on from day to day and month to month and year to year. Energetic State and local officials quickly saw in the generosity of Uncle Sam an opportunity to pass on to the Federal Treasury many of their burdens. They have made the most of that

opportunity.

Let me say at this point in order to make my personal position very clear that, believing that there was a great emergency facing the American people and in order to prevent actual suffering and distress, I have supported almost without exception the objectives of the present administration. I sincerely believe that except for the courageous and humanitarian leadership of our President in those early days of this emergency there would have been quite a different story to tell in our country today. However, I am one of different story to tell in our country today. However, I am one of those who do not believe that the system or the operation has been perfect, and I am not willing to continue to turn over without restraint or without legislative control vast sums of money to be expended by an administrative agency that has not always demon-

stated its ability to act wisely or to spend public funds prudently.

The situation which faces us is paradoxical. It seems that we are blessed with too much of everything. In a land with bursting barns of grain, surrounded by fields ripe with golden harvest, there is hunger; fields are white with cotton, textile plants are idle and American citizens are naked. A land where there is much work to be done and yet millions of our able-bodied citizens are unable to find employment by which to support themselves and their families. A land where our leaders in finance, industry, and commerce have dreams of great industrial and commercial expansion, and yet do not have the formula with which to carry these into effect; the greatest country in the world, and the finest people, unlimited resources, indefatigable energy, and yet the brain and purpose of America have not been able to piece together this crazy quilt. We have not been able to solve this riddle. We have not been able to coordinate our economy or to bring stability out of this chase and confusion. Such is the problem that confusion.

of this chaos and confusion. Such is the problem that confronts us today. In its solution rests the economic security of the Nation.

I do not know what the answer may be to these economic problems. I am very definitely of the opinion that they cannot be permanently solved by legislative action alone. I am very emphatically of the opinion that the problem will not be solved by putting all of the workers on the Federal pay roll and by subsidizing all of the farmers of America. I feel very positive that we cannot continue to borrow and spend and spend and spend and borrow.

dizing all of the farmers of America. I feel very positive that we cannot continue to borrow and spend, and spend and borrow, unless we are reconciled to meet headon some day the "fiddler" when he comes to collect his pay, and come he surely will.

There is one thought I would like to get over right here. There seems to be an impression in certain quarters that it's all right to plunge right along to pile up a terrific public debt—that the worker and the farmer will get the assistance and "some-body" will pay taxes enough "sometime" to pay the bill. Who is going to pay it, and when? Taxes can only come from national

wealth. National wealth can only come from labor and produc-tion. The worker and the farmer have been the producers in this land of ours, and you can be very sure, my fellow countrymen, that when pay day comes, a large part of this bill will come out of your hides. Don't ever think for a split second that the tax gatherer will pass you up. You may not recognize the gentleman. He may slip in the back door; he will probably disguise his voice; but, nonetheless, he will take from you his toll.

We won't get anywhere in our present dilemme by taking ay

We won't get anywhere in our present dilemma by taking extreme views of the situation. Unfortunately, most of our thinking along this line has been from one extreme to another. On one hand we will find a group of citizens who, for partisan or other reasons, condemn in scathing tones everything that the administration has tried to accomplish. Everything is 100 percent when we will be a second to the contraction of the contractio

other reasons, condemn in scathing tones everything that the administration has tried to accomplish. Everything is 100 percent wrong. While these critics often have nothing fundamentally constructive to offer, yet they can wax eloquent in denouncing everything that has been attempted. On the other hand, we find a group who say that everything is 100 percent right; who are not willing to profit by experience, to recognize mistakes and failures, or to attempt to correct our errors. In the opinion of these partisans anyone who dares raise his voice or attempt to turn his hand to correct any of these blunders or failures is, as the case may be, a Tory, a reactionary, or a traitor to his party. Nothing constructive will come out of either of these groups.

Someone has very properly said there are three sides to every question: My side, your side, and the right side. What we should attempt today is to find the right side. Any American citizen not blinded by bitter partisan feeling will give credit to the present administration for many splendid and fine accomplishments. On the other hand, the most violent partisan of the present administration should be willing and anxious to correct our faults and failures, wherever we may find them.

We find these two extreme groups very well identified on the question of public spending. In one group we find the Budget balancers—those gentlemen who demand immediately, right now, today, a balanced Federal Budget. They can speak long and loud about all of these dangers attendant upon public spending, and yet when an opportunity presents itself to really do something about it, such as very recently when the Senate had under consideration the agricultural appropriation bill, there is a strange and ominous silence in these quarters. Thus we find the agricultural appropriation bill, there is a strange and ominous silence in these quarters. Thus we find the agricultural appropriation bill, there is a strange and ominous of sasa,000,000 over and above the estimates of the Bureau of the Bu of the Budget, and contrary to the recommendations of the President. I do not mean this as any unfair criticism. I merely cite it to show our present attitude.

The House of Representatives is not entirely blameless in this regard. Notwithstanding the fact that we have labored very hard during the current session to try to curtail public expenditures and hold them down certainly to the Budget level or below, a few days ago when we had up the bill providing appropriations for the civil functions of the War Department, my own body, the House of Representatives, loaded on \$50,000,000 over and above Budget estimates for river and harbor improvement, and flood control. This increase was made possible because of the votes of Republicans and Democrats. Sort of a nonpartisan enterprise. Thus we have in two instances actions by the Congress which add nearly a half billion dollars to public expenditures over and above Budget estimates. So much for the spending proclivities of

Congress.

Congress.

Now, when you go to talk about raising some taxes to try to meet these bills, you don't get very far. While there is a lot of talk going around about tax revision, the impression is always left that taxes are going to be reduced. So we face the paradoxical situation of reducing taxes and increasing expenditures. While I am not an economist or a financial expert, I must confess that I cannot follow the logic and reasoning of that sort of thinking. A public debt in America of \$40,000,000,000, while certainly enough to make us stop and think about it, does not necessarily threaten to destroy our credit or our financial integrity, provided that it does not continue to grow. But the public debt today is nearly \$3,000,000,000 more than it was a year ago. Our deficit for this fiscal year is a little over \$3,000,000,000 up to the present time, which is more than twice what it was a year ago.

which is more than twice what it was a year ago.

Now all of that is bad enough, but the most alarming symptom, to my way of thinking, is that nobody seems very much impressed with the necessity of really doing anything about it. Certainly nothing has happened or is happening in this session of Congress out of which we can get very much encouragement. I regret to have to say that, but nevertheless it is a fact. The costs of government will not be reduced and the Budget will not be balanced until there is the coordinated effort of the three

interested parties.

Now just who are the three interested parties? Party No. 1 is the taxpayer, the citizen. Party No. 2 is the legislative branch of the Government, the Congress. Party No. 3 is the executive branch of the Government. It will do no good for groups of citizens to adopt resolutions about balancing the Budget and reducing public acceptage larger extractions. ducing public costs as long as they continue to organize pressure groups to importune Congress for more projects and more public spending, all of which has the tendency of shifting from localities and municipalities and States the costs of their local government and of relief to the shoulders of the Federal Government. I am absolutely convinced of one thing, and that is unless somebody puts on the brakes, we are headed for either repudiation or drastic inflation of our currency, either of which would certainly be a major national calamity

Now, what about relief expenditures? I believe any thoughtful citizen familiar with the national situation will realize that in the immediate future, almost regardless of any natural business revival, the Fetieral Government is going to be called upon to make rather large outlays for unemployment relief. No one wants to see deserving American citizens suffer. Everyone is willing to try to help the deserving, and there is no doubt about the fact that literally the deserving, and there is no doubt about the fact that literally millions of American citizens today are in want, who are able and willing to work, but who, because of our disjointed economic system, are unable to find private employment. These people must receive public assistance. So far as the unemployables are concerned, they are and should be the responsibility of the locality or the State. Providing work for the able-bodied unemployed, however, is a national problem, and I think the Federal Government should have a part in trying to meet this problem. I am quite willing, under proper safeguards and restrictions, to appropriate within the limit of our means, money for this purpose. I do think, however, the time has come when we must take stock of the situation; when we should recognize the faults. frailties, shortcomings

however, the time has come when we must take stock of the situation; when we should recognize the faults, frailties, shortcomings, and blunders that have been made in the administration of the work-relief program; and when we should try to correct that.

Considering the magnitude of the task, the difficulties attendant upon any Federal work-relief system, I unhesitatingly accord to the administration and to the administration of W. P. A. much credit for the work that has been done. The W. P. A. program in many sections of the country has been good. It has met a pressing emergency need, and has afforded employment to millions of American citizens who without its aid undoubtedly would have experienced great sorrow and distress. But there are certain parts of its program, certain policies in administration, certain purposes for which great sorrow and distress. But there are certain parts of its program, certain policies in administration, certain purposes for which expenditures are made which I think are entirely indefensible. A committee of the House of Representatives, of which I am a member, in obedience to a resolution passed by the House, is now investigating the activities of W. P. A. The hearings are open to the public and the committee is securing much useful and valuable

information.

In a few weeks, I believe the committee will be able to report to the Congress and to the country, helpful and constructive suggestions with reference to this matter. I do not feel that it would be appropriate for me at this time to discuss in any de-

suggestions with reference to this matter. I do not feel that it would be appropriate for me at this time to discuss in any detail what these hearings have shown, or to comment particularly upon any feature of the evidence. I will say, however, that, in spite of the caustic and critical public utterances of W. P. A. officials, the committee, without exception so far as I know, is interested in finding out the true facts. I think it will readily give credit where credit is due, and I am confident that without fear or favor it will condemn those practices and policies which have not reflected credit upon this activity.

Let me make, if you please, one or two general observations. One of the great virtues of the American citizen which perhaps more than any other one single factor has enabled us here to build a great nation, is his industry, his perseverance, his individuality, his willingness to meet and overcome obstacles which may lie in the path of his progress. This applies to the American farmer and to the American workingman.

In handling our public assistance program, we should never lose sight of the objective that Federal aid to these groups of citizens is only because of their inability to make it alone, and should be limited and circumscribed to a temporary assistance, the ultimate objective being to rehabilitate the citizen so that he may be self-supporting and self-sustaining. I am afraid in our relief activities we have lost that objective. I am fearful that many of our citizens are rapidly learning to lean upon the Federal Government; to feel that it owes them a job, and to more and more lessen their efforts to be self-sustaining. Statistics show that about 17 percent of the W. P. A. workers in the United States have been on the program for more than 3 years.

On the other hand, thousands of deserving cases are not able to get W. P. A. employment. This national average is not so bad.

States have been on the program for more than 3 years.

On the other hand, thousands of deserving cases are not able to get W. P. A. employment. This national average is not so bad. But some of the metropolitan centers are shocking. The percentage runs as high as 44 percent in some of the heavily congested areas in the United States. Those citizens, employed by W. P. A., I very much fear have become content to stay there indefinitely. We must do something about that. In the rural sections of the country there is much evidence of the fact that W. P. A. employment and the wage rate have made it almost impossible for farmers to get the necessary labor upon their farms. I will comment briefly upon one other feature. It has been shown in our open hearings, and there has been much discussion in the press, of so-called subversive influences which are seeking to organize and control the unemployed workers of America.

It is a matter of common knowledge that a very determined effort is being made to mobilize and organize the unemployed people of America; to stir up strife and discontent and to manipulate

effort is being made to mobilize and organize the unemployed people of America; to stir up strife and discontent and to manipulate this great body of our citizens as a great political factor in local, State, and national elections. That subversive influences control this movement there is not the shadow of a doubt. The disappointing part of it is that the administrative officials of W. P. A. have not felt called upon to do anything about it. Not only that, but in many instances they have, I fear, given comfort and encouragement to the movement. I believe in civil liberties. I believe that men should have a right to have their own political opinions, but I hold that it is inexcusable and indefensible to have

any person upon the relief rolls or the work-relief rolls of this Government whose announced political philosophy is contrary to the form of government under which we live, and who believe in and support a political philosophy that advocates the overthrow of our present form of constitutional government.

In the last relief act, Congress put in a provision that took aliens off the relief rolls. I predict that in whatever legislation is

passed in the future, Congress will endeavor as best it can within constitutional limitations to circumscribe and restrict subversive activities, and to make it impossible for people to secure public assistance, or to influence its administration, who are not in sympathy with the American form of government.

Now, what is the conclusion of the whole matter? First of all,

we should refuse to embark upon any further experiments that will place a charge upon the Treasury. We should not only talk economy in government, but vote economy when opportunity presents itself. We should try to consolidate and perpetuate the splendid social reforms which we have set in motion. We should splendid social reforms which we have set in motion. mete, as best we can under appropriate restrictions and limitations, assistance to needy persons who cannot help themselves, but we must be able above all things to say in thunderous tones "No" to the manipulations of pressure groups who are constantly demanding increased public expenditures without reference to our national income, or our ability to pay. If the legislative and executive branches of this Government, supported by an intelligent citizenry, do not set about with resolute determination to set our economic buses in order then in my judgment we are headed for a great house in order then, in my judgment, we are headed for a great economic disaster.

Un-American Activities

EXTENSION OF REMARKS

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1939

Mr. DICKSTEIN. Mr. Speaker, many publications have appeared recently showing how the German Government wishes to continue its control over persons of German blood and their descendants in the United States and other countries, and how effective German methods have been to keep tabs on people of German blood in this country.

The organization concerned with this branch of activity has its headquarters in Stuttgart, Germany, and its leader or head is one Ernest Wilhelm von Bohle, whose antecedents and method of action was recently described in a German newspaper, the Volks-Echo, of New York City.

I am quoting from the Volks-Echo of May 13, 1939:

VON BOHLE WANTS UNITED STATES TO GO NAZI

A mild appearing man, who makes his headquarters at Tiergartenstrasse 4 in Berlin, is currently at work on a careful plan involving the United States. He is Ernst Wilhelm von Bohle, head of that division of the Nazi Government known as "Germans in Other Lands," Though more than 3,000 miles of water separate Von Bohle from our country, he holds in his hands the controls which are driving the Nazi espionage and propaganda machine with an ever greater dexterity toward its aim: a Nazi America. Who is Von Bohle?

Born 36 years ago in Bradford, England, educated in South

Born 36 years ago in Bradford, England, educated in South Africa and Germany, a traveler since his earliest days, Ernst Wilhelm von Bohle knows the world scene and so is well equipped for his task. He has worked in the department that he now controls, he was a member of the Reichstag in 1933, he learned his Next textice from his good friend Beldyn was Schireck Next controls, he was a member of the Reichstag in 1933, he learned his Nazi tactics from his good friend Baldur von Schirach, Nazi youth fuehrer, and he acts on the theory that "blood is stronger than passports." All Germans are members of the Third Reich whether they like it or not, according to Von Bohle. Said he at the 1935 Nuremberg Congress of the Nazi Party: "Just now we are in the midst of our fight for the creation of a Nazi Germany abroad." On August 30, 1937, declared he at Stuttgart: "We only know the concept of the complete German who as a citizen of his country is always and everywhere a German and nothing but a German. This makes him a Nazi."

LAYS GROUNDWORK

In the last few years Von Bohle has done a thorough job. Witness the fate of Austria, Czechoslovakia, and Memel. Witness the ness the fate of Austria, Czechoslovakia, and Memel. Witness the troubles stirred up by Nazi provocateurs in many other parts of the world, including South America and our own United States, and you know the job that Von Bohle has turned in. He is the little-known man of Nazi politics who carries on the important groundwork which eventually is intended to end either in a "putsch" or an "anschluss." Since he has direct charge of all "persons of German blood" outside the Third Reich and Danzig, his files bulge with their names, their histories, their beliefs—all spaded up by his world-wide spy network. The propaganda ministry and Gestapo (the Nazis' secret police) cooperate through Von Bohle. According to the Swiss newspaper Berner Tagwacht, there are 548 Hitler groups in 45 foreign countries manned by 25,000 propaganda agents and 2,450 special Gestapo hirelings.

The same issue of the Volks-Echo contains a statement about another Nazi agent who is now employed as a German consul in San Francisco. Here is the story of Capt. Fritz Wiedemann:

THE STORY OF CAPT. FRITZ WIEDEMANN, HITLER'S NEW CONSUL GENERAL IN SAN FRANCISCO

M. H .- In the first week of March Capt. Fritz Wiedemann arrived in San Franicsco, Calif., as newly appointed German consul general.

His first statement issued to American newspapermen in Berlin the day on which he was appointed to his San Francisco post reads: "I am firmly of the opinion that foreign representatives should not involve themselves in the internal affairs of the country in which they are stationed." This statement was quoted in the February issue of the German-American Commerce Bulletin, published in New York by the Board of Trade for German-American Commerce, Inc., a Nazi-financed institution.

I have every reason to doubt the truth of this statement because the story of Capt. Fritz Wiedemann, who was for many years Hitler's personal adjutant, shows him as being not only an outstanding figure in the Nazi Party for many years, but also as being very much interested and practically engaged in the Nazi movement in the United States as far back as the year 1933.

First, that Wiedemann was involved in the Nazi spy trial in New His first statement issued to American newspapermen in Berlin

First, that Wiedemann was involved in the Nazi spy trial in New York City;
Second, that on previous trips to the United States, he issued orders and instructions to the leaders of the Nazi Bund and of its predecessor;

Third, that Wiedemann was active in Hitler's blood purge, 1934.

Fourth, that Wiedemann was sent to London by Mr. Hitler during the Czechoslovakian crisis in September 1938, where he played

an important role to initiate Chamberlain's appeasement policy and to prepare the Munich sell-out of Czechoslovakia.

Fifth, that Wiedemann played an important role in secret conversations with representatives of the Japanese Government, in which he figured as Hitler's special confidential representative, and which finally materialized in the political and military treaty be-tween the Governments of Berlin and Tokyo.

This last fact gives us a hint to the real meaning of Captain

Wiedemann's new appointment as German consul general in San Francisco, which is a key post for an assertive and close cooperation between the German and Japanese secret service.

In successive issues this paper will publish the whole story of Captain Wiedemann, who, as the successor of Baron Manfred von Killinger, plays an even more dangerous role on the western coast of the United States.

WIEDEMANN 1933 IN CHICAGO

Today we confine ourselves to mentioning that Captain Wiedemann's close personal relation to Adolf Hitler is shown, first, by the fact that Captain Wiedemann, during the World War, was Hitler's superior officer in the same regiment of the German Army where Adolf Hitler was serving. Nothing has been heard of Wiedemann's activities for the time between the end of the World War and the beginning of Hitler's coming into power.

The first thing I knew about him in connection with Hitler's

Nazi movement was a trip to the United States, which Captain Wiedemann took during the Chicago World's Fair in 1933. Offiwiedemann took during the Chicago world's Fair in 1935. Online cially, he was at this time in charge of representing the German interests of trade at the world's fair. Vigorous protests of Chicago anti-Nazi groups prevented an official recognition by the Chicago World's Fair authorities of Captain Wiedemann's mission. However, Captain Wiedemann made the best use of his stay in Chicago by calling a conference of leaders of the Friends of New Germany. a Nazi organization, which later changed its name to the German-American Bund. At this conference where leaders from all over the country were present, Captain Wiedemann has given special instructions how Nazi propaganda should be carried on in the United States.

We will continue our exposure of Captain Wiedemann in the following editions of the German People's Echo.

Troubles in the Reign of King Cotton

EXTENSION OF REMARKS

HON. LUTHER PATRICK

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 23, 1939

ARTICLE BY JOHN TEMPLE GRAVES. II

Mr. PATRICK. Mr. Speaker, writing from Birmingham, Ala., we have one who has ideas and the ability to delightfully

express them. He is John Temple Graves, II, a columnist, and one who is an adornment to the journalism of the South, indeed, to that of all America.

Oh, he was no great contributor to my becoming a part of this body—he is far too smart for that—but he is a worthy son of an illustrious father, and we of our section are proud

Yesterday he developed a picture of the present trials in the reign of King Cotton and he did so in a style and with a truth that makes well worth reading his offering for the day; and for the reason that it would be good for this entire group to the last person to read and reflect upon it, I am herewith placing it in the Congressional Record for this date.

The last paragraph is a departure, taking up a word of compliment for Senator LISTER HILL. This will be of interest to those who feel that it is a promotion to move from these Halls to the Halls of the Senate.

THIS MORNING

(By John Temple Graves, II)

"You dare not make war on cotton! No power on earth dares

make war upon it. Cotton is king!"

Thus spoke South Carolina's Senator James Henry Hammond to New York's Senator William H. Seward in 1858. He was wrong. Grant and Sherman made war upon it almost immediately. The radicals of reconstruction made frightful war. The boll weevil has made war. The American tax and tariff policy has made war. Ignorance and poverty have made war. Rayon, silk, linen, jute, and paper have made war. Wisconsin has made war. That cotton survives all its wars and is still, though sick, a monarch, is comment enough on its eternal place in the economy of markind.

on its eternal place in the economy of mankind.

This is National Cotton Week. Those who are weary of weeks may call it something else, but all must accept the fact that a crisis has come to cotton in America and the immediacy of measures needed to ward off a disaster that concerns not the South alone but the whole Nation.

but the whole Nation.

There is a division among us on the usefulness of measures taken or proposed for production and price control. But there can be no division on the measure to which National Cotton Week is devoted. There can be no division on the usefulness of simply whooping it up for the South's white staple, of becoming romantic again about it, of advertising it for old uses and new, of appreciating the new excellence of fabrics, of realizing and reaching for the greater consumption that may be bed with elegenerable of the constraint of t

excellence of fabrics, of realizing and reaching for the greater consumption that may be had with salesmanship. In an age of advertising cotton has gone pitifully unadvertised. In an age of high-pressure selling cotton has had almost no pressure at all. The time has come for a streamlining of cotton's distribution method—and they call it National Cotton Week.

Not southern cotton week, but National Cotton Week. That is because the whole Nation is bound by the No. 1 problem of its No. 1 problem. Unless the South is permitted to prosper in its old economy the Nation will suffer in two ways. It will suffer for lack of the market the South can be for national goods and services. And it will suffer from southern competition in new fields based on substandard and distress. The farmers of the West must have cotton a more rugged king in the South or they will must have cotton a more rugged king in the South or they will lose their markets to southern herds and hay. The factory folks of the North must have cotton king in better purple or the nature that abhors a vacuum will continue to suck their industries southward. Cotton is the whole of America's problem, and the first one of all.

This is something for our southern press and people to tell the country in Cotton Week. But something to tell ourselves is that the problem will never be solved without our own faith and works, that unless we are eager participants in all the science, advertising, organization, and personal expressions of affection and faith which cotton needs today, the rest of the country can carry us nowhere.

Cotton is old. Herodotus, the Greek, wrote of it 24 centuries ago; Caesar, the Roman, covered the Roman forum with fabrics of it 20 centuries ago; Columbus found it in America when he came; Cortez used it to quilt the jackets of his soldiers against Indian arrows; Andrew Jackson's men had it for breastworks against Pakenham's artillery at New Orleans. Cotton is universal. They grow it in India; they grow it in Egypt, Russia, Brazil, Turkey, China, Peru; they grow it on 9,000-foot elevations of the Andes, on fields 5,000 feet above the sea in Mexico, on mile-high plains of the Himalayas; but they grow it best of all in our own South. Cotton is eternal. Time is on its side against threats of coal and wood and other rivals exhaustible or slow in supply, for cotton comes in new harvest each year. Cotton is old. Herodotus, the Greek, wrote of it 24 centuries cotton comes in new harvest each year.

cotton comes in new harvest each year.

War has been made on it. Senator Hammond was wrong about that. But cotton is king, just as the Senator said, and will always be king. May our Southern States find a will and a way to remain the kingdom!

For the annual alumni-senior banquet address on May 29, which amounts to its commencement speech, the University of Alabama has selected LISTER HILL. The choice, in our opinion, is a tribute to growth. The junior Senator from this State has been growing all his life and is still at it. He was growing when he became the first president of the Student Government Association at the university. He was growing when he got his A B. degree there and versity. He was growing when he got his A. B. degree there and

later when he won his degree in law. He was growing all the years of his incumbency in the Lower House of Congress. And today, as a Member of the greatest deliberative body in the world, he has grown mightily in sight of those who once looked upon him as mere rubber stamp for the New Deal, an errand boy to the President. His courage, his sober judgment, his independence, eloquence, and patriotism, are recognized today by political friend and foe alike, and his State and its university honor him as an accepted political leader of the Nation. accepted political leader of the Nation.

Crab Orchard Lake Project

EXTENSION OF REMARKS

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 23, 1939

LETTER FROM THE SOIL CONSERVATION SERVICE

Mr. DIRKSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from the Soil Conservation Service:

> UNITED STATES DEPARTMENT OF AGRICULTURE, Soil Conservation Service, Washington, D. C., May 22, 1939.

Hon. EVERETT M. DIRKSEN,

HOIL EVERETT M. DIRKSEN,

House of Representatives.

MY DEAR MR. DIRKSEN: This is a further reply to your letter of May 13 with which you enclosed a protest received from Mr. Frank Singleton, of Carbondale, Ill., regarding the Crab Orchard project. I believe that Secretary Wallace wrote you on May 17, giving a rather full explanation of the background and present

giving a rather full explanation of the background and present status of this project.

There have been, as you mention, so many conflicting reports received about the Crab Orchard development that we made a special investigation of the project and of the criticisms which had been raised. The engineer who undertook this investigation with the help of a land acquisition specialist, was, I might add, one who had not previously been connected with this project or with the work of the service in that region. This investigation has made it clear that a great many of the arguments used against this project are based on misunderstandings or highly exaggerated facts. Our investigators also report that the failure of the local representatives of the agency that started the project to explain fully the purposes and methods of their work, helped to create certain misunderstandings and antagonisms which have recently been cleared up to a large extent. In this connection you will be certain misunderstandings and antagonisms which have recently been cleared up to a large extent. In this connection you will be interested in the following quote from the Chicago Times of April 9, 1939, which sent a reporter to the Crab Orchard area:
"More than a score of personal-interviews show the project falls only slightly showt of being universally popular in the communities affected. It is next to impossible to find adverse comment outside of the project area."

cally slightly short of being universally popular in the communities affected. It is next to impossible to find adverse comment outside of the project area."

Now as to the specific points raised by Mr. Singleton. He first criticises the lake because "it will merely be another swamp" and will average only 5 feet in depth. The engineering plans based upon measurements of elevation and flow indicate that the water will have a maximum depth of 25 feet and should average at least 10 feet in depth. It is true that in the upper end of the lake there will be shallow arms of water. To meet this problem, we are planning to build some check dams which will result in a rapid sliting up of these shallow areas.

Mr. Singleton says "they are driving 700 families from their homes." The actual fact is that there will be slightly more than 300 families bought out in this project. About two-thirds of the owners from whom options have been taken so far are selling their land voluntarily. About 56 owners of tracts located in the area to be flooded by the reservoir have contested the condemnation of their land, but many of these cases are actually being settled out of court. We expect that not more than 25 contested cases will have to be carried through the court. Prices paid for these condemned tracts are fixed by the Federal district court in St. Louis, Mo., in the usual manner, based upon the court's best information as to the actual value of the properties.

Many of the families have already moved and we have in our files letters from several expressing their satisfaction at being able to sell their poor farms in the Crah Orchard area and move to

Many of the families have already moved and we have in our files letters from several expressing their satisfaction at being able to sell their poor farms in the Crab Orchard area and move to better lands in adjoining counties. To avoid undue difficulties on the part of families who are using farm lands in the future reservoir area, we have decided not to close the gates of the Crab Orchard Dam until after the end of this year's crop season, thereby permitting the families to harvest crops even though they have sold their land.

Naturally, there are always certain families who object to selling

Naturally, there are always certain families who object to selling their land because of sentimental attachments, and this, unfortu-nately, is one of those things which must be encountered in any public venture which demands the acquisition by the Government

of all land within a given area. Recognizing this, we have exercised extreme care in arriving at a method of appraisal which would be the fairest possible. Our appraisers are experienced men who are familiar with local land values. Their appraisals have been checked by appraisers of the Federal land bank and adjusted whenever reconsideration made that advisable. We know of no better way of arriving at a valuation of properties that would be fair to the vendors and at the same time protect the interests of the Government.

Possibly as a result of sentimental attachments some people have

the Government.

Possibly as a result of sentimental attachments some people have exaggerated the productive value of their farmland in the Crab Orchard area. The soil survey of the University of Illinois shows that the best lands here are rated as No. 7 in the series which classes the soils of Illinois on the basis of productive value from No. 1 (the best) to No. 10 (the least productive). Much of the soil in this area, therefore, is unsuited to commercial agricultural use.

Mr. Singleton advises you that 17 cemeteries are being moved in this project. Actually only 4 cemeteries and 1 family burying ground, involving a total of 182 graves, will be flooded by the reservoir, and must therefore be moved. We definitely intend to make other Federal lands available for the removal of the graves at no cost to the families of the deceased. Other graves or cemeteries within the purchase area will not be disturbed.

The next point refers to land clearing. I am quite sure that when the job of clearing the reservoir area is completed the cost will prove to be only a fraction of the \$400 or \$500 per acre figure that Mr. Singleton uses. This spring, during flood season, there was a period of time when the ground was so soft and muddy that clearing costs ran rather high. The work was continued, because it was the only job on which the relief labor could be employed at that time. Normally such ground conditions do not exist and costs are not excessive. Approximately \$20,000 worth of timber has been salvaged from the clearing operations to date and used for construction purposes, while free firewood has been made available to local families and relief agencies.

Mr. Singleton also brings up the matter of the loss of taxes to the county as a result of public purchase of the land. As Secretary Wallace pointed out in his letter to you of May 17, the actual loss to the county amounts to approximately 1½ percent of the county's total tax base. Since only 44 percent of the county's income is derived from property taxes, the actual de

Mr. Singleton is correct in stating that from four to five miles of State highway No. 13 will have to be relocated as a result of the flooding of the reservoir. We were informed by the Illinois State Highway Department that relocation of this road had been contemplated even before the Crab Orchard project was initiated. The State is assuming the entire cost of constructing the new road.

We have attempted to meet the criticisms of the Crab Orchard project in the fairest and most objective manner possible. We regret very much that so much misinformation has been circulated. Most of the criticisms have completely ignored the major fact that Williamson County has suffered tremendously from the closing of williamson County has suffered tremendously from the closing of coal mines and the consequent heavy relief problem. The project that is now giving steady employment to approximately 600 relief workers is an attempt, based upon the surveys of both Federal and State authorities, to develop the natural resources of this area in such a way as to lay the basis for future economic improvement.

The correspondence which was attached to your letter is returned herewith.

Sincerely,

D. S. MYER, Assistant Chief.

Sugar Talks

EXTENSION OF REMARKS

HON. PAT CANNON

OF FLORIDA

ARTICLE BY CLARENCE R. BITTING

Mr. CANNON of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Clewiston News, of Clewiston, Fla.:

[From the Clewiston (Fla.) News of May 19, 1939] SUGAR TALKS

> (By Clarence R. Bitting) FOREIGN FOOD SUPPLIES

Considerable heat has been generated during the past few weeks relative to a few tons of tinned beef from the Argentine. President Roosevelt stated that Argentine tinned beef was both better

and cheaper than American canned meat. Ignoring, for the moment, the controversy relative to both quality and price, which are but slight incidents to the problem that has been posed for the American people, let us examine the fundamentals involved in this situation; these fundamentals are all condensed and consolitated in the situation; these fundamentals are all condensed and consolitated in the situation.

this situation; these fundamentals are all condensed and consolidated in one short, concise, clear, and straightforward question, namely, Shall the American people be deprived of their historic and inherent right to supply their own needs?

In 1934 Congress wrote a most emphatic "yes" in answer to this question when the Jones-Costigan sugar legislation was enacted, and again in 1937 emphatically denied the American people their historic and inherent rights by extending the monopolistic rights to our markets freely granted foreign countries by the Sugar Act of 1937

Act of 1937.

Act of 1937.

Sugar legislation was the opening wedge for foreigners to supply all our needs. In sugar there is no question of price as all sugar is sold in the open market at one and the same price. In sugar there was no question as to quality because sugar is produced in the United States under much better sanitary conditions than in foreign countries. American sugar workers are much better paid than those engaged in the production of sugar in foreign countries.

foreign countries. American sugar workers are much better paid than those engaged in the production of sugar in foreign countries. Sugar is a nonsurplus crop, considered by our Army and Navy as a critical wartime raw material. Despite all these considerations, Congress prohibits the American people from producing even as much as one-third the sugar they consume.

The wedge for foreign production of our necessities of life was furnished by our Congress when it guaranteed foreign countries and other offshore areas over 70 percent of our sugar market. The wedge is there and it should not be surprising to the American people if the door is forced open so as to guarantee to foreigners two-thirds of our requirements of beef, lamb, pork, poultry, eggs, butter, wheat, corn, cotton, textiles, vegetables, shoes, clothing, hats, and all the rest of the long list of necessities, comforts, and luxuries which go to make up the American standard of living. When supplied by foreigners, all of these items of daily use will be produced by peons, the unemployment rolls in the United States will be swollen beyond the most extravagant imaginations, and the Nation crushed under a staggering load of taxes and debt.

The American way of life can still be saved for the American people. The entering wedge of foreign dominance can be removed by repealing the inquitous Sugar Act of 1937 and returning to the American people their historic and inherent right to supply their own needs.

Hearings Before Committee on Labor on Amendment of Labor Relations Act

EXTENSION OF REMARKS

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1939

AN EXCERPT FROM THE MAY 9 BROADCAST OF FULTON LEWIS, JR., OVER RADIO STATION WOL, WASHINGTON, D. C., AND THE MUTUAL NETWORK

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following brief statement of Fulton Lewis, Jr., Mutual Network commentator, concerning the testimony of Congressman C. Arthur Anderson, of Missouri, before the House Labor Committee:

Now we had a merry show this afternoon, in the hearings before the Labor Committee of the House of Representatives. That's the

the Labor Committee of the House of Representatives. That's the committee that's headed by Representative Mary T. Norton, Democratic Congresswoman from New Jersey.

For several days the committee had been holding hearings on the various proposals to change the Wagner Labor Act and to overhaul the National Labor Relations Board, and the witness today was a Democratic Member of Congress from Missouri, Republications of the Congress of the Congr resentative C. ARTHUR ANDERSON, a rather vigorous critic of the N. L. R. B.

He is the sponsor of one of these bills to change the Wagner

He is the sponsor of one of these bills to change the Wagner Labor Act, and he is also the sponsor of a resolution calling for a general investigation of the Labor Relations Board by a separate special committee of the House.

This afternoon when Mr. Anderson appeared on the witness stand the New Deal Democrats of the Labor Committee (including Mrs. Norton herself) pounced on Representative Anderson with both hands and both feet—apparently it was a pre-arranged agreement. But as it turned out it was not a very successful job of pouncing, because Mr. Anderson pounced right back, and for a while the fur was flying in all directions.

In the first place, Representative Kent Keller, of Illinois, de-

In the first place, Representative Kent Keller, of Illinois, demanded to know why Mr. Anderson had introduced a resolution for an investigation of the Labor Board by a separate committee

and not by the Labor Committee itself. Representative Anderson said this was an easy one to answer. The reason he introduced the resolution was that this Labor Committee was refusing to conduct any investigation itself, so he proposed to have a special committee set up that would conduct the investigation. Kent Keller snapped back rather indignantly that the Labor Committee is conducting an investigation right now, and "you are the witness," and Mr. Anderson snapped back, just as indignantly, "Yes, it is, but it didn't start investigating until after I introduced my resolution and forced you to do so."

Representative Keller then kept on with a rather critical line of questioning, but Representative Anderson seemed to be taking care of himself well enough, for every verbal blow that Mr. Keller was landing on his chin he was delivering one back to Mr. Keller.

Mr. KELLER

Keller was landing on his chin he was delivering one back to Mr. Keller.

But finally, Representative Bruce Barton, the Republican from New York, interrupted the duel, he turned to Representative Keller and said, "I would like to ask whether the attorneys for the Board prepared Mr. Keller's list of questions for him." And Representative Keller almost exploded at that. He said he had not consulted any attorney for the Labor Board. He held out several sheets of paper from which he was reading. "Here, you can see for yourself that these are in my own handwriting." And Mr. Barton replied, "Well, I just wanted to ask the question. As a matter of fact the benign and kindly gentleman from Illinois (meaning Mr. Keller) acts as self-appointed attorney for the N. L. B. R. every time we take up labor matters in this committee." And Representative Anderson from the witness stand chimed in with this remark, "Yes, and also the attorney for the C. I. O., just as a few days ago, the distinguished gentleman from Illinois appeared at a convention of the United Mine Workers here in Washington, made a violent oration in favor of the C. I. O., then came to the floor of the House of Representatives wearing a C. I. O. badge." Mr. Keller leaped to his feet at this point, his face was very red. He denied that he had done any such thing.

Mrs. Norton, the chairman of the committee, had become quite

Mrs. Norron, the chairman of the committee, had become quite Mrs. Norton, the chairman of the committee, had become quite explosive by that time. She pounded on the table and said that any member of the committee had a right to ask the witness any questions he desired. So up spoke Representative Chestre Gross, a Republican from Pennsylvania. He said, "Well, I want to ask the chairman of the committee a question. I notice that any time anyone defends the Labor Board at these hearings the spectators here in the committee room applaud and cheer. I'd like to ask you, Mme. Chairman, how many people in this audience are employees of the National Labor Relations Board and what they are doing here."

of the National Labor Relations Board and what they are doing here."

Mrs. Norton came back with the reply that the hearings were open to the general public. It was no affair of hers whether the spectators were employees of the Labor Board or not. And at that point Representative Barron jumped in again with the remark, "Well, it occurs to me that it may be very much the affair of the taxpayers because the Labor Relations Board employees are being paid by the taxpayers to work, and not to sit in the congressional hearings and to cheer."

So there it ended, without any decision in favor of either side, but at least there were no bones broken and no skulls crushed.

Federal Expenditures and the National Debt

EXTENSION OF REMARKS

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 23, 1939

RADIO ADDRESS BY HON. JOSHUA L. JOHNS, OF WISCONSIN, APRIL 24, 1939

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address delivered by me over the radio on April 24, 1939:

Friends, first of all this evening I want to thank WHA for the privilege it has extended to the Wisconsin delegation in Congress to talk over this station with the thought in mind that the citi-

to talk over this station with the thought in mind that the citizens of the State of Wisconsin may be better informed of just what is transpiring down at Washington.

In discussing the radio talks by the Congressmen and Senators it is thought of all of us to make these broadcasts educational and of benefit to the citizens of our State. This evening I expect to discuss—during the time alloted to me—the subject of our national debt, our national income, our expenditures, and the deficits which are constantly increasing with the National Government.

The subject is not a new one with me, because for some 5 years I have been discussing this problem on many occasions when I have been asked to speak. If the radio audience wants to retain some figures that I am going to give you this evening I suggest that you get your pencil and paper and take down some of them,

and if you are unable to do this, that you make a mental note of some of the figures that I am going to give you.

The total expenditures of the Federal Government for the fiscal

The total expenditures of the Federal Government for the fiscal year ending June 30, 1933, were \$3,559,000,000; June 30, 1934, \$6,353,000,000; June 30, 1935, \$7,581,000,000; June 30, 1936, \$8,969,000,000; June 30, 1937, \$8,550,000,000; June 1938, \$7,684,000,000; and it is estimated at this time that at the end of the fiscal year June 30, 1939, we will have expended \$9,085,000,000.

In making these expenditures we have kept the Budget of the United States Government out of balance now for over 7 years and have been constantly suffering from greater deficits until we have reached the point now where those who are responsible for these deficits no longer refer to them as deficits but as investments. Of course, with individuals an investment in deficits soon leads to disastrous consequences. The deficits for the fiscal years beginning with 1933 are as follows:

1933 \$1,942,000,000 3,238,000,000 1934. 3, 780, 000, 000 1935_____ 1936 1937_____ 1, 442, 000, 000

But this year it will again increase, so it will reach the approxi-

But this year it will again increase, so it will reach the approximate figure of \$4,085,000,000.

Of course, there is a difference between the permanent expenditures of the National Government and those that may be classified as emergency—such as agencies for relief and other agencies established since 1933. These permanent expenditures of the Government instead of being reduced have also constantly increased. For the following years they were as follows:

1934	\$3, 607, 000, 000
1935	4, 215, 000, 000
1936	5, 627, 000, 000
1937	5, 473, 000, 000
1938	5, 454, 000, 000
1939 (approximate figure)	6, 436, 000, 000

These constantly increasing deficits have accumulated notwith-

These constantly increasing deficits have accumulated notwith-standing the fact that the taxes of the Government have also constantly increased since June 30, 1933, when the receipts were \$2,079.000,000; 1934, \$3,115,000,000; 1935, \$3,800,000,000; 1936, \$4,-115,000,000; 1937, \$5,293,000,000; 1938, \$6,241,000,000; and in 1939 it is estimated that we will receive approximately \$5,000,000,000. In 1933 it was suggested that the expenditures of the National Government should be reduced at least 25 percent and that everybody else should reduce their obligations accordingly. The people had confidence that this could be done because it had been done in the past, and from 1933 until 1939 private industry, municipal corporations, and other organizations reduced their indebtedness approximately 30 percent, while the Government increased its indebtedness to the same amount.

In 1933 we had approximately 11,000,000 unemployed people looking for work. Today we have approximately the same number and

In 1933 we had approximately 11,000,000 themployed people looking for work. Today we have approximately the same number and our relief expenditures have increased. At the end of the fiscal year 1934 they were \$1,846,000,000; 1935, \$2,353,000,000; 1936, \$2,387,000,000; 1937, \$2,505,000,000; 1938, \$1,983,000,000; and the emergency expenses from July 1 last year up to and including April 17 this year amount to \$2,480,676,000. This corresponds to \$951,586,522 in 1938 on April 16—a corresponding date—so that you can see the tremendous increase in relief expenditures.

From July 1 the beginning of our fiscal year up to and including

tremendous increase in relief expenditures.

From July 1, the beginning of our fiscal year, up to and including April 17 of this year we had expended \$7,258,129,771.50 and we have taken in \$4,536,442,854, leaving an excess of expenditures over receipts of \$2,721,686,917.50, and it is estimated that this will reach, before the end of our fiscal year June 30, \$4,000,000,000.

Our national debt at the close of business on April 17, 1939, was \$40,030,682,500. This corresponds with the same date last year of \$37,563,427,120.31. These figures may startle you, but they are given to you for the sole purpose of making you think of the seriousness of the situation. If I may be permitted, I would like to compare it with England in 1932 when it had a national income of \$11,759,000,000, while in 1937 it had a national income of \$23,672,000,000. \$23,672,000,000.

In 1932 the United States had a national income of \$46,359,-000,000 and in 1937 \$64,000,000,000. From these figures you will observe that England increased its national income over 100 perobserve that England increased its national income over 100 percent, while the United States increased only about 50 percent. From 1932 to 1938 the British budget showed a surplus of approximately \$400,000,000. For corresponding dates in the United States our Budget showed a deficit of nearly \$21,000,000,000. The per capita tax at this time for the United States is approximately \$95.16, while the United Kingdom is \$100.81, but the per capita debt of the United States is \$429.99, while that of the United Kingdom of Great Britain is \$207.89.

The interest on our obligations for 1938 was approximately \$926,000,000, and this year, with the lowest rate of interest this country has ever enjoyed on its obligations, our interest will be more than a billion dollars.

In 1937 taxes absorbed about 17.6 percent of the national income and, had we paid taxes and paid our obligations as we went along

and, had we paid taxes and paid our obligations as we went along instead of borrowing money to pay them, it would have taken approximately 24 percent of our national income to have paid the running expenses of our Nation.

In the 8 years from 1931 to 1938 the Federal Government alone spent \$23,777,000,000 more than it received in revenue.

As stated heretofore, our national debt is now over \$40,000,000,000 and in addition to that the Government has guaranteed some

\$5,000,000,000 other obligations, and under the F. H. A. bill we may guarantee as high as \$4,000,000,000 more. Our direct debt limit fixed by an act of Congress is \$45,000,000,000. At the present time our debt is over \$40,000,000,000, so at the end of this fiscal year we will have almost reached our limit without taking into consideration our guaranty on other obligations.

We must cut down the spending of money in this country, in my opinion, or we are due for some trouble and it may be very serious. All we need to do is to study the History of the Rise and Fall of Rome and some of the causes of the French Revolution and we can learn some very valuable lessons. To make it just a little bit plainer to the radio audience: In the last fiscal year ending June 30, 1938, our Government spent \$21,000,000 daily; \$875,000 every hour; \$14,583.33 every minute; \$242.21 every second.

Many corporations today pay more in taxes to the Government

\$242.21 every second.

Many corporations today pay more in taxes to the Government than they do to their stockholders, and some pay more in taxes to the Government than they pay to their employees.

I have been told that there is no adding machine made today that will carry the huge figures entering into the Government finances for any one year and for accounting purposes it is necessary continually to break down and subdivide the figures!

Another great danger in all this spending is that about three-fourths of the direct obligations of the Government are held by banks, reserve banks, insurance companies, and nonfinance corporations. This is a most dangerous situation, because if the Government obligations should drop 10 points it would cause very serious trouble not only in our own country but throughout the world. About 50 percent of the total direct-interest-bearing obligations are owned by the banks, and their holdings of Government securities, direct or guaranteed, now represent about 25 percent of their total investsecurities, direct or guaranteed, now represent about 25 percent of their total assets and more than 60 percent of their total investments. The insurance companies which have some 64,000,000 policy holders—many from people with moderate incomes, have invested their funds and now own more than \$4,500,000,000 direct obligations of the Government. These holdings have increased nearly 15-fold since 1930.

The danger that I want to point out is that with the constantly increasing debt we may reach a point where the public more have

The danger that I want to point out is that with the constantly increasing debt we may reach a point where the public may have raised in their minds a doubt as to our ability to pay. Just how near we are to that point, no one knows, and therein lies the great danger. Each day brings us nearer to that point unless we

stop creating deficits.

We also have entirely too much idle money in this country Just a few days ago the banks were holding \$3,810,000,000 in reserves that ought to be invested in business in this country today in order to have a national income sufficient to operate the Gov-ernment safely.

We all know the increasing tax burden has meant that every self-

We all know the increasing tax burden has meant that every self-supporting person has turned over an increasing amount of his labor to meet the increasing expenditures of the Government. The cost of keeping the unemployed necessarily falls on the employed. The purchasing power of the people depends upon the value of production and distribution of goods and services, and our future standard of living depends upon our future value of production, not upon the theory that if you produce less you will have more, whether it is earned or not.

We can reduce our obligations in this country, because it has been

We can reduce our obligations in this country, because it has been done in the past. None of us have forgotten that after the World War we cut Federal expenditures from \$18,500,000,000 in 1919 to about \$3,000,000,000 annually, lowered taxes four times, and we reduced the Federal debt from \$26,600,000,000 to \$16,000,000,000, and except for a brief period in the year 1921 the national income was gradually rising from \$56,800,000,000 in 1921 to \$79,500,000,000 in 1929. The people are satisfied that if governmental affairs are properly managed this can be done again. The people are learning a 1929. The people are satisfied that if governmental affairs are properly managed this can be done again. The people are learning a lesson now that will be of lasting benefit to future generations, and that is that every dollar paid in taxes is a dollar out of their purchasing power; that these taxes, added to the cost of articles bought, necessarily reduces the value of sales and the production of the article, and also lessens the incentive of capital to invest.

Over 60 percent of the people at the present time, according to polls that have been conducted, agree that we are spending entirely too much money. That seems to be a majority. Let us, as a majority, start doing something about it.

Problems of Today

EXTENSION OF REMARKS

HON. CARL E. MAPES

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 23, 1939

ADDRESS BY HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS

Mr. MAPES. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address by Hon. JOSEPH W. MARTIN, Jr., of Massachusetts, before the Retailers' National Forum, Hotel Mayflower, Washington, under the direction of the American Retail Federation:

Mr. Chairman, ladies and gentlemen of the American Retail Federation, no one can come before such a gathering without full appreciation of the important part our retailers have in American life. I think I can understand your problems fully, because of my intimate contact through the years with merchants and retailers.

When a boy of seven, I was a hustling retail merchant, and my stock consisted of newspapers. All during my school days I owned a profitable route. That was an experience which has been valuable profitable route. That was an experience which has been valuable to me. It taught me a great many fundamentals of business. I learned the wisdom of fair dealing with the public. And I learned, too, it was necessary to spend less than you earned if the newsdealer was to be paid at the end of the week. Sometimes when I note hysterical Government spending without regard to income, I think it might be a good idea if all our public officials could have a little experience in mercantile life.

As publisher of a small-town daily since I was 24 years old, I have come to know quite intimately the problems and needs of retailers. Alertness, vision, resourcefulness, and character are essential for success in the retail business. The tricky retailer, who is ever cutting corners in his relations with the public and competition, generally finds at the end of the road it is unprofitable.

When I first came to Congress in 1924, there was only a remote

When I first came to Congress in 1924, there was only a remote when I hist came to Congress in 1922, there was only a remote interest in national legislation. Occasionally there would be a burst of limelight as some particular subject came to demand public attention. But when this issue was adjusted, quiet again prevailed and Washington, to the average man and woman, appeared very distant.

Today it is being driven forcibly to the attention of all that the

Government in Washington is a major influence in our daily lives.

PRIVATE ENTERPRISE MUST SURVIVE

That is why such gatherings as this are of the utmost importance in these times. If ever we are to enjoy solid and sustained economic recovery in this great country it will be because the millions of men and women engaged in private business contrive somehow to keep things going in the face of many discouraging and crippling obstacles. The job is a difficult one, I know. But these recent trying years have demonstrated the indomitable vitality of American business. The job will be done.

But I have come not to generalize upon questions of national concern. I want to discuss with you honestly and frankly some of the major problems which American business now faces and which.

the major problems which American business now faces and which, to my mind, the Government must solve before we can pull onto the broad highway of national prosperity and put our 11,000,000 unemployed back to work.

REPUBLICAN POLICIES IN CONGRESS

That is our great problem today, for every other difficulty before us is but a projection of unemployment. As the leader of the Republican minority in the House of Representatives, I may tell you in all sincerity that during the present session we have had but one

mail sincerity that during the present session we have had but one measuring rod for every piece of legislation recommended by the administration, Will it help put our unemployed back to work? We have fought for economy in Government because we believe that widespread fears of Federal fiscal policies are today the greatest single restraint upon a driving national expansion of business. In this endeavor, however, we have received very little moral support or encouragement from the administration

or encouragement from the administration.

We have advocated some comprehensive adjustments in the Federal tax structure to lift those penalizing provisions which hobble the very spirit of enterprise. And here again, up to date, we have made very little actual progress although many promising words have been uttered.

We have pressed for a clean-up in the corruption and political manipulation of relief; and in cooperation with a group of honest, sincere Democrats we have made real progress and, I believe, will make more in the weeks ahead.

We have advocated and supported amendments to the Wagner Labor Relations Act in the interest of equity and justice to employer and worker alike. This Congress should never adjourn until this great obstacle to recovery is adjusted. Here in America there must be equal opportunity, fair play, and honest cooperation between all engaged in industry if we are to have the fullest measure of properties. of prosperity.

If we can keep this Congress in session we will force other steps toward freeing business of existing crippling restraints. But, mark you well, it is already a tough fight even to keep Congress in session. Every influence of the administration is pressing for quick adjourn-

ment.

Early adjournment in the face of the many things which need to be done in the interest of recovery simply means abdication—a throwing overboard of the legislative program—a running away from the grave responsibilities of the national welfare.

URGES PATRIOTISM FOR RECOVERY

I am against calling harsh names. I do not believe that is the way out. Whatever is to be accomplished will be accom-plished through negotiations conducted in a spirit of cooperative good will. All history teaches us that.

The grave economic problems before the country will be satisfactorily adjusted if there is real cooperation on the part of all who want their country to succeed.

What is needed is an old-fashioned patriotic revival of Americanism. We must rededicate ourselves to fundamentals; we must cling to the virtues which made America the greatest country in the world; the land of hope and opportunity for all.

Above all, we must recreate a new spirit of unselfishness; a spirit which will put country above individual self; a spirit which will not demand benefits for a few at the risk of imperiling the

chances of all.

If we tackle these problems with real unselfishness, we will solve them, and the solution will bring greater happiness and prosperity to all; yes, even more to those who now seek to advance through selfish concessions.

No individual can prosper long unless the country as a unit is prosperous. Only through a realization of that great and self-evident truth can we achieve real national progress and make

secure the future of America.

G. O. P. PROGRAM IS CONSTRUCTIVE

For this reason we of the minority have adopted a firm policy of constructive action. We do not seek to oppose any measure merely because it is offered from the other side of the House. We have a definite and specific program. And to accomplish any part of it we have and will continue to subordinate partisanship to patriotism. Here in brief summary is the Republican program for this session:

(1) Keep the United States out of war.
(2) Move immediately to curb unnecessary, wasteful, and reck-

less spending.

(3) Repeal the repressive tax on undistributed corporate earnings, which has proved so harassing and dangerous to business, large and small.

(4) Revise the remainder of the Federal tax structure to eliminate or modify provisions retarding business recovery.
(5) Repeal the dangerous discretionary authority which the President now has over the Nation's monetary system.
(6) Amend the National Labor Relations Act by Clarifying the mutual obligations of worker and employer and the duties of both toward the public in order to end present perceiving discord.

toward the public in order to end present paralyzing discord.

(7) Defines specifically the area of Government competition with private enterprise so that business may be able to create jobs with some certainty as to the future.

(8) Restore American markets to the American farmer and

wage earner and develop new markets for agricultural products.

(9) Adopt immediate legislation to rehabilitate the railroads to make secure the jobs of many hundreds of thousands of workers and the investments of savings banks and life insurance companies

(10) Create a special committee of Congress to inquire into the effect of the reciprocal trade agreement policy on American industry and agriculture.

(11) Clarify Federal rules and regulations so industry and busimay know what to expect.

ness may know what to expect.

(12) Reject all experimental legislation not clearly helpful in promoting recovery, or, which would subject agriculture, labor, or industry to compulsory decrees of a Federal bureaucracy.

We are convinced that no progress can be made toward restoring this country to a sound and permanent prosperity until a program along these lines is adopted and put into effect.

We are convinced if this program in its entirety is adopted by Congress and accepted by the President, our country will immediately take on new life and vigor and will presently begin to enjoy economic stability and a higher standard of living. Panaceas and short-cut methods have been tried and found wanting. The time has come to go forward to fundamentally sound principles.

and short-cut methods have been tried and found wanting. Ine-time has come to go forward to fundamentally sound principles. Words are not sufficient; action is imperative now. The entire economic life of the Nation is bogged down in a quagmire of experimentation and foggy theories. We must release the energies of our people from the restraints and devitalizing meddling of a headstrong and impractical Federal bureaucracy.

NEW DEAL REPULSES SOUND POLICIES

In line with this broad policy of constructive cooperation, the minority party in the House also has set up three special committees to inquire into various major issues of the hour. The first was our special committee on national defense policy, which gave tremendous impetus to a move which aimed at a clear

definition of United States foreign policy—insisting upon a policy in accord with the deepest traditions of Americanism, and one which would reaffirm our determination not to become a party to age-old intrigues and racial frictions of Europe and the Orient.

That policy is now the settled policy of the majority of the American people, and I think it safe to say that no administration in the people will deep to give the receiver from it.

in the near future will dare to swerve from it.

However far negotiations and conversations abroad may appear to lure this country from its traditional course, we may be sure

that an alert and articulate public opinion at home is now on guard against our military involvement overseas.

Next we appointed a special committee on the extraordinary powers of the President, the so-called "emergency powers," which were delegated to the White House by the successive rubber-stamp

were delegated to the White House by the successive rubber-stamp Congresses between 1933 and 1938.

This committe already has reported that the emergency powers have been of little value as a stimulant to real economic recovery. More important as a guide to future policy, the committee's studies have indicated clearly that every job attempted by this method of dictatorship and one-man government actually might have been accomplished under the orderly processes of congressional consideration, proper debate, and constitutional legislation.

FUNDAMENTAL PROBLEMS PERSIST

Indeed, we may look around us today and see clearly that from the national viewpoint we still have every fundamental problem to meet—11,000,000 unemployed, billions of idle capital, the unbalanced Budget, an elastic currency, Government competition in busi-

ness, excessive taxation, and demoralizing bureaucratic regulation.

On top of all these we now face the fears and alarms of a potential inflation, or of still more taxes to carry our \$40,000,000,000

national debt.

Meanwhile, in the interval since 1933 Federal tax collections have already trebied, increasing from, roundly, \$2,000,000,000 in the fiscal year 1934 to, roundly, \$6,000,000,000 in 1938.

ABLE ADMINISTRATION NEEDED

On the whole, I think it is no exaggeration to say that the investigations and researches of this committee have made it clear that the fundamental structure of our Government is adequate to cope with the problems of the day. What we need most urgently is an able and conscientious administration of the Nation's business an able and conscientious administration of the Nation's business under a philosophy not of selfish partisanship but of broad-gage Americanism—an Americanism which holds a deep faith in the ability of the people themselves to work out many of our difficulties under the forms and processes of constitutional freedom and legal security.

RESIST MORE DEBT

Third, we appointed a special committee to study the whole question of the national debt, its influence upon business plans, its tion of the national debt, its innuence upon business plans, its ramifications in threatened inflation, in restraint of private enterprise, and in the prospective load of taxes upon whole generations of our people during the next 100 years.

We have stood firmly against a proposal to increase the legal limit of the national debt above the present ceiling of

limit of the \$45,000,000,000.

We believe that no further Federal borrowing should be authorized by Congress until the administration gives some convincing evidence of a program to move toward a balanced Budget.

ESSENTIALS OF RECOVERY

Recovery cannot begin until all Americans may again face the future with confidence in the security and stability of constitutional government and the safety of our bountiful American system of private enterprise.

Confidence can never be restored to a harassed and worried business world by words and phrases alone. Action must square with appeasement promises if we are to have that confidence essential to recovery.

Nothing can be more fatal to business then excessive meddling

Nothing can be more fatal to business than excessive meddling on the part of the Government. Hordes of Government agents swooping down upon business concerns like a swarm of locusts can quickly destroy incentive and be the means of depriving men and women of jobs.

and women of jobs.

The other day a Democratic Congressman told me a story that illustrates the plight of the American businessman, both large and small; a situation particularly deadening to small business. The story came from an agent representing the Social Security Board. He went to a small business plant on a Government mission and found seven others ahead of him waiting to see the owner. Inquiry revealed six of the seven were Government agents. Even the social security agent was affected by this situation and decided he would try again some other day.

Even the social security agent was affected by this situation and decided he would try again some other day.

No wonder there is a growing resentment against the growth of bureaucracy. No wonder there is no recovery. The businessman who spends half his time answering Government questionnaires has no time for his own business.

I mention these specific activities of the minority during the present session merely to point out that we are alive fully to the urgent need of the Nation today, and secondly, to dispel the smoke screen of propaganda so persistently laid down by the new dealers, which would have the country believe the Republican Party has no program. Party has no program.

DEMANDS PRACTICAL MEASURES

We have a positive and constructive program-based, not upon collegiate theories or administrative brainstorms, but upon the realities of the world situation today, and upon the lessons of

We seek those practical measures which will put this mighty Nation back on the track. Our motto is "Let's put America back

We on the minority side emphatically reject the New Deal eco-nomic defeatism which proclaims there are no more frontiers to

be conquered.

We do not believe this great country has reached the end of the road. We do not believe that American youth must forever take a job at a dollar a day in the woods, or that our unem-ployed face no better future than a subsistence job in the W. P. A. Neither do we believe that America faces a future which will find everybody over a certain age on a meager Government pension.

AMERICA'S WILL TO PROGRESS

On the contrary, we on the minority side envision a day when our national income easily may reach \$100,000,000,000 a year.

We look forward to the day when the eyes of youth will glow once more with the light of hope, adventure, and enterprise.

We look forward to the time when American business may do more than work for the tax collector.

LXXXIV-App-137

We look forward to the day when the job maker and the job giver rightfully will be regarded as keymen in a revived scheme of economic abundance.

America has the resources, the skill, the technical equipment, and the manpower to push this Nation to heights of prosperity

and the manpower to push this Nation to heights of prosperity undreamed in the past.

But we may realize these high hopes only through a robust national confidence—through a confidence born of security, stability, order, and old-fashioned common sense in government.

We are hog-tied today not because we lack the vision of progress, not because we lack the courage of enterprise, but because the spirit of our people is hobbled by devitalizing bureaucratic restraints. restraints.

NATION'S FIRST TASK

Our first task is to restore the vigorous forward-looking and

Our first task is to restore the vigorous forward-looking and hopeful spirit of our people.

We are a nation in the chains of uncertainty and confusion. Business can hum only when it can plan with security and assurance for a period of 5 or 10 years.

We cannot go on forever on a day-to-day basis, hanging by our teeth to the slender hope that the morrow will not bring a new crack-down.

SEES REVIVAL OF AMERICANISM

It is a part of my job to keep in touch with what America is

It is a part of my job to keep in touch with what America is thinking.

I know that today America is looking forward eagerly and hopefully to a decided change in Federal policies.

I have seen thousands of letters from various parts of the country during the last 5 months. In them there is an undercurrent of deep conviction that our cherished American system of balanced constitutional government and private enterprise will weather this storm to the end.

America will come through. She has taken a terrible lashing. It has been a season to test the souls of men.

It has been a season to test the souls of men.

But I can assure you the tide has turned.

The deep spirit of America has found its voice. Our country is all through with court packing, crack-down, and purge. America already has made up her mind to be free again—free to do, free to dare, and free to prosper according to the bounty which a kindly Providence has entrusted to our hands.

That is my message to the business people of America today. Having paused for an interval to experiment with every economic hallucination recorded in the history of man, the American people have once more set themselves to move forward along the tested

have once more set themselves to move forward along the tested paths of peace, progress, and prosperity.

Solution of the Agricultural Problem

EXTENSION OF REMARKS

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1939

Mr. LEMKE. Mr. Speaker, here in this world physical welfare is inseparably linked with spiritual well-being. For the highest intellectual, physical, and spiritual development there must be a reasonable assurance of future security for our families and for our homes. There must be hope and aspiration. Yet, today, all is uncertainty, confusion, and despair. Everything is in chaos. Our civilization is in transition.

There is hunger and want in the land. Our Nation is in mental and physical distress. Hundreds of thousands of farmers have lost and are still losing their homes. This, because they feed and clothe the Nation for less than cost. Millions of laboring people have been and are still unemployed-are hungry and dying of malnutrition. All this in a land of plenty-in a land where we have so much that we have seen fit to restrict and destroy the very things necessary to satisfy our hunger and our want.

Little wonder thousands of farmers are asking, What happened to the National Farmers Union? Why do somenot all-of its officers oppose the farmers' cost-of-production bill? Why did these stab us in the back? Why did they wait until a few days before the bill was to be voted on by the Members of the House Agricultural Committee and then send a letter to each Member making a sudden assault upon it? Was not this bill born under the gallant leadership of John A. Simpson? Is it not the baby of the Farmers Union? Why should its national officers and a few of its State officers now attempt to strangle their own child?

The cost-of-production bill is the baby of the Farmers' Union. It was ably fathered and protected by the late John A. Simpson, the greatest farm leader this Nation ever produced. A leader who could not be subsidized by the Department of Agriculture or anyone else. A leader who represented the membership of his organization and 95 percent of the farmers of this Nation. Such leaders are rare and far between.

SUBSIDIZED LEADERS

What happened the other day happened in 1933 and will always happen when a great and human cause makes its appearance and struggles for recognition. In 1933 the Department of Agriculture subsidized a few of the farm leaders and sold the farmer down the river. It defeated the Norriss Simpson cost-of-production amendment. The Department, then and now, deliberately put farm leaders on the Federal pay roll for the express purpose of using them as cat's-paws with which to decoy the unwary farmer into the Triple A.

The other day that Department, through its Mr. Dodd and a few subsidized farm leaders, together with its 88,800 field men, began its fight on the farmers' cost-of-production bill. These tell Congress that they represent you and that you farmers can continue to feed and clothe the Nation below the cost of production. They are opposed to having this bill come up on the floor for consideration where all the pros and cons can be heard by the farmers. They do not wish to have the white light of publicity thrown upon their subsidization.

There is a mob of them now at the other end of Pennsylvania Avenue. They are on the Federal pay roll. They are designated in the Department of Agriculture as collaborators—should be fabricators. These are the so-called leaders that sent letters to the members of the House Committee on Agriculture, telling them that the farmer did not want cost of production. Some of these are staying rather overtime. They are afraid to go home because they now realize that the farmers are getting their number—betrayers of "a great and human cause" will always find that there is a judgment day.

CRITICISMS

Let us now answer the false charges and criticisms made against the cost-of-production bill in the letter sent the Members of Congress.

Criticism No. 1: "No safeguards are provided in the measure for the family-size farm, the cooperative farming association, and the tenant operator."

Answer: This is not true. The bill is universal in its operation and protects every farmer. It gives them cost of production for that part of their commodities consumed within the United States. It gives the American market exclusively to the American farmer and not to the Argentine or any other foreign nation.

Just what is a family-sized farm? Is it a Wallace farm? Is it a farm on which you spend \$200 in labor, cultivation, and clover seed and receive a soil-conservation check for \$49? Is it a farm on which a man and his wife may subsist but when they add two children to their household then all four will starve? Does not this family-size farmer need cost of production in order to live like an American citizen?

Criticism No. 2: "The measure would centralize authority in the Secretary of Agriculture to a degree never hitherto contemplated or proposed."

Answer: This is another inaccurate statement. This bill takes away powers from the Secretary and gives him duties to perform. It reduces his army of salaried lobbyists and subsidized farm leaders from 88,800 to 1,056. The truth is this bill takes control of the farmer's farm out of the hands of the bureaucrats and the subsidized lobbyists and places it back in the hands of the farmer where it belongs.

Criticism No. 3: "The bill is fascism."

Answer: If to give the farmers cost of production is fascism then make the most of it. This false statement comes with poor grace from those who make it. I happen to know that everyone of these was quite willing to destroy the indpendence

of the Supreme Court just a few short years ago. That would have been the first step toward fascism. They did not succeed in fooling the farmers then and they will not succeed now.

Criticism No. 4: "The obvious effect of such a program would be to subsidize foreign consumers at the expense of our own people, millions of whom are even now unable to purchase their requirements at current ruinous prices."

Answer: This statement is incorrect. Under the bill the farmer gets cost of production for that part consumed in the United States and he gets the world market for the surplus. At present he gets the world market for all.

The farmer, now, not only subsidizes foreign consumers but our own consumers. Under the Triple A your wheat has been sold abroad for charity as low as 20 cents a bushel. That is subsidizing foreign consumers. This same argument was made by Andrew W. Mellon when he opposed the McNary-Haugen bill. It comes with poor grace from subsidized farm leaders—from the paid lobbyists. The truth is that agricul-

ture is the basic industry. When the farmer has purchasing power then the laborer and the businessman have purchasing power. The greater the agricultural income the greater the income of the Nation.

Criticism No. 5: "Simply establishing a price does not necessarily mean that buyers will be readily available with adequate purchasing power to absorb the volume for domestic consumption."

Answer: These leaders now tell you farmers that you will have to continue to feed and clothe the Nation below the cost of production and continue to lose your homes. Surely they ought to know that when the farmer gets cost of production the unemployment problem will be solved. Then there will be prosperity and purchasing power for all. I am afraid they are more interested in the collaborators' fund then they are in the farmers. "False face must hide what the false heart doth know."

Criticism No. 6: "The measure fails to provide adequate and effective differentials as to the many grades and varieties of each commodity included in its sweeping provisions."

Answer: This is an untrue statement. The bill provides:

The Secretary shall also recognize and allow the usual and customary price differentials now or hereafter recognized or established in the channels of trade on grades, staples, classifications, or qualities below or above such basic grades, staples, classifications, or qualities.

Criticism No. 7: "Inasmuch as the bill applies only to agricultural commodities entering into the channels of interstate commerce, intrastate traffic in such commodities remains outside the effective scope of the measure."

Answer: This is another smoke screen. We know that when we fix the price on interstate and foreign commerce the intrastate follows the interstate price because no farmer would sell for less in intrastate than he can get in interstate commerce.

When the price was fixed at \$2.26 on wheat, there were no two prices, no matter whether the wheat was sold in interstate or intrastate commerce. When Mr. Hoover fixed the price on hogs at \$17.50 per hundred, there was no difference in price between the pork within the State or that shipped in from another State. The interstate governed the intrastate price.

Criticism No. 8: "The police force necessary to enforce the provisions for regulation and regimentation outlined in the bill staggers the imagination."

Answer: These collaborators have become so accustomed to regimenting the farmer that they allow their imagination to run away with them. This bill does away with regimentation. It makes use of the same machinery that Hoover used when Congress fixed the price of wheat, or when he fixed the price on hogs. It licenses the dealers in interstate and foreign commerce. It does not attempt to control the farmer or his farm. It simply compels these dealers to pay the cost of production as a minimum price. It reduces the 88,800 employees in the department, now used to police the farmer and direct his activities, to 1,056.

Criticism No. 9: "The bill is so full of loopholes and so poorly drafted that, even if it were enacted, farmers would never receive more than the paper promise of cost of production"

Answer: Again, a deliberate misstatement of fact. This bill has been drafted and redrafted. Ever since 1933 it has received the most careful consideration of many Members of Congress.

It is true it was not drafted by the "brainless trust," but draftsmen employed by Congress assisted in its drafting. It is one of the most perfect bills before Congress. I invite the authors of the letter to discuss this bill with me in any part of this Union, on any one or all of their nine criticisms based upon misrepresentation and erroneous conclusions.

NONPOLITICAL REVOLT

A nonpolitical revolt has taken place in Congress against the further deception and betrayal of agriculture. Eighteen Members of the Senate and 16 of the House, realizing that the Secretary of Agriculture's farm program has been a "flop," introduced this nonpartisan cost-of-production farm bill.

I give here the names of the Senators and Representatives who introduced and sponsor this cost-of-production bill.

Senators: Frazier, North Dakota; Wheeler, Montana; Thomas, Oklahoma; Bulow, South Dakota; Capper, Kansas; Shipstead, Minnesota; La Follette, Wisconsin; Nye, North Dakota; Russell, Georgia; McCarran, Nevada; Bone, Washington; Donahey, Ohio; Burke, Nebraska; Johnson, Colorado; Lundeen, Minnesota; Schwartz, Wyoming; Gurney, South Dakota; and Holman, Oregon.

Representatives: Massingale, Oklahoma; Lemke, North Dakota; O'Connor, Montana; Pierce, Oregon; Stefan, Nebraska; Gehrmann, Wisconsin; Mundt, South Dakota; Sweeney, Ohio; Leavy, Washington; Houston, Kansas; Buckler, Minnesota; Johnson, Illinois; Landis, Indiana; Seccombe, Ohio; Hawks, Wisconsin; and Fish, New York.

The long and determined fight that most of these 34 Members, together with other sponsors, have made for justice to the farmer, beginning with the McNary-Haugen bill, is a genuine guaranty that this cost-of-production bill is real farm legislation and not the Wallace "Alice in Wonderland," makebelieve kind. No "fly by night" subsidized opposition can shake the farmers' faith in this cost-of-production bill or their confidence in these Members.

LOSING HOMES

These Members know that during the last 6 years of farm regimentation—of the insane policy of destruction and curtailment of agricultural wealth—about one farmer out of every five lost his farm by mortgage foreclosure, tax, or judgment sale. The price of that erroneous policy comes too high. These Members of Congress know that the farmer who still owns his farm is deeper in debt than he was in 1932. They know that the prices for farm commodities last fall were as low as they were in 1932, considering the difference in the purchasing power of the farmers' dollar.

INCLUDES FIFTY PRODUCTS

This bill would give cost of production to about 50 agricultural products. It would lift the entire agricultural structure out of the mud and leave the relative position undisturbed. If cost of production were given just on a few agricultural products then, naturally, there would be overproduction of those products, because then everyone would raise those particular products.

But, when the cost of production is given on 50 of the principal agricultural commodities then there would be no incentive of going excessively into the production of any one particular commodity. This is the safety valve against overproduction, because if you get cost of production for 100 percent of one commodity and cost of production for 75 percent of another commodity, you naturally would switch to the commodity of which there is no overproduction,

PROTECTS LABOR AND INDUSTRY

In order to protect domestic labor and industry, the bill provides further:

The Secretary may sell at or above the world price warehouse reserves and export quantities and percentage of any agricultural product to any processor or manufacturer for processing or manufacturing into finished or semifinished and manufactured or semimanufactured product, but he shall first require a sufficient bond from such processors or manufacturers to the effect that such

finished or semifinished or manufactured or semimanufactured product or any byproduct thereof will not be sold or disposed of directly or indirectly for domestic consumption.

It also provides further:

If the quantity and percentage estimated for domestic consumption should be insufficient by reason of flood, drought, pestilence, or other calamity, or for any other reason, to supply the demand for domestic consumption, the Secretary of Agriculture is authorized to supply such shortage out of the warehouse reserve or export quantities and percentages, at the cost-of-production price, plus storage and expenses.

It provides:

Any agricultural product, now owned or hereafter coming into the possession of the Government of the United States, or any department or agency thereof, shall be conclusively deemed to be warehouse reserves or exportable surpluses, and shall be disposed of only in accordance with the provisions of this act providing for the disposal of warehouse reserves and export quantities and percentages.

PROHIBITS IMPORTATIONS

This bill would prohibit foreign importations into this country until our farmers received cost of production plus 10 percent for that part of their commodities domestically consumed. It provides:

In order to carry out the purposes of this act, the Secretary of Agriculture is hereby directed that whenever he finds, upon investigation, that the world price, computed in United States currency, of any foreign agricultural product or substitute, in its manufactured or unmanufactured state, is below the cost-of-production price of any competing domestic agricultural product, in its manfactured or unmanufactured state, to notify the Secretary of the Treasury thereof.

Treasury thereof.

It shall thereupon become the duty of the Secretary of the Treasury to levy and collect upon such foreign competing agricultural product or substitute, notwithstanding that such agricultural product or substitute may have been originally produced in the United States or its possessions, in its manufactured or unmanufactured state, when imported from any foreign country into the United States or any of its possessions, a duty equal to the difference between the world price and the cost-of-production price of such product, plus 10 percent of such cost-of-production price.

This bill will repeal the so-called reciprocal foreign trade agreements. It will give to the American farmer the American market. The salaried lobbyists and subsidized leaders, in their letter of criticism, forgot to say one word about the foreign importations. In fact, they are quite willing to have the farmer and the laborer sold by the international manufacturer and the international banker in foreign market places. They are quite willing that agriculture shall pay for the World War a second time.

We imported from foreign nations \$8,373,652,981 of agricultural products, substitutes, and manufactured products thereof in the last 6 years. That is the foreign valuation. The domestic valuation would be over \$16,750,000,000. This would have been sufficient to have handed to every head of our 6,000,000 farm families a check for \$2,790.

That money would have done billions of dollars' worth of business in our country. In place of the stupid curtailment and destruction of agricultural wealth it would require an additional 87,237,280 acres to produce sufficient agricultural products for our own people.

PRICES UNDER THIS BILL

If this bill had been a law last fall you would have received \$1.50 a bushel for your wheat, 94 cents for your barley and corn, \$11.32 per hundred for your hogs, \$2.76 per hundred pounds of milk, 48 cents for your butterfat, 31 cents for eggs, 24 cents for chickens, and 30 cents for yours turkeys, and so forth.

These are cost-of-production prices. No honest person wants to consume the products the farmer produces for less than cost. If he does then he is consuming the home of the farmer—taking the bread out of the mouths of the farmer's children. It matters not whether he be a subsidized leader or a salaried lobbyist.

In short, if this bill had been a law your farm income would have been increased by \$7,500,000,000. Since every dollar of income that the farmer receives increases the national income by over seven and one-half, the national income would have been increased by \$56,625,000,000. This would give prosperity and buying power to all. Then there would be no further need of appropriating billions with which to subsidize business, labor, and agriculture.

CONCLUSION

I invite the farmers of this Nation to let their Congressman and Senator know whether or not they want cost of production. I know that the great majority of Members wish to know the actual sentiment of the farmer. They value a telegram or a letter from their constituents. They have a right to know whether you want them to sign petitions Nos. 5 and 6 at the Speaker's desk-whether you want the cost-of-production and the Frazier-Lemke refinance bills brought up for discussion and disposition on their merits.

I invite these farmers to form a cost of production and refinance club in every township and every county of this Nation. Self-preservation is still the first law of nature. When you form this club you will have taken the first step toward preserving agriculture. Then you can emphatically tell your farm leaders that you want this legislation and that they must not attempt to scuttle the ship by introducing camouflaged substitutes-for the purpose of confusing

I also invite the laborer and the businessman, who believe in a square deal and who are big enough to realize that when agriculture is prosperous the Nation is prosperous, to let their Congressman and Senator know that they too are in favor of giving the farmer cost of production for that part of his agricultural products consumed within this Nation. They have a right to know that you too want them to step up to the Speaker's desk and sign petitions Nos. 5 and 6.

Investigating the W. P. A. Questionable Aspects

EXTENSION OF REMARKS

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1939

LETTER FROM ROCKWELL KENT

Mr. COFFEE of Washington. Mr. Speaker, this House recently authorized an investigation of the W. P. A. The ostensible purpose of such investigation was an attempt to disclose evidence of inefficiency, prejudice, misfeasance, or malfeasance in office. One particular aspect of the investigation is very unfortunate. That is the seizure of an album of photographs of female nude models for use in professional art projects. It seems to me that the manner of such seizure of such album is most reprehensible and deserves censure by

Because complaint was made to me about this matter I wrote to one of the leading artists in America for his opinion in the matter. Mr. Rockwell Kent is preeminent among the artists of America for the brilliance of his attainments and the skill of his portrayals. He is an artistic genius of the first water. He has written me a letter in which he discusses the incidents to which reference has been made. I append the letter and in it let Artist Rockwell Kent express his views. The letter is as follows:

AUSABLE FORKS, N. Y., May 11, 1939.

The Honorable JOHN M. COFFEE,

The Honorable John M. Coffee, House of Representatives, Washington, D. C.

Dear Congressman: In reply to your letter of May 4, which owing to change of address on my part was unfortunately delayed in reaching me, I send you the following statement about the seizure by the committee investigating the W. P. A. of the nude photographs—and, I believe, of the addresses and telephone numbers—of women models.

An efficient administration of the art projects requires that a list of professional male and female models available to artists be kept on record. For this list to be of any practical value it has to be accompanied by photographs and, in the cases of those models who pose in the nude, nude photographs. The reason for this should be obvious. Photographs are the only kind of "reference" that an artist in need of a certain type for his projected picture or sculpture can be interested in. I believe that the United American-Artists, Local 60, of which I am president, keeps just such a file Artists, Local 60, of which I am president, keeps just such a file

of its professional model members. I am not sure for I have never happened to consult it.

Beginning with their student days, art students, young men, and young women, become accustomed in their life classes to the contemplation of nude models of both sexes. Their attitude is so invariably professional that I may say that there is even less thought by students and artists of carnal familiarity with a model than may occur between the sexes in a business office. I have never happened to know a model, male or female, who was not a thoroughly decent person as fastidious in personal morals as never happened to know a model, male or female, who was not a thoroughly decent person, as fastidious in personal morals as men and women of any reputable class. Many models are serious students of art, of the dance, or of university courses. Their very purity of heart seems to have justified them in the pursuance of temporary work to which there was vulgarly some stigma attached. Many models, because of this vulgar stigma, keep their work a secret. So much I may state as fact that would be borne out by every artist and student of art.

every artist and student of art.

In my opinion the seizure of the photographs and records of models constitutes a serious violation of private rights. Most models object to outsiders entering a studio when they are at work. They have every right to object to outsiders even glancing at their records and photographs. No end whatever can have been served by the investigators even looking into the model files. The seizure by the investigators even looking into the model files. The seizure of the files and the specializing in this seizure on women models I can only interpret as an expression of lasciviousness, and of an intention to pursue, annoy, and even victimize the girls. To those responsible for that seizure, and to those who have connived at it by looking at the photographs, I should like personally, and in the name of artists as a body, to convey my unqualified contempt. They are nasty people. You have my full authority to tell them so. If I had the names of those involved in this scandalous outrage, I would see to it that they were posted in every artists' club and

I would see to it that they were posted in every artists' club and union in the country. Let me assure you that I will do everything in my power to let artists, and decent people in general, know what character of men are to be found among their representatives in general and the second of the s sentatives in government.

Sincerely yours,

ROCKWELL KENT.

Federal Spending

EXTENSION OF REMARKS

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 23, 1939

ARTICLE BY G. GOULD LINCOLN

Mr. TREADWAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star of today by G. Gould Lincoln:

[From the Washington Evening Star of May 23, 1939] THE POLITICAL MILL—ROOSEVELT CARRIES DEFICIT SPENDING DEFENSE INTO SESSION OF RETAILERS

(By G. Gould Lincoln)

President Roosevelt, in his speech to the forum of the American Retail Federation last night, held out the bait of Federal spending—to increase retail sales. This was not exactly new. The inference was plain, however, that if the Federal millions were not poured out to the W. P. A., the farmers, through public works, and all the other forms of Government spending, the retail sales would drop off.

The President insisted that the opponents of Federal spending on a large scale were gambling—gambling on the hunch "that if Government will just keep its hands off the economic system, customers will just happen." Some say it's a good gamble—although the President does not think so.

the President does not think so.

The American people gambled in 1932. They gambled on Mr. Roosevelt and the possibility of getting better economic conditions under his administration than they had had under the Hoover administration. Unless a good many political leaders, including some prominent Democrats, are mistaken, the people are going to gamble again next year—on getting something better than the Roosevelt administration. In fact, the people will gamble any time when they are dissatisfied with existing conditions.

CITES BILLION-DOLLAR INTEREST

The President himself brought out the fact in his address last night that the interest on the public debt of the United States Government today is a billion dollars or more annually. The public debt is now over the \$40,000,000 mark—and more than \$20,000,000,000 of the debt has been added during the Roosevelt administration. The President was using the interest figures to show that it was impossible to cut Government expenditure materially—and more than impossible to balance the Government Budget at present.

The great gamble which the Roosevelt administration is taking lies in the hope that continued expenditure of billions of dollars—in excess of Government revenues—will eventually turn the tide and bring prosperity to the American people. In the eyes of the President and his New Deal supporters, this is not a gamble. It is a sure thing.

But all the time the deficit spending is going on, the public debt continues to increase and the interest payments on the debt grow. Today a large share of every dollar that the American people put into the Federal Treasury, either in direct or indirect taxes, goes to pay not the principal of the Federal debt but the interest merely, about 20 cents out of every dollar of revenue.

STILL NOT ON TOP

This deficit spending may be a good gamble, but it has not so far brought the American people out of the hole. The relief expenditures continue vast—the President has asked for \$1,500,000,000 for next year for the W. P. A. alone. It is probable that later in the year 1940, still further appropriations for the W. P. A. will be asked, just as they have been in 1939—provided the W. P. A. system is not changed by Congress.

President Research pointed out in his address that the patients.

President Roosevelt pointed out in his address that the national income in 1932—the deepest period of the depression—was only \$39,000,000,000. Five years later, in 1937 he said, the national income had risen to \$69,000,000,000. In 1938, it dropped back to \$62,000,000,000. And this year it promises to be about \$65,000,-

In 1929 the national income of the United States was \$79,395,-000,000. In that year the public debt, most of it growing out of the World War expenditures and loans, had been reduced to about \$16,000,000,000. This year the President hopes for a \$65,000,000,000 national income. And the administration has expended \$20,000,-000,000 more than the income of the Federal Government during the administration's incumbency. the administration's incumbency.

EIGHTY BILLION DOLLARS INCOME GOAL

The President expressed a hope—a conviction, indeednational income of the country can be raised to \$80,000,000,000, the revenue derived from existing Federal taxes will be equal to most expenditures of the Government on the present scale, and actually

expenditures of the Government on the present scale, and actually to reduce relief appropriations.

The only New Deal remedy for the financial and economic situation, apparently, is to spend more billions of Federal money. The President held out no hope in his talk to the retailers that there would be a change in policy of Government as it relates to business. He said, "You cannot expect this administration to alter the principles and objectives for which we have struggled for the last 6 years."

The President peak and the principles are president peak and the principles are president peak and the principles are president peak.

The President pooh-poohed the idea that amendments to the corporate tax structure, advocated by many businessmen and now demanded by a majority of the Members of Congress, will have any beneficial effects on business. He pointed out that if the much-discussed undistributed-profits tax is repealed, it would mean only a loss of \$20,000,000 in revenue to the Federal Government.

MINIMIZES DEBT BOGEY

MINIMIZES DEBT BOGEY

The President sought to minimize the bogey of the huge national public debt. He ridiculed the G. O. P. because it has dedicated this week to an attack on the Roosevelt policies which have continued to increase this national debt. And, finally, he argued that "our national debt after all is an internal debt, owed not only by the Nation but to the Nation. If our children have to pay interest on it, they will pay that interest to themselves. A reasonable internal debt will not impoverish our children."

Presumably the \$40,000,000,000,000 debt, on which the Government is now paying more than \$1,000,000,000 interest each year, is a reasonable internal debt. A huge part of this debt has produced no goods, has created no tangible values, has gone over the damand must be paid for in taxes just the same.

To the President the critics of his spending program and his other peolicies are the radicals of today, and he and the new dealers are the conservatives. He insisted that he and the new dealers were "unwilling to take radical chances with other people's property and other people's lives." And yet the new dealers seem entirely willing to take chances with other people's money—collected from them in taxes—chances which have rolled up billions more of public debt, and which have failed to bring real recovery or to relieve unemployment on a major scale.

Federal Aid to Education in Puerto Rico

EXTENSION OF REMARKS

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO IN THE HOUSE OF REPRESENTATIVES Thursday, May 11, 1939

RESOLUTION OF THE SAN JUAN TEACHERS' UNION LOCAL NO. 582, AMERICAN FEDERATION OF TEACHERS

Mr. IGLESIAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the San Juan Teachers' Union, Local No. 582, American Federation of Teachers, affiliated with the Free Federation of Workingmen of Puerto Rico:

Whereas glaring inequalities characterize educational opportuni-

whereas garing inequatives characterize cutcational opportunities throughout our Nation;
Whereas the least satisfactory schools are found in rural areas, and under present conditions there is no prospect that the rural areas will be able to lessen the gap between the rural and urban schools through their own resources;

Whereas the Advisory Committee on Education, appointed by President Roosevelt, found that more than 60 percent of the children in the United States live in States that, on a State-wide basis, could not provide adequate financial allotment per child without heavier-than-average taxes;

heavier-than-average taxes;

Whereas most of the States admitted to the Union since 1860 were first organized as Territories through acts of Congress, there being provided in such acts a system of public schools, thus making the Federal Government the founder of the public educational system of most of the States;

Whereas public schools, normal schools, colleges of agriculture, universities, and other types of educational institutions have all benefited from extensive land grants by the Congress of the United States:

States;
Whereas the Federal Government has been allowing annual grants of money to the States for the support of instruction in land-grant colleges since 1890, for agricultural and home-economics extension service since 1914, and for the support of vocational education in public schools since 1917;
Whereas the participation of the Federal Government in the education of the citizens of the United States has been required by the fact that locally supported programs of education have never been sufficient to accomplish all vital national purposes;
Whereas it has been proved beyond any reasonable doubt that the ability of the States and local communities to provide education has always been unequal, and that this inequality has been augmented

always been unequal, and that this inequality has been augmented by the changes that have recently taken place in social and eco-

nomic conditions;
Whereas Federal aid for education is the appropriate procedure to uphold the principle of equality of educational opportunities for all the citizens of the United States, irrespective of race, religion, political point of view, or place of residence, and to perpetuate the democratic principles and institutions of our Nation;
Whereas, in spite of the fact that bill S. 1305 has been reported favorably by the Senate Committee on Education and Labor, there is still no indication it will reach the floor of the Senate;
Whereas we understand that the chairman of the Education Com-

is still no indication it will reach the floor of the Senate;
Whereas we understand that the chairman of the Education Committee of the House refuses to call hearings on H. R. 3517, a companion bill to S. 1305, until the Senate takes action on said bill:

Be it resolved by the San Juan Teachers Union, Local 582, of the American Federation of Teachers:

I. To demand, as is hereby most respectfully demanded, the unqualified support for Federal aid to education of the Resident Commissioner of Puerto Rico.

II. To urge, as is hereby most respectfully urged, that the House Education Committee hold hearings on H. R. 3517, Federal aid to education.

HI. To solicit from the United States Congress, as is hereby most respectfully solicited, the enactment of legislation providing adequate Federal aid to education.

IV. That copy of this resolution be sent to (1) the President of the United States, (2) the Vice President of the United States, (3) the Speaker of the House of Representatives, (4) the Resident Commissioner of Puerto Rico, (5) the chairman of the House Education Committee, and (6) the daily press.

The Virgin Islands

EXTENSION OF REMARKS

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 23, 1939

EDITORIAL FROM THE WASHINGTON STAR

Mr. CRAWFORD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial which appeared in the Evening Star, issue of May 22, 1939:

THE VIRGIN ISLANDS

In the scramble to give American farmers an additional \$385,-000,000 as "parity payments" and other benefits, a bill now before Congress intended to rectify what can only properly be classified as an unfair discrimination against a small group is in danger of being overlooked. This small group has no powerful friends at court. It is composed of Virgin Islanders—American farmers without representation and without a vote.

Under the terms of the Sugar Act of 1937 sugar growers in the Under the terms of the Sugar Act of 1937 sugar growers in the Virgin Islands are restricted to a very small quota of production. No sugar refineries may be established in the islands, although sugar growing is the most important industry giving employment there. Sugar growers everywhere else under the United States flag are by this law entitled to benefit payments ranging from \$10 to \$12 per ton. Sugar growers in the Virgin Islands alone are denied these payments. They have been denied them ever since 1934 when the first sugar production restriction law was enacted. Not only do Virgin Island farmers suffer this unenviable distinction, but in addition they are required by law of the United States

Not only do Virgin Island farmers suffer this unenviable distinction, but in addition they are required by law of the United States to pay a burdensome and unique tax of \$6 per ton on all sugar exported from the islands to the United States, their only market. Thus, the Virgin Island farmer, in addition to being plagued by drought, by low per-acre yield, by high freight rates and by low market prices, receives \$18 less per ton for his product than does the sugar grower elsewhere under American jurisdiction. Survival of the sugar industry in the Virgin Islands is seriously jeopardized by this discrimination. If it is not removed, the unemployment and fiscal problems of 25,000 American Virgin Islanders will constitute a continuing reflection upon the United States Government's capacity to administer this small possession wisely and well.

ment's capacity to administer this small possession wisely and well.

Legislation introduced in this and the previous session of Congress, if enacted, would permit the removal of this unfair discrination. The bill now before Congress would accord to the Virgin Islands the same treatment that has been for many years accorded is and the same treatment that has been for many years accorded to Puerto Rico and the Philippine Islands with respect to the return to those possessions of internal-revenue taxes collected on their products imported into the United States. It would place growers of sugarcane in the Virgin Islands on a basis of legal equality with sugar growers elsewhere under the American flag. It would constitute a practical method, based on precedents already established elsewhere, of meeting the fiscal problems of the Virgin Islands and of assuring the continuance of their most important

Washington, long and unhappily aware on its own part of the in-justices and undeserved penalties incidental to a lack of congressional representation, bespeaks a fair and generous consideration of Virgin Islanders' problems by the Congress.

A Discussion of the Social-Security Pension Plan of Chairman A. J. Altmeyer, of the Social Security Board

EXTENSION OF REMARKS

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 23, 1939

RADIO ADDRESS BY HOWARD COSTIGAN, OF SEATTLE, WASH.

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include herein an interesting radio address by Howard Costigan, of Seattle, Wash. Mr. Costigan is a prominent spokesman of the liberal movement in the State of Washington, whose speeches are always provocative and arresting in their subject matter and treatment.

Mr. Costigan expresses the views of many liberals on the subject of social-security legislation and gives his suggestions as to what course should be pursued in connection therewith. The speech is as follows:

The House Ways and Means Committee is now holding open hearings on proposed changes in the social-security law. Last Tuesday Arthur J. Altmeyer, Chairman of the Federal Social Security Board, testified before this committee in regard to the Townsend plan and testified before this committee in regard to the Townsend plan and the general-welfare proposal concerning old-age pensions. The newspapers reported that Mr. Altmeyer denounced both plans as impractical and inequitable. He contended that the taxes proposed by the two pension systems would not create purchasing power as their supporters claim, but would merely transfer purchasing power from one group to another. He contended that this was special-group legislation, and therefore unsound. Of course, Mr. Altmeyer had in mind the Townsend proposal to raise the necessary funds by a 2-percent income tax on all incomes above \$2,000.

Chairman Altmeyer argued before the Ways and Means Committee that the only sound plan was that contained in the Social Security Act. He argued that the Social Security Act raised the necessary revenue on a more gradual basis, so that it would not cause a major disturbance in our economic system, and he argued that the present crisis existing among the aged people would gradually improve. No doubt Mr. Altmeyer had in mind (although he did not say so) that the aged would die off, and thus the Government would not have to pay so much in pensions if it waited long

enough. He also argued that the present Social Security Act is a self-liquidating proposal, because the contributory payments of those who have an income, together with contributions from employers and from the Federal Government, went into a reserve, which would rapidly increase until it would be sufficient to carry the payments which would be made out annually to the old people eligible under the act.

With due respect to Chairman Altmeyer, his arguments are unsound from at least two angles. Both from an economic angle and from an angle of social justice, there is more to justify either the Townsend plan or the General Welfare Act than there is to justify the provisions in the Social Security Act.

Many people do not realize that the Townsend plan is basically

Many people do not realize that the Townsend plan is basically an attempt to solve the economic problem facing the country even more than it is a pension plan pure and simple. The thinkeven more than it is a pension plan pure and simple. The thinking of Dr. Townsend and of his supporters is an old and time-honored tradition in America. Many of these aged Townsend supporters were in their younger days supporters of populism and of the Bryan fight for the free coinage of silver at a 14-to-1 ratio to gold. It has been an American tradition ever since the colonial days when a person no less distinguished than Benjamin Franklin advocated policies basically similar to those of the Populists. Up until the World War the United States was a debtor nation. It borrowed money on a large scale from the financial centers of Europe and the Atlantic seaboard in order to conquer the wilderness and construct a modern civilization. Periodically depressions brought ruin and hardship to millions of Americans, particularly the farmers, the workers, and the small-business man. These people were debtors; they had borrowed money in good times in order to improve their economic position, and they were forced by their creditors, the bankers and the wealthy businessmen, to pay these debts or go bankrupt in hard times. In the depression they were unable to get the money necessary to pay up their debts, and the wealthy creditors were able to take over their farms and their small businesses at a great profit to themselves. Because of

were unable to get the money necessary to pay up their debts, and the wealthy creditors were able to take over their farms and their small businesses at a great profit to themselves. Because of this condition in every depression in American history a great popular wave of monetary or credit reform invariably sprang up. If only money were more plentiful then the small farmers and the small-business men could pay their debts.

Dr. Townsend and his supporters have inherited this thinking from the long line of American predecessors such as Benjamin Franklin, Coin Harvey, William Jennings Bryan, and many others. They see their scheme as a means of solving the economic problem by releasing purchasing power and speeding up the circulation of money. And as far as Dr. Townsend is concerned, he has said repeatedly that this is the major purpose of his plan.

Irregardless of the final conclusions of economists about this economic feature of the Townsend plan, it is worthy of note that both the Townsend plan and the General Welfare Act have put their finger on one basic economic problem, and in this respect are much more sound than Chairman Altmeyer. The basic problem facing America today is to increase the purchasing power of the Nation, because the basic problem under the present economic system will collapse in the long run. The national income is composed of two things: First, the total of wages, salaries, and income which is used to purchase commodities; and, second, the amount of salaries, wages, and other forms of individual income which are saved. That which is saved does not go into direct purchasing power, but unless it is invested in building new plants, machines, homes, and similar capital goods it lies idle and, as all economists are agreed, idle savings causes the economic system to be unbalanced and inevitably produces a depression. Any plan which merely takes from one part of the national income and adds to another part does not increase produces a depression. Any plan which merely takes from one part of the national income and adds to another part does not increase the total national income and so will not solve our economic problem in a depression.

The social security pension plan which Chairman Altmeyer praises so highly is economically unsound because it does just this thing. In a depression period it simply takes away from the this thing. In a depression period it simply takes away from the national income and puts this money into a reserve which is to be spent at some later date, when the crying need of the depression is to increase purchasing power. Thus, the system of building a reserve and of requiring the workers to contribute does the worst thing possible; it reduces the total purchasing power by exactly the amount which is building up in this reserve. It piles up savings at a time when we already have more savings than we can invest through private enterprise. The two things which are necessary in order to get our economic system on an even keel again are to increase purchasing power again, and to invest in needed construction all the savings that are being accumulated. Moreover, this reserve which eventually builds up to a staggering total of \$40,000,000,000 holds a grave danger for the future. If Moreover, this reserve which eventually builds up to a staggering total of \$40,000,000,000 holds a grave danger for the future. If we had such a reserve in 1929 when the markets began to crash the Government would certainly have found it necessary to begin the payments of unemployment compensation and old-age pensions to millions of Americans in a very short time. In order to make these payments it would have been forced into throwing Government bonds upon the market, in order to get the necessary cash. And such an action would have made the crash ten times worse than it was because all of the purchasers were scared out or temporarily in distress and the bonds could not have been sold except at such low prices as to bankrupt the whole scheme. Thus Chairman Altmeyer is on very dangerous ground, indeed, when he levels charges of economic unsoundness against the Townsend plan and the General Welfare Act, and starts to justify the economic principles of the Federal Social Security Act. If anybody needs to take some elementary lessons in economics, Chairman needs to take some elementary lessons in economics, Chairman Altmeyer certainly is that one.

The supporters of the Townsend plan and of the General Welfare Act are perfectly right when they insist that the purchasing power of the country needs to be increased. Until it is increased, there is no possibility of putting more men to work, because business would be crazy to produce more goods until the people had money enough to buy them. These two pension plans, by increasing purchasing power, would enable the factories to put more men to work because it would increase the market for their goods. Raising the revenue by an income tax, particularly a tax on the higher incomes, is economically sound. The higher the income tax is the less purchasing power it represents, because an increasing amount of the income is then saved. And the beneficial effect of a graduated income tax is to redistribute the national income, taking from those come tax is to redistribute the national income, taking from those who have a surplus above their purchasing power and giving to those who do not have enough income, in order to buy the elementary necessities of life. The only thing missing in the Townsend plan or the General Welfare Act is a means of enabling the Government to utilize the now idle savings of the Nation in the necessary building which is also a vital part of any plan for economic recovery

recovery.

So much for the economic angle which Chairman Altmeyer raised. The second major objection was on the question of social policy. Chairman Altmeyer charged that these pension plans were a kind of special legislation giving undue favors to the aged, and discriminating against the other elements of our population. This is ironical indeed. The old people who stand in need of pensions are the work veterans of the country. It was their labors which enabled our country to conquer the wilderness and build up present-day America. They were neither lazy nor idle, during the long years in which they could engage in useful work. The United States, which is the wealthiest nation in the world, was made so by these people who by their work developed the The United States, which is the wealthiest nation in the world, was made so by these people who by their work developed the great natural resources of the continent. In a large part those past the age of 40 cannot get work because of the present labor policies of private enterprise. It is practically impossible for a man over 40 to get a job in private business, which is as careless about the human material which it uses as it is about our natural resources. It has squandered and wasted both of them, and continues to do so. And so long as this continues, private industry has the moral and the social obligation of being held accountable for the fruits of its own shortsightedness. These people seeking for the fruits of its own shortsightedness. These people seeking pensions also paid taxes during the many years in which they were able to work. They have therefore a moral obligation to were able to work. They have therefore a moral obligation to some consideration on the part of a government which they, through their taxes, have supported for many long years. Through no fault of their own their small savings, accumulated by years of hard work and personal economy, have been either used up or destroyed by the depression. Thousands of them entrusted these savings to business leaders and bankers, many of whom are now under indictment by the Federal Government on charges of misrepresentation and misuse of funds. These small savings, patiently accumulated for old age, have been wiped out by our financial leaders who, to say the least, certainly proved themselves to be unsound advisers and are therefore morally responsible for the desperate plight of many old people.

Chairman Altmeyer has reason to be thankful himself that the old people are both patient and charitable. Otherwise such

Chairman Altmeyer has reason to be thankful himself that the old people are both patient and charitable. Otherwise such grossly false arguments as those which they did not deserve, would get their reward through the justifiable anger of the pension seekers. Nobody in the world has a better claim on the Government than the aged work veterans of the Nation. Further consideration of the social problem shows that adequate pensions for the aged is not just the just social reward which they have a right to expect. It would relieve the thousands of young people now so burdened with the care of their aged relatives and enable these younger people to themselves improve their

young people now so burdened with the care of their aged relatives and enable these younger people to themselves improve their own standard of living. It would help solve the problem of unemployment since it would honorably and justifiably retire those of the aged who now have to work, thus providing the youth of the land with opportunities to take their places in industry. The Ways and Means Committee of the House will not have done its job until it has allowed people with more social vision and more economic understanding to come before them and expose the glaring weaknesses in the testimony of Chairman Altmeyer of the ing weaknesses in the testimony of Chairman Altmeyer of the Social Security Board. Supporters of these two pension plans should indicate to the House that they expect the Members of Congress to see that this opportunity is provided.

Essentials of Recovery

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS IN THE HOUSE OF REPRESENTATIVES Tuesday, May 23, 1939

ADDRESS BY JOHN W. HANES, MAY 4, 1939

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by John W. Hanes, Under Secretary of the Treasury, delivered at the annual convention of the Indiana Bankers Association, Indianapolis, Ind., May 4, 1939:

am delighted to be here and to have the unique privilege of I am delighted to be here and to have the unique privilege of appearing on the same platform with my banker brother, Bob. I am pleased to be here for many reasons. In the early days of the last century there was a large migration of North Carolinians into Indiana, and many of you people are descendants of those rugged pioneers. The grandfather of Herbert Hoover left North Carolina and came to Indiana, but, yielding to the impulse of the western movement, later traveled on to Iowa. Uncle Joe Cannon was born within 20 miles of my North Carolina home. He, too, moved to Indiana and thence to Illinois. Hoover and Cannon were Whigs, and they may have become dissatisfied with your Indiana Democratic organization, if you had one at that time, and moved on to other fields. to other fields

North Carolina and Indiana have many things in common. Our population is almost identical in size. The citizens of both States have always taken a deep and serious and somewhat kindred partisan interest in politics.

I am not the politician of my family. This gentleman is the statesman of the Hanes clan. Bob has served a number of terms in the North Carolina State Senate. I am holding my first, and perhaps my last, public office, and I was elected to it without being a candidate for it.

candidate for it.

Bob Hanes has a robust and well-developed notion that a budget, whether public or private, ought to balance. This is doubtless emphasized by the banker instinct in his blood stream. It is probably accentuated by the fact that the first 40 persons on the weekly list of overdrafts in his bank answer to the name Hanes—proving conclusively that their budgets are hopelessly out of balance. He believes that because the State of North Carolina operates under a balanced budget that it would be a wholesome thing for the Federal Treasury to give more consideration to the problems of income and outgo. I am prone to think that he sometimes overlooks the fact that the Treasury of the United States is but the agency of the Congress and that the Congress is the representative of the whole people.

but the agency of the Congress and that the Congress is the representative of the whole people.

I favor a balanced Federal Budget as much as Bob or any other person in this audience, and I feel that it will be helpful to the country, at this time, if we can find a convincing way of developing a definite trend in the direction of a balanced Budget. At the same time, I think the State governments should remember that one reason why they are able to live within their income is the fact that they have surrendered many State functions to Federal control, and that many services heretofore performed by the States have been transferred and urged as national projects.

One of the greatest races in America today is not the Derby in Louisville to be run Saturday. The greatest race in America for the past 6 years has been the race of Governors, politicians, and statesmen on the track of Congress, jockeying for place and position as they struggle for the credit and currency of the Federal Treasury. My home State, North Carolina, within the last 6 years, has received in grants, loans, subsidies, relief, and what not, from Uncle Sam, the amazing sum of over \$450,000,000, and your State, Indiana, has not been asleep in this period. You have received Indiana, has not been asleep in this period. You have received more than \$730,000,000 for the same purposes from the pockets of your Uncle Sam. I merely mention this encroachment of the State governments upon the Federal Treasury. I do not set it up as a defense or justification of an unbalanced Federal Budget. I do think it throws some light on the fiscal difficulties confronting us in the Treasury.

I have never deviated from the firm conviction I held when I was making up my mind to go to Washington—that the paramount problem of this democracy is recovery. I mean recovery so permanent and so thoroughgoing that the majority of our people will once again feel secure. I am thinking of conditions that will employ substantially all of our manpower and capital power in productive enterprises. productive enterprises.

productive enterprises.

I am going to recite a few facts so simple that they are likely to be overlooked or forgotten in our search for more complicated explanations of our economic difficulties.

Business is collective trading among people. Everybody has one thing in common with which to begin any trade—his or her time—60 minutes in the hour. When we want to punish anyone, we take away his money, viz, the earnings of past time, or his much more precious future time. To take away a man's future time we put him in jail. When we pay a man for services or work we give him a stipulated amount in money for an hour, a week, or a month. We pay him for his time. Employed time, therefore, is a medium of exchange.

When we pay a worker with what is called "money," this pay is

of exchange.

When we pay a worker with what is called "money," this pay is cashed time. Money is good only if it will buy goods and services. Therefore, goods are the backing for money. The value of money is—what money will buy. What people do not consume is called by two words meaning the same thing: "savings" or "profits." When we employ these savings or profits we call it "capital invested." By employing more people, more units of man and machine labor in the same time interval, we gain the value of time. There is only one way to save time and that is to employ it productively.

When we borrow, we get the use of the past savings of employed time, to finance through future periods. While we pay for the use of it through the future time, we work. The man who saves or has a profit lends his savings or capital the moment

he deposits it in a bank. The banks lend these deposits to borrowers. A borrower who has the use of something borrowed is in a position to get the time value out of it. These borrowings, as

rowers. A borrower who has the use of something borrowed is in a position to get the time value out of it. These borrowings, as they are converted, enable the borrower to pay off his loan. And by this means he saves and gains, if the borrowings have been well used in producing more value.

A business is started by a management group, or the incorporators of a company, borrowing from investors who become stock-holders, to get the money to build or buy a factory. When established they borrow from the makers of machines the equipment needed to equip the plant. They have 60 or 90 days or more to pay. They borrow from the utility company for 30 days the power to run their machines. They borrow from the material suppliers materials to fabricate. And finally they borrow from workers their time for 7 days. These borrowed elements are all put together and emerge in that form which we call "production." As this production moves into trade, the buyer borrows from the seller for varying lengths of time. That is what we call terms. And as the bills become payable to the seller he then pays his workers, pays his bills for material, pays for his electric power, and if successful, ultimately pays a dividend to his stockholders.

It is all borrowed, and no greater adjunct to the economic system exists than that which we have come to know as the privilege of borrowing. But to provide for this requires, first, that some people must have savings, since only what has been saved can be lent. So the more we have in savings (or called by the other name "profits") the more trade we can negotiate.

the more we have in savings (or called by the other name "profits") the more trade we can negotiate.

There is hardly a problem today confronting our economy which would not be solved by putting the large part of 10,000,000 men, now

idle, back to work.

There is hardly a problem today confronting our economy which would not be solved by putting the large part of 10,000,000 men, now idle, back to work.

For several years now we have been confronted with the spectacle of idle capital and idle labor existing side by side—capital waiting for opportunities to put labor to work and labor waiting for opportunities to find work. In all these years private capital has not been able to offer adequate opportunities for such employment. In consequence we have the army of unemployed, the various relief programs, and the large public expenditures.

The plant account of all our industrial companies, I am told, declined from \$41,000,000,000 in 1929 to about \$32,000,000,000 in 1937. Under more normal circumstances plant account should have grown by at least \$1,000,000,000 per annum during that period, or to a total of, roughly, \$50,000,000,000.

Under our economic system, the sum of approximately \$7,000 of capital assets, such as land, building, equipment, tools, is required to put a man to work. We have upward of 600,000 young men and women coming into our employment stream yearly. To put these 600,000 to work requires a minimum new annual investment in capital goods of at least \$4,200,000,000.

It is this type of enterprise capital which we have failed to attract to the capital markets during the past 10 years. In the American economy, such capital can be supplied only by private individuals and will be supplied by these individuals only if there is a reasonable prospect for profit.

The economic history of our country points clearly to the only sound solution for unemployment, for weak capital markets, and for unbalanced budgets; that solution is the creation of a healthy, prosperous economy whose maximum powers can be generated only under profitable private enterprise.

History proves further that whenever business profits were substantial, farm and labor incomes were generally high and Government revenues consistently increasing. When the profit system was functioning smo

terial civilization.

Profits earned by business are customarily spent on producers' goods—land, building, machinery, tools, etc. Profits thus plowed back into business form the basis for attracting additional credit resources and investment by the public.

Because such earnings can be capitalized at ten to twenty times their amount in new capital issues, \$100,000 of profits will make possible the purchase by industry up to \$2,000,000 worth of capital goods. This capacity of earnings to generate a multiple of dollars in spending power for every dollar of profits is a quality which we should never ignore.

in spending power for every dollar of profits is a quality which we should never ignore.

It is partially because we have had small profits during the last decade that we have experienced terrifying idleness of deposits, low production, unemployment, lack of investment in venture-some enterprise, and reduced national income.

I repeat that it is only by increasing industrial production through the maintenance of conditions under which private enterprise may make reasonable profits that our critical the maintenance.

through the maintenance of conditions under which private enterprise may make reasonable profits, that our existing ills may be cured. What other economic force besides profits has the almost miraculous quality of making a dollar of earnings do the work of many times its number?

There is current today a great deal of loose talk of a highly pessimistic tone to the effect that there are no longer any opportunities for investment. This, I think, is nonsense made credible by the strain of depression years. Full business recovery is so long in coming that we conclude it never will come.

Like the French and British soldiers during the war who became so conditioned by trench warfare that they could not take the

so conditioned by trench warfare that they could not take the offensive, we have been on the defensive so long that we cover up our unwillingness to take chances by saying that there are no opportunities. Only a few weeks ago I heard Mr. Kettering, of General Motors, describe before a distinguished group of Senators and

Congressmen the new industries that could be started now with the discoveries and inventions of the past few years. They are too numerous to dwell upon. It is highly important, however, that capital should have an adequate incentive to enter venturesome

we are confronted today with a great surplus of capital which does not decide to take a chance and a distinct shortage of that which does. Venturesome capital is needed to induce the investment of cautious capital. New enterprises can be started and old ones that are subject to rapid changes can be continued only with capital willing to take a chance. Moreover, even our most stable industries need a margin of enterprising capital willing to absorb the shock of the risks to which even those industries are subject in order to permit them to secure senior central through the issuthe shock of the risks to which even those industries are subject in order to permit them to secure senior capital through the issuance of bonds and preferred stock. The employment of a dollar of venturesome capital may permit the employment of several dollars of senior capital; but if no one is willing to take a chance, projects may be abandoned even if the earning prospects are promising.

The fact that despite an abundance of capital, there is no willingness to supply these assets, means that there are obstacles in the way of profitable investments. Some of these obstacles are, of course, beyond our control; others are beyond our vision; some, however, are of our own doing and can just as well be undone.

Undone.

There are a number of places where sympathetic action by Government might help restore courage and willingness to launch out in new enterprises. It is essential that we direct our energies toward every move that will encourage our people to invest in enterprises which will put men back to work.

Democracy is on trial, and we who hold that ours is the best of all possible systems, owe a duty to mankind to unite in a common effort to make democracy succeed. We must demonstrate that we can utilize democratic methods to surpass totalitarian results, instill greater vigor in our national economy, provide employment for all idle hands, and give to all our citizens the opportunity to share in higher standards of living than are available to any other people under any other form of government. To do so, we must enlist the wholehearted cooperation of business and Government, of capital and labor. and Government, of capital and labor.

Importation of Beef and Blackstrap Molasses

EXTENSION OF REMARKS

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 23, 1939

LETTER FROM IRA ASHBY

Mr. CHIPERFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from Ira Ashby, manager of 20 tenant farms located in my district:

THOMPSON LAKE FARMS, Lewistown, Ill., May 19, 1939.

Hon. ROBERT CHIPERFIELD,

be done.

Hon. Robert Chiperfield, Washington, D. C.

Dear Sir: It is with surprise and indignation that I read from the papers that our President has purchased a supply of beef for our Navy from foreign countries, while our own farmers and stockmen here in the United States are needing all of the markets and resources that can be made available to them. According to the papers, the excuse is made that they received better beef and at a lower price than what they would have to pay here. I would hate to think that this country couldn't produce as good a beef for any use as the Argentine Republic, providing that they were paid the proper price for it. I think, personally, that our beef should be used in preference to any foreign meat regardless of the difference in price; because it looks so silly to try to subsidize us farmers on grain and then turn around and buy the products of this grain in foreign countries. If our boys are good enough to man the battle-ships and fight and protect this country, I surely do not think we should ask them to eat foreign beef while they are doing it. I believe if anything could be done to cancel this order that it should be done.

be done.

While I am on this subject, another thing I can't understand is why some countries are allowed to ship in blackstrap molasses to the Peoria market until it has virtually destroyed our corn market at the Commercial Solvents Co. In years gone by the Commercial Solvents Co. used large amounts of sample and offgrade corn for their manufacturing, and now I understand they don't even grind a single bushel of corn. Yet I saw in yesterday's paper where they had got a reduction in the rate from the Interstate Commerce Commission on blackstrap molasses from New Orleans to Peoria in trainload shipments. Think of the thousands of bushels of

corn that would be used in Peoria alone if whole trainloads of blackstrap molasses were not shipped in here from foreign coun-tries where labor is cheap.

Not only does this affect the American farmers, but it also affects our coal industry because surely these molasses are half processed into whatever the Commercial Solvents Co. intend to make them. So this means that part of the market for coal is lost for heating and converting the molasses to their present stage. I think this importation of blackstrap molasses is one of the most severe tragedies that has happened to the American farmer. I urgently wish that you could do something to make this impossible, or at least make it prohibitive until the price of corn reaches a higher level than it is at the present time, and without taxpayers having to subsidize the farmers. I think if something like this were adjusted that our farmers would not need the dole

like this were adjusted that our farmers would not need the dole or help from the Government.

I believe that the farmers should have a fair price for their wheat, corn, cotton, and other products. I believe a plan that would work would be one whereby the Government would set a fair price on what the farmer has to sell. Then allow the farmer to sell whatever amount that the domestic use could consume at this set price, and the balance be held in reserve on the farm under Government seal, and quotas issued thereafter as the domestic use could consume the surplus. For example, if the Government would set the price at 75 cents per bushel on corn, \$1.25 per bushel on wheat, then the Government could issue quotas on the crop from 30 to 60 days before it was harvested on the amount the farmers could sell. For instance, on our last year's corn crop it would have been better to have allowed the farmers to sell one-half their corn at 75 cents and put the balance of it under seal, same as they have it now where they adde a loan on the corn, and held this other half in reserve on the farm for future quotas.

future quotas.

If we farmers had large reserves on hand we had not sold, we If we farmers had large reserves on hand we had not sold, we would not be anxious to plant a large acreage of corn again, but would plant about what we thought we could market at a fair price without holding it too long. Should our surplus become too large, then it would be time enough to think about dumping the surplus on the foreign markets at a lesser price than what we got for it at home. In the past when we have had large surpluses of both corn and wheat on hand, it has always been used at some price. So I think the only thing we need do is to regulate the price and the amount we can sell, and time will use our surplus as it has in the past. Farmers should not be paid for holding their surplus on the farms except the set price that they will get for their grain when they do eventually market it. This plan would furnish us with the ever-normal granary that Mr. Wallace talks about, and inasmuch as we cannot regulate the weather, it is very essential that we do carry over from one year to another talks about, and inasmuch as we cannot regulate the weather, it is very essential that we do carry over from one year to another surpluses. If a plan similar to this were worked out, it seems to me that it would work no hardship on any taxpayer, and the farmers should pay their prorated share of the handling charges, the same as they do now under the Government dole system. I take the liberty of writing you this letter, because I know that you are interested in the farmers' problem, and I believe you will safeguard our interest whenever it is possible to do so.

Yours truly.

Yours truly,

IRA ASHBY.

Ten Million Industrial Jobs Predicted if Congress Puts Brakes on Spending

EXTENSION OF REMARKS

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1939

ARTICLE FROM THE NEW YORK JOURNAL AND AMERICAN OF MAY 14, 1939

Mr. ENGEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by me and published in the New York Journal and American on Sunday, May 14, 1939:

TEN MILLION NEW INDUSTRIAL JOBS PREDICTED IF CONGRESS PUTS BRAKES ON SPENDING

(By Albert J. Engel, Republican Representative from Michigan, Member of House Appropriations Committee)

Washington.—If we in this country can put industry in a prosperous condition—barring competitive imports—agricultural prosperity will follow.

For every 180 men we employ in purely manufacturing industries, we can put 820 men to work on the farms and in supplementary

work.

If we could put 1,800,000 people back on the factory pay rolls, we would be able to put back to work a total of 10,000,000 persons, 6,200,000 of whom, according to United States Census figures, would be employed in supplementary occupations, in transportation, in mining, etc., and 2,000,000 more in agriculture.

The Government's course stellars state that once we reach a

The Government's own statistics state that once we reach a point in industrial production which equals 105 percent of the 1923-25 average, we will add approximately 400,000 persons to the pay rolls for every point that we can increase production over and

pay rolls for every point that we can increase production over and above that percentage.

Volume 4 of the Census of Unemployment, table No. 6, shows that in November 1937, there were 54,474,000 persons seeking gainful occupations. As this increases 400,000 a year, in November 1938, there were 54,874,000 persons seeking gainful employment.

PRODUCTION NEEDED TO PROVIDE JOBS

On this basis, it will require 137.2 percent of the 1923–25 average to keep these 54,874,000 persons at work. Since we are adding 400,000 persons a year to the total number seeking employment or

400,000 persons a year to the total number seeking employment or gainfully occupied, we would have to increase industrial production one point each year over the preceding year to keep this everincreasing number of persons employed.

In 1929, the national income produced was \$81,000,000,000, while the average industrial production was about 123 percent of the 1923-25 average. We were able to furnish jobs to 46,192,000 people, leaving 1,864,000 persons unemployed, if we take the American Federation of Labor figures as to the number of gainful workers, and 2,637,920 unemployed if we take the Department of Commerce figures as to the number of gainful workers.

The President in his message of January 3 said:

"This country need not always be a \$60,000,000,000 country. We are going to make it an \$30,000,000,000 country."

An \$81,000,000,000 income produced with an industrial production average of 123 percent which we had in 1929 during our most prosperous year, furnished jobs to 46,192,000. That same amount of industrial production and the same income produced would have left us in 1938 with 6,687,211 persons unemployed, if we take the American Federation of Labor figures on the number of gainful workers that year, or with 8,682,000 persons unemployed if we

workers that year, or with 8,682,000 persons unemployed if we take the Department of Commerce figures.

On a 1929 basis, we find that it requires approximately an \$1,800 income produced a year to furnish employment to one person a year. If this is true, then it would require an income produced of \$98,773,200,000 per year to keep these 54,874,000 persons employed.

employed.

employed.

If we add 400,000 persons a year to the number gainfully occupied or seeking gainful occupation, we would have to add \$720,000,000 income produced each year to keep these ever-increasing unemployed at work.

It is obvious that the difference between the 1938 income produced of \$60,000,000,000 and the required income produced of ninety-eight to one hundred billion dollars a year necessary to put these unemployed at work cannot be bridged by any public spending program. spending program.

If bridged, it must be bridged by private employment brought about primarily through industrial production.

Thus I am forced to the following conclusions:
First. That 6 years of spending has not brought about permanent nent recovery.

Second. That there are still from eleven to thirteen millions of unemployed and some twenty-two to twenty-three million persons receiving Government relief today.

Third. That an \$80,000,000,000 income produced would leave us with from 6,500,000 to 8,700,000 persons unemployed, with from fourteen to sixteen million persons receiving various kinds of Government aid.

Fourth. That it will require an income produced of from ninety-five to one hundred billions of dollars a year to put all the un-employed back to work.

STEPS NECESSARY TO END IDLENESS

Fifth. That the Federal Reserve Board's 1923–24 average industrial production will only provide employment on a 1923–25 basis and can only be used as a base from which to begin.

Sixth. That it will require approximately 137 percent to 140 percent of the 1923–25 average industrial production to put all the un-

employed back to work.

Seventh. That industrial production will have to increase progressively 1 percent and income produce \$720,000,000 each year to take care of the 400,000 additional gainful workers added to the total each year.

Eighth. If we assume that we always will have 2,000,000 unemployed because of shifting employment, we can reduce the industrial production one point for each 400,000 workers, or 5 percent, and the income produced approximately by \$3,600,000,000, or \$1,800 for each worker.

Ninth. That our objective should be an income produced of \$100,000,000,000 instead of \$30,000,000,000 and an industrial production of at least 135 percent of the 1923-25 average.

Concentration Camps in the United States

EXTENSION OF REMARKS

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 23, 1939

RADIO ADDRESS BY HON. VITO MARCANTONIO, OF NEW YORK, ON MAY 18, 1939

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over radio station WOL, Washington, D. C., through the facilities of the inter-city network, under the auspices of the National Council for Prevention of War:

On May 5 the House of Representatives, by a vote of 288 to 61, passed H. R. 5643, known as the Hobbs bill. This bill provides as follows:

"That any alien in any of the classes indicated in section 2 of "That any alien in any of the classes indicated in section 2 of this act, who has been or may hereafter be ordered deported by the Secretary of Labor, but whose deportation or departure from the United States otherwise is not effectuated within 90 days after the date of the warrant of deportation shall have become final, shall be taken into custody and transported to such places of detention as may be designated by the Secretary of Labor, and/or in such other place or places as may be thereafter designated by the Secretary of Labor, confined, though not at hard labor, until such time as deportation shall have become feasible, or departure from the United States otherwise shall have been arranged, or from the United States otherwise shall have been arranged, or until the Secretary of Labor, upon sufficient evidence of good cause, shall order the release of such alien temporarily or permanently on such bond as may be required, with or without rescinding the warrant of deportation."

The aliens who may thus be detained are described in section 2 of the act as those who fall in four categories of criminal aliens.

It was generally conceded during the debate on this bill in the House that the Secretary can under the first section of the bill.

House that the Secretary can, under the first section of the bill, arrest and detain any alien for the rest of his natural life in any place of detention designated by her, or in any other place chosen

by her.

The language of the act gives the Secretary of Labor not only the power to confine such aliens for the rest of their natural lives, but gives her discretionary power as to the choice of the place of detention. It may be a Federal penitentiary, a house of detention, or even a farm or camp, or any other place of confinement that might be conceived by the Secretary of Labor in the exercise of the discretion granted by this bill.

Nowhere in this bill is any provision found for due process. In other words, for any kind of a trial, with or without a jury. The issue raised by this bill is one of greatest importance. The issue is not that of protecting criminal aliens. Those of us who opposed the enactment of this bill had no intention of protecting criminal aliens. There are laws now on the statute books that adequately deal with these people. Furthermore, any more stringent legislation may be enacted to deal with them, provided that Congress exercises this legislative function in conformity with the fifth, sixth, and fourteenth amendments to the Constitution of the United States. Therefore, the question involved is not one of protecting criminal aliens, but the real fundamental issue is that of protecting and defending democratic procedure and due process,

in keeping with true American traditions.

No one questions that Congress has the right to deport aliens.

No one questions that Congress has the right to deport aliens. Nor does anyone question that Congress has the right to provide for the detention of deportable aliens as an incident to deportation. In other words, the detention as an incident to deportation. In other words, the detention as an incident to deportation must be reasonable for the purpose of effectuating deportation. The right to keep an alien in custody must be conditioned on the prospect of his deportation within a reasonable period of time.

When detention becomes unreasonable—that is, when a person is confined for a longer period of time than is necessary as an incident to deportation, or when an alien is confined for a longer period of time than is necessary to effectuate deportation, then such confinement becomes imprisonment, and Congress cannot provide for such imprisonment unless it does so by placing all of the due process and constitutional protection around the person who is liable to such imprisonment.

The Supreme Court of the United States has passed on this

The Supreme Court of the United States has passed on this question in the case of Wong Wing v. United States (163 U. S. 228),

question in the case of Wong Wing v. United States (163 U. S. 228), and decided as follows:

"We regard it as settled by our previous decisions that the United States can, as a matter of public policy by congressional enactment, forbid aliens or classes of aliens from coming within their borders and expel aliens or classes of aliens from their territory, and can, in order to make effectual such decree of exclusion or expulsion, devolve their power and duty of identifying and arresting the persons included in such decree and causing their deportation upon executive or subordinate officials. executive or subordinate officials.

"But when Congress sees fit to further promote such a policy by subjecting the persons of such aliens to infamous punishment at hard labor, or by confiscating their property, we think such legislation to be valid must provide for a judicial trial to establish the guilt of the accused."

It is true that section 1 of the bill provides that the aliens thus to be confined shall not be imprisoned at hard labor. This is a very naive method of trying to evade the constitutional requirements in the enactment of legislation of this character. The Constitution cannot be circumvented in this manner. Hard labor is not the test. The test is the method by which a person is deprived of his liberty and the method by which confinement or detention

is accomplished.

No one by the farthest stretch of the imagination can contend that the confinement provided for in the bill is an incident to deportation. In fact, the bill deals with those aliens only whose deportation. In fact, the bill deals with those aliens only whose deportation cannot be accomplished within 90 days. How can imprisonment bring about the deportation? One is entirely unrelated to the other. Furthermore, the duration of the imprisonment may be for 1 day and it may be for life. It rests within the judgment of the Secretary of Labor. Such indefinite imprisonment sidefinitely unreasonable, and not an incident to deportation. Such imprisonment, therefore, in accordance with the decisions, can be provided for by Congress only in accordance with the fifth, sixth, and fourteenth amendments to the Constitution of the United States. These amendments all provide that no person may be deprived of his liberty without due process, that is, without a judicial trial judicial trial.

judicial trial.

The language of the amendments, please note, use the word "person" and not "citizen." This, as well as the decisions that I have referred to, clearly establishes that the constitutional guaranties are as equally applicable to aliens as well as they are to citizens. Nowhere in the bill is there any provision for a judicial trial. No protection is set up for an innocent person, in keeping with American traditions of jurisprudence.

The proponents of the bill complained very vociferously when we characterized it is a concentration-camp bill. Just as they are the constitution by providing that

naively sought to circumvent the Constitution by providing that the imprisonment shall not be at hard labor, by the same form of specious argument, they informed us that the bill was not a concentration camp bill because it does not contain the words "concentration camp." However, what makes a concentration camp? Is it the barbed-wire fence that makes a concentration camp? That does not in and of itself make a concentration camp. If a person is sent by due process and after a judicial trial to a place that is surrounded by a barbed-wire fence, no one can contend that that person is sent

by a barbed-wire fence, no one can contend that that person is sent to a concentration camp.

What constitutes a concentration camp, what constitutes a Bastille is the method by which persons are sent to those places. Imprisonment without due process of law or without a judicial trial is concentration camp imprisonment. This bill confines people without due process of law, and without a judicial trial. It sends people to places of detention without due process of law, and without a judicial trial. Therefore, the characterization of this bill as a concentration camp bill, or a Bastille bill, or a lettre de cachet bill is a correct characterization.

For the purpose of dealing with a few criminal aliens we sub-

For the purpose of dealing with a few criminal aliens we stitute for our democratic procedure an undemocratic procedure, a procedure which dates back to the days of King Louis XIV, of a procedure which dates back to the days of King Louis XIV, of France, who sent people to the Bastille by simply placing his signature at the bottom of a letter. This letter was known as the infamous lettre de cachet. Does it make any difference whether it be by a letter signed by a king or an order signed by the Secretary of Labor which brings about imprisonment of any person without judicial trial or due process of law?

This bill imports into our country an alien totalitarian system of criminal procedure, a concentration-camp procedure, a Hitler procedure which is repugnant to the Constitution, repugnant to the Declaration of Independence, and repugnant to our demo-

of criminal procedure, a concentration-camp procedure, a Hiter procedure which is repugnant to the Constitution, repugnant to the Declaration of Independence, and repugnant to our democratic form of government. The bill is now before the Senate where I hope that the demagogy and hysteria which existed in the House at the time this bill was passed will not play as important a role in the debate in the Senate.

On Tuesday next the Judiciary Committee of the House of Representatives will have under its consideration the Smith bill. The Smith bill contains all of the bad features of the Hobse bill. If enaced into law, it will be the most flagrant disregard of our Bill of Rights. Among other Hitler imitations it provides for the registration and fingerprinting of all aliens and requires that these persons register every 6 months. The House a month ago passed the Dempsey bill, which, if enacted into law, would make it impossible for progressive organizations of all sorts from taking action on basic political issues because of the existence of noncitizens in their membership. The Dempsey bill gags every single noncitizen in the United States. It seems as though history were repeating itself. All of this antiallen legislation is not new. It is a repetition of the alien and sedition laws of 1798. The American people became nauseated by that type of legislation and reaffirmed a repetition of the alien and sedition laws of 1798. The American people became nauseated by that type of legislation and reaffirmed the principles for which the Revolutionary War was fought, and reaffirmed the principles of the Declaration of Independence by repealing every vestige of the Alien and Sedition Acts of 1798. Why these attacks on the alien? It is a smoke screen behind which the reactionaries are advancing against the democratic rights of the American people. It is the first objective of the offensive of the reactionaries against democratic rights.

Today the attack is against the aliens. Tomorrow it will be against the citizen. Today the concentration camp is being pro-

vided for the alien. Tomorrow it will be provided for the citizen. It can happen here. It is happening here. However, I am not discouraged. I have faith in the traditional desire of the American people to keep democratic institutions alive by preserving democratic rights. I have faith that the American people will become aroused and will launch the same counter offensive against our reactionaries of today who are writing the alien and sedition laws of today, as they did against the reactionaries of 1798, who wrote the alien and sedition laws of that date.

Regional Meeting of Democratic Women Winston-Salem, N. C.

EXTENSION OF REMARKS OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES Wednesday, May 24 (legislative day of Friday, May 19), 1939

ADDRESS BY HON. ALBEN W. BARKLEY, OF KENTUCKY, MAY 23, 1939

Mr. BAILEY. Mr. President, the leader on our side of the Chamber, the senior Senator from Kentucky [Mr. BARKLEY], did my State and the Democratic women of my State the honor to make a very noble address at Winston-Salem, N. C., on May 23, 1939. I ask leave to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, I am happy to be in North Carolina this evening, for this great State was the home of my ancestors and the birthplace of my grandfather.

I am happy to be the guest of this great gathering of Democratic women from the 11 Southeastern States which you represent.

You are here as a vital and indispensable part of organized democracy in America. You are looking back and upon a glorious record of achievement that is coextensive with the history of the You are looking forward to the vindication of that record in 1940.

In 1940.

But, in a broader and deeper sense, you are concerned with the preservation of the fundamental conceptions of the rights of the people as they have been proclaimed and effectuated by the Democratic Party from Thomas Jefferson to Franklin Roosevelt.

You are concerned with the question of keeping the Democratic Party democratic. You are concerned with the problem of making democracy function for all the people in adapting itself to the complexity of modern life as completely as it adapted itself to the simpler problems of a simpler day.

The struggle for liberty, for equality, for real democracy in every age of the world's history has been accompanied by the jeers and the contempt of those who have looked upon Government as the agency of those who seek and enjoy some form of special privilege.

The Democratic Party was born of the struggle between privilege and equality.

The Democratic Party was born of the struggle between privilege and equality.

Born humble and without a name, Alexander Hamilton became the outstanding aristocrat. He would have limited participation in government to the rich, the educated, and the well born.

Born an aristocrat, Thomas Jefferson became the outstanding democrat. He believed that no man is wise or good enough to govern another man without that man's consent. He believed that those who are required to fight to preserve government are entitled to participate in it.

For this belief he was called a demagnitude a radical, and a danger-

For this belief he was called a demagogue, a radical, and a danger-ous perpetrator of theoretical innovations.

But he exercised so profound an influence upon American institu-

But he exercised so profound an influence upon American institutions that in his life of Alexander Hamilton, Henry Cabot Lodge declared that the election of Jefferson in the peaceful revolution of 1800 permanently fixed the status of our institutions as those not only of a republic but of a democratic republic.

During most of the century and a half of our history as a Nation, the Democratic Party has been the liberal and progressive party of America. It has sought to use the agencies of government to aid the people in adjusting their political, economic, and social problems as they arose, and to adjust them within the frame work of the Constitution.

With one or two exceptions, practically every extension of the right of the people to participate directly in the control of their Government has been initiated by the Democratic Party.

Practically every movement to liberalize and democratize the processes of government has been consummated through the driv-

processes of government has been consummated through the driving power of the forces of democracy.

It was the Democratic Party under Andrew Jackson that fought the first successful battle after Jefferson to restore the Government

of the United States to the people.

It was the Democratic Party which first proposed and ultimately succeeded in amending the Constitution so as to levy taxes accord-

succeeded in amending the Constitution so as to levy taxes according to the ability to pay.

It was the Democratic Party which first proposed and then saw adopted the amendment to the Constitution providing for the election of United States Senators by direct vote of the people.

It was the Democratic Party under Woodrow Wilson that submitted and saw adopted the amendment granting to the women of America the right to vote, thus taking them into partnership with men in shaping the destiny and molding the form of our Government.

Government.

It was the democracy of Woodrow Wilson that gave us the Federal Reserve System, the national good roads law, the Federal Trade Commission, the Department of Labor, and the first time granted to agriculture and to labor the right to organize for mutual protection and advancement.

These fundamental advances in the march of democratic ideals are not cited as a complete catalog of the record, but as outstanding examples of the constant fight which we have made to capture new territory in the warfare between those who would deny or withhold it.

We are engaged today in the struggle not only to extend and expand still further the application of the democratic theory in every phase of Government, but to preserve for the people the gains we have made during the past 6 years as well as the past 150 years.

150 years.
We need not delude ourselves about the character of the fight. The theory and processes of democracy are under attack on a wider front today throughout the world than at any time within the last century. They are under attack in America as well as

in Europe and Asia.

The task which faces us now and will face us next year and all the years of the future is to prove not only that democracy can work but that it has worked and is working in spite of the handicap thrown in its pathway by those who hate it or do not understand it.

understand it.

I shall not here recount the details of the record of the Roosevelt administration since the 4th of March 1933. But there are some things about it which the American people cannot afford to forget, and there are many things about the record of its predecessor which the American people cannot afford to forget.

And in the effort to make the American people forget both records, we do not propose to allow Republican spokesmen to assume that the American people are more forgetful or less intelligent than they themselves.

What is it that the Roosevelt administration has done or failed to do that characterizes it as the loathsome thing that the hitch-

to do that characterizes it as the loathsome thing that the hitching-post brigade would have us believe it to be?

ing-post brigade would have us believe it to be?
Did it find the American banking system prostrate and discredited? Not even our enemies can deny it.
Did we restore that system by restoring the people's confidence in it? Ask the banks themselves, and if they are unwilling to answer, ask the depositors in those banks. Will the Republican Party or its candidate for President next year tell the American people whether they will return our banking system to the shambles of 1932? If they will, let them speak out. If they will not, let them give us credit for revitalizing it and creating something they dare not touch they dare not touch.

Did we find the agricultural credit established by Woodrow Wilson paralyzed and impotent at the end and during most of the Hoover administration? Ask the farmers.

Did we set it up into business again, and have we reestablished it on a solid foundation and expanded its facilities for the service of agriculture? Ask the farmers.

Did we find millions of homes on the verge of foreclosure because Did we find millions of homes on the verge of foreclosure because of the lack of urban credit to the home owners of the Nation? Ask them in thousands of towns and cities throughout the Nation. Did we smite the rock with the rod of Moses, but to see the living waters of restored credit gush forth to preserve the firesides of

our country?

our country?

Ask a million home owners, and when the answer is heard in a chorus of grateful voices, let the croaking noises from the marshes of Republican despair shout back the hypocritical denial.

Did we double their income and make of the American farmer again the purchaser of the products of American industry? Take a look at the record and note that the income of our farmers rose from four and one-half billions per year to nearly nine billions per year. Did we find the income of the American farmer so desperately low as to render it impossible for him to produce except at a loss the things upon which the world depends? Ask the growers of cotton, wheat, corn, tobacco, and other essential crops grown on the farms of the Nation.

Though the economic condition of agriculture has not yet risen.

Though the economic condition of agriculture has not yet risen to the point which is our goal, it is infinitely above the point where we found it 6 years ago, and every farmer knows it, and every reactionary politician wishes it were not true.

Did we find international trade at the lowest ebb in a genera-tion, with hatred and suspicion manifesting themselves at every customs house and economic paralysis staring every nation in the

Ask the producers of surplus products of the field and the factory.

Have we reestablished the lines of commercial communication and reminded the world that no nation can live unto itself without reaping the consequences of its hermitage?

Let those who doubt the wisdom of the good-neighbor policy of this administration take a view of the quickening arteries of inter-national trade and consult those who give employment to American labor and profits to American investors in order that mankind may

labor and profits to American investors in order that mankind may enjoy the fruits of our enterprise.

Have we sought to elevate the standard of life in the crowded cities of our country? Have we sought to give to the children of the slums of our great cities a more wholesome environment in which to grow up as worthy citizens of this Republic?

Ask hundreds of thousands of families whose names rarely appear in the columns of the press and whose appreciation and gratitude are more responsive than that of many others who have received in the past greater financial benefits from the Government.

Have we stimulated the inherent desire to become a proprietor of a small portion of the earth's surface and build a home upon it?

Have we stimulated the inherent desire to become a proprietor of a small portion of the earth's surface and build a home upon it?
Have we sought to apply the theory that the larger the proportion of home owners in America, the greater will be the stake of the people in their institutions? Ask millions of American people who through the Federal Housing Administration, the Federal Housing Authority, the Home Owners' Loan Corporation, the Farm Credit Administration, and other agencies set up by the administration to stimulate the desire to preserve and build homes in which to rear their families.

Have we responded to the universal desire to educate the children of the Nation and take them out of sweatshops and put them in schools and upon playgrounds? Have we sought to stop the coinage of their bone and flesh and blood into commercial products for profits before their minds and bodies are sufficiently mature to

give them an even chance in the social and economic battle which they must fight in the years to come?

Ask the school teachers of the Nation. Ask the children and ask their grateful parents whether this administration, beyond all other administrations, has recognized the call of childhood and

youth for service in their behalf.

Have we by legislative and administrative policies given legal recognition to the right of labor to bargain collectively with its

Employer?

There are two sorts of investment, both of which are important and vital. One is the investment of money and the other is the investment of muscle and brain. Neither investment is of any value without the other. Ask the millions of hitherto voiceless working men and women whether now they have the right to sit across the table with their employer and work out their problems in mutual conference and respect.

Have we pleased the newer and the output.

conference and respect.

Have we placed the power and the authority of organized government at the service of investors that they may be protected from fraud and deception in the purchase of securities?

Ask millions of men and women who know that there is a place in the Securities and Exchange Commission where not only they may obtain information concerning corporations in which they may desire to invest their savings, but that there exists no longer the power to manipulate the value of those securities by practices that

are dishonest and in many cases criminal.

Have we sought to give employment to millions of our people in the performance of useful work, in the completion of permanent and useful additions to the wealth of every community in the

Nation?

Ask those who would have otherwise remained idle.

Ask those who would have otherwise remained idle. Ask them whether they would prefer to work for what they obtain and hold their heads erect in self-respect rather than receive a dole in the form of a few potatoes and a head of cabbage handed out by some patronizing agent of the Federal Government.

Have we sought to give a sense of security in the face of future unemployment and old age? Have we sought to give greater encouragement to the young and to those in the prime of life by holding out the hope that when unemployment and old age approach they may feel that a wise government and a wise administration has had the foresight to provide against these contingencies in the years to come? gencies in the years to come?

we have made but a modest beginning in the field of social security. Many older nations of the world entered upon this field a quarter of a century ahead of us. But ask the aged and unemployed, and I might add ask those who must bear the financial burden necessary for the consummation of this humanitarian movement whether they favor its total abandonment. We shall strengthen and improve these policies. We shall not abandon

In the midst of world chaos, have we neglected our own de-fense? Have we hidden our heads in the sands on the theory

that we are not a part of the world, that we can avoid its cataclysms, that we cannot be scorched by its consuming flames?

While the President of the United States has pursued a policy intended and calculated to prevent war anywhere in the world, which is the surest way to guarantee that we will never be involved in war, he has insisted and Congress has overwhelmingly followed him in the insistence that we shall be prepared to defend our nation, its institutions, its traditions, and prepared to defend the doctrine of James Monroe that any attempt by a foreign power to obtain a foothold in the Western Hemisphere would be an act inimical to the welfare of the United States.

In pursuance of that policy, we rejoice in the knowledge that there is a greater unity of spirit and of action among the republics of the western world than has ever been in the history of this

Republic.

Let me ask our opponents whether they propose to abandon these and other great constructive measures which have been inaugurated by the Roosevelt administration. And if they propose to abandon

them or any of them let them be sufficiently honest with the American people to inform them where they propose to begin.

Not one of them who speaks with any degree of responsibility will advocate or assert his belief in the abandonment of these great

objectives.

They pay lip service to these objectives by saying they endorse em. But they do not like the methods by which they have been them.

advanced.

What methods would they have adopted? I might even ask a more vital question whether they would have adventured at all upon the attainment of these objectives. They were in power for 12 years—I might say 12 long years without inaugurating a single one of the objectives which have been the soul of the New Deal and of those who believe in it.

and of those who believe in it.

They say they believe in these objectives, but they object to the financial outlay necessary for their attainment. They complain that we have increased the public debt. We do not deny that the public debt has been increased. But from the fervid fulminations of ambitious Republican orators one would think that the increase of the public debt was a Roosevelt invention. Who started the increase in the public debt? Herbert Hoover. When he took office on March 4, 1929, the debt of the United States was \$16,000,000,000. When he retired 4 years later it was more than \$22,000,000,000. \$16,000,000,000. \$22,000,000,000.

\$22,000,000,000.

In 4 years he increased the public debt by more than \$7,000,000,000 and during 3 of his 4 years in the Presidency there was a tremendous deficit in the Treasury.

Can our opponents point to a single permanent improvement anywhere in the Nation that represents the expenditure of any of this money? Is there a schoolhouse or a highway, or a courthouse, or a hospital, or a playground, water works, or a sewer system, or an electric facility anywhere in America to which they can point as justification for the expenditure of this increased indebtedness? I assume that all sensible men and women would prefer that the as justification for the expenditure of this increased indebtedness? I assume that all sensible men and women would prefer that the public debt be not only not increased but that it be reduced and ultimately eliminated altogether. But I deny that our country is headed toward bankruptcy because the Roosevelt administration has increased the public debt by fifteen or sixteen billion dollars. And, in contrast to the records of the Hoover administration, we can point to permanent improvement in almost every city and hamlet in the Nation to show where this money has gone.

namet in the Nation to show where this money has gone.

Highways, streets, sidewalks, sewer systems, water works, playgrounds, Civilian Conservation Corps camps, drainage improvements, new and improved courthouses, rural electrification, youth
education and training, financial aid to homes and business, and
countless other evidences of the Government's interest in the
social and economic welfare of all the people stand as monuments to the uses for which this money has been expended.

ments to the uses for which this money has been expended. The test of whether we are headed toward bankruptcy does not lie alone in the increase in the public debt. It lies in part in the total indebtedness, public and private, of all the people, and it lies in part in the relationship between indebtedness and assets.

While the public debt has increased by fifteen or sixteen billion dollars, in the last 6 years, the total indebtedness, public and private, of all the people of the Nation has declined by more than \$5,000,000,000. When Franklin Rocsevelt became President the total indebtedness of all the American people was \$160,000,000,000. Today it is \$155,000,000,000. Can any political financier convince the American people that we are headed toward bankruptcy when, while a portion of the total debt is increased, the total has decreased and that out of the whole a program of infinite improvement has been almost completed throughout the Nation?

One of the reasons why it has been necessary to increase the

One of the reasons why it has been necessary to increase the Treasury's indebtedness is because under our predecessor private credit almost completely evaporated.

From 1920 to 1930 the annual increase in the total debt of our people was about \$5,000,000,000. This was the decade in which we were told that poverty was on its way out, that the poorhouse would become a fading memory, and eternal prosperity loomed up like a glorious mirage before our view. But in considering the necessity for Government aid in all the activities which have renecessity for Government aid in all the activities which have required money, we must remember that since 1930 private long-term leans have fallen off by nearly \$35,000,000,000. Whether this decrease in long-term debts grew out of the inability or the unwillingness of banks and other leading agencies to afford credit may be an academic question. But in the absence of this credit, government had to step into the breach and ten or twelve billion dollars of the increase in the public debt of which our opponents complain is represented by loans to industry, to homes, and to other essential activities of the Nation, practically all of which will be returned to the Treasury and is now being returned on schedbe returned to the Treasury and is now being returned on scheduled time. When we subtract from the total increase of the public be returned to the Treasury and is now being returned on schedd unled time. When we subtract from the total increase of the public debt under Roosevelt, the total amount that will be returned to the Treasury, the total increase in 6 years will not be as great as the increase in the 4 years of his predecessor. In view of the results, I challenge any honest man or woman to make the comparison. When one views this record impartially, it stands out as a glorious achievement not only from a social and economic standpoint but from the standpoint of financial stability as well.

During the administration of our predecessors the obligations of the United States sold for less than par. Today they are above par, and every additional issue of Treasury obligations is many times oversubscribed. And the interest rates and the total interest charges upon these increased Government obligations are less than

they were under the administration of Mr. Hoover.

Political parties and political commentators and, I presume, the minds of the people at large are looking toward the contest for

supremacy in the President's election of 1940. That contest will be fought out on the record of the Roosevelt administration. The Democratic Party stands upon that record, and our opponents will not be permitted to straddle the fundamental issues involved by pretending to approve the objectives while objecting to the details of their accomplishment.

Without regard to conditions the Democratic Party will stand or

of their accomplishment.

Without regard to conditions, the Democratic Party will stand or fall in 1940 on the record of the Roosevelt administration. We are ready to lay before the American people in the minutest detail, if desired, not merely the objectives but the methods and the fundamental conception of the relationship between government and the people. In my judgment, the American people will not repudiate the first administration in 2 decades that has sought to humanize

the first administration in 2 decades that has sought to humanize our Government. They will not repudiate the record of the man who, while battling for peace and self-respect among the world, has battled for peace and self-respect at home.

When future historians write impartially the great achievement of the Roosevelt administration they will marvel at the almost incredible accomplishments which have marked its progress.

Let us who have been a part of that record, or who have benefted by it, or who have believed in it, unsheath our sword and unfurl our fiag, not in cowardice, not in retreat, not in apology, but in the militant knowledge that the American people are both just and intelligent and they will, when they know the truth, enthrone it again in their hearts and in their Government.

National Maritime Day

EXTENSION OF REMARKS

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Wednesday, May 24 (legislative day of Friday, May 19), 1939

ADDRESS BY HON. FRANCES T. MALONEY, OF CONNECTICUT, MAY 22, 1939

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered at Bowling Green, New York City, on the occasion of the celebration of National Maritime Day, May 22, 1939, by my distinguished colleague from Connecticut [Mr. Maloney]. The able address delivered by the Senator from Connecticut emphasizes the national significance attached to the maritime industry and its relation to our national well-being.

There being no objection, the address was ordered to be

printed in the RECORD, as follows:

A score of years more than a century ago the first American steam-propelled ship, the Savannah, left Savannah, Ga., for a "round voyage" across the Atlantic. As this tiny vessel breasted the broad Atlantic, history was in the making. An industry was to be transformed in a way to affect profoundly the lives and destinies of men and nations. In commemoration of that notable event President Roosevelt has designated the anniversary of that great accomplishment as National Maritime Day. And that is why we are gathered here, and why groups like us are holding similar observances in every important American port on this maritime holdiday. holiday.

holiday.

I have an inherent natural pride in the maritime industry—perhaps the oldest industry we have—because I come from New England. It was from New England, and from ports in my own State of Connecticut, that clipper ships—in those early days—went out to the seven seas. We were the earliest of the Americans to follow this romantic calling—first to brave the dangers of treacherous ocean waters, in craft that today would be looked upon as almost foolhardy. These ships came back to Connecticut and to other ports of New England with ivory and spices and other articles of commerce. It was largely as a result of those dangerous errands of trade and because of the heroism of the masters and crews of those vessels that there was established in this Nation and in this very region the beginnings of individual fortunes and great industrial and financial institutions.

Out of the trading traditions of that period came the skilled and

Out of the trading traditions of that period came the skilled and steady Yankee trader, who not only became famous over the world but pioneered in the building of institutions which are now famous and far reaching and which have contributed so much to the world's

greatest Nation.

greatest Nation.

Although Connecticut finds its greatest glory in fields other than maritime affairs—at least in comparison with its neighboring States—our devotion to the sea has never dimmed, but rather has our interest in matters pertaining to shipping been intensified. Not only are we concerned with the interests of maritime men, but we as a State are consciously proud of our great harbors. We look with optimism toward the day when Connecticut may once

more enjoy its place in the sun of the maritime trade. The Coast Guard Academy, which is located at New London, is an intimate link between Connecticut and the merchant marine. The manu-

link between Connecticut and the merchant marine. The manufacturers and businessmen of my State are now, as always, keenly aware of the vital necessity of shipping, and especially American shipping, to their business and to American industry.

This gathering of American citizens, for whom carriage by sea, its history and development, are part and parcel of your daily lives, know that during the eighteenth century and more particularly during the early half of the nineteenth century, American sailing ships were foremost in world trade. When steam vessels became fast enough to supersede our great clipper ships. ican sailing ships were foremost in world trade. When steam vessels became fast enough to supersede our great clipper ships, the American fiag, which until that time was found on mastheads in all of the ports of the world, was gradually replaced by other flags. American shipping declined. The reasons for that decline are not especially important now. What is important is that we must once more raise the American flag on the sea highways of world commerce to a point that will approximate its former pre-

During the boom occasioned by the horrible World War when the United States Government attempted the Herculean task of build-

United States Government attempted the Herculean task of building a merchant marine in 2 years, it appeared that we might regain the ground that was lost. We made some gain, but in spite of support from the Federal Government, the great war fleet was allowed to deteriorate and to some extent decay.

I should like to believe, however, that this day might mark the rebirth or the reawakening of the American merchant marine. Thanks to the Merchant Marine Act, 1936, and the efforts of the United States Maritime Commission, of which the distinguished gentleman who preceded me is a member, the American flag is once more becoming prominent and important in world trade. Since

gentleman who preceded me is a member, the American flag is once more becoming prominent and important in world trade. Since all things that are good in American government seem to be laid on a foundation of something said by George Washington, it is interesting to remember that as early as 1790 he said:

"We should not overlook the tendency of war to abridge the means, and thereby at least enhance the price of transporting productions to their proper markets. I recommend to the serious reflections of Congress how far and in what mode it may be expedient to guard against embarrassments, by such encouragement to our own navigation as will render our commerce and agriculture less dependent on foreign hottoms."

less dependent on foreign bottoms."

Partly because of this advice from Washington, and in part because of our earlier traditions, the Federal Government has always displayed a keen interest in shipping, but never so much as now. As a member of the Senate Committee on Commerce I have an especial interest in the promotion of an adequate merchant marine

especial interest in the promotion of an adequate merchant marine and am hopeful that I may, in some small measure at least, be able to assist in encouraging its further growth.

I should like to say at this time, in parentheses, that as I came to this observance this morning my mind dwelt upon the sweet memory of Senator Copeland, who was so devoted to the welfare of the men and the business that followed the sea. The maritime industry, his colleagues in the Senate, and his millions of friends in New York and over the country miss him as I do. Because he so much loved the work in which you are engaged, my heart, at the moment, seems to bleed a little. I pray that he is now enjoying the everlasting beauties of eternity. His illustrious successor, Senator Mean, has taken Senator Copeland's place on the Commerce Committee, and follows in his wake as a friend of the men of the sea. He is endowed with ability and a rare courage and strength, and he will earn your applause.

and he will earn your applause.

The Government is interested in the development of an American merchant marine for two reasons: First, to protect our foreign trade from complete dependence on foreign-flag ships, and secondly, to provide an adequate number of merchant vessels suitable as naval auxiliaries in times of naval emergency.

The idea of protecting American commerce by the maintenance of an American merchant marine is not in my opinion a smart public relations argument of American ship operators. On the contrary, it is an important and real necessity—as history has so clearly pointed out. During the period of the Boer War we were left without transportation facilities sufficient to handle our foreign commerce, because we had become careless of our merchant marine and had come to depend upon foreign-flag ships.

The lack of an American merchant marine in those days de-preciated the value of products of the American farms to a pitifully low level. Here was eloquent evidence to demonstrate how im-portant our shipping facilities were to the manufacturer, to the im-porter, and to the farmer of the Middle West. Again in 1914, when nations at war withdrew their ships from our trade, the products of our factories were piled high on American wharves, and stored in railway cars that crowded terminal yards because there was not available transportation. This serious dislocation of our foreign trade had a damaging, lasting effect. Now—in another unfortunate period in the world's history—it seems to me that we are bound, as a matter of national defense, and for the protection of our

as a matter of national defense, and for the protection of our farms and industries, to build an American merchant marine which will free us from a dependence on foreign-flag vessels.

With respect to providing auxiliaries for the Navy for national defense, it is obvious to anyone who thinks about it that our present merchant-marine fleet is inadequate to supply the type and number of vessels which the Navy must have if it is to function. Fortunately, however, the Maritime Commission has developed a program under which we are rapidly completing a number of vessels meeting the Navy requirements for such services. Hardly

a week goes by, it seems to me, during which a new ship is not being launched, and one which is built to Navy specifications and with sufficient speed properly to serve our national forces should there ever come a time of necessity. God forbid that that time ever come, but God give us strength properly to defend ourselves should we be caught in the vortex of another conflict. I have no fear that we will become involved in war, but I would be afraid if the American people were not of the almost unanimous desire that we be well prepared so well prepared that those with a thought of we be well prepared, so well prepared that those with a thought of war would pass us by.

There are no peoples of the world toward whom I have a feeling

There are no peoples of the world toward whom I have a feeling of hate. There are, however, a few governments, I'm sorry to say, which have so disregarded respect for the ordinary canons of decency that we would be naive if we did not possess a strength that they will respect. Without a competent police force even this great city might become a shambles. Without a great navy, we, as a nation, might one day find ourselves lacking the strength to meet

a ruthless enemy.

Congress has decided that it is absolutely necessary that this Congress has decided that it is absolutely necessary that this country produce a merchant marine adequate to protect our foreign commerce and provide a necessary naval auxiliary. The Merchant Marine Act, 1936, declares that it is the policy of Congress that the merchant marine should be built up by private enterprise, assisted where necessary by Government aid. The necessity of an adequate merchant marine, however, is so great that if private enterprise is unable to maintain it, it will be necessary that the Government assume the responsibility. It is my hope that such a course will not be necessary, and that we may revitalize the spirit of the masters of the old New England clipper ships and build a substantial merchant marine owned and operated by private American citizens.

masters of the old New England clipper ships and build a substantial merchant marine owned and operated by private American citizens. To have a successful merchant marine we must do more than merely construct ships. We must man them with efficient and contented crews of American citizens. In that direction we are also making progress. I am happy that labor disturbances, which were common in the maritime industry just a little while ago, have become less frequent. I believe that this has come about largely by the cooperative attitude of the seamen's labor organizations and of the yessel operators in compliance with the spirit of the National the cooperative attitude of the seamen's labor organizations and of the vessel operators in compliance with the spirit of the National Labor Relations Act. Both the labor unions and the American Merchant Marine Institute have done a good job in minimizing the disputes which are so destructive to orderly commerce. May the good feeling be intensified and magnified. May more American ships go down to the seas. May their progress to the sea give comfort to all Americans in showing that the Nation is on the job. May they give joy to our friends, and may they be notice to the world and our enemies therein—if such there be—that this peaceloving nation of ours in its devotion to peace has not forgotten to be prepared for war. prepared for war.

Missouri Chapter of National Association of **Postmasters**

EXTENSION OF REMARKS

HON. BENNETT CHAMP CLARK OF MISSOURI

IN THE SENATE OF THE UNITED STATES Wednesday, May 24 (legislative day of Friday, May 19), 1939

ADDRESS BY HON, JAMES A. FARLEY, MAY 12, 1939

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an address delivered by Hon. James A. Farley, Postmaster General of the United States, at the State convention of the Missouri Chapter of the National Association of Postmasters held in St. Louis, Mo., on May 12, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a privilege to meet here in St. Louis today with the Missouri Chapter of the National Association of Postmasters, and it is always a pleasure to visit with your genial host, Rufus Jackson, the postmaster of this great city. You are to be congratulated on the fine attendance at this convention and I want to thank you for

coming.

We are most fortunate in having an opportunity to share in the management and in the operation of the United States Postal Service, and I know that each and every one of us has a justifiable pride in our accomplishments. Few people realize the tremendous influence exerted by the Postal Service in the progress of business, transportation, and in the daily lives of our citizens.

The report of the Comptroller General of the United States shows that during the last fiscal year the transactions of the Postal Service resulted in a total turn-over of cash handled in post offices of more than \$8,000,000,000. This amount is one-third more than

of more than \$8,000,000,000. This amount is one-third more than all of the money in circulation in the United States, and exceeds the total appropriations made by Congress for the maintenance of the whole Federal establishment, including the emergency agencies.

It amounts to more than \$62 for every man, woman, and child in America.

The ordinary postal revenues derived from the collection of postage broke all records last year, and the revenues received thus far in this fiscal year indicate further increases, which means that for the third successive year the postal revenues have shown steady gains, exceeding the revenues of any previous year in history.

I think it would be of interest to you to know that during the

fiscal years of 1937 and 1938 the increase in postal revenues came fiscal years of 1937 and 1938 the increase in postal revenues came largely from the smaller cities and towns, and during that period postal business lagged somewhat in the great industrial centers—while during the current fiscal year of 1939 increases have been shown in the large cities, and we are still maintaining increased business in the smaller communities. Therefore, I can say to you that there has been no business recession insofar as the Postal Service is concerned, and our revenues are ordinarily accepted as

an accurate barometer of business conditions.

an accurate barometer of business conditions.

The mail volume is increasing daily, weekly, and monthly when compared to the same periods of last year. We have kept pace with this increased volume by adding more employees. We now have on our rolls and at work in the post offices more people than have ever been employed at any time in the history of the Service. Working conditions are better. The average salary of postal employees in the field service is greater than the average salary in other Government establishments, and certainly higher than the average income of employees in private industry. This indicates a steady gain in business, confidence on the part of the people, and shows that the patrons are taking advantage to a greater extent than ever before of the wonderful facilities of the United States Postal Service.

I am proud, indeed, to be able to make this report to you, and

I am proud, indeed, to be able to make this report to you, and I know that you, as public officials and as citizens, are pleased to note and accept this report as evidence of the fact that the United States of America is keeping up its march of progress; that its people are increasing business activities; that they believe in their Government; that they are living up to the good-neighbor policy—for you and I know that when postal receipts are increasing in the smaller cities and towns a good part of that revenue comes from the ordinary social correspondence carried on between families and they are that they are that they are the transfer that the continuous contractions are the contractions.

friends. When that condition exists everybody knows that we are getting along all right in America.

are getting along all right in America.

I make no claim for personal credit for the accomplishments of this fine establishment. While the service has been generally improved during my administration as Postmaster General, frankness and honesty require that I give to you, the postmasters, to my most efficient staff in the Department, and to all of the postal employees the credit for such improvements. You know, and I know, that the Postal Service has been the most respected of all Government agencies for many, many years. Before we were born postal offi-cials and employees, hundreds of thousands of them, had given the best years of their lives and their best efforts to the development best years of their lives and their best efforts to the development of this magnificent communication system. All praise to my predecessors and your predecessors and to the loyal army of workers that has given such a fine example of courage, fidelity, and efficiency. We make but one claim—that we have accepted our positions as a public trust. We have but one objective—that in the administration of this public trust we shall at all times safeguard the public interest and pass on to our successors an improved corvice. the public interest and pass on to our successors an improved service in keeping with the progress of the Nation.

Our greatest asset is good will. In private business goodwill is recorded as a capital asset. In a public establishment such as ours we have no reason to reduce this asset to a dollar and cents value. We do know, however, that unless we do everything possible to develop goodwill we are not satisfying our patrons, and we will not attain our objective.

I am happy to say to you that careful observance of postmasters and postal employees convinces me that we are reaping the benefit of our many campaigns to encourage courteous and efficient postal service. I hear many expressions and receive many letters com-mending postal people on their tact and courtesy. I want to thank all postmasters for this accomplishment and to urge that you conall postmasters for this accomplishment and to urge that you continue your efforts along this line. Eternal vigilance is required if we are to meet our obligation to our patrons. We in the Department are convinced that the need for politeness is more pronounced in the post office than in most other public services. It is an important part of what we term "efficiency." We operate a monopoly, at least in the transmission of letters, therefore, a patron has no choice but to deal with us; consequently it is fundamental that we exercise great care in dealing with our customers, who are in reality our employers. reality our employers.

obviously the patron is not always right, but we gain nothing in attempting to prove to him that he is wrong. Conversely, we are not always right. While it is true that relatively few mistakes occur in the handling of the billions of pieces of mail annually, yet it is human to err, and our employees on rare occasions missend mail or delay the transmission of mail matter. When such a thing occurs, be frank about it. Admit the fault and take prompt steps to prevent a recurrence. Apologize for the mistake and you will make a friend for the Postal Service and add to the good will so valuable to the Department.

valuable to the Department.

You, as pestmasters, should constantly strive to secure the cooperation and good will of the employees of your office. Make each and every person in your establishment feel that the part he plays in the Service is an important part. Be firm when necessary and always point out the mistakes made by your subordinates. Let them feel that they have an individual responsibility to the public and encourage them to assume responsibility.

Never reprimand an employee in the presence of others. To do so injures his self-respect, causes him to resent the criticism, and defeats any good that might come from it. When irregularities occur call the offender aside privately and administer the rebuke in a gentlemanly way. Authority should never assume the privilege of transgressing the laws of common courtesy of man to man.

Be sure that your supervisors are properly trained, and regardless of the circumstances do not permit humiliating incidents to occur in maintaining discipline in your office.

of the circumstances do not permit humiliating incidents to occur in maintaining discipline in your office.

It is your duty as postmasters to see that all employees are trained for their work. The importance of this phase of your jobs cannot be overemphasized. Adequate and understandable instructions should be furnished to all newly appointed employees, and these instructions may be repeated occasionally, for even those who are presumed to thoroughly understand their work are often helped by having their minds refreshed on some important points. I am turn that the average postel employees wants to been more and sure that the average postal employee wants to learn more and more about this business, and if proper instructions are given in an enlightened manner it will do much in quickening the purpose

an enlightened manner it will do much in quickening the purpose and energy of our personnel.

There are several ways of instructing the employee, depending upon the size of the organization. It can be accomplished either singly or in groups. Regardless of the method that is followed, be sure that each and every individual under your supervision is trained for the task assigned to him, and be doubly sure that those assigned to window work where they contact the public have a complete knowledge of the details of the positions they occupy. Inaccurate information given to patrons is most annoying and causes complaints that are very difficult to answer. Ading and causes complaints that are very difficult to answer. Admonish all those who are in a position to deal directly with the patrons to be courteous at all times, to give information only when they are sure the answer is correct, and to say "thank you" pleasantly at the conclusion of each transaction. Give your personal attention to this matter and you will accomplish more than you realize.

It is also important to recognize good work. When some member of your staff has performed a task in a most efficient manner, or has done something to cause favorable comment on the part of a patron, let him know you are pleased with his work. It does not take long to pat him on the back and commend him for his interest in the Service. To do so encourages him to continue in his efforts along that line.

I feel very strongly on this matter of tact and courtesy in our dealings with the patrons and applicates and challenges.

dealings with the patrons and employees, and shall appreciate your continued cooperation.

You may be assured that the Department will cooperate with you if you will but seek its help when you are in need of assistance in solving any of your problems. The administrative agencies of the Department are organized and maintained for that pur-

of the Department are organized and maintained for that purpose. The several bureaus under my general direction formulate policies and issue rules and regulations which are calculated to insure adequate and efficient service for the people, and also to protect your interest and the interest of the employees.

We in the Department have no direct contact with our customers but must of necessity leave that most important function to you and your staff in the local post offices, so that in the final analysis, no matter how high our purpose may be, unless we can secure your enthusiastic support we cannot be successful. For that reason I attend meetings of this kind whenever possible, and I encourage the administrative officials in the Department to do likewise—for I am convinced that these conventions offer us our likewise-for I am convinced that these conventions offer us our likewise—for I am convinced that these conventions offer us our best opportunity to engender good will and good feeling between the headquarters staff and the personnel in the field service. There are others here with me from the Department and a number of post-office inspectors are present, all of them available for counsel and advice concerning your service problems.

I regret that other engagements which are principally my scheduled appearance at other State conventions prevent my remaining with you for a longer period, and I trust that I shall have an opportunity to meet with you again. Before concluding I want to extend to you the warmest regards and best wishes of President Roosevelt, and to again assure you of my sincere appreciation for the fine work you are doing.

ation for the fine work you are doing.

March of Fascism

EXTENSION OF REMARKS OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES Wednesday, May 24 (legislative day of Friday, May 19), 1939

ADDRESS BY DR. HAROLD C. UREY

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Congressional Record an address delivered by Dr. Harold C. Urey, of Columbia University, at the National Emergency Conference, held at the Raleigh Hotel, Washington, D. C., May 14, 1939. The address deals with the march of fascism, which has been spreading over certain sections of Europe and is now manifesting its influence in our own country. It discusses particularly the flood of antialien bills, which are essentially Fascist in their purport and intent, now appearing in the Congress of the United States.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The many sides of these numerous bills have been discussed by the speakers in this symposium, so that it would be quite impos-sible, I think, for me to add anything on this subject. I shall therefore review what I believe to be the broader aspects of this prob-lem. I refer to the speedy march of fascism, or perhaps one should say totalitarianism, which has been spreading over Europe, signs of which are appearing in France and England, and now in the United States. For essentially these antialien bills are Fascist in

intent and will be Fascist in their results.

For a long time I have realized that fascism, when it came to the For a long time I have realized that fascism, when it came to the United States, would come as 100-percent Americanism, but I had not quite realized what the scapegoat would be. I had thought perhaps it might be the Negroes or the Jews, but now we realize definitely that it is the foreigners who have appeared on the scene. It is in line with certain characteristics of the people of the United States, being all of us foreigners, that of course, we could not tolerate the most recent foreigners who arrived on our shores.

But what is fascism? This question is asked by many people, and most of us have but the haziest notions of what the underlying philosophy of this movement is. I should like to give you my concept of its underlying purposes and objectives. We all recognize that selfishness is a characteristic of human beings. We vary all the way from those who have the slightest trace of this characteristic who are willing to give everything they have to other people, to dedicate their whole lives to a particular movement, to those who are completely self-centered in their reactions.

It is difficult for us who sit here to realize that people exist who are so abjectly selfish as are certain powerful people in this modern

It is difficult for us who sit here to realize that people exist who are so abjectly selfish as are certain powerful people in this modern world. There are people who wish to acquire for themselves and their friends all power, all wealth, all unhampered freedom. Moreover, they believe that this can be done by curtailing the rights, wealth, and freedom of others. They wish to have their own freedom but would reduce others to slaves; they would acquire great wealth when others are reduced to poverty. If you see this characteristic of fascism, then you can understand many of the things they do. Such fundamental principles as justice, truth, and honor have no meaning whatever, since they are contrary to their fundamental objectives. mental objectives

In order to obtain their objectives it is impossible for them to tell the truth, because any cooperation they might receive from the great mass of people could never be secured if they frankly admitted their real purposes. Hence in their contacts with people their statements range all of the way from failure to state the truth through intentional misrepresentation to out-and-out lies of unballs with the statements. believable magnitude. In fact, Hitler has stated that in order to obtain one's ends lies should be so vast that people cannot believe they could be lies. Moreover, in fighting things of this sort we are hampered by the essential honesty and uprightness of most people. We are so honest that we cannot believe that other people intentionally lie in a brazen and bold fashion.

These anti-alien bills are essentially Fascist in their concept and purposes, as we all know. They have for their purpose not the eradication of corruption brought by a handful of aliens in the United States, but the curtailment of the rights of citizens of the United States. It is well, in considering things of this sort, to be sure that we, ourselves, are not of the intolerant Fascist group, for whenever one attempts to curtail his fellow citizens and their proposals one may lay himself open to the same countercharge. Hence let us look briefly at the characteristics of fascism or totalitarianism. let us look briefly at the characteristics of fascism or totalitarianism

as we see them today.

I wish to list some of these characteristics as I observe them in foreign countries. I list them without any intent of giving them in their order of importance at all. I am in a way only collecting my experimental data.

(1) The Fascist states that he believes in law and order. Of course, we all believe in law and order. But the Fascist objects to the democratic disorder that comes from people having different and conflicting ideas. He is anxious to get rid of this disorder and make everybody agree. This is his definition of law and order. Please note that many people have hailed the dictatorship of France under Daladier in the name of law and order.

(2) The Fascist suppresses the human freedoms that are guaranteed to us in the Bill of Pights of the Constitution, the profest

anteed to us in the Bill of Rights of the Constitution—the right of free assembly, the right of free speech, the right of free press, the right of trial by jury, and the right of being unmolested in our homes. All of these are suppressed in the totalitarian governments. Whenever they appear in our own country to that extent there is a similarity between their actions and the actions of our fellow citizens and our governments and the governments of the fellow citizens and our governments and the governments of the totalitarian states.

(3) The Fascist suppresses all organizations except his own. In particular he first outlaws all labor organizations. Perhaps the

C. I. O. and the A. F. of L. do not always behave in a purely democratic and altruistic fashion Sometimes I think there are cases when they do not, but I am nevertheless very suspicious of anyone who would completely abolish and hamper these organizations. Undoubtedly part of the alien bills are intended for this very object. It would be difficult for a labor organization having some

foreigners in its organization to engage in lobbying activities in Washington. To that extent we are certainly dealing with fascism. Moreover fascism advocates the total abolition of all religious and youth organizations, except its own. This primarily is done not because they object to religion but because they object to any organization where the members might freely discuss their ideas. A dictatorship must be totalitarian and can have no objectors what-

(4) The Fascist oppresses minorities. He, of course, claims to have a solution to all the ills which are plaguing the entire civilized world at the present time. Of course he has not and it is necessary for him to load the blame of that failure upon some minority. Moreover there are latent in people a very sadistic persecution complex, and by allowing his followers to give vent to this persecution complex he is able to mold them to his own objectives. In Germany we have seen the Jews and intellectuals and, to a lesser degree, the Christian sects persecuted. In Italy we see the intellectuals, and I am told, the Protestants oppressed. These antialien bills show that certain men in our Government are willing to use the foreigner as the scapegoat. The foreigner is entirely too minor a problem in this country to be worth considering for himself. I might mention that Father Coughlin's particular variety of totalitarianism has picked upon the Jew for his minority, and was not there some difficulty about Marian Anderson in this

city a short time ago?

(5) The totalitarian is intensely nationalistic. It is usually 100-percent Americans who perhaps are the most dangerous citizens. The Fascist includes in his selfishness not only himself but extends his intense feeling to his nation. He is interested in seeing that his nation succeeds beyond all others. He would like to see his so-called race populate the earth. This makes the existence of other independent states intolerable to him. It makes necessary

other independent states intolerable to him. It makes necessary the deceitful foreign policy of totalitarianism.

(6) He openly states that his object is to save the country from communism. It was under this slogan that fascism came to Italy, that national socialism came to Germany, that Franco came to Spain. It is perhaps difficult for us to know how great the Communist danger was in any of these countries at the time that fascism arose. In my mind, at least, the cure is at least as bad as the disease. I can see little difference in what happens in these three countries and what happens fundamentally in Russia. But at this point I am only pointing out the strategy under which But at this point I am only pointing out the strategy under which all these things are done; that is, saving the country from communism.

communism.

The United States was inoculated with the theory of communism approximately 20 years ago. Surely this country has come to a state of immunity from this particular "ism." It is impossible for the Communist Party to maintain its position on the voting ticket in New York State, because they are not able to muster as much as 50,000 votes. Nevertheless, many are saying that we must save the country from communism. Of course, if we do not have any out-and-out communistic scapegoat in this country or if we have no Socialists, we turn next to the Democountry, or if we have no Socialists, we turn next to the Demo-cratic Party, where the charge will be made that the President of the United States or the First Lady of the land are outstanding Communists

I can only say that people who engage in this sort of propaganda are following exactly the same pattern as those countries abroad who have followed the national socialistic or Fascist pattern, and I think they are to be looked at with caution, especially when they

think they are to be looked at with caution, especially when they appear in high offices in our Government.

(7) If one finally realizes that perhaps a man is a Fascist or a National Socialist or totalitarian then of course we must realize that he does not tell the truth. When one first suspects Fascist propaganda of being untruthful it becomes immediately obvious that it is a complete lie. These bills which we have been discussing here represent to my mind the very height of that propaganda. The basis upon which they are reached cannot possibly stand in the light of day. As speakers in this very conference have shown the number of aliens in the United States is entirely too small to be worthy of the slightest consideration at all. And furthermore the existing immigration and deportation laws of the furthermore the existing immigration and deportation laws of the United States and the Criminal Code of the United States is quite adequate to take care of the situation. Hence their objectives must be other than the avowed ones.

I invite you to look over our leaders in high positions in the United States Government in the light of these few superficial characteristics that I have listed. I think you must conclude that the Fascist-Nazi philosophy has penetrated into the Government of the United States to an extent far beyond any such penetration by the so-called Communist type of totalitarianism. We, as citizens of the United States, have a right to question the motives of people in Congress who have introduced this list of 70 bills, at least until the bills are passed and signed by the President.

In closing I should like to express my profound confidence in the United States and its people. Whenever things of this sort have come up in the past they have slowly been brought to the light of day and have been defeated. I only need to mention the organization known as the Knights of the Ku Klux Klan. It still exists in the United States, but its effect is negligible. The work of this con-

ference will also bring to public attention motives behind these bills

and the people of the United States will defeat them, I am sure.

Just a word to the admirers of Hitler, Mussolini, Franco, and Stalin. You always picture yourself as he who rides at the top. You always see yourself as the oppressor, not as the oppressed. You will rule, have the riches, have freedom. But the wheel of fate is treacherous. You may be in the labor battalion, the concentration camp, the one excluded from employment. But will you heed this warning? Not at all. You are so self-centered that you see nothing outside of your own importance. You are so short-sighted that you see nothing a year ahead and cannot think of your children and their children, just as you cannot remember that you are an alien yourself and probably have not a drop of pure American Indian blood in veins.

It is we who must protect these institutions for you and yours. Pardon our obvious irritation toward you and your short-sighted.

deceitful, and selfish activities.

Government Spending and the National Debt

EXTENSION OF REMARKS

HON. H. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Wednesday, May 24 (legislative day of Friday, May 19), 1939

RADIO ADDRESS BY HON. ARTHUR H. VANDENBERG, OF MICHIGAN, MAY 21, 1939

Mr. BRIDGES. Mr. President, I ask unanimous consent that there be inserted in the Appendix of the RECORD an address by the very able senior Senator from Michigan [Mr. VANDENBERG] over the Mutual Broadcasting System during the American Forum of the Air program on Sunday, May 21,

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

I discuss Government spending and the national debt. I discuss Government spending and the national debt. I shall do it without burdening you with detailed statistics. But I shall give you a few general figures which ought to jolt any thoughtful citizen—unless he be Ponzi-minded—into a realization that our Santa Claus spenders are pushing us too close to bankruptcy for safety or comfort. Simple arithmetic is the same under any kind of a "deal"—old, new, raw, or square. You can be ever so bighearted and social-minded and generous with other people's money, but unless you keep your arithmetic straight, your sweet intentions won't save you from disaster. I quote Franklin D. Roosevelt, on July 30, 1932, when he was campaigning for President on the promise he would reduce Government expenditures 25 percent, if I may be pardoned that poignant reminiscence. Said Mr. Roosevelt:

Roosevelt:

"Any government like any family can for a year spend a little more than it earns; but you and I know that a continuation of that habit means the poorhouse."

The Federal Government has continued that habit for 9 un-

interrupted years; and now—attempting to make a virtue of necessity—we are engaged in an amazing effort, deliberately and consciously, to stretch an annual national income of \$60,000,000,000 into an annual national income of \$30,000,000,000,000 by spending the difference. This administration has deliberately and consciously chosen what the President himself described as the poorhouse route—and we are now so intent upon a pell-mell journey to the end of this road that the Senate this week added \$375,000,000 of extrabudgetary appropriations to the agricultural bill without even hesitating for roll calls en route. It is the folly of the ages. It either leads to bankruptcy or to the equally suicidal jeopardy of an inflation which will destroy the purchasing power of our money precisely as it did in the German Republic 15 years ago when 100,000,000 marks were stabilized on the basis of about 1 new

We are now "spending" at the rate of \$10,000,000,000 a year. Our operating deficit will be about \$4,000,000,000 this year. It will be the ninth heavy deficit in a row. The national debt this month crossed the \$40,000,000,000 line. This does not include at least crossed the \$40,000,000,000 line. This does not include at least four additional billions of contingent liability which we have guaranteed. Oh yes, there are some offsetting assets which will provide partially compensating credits. But the fact remains that we are paying about \$15,000 a minute out of the Treasury, day and night, while we are taking in only about \$8,000 a minute, and the gap constantly widens. No amount of wishful camouflage can hide this fateful trend. In spite of all the Pollyanna nonsense that we can spend ourselves into prosperity, the nagging voice of common sense whispers a sinister warning to us that we had better get off these skids before it is too late. The American people themselves sense it, as demonstrated by the Gallup polls, each one of which shows a progressively increasing public animosity to these prodigal expenditures.

The total cost of government in 1937-National, State, and localwas seventeen and one-half billion dollars. That is equivalent to the total annual income enjoyed that same year by all the people in 21 States west of the Mississippi River. Think of it! The total income of that great group of States only equals the total bill for government—and the bill still grows. How much longer can that enormous nonproductive absorption of the national income con-

In 1913 the cost of all government in the United States was \$34 per family. Now it is \$540 per family. And Washington sets the pace. Listen! If we were to confiscate every dollar of every American income in excess of \$5,000, it would not pay the bill for the Federal Government alone this year!

the Federal Government alone this year!

These enormous expenditures produce an ever-mounting debt which charges today's bills to the generations of tomorrow. We mortgage the birthright of tomorrow's youth. Meanwhile, we build up enormous carrying charges for ourselves. The annual interest charges alone are reaching a point where they equal what was the whole Federal Budget in prewar days. The Greeks had an epigram that "debts turn free men into slaves." But we need revert to none of this ancient wisdom out of a "horse-and-buggy age." We can rest upon modernistic authority. In his great retrenchment message of March 10, 1933, President Roosevelt said:

"Most liberal governments are wrecked on the rocks of loose fiscal policy, and we must avoid this danger."

most interar governments are wreated on the rocks of loose liced policy, and we must avoid this danger."

He was right; and the best proof lies in the fact that by courageously following a policy of hard economy during the first 4 months of his administration he got more economic recovery for this country than was ever registered in like time in the history of this country than was ever registered in like time in the history of any other land in any other time. Then something happened, and it has been happening ever since. Indeed, we now are told that deficit spending is actually the road to economic recovery. Well, we get the "spending," but we do not get the "recovery." As a matter of fact, the "spending" and the "debts" are two of the reasons why we do not get recovery.

Solvency and confidence were the keys to recovery during those first 120 days. They are still the keys today. The tragedy of it is that the keys seem to have been deliberately thrown away. The necessity is to find them and put them to use once more.

How can business thrive, how can it make a long-range plan for expansion and development, how can it substantially contribute to reemployment, when the public credit is in jeopardy? Increasing debts and increasing deficit spending inevitably lead to a Federal need for greater revenues—though we are now paying the highest peacetime taxes in our experience. Greater revenues mean greater taxes; and greater taxes fall primarily on business, although finally

peacetime taxes in our experience. Greater revenues mean greater taxes; and greater taxes fall primarily on business, although finally they must be paid, as President Roosevelt has said, in the "sweat of the brow of every man who toils." There is much discussion in congressional circles about reducing taxes as an encouragement to business. But how can you reduce taxes and increase appropriations simultaneously? How can you hope to stimulate business with a prospect of easier tax burdens when you paralyze business with the contemplation of an ever-mounting expenditure and an ever-mounting debt? It just doesn't make sense.

with the contemplation of an ever-increasing expenditure and an ever-mounting debt? It just doesn't make sense.

The only other alternative would be another Houdini manipulation of the value of the dollar under dangerous, floating powers still lingering in the White House. But that prospect is as terrifying to business as the other. Take either horn of the dilemma. Business and recovery are the victims. So are 12,000,000 unemployed. And so are the other 110,000,000 Americans who are still struggling to "carry on."

"Oh," but they say, "you cannot possibly balance the Budget today; where and how would you do it?"

Let's be entirely frank about it. I do not believe that anybody could actually balance the Federal Budget this year or next. We have created too many new instrumentalities of government, many of which are sound in principle and which the people would not permit to be abandoned. But we can stop the creation of new

of which are sound in principle and which the people would not permit to be abandoned. But we can stop the creation of new instrumentalities where we are. We can quit making new ones until we have caught up with the bills for those now existing. We can stop creating new Federal subsidies until we have found a way to pay for those created heretofore. We can postpone every new governmental enterprise not immediately essential and provably indispensable. We can clean house, wherever possible, in respect to existing undertakings. We can rip politics out of pay rolls. We can once more put a horizontal reduction on all Federal salaries in the higher brackets. We can quit boondoggling. We can substantially tighten up in all directions if the official tempo and the official pattern are to see how much we may save rather than how official pattern are to see how much we may save rather than how much we can spend.

An evidence of a real will to thrift, an evidence of a dependable conservation purpose will go far toward anticipating the solvency and stimulating the confidence which this national crisis so badly and stimulating the conneence which this national crisis so badly needs, and which will precipitate wholesome recovery. Those to whom we are voting large benefits certainly would prefer to get their living out of recuperated business than out of an empty treasury. There is no final advantage for anybody out of Federal services and subsidies if we destroy a solvent society and a sound economy in which to enjoy them. At the moment we are trying to make a still nurse out of a sow's examined it just can't be done.

make a silk purse out of a sow's ear—and it just can't be done.

The spending that is necessary in this country to restore business—and jobs—is private spending, not public spending. From

1919 to 1929 there was spent in this country for durable goods and privately financed construction alone a total of \$210,000,000,000, or an average of \$19,000,000,000 a year. But from 1932 to 1935 this figure dropped to less than five billions a year—and there we linger. It is a loss of something like \$15,000,000,000 a year. Public deficit It is a loss of something like \$15,000,000,000 a year. Public deficit spending, even at the alarming rate of four billions a year, cannot possibly be a substitute. There is no substitute. Furthermore, this public deficit spending is pretty generally conceded to discourage private investment and private enterprise. Our net deficit from 1931 to 1938 actually totaled more than all the deficits of all the other major nations of all the world combined for the same period. But it did not bring back the private spending of the Nation's enterprisers, the Nation's investors, and the Nation's plant managers. That requires a type of basic confidence which is not

Nation's enterprisers, the Nation's investors, and the Nation's plant managers. That requires a type of basic confidence which is not induced by the spectacle of an improvident government. For this and other reasons the United States stands at the bottom of the list among the 20 leading industrial nations of the world in degree of recovery between 1929 and 1938, according to the League of Nations charts. And that bespeaks the great stake which the unemployed themselves have in every effort to bring Federal income and outgo at least within speaking distance of each other.

This word in conclusion: It is infinitely easier and more enjoyable for public officials to spend than to save. The favorite formula of the Congressman who wants to stay indefinitely in public life is to vote in favor of all appropriations and against all taxes. But there comes a day of reckoning. It confronts the people and the Government of the United States tonight. We cannot much longer go on as we are. We must leave the road to ruin while there is yet time. If what the President said on March 10, 1933, was true, then it is emphatically more true now in the aftermath of the most then it is emphatically more true now in the aftermath of the most colossal spending spree in all recorded history: "Most liberal govern-ments are wrecked on the rocks of loose fiscal policy; we must avoid

this danger."

Silver Jubilee of the Missouri Farmers' Association

EXTENSION OF REMARKS

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1939

Mr. CANNON of Missouri. Mr. Speaker, we have just celebrated in Missouri an event of significance and importance to the entire Nation-the twenty-fifth anniversary of the organization of the Missouri Farmers' Association. On March 10, 1914, in a lonely little country schoolhouse, seven farmers met and organized the first Farm Club, and with the zeal of apostolic missionaries initiated a crusade that in 25 short years has developed the most successful and most powerful cooperative farm organization to be found in any State of the Union. On March 10, in commemoration of its founding, and its quarter century of service to the farmer and the country, thousands of members of the M. F. A., and their families, assembled in towns and rural schools throughout the State to celebrate their silver jubilee and listen to an address by William Hirth, founder of the association, over a Nation-wide broadcast.

The founding of the Missouri Farmers' Association marks a milestone in the history of cooperative farm organization. Its story reads like a romance. Beginning with seven members and no tangible resources, it has dotted the State with clubs, exchanges, filling stations, warehouses, and grain elevators. It has established selling agencies, creameries, processing plants, mills, truck routes, shipping associations, stockyards, and commission companies. It maintains representatives in the Chicago and New York markets and memberships on the St. Louis and Kansas City Boards of Trade. It markets farm commodities, including grain, livestock, poultry, and dairy products, and purchases farm supplies, involving an annual turn-over in excess of \$60,000,000 a year. It has made economic and legislative history, increased the farm income, lowered costs of production, and materially advanced standards of living both on the farm and in business communities dependent on farm patronage.

At a time when every buying and selling agency with which the farmer has to deal is highly organized, and farm organization is imperative if agriculture is to maintain its place

LXXXIV-App-

with other industries—when "the butcher, the baker, and the candlestick maker" are organized and the farmer must organize in self-defense—the Missouri Farmers' Association and its auxiliaries, the Women's Progressive Farm Association and the Junior Farmers' Association, are filling that need with remarkable thoroughness and efficiency.

The M. F. A. is essentially democratic. Through it the farmers are "doing the job themselves." Each club elects its own officers, and each activity is managed by a board which selects its manager and supervises its operations, and the State organization is administered by officers and executive committees elected at annual conventions.

The M. F. A. is a business success. Each year the local units are audited and "melon cuttings" are held at which patronage dividend checks are distributed to M. F. A. customers. During the quarter century of its existence the association has paid out large sums in dividends, not including the millions of dollars it has brought its members through increased prices for farm products and savings in the purchase of farm supplies. It is in that respect a convincing example of how successfully farm cooperation can be carried Through M. F. A. agencies its members are assured at least 1 or 2 cents more per dozen for their eggs, and much more per pound on poultry. Its creameries and milk plants have forced a constantly narrowing margin on cream as between the local and central market price. Its grain elevators are handling grain on a far less margin per bushel than the old-line grain elevators formerly charged, saving hundreds of thousands of dollars on this one item alone. Its livestock shipping associations have saved farmers from 50 cents to \$2.50 per hundred on livestock, running literally into millions during the past 20 years, without taking into account approximately \$2,000,000 saved in commissions by the M. F. A. livestock commission companies on the terminal markets. And the savings made on farm supplies, such as flour, feed, fertilizer, twine, fence, tankage, and so forth, runs into a staggering amount. In short, the Missouri Farmers' Association is demonstrating conclusively how successfully cooperative agriculture can operate when properly organized and administered.

The M. F. A. is also demonstrating effectively the power of organized agriculture in another important direction. Through its impartial, nonpartisan interest in legislation, it has become a power for honest government in the county court, the State legislature, and the National Congress. Mr. Hirth, more than any other one man, was responsible for the drafting of the McNary-Haugen bill. As chairman of the powerful Corn Belt committee, composed of farm leaders throughout the Central States, he secured the passage by heavy majorities in both House and Senate of this widely debated measure, which but for its veto by the President would have assured the farmer the home market, saved farm prices, and prevented the depression which inevitably followed when the farmer could no longer buy the products of industry and labor.

At Jefferson City the M. F. A. supplied the support required to pass the 1931 school law under which farm boys and girls attend high school free of tuition. It was one of the deciding factors in eliminating the sales tax of 2 percent on feed, thereby saving the Missouri farmer \$1 every time he buys \$50 worth of feed. It prevented the enactment of the State soil conservation districts law in both the fifty-ninth and sixtieth general assemblies. It compelled the enactment of a State income tax law, forced the passage of the county budget law, and sponsored the law requiring examination of county records by State auditors under which more than a million dollars in shortages has been uncovered. It saved huge sums and enforced economical government through two constitutional amendments, giving the Governor authority to veto portions of appropriation bills, and limiting the number of legislative clerks. It has just defeated the attempt of St. Louis and Kansas City to "redistribute" the school funds and deprive the rural schools of hundreds of thousands of dollars in free tuition and transportation for rural high school students.

The M. F. A. paper, the Missouri Farmer, is more than an official organ. It carries in each issue a highly diversified menu, literary, political, professional, and cultural. While it emphasizes the legislative and administrative interests of agriculture and provides practical and authoritative technical advice and information applicable to the everyday problems of the farm, it also supplies something of personal interest for every reader, and its "After-Thoughts" series, by Mr. Hirth, carry a deep philosophy and a human interest which make the Missouri Farmer one of the distinctive journals of the day.

Let me quote one of these paragraphs from the last issue: Granting that life on the farm has been a rather thankless task during recent times, cannot the average farmer hold body and soul together more easily than those who live in the cities with their idle millions? Nobody can tell what the future has in store for our beloved Nation, but come what may agriculture will remain the chief source of its new wealth, and thus if I were a young man starting out I would take my chances on the farm, and in so doing I would resolve to become a good farmer in all the term implies. After all, while farm life is no rose-bordered path, does it not also have its deep satisfactions? Of course, there are lean years, but also fat ones. There are heartless prices, but it's a long road that has no turn. So ponder deeply, my friends, ere you turn your back on the farm where Bobwhite greets you morning and night.

The Missouri Farmer is edited by H. E. Klinefelter, who previously served as secretary of the outstanding Franklin County Farmers Association for 7 years and has recently been succeeded in that position by Joseph H. Jasper, a worthy successor. I speak advisedly when I say it is, in my opinion, the best and most practical farm paper in America today.

No reference to the Missouri Farmers' Association would be complete without mention of some of the able men who have contributed to its growth and progress, such as R. J. Rosier, of Columbia, State secretary; Joseph G. Goeke, business manager of the official paper; Henry J. Rapps, of Union; Charles Maeger, of St. Genevieve; O. C. Lynch, of Catawissa; Maurice Maze, of Washington; Ed. Jaspering, of Truesdale; Herman F. Hetlage, of Wright City; John W. Kreutzer, of Owensville; H. J. Bucker, of Rhineland; Walter W. Bruens, of Hermann; Miss Elizabeth Gibson, of Bourbon; Frank Duebbert, of St. Elizabeth; James M. Boston, of Gerald; Urban Mueller, of Wentzville; and John G. Lynch, of Catawissa. And if my colleagues who so often express an interest in the M. F. A. as a model cooperative organization ever visit Missouri and desire to see a model exchange I recommend them to the exchange at St. James under the management of W. S. Miller, Mr. Miller, like F. L. Cuno, of Union, who has been fighting the battles of organized agriculture a lifetime, was one of the earliest pioneers in the association, and has recently rebuilt at St. James an exchange which is regarded by those competent to judge as the last word in cooperative plant, staff, and management.

But the incredible story of the origin and achievements of this great farm organization, with its purposes and program for the future, are best told by the founder himself. Speaking from station XERA on the night of its twenty-fifth anniversary, Mr. Hirth said:

Twenty-five years ago tonight, upon the initiative of Aaron Bachtel, seven farmers met in the little Newcomer schoolhouse in Chariton, County, Mo., and organized the first farm club. Some days before I had sent a general letter of suggestions to Mr. Bachtel, pointing out the kind of an organization I thought we should build, and after this statement had been read to the little crowd, the constitution and by-laws which I had supplied, were adopted. In this modest way began the most practical and powerful farm organization that has ever existed in any State in the United States, and I have often thought that there was something prophetic in the fact that it had its birth in a little rural schoolhouse called "Newcomer," for the farm-club movement was indeed destined to be a "new comer" among the farm organizations of

the country, and how truly this illustrated the old saying that

"great caks from small acorns grow."

Little did that small group of farmers realize as they sat beneath the faint glow of coal-oil lamps 25 years ago tonight that they were about to make a substantial contribution to the rural life of America. How dumbfounded they would have been if at the con-clusion of their deliberations there had been a knock at the door, and if upon opening it a stranger had entered and had said, "You have made history here tonight—you have launched a farm organization that in a few years from now will have millions of dollars invested in its hundreds of marketing agencies which will be scattered from the Iowa line to Arkansas; an organization that will establish its own sales agencies for poultry and dairy products in Chicago and New York, that will have membership on the St. Louis and Kansas City Boards of Trade, and its own or jointly controlled cooperative livestock commission companies at the great controlled cooperative livestock commission companies at the great corn Belt stockyards—that in the years to come will not only save its members and other farmers millions of dollars in the marketing of grain, livestock, poultry, and dairy products, and in the purchase of farm supplies, but whose yearly business activities will exceed those of the largest private corporations in St. Louis or Kansas City; that, with a yearly turn-over in excess of \$60,000,000, will become the biggest business in Missouri." And then he might have added, "And in time this organization will also become the prester influence for sound governmental policies Missouri has greatest influence for sound governmental policies Missouri has ever known.'

Not only would the little group of farmers who were assembled Not only would the little group of farmers who were assembled in the Newcomer schoolhouse 25 years ago tonight have regarded these prophecies of the stranger with amazement, but recovering from their astonishment they would have looked at each other, and said, "Impossible—a fairy tale!" And this illustrates the old saying that "Truth is stranger than fiction." Great events are rarely ever preceded by heralds—when one night back in 1773 a band of patriots disguised as Indians staged the Boston Tea Party, little did they dream that in this protest against taxation without representation they were initiating forces that a few years later would cause tation they were initiating forces that a few years later would cause a great revolution, and that out of that revolution would emerge the greatest Republic civilization had ever known. And so when on the cold morning of February 12, 1809, the word spread among the hill folks of Hardin County, Ky., that there was a new baby boy down at Tom Lincoln's cabin, who would have believed that in the after years this little "hillbilly" would free 3,000,000 slaves, and become the most beloved American?

THE OBJECTIVES OF THE M. F. A.

I know that there is pride in the hearts of the thousands of men and women, and farm boys and girls, who are listening to me tonight up in Missouri—pride in the part you have had in making the Missouri Farmers' Association the great organization that it is, and how I wish that time would permit me to recite the dramatic story of the M. F. A. with its mixture of victories and heartaches. But since my time is limited, all I can do is to impress upon you the things that have made the M. F. A. outstanding among the farm organizations of the Nation—why it is that during the tragic depression years the M. F. A. has grown stronger year after year, while many other farm organizations have given up the ghost. When I formulated the plans for the M. F. A., I had three great objectives in mind, and time has proven that they were sound.

First, I believed that the overwhelming objective of any worthwhile farm organization should be to market the things the men and women, and farm boys and girls, who are listening to me

while farm organization should be to market the things the farmer produces through farmer owned and controlled agencies, farmer produces through farmer owned and controlled agencies, not only to eliminate the middleman's profit, but because if farmers ever expect to have anything to say about what they shall receive for the products of their toil, they must retain control of these products from the farm to our great consuming centers. Undoubtedly the many thousands of carloads of poultry and dairy products which the M. F. A. has marketed in the big Atlantic seaboard cities during the last 20 years have put millions of dollars into the pockets of our members, and other farmers, which they would not have received if these products had been marketed through the old private channels. A private dealer usually exacts as much profit on the farm products he handles when prices are low as when they are high, and therefore when farmers market their own products they not only save the dealer's profit, but they place themselves in position to wield an influence for better prices in the central markets. And so through the for better prices in the central markets. And so through the years our hundreds of elevators and exchanges have likewise years our hundreds of elevators and exchanges have likewise saved our members and other farmers millions of dollars in the purchase of feed, flour, wire, fertilizer, binder twine, automobile tires, and other farm supplies. The M. F. A. has never made war upon private merchants as such—as a practical business proposition, we took the position years ago that farmers should market the products of their toil through their own agencies for the receiver. reasons I have mentioned, and likewise merchandise the leading farm supplies. When farmers can do this business at actual cost, why should they support a dozen or so private dealers in the average rural town?

THE PRICE INFLUENCE OF OUR EXCHANGES

The fact that each year we return to our members hundreds of thousands of dollars in earnings shows that farmers can do their own marketing and make big money in so doing. Here and there

our members complain because a certain exchange isn't paying patronage dividends at the year's end; and while, of course, this is highly desirable, on the other hand, in the more than 300 towns in which we operate exchanges I don't believe that we have an agency that doesn't during a year's time save the surrounding farmers its that doesn't during a year's time save the surrounding farmers its capital stock in compelling a better price on what they have to sell and in a lower price on farm supplies; and in proof, now and then when one of our exchanges closed its doors—and only a very few have closed—and the private dealers once more had things in their own hands, the price of eggs, poultry, and cream immediately went down, while the price of feed and other farm supplies advanced. Meanwhile we haven't an exchange in the State that couldn't pay a good patronage dividend at the year's end if all the farmers within its trade district gave it 100-percent support, and to bring about this kind of a situation within each of our trade districts is the overwhelming appeal I want to make to you tourish. bring about this kind of a situation within each of our trade districts is the overwhelming appeal I want to make to you tonight. Out of my long experience in the farm movement—and I have seen many farm leaders come and go—I want to say to you that, in my opinion, there never has been and there never will be a sounder plan than that of the M. F. A., and the keystone of this plan is that in every community the farmers shall own and operate an agency through which they can market their products, and merchandise the leading farm supplies, and there isn't a farming community in the United States in which, with intelligent management, they cannot do this with substantial profit to themselves; in a State-wide sense, these profits in any State will run into hundreds of thousands of dollars annually, while in a Nation-wide sense they will run into many millions. For 150 years the farmers of this country have made a good living for tens of the farmers of this country have made a good living for tens of thousands of private dealers who marketed the things they produced and who sold them farm supplies, and why should we con-

tinue to do this?

If today there existed an organization like ours in every farming State, not only would the aggregate savings in buying and selling run into many millions of dollars but the higher prices we could compel in our central markets on farm commodities would run into compel in our central markets on farm commodities would run into hundreds of millions of dollars. More than that, with a great organization like the M. F. A. in every State, we would be in position to demand of Congress a farm bill that would assure farm prices in our home markets based on the cost of production, plus a reasonable profit Verily, what a God's blessing it would be to American agriculture if the farmers of other States would build organizations like the M. F. A., and let us hope the time is not far distort when they will. far distant when they will.

TIME TO "FINISH THE JOB"

Meanwhile, we must finish the job we so ably and wisely began 5 years ago, and by this I mean that starting tonight we must nell our coats for a 100-percent membership as near as this is possible in every trade district in which we operate an elevator or exchange. In sending out his first appeal, Mr. Rosier suggested exchange. In sending out his first appeal, Mr. Rosier suggested that on this jubilee night our local leaders and members should be able to report not less than 5,000 new members, but I will be deeply disappointed if you do not report at least 10,000. But the overwhelming appeal I make to you tonight is that during the next week or so you will resolve to see how near you can make our membership 100 percent in each trade district, and since this will place practically all our elevators and exchanges in position to pay a substantial patronage dividend at the year's end, could you possibly put in a few days more profitably? Where we now have an elevator or exchange that is paying its operating expenses with the patronage of 60 percent of the farmers in its trade district, could it not "cut a melon" at the year's end if it had the patronage of 75 or 80 percent of the surrounding farmers?

We have done a magnificent job up to this time, but we haven't

We have done a magnificent job up to this time, but we haven't finished the job—we need to convince the farmers who are outside our association that if it will pay 60% of the farmers of a community to cooperate it will pay 80 or 90% of them much better, and there are thousands of farmers in Missouri who are ready to join the M. F. A. if only we will make this appeal to them face to face. There M. F. A. if only we will make this appeal to them face to face. There are many young farmers just starting on their own to whom we cld members should patiently explain the M. F. A. Because these young men will be the leaders of tomorrow, let's fit them for the job! What we members of the M. F. A. must realize is that our association can become no greater than we make it—that as farmers we are our "brother's keeper," and that in helping them to see the light we will be able to reap a richer reward ourselves. Never have industry and labor been as powerfully organized as they are today, and unless we are willing to take a few days off and bring our neighbors into the fold, have we much right to complain about being the "underdogy"? Therefore I hope that before your meeting our neighbors into the fold, have we much right to complain about being the "underdog"? Therefore I hope that before your meeting ends tonight you will appoint a committee of from three to five good members who, during the next week or so, will resolve to make your trade district as nearly 100 percent as possible, and Mr. Rosier will gladly send you literature to help out. We have built the greatest farm organization in the Nation, but we haven't finished the job—let's resolve to finish it tonight, and thus set an example for the farmers of the entire Nation!

THE M. F. A. AND SOUND GOVERNMENT

My second objective in planning the M. F. A. was to make it a power for good government, and during recent years we have successfully sponsored legislation and constitutional amendments

that have saved farmers and other taxpayers millions of dollars, and which have otherwise initiated sound policies of government. I do them no injustice when I say that during recent years the M. F. A. has been a much greater power for good government in our State than have the great chambers of commerce in St. Louis and Kansas City, and this should fill the hearts of our men and women with pride. Ordinarily the politicians look upon a farm organization with contempt, but this is not true of the M. F. A.—not only do they respect the clear vision of our leaders, but they know that our thousands of members have learned how to reward and punish at the ballot box, and how wonderful it to reward and punish at the ballot box, and how wonderful it would be if in each State farmers had a great organization of this kind. In recent radio addresses I have called attention to the raid which St. Louis and Kansas City are trying to make upon the funds of our rural schools, and, needless to say, we will fight this selfish effort to the last ditch.

A HAPPIER RURAL LIFE

My third objective was that through the M. F. A. we should make rural life more interesting, and in this field the thousands of fine farm women who belong to the W. P. F. A. and the bright boys and girls who belong to the junior farm clubs are making a wonderful contribution. In my opinion, the W. P. F. A. is the finest organization of farm women in the United States, and every farm woman in Missouri should belong to it. One of the crying needs of rural life in America is that we shall put more joy into the lives of our farm women and children and "where crying needs of rural life in America is that we shall put more joy into the lives of our farm women and children, and "where there is a will there is a way." For years our annual conventions have been the largest and most colorful farm gatherings in the Nation, and each year this interest grows. As famous speakers from other States have looked out upon these vast audiences and heard them sing "America" or swing into a beautiful old-time hymn, I have often seen their eyes fill with tears as they gazed upon this beautiful and inspiring spectacle. We must not only make the farmer's toil yield him a decent living, but we must make farm life itself happier.

FARMERS BULWARK OF OUR NATION

Reaching back 200 years or more, the men and women of the farm have been the true bulwark of our mighty Nation, and in this hour when strange foreign isms are being preached within our midst, they are more than ever before the true anchorage of the Republic as the fathers conceived it. When finally the tyranny of Great Britain became intolerable, it was the "embattled farmers" who repropuled to the midnight can of Paul Revers and who on the more Britain became intolerable, it was the "embattled farmers" who responded to the midnight cry of Paul Revere, and who, on the morning of April 19, 1775, fired at Concord Bridge the "shot heard round the world"; and so as on Christmas eve during the bleak winter of 1777, Washington stole out into the stillness of the night at Valley Forge and prayed out of the depths of his great heart that the struggle for liberty might not be in vain, his chief reliance was upon a tattered and half starved army made up almost wholly of farmers, many of whom left their crimson footprints upon the snow, and when finally Lord Cornwallis was compelled to surrender his and when finally Lord Cornwallis was compelled to surrender his sword at Yorktown, it was because of the unconquerable spirit of these lion-hearted farmers who were willing to die, to the end that their children and their children's children might live in a land where they were free to worship God as they wished, and, as free men, work out their common destiny. And so in the after years it was the sons and daughters of these soldiers of the Revolution who built their log cabins farther and farther into the wilderness, and who, braving the treachery of the Indians, and the heartaches and hardships of pioneer life, built deep and strong the foundations of the Republic; and so as the years have passed, the most of our Presidents first saw the light of day in humble farm homes, and this has likewise been true of the most of our great Governors and Senators, and "captains of industry." Had Abraham Lincoln been born in one of our great cities and spent his boyhood amid its grime and roar. I do not believe that he would have become the most beloved American—it was in God's great out-of-doors, and amidst poverty and hardship, that his great heart and mind developed qualities of tenderness and leadership that will make him immortal as long as civilization endures.

OUR CHIEF DANGER FROM WITHIN

In this dread hour, when the centuries-old civilization of Europe seems on the brink of collapse, more than ever before the preservation of constitutional government in the United States depends not upon the millions who are huddled together in our great cities, and who so readily listen to strange doctrines of government, but upon the millions of farm men and women who have never demanded special privileges for themselves, but who ask only that other groups shall do unto them as they would be done by. My fear for the perpetuity of our Republic springs not from by. My fear for the perpetuity of our Republic springs not from the aggression of European dictators who are trampling underfoot the laws of God and humanity, but from enemies from within who are poisoning the minds of our people against our democratic institutions. The millions of the farm believe deeply in the rights of private property, and those other guaranties of the Constitution, which, through the years, have made ours the greatest government in the world. But if our farmers are to remain the bulwark of the Republic in the days to come, then it is high time that Congress assured them of "economic equality," and by this I mean prices for the products of their toil in our home markets that will afford them a decent living, and otherwise their share of human happiness. No class of people can remain self-respecting citizens who are not given an opportunity to own debt-free homes, and to give their children a fair chance in life.

When Roosevelt became a candidate for President in 1932 he promised the farmers of the United States economic equality, but after 6 long years this pledge still remains unredeemed. My voice went out for him over the big radio stations of the Corn Belt both in 1932 and in 1936, and knowing him as I do, I do not doubt his sympathy for the farmer. But there is an old saying that "handsome is as handsome does," and with less than 2 years more to serve, the time has come when there is no time to lose if he ever expects to make good his pledge to the millions of the farm. What expects to make good his pledge to the millions of the farm. What our farmers want is not shots in the arm out of the Federal Treasury under the guise of soil conservation and crop loans but fair ury under the guise of soil conservation and crop loans but fair prices in our home markets—and if the workers in our cities are entitled to an American living standard, are not the farmer and his wife and children entitled to such a standard also? In a conference with the President last spring, I told him that in my opinion there was not the slightest chance to get the idle millions in the cities back to work except through the vigorously restored buying power of our farmers, for this alone can start our mills and factories to roaring. I am willing to let the future decide whether this view is sound or not.

Under the Wallace farm policies, the promise of economic equality for the farmer has become a ghastly farce—yea, under these policies

for the wallace farm policies, the promise of economic equality for the farmer has become a ghastly farce—yea, under these policies our farmers are more and more being told what they may or may not do, and what does this mean? It means the "nationalization" of American agriculture at the hands of the most arrogant and power-American agriculture at the hands of the most arrogant and powerful bureaucracy the Nation's capital has ever known, and will the farmers of this country much longer submit to such dictation? In my opinion, if they do, then they are unworthy descendants of the lion-hearted farmers of the yesterdays who made the Republic possible, and out of whose sweat in bygone years has come the lion's share of our Nation's wealth. Therefore, in this fateful hour we must give increased power to the M. F. A.—let us make this jubilee night a new milepost in the history of our great association, and in closing let me plead with the formers of other States who are listen. closing, let me plead with the farmers of other States who are listening in that they follow in our footsteps. I have made the long trip down here to get access to a radio station powerful enough to reach the thousands who are celebrating jubilee night back in my beloved Missouri. I hope my long pilgrimage has not been in vain, and now I bid you Godspeed and good night.

Values of Exports and Imports of Agricultural Products

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 24, 1939

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following tables:

Agricultural exports, 3 months ended March 1938 and 1939 [Value of United States exports of agricultural products]

	3 months en	Decrease (-),		
Agricultural products	1938	1939	increase (+)	
Total agricultural exports	\$233, 686, 000	\$160, 312, 000	-\$73, 374, 000	
Cotton, unmanufactured	78, 909, 000	45, 665, 000	-33, 244, 000	
Tobacco, unmanufactured	36, 936, 000	28, 340, 000	-8,596,000	
Foodstuffs (total)	111, 380, 000	80, 806, 000	-30, 574, 000	
Wheat	27, 406, 000	16, 630, 000	-10, 776, 000	
Corn	27, 491, 000	8, 357, 000	-19, 234, 000	
Wheat flour	6, 189, 000	5, 381, 000	-808,000	
Oilcake and meal	3, 036, 000	2, 360, 000	-676,000	
Vegetables and preparations of Fruits:	3, 249, 000	3, 216, 000	-33,000	
Frach	8, 985, 000	10, 591, 000	+1,606,000	
Dried and evaporated	4, 577, 000	4, 570, 000	-7,000	
Canned	5, 483, 000	5, 401, 000	-82,000	
	6, 665, 000	7, 413, 000	+748,000	
Meat products	5, 037, 000	5, 772, 000	+735,000	
Dairy products (except fresh milk).	1, 252, 000	1, 378, 000	+126,000	
Other foodstuffs	11, 910, 000	9, 737, 000	-2, 173, 000	
Other agricultural products	6, 461, 000	5, 501, 000	-960,000

A Double Check on War—How My War Referendum Resolution Would Operate to Keep America Out of Foreign Wars

EXTENSION OF REMARKS

HON. LOUIS LUDLOW

OF INDIANA IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1939

Mr. LUDLOW. Mr. Speaker, in asking the indulgence of the House my purpose is to explain to the Congress and the country how my Joint Resolution No. 89, providing for a referendum to the people on participation in foreign wars, would act as a double check on war and thus would greatly reduce the danger of America becoming involved in any foreign conflicts.

How often have we heard misinformed persons say:

"I am opposed to the Ludlow resolution because I believe the people would be more likely to be swept off their feet and rush into war than Congress would be."

Those who make this statement fail to understand the mechanism of House Joint Resolution No. 89, and have an entirely erroneous idea as to how it would operate.

In fact, it provides a double check on war.

Let us read the text of the resolution. It is as follows:

Except in case of invasion by armed forces, actual or immediately threatened by an approaching military expedition, or attack upon the United States or its Territorial possessions, or by any non-American nation against any country in the Western Hemisphere, the people shall have the sole power by a national referendum to declare war or to engage in warfare overseas. Congress, when it deems a national crisis to exist in conformance with this article, shall by concurrent resolution refer the question to the people.

Let us imagine that this proposed amendment is a part of the Constitution, and that an acute international situation involving the United States arises.

The first step toward a declaration of war by the United States would have to be taken by the Congress at Washington.

The people of America could not be "swept off their feet" into making a declaration of war until the Congress is first swept off its feet.

Action by Congress is the first check in a double check that is admirably designed to keep America out of war.

Unless Congress by concurrent resolution refers the question to the people there will never be a popular referendum, and under this proposed constitutional amendment no power on earth could compel the Congress to adopt a concurrent resolution calling for a popular referendum. Congress alone is to be the judge of when the time has come to submit the question to the people. If critics of my resolution are right in assuming that Congress is more stable and dependable and less likely to be swept off its feet than the people—an argument with which I do not agree—then they have nothing to fear from my resolution, for under it Congress has to act before the people can act.

My resolution only goes to the point of determining that if there is to be a decision on proposals to send our boys overseas to fight and die in wars of alien origin, the decision shall be by the great national jury of all the people, with women having equal voting rights with men. It simply means that this most important, most serious, and most tragic of all decisions would be made in the privacy of the ballot booths, each person alone with his Maker. In this way we would have the composite verdict of the judgment and conscience of the American people, which is the only way a question of such transcendent importance should be decided. Under this plan the people who have to do the dying and the suffering and to bear the unspeakable burdens and costs and woes and griefs of war would have the right to say whether America shall enter a nondefensive war in some far-away country outside of the Western Hemisphere.

To recapitulate, my resolution establishes a double check on war. The Nation cannot be swept off its feet until Congress is first swept off its feet. It is perfectly designed to bring the conservative, peaceful elements both in Congress and the country to bear against the efforts of war mongers to plunge America into war, for it provides a double negation on their activities.

The deluge of letters coming to me from all of the States convinces me that nine-tenths of the American people are in favor of my resolution and would like to see it adopted at the present session of Congress. The railroad brotherhoods, a million strong, have come out for it, and the great army of farmers belonging to the Farmers' Union has declared for it. The Church of the Disciples of Christ, with its millions of communicants, has declared for it. A page of the Congressional Record would not suffice to present the names of the organizations and key officials and individuals that have gone on record for it.

I have filed at the Speaker's desk a discharge petition, known as Discharge Petition No. 4, to bring this resolution out of committee for debate and a vote, and all Members of the House who endorse the proposal for this double check on war, and those who think that a proposal that holds the heart interest of so many millions of people at least is entitled to fair consideration and a record vote instead of death by strangulation in committee, are invited to sign this petition.

New Deal Tax Policies

EXTENSION OF REMARKS

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 24, 1939

Mr. THOMAS F. FORD. Mr. Speaker, it seems to me to be entirely fitting at this time to place in the Record some figures that must befuddle and surely belie the extravagant

statements being made by the minority and their big business cohorts as to the repressive effects of New Deal tax policies on industry generally.

I want at this point to refer to the remarks of my distinguished colleague from Michigan [Mr. Mapes] on page 2174 of the Appendix to the RECORD.

My good and distinguished colleague presents, what purports to be, a constructive program of the G. O. P.

A distinguished member of my colleague's party once referred to the Declaration of Independence as a mass of "glittering generalities."

I most respectfully ask permission to apply that characterization to my distinguished colleague's [Mr. Mapes] speech.

In presenting his so-called "constructive program," he says in proposal No. (3) "Repeal the repressive tax on undistributed corporate earnings, which has proved so harassing and dangerous to business, large and small."

In No. (4) he proposes to "revise the remainder of the Federal tax structure to eliminate or modify provisions retarding business recovery."

Now, just in the interest of facts, let us analyze those two "glittering generalities":

Industry, according to my good friend, Mr. Mapes, is suffering from the "repressive tax" on corporate earnings. Interesting and calamitous, if true.

Let us take a casual squint at the record. I am sure it will help us. Robert P. Vanderpoel, financial editor of the Chicago Evening American, for May 6, 1939, has this to say:

Industry, as represented by the first 260 representative corporations to report, earned a return on its net worth equivalent to an annual rate of 7.9 percent during the first quarter of this year. These figures are supplied by the National City Bank of New York.

The 260 corporations, having a net worth as of January 1, 1939, of \$9,880,681,000, had net profits, after all charges, including depreciation, interest, and reserves and after all taxes, of \$195,112,000.

The return on net worth of 7.9 percent contrasts with a return by these same corporations during the first quarter of last year

of 3.3 percent.

ALL GROUPS IN BLACK

The corporations are divided into 21 groups, all of which oper-

The corporations are divided into 21 groups, all of which operated on a profitable basis this year. A year ago 5 reported deficits. The best showing in the first quarter of this year was made by the General Motors Corporation (because of its size it is placed in a group by itself), which earned at an annual rate of 20.7 percent on its net worth. Other automobile manufacturers were not far behind. Seven concerns in this classification (Ford not being the beauty apparent when the property was returned by the profit of the profit o included because quarterly reports are not made public) earned 20.1 percent on net worth.

The next best showing was made by corporations in the metal business, manufacturing hardware, etc., with earnings equivalent to 16 percent on net worth. Manufacturers of miscellaneous products earned at a rate of 13.6 percent.

DRUG NET 12.6 PERCENT

Concerns in the chemical and drug business followed, with 12.6

concerns in the chemical and drug business followed, with 12.6 percent. Manufacturers of motor-vehicle parts earned 11.4 Corporations engaged in producing food products earned 11 percent. The poorest showing was made by the United States Steel Corporation, also given a classification of its own and reporting only 0.2 percent earned on its net worth. Other iron and steel producers earned at a rate of 2.7 percent. Railway equipment makers earned only 2.3 percent.

An examination of these figures makes it plainly evident not only that profitable opportunities for the investment of capital existed during this period but that such opportunities were exceptionally great.

AVERAGE EARNINGS

It must be remembered that these are average earnings. They include the returns of poorly as well as efficiently managed corporations, of industries that were having unusual difficulties, such as railway equipment, and that they were after all charges, including all those terrific business taxes of which everyone has heard so much.

In other words, representative industry, at a time when idle capital was of record-breaking proportions and the idle labor supply was enormous, earned an average return on invested capital at an annual rate of 7.9 percent.

The figures offer a challenge to economists, to business leaders, and Government officials. Certainly their significance is understood by few. This might be forgiven, because it is recognized that we are a nation of economic illiterates. but it seems to us that we cannot be forgiven for failure to study the matter and attempt to arrive at some sort of sound conclusions.

RECORD PROSPERITY

It should be recalled that this 7.9 percent return-which, incidentally, is for industry and does not include the railroads, making a very unsatisfactory showing: the utilities. where the showing is moderately satisfactory; trade, experiencing difficulties; mining, where profits are unsatisfactory in respect to coal and good elsewhere; or amusements earning a very good average return-follows a profit of 4.4 percent in the recession year, 1938, 10.5 percent in 1937, and 10.1 percent in 1936.

In short, industry has been experiencing almost unparalleled prosperity over this period when the complaints from industry have been the greatest in the Nation's history.

It occurs to me, that my distinguished friend from Michigan has not in reality given the matter much study. If he had, I am sure he would have found that industry, as a whole, is much more prosperous, if earnings on net worth is considered, than it has been for many years.

Facts are stubborn things. I hope that my distinguished friend and his colleagues, all members of the "crepe hanging brigade" will get busy and look a few facts in the face, in spite of the fact that that face may wear a broad grin because of their naïveté and, to quote the editor of the Chicago Evening News, their economic illiteracy.

Failure of the Wallace Agriculture Policy

EXTENSION OF REMARKS

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 23, 1939

Mr. JENKINS of Ohio. Mr. Speaker, under permission to extend my remarks, I wish to state that there has come to my hands a letter from a very prominent farmer in my State who complains bitterly against the Wallace program as it deals with agriculture. He says that the good farmers who heretofore have been keeping a proper proportion of their fields in grasses have been penalized. Citing his own case, he says that before the Wallace allotment program he had a very large percentage of his farm in grass while his neighbor had a very small percentage. In the allottment program his neighbor, who was a poor farmer according to the new standards, was given a greater allowance than he was. In other words, his having been a good farmer was a detriment while if he had been a poor farmer he would have been much better off as far as allottments are concerned. He maintains that the whole program lowers the moral courage of the farmer and makes them poorer and poorer in the long run.

I note by newspaper clippings that the Ohio State University, together with the three soil-conservation nurseries in Ohio, Indiana, and Kentucky, has been using hundreds of tons of tobacco as fertilizer. It is claimed that this tobacco had been taken out of the market under the New Deal policies and that-

Tobacco worth many thousands of dollars and purchased by the A. A. A. is turned into fertilizer which brings only \$1,440.

Another newspaper which illustrates the gigantic program graphically by pictures comments and says:

Use of low-grade surplus tobacco as fertilizer is in line with the policy of the Federal Surplus Commodities Corporation of developing new uses for surplus commodities. Up to this time the large quantities of tobacco purchased to sustain the price to growers has been reduced to nicotine extract and used to kill insects. About 3,000,000 pounds of the 11,000,000 pounds of the 1938 crop bought by the Commodities Corporation is being used for fertilizer experiments.

The agricultural program has broken down from nearly every angle.

Public Indebtedness

EXTENSION OF REMARKS

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 24, 1939

Mr. COLE of New York. Mr. Speaker, National Debt Week, now being fostered by the Republican Party, is not a period of celebration, it is not a gala event, but rather a time of mourning in which the attention of an unmindful public is directed to the alarming condition of the fiscal affairs of this Nation. It is to hang a crepe of the blackest hue over the doorway of the Treasury Building in Washington.

After 9 years of unbalanced Budgets, average annual deficits of two and one-half billion dollars, and a national debt of over forty-one billions it is, indeed, a cause for mourning to hear President Roosevelt ridicule those who are concerned over the financial stability of our country. He offers no hope that in the near future we may be able to match our revenues and our expenses. In a flippant vein, he infers that debt is a wholesome thing for a nation because through interest on it an income for our people is assured. How quickly he forgets the plight of the lower third of our people about whom he has continued to prate with his New Deal assurances; he now abandons those who will inevitably be forced to pay that vast amount of interest to the fractional part of the upper third of our people who own the bonds, whom he has consistently continued to berate.

The strange position which the President has suddenly taken is no better explained than by the following editorial which appears in this morning's issue of the Washington

GAMBLING ON A HUNCH

With increasing frequency, as his efforts to solve basic economic problems have proved futile, President Roosevelt has resorted in his speeches to a rather shopworn oratorical device. He seeks to turn the tables on his critics by accusing them of the very faults or failings which are attributed to him. When it will stand up under analysis such a counter attack is very effective. But when neither logic nor reason nor common sense are in support, the impression, once the magnetism of the speaker has evaporated, is not happy.

impression, once the magnetism of the speaker has evaporated, is not happy.

Mr. Roosevelt's speech to the forum of the American Retail Federation on Monday night is a case in point. Because pump-priming is so clearly a dubious experiment the President retorts that those who criticize it are "gambling on a hunch." Because there is increasing anxiety about continuous deficit financing Mr. Roosevelt denounces those who are perturbed as "wild-eyed radicals," "New dealers," he says, "are the conservatives because we simply cannot bring ourselves to take radical chances with other people's property and other people's lives."

In a sense the President is justified in calling his deficit-financing policy "conservative." It is conservative to the extent that it has been used since time immemorial by governments without the wisdom, ingenuity or courage to face their problems squarely. It is certainly not radical, if radical is used in its true meaning of a policy designed to grapple with the roots of a

problem. Indeed reactionary is the most accurate term for Mr. Roosevelt's attitude toward the soaring national debt. The dislike of confronting an annoying catastrophe is as old as Nero or Nebuchadnezzar, who in their place and time could also find good alibis for indifference to fiscal difficulties.

Unfortunately for the President's argument, it is all too easy to show that he himself is the one who is playing a speculative hunch "in the hope that in some mysterious way a miracle will occur." The miracle which he seeks is a stable national income of at least eighty billions, and his "speculative hunch" is the anticipation that with this achieved, "present taxes will be sufficient to meet expenditures on the present scale."

expenditures on the present scale."

Such rosy anticipation is an old, old story, relied upon by millions of men; by thousands of companies, by scores of governments—all of them now swept by disaster from the stage. And all this oft-repeated tragedy roots in the inability to see that there comes a time, in the evolution of a man, an institution, or a nation when the mounting accumulation of debt is not merely hypothetically dangerous but inevitably disastrous.

In the case of the individual this time can be defined with some

hypothetically dangerous but inevitably disastrous.

In the case of the individual this time can be defined with some precision. Debt for constructive purposes may be incurred with equanimity as long as there is good prospect of a rising personal income. But the man whose expenditure habitually exceeds his revenue when his income has reached its maximum is rightly regarded by his fellows as a spendthrift fool.

Different only in kind is the case of the business which steadily increases its debt at a time when the industry of which it is a part confronts a period of stationary or diminishing returns. Like President Roosevelt, many an American railroad management has argued in the past that given a larger income it could readily meet increased obligations out of current revenues. But now we all know that the railroads as a whole are no longer an expanding all know that the railroads as a whole are no longer an expanding industry.

industry.

In similar manner the President lightheartedly assumes that the United States is still an expanding Nation. This assumption, in view of the known facts, is more optimistic than convincing. Our population curve has flattened out; our birth rate is low; our immigration is sharply curtailed and seemingly will continue to be so. Nor is there, in any other field of measurement, any reliable indication of the steady upward trend which would justify a mounting debt on the strength of future prospects.

So President Roosevelt throws a boomerang when he indicts those who are gambling "on nothing more than their personal hunch." It is his personal hunch that somehow by deficit financing we may achieve an annual national income of eighty billions.

nunch." It is his personal nunch that somehow by dencit mancing we may achieve an annual national income of eighty billions. Perhaps, if that hunch proves valid, "income from present taxes will be sufficient to meet expenditures on the present scale." But the "if" is big. And nothing the administration is doing serves to keep it from growing on the horizon.

Those of us whom the President now calls the radicals, those who seek to attain the same objective as he in the improvement of the lot of the vast majority of the people know that the only way the people can have more of the comforts of life is to have an abundance of those things that they want. Only by the production of wealth can a nation be prosperous. We further know that not a cent of money spent by government, with the possible exception of the T. V. A. experiments, ever goes to the production of wealth or for the permanent employment of our people. Money taken from business in the form of taxes means only that there is that much less that business has to use for the production of greater wealth. Only by the production of wealth can the people be permanently employed. Only by permanent employment can they have the security which is the common goal of us all.

In connection with National Debt Week I desire to call to the attention of the people of the Thirty-seventh District of the State of New York who have sent me here to represent their interests, just what the national, State, county, and local debts mean to them. For several weeks I have been preparing the following tables which show the per capita share of all public indebtedness of each person in each town, city, and village of the district. To me it has been a revelation to discover that in many instances its share of the public debt is greater than the assessed valuation of the property in the town. In most instances, half of the value of the real property, from which all wealth springs, is pledged to payment of the public debt.

It is not too late to avert the impending disaster of inflation. Assaults on the Public Treasury must stop.

Archbishop Spellman Arrives

EXTENSION OF REMARKS

HON. MICHAEL J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 24, 1939

ADDRESS BY MOST REV. FRANCIS J. SPELLMAN, D. D., ARCH-BISHOP OF NEW YORK

Mr. MICHAEL J. KENNEDY. Mr. Speaker, the people of the archdiocese of New York are most fortunate and exceptionally blessed to have received as their new shepherd His Excellency the Most Reverend Francis J. Spellman, D. D., to succeed their beloved and late lamented Cardinal Patrick J. Hayes. The largest and wealthiest diocese in the world requires a man of extreme piety, acumen, and unusual stamina, both physical and mental, supplemented by vision and native common sense, for his task is an enormous one. His

duties comprise the supervision and guidance of thousands of Catholics, as well as the greatest parochial school system in the world. A recent demonstration upon the occasion of the St. Patrick's Day parade in New York City gave evidence of this fact and revealed to the world the fine, upstanding products of our Catholic schools and colleges.

Never in the history of our time has there been a more growing need for molding good citizens in world affairs. Archbishop Spellman is charged with the responsibility of this task, and I feel that His Holiness displayed rare vision in his selection of His Excellency Francis J. Spellman to don the cloak of the archbishopric of New York to preach peace, good will, and good neighborliness to mankind. It is only by being good neighbors that we may expect to give and receive happiness, peace, and contentment. I know that the 1,000,000 Catholics of this archdiocese are proud and happy in their anxiety to cooperate with their new shepherd, whose brilliance of intellect, piety, and understanding attest to his fitness for the signal honor that has been conferred upon him.

Under leave to extend my remarks in the Record, I wish to include therein the text of the address which His Excellency Most Reverend Francis J. Spellman made following his

installation as archbishop of New York at St. Patrick's Cathedral on Tuesday, May 23, as follows:

Your Excellency, the Apostolic Delegate of Our Holy Father, Pope Pius XII; Brother Bishops, Brother Priests, Brothers and Sisters in Christ, My Dear Brethren, a traveler in search of a temple enshrining the beauty and majesty of religion may stand within this cathedral and be satisfied that he has found an answer to his quest. The grandeur of this holy place has lifted up the lowly and taught humility to the mighty. At its portals the world seems left behind and every advancing step brings heaven nearer and deepens the scull's union with distinct soul's union with divinity.

soul's union with divinity.

As a child I was brought here by my father and mother. As a youthful student in this city, often did I come here to pray, and never did I come without feeling renewed in the life of the spirit. On the altar in the Lady Chapel of this cathedral on July 16, 1916, I offered my first mass in America. Today I have walked the long aisle and approached the altar not as a young man come to commune awhile with God and then to depart fortified with new-found grace to meet the problems of youth and of scholastic tasks but I have come in my mature years to stay, to stay with the keys of this building of God, and all that it typifies and signifies entrusted to my care—here to remain, until God calls me to render an account of my stewardship. of my stewardship.

THE ANSWER OF SCRIPTURE

If this Gothic structure were only a work of art made by man. I would feel myself alone—chilled, perplexed, and afraid. But the divine Presence is here and in prayer I have support for my soul stronger than the arches that, pointing heavenward, hold up this edifice, and to the voice of my own misgivings the answer of Scripture is heard: "My grace is sufficient for thee" (II Corinthians xii: 9).

Dim would be the body of this church and shadowy my heart,

Dim would be the body of this church and shadowy my heart, but that in this cathedral which perpetuates the glory of His name, the same flame of faith that St. Patrick lit on the hill of Slane burns brightly. The altar candles—symbols of the living Christ—are aglow in the sanctuary. Christ—the living Christ—warms me, guides me, calls me, leads me. I follow.

To me, it is not without significance that my advent is in the springtime of the year. The spring is the time for planting. I come to sow the seed of the gospel. The ground is good because those who tilled it before me have left it so. The soil itself is active, and my helpers, the zealous clergy, the self-sacrificing religious, and the devoted faithful of the laity are good. From the hand of him whom God has called to eternal rest, the former great-hearted shepherd of this archdiocese, Cardinal Hayes, I take up the work before me. To this work I have been assigned by the supreme pastor of Christendom, nor do I make any other account of my life than to affirm that with all its faculties and energies, it will be spent until it can be spent no more for the gaining of souls for Christ. In the discharge of my office, I have an example that is near and compelling. that is near and compelling.

THE CARDINAL OF CHARITY

It is impossible that I should not be profoundly influenced by the life and virtues of my revered predecessor, Cardinal Hayes. Memory is faulty in many matters, but men that are men remem-ber charity in at least one of its two phases—either to be charitable or to be grateful. Therefore, it is that Cardinal Hayes lives in the hearts of New York and America because he was grateful for your

charity, and he was charitable with your greatness. More than all, no man can give—and the cardinal of charity gave all.

In my deepest heart this morning I carry the thought of him who has sent me to you—our Holy Father, Pope Pius XII. If it is expected that I should speak of myself, then I shall speak of him who has sent me to you—our Holy Father, Pope Pius XII. If it is expected that I should speak of myself, then I shall speak of him because he is my credentials to you, and all that is lacking in me is made up in him. Shall I not say more—that the Holy Father fulfills the desires and needs of all of us? How else explain the universal joy with which his election was acclaimed? Even before the announcement from the balcony of St. Peter's his name had been framed on the lips and his person enshrined in the hearts of people the world over. It was not necessary to inform an inquiring public about the personality and the virtues of the new Pope. The world had already drawn its own clear portrait of his character. Serene, humble, devout, sympathetic, a man close to the people and close to God, a high priest after the pattern of Jesus Christ, this was the superb figure whose appearance before the people in St. Peter's Square was greeted with jubilant cries that were taken up with increasing volume all over the world.

No little of this acclaim rose from the people of this city, irrespective of creed, of race, or of class. New York had given the then Cardinal Pacelli a glad and admiring welcome when he made his memorable visit to the United States 2½ years ago. He who is now our holy father has entered our city from the ocean's door, has passed through our streets, has looked down from above upon these towers that reached up to him, has spoken to us, has knelt in prayer

towers that reached up to him, has spoken to us, has knelt in prayer in our midst, and has blessed us.

THE RICHEST SEE

These experiences and more have ratified between the holy father and all of us a deep and a solemn pact of mutual understanding and of friendship. How heartening to all of us to think that he

knows us as we know him, that he loves us as we love him, that we can depend on his learning, knowledge, and affection to aid us in our difficulties, as in his trials we shall stand with him in true and unswerving devotion.

our difficulties, as in his trials we shall stand with him in true and unswerving devotion.

I have read that this see to which I have been appointed is the richest see. What are the riches intended—the riches of material things or the riches of divine grace and spiritual power in Christ our Saviour? The city of New York has length and breadth and height and depth of astonishing dimensions, enclosing marvels of human invention and construction and vast treasures of wealth; and while I am not unmoved—and who is not—by the startling evidences of size and of affluence and of progress, I do not estimate this city's preeminence with the eyes of one who regards only the passing external fashion. My viewpoint as a Catholic bishop is the apprehension of St. Paul, who wrote to the Corinthians: "We look not at the things that are seen, but the things which are not seen. For the things which are seen are temporal, but the things which are not seen are eternal." (II Corinthians v: 18).

The ancient world had its proud edifices, but they are no more. The outward form of this modern city of New York has continually changed. Where are the mansions and the emporiums that were the glory of a former age? They have fallen before the march of time so that they are hardly a memory. But in this metropolis there stands a building firm and indestructible, resisting the ages, and that building is the church which St. Paul described to the faithful of Ephesus as different from all other buildings because housing them as "fellow citizens with the saints and domestics of God; built upon the foundation of the apostles and prophets, Jesus Christ Himself being the chief corner stone. In whom all the buildings being framed together groweth up into a holy temple of God. In whom you also are built together into an inhabitation of

buildings being framed together groweth up into a holy temple of God. In whom you also are built together into an inhabitation of God in the Spirit" (Ephesians 2: 19–21).

THE TRUE ENDOWMENT

Where, then, are we to look for the true endowment that enriches a people? Not in outward magnificence, but "in the inward man" (Ephesians 3: 16), where Christ dwells by faith and charity. Riches there are indeed in this famed archdiocese—unsearchable and inestimable—the riches "in the abundance of the blessings of the gospel of Christ" (Romans 15: 29), the riches that grace has worked and multiplied from the beginning, and through all the history of this see—the knowledge of God, plety, peace, patience, hope, long-suffering, comfort, thanksgiving, a sincere charity, and whatsoever else is virtuous to fill the heart with "the fullness of God" (Ephesians 3: 9). God" (Ephesians 3: 9).

God" (Ephesians 3: 9).

Whatever be the expressions that have been made concerning my coming, I account myself only as "a servant of Jesus Christ," and I judge myself in the words of St. Paul—"not to know anything among you but Jesus Christ and Him crucified" (I Corinthians 2: 2). I wear the cross as my shield and my breastplate iecause I am set for the defense of the gospel. Armed with "the sword of the spirit, which is the word of God" (Ephesians 6: 7), my mind is forward. There are as many spiritual swords as there are words of the Lord. The most invincible is the name of the Lord Himself. The name of Jesus sounds no uncertain call, enlists no hesitant following, promises no doubtful victory. With this name upon my lips, and in the confidence it inspires, I begin my labors among you.

In the name of Jesus, dear people, may I not count on you to walk in the presence of God, to follow in the footsteps of the Master, to support the good works of our holy religion in the same generous measure that you have in the past, so as to maintain for your faith its renown in all the world?

In the name of Jesus, men and women of religious congregations, may I not count on you to instruct the little ones of the flock of Christ, to aid the poor, to comfort the sick, and to perform all the spiritual and corporal works of mercy, so that through your zeal and sacrifice the charity of Christ may more and more abound?

"THE BURDEN IS HEAVY"

In the name of Jesus, priests of the archdiocese of New Yorksecular and regular—may I not count on your sympathetic cooperation and your readiness to work with me with all your graces, with all your heart, and with all your strength for the salvation of

What return shall I make for all that I have received?
To my people, my care and my solicitude.
To my priests, justice and charity.
To the bishops, my brotherly affection.

To the apostolic delegate who has installed me, my loyal devotion.

To our holy father, Pope Plus XII, gloriously reigning, who has appointed me, the love of a son, and the undying fidelity of a Catholic bishop.

And to God, for this grace to me unworthy, I bow my head and direct my prayer that His grace in me may not be in vain. The burden is heavy. Without God, my capacity is nothing. In the end, I turn to you all for that help required even by St. Paul, the Apostle of the Gentiles, though he was a vessel of election: "I beseech you, therefore, brethren, through our Lord Jesus Christ, and by the charity of the Holy Ghost, that you help me in your prayers for me to God" (Romans 15: 30).
